**Canadian EMI Notice**

This Class A digital apparatus meets all the requirements of the Canadian Interference-Causing Equipment Regulations.

Cet appareil numérique de la classe A respecte toutes les exigences du Règlement sur le matériel brouilleur du Canada.

**European Notice**

Products with the CE Marking comply with both the EMC Directive (89/336/EEC) and the Low Voltage Directive (73/23/EEC) issued by the Commission of the European Community. Compliance with these directives imply conformity to the following European Norms:

EN55022 (CISPR 22) - Radio Frequency Interference  
EN61000-X - Electromagnetic Immunity  
EN60950 (IEC950) - Product Safety

**Five-Year Limited Warranty**

Transition Networks warrants to the original consumer or purchaser that each of its products, and all components thereof, will be free from defects in material and/or workmanship for a period of five years from the original factory shipment date. Any warranty hereunder is extended to the original consumer or purchaser and is not assignable.

Transition Networks makes no express or implied warranties including, but not limited to, any implied warranty of merchantability or fitness for a particular purpose, except as expressly set forth in this warranty. In no event shall Transition Networks be liable for incidental or consequential damages, costs, or expenses arising out of or in connection with the performance of the product delivered hereunder. Transition Networks will in no case cover damages arising out of the product being used in a negligent fashion or manner.

**Trademarks**

The MiLAN logo and Transition Networks trademarks are registered trademarks of Transition Networks in the United States and/or other countries.

**To Contact Transition Networks**

For prompt response when calling for service information, have the following information ready:

- Product serial number and revision
- Date of purchase
- Vendor or place of purchase

## **FCC Warning**

This Equipment has been tested and found to comply with the limits for a Class-A digital device, pursuant to Part 15 of the FCC rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

## **CE Mark Warning**

This is a Class-A product. In a domestic environment this product may cause radio interference in which case the user may be required to take adequate measures.

# Introduction

---

**Power-over-Ethernet (PoE)** eliminates the need to run power to other devices on a wired LAN. Using Power-over-Ethernet systems installers need to run only a single Category 5 Ethernet cable that carries both power and data to each device. This allows for greater flexibility in the location of network devices and significantly decreasing installation costs in many cases.

There are two system components in PoE—the Power Sourcing Equipment (PSE) initiates the connection to the second component, and the Powered Device (PD). The current is transmitted over two of the four twisted pairs of wires in a Category-5 cable.

Power over Ethernet follows the IEEE 802.3af and is completely compatible with existing Ethernet switches and networked devices. Because the Power Sourcing Equipment (PSE) tests whether a networked device is PoE-capable, power is never transmitted unless a Powered Device is at other end of the cable. It also continues to monitor the channel. If the Powered Device does not draw a minimum current, because it has been unplugged or physically turned off, the PSE shuts down the power to that port. Optionally, the standard permits Powered Devices to signal to the PSEs exactly how much power they need.

The 8 10/100TX + 2 Gigabit copper/Mini-GBIC Combo with 8 PoE Injectors Managed Switch and the 8 10/100TX + 1 10/100/1000T/100/1000 SFP Combo with 4 PoE Injectors Managed Switch are the multi-port switches that can be used to build high-performance switched workgroup networks. Both switches are a store-and-forward device that offers low latency for high-speed networking. It also features a “store-and-forward” switching scheme. This allows the switch to auto-learn and store source address in an 8K-entry MAC address table. The switch is targeted at workgroup, department or backbone computing environment.

## Features

- System Interface/Performance
  - RJ-45 ports support Auto MDI/MDI-X Function
  - Embedded 4-port or 8-port PoE injector function
  - Store-and-Forward Switching Architecture
  - Back-plane (Switching Fabric): 5.6Gbps (8 10/100TX + 2 Giga Copper/Mini-GBIC Combo model)
  - Back-plane (Switching Fabric): 3.6Gbps (8 10/100TX + 1 10/100/1000T/100/1000 SFP Combo model)
  - 1Mbits Packet Buffer
  - 8K MAC Address Table
- VLAN
  - Port Based VLAN
  - Support 802.1 Q Tag VLAN
  - GVRP
  - Double Tag VLAN (Q in Q)\*
- Port Trunk with LACP
- 8 10/100TX + 2 Giga Copper/Mini-GBIC Combo model supports 802.1ab LLDP\*\*
- QoS (Quality of Service)
  - Support IEEE 802.1p Class of Service
  - Per port provides 4 priority queues
  - Port Base, Tag Base and Type of Service Priority
- Port Mirror: Monitor traffic in switched networks.
  - TX Packet only
  - RX Packet only
  - Both of TX and RX Packet
- Security
  - Port Security : MAC address entries/filter
  - IP Security : IP address security management to prevent unauthorized intruder.
  - Login Security: IEEE802.1X/RADIUS
- IGMP with Query mode for Multi Media Application

- Spanning Tree
  - Support IEEE802.1d Spanning Tree
  - Support IEEE802.1w Rapid Spanning Tree
- X-ring
  - X-ring, Dual Homing, and Couple Ring Topology
  - Provide redundant backup feature and the recovery time below 300ms
- Support 802.1ab LLDP \*\*
- Bandwidth Control
  - Ingress Packet Filter and Egress Rate Limit
  - Broadcast/Multicast Packet Filter Control
- System Event Log
  - System Log Server/Client
  - SMTP e-mail Alert
- SNMP Trap
  - Device cold start
  - Authentication failure
  - X-ring topology changed
  - Port Link up/Link down
  - PoE Status \*
- TFTP Firmware Update and System Configure Restore and Backup

\* Future Release

\*\* Optional

## Software Feature

<b>Management</b>	<p>SNMP v1</p> <p>SNMP v2c</p> <p>SNMP v3</p> <p>Web/Telnet/Console (CLI)/Menu Driven**</p>
<b>VLAN</b>	<p>Port based VLAN</p> <p>IEEE802.1Q Tag VLAN(256 entries) / VLAN ID(Up to 4K, VLAN ID can be assigned from 1 to 4094)</p> <p>GVRP (256 Groups)</p> <p>Double Tag VLAN (Q in Q)*</p>
<b>Port Trunk with LACP</b>	<p>LACP Port Trunk: 4 trunk groups of maximum 4 trunk members</p>
<b>LLDP**</b>	<p>Supports LLDP that allows switch to advertise its identification and capability on the LAN</p>
<b>Spanning Tree</b>	<p>IEEE802.1d Spanning tree</p> <p>IEEE802.1w Rapid spanning tree</p>
<b>X-ring</b>	<p>Supports X-ring, Dual Homing, and Couple Ring</p> <p>Provides redundant backup feature and recovery time below 300ms</p>
<b>Quality of service</b>	<p>The quality of service determined by port, Tag and IPv4 Type of service, IPv4/IPv6 Different Service</p>
<b>Class of Service</b>	<p>Supports IEEE 802.1p Class of Service, per port provides 4 priority queues</p> <p>Weight Round Ratio (WRR)→ High: Mid-High: Mid-Low: Low (8:4:2:1)</p>

<b>Port Security</b>	Supports 100 entries of MAC address for static MAC and another 100 for MAC filter
<b>Port Mirror</b>	Supports 3 mirroring types: "RX, TX and Both packet"
<b>IGMP</b>	Supports IGMP snooping v1 and v2 256 multicast groups IGMP query mode
<b>IP Security</b>	Supports 10 IP addresses that have permission to access the switch management to prevent unauthorized intruder
<b>Bandwidth Control</b>	Supports ingress packet filter and egress packet limit The egress rate control supports all of packet type and the limit rates are 100Kbps (10/100) and 256Mbps (1000) Ingress filter packet type combination rules are Broadcast/Multicast/Unknown Unicast packet, Broadcast/Multicast packet, Broadcast only and all of packet The packet filter rate can be set as 100Kbps (10/100) and 256Mbps (1000)
<b>User Authentication</b>	Supports IEEE802.1x User Authentication and can report to RADIUS server
<b>Flow Control</b>	Supports Flow Control for Full-duplex and Back Pressure for Half-duplex

<b>System log</b>	Supports System log record and remote system log server
<b>SMTP</b>	Supports SMTP Server and 6 email accounts for receiving event alert
<b>SNMP Trap</b>	Up to 3 Trap stations Cold start, Port link down, Port link up, authorization failure, PoE status, X-ring topology change
<b>DHCP</b>	DHCP Client DHCP Server
<b>DNS</b>	Provides DNS client feature and supports Primary and Secondary DNS server
<b>SNTP</b>	Supports Simple Network Time Protocol to synchronize system clock in Internet
<b>Firmware Upgrade</b>	Supports TFTP firmware upgrade
<b>Configuration Upload and Download</b>	Supports binary format configuration file for system quick installation (TFTP backup and restore)

\* Future Release

\*\* Optional

## Package Contents

Unpack the contents of the 8 10/100TX + 2 Gigabit copper/Mini-GBIC Combo with 8 PoE Injectors Managed Switch or 8 10/100TX + 1 10/100/1000T/100/1000 SFP Combo with 4 PoE Injectors Managed Switch then verify them against the checklist below:

- **(1) 8 10/100TX + 2 Gigabit copper/Mini-GBIC Combo with 8 PoE Injectors Managed Switch** or **(1) 8 10/100TX + 1 10/100/1000T/100/1000 SFP Combo with 4 PoE Injectors Managed Switch**
- (4) Rubber Pads
- (1) RS-232 cable
- (1) Power Cord
- (1) User Manual

**8 10/100TX + 1 10/100/1000T/100/1000 SFP Combo with 4 PoE Injectors Managed Switch**

**8 10/100TX plus 2 Gigabit copper/MINI-GBIC Combo with 8 PoE Injectors Managed**

or

**Rubber Pads**

**RS-232 cable**

**Power Cord**

**User Manual**

Compare the contents of the package with the standard checklist above. If any item is missing or damaged, please contact the local dealer for exchanging.

# Hardware Description

---

This section mainly describes the hardware of the PoE Injector Managed Switch and gives a physical and functional overview on the certain switch.

## Physical Dimension

(MIL-SM802GAF) 8 10/100TX + 1 10/100/1000T/100/1000 SFP Combo with 4 PoE Injectors Managed Switch's physical dimensions is **217mm(W) x 140mm(D) x 43mm(H)**.

(MIL-SM8TXAF2GPA) 8 10/100TX + 2 Gigabit copper/Mini-GBIC Combo with 8 PoE Injectors Managed Switch's physical dimensions is **270mm(W) x 210mm(D) x 44mm(H)**.

## Front Panel

The front panel of the 8 10/100TX + 1 10/100/1000T/100/1000 SFP Combo with 4 PoE Injectors Managed Switch consists of 8 x 10/100Base-TX RJ-45 Ethernet ports (Auto MDI/MDIX), 1 Giga port and 1 Mini-GBIC ports. The LED Indicators are also located on the front panel of the switch.

The Front panel of the 8 10/100TX + 1 10/100/1000T/100/1000 SFP Combo with 4 PoE Injectors Managed Switch

- **RJ-45 Ports:** 8 x 10/100 N-way auto-sensing for 10Base-T or 100Base-TX connections. Ports 1 ~ 4 are general 10/100Base-TX Ethernet ports; Ports 5 ~ 8 are for Data in/out and Power out.

In general, **MDI** means connecting to another Hub or Switch while **MDIX** means connecting to a workstation or PC. Therefore, **Auto MDI/MDIX** would allow the unit to connect to another switch or workstation without changing non-crossover or crossover cabling.

- **1 Giga port:** 1 x 10/100/1000TX N-Way auto-sensing for 10/100/1000 connection.
- **1 Mini-GBIC (SFP) port:** 1 mini-GBIC port for Gigabit fiber connection (100/1000).

The front panel of the 8 10/100TX + 2 Gigabit copper/Mini-GBIC Combo with 8 PoE Injectors Managed Switch consists of 8 x 10/100Base-TX RJ-45 Ethernet ports (Auto MDI/MDIX), 2 Giga port and 2 Mini-GBIC ports. The LED Indicators are also located on the front panel of the switch.

The Front panel of the 8 10/100TX + 2 Gigabit copper/Mini-GBIC Combo with 8 PoE Injectors Managed Switch

- **RJ-45 Ports:** 8 x 10/100 N-way auto-sensing for 10Base-T or 100Base-TX connections. Moreover, these ports also supply power for PDs.  
In general, **MDI** means connecting to another Hub or Switch while **MDIX** means connecting to a workstation or PC. Therefore, **Auto MDI/MDIX** would allow connecting to another switch or workstation without changing non-crossover or crossover cabling.
- **2 Gigabit Ethernet port:** 2 x 10/100/1000TX N-Way auto-sensing for 10/100/1000 connection.
- **2 Mini-GBIC port:** 2 mini-GBIC ports for Gigabit or 100M fiber connection.

## LED Indicators

The LED Indicators display real-time information of systematic operation status. The following table provides descriptions of LED status and their meaning.

The LED indicators description of 8 10/100TX + 2 Gigabit Copper/Mini-GBIC Combo model (MIL-SM8TXAF2GPA)

LED	Status	Description
<b>Power</b>	Green	Power On
	OFF	No power inputs
<b>FWD (port 1~8)</b>	Green	The port is supplying power to the connected powered-device
	OFF	No powered device attached or power supplying failed
<b>1000M (RJ45 port 9~10)</b>	Green	The port is operating at speed of 1000M
	OFF	The port is disconnected or not operating at speed of 1000M
<b>LK/ACT (port 1~ 10)</b>	Green	Connected to network
	Blinking	Networking is active
	OFF	Not connected to network
<b>100M</b>	Green	The port is operating at speed of 100M
	OFF	The port is disconnected or not operating at speed of 100M

<b>LK/ACT (MINI GBIC 9, 10)</b>	Green	Connected to network
	Blinking	Networking is active
	OFF	Not connected to network

The LED indicators description of 8 10/100TX + 1 10/100/1000T/100/1000 SFP Combo model (MIL-SM802GAF)

<b>LED</b>	<b>Status</b>	<b>Description</b>
<b>Power</b>	Green	Power On
	OFF	No power inputs
<b>COPPER 1000M</b>	Green	The port is operating at speed of 1000M
	OFF	The port is disconnected or not operating at speed of 1000M
<b>LNK/ACT (port 1~ 9)</b>	Green	Connected to network
	Blinking	Networking is active
	OFF	Not connected to network
<b>SFP</b>	Green	Connected to network
	Blinking	Networking is active
	OFF	Not connected to network
<b>FWD (port 5~8)</b>	Green	The port is supplying power to the connected powered-device

	OFF	No powered device attached or power supplying failed
<b>100M</b>	Green	The port is operating at speed of 100M
	OFF	The port is disconnected or not operating at speed of 100M
<b>FDX/COL (port 1~8)</b>	Orange	Full duplex
	Blinking	Collision of packets occurs
	OFF	Half duplex or not connected to network

## Rear Panel

The 3-pronged power plug is located on the rear panel of the 8 10/100TX + 1 10/100/1000/100/1000 SFP Combo with 4 PoE Injectors Managed Switch as shown below. The switch will work with AC in the voltage range of AC 100-240V with Frequency of 50-60Hz.

The Rear Panel of the 8 10/100TX + 1 10/100/1000/100/1000 SFP Combo with 4 PoE Injectors Managed Switch (MIL-SM802GAF)

The 3-pronged power plug and terminal block are located on the rear panel of the 8 10/100TX + 2 Gigabit copper/Mini-GBIC Combo with 8 PoE Injectors Managed Switch as shown below. The switch will work with AC in the voltage range of AC 100-240V with

Frequency of 50-60Hz, or work with DC 48V which is the redundant power supply for the switch.

The Rear Panel of the 8 10/100TX + 2 Gigabit copper/ MINI GBIC Combo with 8 PoE Injector Managed Switch (MIL-SM8TXAF2GPA)

## Desktop Installation

Set the switch on a sufficiently large flat space with a power outlet nearby. The surface where you put the switch should be clean, smooth, level and sturdy. Make sure there is enough clearance around the switch to allow attachment of cables, power cord and allow air circulation.

## Attaching Rubber Pads

- A. Make sure mounting surface on the bottom of the switch is grease and dust free.
- B. Remove adhesive backing from your Rubber Pads.
- C. Apply the Rubber Pads to each corner on the bottom of the switch. These footpads can prevent the switch from shock/vibration.

## Power On

Connect the power cord to the power socket on the rear panel of the switch. The other side of power cord connects to the power outlet. The internal power supply of the switch works with voltage range of AC in the 100-240VAC/ Frequency of 50~60Hz, or the redundant power of DC 48V for 8 10/100TX + 2 Gigabit copper/Mini-GBIC Combo with 8 PoE Injectors Managed Switch. Check the power indicator on the front panel to see if power is properly supplied.

# Network Application

---

This section provides a few samples of network topology in which the switch is used. In general, the PoE Injector Managed Switch is designed as a segment switch which has large address table (8k MAC addresses) and high performance to deal with interconnecting networking segments.

PC, workstations, and servers can communicate each other by directly connecting with PoE injector Managed Switch. The switch automatically learns nodes addresses, which are subsequently used to filter and forward all traffic based on the destination address.

Using the uplink port (Giga Combo port), the switch can connect with another switch or hub to interconnect other small-switched workgroups to form a larger switched network. Meanwhile, user can also use fiber ports to connect switches. The PoE switch also injects power into the UTP cables for supplying the power that PDs (Power Devices) need.

The Power over Ethernet Switch can provide power to PDs that follow the IEEE 802.3af standard in the network. It can solve the problem of position limitation. The network devices can be installed in more appropriate position for better performance. The following figure is an example of network application for Power over Ethernet Switch.

## Small Workgroup

The PoE Injector Managed Switch can be used as a standalone switch to which personal computers, server, printer server, are directly connected to form a small workgroup.

## PoE Injectors Managed Switch

Small Workgroup application

## Segment Bridge

For enterprise networks where large data broadcasts are constantly processed, this switch is an ideal solution for department users to connect to the corporate backbone.

In the illustration below, two Ethernet switches with PCs, print server, and local server attached, are both connected to the switch. All the devices in this network can communicate with each other through the switch. Connecting servers to the switch allows other users to access the data on server.

Segment Bridge application

# Console Management

---

## Login in the Console Interface

When the connection between switch and PC is ready, turn on the PC and run a terminal emulation program or **Hyper Terminal** and configure its **communication parameters** to match the following default characteristics of the console port:

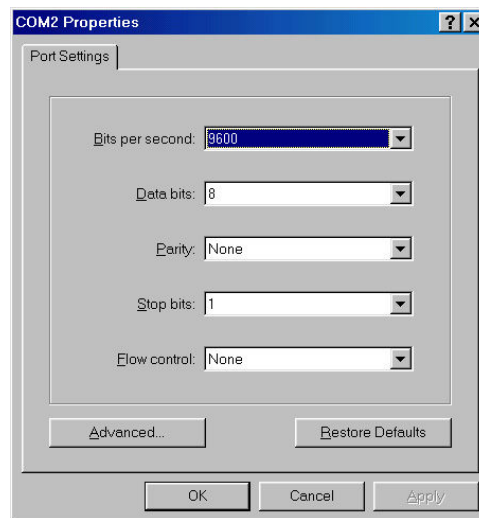

**Baud Rate: 9600 bps**

**Data Bits: 8**

**Parity: none**

**Stop Bit: 1**

**Flow control: None**

The settings of communication parameters

After finishing the parameter settings, click **“OK”**. When the blank screen shows up, press Enter key to bring out the login prompt. Key in the **‘root’** (default value) for both User name and Password (use **Enter** key to toggle), then hit Enter key and the console management appears right after. Please see the figure below for login screen.

```
                Welcome to the
8 10/100TX + 2 10/100/1000T/ Mini-GBIC Combo w/ 8 PoE Injector Managed Switch
```

```
User Name : _
```

```
Password :
```

Console login screen

## CLI Management

The system supports console management – CLI command. After you login to the system, you will see a command prompt. To enter CLI management interface, enter “**enable**” command. The following table lists the CLI commands and description.

```
switch>enable
switch#_
```

CLI command interface

## Commands Level

Modes	Access Method	Prompt	Exit Method	About This Mode <sup>1</sup>
User EXEC	Begin a session with your switch.	switch>	Enter logout or quit.	The user commands available at the user level are a subset of those available at the privileged level. Use this mode to <ul style="list-style-type: none"> <li>• Perform basic tests.</li> <li>• Display system information.</li> </ul>
Privileged EXEC	Enter the enable command while in user	switch#	Enter disable to exit.	The privileged command is in advanced mode Privileged this mode

	EXEC mode.			to <ul style="list-style-type: none"> <li>• Display advanced function status</li> <li>• Save configuration</li> </ul>
Global Configuration	Enter the configure command while in privileged EXEC mode.	switch (config)#	To exit to privileged EXEC mode, enter exit or end	Use this mode to configure parameters that apply to your switch as a whole.
VLAN database	Enter the vlan database command while in privileged EXEC mode.	switch (vlan)#	To exit to user EXEC mode, enter exit.	Use this mode to configure VLAN-specific parameters.
Interface configuration	Enter the interface command (with a specific interface) while in global configuration mode	switch (config-if) #	To exit to global configuration mode, enter exit. To exist to privileged EXEC mode, or end.	Use this mode to configure parameters for the switch and Ethernet ports.

<b>ip dhcp</b>	<b>G</b>	Enable DHCP client function of switch	switch(config)# <b>ip dhcp</b>
<b>show ip</b>	<b>P</b>	Show IP information of switch	switch# <b>show ip</b>
<b>no ip dhcp</b>	<b>G</b>	Disable DHCP client function of switch	switch(config)# <b>no ip dhcp</b>
<b>reload</b>	<b>G</b>	Halt and perform a cold restart	switch(config)# <b>reload</b>
<b>default</b>	<b>G</b>	Restore to default	switch(config)# <b>default</b>
<b>admin username</b> [Username]	<b>G</b>	Changes a login username. (maximum 10 words)	switch(config)# <b>admin username</b> <b>xxxxxx</b>
<b>admin password</b> [Password]	<b>G</b>	Specifies a password (maximum 10 words)	switch(config)# <b>admin password</b> <b>xxxxxx</b>
<b>show admin</b>	<b>P</b>	Show administrator information	switch# <b>show admin</b>
<b>dhcpserver enable</b>	<b>G</b>	Enable DHCP Server	switch(config)# <b>dhcpserver enable</b>
<b>Dhcpserver disable</b>	<b>G</b>	Disable DHCP Server	switch(config)# <b>no dhcpserver</b>
<b>dhcpserver lowip</b> [Low IP]	<b>G</b>	Configure low IP address for IP pool	switch(config)# <b>dhcpserver lowip</b> <b>192.168.1.100</b>
<b>dhcpserver highip</b> [High IP]	<b>G</b>	Configure high IP address for IP pool	switch(config)# <b>dhcpserver highip</b> <b>192.168.1.200</b>
<b>dhcpserver subnetmask</b> [Subnet mask]	<b>G</b>	Configure subnet mask for DHCP clients	switch(config)# <b>dhcpserver subnetmask</b> <b>255.255.255.0</b>
<b>dhcpserver gateway</b> [Gateway]	<b>G</b>	Configure gateway for DHCP clients	switch(config)# <b>dhcpserver gateway</b> <b>192.168.1.254</b>
<b>dhcpserver dnsip</b> [DNS IP]	<b>G</b>	Configure DNS IP for DHCP clients	switch(config)# <b>dhcpserver dnsip</b> <b>192.168.1.1</b>
<b>dhcpserver leasetime</b> [Hours]	<b>G</b>	Configure lease time (in hour)	switch(config)# <b>dhcpserver leasetime</b> <b>1</b>
<b>dhcpserver ipbinding</b>	<b>I</b>	Set static IP for DHCP	switch(config)# <b>interface</b>

[IP address]		clients by port	<b>fastEthernet 2</b> switch(config)# <b>dhcpserver ipbinding 192.168.1.1</b>
<b>show dhcpserver configuration</b>	<b>P</b>	Show configuration of DHCP server	switch# <b>show dhcpserver configuration</b>
<b>show dhcpserver clients</b>	<b>P</b>	Show client entries of DHCP server	switch# <b>show dhcpserver clients</b>
<b>show dhcpserver ip-binding</b>	<b>P</b>	Show IP-Binding information of DHCP server	switch# <b>show dhcpserver ip-binding</b>
<b>no dhcpserver</b>	<b>G</b>	Disable DHCP server function	switch(config)# <b>no dhcpserver</b>
<b>security enable</b>	<b>G</b>	Enable IP security function	switch(config)# <b>security enable</b>
<b>security http</b>	<b>G</b>	Enable IP security of HTTP server	switch(config)# <b>security http</b>
<b>security telnet</b>	<b>G</b>	Enable IP security of telnet server	switch(config)# <b>security telnet</b>
<b>security ip [Index(1..10)] [IP Address]</b>	<b>G</b>	Set the IP security list	switch(config)# <b>security ip 1 192.168.1.55</b>
<b>show security</b>	<b>P</b>	Show the information of IP security	switch# <b>show security</b>
<b>no security</b>	<b>G</b>	Disable IP security function	switch(config)# <b>no security</b>
<b>no security http</b>	<b>G</b>	Disable IP security of HTTP server	switch(config)# <b>no security http</b>
<b>no security telnet</b>	<b>G</b>	Disable IP security of telnet server	switch(config)# <b>no security telnet</b>

## Port Commands Set

Commands	Level	Description	Example
<b>interface fastEthernet</b> [Portid]	<b>G</b>	Choose the port for modification.	switch(config)# <b>interface fastEthernet 2</b>
<b>duplex</b> [full   half]	<b>I</b>	Use the duplex configuration command to specify the duplex mode of operation for Fast Ethernet.	switch(config)# <b>interface fastEthernet 2</b> switch(config-if)# <b>duplex full</b>
<b>speed</b> [10 100 1000 auto]	<b>I</b>	Use the speed configuration command to specify the speed mode of operation for Fast Ethernet., the speed can't be set to 1000 if the port isn't a giga port..	switch(config)# <b>interface fastEthernet 2</b> switch(config-if)# <b>speed 100</b>
<b>no flowcontrol</b>	<b>I</b>	Disable flow control of interface	switch(config-if)# <b>no flowcontrol</b>
<b>security enable</b>	<b>I</b>	Enable security of interface	switch(config)# <b>interface fastEthernet 2</b> switch(config-if)# <b>security enable</b>
<b>no security</b>	<b>I</b>	Disable security of interface	switch(config)# <b>interface fastEthernet 2</b> switch(config-if)# <b>no security</b>
<b>bandwidth type all</b>	<b>I</b>	Set interface ingress limit frame type to 'accept all frame'	switch(config)# <b>interface fastEthernet 2</b> switch(config-if)# <b>bandwidth type all</b>

<b>bandwidth type broadcast-multicast-flooded-unicast</b>	<b>I</b>	Set interface ingress limit frame type to 'accept broadcast, multicast, and flooded unicast frame'	switch(config)# <b>interface fastEthernet 2</b> switch(config-if)# <b>bandwidth type broadcast-multicast-flooded-unicast</b>
<b>bandwidth type broadcast-multicast</b>	<b>I</b>	Set interface ingress limit frame type to 'accept broadcast and multicast frame'	switch(config)# <b>interface fastEthernet 2</b> switch(config-if)# <b>bandwidth type broadcast-multicast</b>
<b>bandwidth type broadcast-only</b>	<b>I</b>	Set interface ingress limit frame type to 'only accept broadcast frame'	switch(config)# <b>interface fastEthernet 2</b> switch(config-if)# <b>bandwidth type broadcast-only</b>
<b>bandwidth in [Value]</b>	<b>I</b>	Set interface input bandwidth. Rate Range is from 100 kbps to 102400 kbps or to 256000 kbps for giga ports, and zero means no limit.	switch(config)# <b>interface fastEthernet 2</b> switch(config-if)# <b>bandwidth in 100</b>
<b>bandwidth out [Value]</b>		Set interface output bandwidth. Rate Range is from 100 kbps to 102400 kbps or to 256000 kbps for giga ports, and zero means no limit.	switch(config)# <b>interface fastEthernet 2</b> switch(config-if)# <b>bandwidth out 100</b>
<b>show bandwidth</b>	<b>I</b>	Show interfaces bandwidth control	switch(config)# <b>interface fastEthernet 2</b> switch(config-if)# <b>show bandwidth</b>

<b>state</b> [Enable   Disable]	I	Use the state interface configuration command to specify the state mode of operation for Ethernet ports. Use the disable form of this command to disable the port.	switch(config)# <b>interface fastEthernet 2</b> (config-if)# <b>state Disable</b>
<b>show interface configuration</b>	I	show interface configuration status	switch(config)# <b>interface fastEthernet 2</b> switch(config-if)# <b>show interface configuration</b>
<b>show interface status</b>	I	show interface actual status	switch(config)# <b>interface fastEthernet 2</b> (config-if)# <b>show interface status</b>
<b>show interface accounting</b>	I	show interface statistic counter	switch(config)# <b>interface fastEthernet 2</b> (config-if)# <b>show interface accounting</b>
<b>no accounting</b>	I	Clear interface accounting information	switch(config)# <b>interface fastEthernet 2</b> switch(config-if)# <b>no accounting</b>

### Trunk Commands Set

Commands	Level	Description	Example
<b>aggregator priority</b> [1~65535]	G	Set port group system priority	switch(config)# <b>aggregator priority 22</b>
<b>aggregator activityport</b> [Group ID] [Port Numbers]	G	Set activity port	switch(config)# <b>aggregator activityport 2</b>
<b>aggregator group</b>	G	Assign a trunk group	switch(config)# <b>aggregator group</b>

<p>[GroupID] [Port-list]  <b>lacp</b>  <b>workp</b>  [Workport]</p>		<p>with LACP active.  [GroupID] :1~4  [Port-list]:Member port list, This parameter could be a port range(ex.1-4) or a port list separate by a comma(ex.2, 3, 6)  [Workport]: The amount of work ports, this value could not be less than zero or be large than the amount of member ports.</p>	<p><b>1 1-4 lacp workp 2</b>  or  switch(config)#<b>aggregator group 2 1,4,3 lacp workp 3</b></p>
<p><b>aggregator group</b>  [GroupID] [Port-list]  <b>nolacp</b></p>	<p><b>G</b></p>	<p>Assign a static trunk group.  [GroupID] :1~4  [Port-list]:Member port list, This parameter could be a port range(ex.1-4) or a port list separate by a comma(ex.2, 3, 6)</p>	<p>switch(config)#<b>aggregator group 1 2-4 nolacp</b>  or  switch(config)#<b>aggregator group 1 3,1,2 nolacp</b></p>
<p><b>show aggregator</b></p>	<p><b>P</b></p>	<p>Show the information of trunk group</p>	<p>switch#<b>show aggregator 1</b>  or  switch#<b>show aggregator 2</b>  or  switch#<b>show aggregator 3</b></p>
<p><b>no aggregator lacp</b>  [GroupID]</p>	<p><b>G</b></p>	<p>Disable the LACP function of trunk group</p>	<p>switch(config)#<b>no aggregator lacp 1</b></p>
<p><b>no aggregator group</b>  [GroupID]</p>	<p><b>G</b></p>	<p>Remove a trunk group</p>	<p>switch(config)#<b>no aggregator group 2</b></p>

## VLAN Commands Set

Commands	Level	Description	Example
<b>vlan database</b>	<b>P</b>	Enter VLAN configure mode	switch# <b>vlan database</b>
<b>Vlanmode</b> [portbase  802.1q   gvrp]	<b>V</b>	To set switch VLAN mode.	switch(vlan)# <b>vlanmode portbase</b> or switch(vlan)# <b>vlanmode 802.1q</b> or switch(vlan)# <b>vlanmode gvrp</b>
<b>no vlan</b>	<b>V</b>	No VLAN	Switch(vlan)# <b>no vlan</b>
<b>Ported based VLAN configuration</b>			
<b>vlan port-based</b> <b>grpname</b> [Group Name] <b>grp-id</b> [GroupID] <b>port</b> [PortNumbers]	<b>V</b>	Add new port based VLAN	switch(vlan)# <b>vlan port-based</b> <b>grpname test grp-id 2 port 2-4</b> <b>or</b> switch(vlan)# <b>vlan port-based</b> <b>grpname test grp-id 2 port 2,3,4</b>
<b>show vlan</b> [GroupID] or <b>show vlan</b>	<b>V</b>	Show VLAN information	switch(vlan)# <b>show vlan 23</b>
<b>no vlan group</b> [GroupID]	<b>V</b>	Delete port base group ID	switch(vlan)# <b>no vlan group 2</b>
<b>IEEE 802.1Q VLAN</b>			
<b>vlan 8021q name</b> [GroupName] <b>vid</b> [VID]	<b>V</b>	Change the name of VLAN group, if the group didn't exist, this command can't be applied.	switch(vlan)# <b>vlan 8021q name</b> <b>test vid 22</b>
<b>vlan 8021q port</b> [PortNumber] <b>access-link untag</b> [UntaggedVID]	<b>V</b>	Assign a access link for VLAN by port, if the	switch(vlan)# <b>vlan 8021q port 3</b> <b>access-link untag 33</b>

		port belong to a trunk group, this command can't be applied.	
<b>vlan 8021q port</b> [PortNumber] <b>trunk-link tag</b> [TaggedVID List]	<b>V</b>	Assign a trunk link for VLAN by port, if the port belong to a trunk group, this command can't be applied.	switch(vlan)# <b>vlan 8021q port 3 trunk-link tag 2,3,6,99</b> or switch(vlan)# <b>vlan 8021q port 3 trunk-link tag 3-20</b>
<b>vlan 8021q port</b> [PortNumber] <b>hybrid-link untag tag</b> [UntaggedVID] <b>tag</b> [TaggedVID List]	<b>V</b>	Assign a hybrid link for VLAN by port, if the port belong to a trunk group, this command can't be applied.	switch(vlan)# <b>vlan 8021q port 3 hybrid-link untag 4 tag 3,6,8</b> or switch(vlan)# <b>vlan 8021q port 3 hybrid-link untag 5 tag 6-8</b>
<b>vlan 8021q trunk</b> [PortNumber] <b>access-link untag</b> [UntaggedVID]	<b>V</b>	Assign a access link for VLAN by trunk group	switch(vlan)# <b>vlan 8021q trunk 3 access-link untag 33</b>
<b>vlan 8021q trunk</b> [PortNumber] <b>trunk-link tag</b> [TaggedVID List]	<b>V</b>	Assign a trunk link for VLAN by trunk group	switch(vlan)# <b>vlan 8021q trunk 3 trunk-link tag 2,3,6,99</b> or switch(vlan)# <b>vlan 8021q trunk 3 trunk-link tag 3-20</b>
<b>vlan 8021q trunk</b> [PortNumber] <b>hybrid-link untag tag</b> [UntaggedVID] <b>tag</b> [TaggedVID List]	<b>V</b>	Assign a hybrid link for VLAN by trunk group	switch(vlan)# <b>vlan 8021q trunk 3 hybrid-link untag 4 tag 3,6,8</b> or switch(vlan)# <b>vlan 8021q trunk 3 hybrid-link untag 5 tag 6-8</b>
<b>show vlan</b> [GroupID] or <b>show vlan</b>	<b>V</b>	Show VLAN information	switch(vlan)# <b>show vlan 23</b>
<b>no vlan group</b> [GroupID]	<b>V</b>	Delete port base group ID	switch(vlan)# <b>no vlan group 2</b>

## Spanning Tree Commands Set

Commands	Level	Description	Example
<b>spanning-tree enable</b>	<b>G</b>	Enable spanning tree	switch(config)# <b>spanning-tree enable</b>
<b>spanning-tree priority [0~61440]</b>	<b>G</b>	Configure spanning tree priority parameter	switch(config)# <b>spanning-tree priority 32767</b>
<b>spanning-tree max-age [seconds]</b>	<b>G</b>	Use the spanning-tree max-age global configuration command to change the interval between messages the spanning tree receives from the root switch. If a switch does not receive a bridge protocol data unit (BPDU) message from the root switch within this interval, it recomputed the Spanning Tree Protocol (STP) topology.	switch(config)# <b>spanning-tree max-age 15</b>
<b>spanning-tree hello-time [seconds]</b>	<b>G</b>	Use the spanning-tree hello-time global configuration command to specify the interval between hello bridge protocol data units (BPDUs).	switch(config)# <b>spanning-tree hello-time 3</b>
<b>spanning-tree</b>	<b>G</b>	Use the spanning-tree	switch(config)# <b>spanning-tree</b>

<b>forward-time [seconds]</b>		<p>forward-time global configuration command to set the forwarding-time for the specified spanning-tree instances. The forwarding time determines how long each of the listening and learning states last before the port begins forwarding.</p>	<b>forward-time 20</b>
<b>stp-path-cost [1~200000000]</b>	<p>I Use the spanning-tree cost interface configuration command to set the path cost for Spanning Tree Protocol (STP) calculations. In the event of a loop, spanning tree considers the path cost when selecting an interface to place into the forwarding state.</p>	<p>switch(config)#<b>interface fastEthernet 2</b> switch(config-if)#<b>stp-path-cost 20</b></p>	
<b>stp-path-priority [Port Priority]</b>	<p>I Use the spanning-tree port-priority interface configuration command to configure</p>	<p>switch(config)#<b>interface fastEthernet 2</b> switch(config-if)#<b>stp-path-priority 128</b></p>	

		a port priority that is used when two switches tie for position as the root switch.	
<b>stp-admin-p2p</b> [Auto True False]	I	Admin P2P of STP priority on this interface.	switch(config)# <b>interface fastEthernet 2</b> switch(config-if)# <b>stp-admin-p2p Auto</b>
<b>stp-admin-edge</b> [True False]	I	Admin Edge of STP priority on this interface.	switch(config)# <b>interface fastEthernet 2</b> switch(config-if)# <b>stp-admin-edge True</b>
<b>stp-admin-non-stp</b> [True False]	I	Admin NonSTP of STP priority on this interface.	switch(config)# <b>interface fastEthernet 2</b> switch(config-if)# <b>stp-admin-non-stp False</b>
<b>show spanning-tree</b>	E	Displays a summary of the spanning-tree states.	switch> <b>show spanning-tree</b>
<b>no spanning-tree</b>	G	Disable spanning-tree.	switch(config)# <b>no spanning-tree</b>

### QOS Commands Set

Commands	Level	Description	Example
<b>qos policy</b> [weighted-fair strict]	G	Select QOS policy scheduling	switch(config)# <b>qos policy weighted-fair</b>
<b>qos prioritytype</b> [port-based cos-only tos-only cos-first tos-first]	G	Setting of QOS priority type	switch(config)# <b>qos prioritytype</b>
<b>qos priority portbased</b> [Port] [lowest low middle high]	G	Configure Port-based Priority	switch(config)# <b>qos priority portbased 1 low</b>

<b>qos priority cos</b> [Priority][lowest low middle high]	<b>G</b>	Configure COS Priority	switch(config)# <b>qos priority cos 0 middle</b>
<b>qos priority tos</b> [Priority][lowest low middle high]	<b>G</b>	Configure TOS Priority	switch(config)# <b>qos priority tos 3 high</b>
<b>show qos</b>	<b>P</b>	Displays the information of QoS configuration	Switch# <b>show qos</b>
<b>no qos</b>	<b>G</b>	Disable QoS function	switch(config)# <b>no qos</b>

### IGMP Commands Set

Commands	Level	Description	Example
<b>igmp enable</b>	<b>G</b>	Enable IGMP snooping function	switch(config)# <b>igmp enable</b>
<b>igmp-query auto</b>	<b>G</b>	Set IGMP query to auto mode	switch(config)# <b>igmp-query auto</b>
<b>igmp-query force</b>	<b>G</b>	Set IGMP query to force mode	switch(config)# <b>igmp-query force</b>
<b>show igmp configuration</b>	<b>P</b>	Displays the details of an IGMP configuration.	switch# <b>show igmp configuration</b>
<b>show igmp multi</b>	<b>P</b>	Displays the details of an IGMP snooping entries.	switch# <b>show igmp multi</b>
<b>no igmp</b>	<b>G</b>	Disable IGMP snooping function	switch(config)# <b>no igmp</b>
<b>no igmp-query</b>	<b>G</b>	Disable IGMP query	switch# <b>no igmp-query</b>

### Mac / Filter Table Commands Set

Commands	Level	Description	Example
<b>mac-address-table static</b>	<b>I</b>	Configure MAC	switch(config)# <b>interface</b>

<b>hwaddr</b> [MAC]		address table of interface (static).	<b>fastEthernet 2</b> switch(config-if)# <b>mac-address-table static hwaddr 000012345678</b>
<b>mac-address-table filter hwaddr</b> [MAC]	<b>G</b>	Configure MAC address table(filter)	switch(config)# <b>mac-address-table filter hwaddr 000012348678</b>
<b>show mac-address-table</b>	<b>P</b>	Show all MAC address table	switch# <b>show mac-address-table</b>
<b>show mac-address-table static</b>	<b>P</b>	Show static MAC address table	switch# <b>show mac-address-table static</b>
<b>show mac-address-table filter</b>	<b>P</b>	Show filter MAC address table.	switch# <b>show mac-address-table filter</b>
<b>no mac-address-table static hwaddr</b> [MAC]	<b>I</b>	Remove an entry of MAC address table of interface (static)	switch(config)# <b>interface fastEthernet 2</b> switch(config-if)# <b>no mac-address-table static hwaddr 000012345678</b>
<b>no mac-address-table filter hwaddr</b> [MAC]	<b>G</b>	Remove an entry of MAC address table (filter)	switch(config)# <b>no mac-address-table filter hwaddr 000012348678</b>
<b>no mac-address-table</b>	<b>G</b>	Remove dynamic entry of MAC address table	switch(config)# <b>no mac-address-table</b>

## SNMP Commands Set

Commands	Level	Description	Example
<b>snmp system-name</b> [System Name]	<b>G</b>	Set SNMP agent system name	switch(config)# <b>snmp system-name I2switch</b>
<b>snmp system-location</b> [System Location]	<b>G</b>	Set SNMP agent system location	switch(config)# <b>snmp system-location lab</b>
<b>snmp system-contact</b> [System Contact]	<b>G</b>	Set SNMP agent system contact	switch(config)# <b>snmp system-contact where</b>

<b>snmp agent-mode</b> [v1v2c v3 v1v2cv3]	<b>G</b>	Select the agent mode of SNMP	switch(config)# <b>snmp agent-mode v1v2cv3</b>
<b>snmp community-strings</b> [Community] <b>right</b> [RO/RW]	<b>G</b>	Add SNMP community string.	switch(config)# <b>snmp community-strings public right rw</b>
<b>snmp-server host</b> [IP address] <b>community</b> [Community-string] <b>trap-version</b> [v1 v2c]	<b>G</b>	Configure SNMP server host information and community string	switch(config)# <b>snmp-server host 192.168.1.50 community public trap-version v1 (remove)</b> Switch(config)# <b>no snmp-server host 192.168.1.50</b>
<b>snmpv3 context-name</b> [Context Name ]	<b>G</b>	Configure the context name	switch(config)# <b>snmpv3 context-name Test</b>
<b>snmpv3 user</b> [User Name] <b>group</b> [Group Name] <b>password</b> [Authentication Password] [Privacy Password]	<b>G</b>	Configure the userprofile for SNMPV3 agent. Privacy password could be empty.	switch(config)# <b>snmpv3 user test01 group G1 password AuthPW PrivPW</b>
<b>snmpv3 access</b> <b>context-name</b> [Context Name ] <b>group</b> [Group Name ] <b>security-level</b> [NoAuthNoPriv AuthNoPriv AuthPriv]	<b>G</b>	Configure the access table of SNMPV3 agent	switch(config)# <b>snmpv3 access context-name Test group G1 security-level AuthPriv match-rule Exact views V1 V1 V1</b>

<b>match-rule</b> [Exact Prifix] <b>views</b> [Read View Name] [Write View Name] [Notify View Name]			
<b>snmpv3 mibview view</b> [View Name] <b>type</b> [Excluded Included] <b>sub-oid</b> [OID]	<b>G</b>	Configure the mibview table of SNMPV3 agent	switch(config)# <b>snmpv3 mibview view V1 type Excluded sub-oid 1.3.6.1</b>
<b>show snmp</b>	<b>P</b>	Show SNMP configuration	switch# <b>show snmp</b>
<b>no snmp community-strings</b> [Community]	<b>G</b>	Remove the specified community.	switch(config)# <b>no snmp community-strings public</b>
<b>no snmp-server host</b> [Host-address]	<b>G</b>	Remove the SNMP server host.	switch(config)# <b>no snmp-server 192.168.1.50</b>
<b>no snmpv3 user</b> [User Name]	<b>G</b>	Remove specified user of SNMPv3 agent.	switch(config)# <b>no snmpv3 user Test</b>
<b>no snmpv3 access context-name</b> [Context Name ] <b>group</b> [Group Name ] <b>security-level</b> [NoAuthNoPriv AuthNoPriv AuthPriv] <b>match-rule</b> [Exact Prifix] <b>views</b>	<b>G</b>	Remove specified access table of SNMPv3 agent.	switch(config)# <b>no snmpv3 access context-name Test group G1 security-level AuthPriv match-rule Exact views V1 V1 V1</b>

[Read View Name] [Write View Name] [Notify View Name]			
<b>no snmpv3 mibview view</b> [View Name] <b>type</b> [Excluded Included] <b>sub-oid</b> [OID]	<b>G</b>	Remove specified mibview table of SNMPV3 agent.	switch(config)# <b>no snmpv3 mibview view V1 type Excluded sub-oid 1.3.6.1</b>

### Port Mirroring Commands Set

Commands	Level	Description	Example
<b>monitor rx</b>	<b>G</b>	Set RX destination port of monitor function	switch(config)# <b>monitor rx</b>
<b>monitor tx</b>	<b>G</b>	Set TX destination port of monitor function	switch(config)# <b>monitor tx</b>
<b>show monitor</b>	<b>P</b>	Show port monitor information	switch# <b>show monitor</b>
<b>monitor</b> [RX TX Both]	<b>I</b>	Configure source port of monitor function	switch(config)# <b>interface fastEthernet 2</b> switch(config-if)# <b>monitor RX</b>
<b>show monitor</b>	<b>I</b>	Show port monitor information	switch(config)# <b>interface fastEthernet 2</b> switch(config-if)# <b>show monitor</b>
<b>no monitor</b>	<b>I</b>	Disable source port of monitor function	switch(config)# <b>interface fastEthernet 2</b> switch(config-if)# <b>no monitor</b>

### 802.1x Commands Set

Commands	Level	Description	Example
----------	-------	-------------	---------

<b>8021x enable</b>	<b>G</b>	Use the 802.1x global configuration command to enable 802.1x protocols.	switch(config)# <b>8021x enable</b>
<b>8021x system radiusip</b> [IP address]	<b>G</b>	Use the 802.1x system radius IP global configuration command to change the radius server IP.	switch(config)# <b>8021x system radiusip 192.168.1.1</b>
<b>8021x system serverport</b> [port ID]	<b>G</b>	Use the 802.1x system server port global configuration command to change the radius server port	switch(config)# <b>8021x system serverport 1815</b>
<b>8021x system accountport</b> [port ID]	<b>G</b>	Use the 802.1x system account port global configuration command to change the accounting port	switch(config)# <b>8021x system accountport 1816</b>
<b>8021x system sharekey</b> [ID]	<b>G</b>	Use the 802.1x system share key global configuration command to change the shared key value.	switch(config)# <b>8021x system sharekey 123456</b>
<b>8021x system nasid</b> [words]	<b>G</b>	Use the 802.1x system nasid global configuration command to change the NAS ID	switch(config)# <b>8021x system nasid test1</b>

<b>8021x misc quietperiod</b> [sec.]	<b>G</b>	Use the 802.1x misc quiet period global configuration command to specify the quiet period value of the switch.	switch(config)# <b>8021x misc quietperiod 10</b>
<b>8021x misc txperiod</b> [sec.]	<b>G</b>	Use the 802.1x misc TX period global configuration command to set the TX period.	switch(config)# <b>8021x misc txperiod 5</b>
<b>8021x misc supportimeout</b> [sec.]	<b>G</b>	Use the 802.1x misc supp timeout global configuration command to set the supplicant timeout.	switch(config)# <b>8021x misc supportimeout 20</b>
<b>8021x misc servertimeout</b> [sec.]	<b>G</b>	Use the 802.1x misc server timeout global configuration command to set the server timeout.	switch(config)# <b>8021x misc servertimeout 20</b>
<b>8021x misc maxrequest</b> [number]	<b>G</b>	Use the 802.1x misc max request global configuration command to set the MAX requests.	switch(config)# <b>8021x misc maxrequest 3</b>
<b>8021x misc reauthperiod</b> [sec.]	<b>G</b>	Use the 802.1x misc reauth period global configuration command to set the reauth period.	switch(config)# <b>8021x misc reauthperiod 3000</b>
<b>8021x portstate</b>	<b>I</b>	Use the 802.1x port	switch(config)# <b>interface</b>

[disable   reject   accept   authorize]		state interface configuration command to set the state of the selected port.	<b>fastethernet 3</b> switch(config-if)# <b>8021x portstate accept</b>
<b>show 8021x</b>	<b>E</b>	Displays a summary of the 802.1x properties and also the port sates.	switch> <b>show 8021x</b>
<b>no 8021x</b>	<b>G</b>	Disable 802.1x function	switch(config)# <b>no 8021x</b>

### TFTP Commands Set

Commands	Level	Description	Defaults Example
<b>backup</b> <b>flash:backup_cfg</b>	<b>G</b>	Save configuration to TFTP and need to specify the IP of TFTP server and the file name of image.	switch(config)# <b>backup</b> <b>flash:backup_cfg</b>
<b>restore flash:restore_cfg</b>	<b>G</b>	Get configuration from TFTP server and need to specify the IP of TFTP server and the file name of image.	switch(config)# <b>restore</b> <b>flash:restore_cfg</b>
<b>upgrade</b> <b>flash:upgrade_fw</b>	<b>G</b>	Upgrade firmware by TFTP and need to specify the IP of TFTP server and the file name of image.	switch(config)# <b>upgrade</b> <b>lash:upgrade_fw</b>

## SystemLog, SMTP and Event Commands Set

Commands	Level	Description	Example
<b>systemlog ip</b> [IP address]	<b>G</b>	Set System log server IP address.	switch(config)# <b>systemlog ip 192.168.1.100</b>

### SNTP Commands Set

Commands	Level	Description	Example
<b>sntp enable</b>	<b>G</b>	Enable SNTP function	switch(config)# <b>sntp enable</b>

<b>sntp daylight</b>	<b>G</b>	Enable daylight saving time, if SNTP function is inactive, this command can't be applied.	switch(config)# <b>sntp daylight</b>
<b>sntp daylight-period</b> [Start time] [End time]	<b>G</b>	Set period of daylight saving time, if SNTP function is inactive, this command can't be applied. Parameter format: [yyyymmdd-hh:mm]	switch(config)# <b>sntp daylight-period 20060101-01:01 20060202-01-01</b>
<b>sntp daylight-offset</b> [Minute]	<b>G</b>	Set offset of daylight saving time, if SNTP function is inactive, this command can't be applied.	switch(config)# <b>sntp daylight-offset 3</b>
<b>sntp ip</b> [IP]	<b>G</b>	Set SNTP server IP, if SNTP function is inactive, this command can't be applied.	switch(config)# <b>sntp ip 192.169.1.1</b>
<b>sntp timezone</b> [Timezone]	<b>G</b>	Set timezone index, use 'show sntp timzezone' command to get more information of index number	switch(config)# <b>sntp timezone 22</b>
<b>show sntp</b>	<b>P</b>	Show SNTP information	switch# <b>show sntp</b>
<b>show sntp timezone</b>	<b>P</b>	Show index number of time zone list	switch# <b>show sntp timezone</b>
<b>no sntp</b>	<b>G</b>	Disable SNTP function	switch(config)# <b>no sntp</b>

<b>no sntp daylight</b>	<b>G</b>	Disable daylight saving time	switch(config)# <b>no sntp daylight</b>
-------------------------	----------	------------------------------	---

### X-ring Commands Set

Commands	Level	Description	Example
<b>Xring enable</b>	<b>G</b>	Enable X-ring	switch(config)# <b>Xring enable</b>
<b>Xring master</b>	<b>G</b>	Enable ring master	switch(config)# <b>Xring master</b>
<b>Xring couplering</b>	<b>G</b>	Enable couple ring	switch(config)# <b>Xring couplering</b>
<b>Xring dualhoming</b>	<b>G</b>	Enable dual homing	switch(config)# <b>Xring dualhoming</b>
<b>Xring ringport</b> [1st Ring Port] [2nd Ring Port]	<b>G</b>	Configure 1st/2nd Ring Port	switch(config)# <b>Xring ringport 7 8</b>
<b>Xring couplingport</b> [Coupling Port]	<b>G</b>	Configure Coupling Port	switch(config)# <b>Xring couplingport 1</b>
<b>Xring controlport</b> [Control Port]	<b>G</b>	Configure Control Port	switch(config)# <b>Xring controlport 2</b>
<b>Xring homingport</b> [Dual Homing Port]	<b>G</b>	Configure Dual Homing Port	switch(config)# <b>Xring homingport 3</b>
<b>show Xring</b>	<b>P</b>	Show the information of X - Ring	switch# <b>show Xring</b>
<b>no Xring</b>	<b>G</b>	Disable X-ring	switch(config)# <b>no X ring</b>
<b>no Xring master</b>	<b>G</b>	Disable ring master	switch(config)# <b>no Xring master</b>
<b>no Xring couplering</b>	<b>G</b>	Disable couple ring	switch(config)# <b>no Xring couplering</b>
<b>no Xring dualhoming</b>	<b>G</b>	Disable dual homing	switch(config)# <b>no Xring dualhoming</b>

# Web-Based Management

---

This section introduces the configuration and functions of the Web-Based management.

## About Web-based Management

On the CPU board of the switch there is an embedded HTML web site residing in flash memory, which offers advanced management features and allow users to manage the switch from anywhere on the network through a standard browser such as Microsoft Internet Explorer.

The Web-Based Management supports Internet Explorer 6.0. And, it is applied with Java Applets for reducing network bandwidth consumption, enhance access speed and present an easy viewing screen.

## Preparing for Web Management

Before using web management, user can use console to login the switch to check the default IP of the switch. Please refer to **Console Management** Chapter for console login. If user needs to change IP address for the first time, user can use console mode to modify it. The default value is as below:

IP Address: **192.168.1.77**

Subnet Mask: **255.255.255.0**

Default Gateway: **192.168.1.254**

User Name: **root** Password: **root**

## System Login

- Launch the Internet Explorer.

- Key in “http://” + “IP Address” of the Switch, and then press “**Enter**”
- Login screen will appear right after
- Key in the user name and password. The default user name and password is “**root**”
- Click “**Enter**” or” **OK**”, then the home screen of the Web-based management appears right after

**Note:** The web interface features shown below are introduced by the screen displays of 8 10/100 TX + 2 10/100/1000T/Mini-GBIC Combo (MIL-SM8TXAF2GPA) model. Unless specifically identified, the all of the screen displays are suitable for the models in this manual.

**Welcome to the**

## **8 10/100TX + 2 10/100/1000T/ Mini-GBIC Combo w/ 8 PoE Injector Managed Switch**

Main interface

## System Information

Assign the system name and location and view the system information

- **System Name:** Assign the system name of the switch (The maximum length is 64 bytes)

- **System Location:** Assign the switch physical location (The maximum length is 64 bytes)
- **System Description:** Displays the description of switch(Read only cannot be modified)
- **Firmware Version:** Displays the switch's firmware version
- **Kernel Version:** Displays the kernel software version
- **MAC Address:** Displays the unique hardware address assigned by manufacturer (default)
- And than, click

## System Information

<b>System Name</b>	<input type="text"/>
<b>System Description</b>	8 10/100TX + 2 10/100/1000T/ Mini-GBIC Combo w/ 8 PoE Injec
<b>System Location</b>	<input type="text"/>
<b>System Contact</b>	<input type="text"/>

<b>Firmware Version</b>	v1.06
<b>Kernel Version</b>	v1.41
<b>MAC Address</b>	001122334455

System Information interface

## IP Configuration

User can configure the IP Settings and DHCP client function

- **DHCP:** Disable or enable the DHCP client function
- **IP Address:** Assign the switch IP address. The default IP is 192.168.1.77
- **Subnet Mask:** Assign the switch IP subnet mask
- **Gateway:** Assign the switch gateway. The default value is 192.168.1.254
- **DNS1:** The abbreviation of Domain Name Server—an Internet service that translates domain name into IP addresses. Domain name are alphabetic which

are easy to be remembered. Because the Internet is based on IP address; every time you use a domain name, therefore, a DNS service must translate the name into the corresponding IP address. For example, the domain name **www.net.com** might translate to **192.168.1.1**

- **DNS2:** The backup for DNS1. When DNS1 cannot function, DNS2 will then replace DNS1 immediately
- And than, click
- Save after assigning the IP address

## IP Configuration

DHCP Client :

IP Address	192.168.16.1
Subnet Mask	255.255.255.0
Gateway	192.168.16.254
DNS1	0.0.0.0
DNS2	0.0.0.0

IP Configuration interface

## DHCP Configuration

DHCP is the abbreviation of Dynamic Host Configuration Protocol that is a protocol for assigning dynamic IP addresses to devices on a network. With dynamic addressing, a device can have a different IP address every time it connects to the network. In some systems, the device's IP address can even change while it is still connected. DHCP also supports a mix of static and dynamic IP addresses. Dynamic addressing simplifies network administration because the software keeps track of IP addresses rather than requiring an administrator to manage the task. This means that a new computer can be added to a network without the hassle of manually assigning it a unique IP address.

## DHCP Server Configuration

The system provides the DHCP server function. Enable the DHCP server function, the switch system will be a DHCP server.

- **DHCP Server:** Enable or Disable the DHCP Server function. Enable—the switch will be the DHCP server on your local network
- **Low IP Address:** The dynamic IP range. Low IP address is the beginning of the dynamic IP range. For example: dynamic IP range is from 192.168.1.100 ~ 192.168.1.200. In contrast, 192.168.1.100 is the Low IP address
- **High IP Address:** The dynamic IP range. High IP address is the end of the dynamic IP range. For example: dynamic IP range is from 192.168.1.100 ~ 192.168.1.200. In comparison, 192.168.1.200 is the High IP address
- **Subnet Mask:** The dynamic IP assign range subnet mask
- **Gateway:** The gateway in your network
- **DNS:** The IP Address of the Domain Name Server in your network
- **Lease Time (sec):** It is the time period that system will reset the dynamic IP assignment to ensure the dynamic IP will not be occupied for a long time or the server doesn't know that the dynamic IP is idle

## DHCP Server - System Configuration

System Configuration	Client Entries	Port and IP Binding
----------------------	----------------	---------------------

DHCP Server :

Low IP Address	<input type="text" value="192.168.16.100"/>
High IP Address	<input type="text" value="192.168.16.200"/>
Subnet Mask	<input type="text" value="255.255.255.0"/>
Gateway	<input type="text" value="192.168.16.254"/>
DNS	<input type="text" value="0.0.0.0"/>
Lease Time (sec)	<input type="text" value="86400"/>

DHCP Server Configuration interface

## DHCP Client Entries

When the DHCP server function is active, the system will collect the DHCP client information and display it here.

# DHCP Server - Client Entries

System Configuration	Client Entries	Port and IP Binding					
<table border="1"><thead><tr><th>IP addr</th><th>Client ID</th><th>Type</th><th>Status</th><th>Lease</th></tr></thead></table>			IP addr	Client ID	Type	Status	Lease
IP addr	Client ID	Type	Status	Lease			
DHCP Client Entries interface							

## Port and IP Bindings

Assign the dynamic IP address to the port. When the device is connecting to the port and asks for IP assigning, the system will assign the IP address that has been assigned before to the connected device.

# DHCP Server - Port and IP Binding

Port	IP
Port.01	0.0.0.0
Port.02	0.0.0.0
Port.03	0.0.0.0
Port.04	0.0.0.0
Port.05	0.0.0.0
Port.06	0.0.0.0
Port.07	0.0.0.0
Port.08	0.0.0.0
Port.09	0.0.0.0
Port.10	0.0.0.0

Port and IP Bindings interface

## TFTP - Update Firmware

It provides the functions that allow user to update the switch firmware. Before updating, make sure the TFTP server is ready and the firmware image is on the TFTP server.

- **TFTP Server IP Address:** Key in the TFTP server IP
- **Firmware File Name:** The name of firmware image
- And then, click

## TFTP - Update Firmware

Update Firmware	Restore Configuration	Backup Configuration
TFTP Server IP Address	192.168.16.2	
Firmware File Name	image.bin	

Update Firmware interface

## TFTP - Restore Configuration

Restore EEPROM value from TFTP server

- **TFTP Server IP Address:** Key in the TFTP server IP
- **Restore File Name:** Key in the restore file image name
- And then, click

## TFTP - Restore Configuration

Update Firmware	<b>Restore Configuration</b>	Backup Configuration
<b>TFTP Server IP Address</b>	<input type="text" value="192.168.16.2"/>	
<b>Restore File Name</b>	<input type="text" value="data.bin"/>	
<input type="button" value="Apply"/> <input type="button" value="Help"/>		

Restore Configuration interface

## TFTP - Backup Configuration

Save current EEPROM value from the switch to TFTP server, then go to the TFTP restore configuration page to restore the EEPROM value.

- **TFTP Server IP Address:** Key in the TFTP server IP
- **Backup File Name:** Key in the file image name
- And then, click

## TFTP - Backup Configuration

Update Firmware	Restore Configuration	<b>Backup Configuration</b>

<b>Backup File Name</b>	<input type="text" value="data.bin"/>	
<input type="button" value="Apply"/> <input type="button" value="Help"/>		

Backup Configuration interface

## System Event Log Configuration

Configure the system event mode, which you want to collect, and system log server IP.

- **System Log Client Mode:** Select the system log mode – client only, server only, or both S/C
- **System Log Server IP Address:** Assign the system log server IP
- Click  to refresh the events log
- Click  to clear all current events log

## System Event Log - Syslog Configuration

<b>Syslog Configuration</b>	SMTP Configuration	Event Configuration
<b>Syslog Client Mode</b>	Both	<input type="button" value="Apply"/>

<input type="button" value="Reload"/>	<input type="button" value="Clear"/>	<input type="button" value="Help"/>

System Log Configuration interface

## System Event Log - SMTP Configuration

You can set up the mail server IP, mail account, account password, and forwarded email account for receiving the event alert.

- **Email Alert:** enable or disable the email alert function.
- **SMTP Server IP:** set up the mail server IP address (when **Email Alert** enabled, this function will then be available).
- **Sender:** key in a complete email address, e.g. [switch101@123.com](mailto:switch101@123.com), to identify where the event log comes from.
- **Authentication:** mark the check box to enable and configure the email account and password for authentication (when **Email Alert** enabled, this function will then be available).
- **Mail Account:** set up the email account, e.g. [johnadmin](mailto:johnadmin), to receive the alert. It must be an existing email account on the mail server, which you had set up in **SMTP Server IP Address** column.
- **Password:** The email account password.
- **Confirm Password:** reconfirm the password.
- **Rcpt e-mail Address 1 ~ 6:** you can assign up to 6 e-mail accounts also to receive the alert.
- Click .

SMTP Configuration interface

## System Event Log - Event Configuration

Select the system log and SMTP events. When selected events occur, the system will result the log information. Also, per port log and SMTP events can be selected.

- **System event selection:** 4 selections – Device cold start, Device warm start, SNMP Authentication Failure, and X - ring topology change. Mark the checkbox to select the event. When selected events occur, the system will produce the logs
  - **Device cold start:** When the device executes cold start action, the system will produce a log event
  - **Device warm start:** When the device executes warm start, the system will produce a log event
  - **Authentication Failure:** When the SNMP authentication fails, the system will

produce a log event

- **X-Ring topology change:** When the X-ring topology has changed, the system will produce a log event

- And then, click

## System Event Log - Event Configuration

Event Configuration interface

- **Port event selection:** Select the per port events and per port SMTP events. It has 3 selections – Link UP, Link Down, and Link UP & Link Down. Disable means no event is selected
  - **Link UP:** The system will result a log message when port connection is up only
  - **Link Down:** The system will result a log message when port connection is down only

- **Link UP & Link Down:** The system will result a log message when port connection is up and down

## SNTP Configuration

You can configure the SNTP (Simple Network Time Protocol) settings. The SNTP allows you to synchronize switch clocks in the Internet.

1. **SNTP Client:** enable or disable SNTP function to get the time from the SNTP server.
2. **Daylight Saving Time:** enable or disable daylight saving time function. When daylight saving time is enabling, you need to configure the daylight saving time period.
3. **UTC Timezone:** set the switch location time zone. The following table lists the different location time zone for your reference.

Local Time Zone	Conversion from UTC	Time at 12:00 UTC
November Time Zone	- 1 hour	11am
Oscar Time Zone	-2 hours	10 am
ADT - Atlantic Daylight	-3 hours	9 am
AST - Atlantic Standard EDT - Eastern Daylight	-4 hours	8 am
EST - Eastern Standard CDT - Central Daylight	-5 hours	7 am
CST - Central Standard MDT - Mountain Daylight	-6 hours	6 am
MST - Mountain Standard	-7 hours	5 am

PDT - Pacific Daylight		
PST - Pacific Standard ADT - Alaskan Daylight	-8 hours	4 am
ALA - Alaskan Standard	-9 hours	3 am

<b>Daylight Saving Period</b>	<input type="text" value="20040101 00:0"/>	<input type="text" value="20040101 00:0"/>
<b>Daylight Saving Offset(mins)</b>	<input type="text" value="0"/>	

SNTP Configuration interface

## IP Security

IP security function allows user to assign 10 specific IP addresses that have permission to access the switch through the web browser for the securing switch management.

- **IP Security Mode:** when this option is in **Enable** mode, the **Enable HTTP Server** and **Enable Telnet Server** check boxes will then be available.
- **Enable HTTP Server:** when this check box is checked, the IP addresses among Security IP1 ~ IP10 will be allowed to access via HTTP service.
- **Enable Telnet Server:** when checked, the IP addresses among Security IP1 ~ IP10 will be allowed to access via telnet service.
- **Security IP 1 ~ 10:** Assign up to 10 specific IP address. Only these 10 IP address can access and manage the switch through the Web browser
- And then, click  button to apply the configuration

---

**Note** Remember to execute the 'Save Configuration' action, otherwise the new configuration will lose when switch power off.

---

# IP Security

IP Security Mode:

<input type="checkbox"/> Enable HTTP Server
<input type="checkbox"/> Enable Telnet Server

Security IP1	<input type="text" value="0.0.0.0"/>

IP Security interface

## User Authentication

You can change login user name and password for the management security issue

1. **User name:** Key in the new user name (The default is 'root')
2. **Password:** Key in the new password (The default is 'root')
3. **Confirm password:** Re-type the new password
4. And then, click

## User Authentication

User Name :	<input type="text" value="root"/>
New Password :	<input type="password" value="...."/>
Confirm Password :	<input type="password" value="...."/>

User Authentication interface

## Port Statistics

The following information provides the current port statistic information.

- **Port:** The port number.
- **Type:** Displays the current speed of connection to the port.
- **Link:** The status of linking—'Up' or 'Down'.
- **State:** It's set by Port Control. When the state is disabled, the port will not transmit or receive any packet.
- **Tx Good Packet:** The counts of transmitting good packets via this port.
- **Tx Bad Packet:** The counts of transmitting bad packets (including undersize [less than 64 bytes], oversize, CRC Align errors, fragments and jabbers packets) via this port.
- **Rx Good Packet:** The counts of receiving good packets via this port.
- **Rx Bad Packet:** The counts of receiving bad packets (including undersize [less than 64 bytes], oversize, CRC error, fragments and jabbers) via this port.
- **Tx Abort Packet:** The aborted packet while transmitting.
- **Packet Collision:** The counts of collision packet.
- **Packet Dropped:** The counts of dropped packet.
- **Rx Bcast Packet:** The counts of broadcast packet.
- **Rx Mcast Packet:** The counts of multicast packet.
- Click  button to clean all counts.

## Port Statistics

Port	Type	Link	State	Tx Good Packet	Tx Bad Packet	Rx Good Packet	Rx Bad Packet	Tx Abort Packet	Packet Collision	Packet Dropped	RX Bcast Packet	RX Mcast Packet

Port.10	1GTx/mGBIC	Down	Enable	0	0	0	0	0	0	0	0	0

Port Statistics interface

## Port Control

In Port control, you can view every port status that depends on user setting and the negotiation result.

1. **Port:** select the port that you want to configure.
2. **State:** Current port status. The port can be set to disable or enable mode. If the port setting is disable then will not receive or transmit any packet.
3. **Negotiation:** set auto negotiation status of port.
4. **Speed:** set the port link speed.
5. **Duplex:** set full-duplex or half-duplex mode of the port.
6. **Flow Control:** set flow control function as **Enable** or **Disable** in Full Duplex mode. The default value is **Enable**.
7. **Security:** When its state is 'On' that means this port accepts only one MAC address which was configured to be a static MAC address.
8. Click  .

Port Control interface

## Port Trunk

The Link Aggregation Control Protocol (LACP) provides a standardized means for exchanging information between Partner Systems on a link to allow their Link Aggregation Control instances to reach agreement on the identity of the Link Aggregation Group to which the link belongs, move the link to that Link Aggregation Group, and enable its transmission and reception functions in an orderly manner. Link aggregation lets you group up to 4 ports into one dedicated connection. This feature can expand bandwidth to a device on the network. **LACP operation requires full-duplex mode**, for more detail information please refer to IEEE 802.3ad.

### Port Trunk - Aggregator setting

1. **System Priority:** A value used to identify the active LACP. The switch with the lowest value has the highest priority and is selected as the active LACP.
2. **Group ID:** There are four trunk groups to provide configuration. Choose the "**Group ID**" and click .
3. **LACP:** If enable, the group is LACP static trunk group. If disable, the group is local static trunk group. All ports support LACP dynamic trunk group. While connecting to the device that also supports LACP, the LACP dynamic trunk group will be created automatically.
4. **Work ports:** Allow up to four ports to be aggregated at the same time. With LACP static trunk group, the exceed ports are standby and can be aggregated later if work ports fail. If it is local static trunk group, the number of ports must be the same as the group member ports.
5. Select the ports to join the trunk group. Click  button to add the port. To remove unwanted ports, select the port and click  button.
6. If LACP enable, you can configure LACP Active/Passive status in each ports on State Activity page.
7. Click .

8. Use **Delete** button to delete Trunk Group. Select the Group ID and click **Delete** button.

## Port Trunk - Aggregator Setting

Aggregator Setting	Aggregator Information	State Activity
<b>System Priority</b>		
1		
<b>Group ID</b>	Trunk.1	Select
<b>Lacp</b>	Disable	
<b>Work Ports</b>	2	
Port.01 Port.02	<<Add Remove>>	Port.03 Port.04 Port.05 Port.06 Port.07 Port.08 Port.09 Port.10

**Aggregator Information**

State Activity

Static Trunking Group	
Group Key	1
Port Member	1 2

Port Trunk – Aggregator Information interface

## Port Trunk - State Activity

When you had setup the LACP aggregator, you can configure port state activity. You can mark or un-mark the port. When you mark the port and click  button the port state activity will change to **Active**. Opposite is **Passive**.

- **Active:** The port automatically sends LACP protocol packets.
- **Passive:** The port does not automatically send LACP protocol packets, and responds only if it receives LACP protocol packets from the opposite device.

- 
- Note**
1. A link has either two active LACP ports or one active port can perform dynamic LACP trunk.
  2. A link has two passive LACP ports will not perform dynamic LACP trunk because both ports are waiting for an LACP protocol packet from the opposite device.
  3. If you are active LACP's actor, after you have selected trunk port, the active status will be created automatically.
-

5		N/A	6		N/A
7		N/A	8		N/A
9		N/A	10		N/A

Port Trunk – State Activity interface

## Port Mirroring

The Port mirroring is a method for monitor traffic in switched networks. Traffic through ports can be monitored via one specific port. That means traffic goes in or out monitored (source) ports will be duplicated into mirror (destination) port.

- **Destination Port:** You can select one port to be the destination (mirror) port for monitoring both RX and TX traffic which come from source port. Or, use one of two ports for monitoring RX traffic only and the other one for TX traffic only. User can connect mirror port to LAN analyzer or Netxray
- **Source Port:** The ports that user wants to monitor. All monitored port traffic will be copied to mirror (destination) port. User can select multiple source ports by checking the **RX** or **TX** check boxes to be monitored.
- And then, click  button.

# Port Mirroring

	Destination Port		Source Port	
	RX	TX	RX	TX
Port.01	<input checked="" type="radio"/>	<input checked="" type="radio"/>	<input type="checkbox"/>	<input type="checkbox"/>
Port.02	<input type="radio"/>	<input type="radio"/>	<input type="checkbox"/>	<input type="checkbox"/>

Help

Port Trunk – Port Mirroring interface

## Rate Limiting

You can set up every port's bandwidth rate and frame limitation type.

- **Ingress Limit Frame type:** Select the frame type you want to filter. The frame types have 4 options for selecting: **All**, **Broadcast/Multicast/Flooded Unicast**, **Broadcast/Multicast** and **Broadcast only**. **Broadcast/Multicast/Flooded Unicast**, **Broadcast/Multicast** and **Broadcast only** types are only for ingress frames. The egress rate only supports **All** type.

# Rate Limiting

	Ingress Limit Frame Type	Ingress	Egress
Port.01	All	0 kbps	0 kbps
Port.02	All	0 kbps	0 kbps
Port.03	All	0 kbps	0 kbps
Port.04	All	0 kbps	0 kbps
Port.05	All	0 kbps	0 kbps
Port.06	All	0 kbps	0 kbps
Port.07	All	0 kbps	0 kbps
Port.08	All	0 kbps	0 kbps
Port.09	All	0 kbps	0 kbps
Port.10	All	0 kbps	0 kbps

Rate Range is from 100 kbps to 102400 kbps or to 256000 kbps for giga ports, and zero means no limit.

Rate Limiting interface

- All the ports support port ingress and egress rate control. For example, assume port 1 is 10Mbps, users can set it's effective egress rate as 1Mbps, ingress rate as 500Kbps. The switch performs the ingress rate by packet counter to meet the specified rate
  - **Ingress:** Enter the port effective ingress rate (The default value is '0')
  - **Egress:** Enter the port effective egress rate (The default value is '0')
- And then, click  to apply the settings

## VLAN configuration

A Virtual LAN (VLAN) is a logical network grouping that limits the broadcast domain, which would allow you to isolate network traffic, so only the members of the same VLAN will receive traffic from each other. Basically, creating a VLAN from a switch is logically equivalent of reconnecting a group of network devices to another Layer 2 switch.

However, all the network devices are still plugged into the same switch physically.

The switch supports port-based and 802.1Q (tagged-based) VLAN. The default configuration of VLAN operation mode is '**Disable**'.

## VLAN Configuration

### **VLAN NOT ENABLE**

VLAN Configuration interface

## VLAN configuration - Port-based VLAN

Packets can go among only members of the same VLAN group. Note all unselected ports are treated as belonging to another single VLAN. If the port-based VLAN enabled, the VLAN-tagging is ignored.

In order for an end station to send packets to different VLAN groups, it itself has to be either capable of tagging packets it sends with VLAN tags or attached to a VLAN-aware bridge that is capable of classifying and tagging the packet with different VLAN ID based on not only default PVID but also other information about the packet, such as the protocol.

- Use  button to modify existing VLAN group.

---

**Note** Remember to execute the 'Save Configuration' action, otherwise the new configuration will lose when switch power off.

---

## 802.1Q VLAN

Tagged-based VLAN is an IEEE 802.1Q specification standard. Therefore, it is possible to create a VLAN across devices from different switch vendors. IEEE 802.1Q VLAN uses a technique to insert a “tag” into the Ethernet frames. Tag contains a VLAN Identifier (VID) that indicates the VLAN numbers.

You can create Tag-based VLAN, and enable or disable GVRP protocol. There are 256 VLAN groups to provide configuring. Enable 802.1Q VLAN, the all ports on the switch belong to default VLAN, VID is 1. The default VLAN can't be deleted.

GVRP allows automatic VLAN configuration between the switch and nodes. If the switch is connected to a device with GVRP enabled, you can send a GVRP request using the VID of a VLAN defined on the switch; the switch will automatically add that device to the existing VLAN.

## Rapid Spanning Tree

The Rapid Spanning Tree Protocol (RSTP) is an evolution of the Spanning Tree Protocol and provides for faster spanning tree convergence after a topology change. The system also supports STP and the system will automatically detect the connected device that is running STP or RSTP protocol.

### RSTP - System Configuration

- User can view spanning tree information about the Root Bridge
- User can modify RSTP state. After modification, click **Apply** button
  - **RSTP mode:** User must enable or disable RSTP function before configuring the related parameters
  - **Priority (0-61440):** A value used to identify the root bridge. The bridge with the lowest value has the highest priority and is selected as the root. If the value changes, user must reboot the switch. The value must be multiple of 4096 according to the protocol standard rule

- **Max Age (6-40):** The number of seconds a bridge waits without receiving Spanning-tree Protocol configuration messages before attempting a reconfiguration. Enter a value between 6 through 40
- **Hello Time (1-10):** The time that controls switch sends out the BPDU packet to check RSTP current status. Enter a value between 1 through 10
- **Forward Delay Time (4-30):** The number of seconds a port waits before changing from its Rapid Spanning Tree Protocol learning and listening STP states to the forwarding state. Enter a value between 4 through 30

---

**Note** Follow the rule to configure the MAX Age, Hello Time, and Forward Delay Time.

$2 \times (\text{Forward Delay Time value} - 1) > = \text{Max Age value} > = 2 \times (\text{Hello Time value} + 1)$

---

## RSTP - System Configuration

System Configuration	Port Configuration
----------------------	--------------------

<b>RSTP Mode</b>	Disable ▾
<b>Priority (0-61440)</b>	32768
<b>Max Age (6-40)</b>	20
<b>Hello Time (1-10)</b>	2
<b>Forward Delay Time (4-30)</b>	15

**Priority must be a multiple of 4096**  
 **$2 * (\text{Forward Delay Time} - 1)$  should be greater than or equal to the Max Age.**  
**The Max Age should be greater than or equal to  $2 * (\text{Hello Time} + 1)$ .**

### Root Bridge Information

<b>Bridge ID</b>	N/A
<b>Root Priority</b>	N/A
<b>Root Port</b>	N/A
<b>Root Path Cost</b>	N/A
<b>Max Age</b>	N/A
<b>Hello Time</b>	N/A
<b>Forward Delay</b>	N/A

RSTP System Configuration interface

## RSTP - Port Configuration

You can configure the path cost and priority of every port.

1. Select the port in Port column.
2. **Path Cost:** The cost of the path to the other bridge from this transmitting bridge at the specified port. Enter a number 1 through 200000000.
3. **Priority:** Decide which port should be blocked by priority in LAN. Enter a number 0 through 240. The value of priority must be the multiple of 16.
4. **P2P:** Some of the rapid state transactions that are possible within RSTP are dependent upon whether the port concerned can only be connected to exactly one other bridge (i.e. it is served by a point-to-point LAN segment), or can be connected to two or more bridges (i.e. it is served by a shared medium LAN segment). This function allows the P2P status of the link to be manipulated administratively. True is P2P enabling. False is P2P disabling.
5. **Edge:** The port directly connected to end stations cannot create bridging loop in the network. To configure the port as an edge port, set the port to “**True**” status.
6. **Non STP:** The state of whether the port includes the STP mathematic calculation. **True** is not including STP mathematic calculation. **False** is including the STP mathematic calculation.
7. Click  .

## SNMP Configuration

Simple Network Management Protocol (SNMP) is the protocol developed to manage nodes (servers, workstations, routers, switches and hubs etc.) on an IP network. SNMP enables network administrators to manage network performance, find and solve network problems, and plan for network growth. Network management systems learn of problems by receiving traps or change notices from network devices implementing SNMP.

### System Configuration

- **Community Strings**

Here you can define new community string set and remove unwanted community string.

1. **String:** Fill the name of string.
  2. **RO:** Read only. Enables requests accompanied by this string to display MIB-object information.
  3. **RW:** Read & write. Enables requests accompanied by this string to display MIB-object information and to set MIB objects.
1. Click **Add**.
  2. To remove the community string, select the community string that you have defined and click **Remove**. You cannot edit the name of the default community strings.
- **Agent Mode:** Select the SNMP version that you want to use it. And then click **Change** to switch to the selected SNMP version mode.

Help

SNMP System Configuration interface

## Trap Configuration

A trap manager is a management station that receives traps and the system alerts generated by the switch. If no trap manager is defined, no traps will issue. Create a trap manager by entering the IP address of the station and a community string. To define management stations as trap manager, enter SNMP community strings and selects the SNMP version.

1. **IP Address:** Enter the IP address of trap manager.
2. **Community:** Enter the community string.
3. **Trap Version:** Select the SNMP trap version type – v1 or v2c.
4. Click **Add**.
5. To remove the community string, select the community string that you have defined and click **Remove**. You cannot edit the name of the default community string set.

## SNMP - Trap Configuration

The screenshot shows the 'Trap Managers' configuration page. At the top, there are three tabs: 'System Configuration', 'Trap Configuration' (which is selected), and 'SNMPv3 Configuration'. Below the tabs, the 'Trap Managers' section is divided into two parts: 'Current Managers' and 'New Manager'. The 'Current Managers' section shows a list with '(none)' and a 'Remove' button. The 'New Manager' section has an 'Add' button and three input fields: 'IP Address', 'Community', and 'Trap version'. The 'Trap version' field has two radio buttons, 'v1' (which is selected) and 'v2c'. Below the form is a 'Help' button.

## MIBview Table

Configure MIB view table.

- **ViewName:** Set up the name.
- **Sub-Oid Tree:** Fill the Sub OID.
- **Type:** Select the type – exclude or included.

- Click **Add** to add context name.
- Click **Remove** to remove unwanted context name.

## QoS Configuration

You can configure QoS policy and priority setting, per port priority setting, COS and TOS setting.

### QoS Policy and Priority Type

- **Qos Policy:** select the QoS policy rule.
  - **Using the 8,4,2,1 weight fair queue scheme:** The switch will follow 8:4:2:1 rate to process priority queue from High to lowest queue. For example, when the system processes, 1 frame of the lowest queue, 2 frames of the low queue, 4 frames of the middle queue, and 8 frames of the high queue will be processed at the same time in accordance with the 8,4,2,1 policy rule.
  - **Use the strict priority scheme:** Always higher queue will be process first, except higher queue is empty.
- **Priority Type:** There are 5 priority type selections available. Disable means no priority type is selected.
- **Port-base:** The port priority will follow the **Port-base** that you have assigned – High, middle, low, or lowest.
  - **COS only:** The port priority will only follow the **COS priority** that you have assigned.
  - **TOS only:** The port priority will only follow the **TOS priority** that you have assigned.
  - **COS first:** The port priority will follow the COS priority first, and then other priority rule.
  - **TOS first:** the port priority will follow the TOS priority first, and the other priority

rule.

- Click **Apply**.

## COS Configuration

Set up the COS priority level.

- **COS priority:** Set up the COS priority level 0~7 –High, Middle, Low, Lowest.
- Click  .

## TOS Configuration

Set up the TOS priority.

- **TOS priority:** The system provides 0~63 TOS priority level. Each level has 4 types of priority – high, middle, low, and lowest. The default value is ‘Lowest’ priority for each level. When the IP packet is received, the system will check the TOS level value in the IP packet that has received. For example, user set the TOS level 25 as high, the system will check the TOS value of the received IP packet. If the TOS value of received IP packet is 25 (priority = high), and then the packet priority will have highest priority.
- Click  .

## IGMP Configuration

The Internet Group Management Protocol (IGMP) is an internal protocol of the Internet Protocol (IP) suite. IP manages multicast traffic by using switches, routers, and hosts

that support IGMP. Enabling IGMP allows the ports to detect IGMP queries and report packets and manage IP multicast traffic through the switch. IGMP have three fundamental types of message as follows:

Message	Description
Query	A message sent from the querier (IGMP router or switch) asking for a response from each host belonging to the multicast group.
Report	A message sent by a host to the querier to indicate that the host wants to be or is a member of a given group indicated in the report message.
Leave Group	A message sent by a host to the querier to indicate that the host has quit being a member of a specific multicast group.

The switch supports IP multicast. You can enable IGMP protocol via setting IGMP configuration page to see the IGMP snooping information. IP multicast addresses are in the range of 224.0.0.0 through 239.255.255.255.

- **IGMP Protocol:** Enable or disable the IGMP protocol.
- **IGMP Query:** Select the IGMP query function as Enable or Auto to set the switch as a querier for IGMP version 2 multicast networks.
- Click  .

# IGMP Configuration

IP Address	VLAN ID	Member Port
239.255.255.250	1	*2*****

**IGMP Query:**

IGMP Configuration interface

## X-Ring

X-Ring provides a faster redundant recovery than Spanning Tree topology. The action is similar to STP or RSTP, but the algorithms not the same.

In the X-Ring topology, every switch should enable X-Ring function and assign two member ports in the ring. Only one switch in the X-Ring group would be set as a master switch that would be blocked, called backup port, and another port is called working port. Other switches in the X-Ring group are called working switches and their two member ports are called working ports. When the failure of network connection occurs, the backup port will automatically become a working port to recovery the failure.

The switch supports the function and interface for setting the switch as the ring master or slave mode. The ring master can negotiate and place command to other switches in the X-Ring group. If there are 2 or more switches in master mode, then software will select the switch with lowest MAC address number as the ring master. The X-Ring master ring mode will be enabled by the X-Ring configuration interface. Also, user can identify the switch as the ring master from the R.M. LED panel of the LED panel on the switch.

The system also supports the coupling ring that can connect 2 or more X-Ring group for the redundant backup function and dual homing function that prevent connection lose between X-Ring group and upper level/core switch.

- **Enable X-Ring:** Enable the X-Ring function. Mark the check box to enable the X-Ring function.
- **Enable Ring Master:** Mark the check box to enable this machine to be the ring master.
- **1<sup>st</sup> & 2<sup>nd</sup> Ring Ports:** Pull down the selection menu to assign two ports as the member ports. The **1<sup>st</sup> Ring Port** and **2<sup>nd</sup> Ring Port** are basically assigned to be forwarding ports except for the Ring Master switch. With the Ring Master switch, one of its two Ring Ports is the blocking port and another one is the forwarding port.

Once its forwarding port fails, the system will automatically upgrade its blocking port to be the forwarding port of the Ring Master switch.

- **Enable Coupling Ring:** Enable the coupling ring function. Mark the check box to enable the coupling ring function.
- **Coupling port:** Assign the member port which is connected to the other ring group.
- **Control port:** When Couple Ring check box is marked, you have to assign the control port to form a couple-ring group between the two X-rings.
- **Enable Dual Homing:** Set up one of the ports on the switch to be the Dual Homing port. For a switch, there is only one Dual Homing port. Dual Homing function only works when the X-Ring function enabled.
- And then, click  to apply the configuration.

## X-Ring Configuration

FORWARDING	FORWARDING	FORWARDING	FORWARDING	FORWARDING

X-ring Interface

---

**Note** When the X-Ring function enable, user must disable the RSTP. The X-Ring function and RSTP function cannot exist in a switch at the same time. Remember to execute the 'Save Configuration' action, otherwise the new configuration will lose when switch power off.

---

## ■ Security

In this section, you can configure 802.1x and MAC address table.

### 802.1X/RADIUS Configuration

802.1x is an IEEE authentication specification prevents the client from connecting to a wireless access point or wired switch until it provides authority, like the user name and password that are verified by an authentication server.

#### System Configuration

After enabling the IEEE 802.1X function, you can configure the parameters of this function.

1. **IEEE 802.1x Protocol:** Enable or disable 802.1x protocol.
2. **Radius Server IP:** Set the Radius Server IP address.
3. **Server Port:** Set the UDP destination port for authentication requests to the specified Radius Server.
4. **Accounting Port:** Set the UDP destination port for accounting requests to the specified Radius Server.
5. **Shared Key:** Set an encryption key for using during authentication sessions with the specified radius server. This key must match the encryption key used on the Radius Server.
6. **NAS, Identifier:** Set the identifier for the radius client.
7. Click .

# 802.1x/RADIUS - System Configuration

<b>802.1x Protocol</b>	Disable ▾
<b>Radius Server IP</b>	0.0.0.0

<b>Accounting Port</b>	1813
<b>Shared Key</b>	12345678
<b>NAS, Identifier</b>	NAS_L2_SWITCH

802.1x System Configuration interface

## 802.1x Per Port Configuration

You can configure 802.1x authentication state for each port. The State provides Disable, Accept, Reject and Authorize. Hit “**Space**” key to change the state value.

- **Reject:** The specified port is required to be held in the unauthorized state.
- **Accept:** The specified port is required to be held in the Authorized state.
- **Authorized:** The specified port is set to the Authorized or Unauthorized state in accordance with the outcome of an authentication exchange between the supplicant and the authentication server.
- **Disable:** When disabled, the specified port works without meeting 802.1x protocol.
- Click  .

### MAC Address Table

Use the MAC address table to ensure the port security.

### Static MAC Address

You can add a static MAC address; it remains in the switch's address table, regardless of whether the device is physically connected to the switch. This saves the switch from having to re-learn a device's MAC address when the disconnected or powered-off device is active on the network again. You can add/ modify/delete a static MAC address.

#### ■ Add the Static MAC Address

You can add static MAC address in the switch MAC table.

1. **MAC Address:** Enter the MAC address of the port that should permanently forward traffic regardless of the device network activity.
2. **Port No.:** Pull down the selection menu to select the port number.

3. Click **Add**.
4. If you want to delete the MAC address from filtering table, select the MAC address and click **Delete**.

## MAC Address Table - Static MAC Addresses

PoE Status

- **Maximum Power Available:** Displays the maximum power supply in Watt.
- **Actual Power Consumption:** This column shows the real-time total power consumption.
- **Power Source:** This column shows the power source which is supplying.
- **Power Source 1 (AC):** This column shows the supplying power value of power source 1.
- **Power Source 2 (AC+DC):** This column shows the supplying power of power source 2 (it depends on the model – only available on the MIL-SM8TXAF2GPA).
- **Firmware Version:** This column shows the PoE chip’s firmware version.
- **AC Disconnect:** Mark this check box to monitor the AC impedance on the port terminals and removes power when the impedance rises above a certain value, for a

certain period (for details, see the IEEE 802.3af specification).

- **Capacitive Detection:** If the port and capacitive detection are enabled, the capacitances state reads in the voltage result from the constant current. This is the subtracted from the pre-capacitance voltage to get a charge rate. If this charge rate is within the window of the PD signatures, the device is considered to be discovered.
- And then, click  to carry into effect.
- **Port:** The index of PoE ports.
- **Enable State:** Check it to enable the PoE function to the port.
- **Power Limit From:** Check it to decide the power limit method.
  - **Classification:** When this check box is marked, the system will limit the power supply to the powered device in accordance with the related class.
- **Legacy:** Check it to support the legacy power devices.
- **Priority:** Pull down the selection menu item to choose the priority of power supplying.
- **Port Limit (<15400) mW:** User can key in the power limit value which is under 15.4 Watts.
- **Mode:** Displays the operating mode of the port.
- **Current (mA):** Displays the operating current of the port.
- **Voltage (V):** Displays the operating voltage of the port.
- **Power (mW):** Displays the power consumption of the port.
- **Determined Class:** Displays the PD's class.
- And then, click  to carry into effect.

# Troubleshooting

---

This section is intended to help solve the most common problems on the PoE Injector Managed Switch.

## Incorrect connections

The switch port can automatically detect straight or crossover cable when you link switch with other Ethernet device. For the RJ-45 connector should use correct UTP or STP cable, 10/100Mbps port use 2-pairs twisted cable and Gigabit 1000T port use 4 pairs twisted cable. If the RJ-45 connector is not correctly pinned on right position then the link will fail. For fiber connection, please notice that fiber cable mode and fiber module should be match.

### ■ Faulty or loose cables

Look for loose or obviously faulty connections. If they appear to be OK, make sure the connections are snug. If that does not correct the problem, try a different cable.

### ■ Non-standard cables

Non-standard and miss-wired cables may cause numerous network collisions and other network problem, and can seriously impair network performance. A category 5-cable tester is a recommended tool for every 100Base-T network installation.

**RJ-45 ports:** use unshielded twisted-pair (UTP) or shield twisted-pair ( STP ) cable for RJ-45 connections: 100Ω Category 3, 4 or 5 cable for 10Mbps connections, 100Ω Category 5 cable for 100Mbps connections, or 100Ω Category 5e/above cable for 1000Mbps connections. Also be sure that the length of any twisted-pair connection does not exceed 100 meters (328 feet).

## ■ Improper Network Topologies

It is important to make sure that you have a valid network topology. Common topology faults include excessive cable length and too many repeaters (hubs) between end nodes. In addition, you should make sure that your network topology contains no data path loops. Between any two ends nodes, there should be only one active cabling path at any time. Data path loops will cause broadcast storms that will severely impact your network performance.

## Diagnosing LED Indicators

The switch can be easily monitored through panel indicators, which describes common problems user may encounter and where user can find possible solutions, to assist in identifying problems.

If the power indicator does not light on when the power cord is plugged in, you may have a problem with power outlet, or power cord. However, if the Switch powers off after running for a while; check for loose power connections, power losses, or surges at power outlet. If the problem still cannot be resolved, please contact the local dealer for assistance.

# Technical Specification

This section provides the specifications of 8 10/100TX + 2 Gigabit copper/ Mini-GBIC Combo with 8 PoE Injectors Managed Switch and the 8 10/100TX + 1 10/100/1000T/100/1000 SFP Combo with 4 PoE Injectors Managed Switch.

## Console Port Pin Assignments

The DB-9 serial port on the switch is used to connect to the switch for out-of-band console configuration. The console—command line interface can be accessed from a terminal or a PC running a terminal emulation program. The pin assignments used to connect to the serial port are provided in the following tables.

DB-9 Console Port Pin Numbers

### ■ DB-9 Port Pin Assignments

EIA Circuit	CCITT Signal	Description	Switch's DB9 DTE Pin #	PC DB9 DTE Pin #
BB	104	RxD (Received Data)	2	2
BA	103	TxD (Transmitted Data)	3	3
AB	102	SGND (Signal Ground)	5	5

■ Console Port to 9-Pin DTE Port on PC

Switch's 9-Pin Serial Port	CCITT Signal PC's 9-Pin	DTE Port
2 RXD	<-----RXD ----->	3 TxD
3 TXD	-----TXD ----->	2 RxD
5 SGND	-----SGND -----	5 SGND

## 100BASE-TX/10BASE-T Pin Assignments

With 100BASE-TX/10BASE-T cable, pins 1 and 2 are used for transmitting data, and pins 3 and 6 for receiving data; pins 4, 5, 7 and 8 are used for power supplying.

## RJ-45 Pin Assignment of non-802.3af standard PD with Midspan/Endspan POE HUB/SWITCH

■ Pin out of Cisco non-802.3af standard PD

Pin	Signal
1	RX+
2	RX-

6	TX-/VCC-
7	
8	

---

**Note** '+' and '-' signs represent the polarity of the wires that make up each wire pair. Before you powered PD, please check the RJ-45 connector pin assignment follow IEEE802.3af standard, otherwise you may need change one of the RJ-45 connector pin assignment, which attached with the UTP cable.

---

All ports on this switch support automatic MDI/MDI-X operation, you can use straight-through cables for all network connections to PCs or servers, or to other switches or hubs. In straight-through cable, pins 1, 2, 3 and 6, at one end of the cable,

are connected straight through to pins 1, 2, 3 and 6 at the other end of the cable. The table below shows the 10BASE-T/ 100BASE-TX MDI and MDI-X port pin outs.

<b>Pin MDI-X</b>	<b>Signal Name</b>	<b>MDI Signal Name</b>
1	Receive Data plus (RD+)	Transmit Data plus (TD+)
2	Receive Data minus (RD-)	Transmit Data minus (TD-)
3	Transmit Data plus (TD+)	Receive Data plus (RD+)
6	Transmit Data minus (TD-)	Receive Data minus (RD-)
