

LMS3200 Errata

APCD-LM019-A

LMS3200 User Guide

Updates to the LMS3200 User Guide to reflect the following changes:

- "2 metres" in place of "32cm" in a Warning statement within the Regulatory Notices section
- Within the "Regulatory Notices" and "Installation" sections include an additional Warning statement that reads "A shielded RS-232 cable must be used on the console port of the device. It is the responsibility of the installer to supply and install a shielded RS-232 cable."

Regulatory Notice Additions

WARNING!

To comply with FCC RF exposure limits, the antenna for this transmitter must be fixed-mounted on outdoor permanent structures to provide a separation distance of 2 metres (6.6 feet) or more from all persons to satisfy RF exposure requirements. The distance is measured between the front of the antenna and the human body. It is recommended that the antenna be installed in a location with minimal pathway disruption by nearby personnel.

WARNING!

A shielded RS-232 cable must be used on the console port of the device. It is the responsibility of the installer to supply and install a shielded RS-232 cable.

Adding an EUM Section Addition

WARNING!

A shielded RS-232 cable must be used on the console port of the device. It is the responsibility of the installer to supply and install a shielded RS-232 cable.
