## 1 General features

UMC-MT2731C is the 254-pin contacting LGA type NAD(Network Access Device) suitable for automotive applications based on its LTE/WCDMA/GSM communication features. For the worldwide market, WNC has three regional variants that have dedicated RAT supporting band designed as below

NA for North America region

EU for Europe region

ROW means Rest-of-World to cover countries that out of NA and EU region

### 1.1 Regional variant

| RAT\Variant     | EU               | NA                    |
|-----------------|------------------|-----------------------|
| GSM/EDGE/GPRS   | 900 and 1800     | 850 and 1900          |
| WCDMA           | Not Supported    | Not Supported         |
| LTE Low Band    | Band8, 20 and 28 | Band26(5) ,12(17),B14 |
| LTE Middle Band | Band1 and 3      | Band25(2) and 66(4)   |
| LTE High Band   | Band7            | Band7                 |

### 1.2 Performance key features

| Key Features\Variant   | EU                                    | NA                                    |
|------------------------|---------------------------------------|---------------------------------------|
| M/N                    | UMC-MT2731CDJ                         | UMC-MT2731CBN                         |
| CPU/GPU                | MTK/MT2731V/COA                       | MTK/MT2731V/COA                       |
| RF IC                  | MTK/MT6177AW/COC                      | MTK/MT6177AW/COC                      |
| Power Management       | MTK/MT6389V/COA                       | MTK/MT6389V/COA                       |
| Primary Antenna        | GSM/LTE;<br>transmitting and reviving | GSM/LTE;<br>transmitting and reviving |
| Diversity Antenna      | LTE; receiving only                   | LTE; receiving only                   |
| Maximum Data Rate      | LTE Category 6                        | LTE Category 6                        |
| LTE Downlink CA(Intra) | CA_1-1, CA_3-3 and CA_7-7             | CA_2-2, CA_4-4 and CA_7-7             |
| LTE Downlink CA(Inter) | Not Supported                         | Not Supported                         |
| LTE Uplink CA          | Not Supported                         | Not Supported                         |
| GNSS L1                | Not Supported                         | Not Supported                         |
| LTE Power Class        | 3                                     | 3                                     |

### 1.3 Interface

#### 1.3.1 Signal interface

UMC-MT2731C has signal interfaces as showed as below table. Developer could use these interfaces to communicate with NAD or debugging

| Interface     | Amount | Description   |
|---------------|--------|---|
| USB 3.1       | 1 set  | USB 3.1 supports the device mode only   |
| USB 2.0 OTG   | 1 set  | support the device or the host mode   |
| I2C           | 1 set  | for I2C communication   |
| I2S           | 1 set  | for the digital audio interface   |
| Audio(analog) | 2 sets | for the analog audio interface; consisting of two audio DACs with Mono data stream and two line-out drivers |
| UART          | 4 sets | 2 sets with CTS/RTS pin   |
| MSDC          | 3 sets | 1 set with 8-bit data lines, dedicated for eMMC; the other 2 sets with 4-bit data lines                     |
| JTAG          | 1 set  | for the firmware upgrade and the debugging  |
| SPI           | 1 set  | support IN and OUT, MASTER and SLAVE mode. 3.3V IO  |
| SIM           | 2 sets | SIM interface( Due to SOC limit,only support DSSS with inserting one SIM once)                              |
| ADC           | 4 pins | ADC channel with 12-bit resolution  |

#### 1.3.2 GPIO

| Interface  | Description |
|------------|-------------|
| GPIO(1.8V) | 18 pins     |
| GPIO(3.3V) | 23 pins     |

#### 1.3.3 Antenna interface

| Interface         | Description  |
|-------------------|--|
| Primary Antenna   | 1 pin for LTE/WCDMA/GSM primary transmitting and receiving |
| Diversity Antenna | 1 pin for LTE and WCDMA diversity receiving                |

#### 1.3.4 Power input interface

| Interface | Description   |
|-----------|---|
| VSYS      | 2 pins. NAD main supply voltage source                  |
| VBUS      | 1 pin. 5.0V input for USB detection (typ 5V, max:10.5V) |

### 1.3.5 Power output interface

| Interface | Description   |
|-----------|---|
| VEMC_PMU  | 1 pin. 3.0V output, max current 800mA. For eMMC             |
| VIO33_PMU | 1 pin. 3.3V output, max current 100mA. For I/O or sensors   |
| VCN33_PMU | 1 pin. 3.3V output, max current 70mA. For Connectivity      |
| VIO18_PMU | 1 pin. 1.8V output, max current 200mA. For I/O or sensors   |
| VCN18_PMU | 1 pin. 1.8V output, max current 450mA. For Connectivity     |
| VSIM1_PMU | 1 pin. 1.86V output, max current 140mA. As SIM1 supply-feed |
| VSIM2_PMU | 1 pin. 1.86V output, max current 140mA.                     |

### 1.4 Operation condition

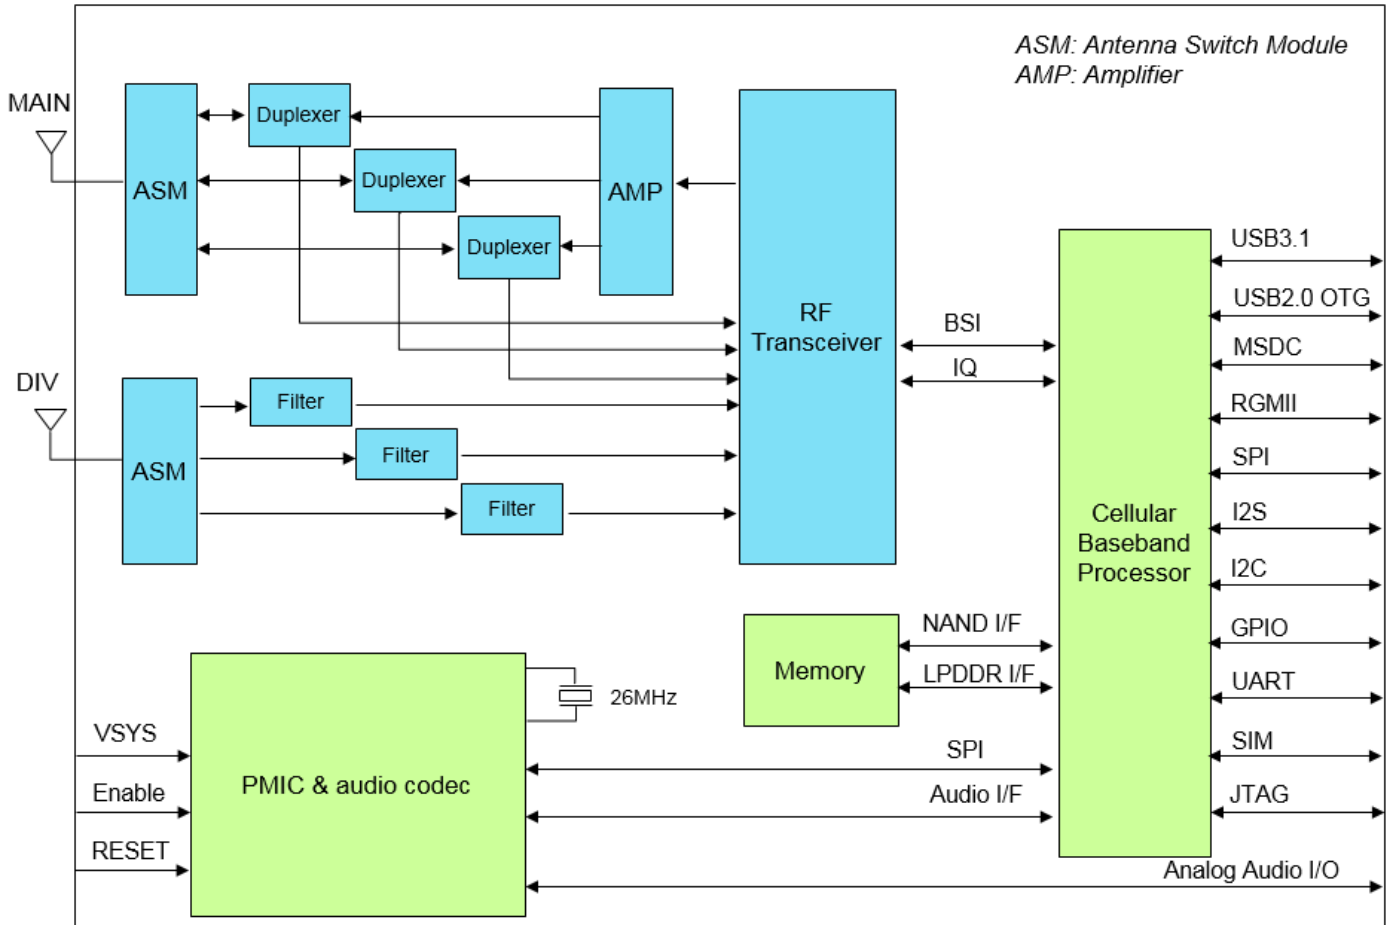

| Parameter                             | Minimum | Typical | Maximum | Unit |
|---------------------------------------|---------|---------|---------|------|
| Storage Temperature Range             | -40     | -       | 85      | °C   |
| 3GPP RF Performance Temperature Range | -20     | -       | 70      | °C   |
| Operating Temperature Range           | -40     | -       | 85      | °C   |
| Power Supply Voltage(VSYS)            | 3.8     | 4       | 4.2     | V    |
| ESD Voltage(Human Body Model)         | -       | -       | 2000    | V    |
| ESD Voltage(Charge Device Model)      | -       | -       | 500     | V    |
| Operation Humidity                    | 0       | -       | 95      | %RH  |
| <b>Current Consumption</b>            |         |         |         |      |
| Sleep(Airplane/Flight/Suspended mode) | -       | 2.11    |         | mA   |
| GSM standby 1.18 sec                  | -       | 3.50    |         | mA   |
| WCDMA standby 2.56 sec                | -       | 3.32    |         | mA   |
| LTE FDD CDRX standby(10-MHz/320-ms)   | -       | 3.14    |         | mA   |
| GSM talk 11-dBm; no DTX, P-GSM        | -       | 159.42  |         | mA   |
| WCDMA talk 5-dBm; IMT                 | -       | 216.72  |         | mA   |
| VoLTE FDD(40-ms DRX cycle/0-dBm)      | -       | 280     |         | mA   |
| LTE Cat 4(150/50-Mbps, 5-dBm, Band7)  | -       | 348.62  |         | mA   |
| LTE Cat 6(300/50-Mbps,5-dBm, Band7)   | -       | 368     |         | mA   |

### 1.5 Mechanical specification

| Parameter                   | Min  | Typ. | Max   | Unit |
|-----------------------------|------|------|-------|------|
| Length                      | 36.7 | 36.8 | 37.05 | MM   |
| Width                       | 41.9 | 42   | 42.25 | MM   |
| Height(with shielding case) | 2.93 | 3.23 | 3.53  | MM   |
| Weight(with shielding case) | 9    | 10   | 11    | g    |
| Module co-planarity         | 0    | -    | 100   | UM   |

## 2 Block diagram

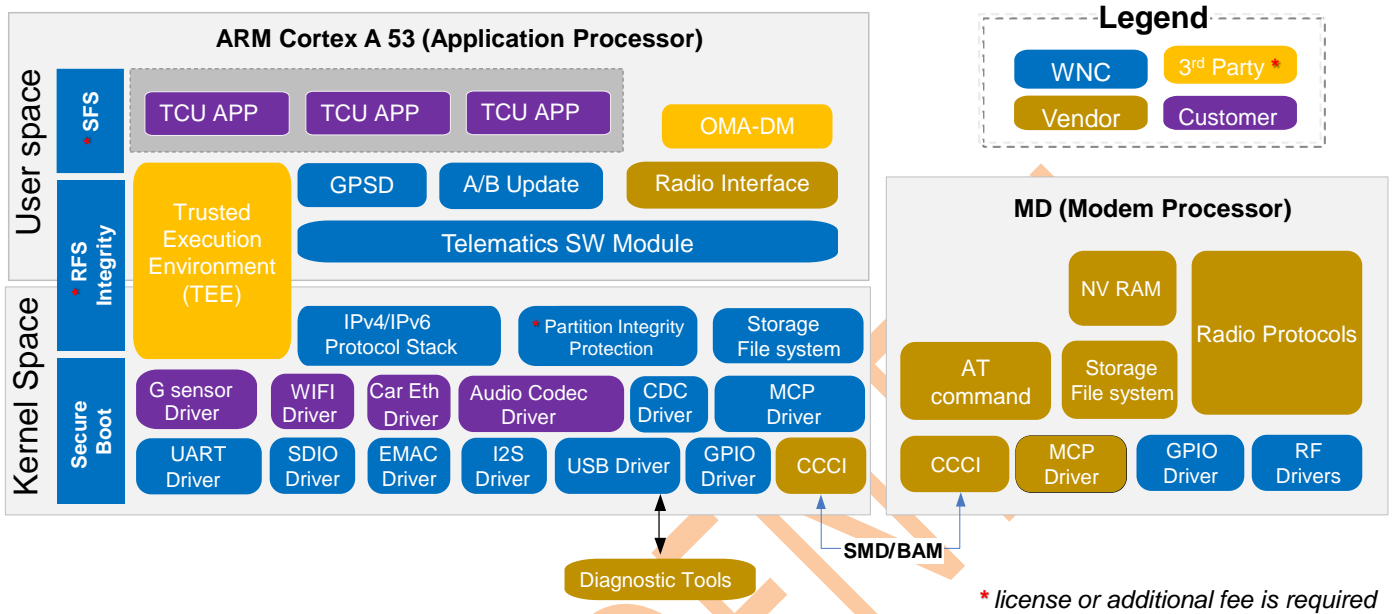

### 2.1 UMC-MT2731C block diagram

### 2.2 Software stack

Figure shows the software stack on MTK/MT2731 platform working on LINUX operation system which Kernel version is 4.14. For telephony, NAD supports not only voice calls but also SMS over CS and IMS

### 3 Board placement

### 3.4 Pin definition table

NC: No Connection

PD: Pull Down

PU: Pull Up

NOTE1 All unused pins should be assigned as “No Connection” on the application board

NOTE2 Internal pull-up/pull-down resistor of GPIO pins in MT2731

Type1 I/O : Internal resistance could be 3 options (10k-OHM, 50K-OHM, and 10K-OHM | 50K-OHM) so far for GPIO30~36, GPIO59~64, GPIO110~115, GPIO134~145.

Type2 I/O : 75K-OHM is a typical value (in the range of 40K-OHM~190K-OHM) for others I/O that cannot be configured to different resistance.

NOTE(\*) In the specified software(Part#: 53tbc), NAD pin#L8 is no longer being a GPI pin as default and configured as “MCU\_RESET\_B” to support following reset function

This pin is triggered high to close application software firstly, and then to do the reset of PMIC for rebooting NAD after the power-off/-on sequence

| NAD Pin# | Symbol Name | Power Domain | Voltage | Internal Pull State | MT2731 Pin-out | GPIO    | Description   |

### 3.5 GPIO table

Table below shows available GPIO pins in the default software setting and internally pulled-down in the device. 1.8V GPIO pins support the interrupt to wake NAD system up, and EINT0 to 15 also supports the hardware de-bounce to filter the mechanical bounce noise

| NAD Pin# | Symbol Name | GPIO  | Power Domain | Voltage | MT2731 Pin-out | Description                           |
|----------|-------------|-------|--------------|---------|----------------|---------------------------------------|
| D15      | GPIO0_1V8   | EINT0 | DVDD18       | 1.8V    | M25            | Support Wakeup and Hardware De-bounce |
| A16      | GPIO1_1V8   | EINT1 | DVDD18       | 1.8V    | M26            | Support Wakeup and Hardware De-bounce |
| G12      | GPIO2_1V8   | EINT2 | DVDD18       | 1.8V    | V21            | Support Wakeup and Hardware De-bounce |
| E17      | GPIO8_1V8   | EINT8 | DVDD18       | 1.8V    | AF23           | Support Wakeup and Hardware De-bounce |
| G13      | GPIO9_1V8   | EINT9 | DVDD18       | 1.8V    | AE18           | Support Wakeup and Hardware De-bounce |

## 4 Mechanical design

### 4.1 Shielding case design

CONFIDENTIAL

|   |           |               |
|---|-----------|---------------|
| Subject:<br>UMC-MT2731C Product Specification | Doc. No.: | Rev: 0.9      |
|   |           | Page 22 of 44 |

**4.2 Label information**

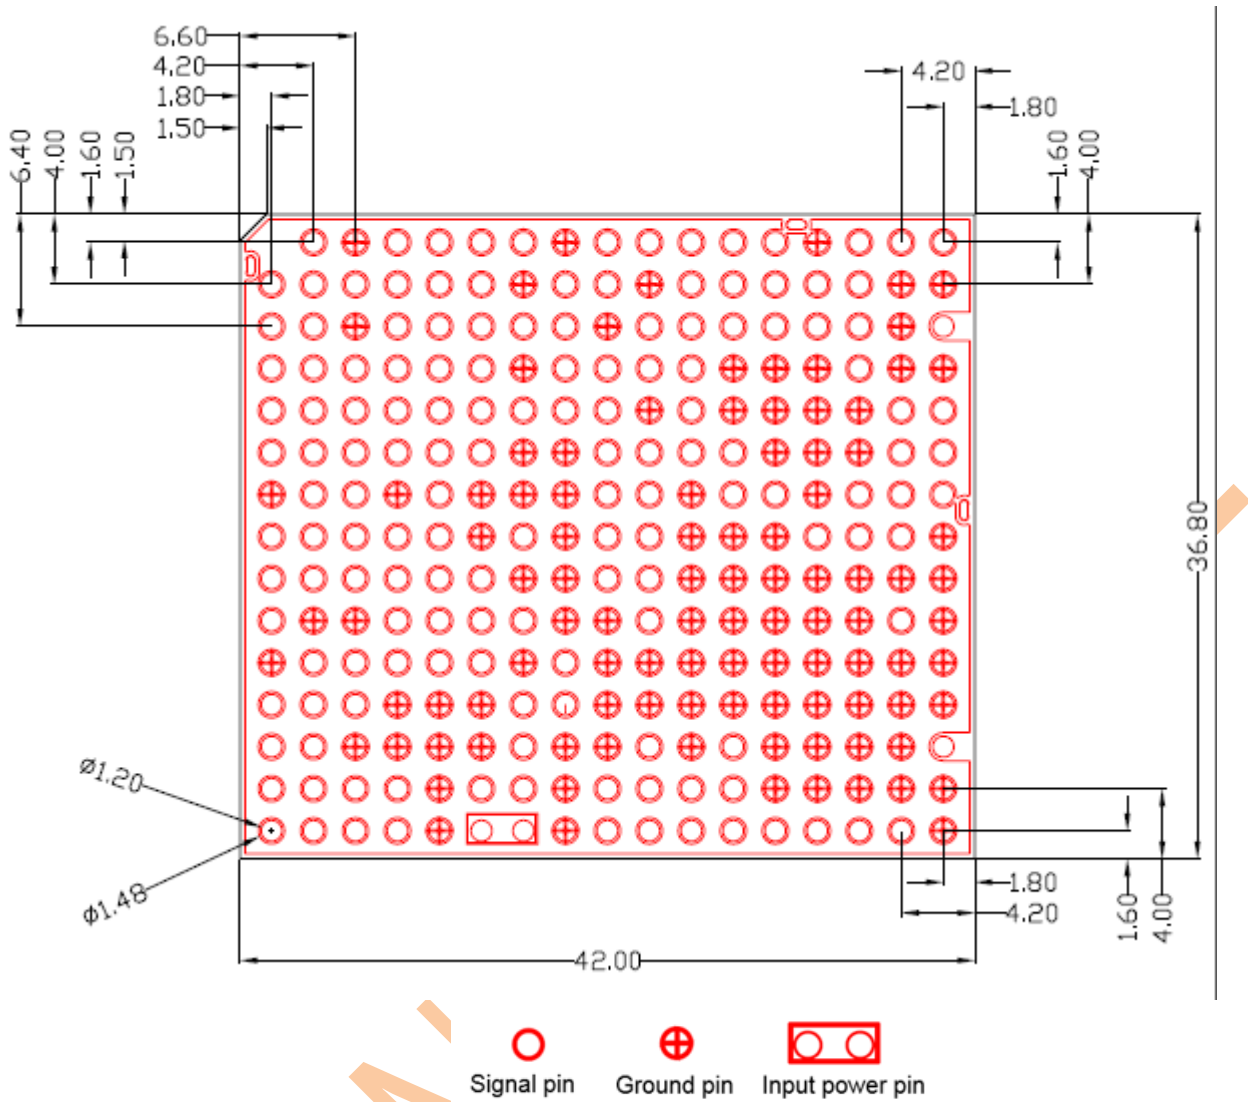

This label is applied to UMC-MT2731C NAD shielding case top. It specifies the label outline with the content format as below

**4.3 NAD land pattern**

1.36-MM is the original NAD bottom side copper pad diameter size. It implemented the solder mask to cover these LGA pads; thus, SMD(Solder Mask Define) round pad diameter is 1.20-MM

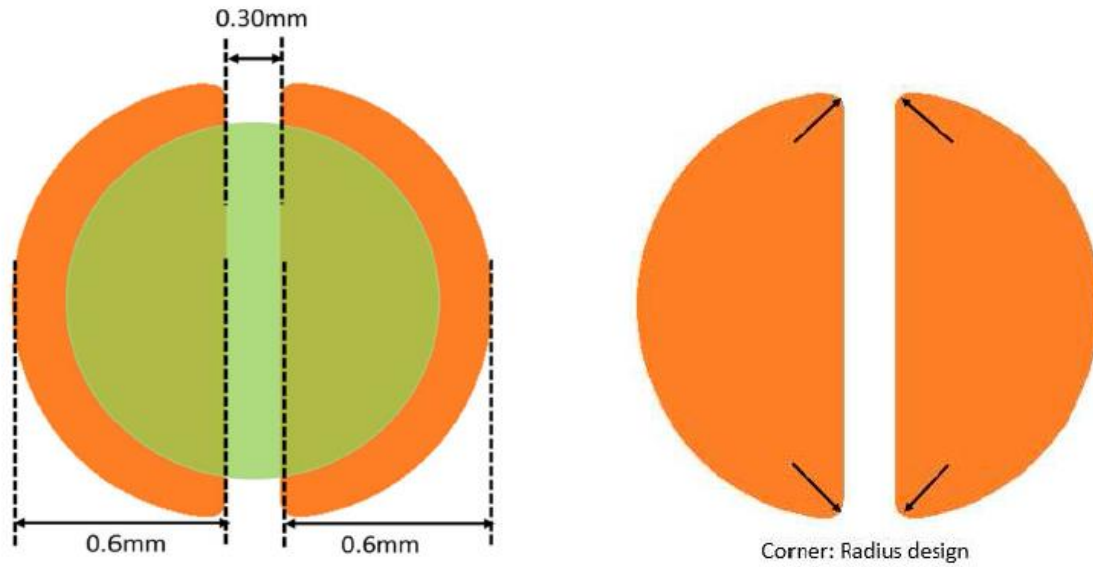

CONFIDENTIAL

#### 4.4 Stencil opening

Following chart is the recommendation for the stencil opening design

NOTE: The final design open window diagram will be updated after the reliability tests completed

\*Orange color: stencil aperture

Thickness of stencil: 0.12mm

Solder Paste Recommendation: SAC305 Alloy

#### 4.5 Reflow profile

| Profile Feature                   | Parameters        |
|-----------------------------------|-------------------|
| Peak Temperature                  | 235 to 250°C      |
| Reflow Zone(Above 227°C or 230°C) | 30 to 70 Seconds  |
| Preheat Zone(140 to 190°C)        | 60 to 120 Seconds |

#### 4.6 Moisture sensitivity level

|   |           |               |
|---|-----------|---------------|
| Subject:<br>UMC-MT2731C Product Specification | Doc. No.: | Rev: 0.9      |
|   |           | Page 25 of 44 |

UMC-MT2731C complies IPC/JEDEC J-STD-020 Standard MSL 3

**4.7 ESD**

It strongly recommends Developer to place ESD suppression components on the interconnection signal traces between NAD bottom pads and the application board for preventing NAD being suffered ESD events with the voltage strength over the requirement defined in the table as below

| Specification/Requirements | Contact Discharge |
|----------------------------|-------------------|
| Human Body Model(HBM)      | 2000 Voltages     |
| Charge Device Model(CDM)   | 500 Voltages      |

**4.8 Packaging**

The single-feed tape carrier for MT2731C is illustrated in Figure as shown in below. The figure also shows the proper part orientation. The tape width is 56 mm and the module is placed on the tape with a 56 mm pitch. The packing length per reel is 10.6 meters and each reel contains 100 pcs modules.

1. CAMBER IN COMPLIANCE WITH EIA 481.
2. MATERIAL: PS BLACK
3. SURFACE RESISTIVITY:  $10^4-10^8$  OHMS/SQUARE
4. PACKING LENGTH PER ROLL : 8.4 METERS.
5. VENDOR SHIPPING LENGTH PER ROLL : 25.2 METERS.
6. COMPONENT POCKETS PER 13" REEL : 100 PCS  
(TOTAL POCKETS PER 13" REEL: 150PCS  
EMPTY POCKET IN FRONT OF REEL: 20PCS  
EMPTY POCKET IN BACK OF REEL: 20PCS  
BUFFER POCKET: 10PCS)

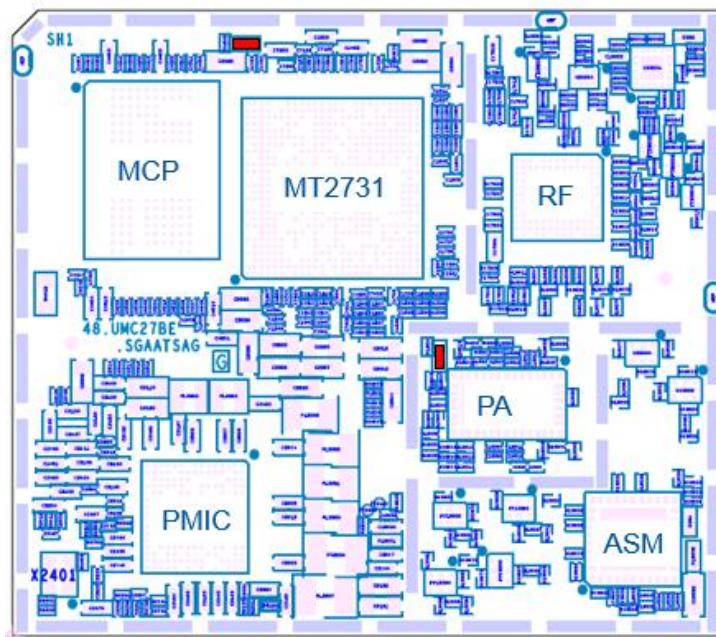

## 5 Thermal design

### 5.1 Thermal sensor

(1) There are four temperature sensors embedded in MT2731 device package. Developer could read temperature value inside MT2731 by the software command. When the package temperature reached the threshold point, MT2731 will trigger itself resetting for the over-heating protection

(2) MT2731 could get thermal information from two on board thermistors and monitor components' temperature near these two thermistor locations

■ Thermistor: to detect PCB temperature

(3) Developer could connect four outgoing general purpose ADC interfaces, named as AUXADC\_VIN2, AUXADC\_VIN3, AUXADC\_VIN4 and AUXADC\_VIN5, of NAD for monitoring hotspots' temperature on the application board

### 5.2 Software thermal mitigation

UMC-MT2731C has software approaches for the thermal mitigation. When the temperature reached the defined threshold point, LINUX kernel will control the system power by holding processors and RF power amplifier current consumption. This will make UMC-MT2731C work safely under the critical and concerned temperature condition

|   |           |               |

**6 RF specification**

**6.1 UMC-MT2731C**

**6.1.1 Maximum output power**

Note(\*): The minimum data in the table is following 3GPP standard

|                         | Specification<br>(Band/Uplink Frequency) | Minimum | Typical | Maximum | Unit |
|-------------------------|--|---------|---------|---------|------|
| LTE                     | Band1(1920 - 1980 MHz)                   | 20.3*   | 23      | 24      | dBm  |
|                         | Band2(1850 - 1910 MHz)                   | 20.3*   | 23      | 24      | dBm  |
|                         | Band3(1710 - 1785 MHz)                   | 20.3*   | 23      | 24      | dBm  |
|                         | Band4(1710 - 1755 MHz)                   | 20.3*   | 23      | 24      | dBm  |
|                         | Band5(824 - 849 MHz)                     | 20.3*   | 23      | 24      | dBm  |
|                         | Band7(2500 - 2570 MHz)                   | 20.3*   | 23      | 24      | dBm  |
|                         | Band8(880 - 915 MHz)                     | 20.3*   | 23      | 24      | dBm  |
|                         | Band12(699 - 716 MHz)                    | 20.3*   | 23      | 24      | dBm  |
|                         | Band17(704 - 716 MHz)                    | 20.3*   | 23      | 24      | dBm  |
|                         | Band14(788 - 798 MHz)                    | 20.3*   | 23      | 24      | dBm  |
|                         | Band18(815 - 830 MHz)                    | 20.3*   | 23      | 24      | dBm  |
|                         | Band19(830 - 845 MHz)                    | 20.3*   | 23      | 24      | dBm  |
|                         | Band20(832 - 862 MHz)                    | 20.3*   | 23      | 24      | dBm  |
|                         | Band25(1850 - 1915 MHz)                  | 20.3*   | 23      | 24      | dBm  |
|                         | Band26(814 - 849 MHz)                    | 20.3*   | 23      | 24      | dBm  |
|                         | Band28(703 - 748 MHz)                    | 20.3*   | 23      | 24      | dBm  |
|                         | Band38(2570 - 2620 MHz)                  | 20.3*   | 23      | 24      | dBm  |
|                         | Band39(1880 - 1920 MHz)                  | 20.3*   | 23      | 24      | dBm  |
|                         | Band40(2300 - 2400 MHz)                  | 20.3*   | 23      | 24      | dBm  |

|                          | Band28(758 - 803 MHz)                      | -94.8   | dBm  |
|                          | Band38(2570 - 2620 MHz)                    | -96.3   | dBm  |
|                          | Band39(1880 - 1920 MHz)                    | -96.3   | dBm  |
|                          | Band40(2300 - 2400 MHz)                    | -96.3   | dBm  |
| WCDMA                    | Band41(2496 - 2690 MHz)                    | -94.3   | dBm  |
|                          | Band66(2110 - 2200 MHz)                    | -95.8   | dBm  |
|                          | Band1(2110 - 2170 MHz)                     | -106    | dBm  |
|                          | Band5(869 - 894 MHz)                       | -104    | dBm  |
| GSM                      | Band8(925 - 960 MHz)                       | -103    | dBm  |
|                          | 850(869 - 894 MHz)                         | -102    | dBm  |
|                          | 900(925 - 960 MHz)                         | -102    | dBm  |
|                          | 1800(1805 - 1880 MHz)                      | -102    | dBm  |
|                          | 1900(1930 - 1990 MHz)                      | -102    | dBm  |

**7 Evaluation Kit**

WNC provides EVK built with UMC-MT2731 EU PoC. User could use this EVK to verify basic functions or develop applications on MT2731 platform. Following is EVK block diagram

|   |           | Page 30 of 44 |

## 8 Design application notes

This section describes how to connect UMC-MT2731C NAD to the circuitry on the application board, and notes that system developers should pay attention to in their design stage

### 8.1 Power trace

On VSYS power traces from the application board to UMC-MT2731C, to place the de-coupling capacitors, 10-uF or 22-uF, near by the input of NAD as close as possible. Recommended width of VSYS trace is at least wider than 80-mil

### 8.2 Power ON/OFF/Suspend and Reset

#### 8.2.1 Power ON

After supplying VSYS, to pull PMIC\_ENB LOW to power NAD on

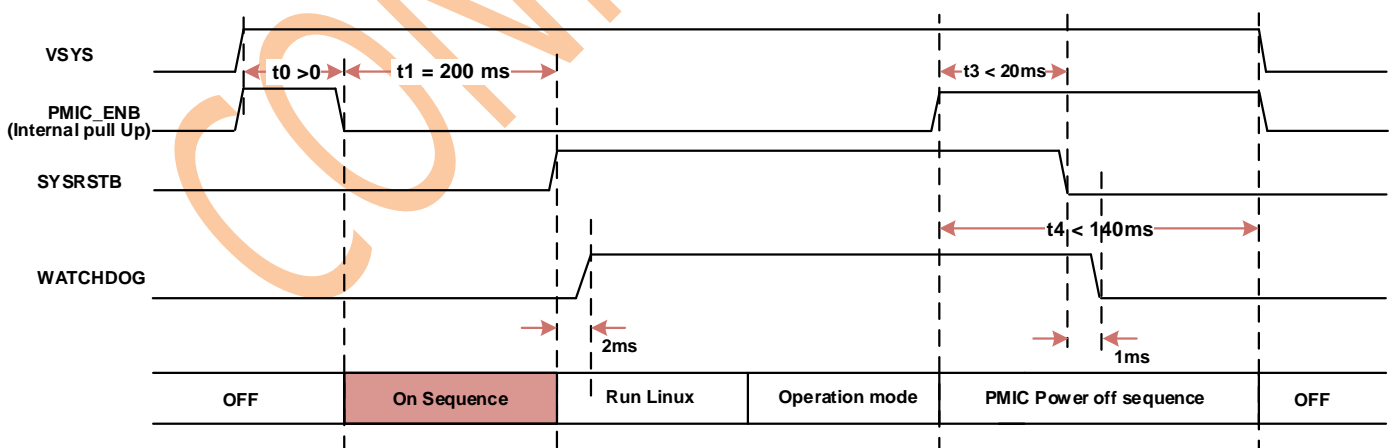

#### 8.2.2 Power OFF

Pull PMIC\_ENB HIGH to power NAD off. Powering off sequence requires at least 140-ms

#### 8.2.3 Reset

- (1) To pull PMIC\_RESET\_B LOW at least 200-ms for rebooting NAD the with completed power sequence
- (2) Alternative approach is pulling SYSRSTB LOW to reset NAD without resetting the power ON/OFF sequence. This is only for the debugging

NAD Power On/Off Sequence

| NAD Pad# | NAD Pad Name | Pin Function Description        |
|----------|--------------|---------------------------------|
| Q6/Q7    | VSYS         | System supply-feed power of NAD |

|   |           |               |
|---|-----------|---------------|
| Subject:<br>UMC-MT2731C Product Specification | Doc. No.: | Rev: 0.9      |
|   |           | Page 32 of 44 |

|    |              |  |
|----|--------------|--|
| P6 | PMIC_ENB     | Pull this pin low to power NAD off   |
| P7 | PMIC_RESET_B | Pull this pin low to trigger the reset of PMIC                                     |
| H7 | SYSRSTB      | Pull this pin low to reset NAD without resetting the power ON/OFF sequence of PMIC |

### 8.3 USB3.1 Gen.1

#### 8.3.1 Layout

The total routing length of SS-USB signal traces should be less than 4500-mil and designed with 90-OHM line impedance on the application board, and the difference length of differential pair signals shall be kept within 5-mil

#### 8.3.2 Using USB2.0

User could use USB 2.0 only. In this case, all SS-USB pins(A4, A5, A6 and A7) should be configured as No Connection(NC)

| NAD Pad# | NAD Pad Name | Pin Function Description         |
|----------|--------------|----------------------------------|
| A4       | SSUSB_TXP    | SS-USB interface signal          |
| A5       | SSUSB_TXN    | SS-USB interface signal          |
| A6       | SSUSB_RXN    | SS-USB interface signal          |
| A7       | SSUSB_RXP    | SS-USB interface signal          |
| A9       | USB_DM_P1    | USB 2.0 differential pair signal |
| A10      | USB_DP_P1    | USB 2.0 differential pair signal |

|   |           |               |
|---|-----------|---------------|
| Subject:<br>UMC-MT2731C Product Specification | Doc. No.: | Rev: 0.9      |
|   |           | Page 33 of 44 |

## 8.4 USB2.0 OTG

The total routing length of HS-USB signal traces should be less than 7500-mil and designed with 90-OHM line impedance on the application board, and the difference length of differential pair signals shall be kept within 40-mil

| NAD Pad# | NAD Pad Name | Pin Function Description             |
|----------|--------------|--------------------------------------|
| B8       | USB_DM_P0    | USB 2.0 OTG differential pair signal |
| B9       | USB_DP_P0    | USB 2.0 OTG differential pair signal |
| A12      | IDDIG        | ID pin of USB 2.0 OTG interface      |

## 8.5 I2C

I2C is internally pulled-up by 3.3V with 4.7K-OHM resistor. Push-pull is recommended for high speed mode. Open-drain is recommended for standard, fast and fast plus mode

| NAD Pad# | Pin Function Description | GPIO Name | I/O Type               |
|----------|--------------------------|-----------|------------------------|
| E11      | SCL0                     | GPIO42    | Push-pull / Open-drain |
| D10      | SDA0                     | GPIO41    | Push-pull / Open-drain |

## 8.6 I2S

Signal voltage level is required 1.8-Volatge

| Interface | Function | Mode                                       | Sampling Rate/Bit Resolution                                |
|-----------|----------|--|---|
| I2S       | IN & OUT | MASTER or SLAVE configured by the software | MASTER: up to 192-KHz, 24-bit<br>SLAVE: up to 96-KHz, 24bit |

## 8.7 MSDC

### 8.7.1 Layout

The total routing length of eMMC signal traces should be less than 1000-mil and the difference length of MSDC signals shall be kept within 10-mil on the application board. Developer could use VEMC\_PMU and VIO18\_PMU as the power supply of eMMC device

### 8.7.2 MSDC interface

MSDC0 has the independent power domain and is dedicated for eMMC device on the application board. MSDC1/2 is reserved for SDIO interface applications excluded SD-Card

| Interface | Function | Standard |
|-----------|----------|----------|
|-----------|----------|----------|

|   |           |               |
|---|-----------|---------------|
| Subject:<br>UMC-MT2731C Product Specification | Doc. No.: | Rev: 0.9      |
|   |           | Page 34 of 44 |

|       |                     |          |
|-------|---------------------|----------|
| MSDC0 | eMMC                | eMMC 5.0 |
| MSDC1 | Reserved            | SDIO 3.0 |
| MSDC2 | Reserved for MT6630 | SDIO 3.0 |

**8.8 SPI**

**8.8.1 Layout**

The total routing length of SPI signal traces should be less than 5000-mil and well-shielded by the nearby grounding in the same layer or neighborhood layers on the application board; furthermore, keeping SPI routing far away from noises source(such as VBUS, the bucking switching nodes and clock signals) is necessary

**8.8.2 Application**

SPI supports MASTER or SLAVE mode which is configured by the software

**8.9 SIM**

**8.9.1 Layout**

VSIM1\_PMU/VSIM2\_PMU is the power supply-feed for SIM1/SIM2 on the application board, and able to be configured as 1.8- or 3.3-Volatge level; the default setting is 1.8-Volatge. Both SIM1\_SCLK and SIM2\_SCLK is recommended to be shielded by the grounding

**8.10 RF antenna port**

Preventing the coplanar grounding being quite close 50-OHM RF transmission lines shall be considered by Developer when you do RF trace design connected to RF antenna pads of UMC-MT2731C on the application board. It is better to have the keep-out gap which is 3 to 5 times of top layer RF trace width between these RF lines and the grounding

Meanwhile, it is also important to reserve the pi-matching circuit design close to NAD antenna out pads as possible

Avoid making RF layout trace of the primary antenna port cross the diversity antenna trace, and then this would cause the poor antenna isolation to impact RF performance of the application board

**8.10.1 Antenna detection**

Following concept schematic diagram is a design example to build the antenna detection circuit by using NAD AUXADC pin of AUXADC\_VIN2 for monitoring NAD ANT\_PTRX connection status with the external passive antenna shunted with a grounded inductor. In this diagram

DC block: to play the role of isolating the detection signal with Antenna matching possibly consisted of the grounded matching elements

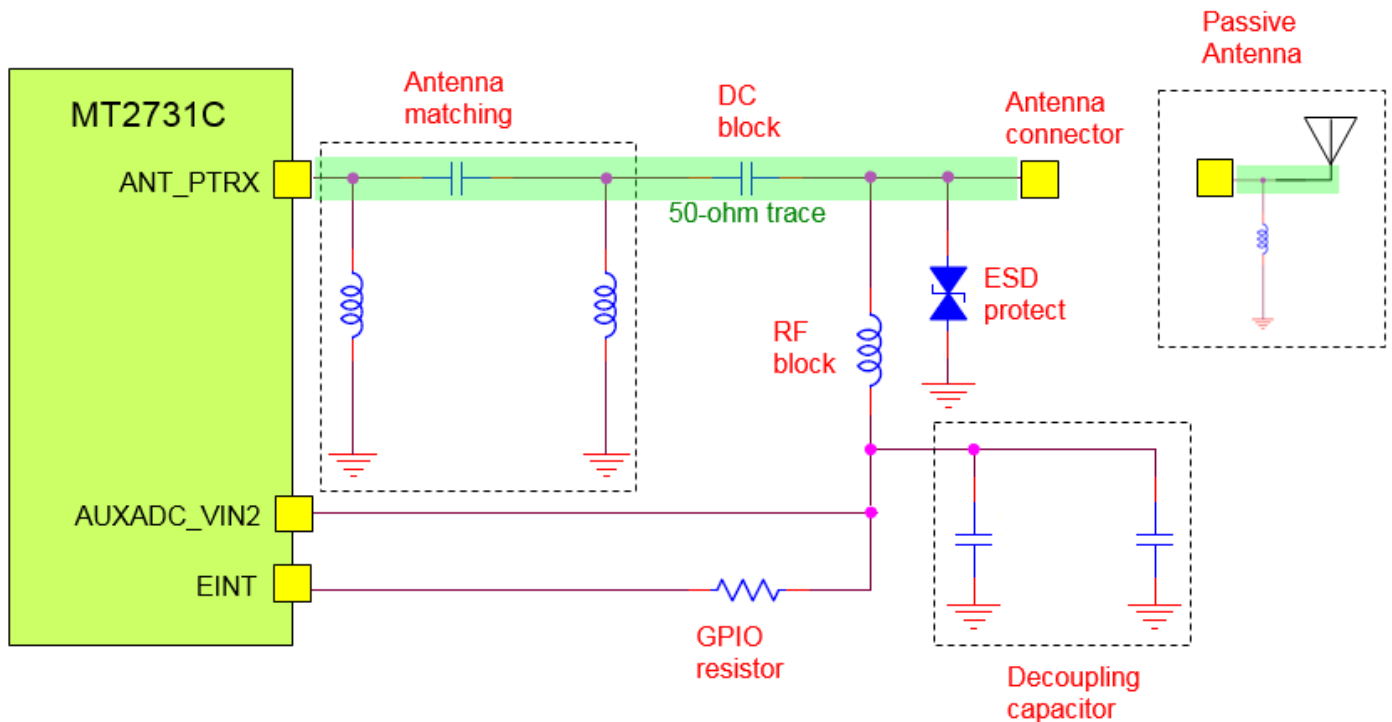

RF block: to prevent RF signals being fed into the antenna detection circuitry

|   |           |               |
|---|-----------|---------------|
| Subject:<br>UMC-MT2731C Product Specification | Doc. No.: | Rev: 0.9      |
|   |           | Page 35 of 44 |

GPIO resistor: to limit the current draw when the external antenna is connected

Connected Case: NAD EINT pin would continuously send out the detection signal of the static high state; if the external antenna is well-attached with the application board, the software reading value of AUXADC\_VIN2 is kept as static zero-Voltage

Disconnected Case: If any broken events happened on RF path between the external antenna and NAD ANT\_PTRX, AUXADC\_VIN2 would read a high state voltage level generated by NAD EINT port

### 8.10.2 Antenna Isolation

Due to B14 2<sup>nd</sup> harmonic fall into GPS in-band, it causes GPS performance degradation. To reduce performance degradation, enough isolation between WWAN ANT and GPS ANT is necessary. About MT2731C NA SKU, the suggest isolation should be more than 28dB.

### 8.11 KPCOLO

Pull KPCOLO LOW to force NAD being USB Download Mode for user updating NAD software

\*Note: Can be customized

### 8.12 IDDIG

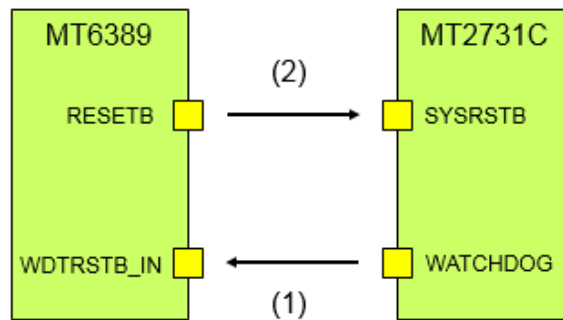

This pin is used as USB 2.0 OTG ID pin

### 8.13 WATCHDOG

|   |           |               |
|---|-----------|---------------|
| Subject:<br>UMC-MT2731C Product Specification | Doc. No.: | Rev: 0.9      |
|   |           | Page 36 of 44 |

WATCHDOG is a 1.8-Voltage level signal generated from MT2731 and then received by PMIC. In normal cases, MT2731 keeps WATCHDOG as the high state; in case of the low state event happened, a NAD resetting reaction steps would be performed between MT2731 and PMIC and defined as below

- (1) If MT2731 is malfunctioning, WATCHDOG would become the low state, as well as WDTRSTB\_IN of PMIC. Then, PMIC starts itself reset
- (2) After the reset of PMIC is finished, PMIC sent RESETB of the low state to SYSRSTB of MT2731. Then, MT2731 also starts itself reset procedure

\*Note: This function works automatically internally, customer doesn't need to do anything to control it.

### 8.14 SRCLKENAO

NAD status indicator generated from MT2731; the state of high(1.8-Voltage) for Normal Mode, as well as low(0-Voltage) for Sleep/Low Power Mode

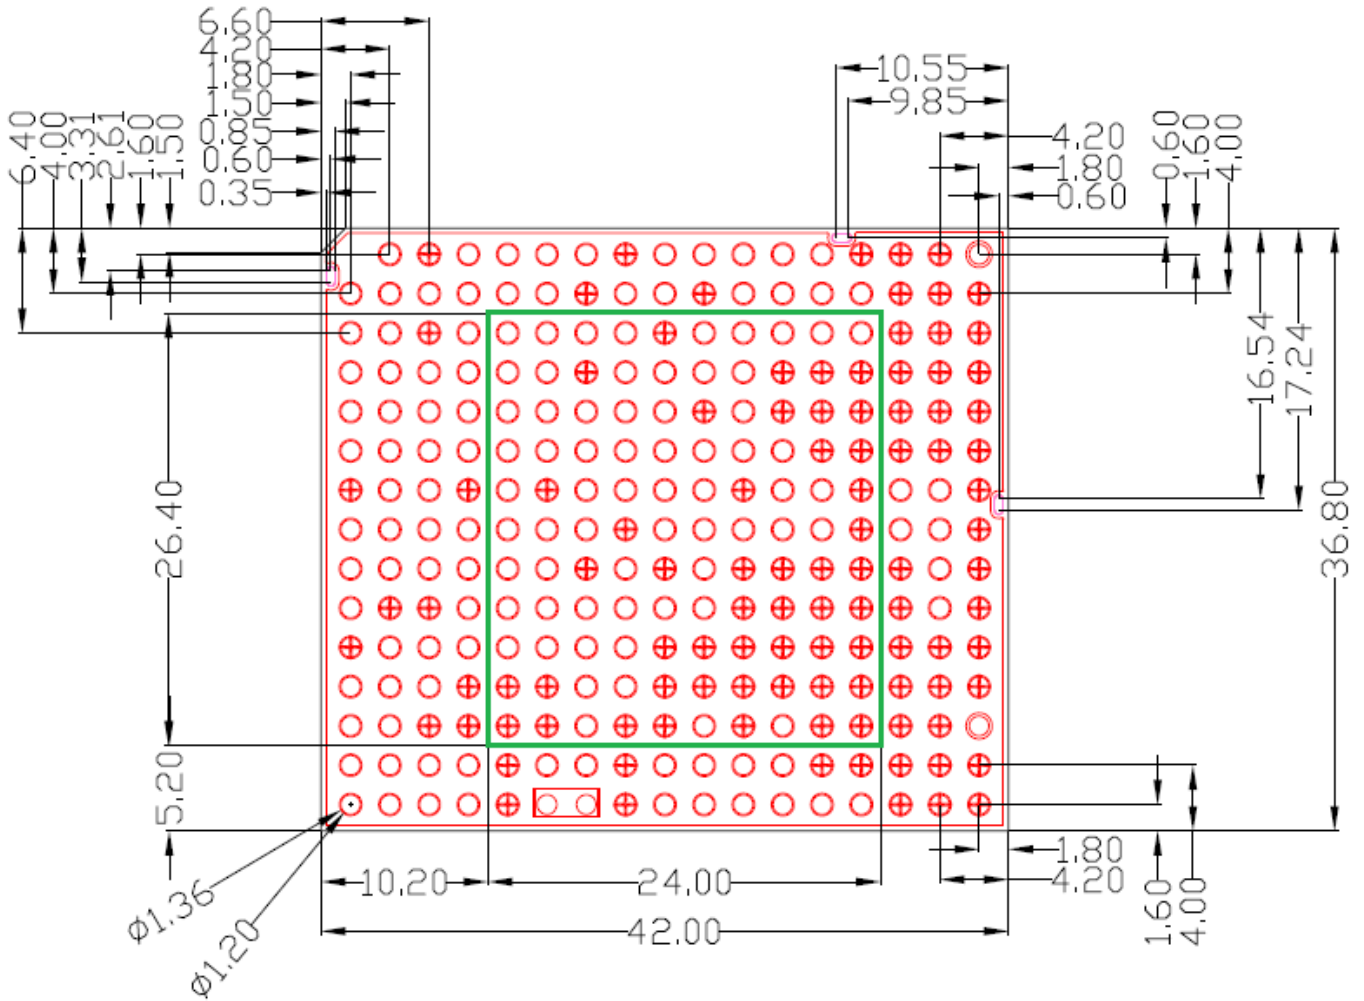

\*Note: Can be customized

### 8.15 RTC\_CLK

32-KHz clock signal generated from PMIC is able to be the synchronized signal source for other functional blocks on the application board

### 8.16 Thermal

It is recommended to reserve contact ground area as broad as possible on TCU. By widening contact ground area, the heat generated by module will be dissipated more efficiently. Green rectangular area is reference area for ground contact

## 10. Warning statement

### Federal Communication Commission Interference Statement:

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

FCC Caution: Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment.

This transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.

### Radiation Exposure Statement:

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance 20cm between the radiator & your body.

|   |           |               |
|---|-----------|---------------|
| Subject:<br>UMC-MT2731C Product Specification | Doc. No.: | Rev: 0.9      |
|   |           | Page 41 of 44 |

**This module is intended for OEM integrators only. Per FCC KDB 996369 D03 OEM Manual v01 guidance, the following conditions must be strictly followed when using this certified module:**

**KDB 996369 D03 OEM Manual v01 rule sections:**

**2.2 List of applicable FCC rules**

This module has been tested for compliance to FCC Part 27, 22, 24, 90

**2.3 Summarize the specific operational use conditions**

The module is tested for standalone mobile RF exposure use condition. Any other usage conditions such as co-location with other transmitter(s) or being used in a portable condition will need a separate reassessment through a class II permissive change application or new certification.

**2.4 Limited module procedures**

Not applicable.

**2.5 Trace antenna designs**

Refer to “Operational Description Antenna trace”  
Please contact the module supplier

**2.6 RF exposure considerations**

This equipment complies with FCC mobile radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with a minimum distance of 20cm between the radiator & your body. If the module is installed in a portable host, a separate SAR evaluation is required to confirm compliance with relevant FCC portable RF exposure rules.

**2.7 Antennas**

The following antennas have been certified for use with this module; antennas of the same type with equal or lower gain may also be used with this module. The antenna must be installed such that 20 cm can be maintained between the antenna and users.

|                   |        |
|-------------------|--------|
| Antenna Type      | Dipole |
| Antenna connector | SMA    |

**2.8 Label and compliance information**

The final end product must be labeled in a visible area with the following: “Contains FCC ID: NKRUMC-MT2731CBN”. The grantee's FCC ID can be used only when all FCC compliance requirements are met.

**2.9 Information on test modes and additional testing requirements**

This transmitter is tested in a standalone mobile RF exposure condition and any co-located or simultaneous transmission with other transmitter(s) or portable use will require a separate class II permissive change re-evaluation or new certification.

**2.10 Additional testing, Part 15 Subpart B disclaimer**

This transmitter module is tested as a subsystem and its certification does not cover the FCC Part 15 Subpart B (unintentional radiator) rule requirement applicable to the final host. The final host will still need to be reassessed for compliance to this portion of rule requirements if applicable.

As long as all conditions above are met, further transmitter test will not be required. However, the OEM integrator is still responsible for testing their end-product for any additional compliance requirements required with this module installed.

**IMPORTANT NOTE:**

In the event that these conditions can not be met (for example certain laptop configurations or co-location with another transmitter), then the FCC authorization is no longer considered valid and the FCC ID can not be used on the final product. In these circumstances, the OEM integrator will be responsible for re-evaluating the end product (including the transmitter) and obtaining a separate FCC authorization.

**Manual Information To the End User**

The OEM integrator has to be aware not to provide information to the end user regarding how to install or remove this RF module in the user's manual of the end product which integrates this module. The end user manual shall include all required regulatory information/warning as show in this manual.

**OEM/Host manufacturer responsibilities**

OEM/Host manufacturers are ultimately responsible for the compliance of the Host and Module. The final product must be reassessed against all the essential requirements of the FCC rule such as FCC Part 15 Subpart B before it can be placed on the US market. This includes reassessing the transmitter module for compliance with the Radio and EMF essential requirements of the FCC rules. This module must not be incorporated into any other device or system without retesting for compliance as multi-radio and combined equipment

**Industry Canada statement:**

This device complies with ISED's licence-exempt RSSs. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Le présent appareil est conforme aux CNR d'ISED applicables aux appareils radio exempts de licence. L'exploitation est autorisée aux deux conditions suivantes : (1) le dispositif ne doit pas produire de brouillage préjudiciable, et (2) ce dispositif doit accepter tout brouillage reçu, y compris un brouillage susceptible de provoquer un fonctionnement indésirable.

**Radiation Exposure Statement**

This equipment complies with ISED radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with greater than 25cm between the radiator & your body.

**Déclaration d'exposition aux radiations:**

Cet équipement est conforme aux limites d'exposition aux rayonnements ISED établies pour un environnement non contrôlé. Cet équipement doit être installé et utilisé à plus de 25 cm entre le radiateur et votre corps.

**This device is intended only for OEM integrators under the following conditions**

- 1) The antenna must be installed and operated with greater than 25 cm between the antenna and users
- 2) The transmitter module may not be co-located with any other transmitter or antenna.
- 3) Module approval valid only when the module is installed in the tested host or compatible series of host which have similar RF exposure characteristic with equal or larger antenna separation distance.

As long as 3 conditions above are met, further transmitter test will not be required. However, the OEM integrator is still responsible for testing their end-product for any additional compliance requirements required with this module installed.

Cet appareil est conçu uniquement pour les intégrateurs OEM dans les conditions suivantes:

- 1) L'antenne doit être installé et exploité avec plus de 25 cm entre l'antenne et les utilisateurs
- 2) Le module émetteur peut ne pas être coïmplanté avec un autre émetteur ou antenne.
- 3) Approbation du Module valable que lorsque le module est installé dans l'hôte testé ou de la série de l'hôte compatible qui ont même caractéristique de l'exposition aux RF avec la distance égale ou supérieure séparation antenne.

Tant que les 3 conditions ci-dessus sont remplies, des essais supplémentaires sur l'émetteur ne seront pas nécessaires. Toutefois, l'intégrateur OEM est toujours responsable des essais sur son produit final pour toutes exigences de conformité supplémentaires requis pour ce module installé.

#### IMPORTANT NOTE

In the event that these conditions can not be met (for example certain laptop configurations or co-location with another transmitter), then the Canada authorization is no longer considered valid and the IC ID can not be used on the final product. In these circumstances, the OEM integrator will be responsible for re-evaluating the end product (including the transmitter) and obtaining a separate Canada authorization.

#### NOTE IMPORTANTE

Dans le cas où ces conditions ne peuvent être satisfaites (par exemple pour certaines configurations d'ordinateur portable ou de certaines co-localisation avec un autre émetteur), l'autorisation du Canada n'est plus considéré comme valide et l'ID IC ne peut pas être utilisé sur le produit final. Dans ces circonstances, l'intégrateur OEM sera chargé de réévaluer le produit final (y compris l'émetteur) et l'obtention d'une autorisation distincte au Canada.

#### End Product Labeling

This transmitter module is authorized only for use in device where the antenna may be installed and operated with greater than 25cm between the antenna and users. The final end product must be labeled in a visible area with the following: "Contains IC: 4441A-MT2731CBN".

#### Plaque signalétique du produit final

Ce module émetteur est autorisé uniquement pour une utilisation dans un appareil où l'antenne peut être installée et utilisée à plus de 25 cm entre l'antenne et les utilisateurs. Le produit final doit être étiqueté dans un endroit visible avec l'inscription suivante: "Contient des IC: 4441A-MT2731CBN".

#### Manual Information To the End User

The OEM integrator has to be aware not to provide information to the end user regarding how to install or remove this RF module in the user's manual of the end product which integrates this module.

The end user manual shall include all required regulatory information/warning as show in this manual.

#### Manuel d'information à l'utilisateur final

L'intégrateur OEM doit être conscient de ne pas fournir des informations à l'utilisateur final quant à la façon d'installer ou de supprimer ce module RF dans le manuel de l'utilisateur du produit final qui intègre ce module. Le manuel de l'utilisateur final doit inclure toutes les informations réglementaires requises et avertissements comme indiqué dans ce manuel

**DETACHABLE ANTENNA USAGE**

This radio transmitter [IC: 4441A-MT2731CBN] has been approved by Innovation, Science and Economic Development Canada to operate with the antenna types listed below, with the maximum permissible gain indicated. Antenna types not included in this list that have a gain greater than the maximum gain indicated for any type listed are strictly prohibited for use with this device.

Le présent émetteur radio [IC: 4441A-MT2731CBN] a été approuvé par Innovation, Sciences et Développement économique Canada pour fonctionner avec les types d'antenne énumérés ci-dessous et ayant un gain admissible maximal. Les types d'antenne non inclus dans cette liste, et dont le gain est supérieur au gain maximal indiqué pour tout type figurant sur la liste, sont strictement interdits pour l'exploitation de l'émetteur.

| Manufacturer | Model | Antenna Type | MaxGain (dBi) | Impedance (Ω) |
|--------------|-------|--------------|---------------|---------------|
| WNC          | SMA   | Dipole       | 2.15          | 50            |
