

BlueGate 2100

Mounting Instructions & Template

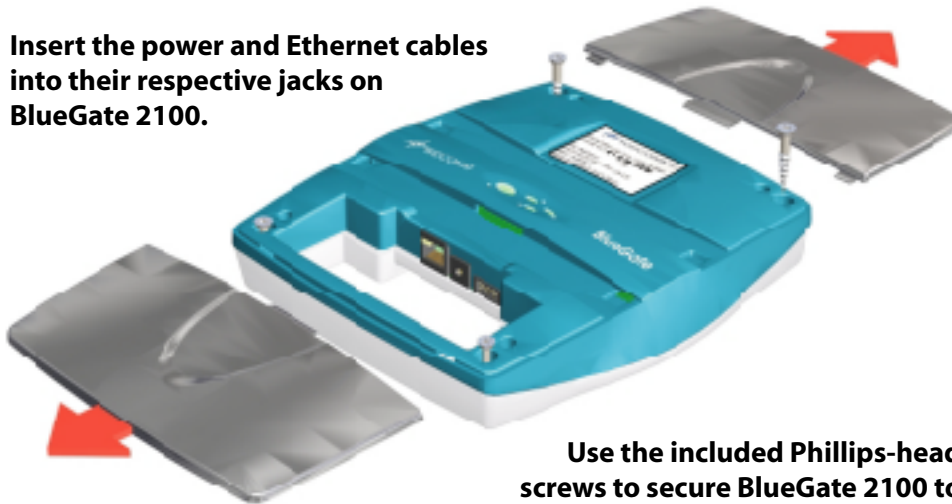

BlueGate 2100 should be mounted on the ceiling or wall to achieve maximum performance.

Choose a location at least 20 centimeters (8 inches) from normal human contact. Tape this template to the installation location and use a nail or other small pointed object to mark the locations of the screw anchors.

Remove the template and install the included screw anchors with a #2 Phillips screwdriver.

Insert the power and Ethernet cables into their respective jacks on BlueGate 2100.

Use the included Phillips-head screws to secure BlueGate 2100 to the screw anchors.
