

Thank you for selecting Verizon FiOS TV for your home video entertainment.

Please complete these steps (in order) to install and activate your new Set Top Box(es) (STB).

STEP 1: Check that you have everything

- Keep this brochure, until you have installed and verified that your Set Top Box is working. You may want to save it for future reference.
- The Digital Set Top Box (STB) you ordered:
 - Standard Definition (SD): 2500 Series
 - SD Digital Video Recorder (DVR): 2708 Series
 - High Definition (HD): 6200 Series
 - HD Digital Video Recorder: 6416 Series
- Coax, HDMI or other cable(s)
- Power Cable
- FiOS® TV Remote Control with batteries
- Locate your Activation Code on the packing slip included with the Set Top Box packaging, and now make note of it below. **You will need it to activate your STB.**

Activation Code: _____

Tip: You may need simple tools such as pliers, so have those handy.

STEP 2: Check your STB location

- The STB must have good ventilation, free of obstruction; don't block vents
- The STB must be plugged in to a power source that is on all the time
- You must be able to see the front of the STB from your viewing location
- Never place anything on top of the STB, especially other home video components

STEP 3: Connect cables to STB

Depending on your TV or display and the type of FiOS TV STB, skip to the step (3a or 3b) that best matches your equipment setup.

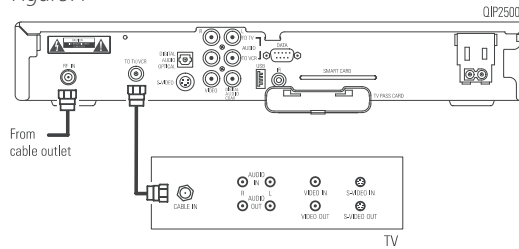

CAUTION: Power cable should **NOT** be plugged into wall outlet yet.

3a. Standard Definition (STB) (2500 Series) & Standard Definition DVR 2708 Series

Tip: This is the simplest method to connect the 2500 series STB.

- Connect the coax cable from the coax wall outlet to the "RF IN" on the back of the STB.
- Connect a coax cable jumper from the "To TV/VCR" output of the STB to the "Antenna," "Cable" or "U/V" input on the back of your TV. [NOTE: If you have a 2708 series STB, you will not have a coax connection, you will need to use composite or S-Video cables to connect your STB to your TV]
- Plug the STB into the power outlet, wait 10 seconds and then press the power button on the front of your STB; the display should light.
- Turn on your TV; tune it to channel 3.

Figure A

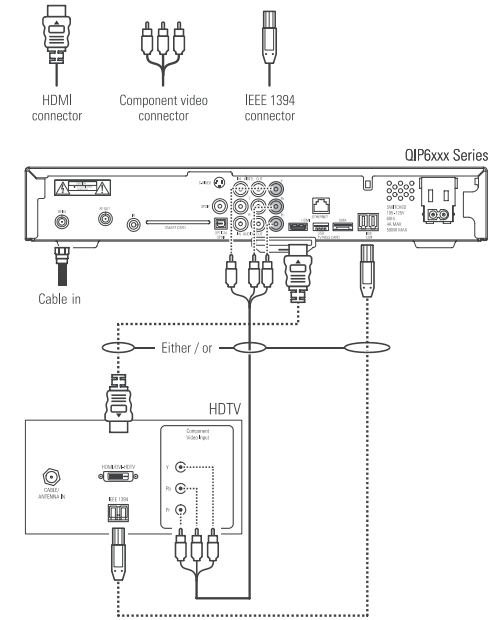

3b. High Definition STB (6200 Series) & High Definition DVR (6416 Series)

Tip: Use HDMI cables for great digital video.

- Connect the coax cable from the coax wall outlet to the "RF IN" on the back of the STB.
- Connect the HDMI cable jumper from the "HDMI" output of the STB to the "HDMI" input on the back of your TV.
- Turn on your TV or HD display.
- Plug the STB in to the power outlet, wait 10 seconds and then press the power button on the front of your STB. The display should light up.

- More advanced cable configurations can be used if your system can support and take advantage of them; see Figure B for one example.

Figure B

Tip: Alternative connections are available for the 6200 and 6416 Series using the following cables, which can be purchased at a local retail provider:

- Component Video Connector
- IEEE/FireWire
- SPDIF
- S Video
- Coax (6200 only)

NOTE: Please complete all previous steps (1–3) prior to STEP 4. Your new STB must be properly connected prior to STEP 4.

Continue to STEP 4 on next page.

STEP 4: Activate your Set Top Box.

Your new STB(s) will not operate until you have called and completed the activation steps.

- Have the six-digit activation code that you wrote down in Step 1 on hand.
- **Choose one of the following activation methods.**
Website: go to <http://www.verizon.com/fios/selfinstall/> enter your activation code and Zip Code and click on "Begin Activation."
Phone: Call the Verizon Set Top Box activation line at 1-888-897-7499 and follow the instructions to activate your new STB(s).

STEP 5: The activation process can take up to 30 minutes.

- After 30 minutes, turn on the STB.
- Then turn on your TV, select the proper input and set to channel 3.

STEP 6: Program your Remote Control

Your FiOS® TV Remote is a universal remote — it can also control your TV, VCR or home entertainment system.

- To set up your remote control, please follow the instructions in the User Guide included with the remote control.
- You can also view a help video with step-by-step instructions. Videos can be found on the On Demand menu, under Help.

Need help?

Help videos are available for free from the On Demand menu. Access On Demand from your remote or Main Menu of your Interactive Programming Guide. Select the "Help" section of the menu to see detailed information and instructional videos. Learn how to create settings for:

- Remote Control
- Parental Controls
- Widgets
- And much more

Go to fioshelp.verizon.com and look under the FiOS TV section.
