

# ADVANCED DESIGN PUTS YOU AHEAD OF THE COMPETITION.

## PROFIT FROM OUR QUALITY ADVANTAGE.

Presenting York® LX Series packaged units — specially developed with a focus on reliability to see new ways to increase your profits. Our product design engineers collected feedback on simplifying installation and servicing from actual field trials. Component reliability was verified by extensive laboratory tests, including accelerated 20-year system testing down to -10°F. Product quality was ensured by Johnson Controls' stringent manufacturing standards. The result: a dependable, price-competitive design that simplifies projects and boosts your profits.

**Faster to install. Easier to set up. Simpler to service. The advantage is all yours.**

### SPEED UP INSTALLATION AND SERVICING

**WITH FRONT ACCESS:** Compressor, refrigeration controls and blower are all accessible from the front, plus the evaporator coil slides out for easy cleaning. Convenient gas and electric hookups eliminate connection hassles.

### BEAT THE COMPETITION WITH SIMPLIFIED

**DEMAND DEFROST CONTROL:** Instead of inferior time temp defrost, LX heat pumps use a simplified demand defrost control, including Anti Short Cycle Delay, LED status lights for easy troubleshooting and t-stat plugs to simplify connections.

### PROVEN CONDENSER COIL:

Tested copper tube/aluminum fin condenser coils combine outstanding heat transfer rate with long-term reliability.

### USES STRONG BASE RAILS:

Fits on roof frames or slabs with no problem, as well as through gates and onto service trucks.

### REDUCE COMPLEXITY WITH STANDARDIZATION:

Standardized design ensures consistent performance and reliability across the product range and reduces replacement parts to carry for servicing.

### WIN CUSTOMERS WITH AFFORDABLE

**EFFICIENCY:** Sell the energy savings and affordability of 14 SEER packaged units that meet 2015 U.S. Department of Energy standards (14 SEER is 29% more efficient than older 10 SEER units).

### TESTED GAS HEAT

**EXCHANGER IS WARRANTIED FOR A**

**LIFETIME:** Stainless steel tubular gas heat exchanger is proven by over 1,000,000 lab-test cycles and comes with a LIFETIME limited warranty as standard.

### MAINTAIN APPEARANCE:

Powder-coat finish with 1000-hour salt spray rating ensures the exterior finish provides outstanding corrosion resistance and superior appearance in harsh conditions.

PCE4B6021A	5.0	14	11	60,000	Up to 25kW

\* Up to 25 kW supplemental electric heat

## Installation and servicing made easy.

With new LX Series packaged units, major components — compressor, refrigeration controls and blower — are all accessible from the front, plus the evaporator coil slides out for easy cleaning. And it's easy to access filters from the side and the condenser coil from all four sides thanks to separate coil guard panels. There's no need to ever remove mid or rear panels. Duct and power connections are industry standard to match up with replaced units. Controls troubleshooting can happen without affecting airflow. Plus, standardized parts mean you carry fewer replacement parts in inventory and on the service truck.

## Technology so advanced, it's simple.

For simplicity and reliability, LX Series packaged units employ proven controls to simplify operation and ensure reliability. The control delivers information on unit status, start-up, supply, return and outdoor air temperatures. For heat pumps, simplified demand defrost control comes standard, including an Anti Short Cycle Delay to protect the compressor and LED status lights to simplify troubleshooting. The balance point can be conveniently set with compatible indoor thermostats.
