Meet the MX-600

"The Most Reviewed Remote in History"
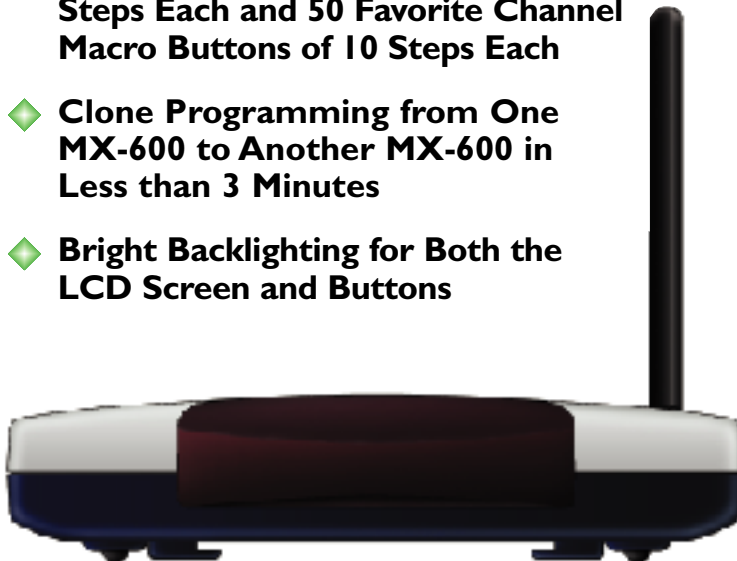

With "No More Pointing" RF Control!

The IR/RF MX-600 inherits it's hybrid LCD screen and hard button layout from the acclaimed MX-500 (IR only) remote control. The MX-600 broadcasts radio frequency (RF) signals as well as infrared (IR). Using the MRF-100 RF Base Station, the MX-600 can control infrared A/V components without pointing the remote at all, through walls, floors, and cabinet doors, indoors or outdoors.

MX-600™

IR/RF Learning Remote and MRF-100 RF Base Station

◆ **50-100' Range Through Walls and Cabinet Doors, Indoors and Outdoors**

◆ **Programs Using Internal IR Command Database or Learning**

◆ **Replaces Up to Ten Remote Controls**

◆ **Macro Capability: 15 Macro Buttons of 20 Steps Each and 50 Favorite Channel Macro Buttons of 10 Steps Each**

◆ **Clone Programming from One MX-600 to Another MX-600 in Less than 3 Minutes**

◆ **Bright Backlighting for Both the LCD Screen and Buttons**

MX-600/MRF-100 IR/RF Learning Remote

Fast On-Board Programming

Automation Using Macros and Favorites
The powerful memory of the MX-600 offers up to 15 potential Macro buttons and an additional 50 Favorite Channel buttons. Each of these macros can play back a sequence of programmed commands that completely automates a complex system with one button press. A Macro button can record and play back up to 20 steps, while a Favorite Channel button can play back up to 10 steps.

Replaces Ten Remote Controls
The MX-600 controls up to 10 components. Each of the 10 components can be programmed with up to 2 pages of LCD screens plus the 33 hard buttons. The MX-600 allows you to edit the text on each LCD screen exactly as you prefer (up to 26 screens with 260 text buttons are available). Whether you prefer single screen simplicity or total replacement of the original remotes, the MX-600 will exceed your expectations.

Comprehensive Compatibility with Components
The MX-600's internal database contains hundreds of "code sets" of various brands, including hard to find and specific discrete codes that allow for precise control of all system components. The MX-600 also has the ability to learn up to 530 new commands.

Memory Back-Up
The MX-600 system features a smart flash memory back-up system that will retain the programmed memory for up to ten years, even with dead batteries.

Specifications

MX-600 Remote Control
RF Frequency: 418MHz
RF Range: 50 to 100 feet, depending upon the environment (the structure of your house, the amount of interference etc.)
IR (Line of Sight) Range: 50-60 feet depending upon components
Weight: 8 oz. (with batteries)
Memory Capacity: 15 Macro Buttons of 20 Steps, 50 Favorite Channel Macro Buttons of 10 Steps and up to 530 IR Commands with up to 26 Custom Labeled Screens.
Size: 9.0" x 3.0" x 1.3"
Batteries: Four AAA Alkaline batteries included
LCD Size: 1.4" x 2.1"
Warranty: One year Parts and Labor

MRF-100 Radio Frequency Base Station
Power Supply: 9V 300mA/110V 60Hz (included)
IR Flasher Line Outputs: 2.5mm Mono Mini Jack
RF Frequency: 418MHz
Size: 5 1/8" x 3.5" x 1.25" (4.5" antenna up)
Mounting Bracket and Six Emitter/Flashers included

## One Hand Ergonomics – Easier to Use than Original Component Remotes!

The optimized layout enables you to naturally reach both the thumbpad and hard buttons to navigate on-screen menus and the critical Transport, Channel and Volume controls. You'll quickly discover that you prefer using the MX-600 to control all the special features of your system (especially personal video recorders, satellite receivers, DVD players, surround sound receivers and digital cable boxes). There will never be a reason to dig out the old remotes again.

## Simplicity Via the RF Base Station

No More Pointing - Radio Waves Penetrate Walls, Doors and Floors
The MRF-100 receives the RF signals of the MX-600 remote control from any direction. You no longer need to point the remote control at any of your A/V components. You can also place the components distracting blinking lights and displays behind closed cabinet doors and/or in another room!

1. The MX-600 remote control sends radio waves in every direction, so you don't have to point the remote anymore.

2. The MRF-100's built-in Front Blaster sends commands to components in the same cabinet space as the MRF-100.

3. Self-adhesive "Flashers" affix to the Infrared sensors on the front panels of your components. The Flashers relay commands to components out of sight of the MRF-100's Front Blaster. The Flashers plug in to the MRF-100's rear flasher line outputs via their 10 foot cables.
