

9. Customizing the mouse functions

With the software provided, many commonly-used tasks can be assigned to the programmable buttons.

- Double click the "Presenter Mouse" icon  at the lower right corner or Windows control panel.
- Select the "Programmable Buttons" to assign many frequently-used Windows and the Web functions as below:

Auto Scroll

Move the documents in the direction with just moving the mouse

Magic Jump

Magic Jump lets you open eight special functions quickly

Switch AP

Quickly switch from one open application to another without moving the mouse

Third Button

The programmable button can be assigned to perform special functions in certain applications.

Double Click

You can assign the "Double Click" function to reduce extra clicks

Back

Forward

Go to the next page in the Internet

Power Point Page Up

Return to the last page in the power point.

Power Point Page Down

Go to the next page in the power point.

Screen Black

❖ Trouble shooting

- Make sure you have connected the charging cardle or the receiver correctly to the computer's USB port.
- For the supreme performance, we suggest you locate the receiver with a distance from other electrical devices, such as the computer, the computer monitor or external storage drives.
- Make sure you have set the communication between the receiver and the mouse. Refer to the channel setting instruction in this manual.
- Some system devices might conflict with the mouse. Confirm the IRQ/address settings of these devices for conflicts, and change the settings as required.
- Make sure that you are not working the mouse on glossy or reflective surfaces.
- Try unplugging then reconnecting the receiver cable to your computer.
- Make sure the software is installed completely. Please check if the **Remote Presenter Mouse** appears in the list of the Mouse Device under Device Manger. If No, Please reinstall again.

❖ Battery use reminders

- Please make sure the batteries used for recharging are "Rechargeable batteries".
- Avoid reverse charging. Check battery polarity before charging.
- Keep all batteries (used or new) out of the reach of children.
- To have the batteries with a regular check and replace new batteries if not used for a long time.
- Remove batteries from the electrical device if the device is not going to be used for a long time.
- If the performance of the batteries decrease substantially, it is time to replace the batteries.
- Do not mix different types of batteries (e.g. NiMH, NiCd, alkaline, etc) in the mouse.

FCC statement

This equipment has been tested and found to comply with the limits for a class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation.

This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation if this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.

To assure continued compliance, any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment. (Example-use only shielded interface cables when connecting to computer or peripheral devices).

FCC & IC Radiation Exposure Statement

The device complies with

* USA models: Part 15 of the FCC Rules.

* Canada models: RSS-210 of Industry Canada.

Operation is subject to the following two conditions:

- This device may not cause harmful interference. and
- This device must accept any interference received, including interference that may cause undesired operation.

Channel

The Wireless Channel sets the radio frequency used for communication.

● Access Points use a fixed Channel. You can select the Channel used. This allows you to choose a Channel which provides the least interference and best performance. In the USA and Canada, 11 channel are available. If using multiple Access Points, it is better if adjacent Access Points use different Channels to reduce interference.

● In "infrastructure" mode, Wireless Stations normally scan all Channels, looking for an Access point. If more than one Access Point can be used, the one with the strongest signal is used. (This can only happen within an ESS.)

IF using "Ad-hoc" mode (no Access Point), all Wireless stations should be set to use the same Channel. However, most Wireless stations will still scan all Channels to see if there is an existing "Ad-hoc" group they can join.
