**TECHNICAL MANUAL
GS/GSM
DUAL MODE USER TERMINAL**

INDEX

1 INTRODUCTION

The Telital GS/GSM Dual Mode User Terminal is an handheld cellular radiotelephone operating under the terrestrial GSM 900 MHz / satellite Globalstar system at frequencies over 1,5GHz at public radiotelephone network.

The design and development of the Telital GS/GSM Dual Mode User Terminal is in line with the following documents:

TBR19 - Editon 5 – European digital cellular telecommunications system (Phase II); Attachment requirements for Global System for Mobile communications (GSM) mobile stations; access.

TBR20 - Editon 3 – European digital cellular telecommunications system (Phase II); Attachment requirements for Global System for Mobile communications (GSM) mobile stations; Telephony.

TBR41 - Edition 1 – Satellite Personal Communications Networks (S-PCN); Mobile Earth Stations (MESs), including handheld earth stations, for S-PCN in the 1,6/2,4 GHz bands under the Mobile Satellite Service (MSS); Terminal essential requirements.

Qualcomm specifications 80–25015–1 X6 date 07.09.97

This apparatus is composed of the following accessories:

- Universal Battery charger;
- Data Terminal Adapter;
- Car Kit.

These accessories are described on dedicated user manuals.

1.1 DIFFERENCES BETWEEN HW REVISION 0 AND HW REVISION 1

The differences between the HW release 0 and the HW release 1 are the following:

CS710C Changed microphone from Electret to BOSUNG;

 The following components are added: C166, C164.

CS680B The following components are changed: C18, C19, R25, C113, R31, U11

 The following components are added: R133, C64, R130, TP42, TP43.

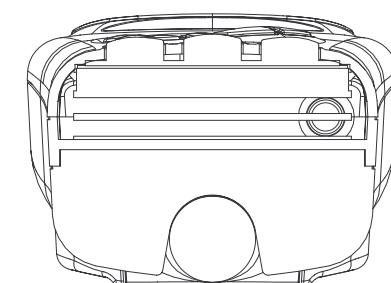

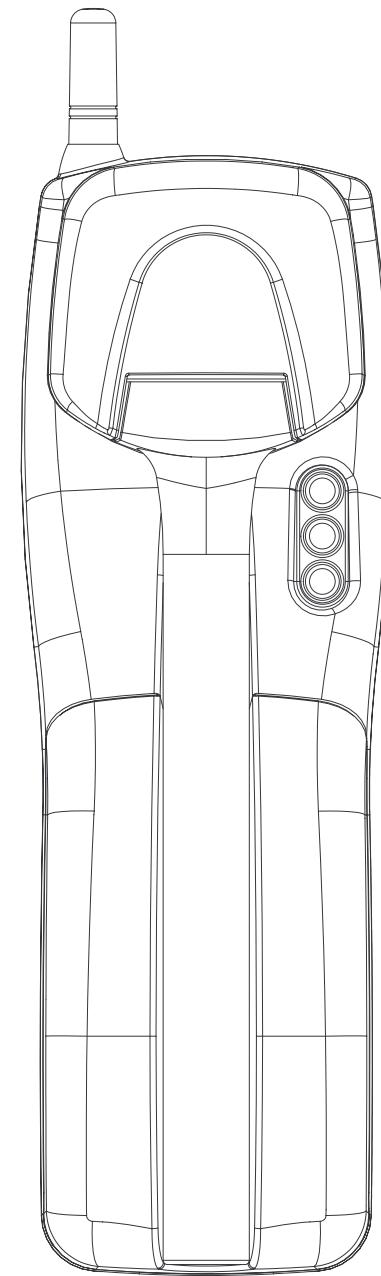

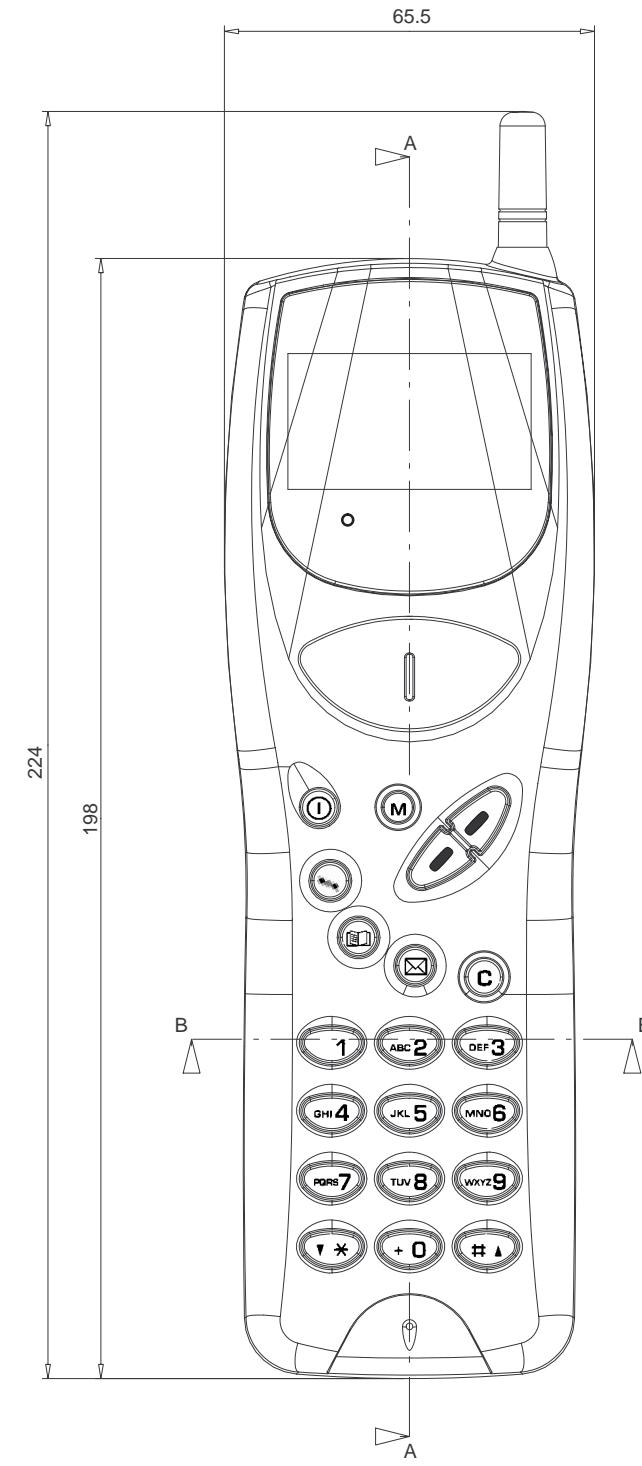

For a detailed description of changes see Parag.4 List of modifications.

3 TECHNICAL SPECIFICATIONS

The scope of this document is to summarize the technical characteristics of the Telital GS/GSM Dual Mode User Terminal.

For detailed informations refer to TECHNICAL SPECIFICATION code 30080ST10010A.

3.1 Operating frequencies

3.1.1 GSM

The GSM operating frequencies are:

| | |
|--|-------------------|
| TX frequencies: | 890.2 ÷ 914.8 MHz |
| RX frequencies: | 935.2 ÷ 959.8 MHz |
| The channel (ARFCN) are numbered from 1 to 124 and frequency offset between TX and RX frequency is 45 MHz. | |

3.1.2 GLOBALSTAR

The satellite operating frequencies are the standard Globalstar frequencies.

| | |
|-------------------------------|--|
| TX frequencies: | 1618.11 MHz |
| Bandwidth: | 15.99MHz |
| Channel bandwidth: | 1.23MHz |
| Minimum channel shift: | 30KHz |
| Number of shift: | 0 ÷ 511 |
| Number of preferred channels: | 13 |
| Preferred channels: | 4, 45, 86, 127, 168, 209, 250, 291, 332, 373, 414, 455, 496. |
| | |
| Rx frequencies: | 2491.77 MHz |
| Bandwidth: | 15.99MHz |
| Channel bandwidth: | 1.23MHz |
| Minimum channel shift: | 123KHz |
| Number of shift: | 0 ÷ 127 |
| Number of preferred channels: | 13 |
| Preferred channels: | 3, 13, 23, 33, 43, 53, 63, 73, 83, 93, 103, 113, 123. |

3.2 Transmitter output power

3.2.1 GSM

a) RF power on 50 Ohm

The GSM section of the DMUT is a class 4 radiotelephone according to standard ETSI regulation that fix the limit at 2 Watts (+33dBm) on 50 Ohm;

In normal test conditions the transmitter nominal power range is between +31.5 dBm and +32.5 dBm on 50 Ohm.

With a supply voltage range between 6.7V and 8.4V and temperature range between -10°C and +55°C the transmitter power range is between +30.5 dBm and +32.5 dBm on 50 Ohm.

b) ERP power

Not supplied in the GSM specification.

The EIRP power will be measured in anechoic chamber.

3.2.2 GLOBALSTAR

| | |
|--------------|---------|
| Output power | >23 dBm |
| | +26 dBm |

3.3 Reference sensitivity

3.3.1 GSM

Sensitivity on 50 Ohm

The sensitivity is according to the GSM specification for the class 4 portable terminal;
The standard ETSI regulation para 6 fix a limit of -102dBm.

The goal limit is ≤ -104 dBm for an Rx Quality $< 0.2 - 0.4\%$.

3.3.2 GLOBALSTAR

Ref. Qualcomm specifications 80-25015-1 X6.

3.4 Antenna

3.4.1 GSM

The antenna for the GSM band is ALLGON 3576.2

3.4.2 Globalstar

The antenna for the satellite Globalstar band is composed of more parts and is assembled on the telephone in way that can rotate on 4 positions.

The satellite antenna in its rotating stalk contains an LNA for the Rx section, the receiving part Rx and the transmitting part Tx.

An optical sensor assembled on the body of the telephone under the antenna rotor, activates the satellite transmission when the antenna is rotated in the positions 1, 2 and 3. In the intermediary positions the transmitter of the satellite section is always disabled.

In the position 0 the telephone works only on the GSM band.

The rotation of the antenna is prevented over the position 3.

3.5 Audio characteristics

3.5.1 Microphone

The telephone uses a microphone PRIMO type EM131S2B2.
This is inserted in a rubber gasket.

3.5.1.1 Microphone sensitivity

The typical level is 3mV typical with a -4.7dBPa signal SPL at f=1kHz

3.5.1.1.1 Microphone electric level

The typical level is >570mVrms with signal AF of 3mV @ f=1kHz.

3.5.1.1.2 Microphone distortion

The typical level is <2% with range of frequency 300Hz to 3400Hz.

3.5.1.2 Buzzer

The Buzzer used into the DMUT is the MUT-03A STAR.

3.5.1.2.1 Acoustic pressure of the buzzer

The value of acoustic pressure is -41dBV.

3.6 Device voltage supply

| | |
|--------------------------|-------------|
| Nominal voltage | 7.4 V |
| Working range | 7 V ÷ 8.4 V |
| Power off voltage range: | 6.8V |

3.6.1 Power consumption

The following table lists the estimated current that flows from the 7.2V battery with a switching circuit efficiency $\eta=0.85$. The values are expressed in mA.

| | GSM Baseband | G*Baseband | GSM Radio | G* Radio | Total |
|---------------------------------|--------------|------------|-----------|----------|--------|
| GSM Mode : RxTx @ Tx level=5 | 83 | 3.84 | 262 | 0.84 | 349.68 |
| GSM Mode : idle | 10.2 | 3.84 | 1.4 | 0.84 | 16.28 |
| G* Mode : RxTx | 60 | 219.6 | 1.56 | 664.44 | 945.0 |
| G* Mode : idle @slot=1 | 10.2 | 129 | 1.56 | 97.44 | 238.2 |
| G* Mode : idle @slot=0.2 | 10.2 | 26.4 | 1.56 | 19.44 | 57.6 |

3.6.2 Battery pack and battery life

The DMUT will be power supplied by a PP35 1350mAh battery pack composed of two Li Ion rechargeable serial elements.

3.6.2.1 Battery life in GSM mode

| Operative mode | Rx/Tx* | Idle |
|----------------|--------|------|
| Battery life | 3.86h | 83h |

* @ Tx level=5

3.6.2.2 Battery life in Globalstar mode

| Operative mode | Rx/Tx | Idle |
|----------------|-------|---------------------------------------|
| Battery life | 1.43h | 5.66h @slot = 1 23.43h @slot = 0.2 |

In conversation: 5.5 hrs

In idle: 70 hrs

3.7 Keypad

The keypad is composed by 20 keys and lighted with 12 leds.

The key functions, related to the specific operative conditions, are shortly listed on the table below.

| Key | Function |
|-------|--|
| | END function to terminate a call; |
| | SEND function to answer an incoming call; |
| | Mode Switch to define the DMUT operating mode; |
| M | Function MENU to enter in the DMUT operative menu; |
| C | Character and number cancellation in edit mode; |
| | Note Book function; |
| | SMS menu; |
| | DMUT power ON/OFF; |
| # ^ | Menu scroll-up function; |
| ' * | Menu scroll-down function; |
| 1...9 | Alphanumeric keys |

3.8 Display

Type SEK1054B5A EPSON LCD, FSTN, positive, reflective, graphic.
The display will be backlit with six leds.

3.9 Data service

Use of a Data Terminal Adapter for the following functions:

Full emulation of analog modem to allows the compatibility with the existent data communication programs.

Class 1 (EIA/TIA 578) and class 2 (TR29.2) command for compatibility with fax.

Max data rate 9600 bit/s.

In Globalstar mode the DTA will support the data service as described on the Globalstar standard specifications.

3.10 Software functionality and user interface

The software installed in the DMUT supports all the functions in table.

| | |
|------------------------|---|
| Radio interface | Radio Protocol Phase 2 |
| Speech Coding | Full Rating |
| SIM | SIM 3/5 volt SIM Toolkit compliant GSM 11.14 |

The functionalities supported by the user interface of the telephone are phase 2 and are listed as follows:

Management of local security, with SIM Lock, keyboard lock and security code request at power-up;

Call control function, with call duration, cost indication and UDUB function;

Volume control and ringer setting function, ringer and signaling tones with possibility of activation of alarm also with telephone powered off;

Display management with contrast level regulation and duration of backlight;

Messages visualized setup in ready state and its language, visualization of the IMEI and the software release of the telephone;

Font Management uppercase/lowercase and international (no Chinese);

SIM related functions, as the activation/deactivation of the numbers in notebook FDN, ADN and PIN. Extension to the PIN2 of the possibility of insertion of PUK2 in case of lock. The telephone supports besides the functionalities of class 2 of the SIM Application Toolkit with the implementation of the relative commands and procedures at MMI level. Implementation of two levels SIM lock.

Tones Management DTMF;

Clock Management with time and alert activation indications for the wake-up service and for the programmed telephone power-up;

Indication of the call status and service availability;

Automatic call of busy number and automatic answer;

Visualization and selection of the GSM providers;

Management of the Supplementary Services (SS) of Call Barring (with related indication, also for SMS), Call Forwarding (with related indication), Advice of Charge, Calling Line

Identification Presentation, Calling Line Identification Restriction, Unstructured SS Mobile Originated, Call Waiting, other party Call Waiting Indication, Call Hold, other party Hold / Retrieved Indication, Multi Party;

Short Message Service Mobile Terminated with signaling of new incoming SMS, reading and SIM full, Mobile Originated with writing, storing in SIM and dispatch, Cell Broadcast compatible with CB-DRX (discontinuous reception) for energy saving.

Special Features, as the list of the incoming not answered calls;

Indications on the battery status through predefined icon on the display with tabs showing the charge level, bitmap on graphic area indicating the state of charge in progress, best terminated or failed for damaged battery and indication of the battery pack temperature during the charge.

Management of the language of menu interface. It is possible to set the DMUT from the language menu up to 16 languages.

Currently the available languages are: Italian, English, German, French, Polish, Norwegian, Spanish, Greek, Hungarian, Czech, Portuguese.

The user interface of the telephone is structured in the following menus:

Main menu pressing the "M" key and divided in the following submenus: "Own number", "Missed calls", "Call divert", "Clock", "Settings", "Security", "GSM Networks", "Call control", "Information".

When a Proactive SIM is inserted, it is available the SIM Toolkit menu identified by number item 0 whose elements are determined by the service provider;

SMS Menù, accessible with the ☎ key, containing all related functions for the messages SMS management;

Call related menù, available only during a call, which allows the access to the call related Services and other possible functions only in this state.

Phone book menu, accessible pressing the "M" key and pressing again for a long time the same "M" key.

It makes available the functions for the transfer between ADN and FDN, the insertion of new records, the cancellation of the records and the visualization of the information related to the phonebook stored on the SIM;

Customizable Menù. At any level of the main menù it is associated a number that can be used to made a fast selection of a menu or submenu item.

3.10.1 Clock

The internal clock besides the normal visualization of the time, allows to set the alarm and the telephone power-up.

The clock is autonomously powered by a not rechargeable lithium battery with autonomy of about 5 years.

3.10.2 Vehicularization

For the vehicularization of the DMUT is used a CAR-KIT.

3.11 Electrical interface

3.11.1 Bottom connector

The 20 pin bottom connector SO2 HIROSE MQ168–QC–20P/4 allows the DMUT interfacement with the accessories as Car Kit, Battery charger, Data Terminal Adapter. The four pins from 21 to 24 allows the connection of battery pack.

| PIN | NAME | A/D | IN/OUT | DESCRIPTION |
|-----|---------------|-----|--------|--|
| 1 | +VBATT | A | IN | +10.4V from battery charger |
| 2 | DM_TX | D | OUT | TX serial line debug monitor G*edge |
| 3 | DM_RX | D | IN | RX serial line debug monitor G* edge |
| 4 | DM_RTS | D | OUT | Request To Send debug monitor G*edge |
| 5 | DM_CTS | D | IN | Clear To Send debug monitor G*edge |
| 6 | DATA_GS_TX | D | OUT | Data transmission line in G* mode |
| 7 | DATA_GS_RX | D | IN | Data reception line in G*mode |
| 8 | GSM_TX | D | OUT | Data transmission and monitor line in GSM mode |
| 9 | GSM_RX | D | IN | Data reception and monitor line in GSM mode |
| 10 | AXE | D | IN | External device connection signal |
| 11 | SW_BATT | A | OUT | Power supplied to external device connected with AXE = 0 V |
| 12 | CAR_PCM_CLK | D | OUT | CLOCK PCM connection to CAR KIT |
| 13 | CAR_PCM_DOUT | D | OUT | Data OUT PCM connection to CAR KIT |
| 14 | CAR_PCM_DIN | D | IN | Data IN PCM connection to CAR KIT |
| 15 | CAR_PCM_SYNC | D | OUT | SYNC PCM connection to CAR KIT |
| 16 | GS/GSM | D | OUT | Signalling for the DMUT operative mode GSM or G* |
| 17 | ON-OFF | D | IN | Signal for DMUT remote power on |
| 18 | CAR_AUDIO_IN | D | IN | Analog audio from CAR KIT |
| 19 | CAR_AUDIO_OUT | — | — | Analog Audio to CAR KIT |
| 20 | GND | A | — | Ground |
| 21 | NTC | A | — | Pin used for reading the internal temperature of battery pack by an NTC or other sensor. |
| 22 | GND | A | — | Ground Battery pack |
| 23 | +VBATT | — | — | Positive Battery pack |
| 24 | SPARE | — | — | |

Legend: **A:** Analog; **D:** Digital 0 : 3V CMOS

3.11.2 SIM

The DMUT uses a SIM card type "PLUG-IN".

The following table list the signals of SIM connector.

| PIN | NAME | A/D | IN/OUT | DESCRIPTION |
|------------|-------------|------------|---------------|--|
| 1 | C1,CCVCC | A | IN | SIM 5Vcc power supply. |
| 2 | C2, RST | D | OUT | RESET command active high coming from uP and managed by the program protocols. |
| 3 | C3,CCLK | D | OUT | CLOCK supplied from uP for data management. |
| 4 | C5,GND | A | IN | SIM circuit ground termination. |
| 5 | C6,NC | — | — | Not Connected. |
| 6 | C7,I/O | D | IN/OUT | Input/output data for the SIM. |

3.11.3 Test connector

This connector allows the connection of DMUT with test equipments for the maintenance, and production test.

ELCO connector Torson 2 x 5pins vertical SMD low profile.

P/N 23–5016–2005–10–081. The following table list the signals of test connector.

| PIN | NOME | A/D | IN/OUT | DESCRIPTION |
|------------|-------------|------------|---------------|--|
| 1 | WAKEUP | D | IN | Signal for remote power on. |
| 2 | RST | D | IN | Reset |
| 3 | TXD1 | D | OUT | Data transmission from 80386 serial line #1 |
| 4 | RXD1 | D | IN | Data reception to 80386 serial line #1 |
| 5 | GND | A | — | Ground |
| 6 | DWLD | D | IN | Download in G* mode enabled |
| 7 | INT3 | D | IN | Not used |
| 8 | GSM_TX_DATA | D | OUT | Data transmission and monitor line in GSM mode |
| 9 | GSM_RX_DATA | D | IN | Data reception and monitor line in GSM mode |
| 10 | +VBATT | A | — | Positive 7.4V power supply |

Legenda: **A:** Analogico; **D:** Digitale 0 – 3V CMOS

3.11.4 RF signals connector

The DMUT has three coaxial connectors to made the connection with the following:

- Band L external antenna (Tx satellite)
- Band S external antenna (Rx satellite)
- GSM external antenna (Tx /Rx)

3.11.5 DAI connector

Pads on pcb.

3.12 Physical characteristics

3.13 Dimensions

Length: 224 mm

Width: 65.5 mm

Thickness: 50 mm

3.14 Weight

400g battery pack included.

9 USER GUIDE

Telital DMUT User Guide

9.1 General

This guide provides all the necessary information for the correct use of the GS-GSM DMUT.

Figure 1 show the DMUT with a brief description of keys function.

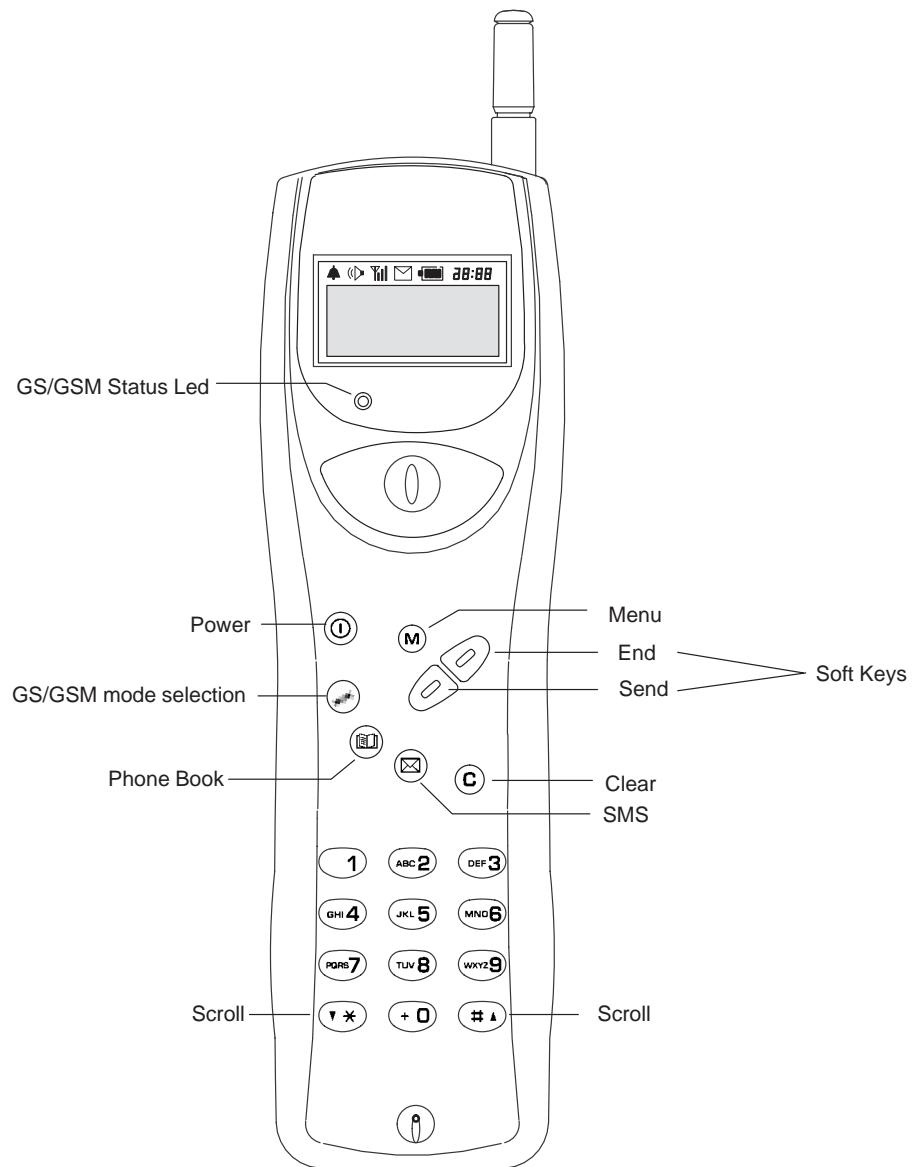

Figure 1

9.1.1 Display and indications

The display show all status and menu of GS–GSM DMUT during the operations. Icons and bitmaps tells to the user all situations and operating modes, telephone numbers, messages, battery charge status, time and other useful informations (see fig. 2).

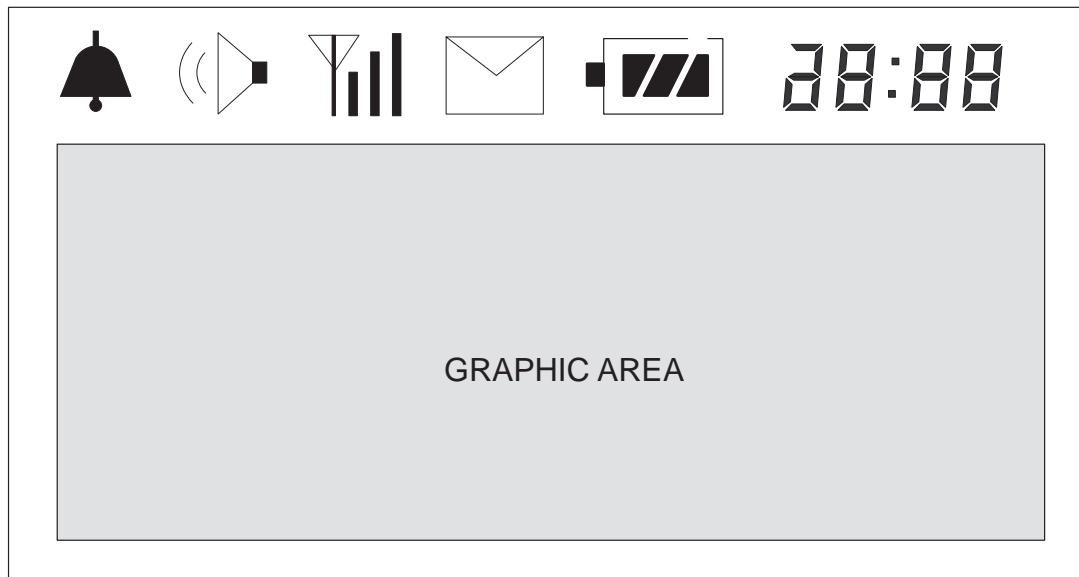

Figure 2

9.1.1.1 Icons

This icon indicates a programmed alarm.
This icon blinking, indicates an alarm time-out

This icon indicates an Hands-free device (car kit) connected.

This icon indicates the received signal intensity both in GS and GSM mode. The number of active bar indicates the signal intensity.

This icon displayed in the graphic area indicates an active conversation.

This icon indicates the SMS function activation and voice mailbox messages presence.

This icon indicates the battery charge status.

Clock

9.1.1.2 Status indications

The status of the dual mode telephone will be given by a led on the front panel and icons on LCD display graphic area.

LED status ON = GS operating mode;

LED status OFF = GSM operating mode;

Icon on Display for the "GS Maintenance Required" indication;

Icon on Display for the "GS Lock" indication.

9.1.2 Battery charger

The DMUT have a rechargeable Lithium ion battery pack and a battery charger.

When the battery charge level becomes low, the icon  shows this status and when the icon  empty is blinking, is necessary to connect the battery charger to the DMUT.

The graphic symbol  is shown when the telephone is operating during a battery charge operation.

The bitmap  is shown during a battery charge operation with the DMUT turned off.

9.1.3 Car kit

The car kit option allows to connect the DMUT to the vehicle with battery charge and hands free functionality.

9.1.4 Operation

9.1.4.1 Minimal functionality

The following operations allows to turn on the DMUT, place a call and then turn off the DMUT.

☞ Insert your plug-in SIM card into the slot

☞ Press ① (POWER) for 1 second to switch on the unit
If PIN is enabled:

If inserted PIN is correct the unit starts network auto search.

In G* mode the following will be displayed:

In GSM mode the following will be displayed:

at the end of the search the following will be displayed:

where the first line indicates the antenna icon (flashing during network auto search) followed by radio signal intensity (up to 4 bars) and the second line the name of the network operator, or the gateway ID and then the service provider name in G* mode.

If inserted PIN is wrong the following will be displayed:

where X on the second line indicates the number of possibilities left to retry correct PIN entering.

If the wrong PIN is entered for three times the following will be displayed:

- ☞ Key in * 05 *, the 8 PUK digits provided by the network operator, press * (new PIN) * (new PIN) and then #.

Warning: If you cannot remember your PUK code or you enter a wrong one for 10 times, you have no other possibility but that of contacting the network operator who issued your SIM card.

If you inserted the correct PUK appears a success graphic symbol that indicates that PUK is valid and then the operative mask.

Now you can place and receive calls.

- ☞ To switch off the unit: press and release ① (POWER).

The following "Good Bye" graphic screen will be displayed:

- ☞ To place a call: dial the number and press ↗ (SEND).
Mistakes in digitizing have to be corrected by pressing shortly "C" key.
If you keep "C" key pressed for longer time, all digits will be cancelled.
- ☞ Emergency calls can be placed also if the SIM card is not inserted.
- ☞ To receive a call: Press ↗ (SEND) or any other key if programmed in the menu.
When using the handset: pick up the handset.
- ☞ To end a call: Press ↘ (END).
- ☞ To adjust listening level: Press ▼ * and # ▲ long during conversation.

- ☞ Mute function: Keep pressed **①** (POWER) for more than 1 second during conversation.
- ☞ Keypad lock: Keep **#** pressed for 2 seconds: selected function will be displayed by lock symbol. Keep press the same key for 2 seconds and press the key "5" to unlock keypad.

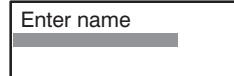

9.1.5 Phone book

9.1.5.1 Storing a number

- ☞ Key in the number to be stored. By pressing "**C**" the last digit will be cancelled; if you press "**C**" for longer time all digits will be cancelled.
- ☞ Press **BOOK**.

The following screen will be displayed:

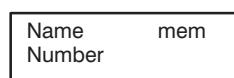

- ☞ Key in the name: keep the alphanumeric key pressed until the desired letter appears on the display.
Key "1" contains the space and special characters, whereas key "*" switches between capital and small letters.
- ☞ Press **④ (SEND)** to store your selection in the first free memory location and press **④ (SEND)** to confirm.
- ☞ Press **⑤ (END)** to exit from phone book without save any number.

9.1.5.2 Recalling a number from phone book

- ☞ Press XX and **#**, where XX is the desired memory location number,
or:
- ☞ Press **BOOK** and with ***↑** or **#↑** scroll through all the allocated memories in alphabetical order or by telephone number order or by memory location order. The search criteria is defined by pressing the "**M**" key corresponding to ">>"symbol on display.

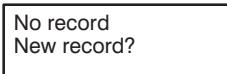

The following screen will be displayed during a phone book operations:

By pressing "C" the last character will be cancelled, and if you keep "C" pressed for longer time all characters will be cancelled.

- ☞ When the desired location appears on the display, press  (SEND) to place the call.

When recalling a memory location not available on the SIM card the following will be displayed:

ADN Memories: Available memory locations in SIM card. Available quantity depends on the SIM card you have chosen.

FDN Memories: Also contained in the SIM card with same features as ADN memories. Activation of FDN memories must be performed from the menu and by entering the PIN2 code which is not always supplied by the network operator.

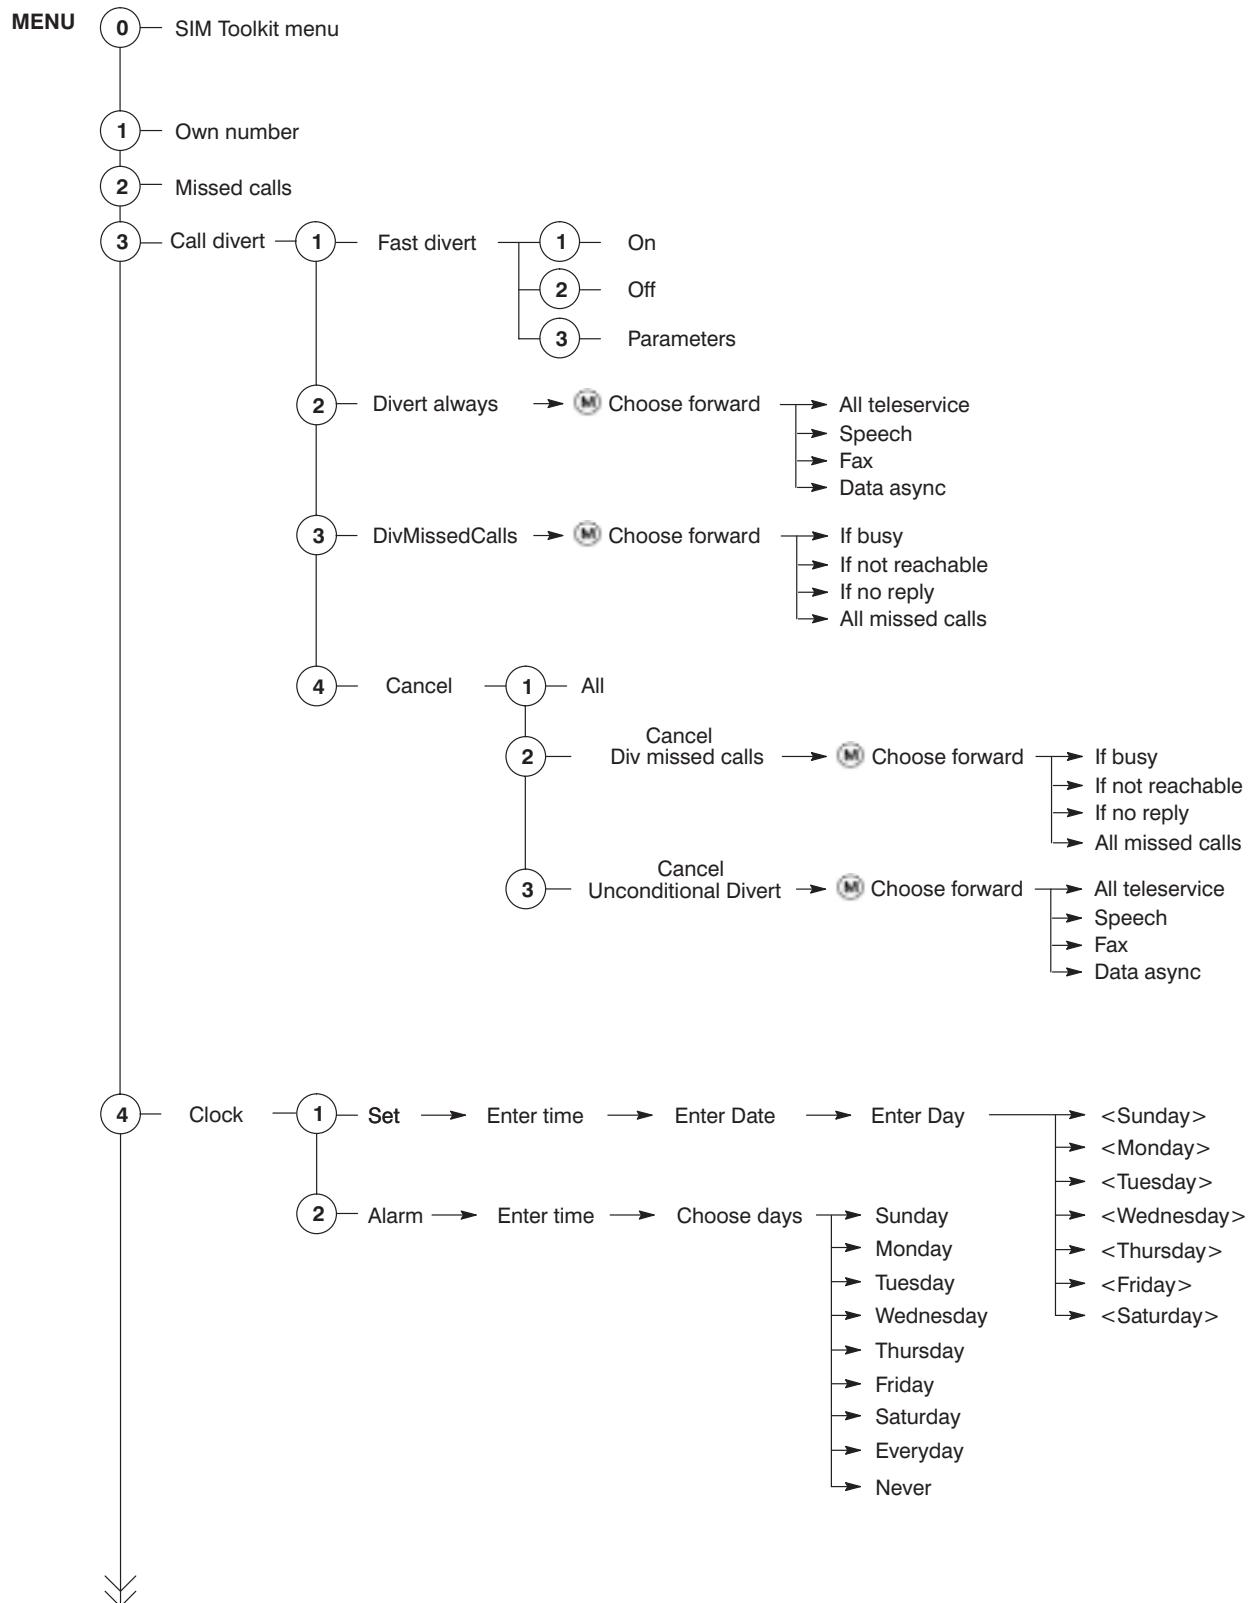

9.1.6 Function menu

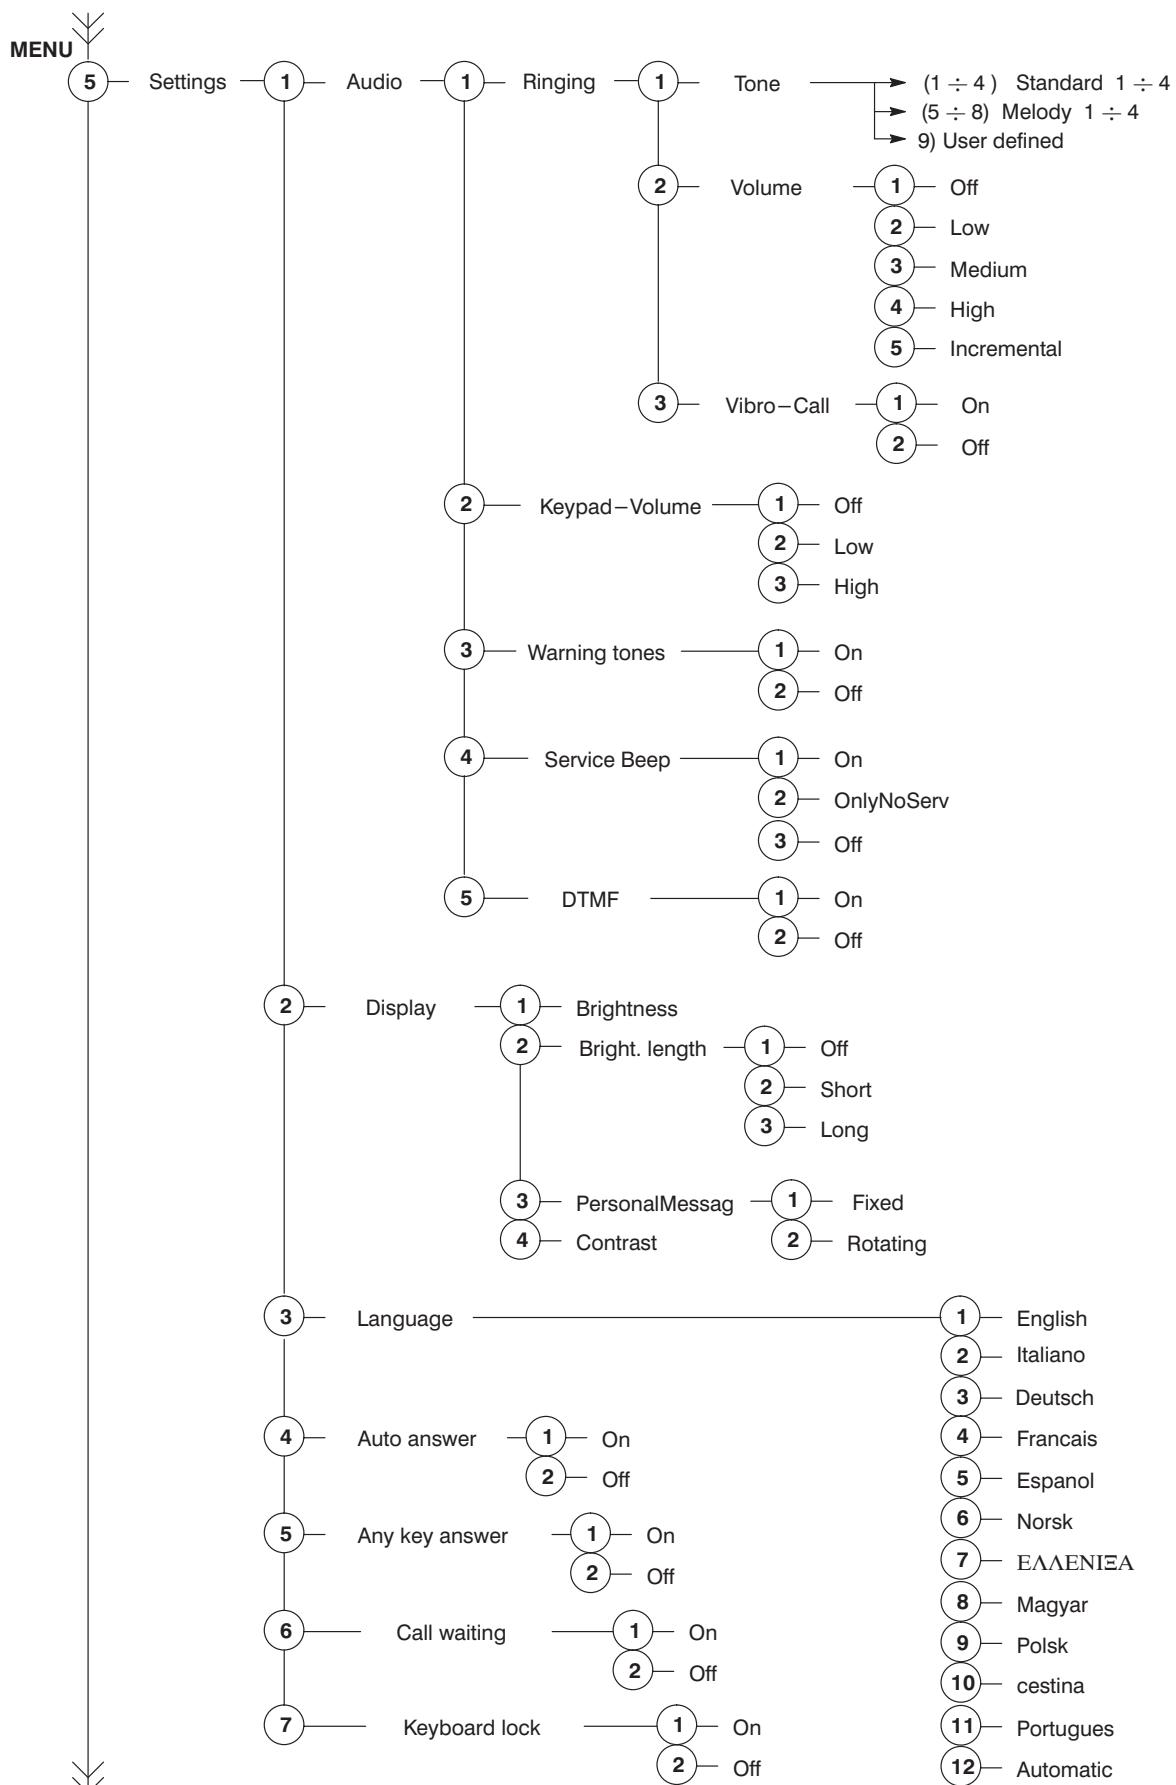

- ☞ Press "M" key followed by the number key corresponding with the desired menu number or,
- ☞ Press "M" key to going to the menu.
- ☞ Press *# and #▲ or press the "M" key to browse the menus.
- ☞ Confirm the access on the desired menu by pressing  (SEND) key.
- ☞ To exit from menu without save the settings press  (END) key.
- ☞ To exit from menu and save the settings press  (SEND) key.

If a "Proactive" SIM is inserted into a DMUT, a menu item 0 will be displayed. By selecting this item, access will be given to the SIM Toolkit services supplied by the network operator.

After 3 minutes of inactivity on the menu operations, the operative condition will be automatically restored.

The following diagrams show the function menu structure.

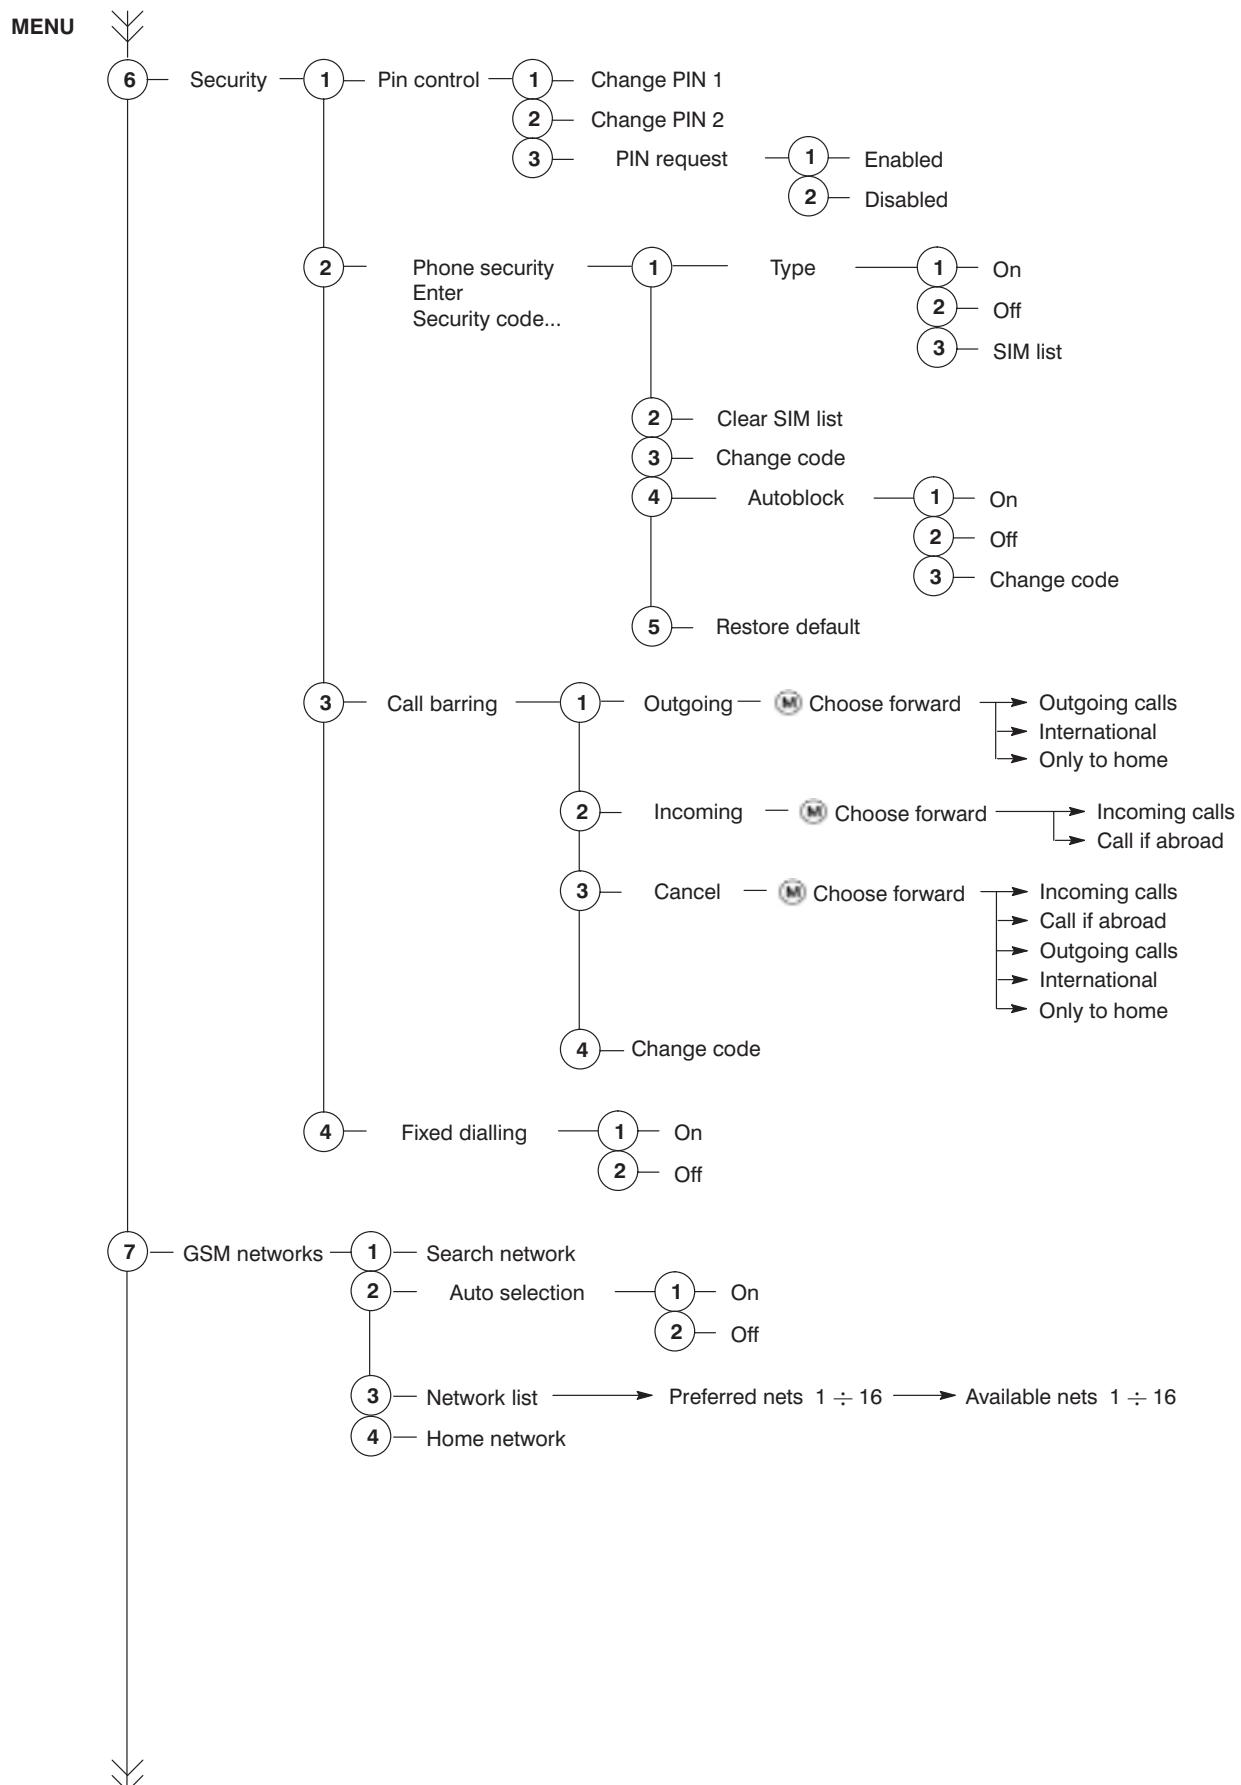

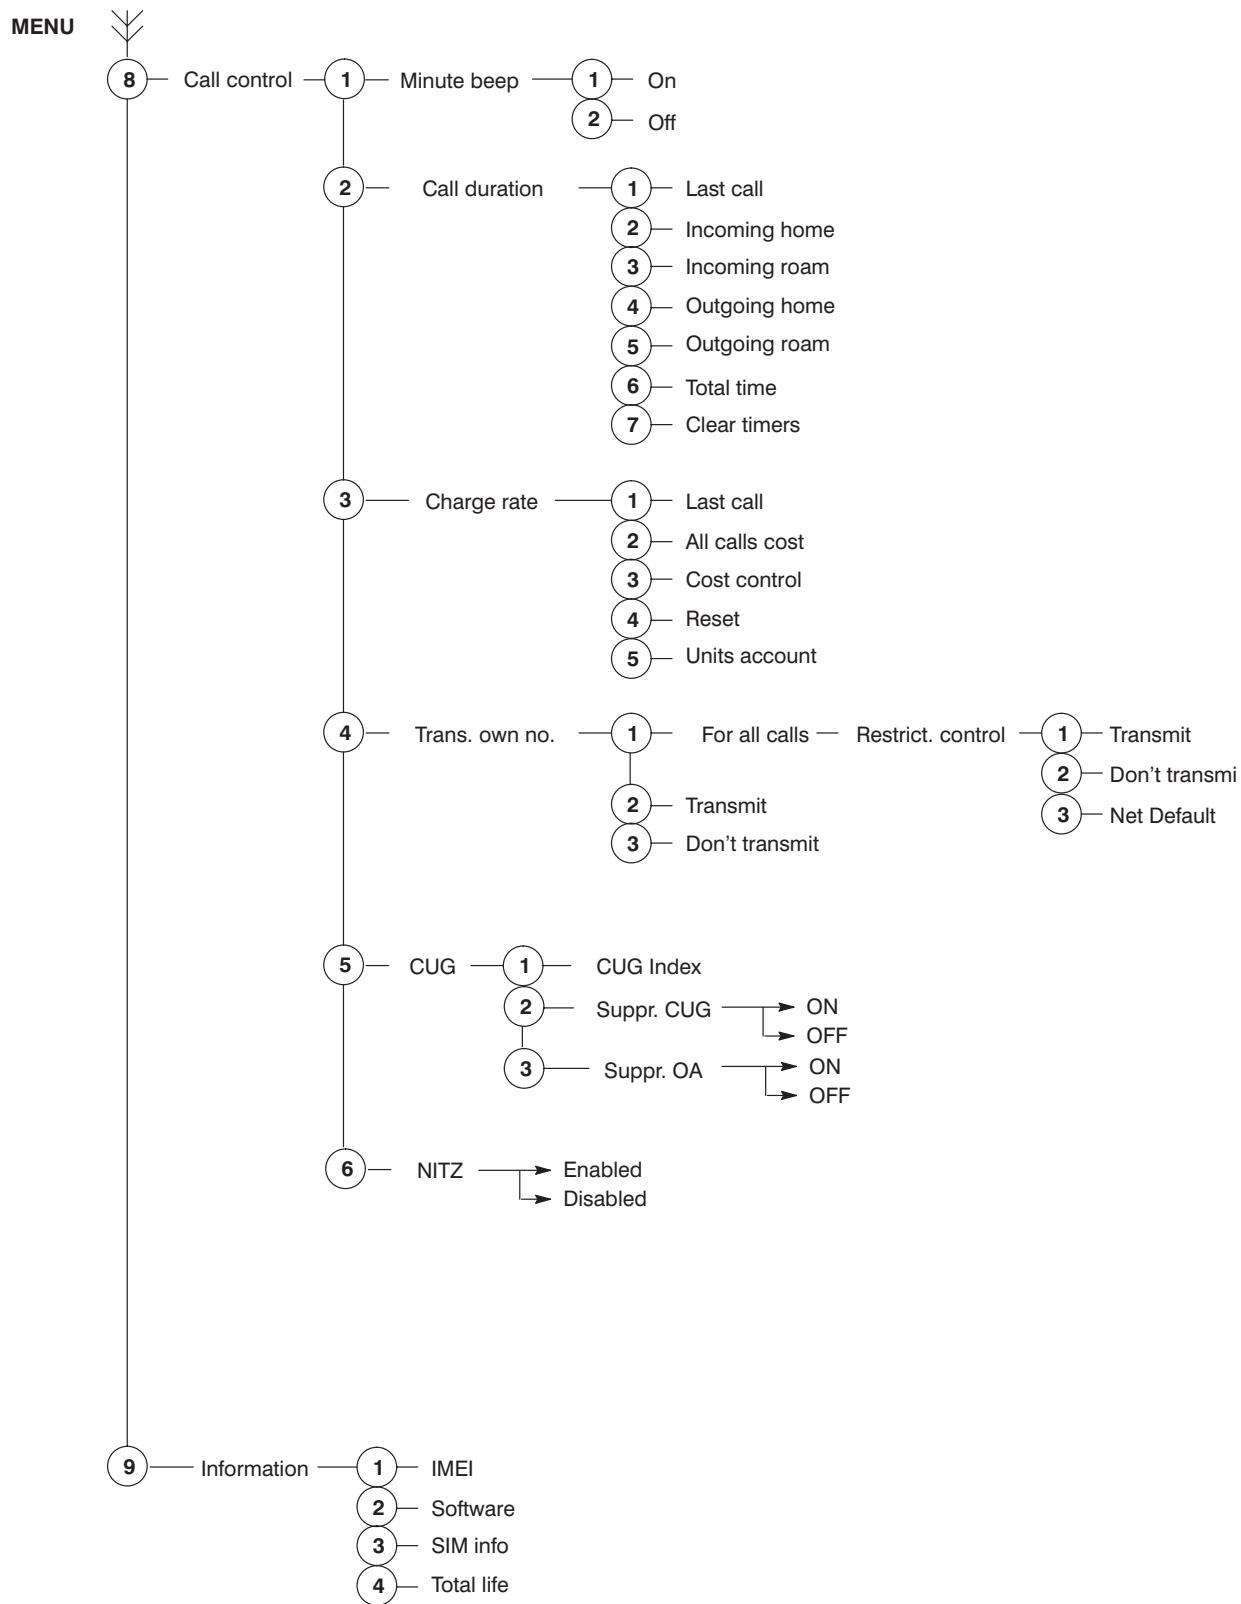

**TECHNICAL MANUAL
