Chapter 1

Getting Started

ZTE MF60 is a 3G mobile hotspot device, working in EDGE/WCDMA/HSPA network. The client devices can connect to the device via USB or Wi-Fi interface; the device supports data and SMS services, enabling you to communicate anytime and anywhere.

Device Appearance

The following figure shows the appearance of the device. It is only for your reference. The actual device may be different.

1.Power	Hold the Power button to switch on/off the device.
2.Memory card slot (microSD card)	It is where you insert the memory card (microSD card).
3.WPS	This button is used to start Wi-Fi Protected Setup authentication process and enable/disable the Wi-Fi function. <ul style="list-style-type: none">● Hold it for three seconds to activate the WPS process.● Press it to enable/disable Wi-Fi function.
4. LED Screen	It is to indicate the signal type, signal strength, battery, Wi-Fi, etc.
5. External Antenna Connector	It is used to connect an external antenna to enhance the signal strength.
6.Charger/USB port	<ul style="list-style-type: none">● Charge your device.

- Connect the client to your device via USB cable.

Notes:

- Press **WPS** and **Power** buttons simultaneously, and hold on about three seconds until all LEDs are off, then release the buttons, the device will restart automatically and restore to the factory default settings.

-  is a trademark of SD Card Association.

Indicators

When the device is powered on, the following icons will appear on the LED screen, with the corresponding indications listed in the table below:

Icon	Indication
	Network signal strength.
	Network type. 2G or 3G icon will appear on the LED screen according to the network being connected.
	Roaming network indication.
	Connect to the Internet automatically.
	Connect to the Internet manually.
	Wi-Fi status and number of the connected users.
	New incoming message indication.
	Battery power indication.

Hardware Installation

Inserting SIM Card and Battery

1. Use the thumb catch at the bottom of the device to open the battery cover.

2. Insert SIM Card into the slot.

 **Warning:**

Please power off the device and remove the external power adapter before removing or inserting the SIM card, if not, the device or SIM card may be damaged.

3. Insert the battery as shown with the contacts located against the gold springs.

4. Line the battery cover up correctly and press gently to close the case.

Inserting microSD Card

1. Pull the microSD cover out of the card slot.

Notes:

Do not pull the cover rudely, as it is connected with the device.

2. Insert the microSD card into the microSD slot. The following picture shows the correct inserting direction. You will hear a click when the microSD card locks in place.

3. Close the microSD cover.

Switching On/Off Your Device

Press and hold the **Power** button to switch on/off the device.

Notes:

- Please install battery before power on.
- The device is powered on when the signal strength indication lights up.

Charging Your Device

Notes:

- Charge at least 4 hours to ensure a full initial charge.
- Charging is only possible within a temperature range of 0°C to 45°C.
- You can charge your device by using USB cable or adapter.

1. Insert the charger lead carefully with the plug arrow facing the bottom of the device.
2. The plug only fits one way. Do not use excessive force to insert the plug.
3. Check the plug is the right way round and lined up correctly and insert it gently.

microSD Card

Using microSD Card

1. Insert the microSD card into the device.
2. Connect the microSD with PC or laptop via provided USB cable, and the system will display it as a removable disk.
3. Use it freely.

Uninstall microSD Card

1. Left click the icon  in the Windows system tray bar. Then a menu will popup and indicate the USB devices list as below:

Safely remove USB Mass Storage Device - Drive(H:)

2. Select **Safely remove the USB disk** which is relevant to the device.
3. Remove the device directly.

About SIM Card

Avoid handling the SIM card unnecessarily. Hold the card by the edges to prevent static damage. Keep the SIM card away from electrical and magnetic appliances.

If you cannot get service, make sure that:

- You are in an area which has network coverage.
- You are using the correct SIM card.

Chapter 2

Working Mode

The following picture is the application example. Use the USB cable to connect your PC or laptop which cannot provide wireless network function, and connect other laptops with device via Wi-Fi, so all of them can surf on the Internet at the same time.

Your device supports three working modes: USB mode, Wi-Fi mode, and Mixed mode. For the client, we only use PC or laptop as the example in this document.

USB Mode

Connect the device to your PC or laptop via the included USB cable, then power on your device. And the following picture is one application example:

Installing Software

When you connect your device to PC or laptop for the first time, the system will automatically detect and recognize the new hardware and display the new icon in the desktop status bar, indicating that the PC or laptop and the USB device have been connected properly. After a few seconds, there will show the following installation interface if the laptop and desktop PC supports automatic installation.

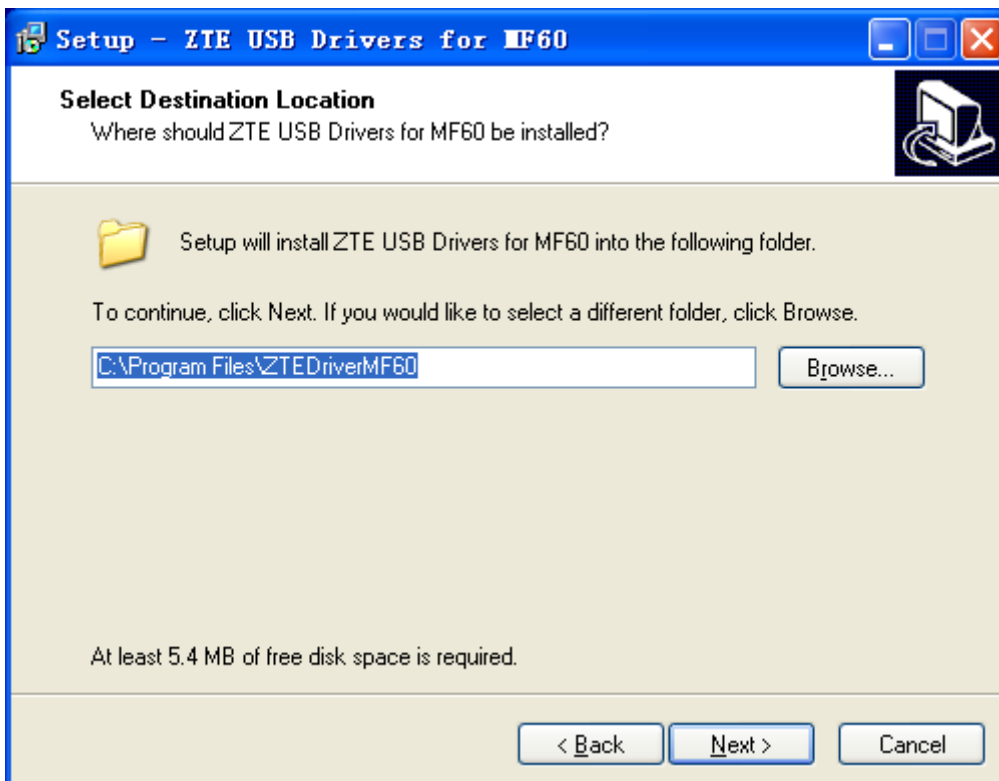

Notes:

If the system does not launch installation automatically, you can run the installation program in path of **My Computer > Portable Hotspot > Setup.exe**.

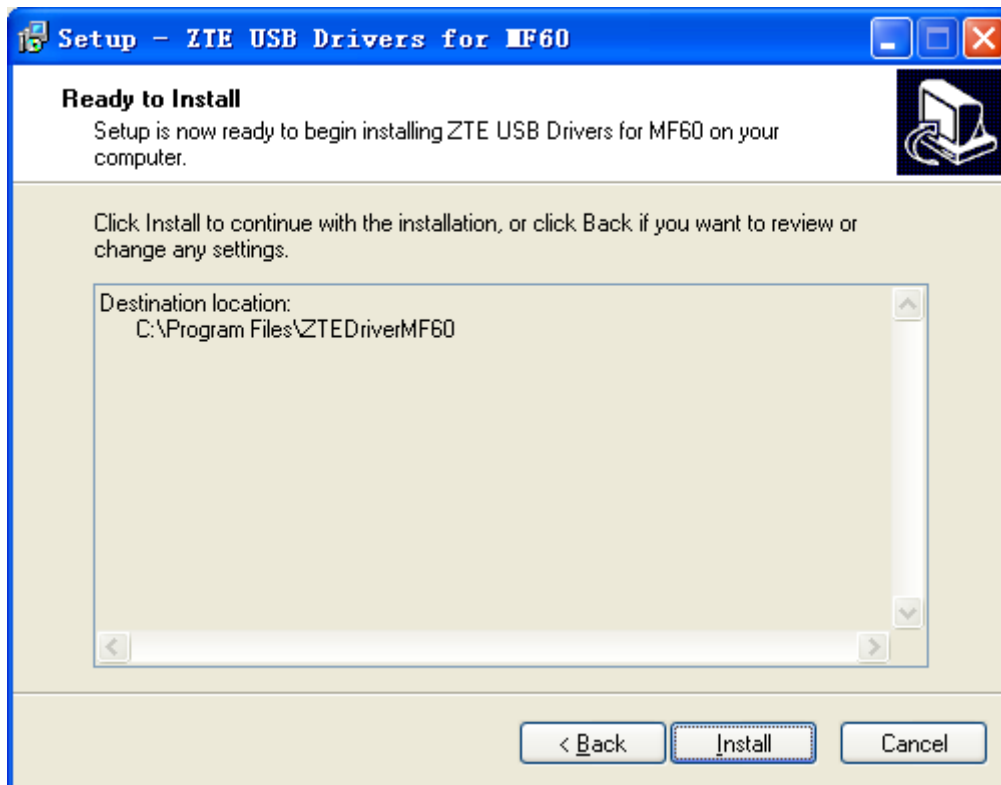

The following installation interface will show how to start installation. And the first screen you see as following:

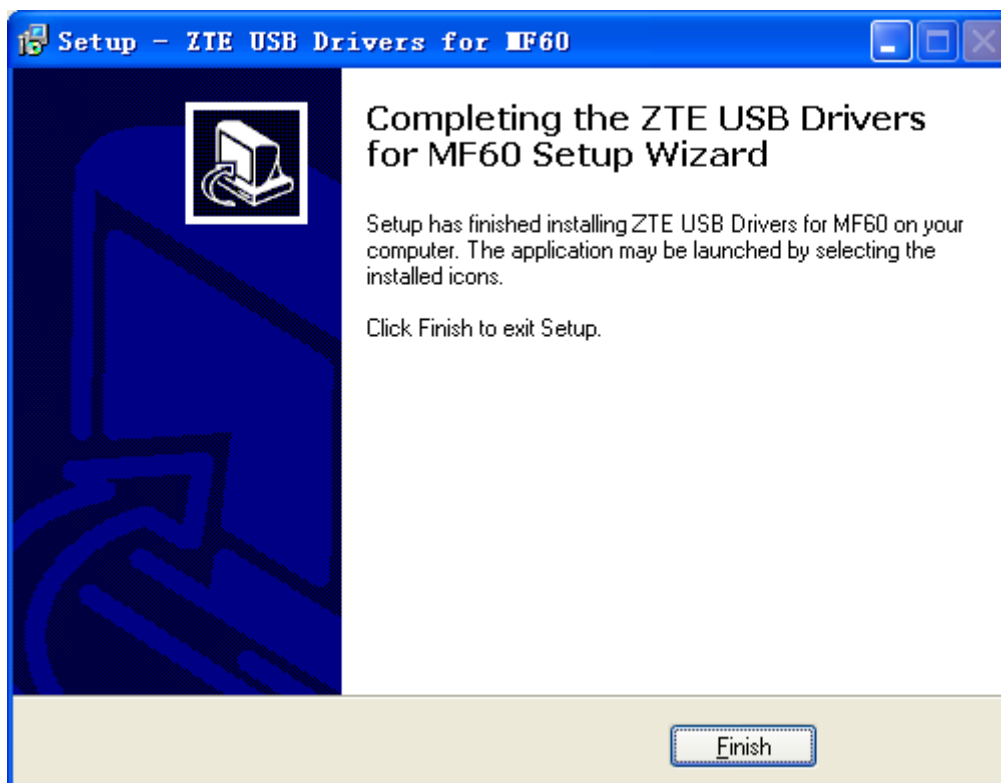

Strongly recommend you to exit Windows programs, and click **Next**,

Select the folder that you want to install the software, and you can select a different path by pressing Change, and then click **Next**.

Click **Install**.

Click **Finish** to complete the installation.

After the installation, select **Start > Programs** and there will be a **ZTE USB Drivers for MF60** program group, which includes **MF60 Web UI** and **Uninstall ZTE USB Drivers for MF60**. There will be a

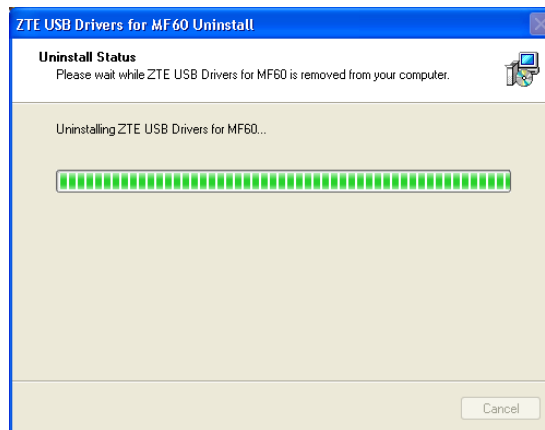

shortcut icon **MF60 Web UI** on the desktop.

Uninstalling Software

Select **Start > Programs > ZTE USB Drivers for MF60 > Uninstall ZTE USB Drivers for MF60** menu on the laptop or desktop PC.

Click **Yes** to confirm uninstall the software. Then the system begins to uninstall programs, and this interface will indicate the progress of uninstall.

Click **OK** to complete the application software uninstall.

Wi-Fi Mode

Power on directly, and then connect the device to your PC or laptop via Wi-Fi. And the following picture is one application example:

Mixed Mode

Use the both connection methods to connect your PC or laptop. And the following picture is one application example:

Chapter 3

Operation and Function

Preparation

Before using the data service, make sure:

- SIM card is inserted.
- All LED Indicators are working normally.

Establish a connection between your device and the client

Via USB Cable

1. Connect your device and the client with the USB cable.
2. Power on your device.
3. Install software.

After the installation, the connection between your device and the client will be established successfully a moment later.

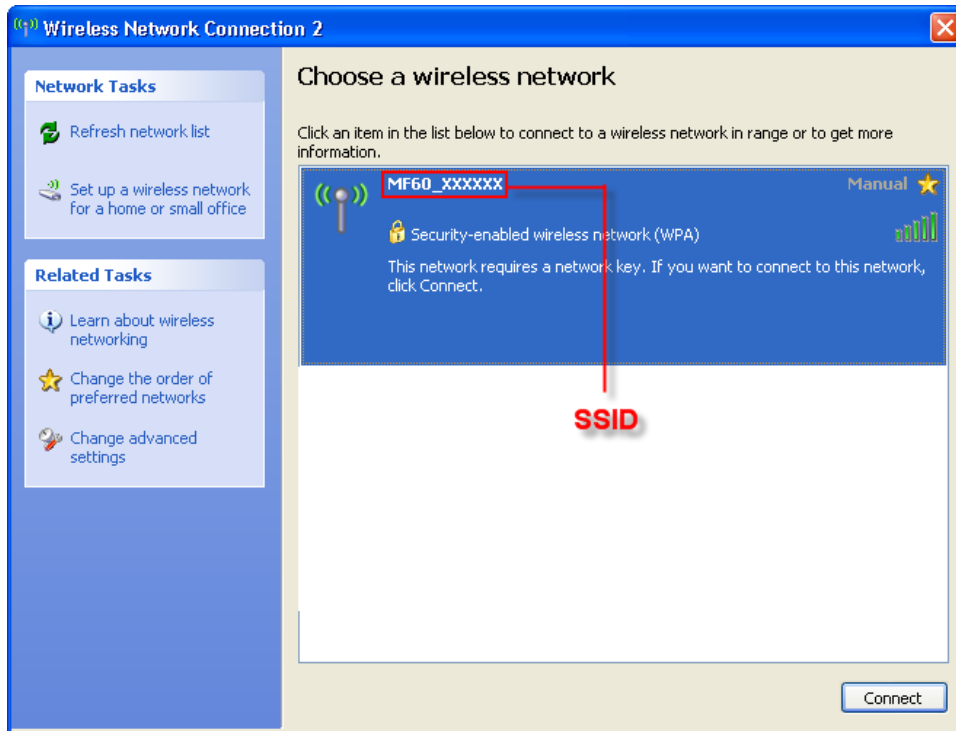

Via Wi-Fi

1. Power on your device directly. It will take 1~2 minutes to initialize, and then Wi-Fi LED icon will be indicated on the LED screen of your device.
2. Use your normal Wi-Fi application on the client to search the available wireless network.

Notes: You need to check your Wireless Network Connection. Set the client to obtain an IP address automatically in the Internet protocol (TCP/IP) properties, and the client will get an IP address like "192.168.0.101".

3. Select the SSID of your device, and then click **Connect**.

NOTE Notes:

There will be a pop-up window to require the password. Please check the label on the battery compartment of your device to gain the SSID and preset password information.

4. Wait a moment, the connection between your device and the client will be established successfully.

Access the Internet

1. Switch on the device.
2. Establish a connection between your device and the client.
3. After successfully establishing the connection, access the Internet in the **Always On** or **Manual** mode. The default mode is **Manual**.

NOTE Notes:

You can browse the WebGUI Configuration page and click WAN Connection to set the WAN connection mode.

Access the WebGUI Configuration Page

1. Make sure the connection between your device and the client is correct.
2. Launch the internet browser and enter <http://192.168.0.1> or <http://ufi.home> in the address bar.

NOTE Notes:

It is recommended that you use IE (6.0 or later), Firefox (1.0 or later), Opera (6.0 or later), Safari (3.0 or later), Chrome (6.0 or later)

3. The login page appears as follows.

Language :
Administrator :

3G Mobile Hotspot

Notes:

In any situation click **Home** to switch to this interface.

The whole interface is divided into three parts. Related functions can be executed by operation in the related areas.

- **Index area:** Show the configuration list for your device.
- **Content area:** Show the detail configuration.
- **System Information Area:** Show the system status and different kinds of tip.

Battery indicator	: Shows the battery level, 4 stages from none to high .
Signal strength	: Shows the network signal intensity, 5 stages from none to strong .
Internet Status	: Connect Internet.
	: Disconnect Internet.
Wi-Fi Strength	: Wi-Fi status and number of the connected users. And the maximum number is 10.

Quick Setup

1. In the main interface click **Quick Setup**.
2. Read the guide carefully, and then click **Next**.

Quick Settings

•The wizard will show you how to set up your gateway in the safe way: Click "Next" to continue, click "Back" and "Next" to navigate, and click "Apply" to save the settings.

Notes:
Basic parameters can be set in this wizard. For advanced parameters, you need to set them in other menus.

Next

3. Set **PPP Profile Configuration** in the following figure:

Quick Setup > PPP Profile Configuration

•Profile Name: The default profile that you used currently.

Profile	
Profile Name	zte
APN	cmwap

Back Next

Type the APN string.

4. Set **PPP Authentication** in the following figure:

Quick Settings > PPP Authentication

•PPP Authentication
The authentication mode is provided by your Internet Service Provider(ISP).
Password Authentication Protocol(PAP): It provides a simple method without encryption for the peer to establish its identity using a 2-way handshake.
Challenge-Handshake Authentication Protocol(CHAP): It is used to periodically verify the identity of the peer
PPP User Name and PPP Password are provided by your ISP and used to obtain authentication from the ISP when the connection is established.

PPP Authentication	
Authentication	NONE
PPP User Name	
PPP Password	

Back Next

5. Set **SSID Configuration** in the following figure:

Quick Settings > SSID Configuration

•Name SSID(Service Set Identifier): Enter a character string up to 32 characters as the name for your wireless local area network(WLAN).
•SSID Broadcast
Enabled: The gateway broadcasts the SSID and other devices can detect and connect to it.
Disabled: The gateway disables broadcasting and hides the name of your network.

SSID	
Name(SSID)	MF60_XXXXXX
SSID Broadcast	
SSID Broadcast	Enabled

Back Next

Service Set Identifier (SSID) is used to uniquely identify your WLAN. If you enable **SSID Broadcast**, the gateway will broadcast the SSID, and other devices can detect and connect to it.

5. Set **Security Configuration** in the following figure:

Quick Settings > Security Configuration

*Add encryption to your wireless network to prevent unauthorised traffic monitoring and access.
 No Encryption: Your wireless network is open to everyone without authentication and encryption, and this option is not recommended.
 Wireless Equivalent Privacy(WEP): It is a 64-bit or 128-bit encryption method with user configurable fixed keys.
 Wi-Fi Protected Access(WPA): It is a 256-bit encryption method with keys changing automatically.
 WPA2: It is the securer version of WPA with implementation of the 802.11i standard.
 WPA Encryption Algorithm: TKIP, AES, AUTO.
 WPA Pre-Shared Key: Enter the Pre-Shared key as a plain text(ASCII) pass-phrase of at least 8 characters.
 Network Key: Enter 5 ASCII characters or 10 hexadecimal digits for a 64-bit key, enter 13 ASCII characters or 26 hexadecimal digits for a 128-bit key.

Encryption Mode

Encryption Mode	WPA-PSK
WPA ENCRYPTION	AUTO
WPA Pre-Shared Key	00000000UU

Back

Next

Encryption will keep your traffic from being unauthorized monitored and accessed, select one encryption mode from the list, and then set key and/or algorithm for it.

6. Show the Configuration in the following figure:

Quick Settings > Configuration as Follows

Notice: You need reconnect the wireless network after commiling this page.

Profile Name:	zte
APN:	cmwap
PPP User Name:	
PPP Authentication:	PAP
Name (SSID):	MF60_XXXXXX
SSID Broadcast:	Enabled
Encryption Mode:	WPA-PSK

Back

Apply

Make sure that all the parameters shown in the figure are correct, and then click **Apply**.

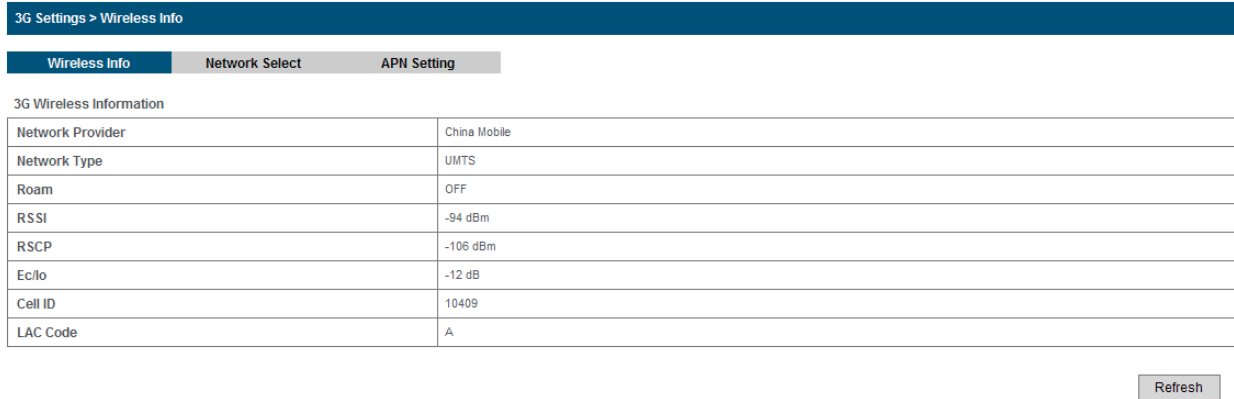

Settings

- Do not modify any settings unless instructed by your service provider.
- Please disconnect the device from the network before change the settings.

3G Settings

Wireless Info

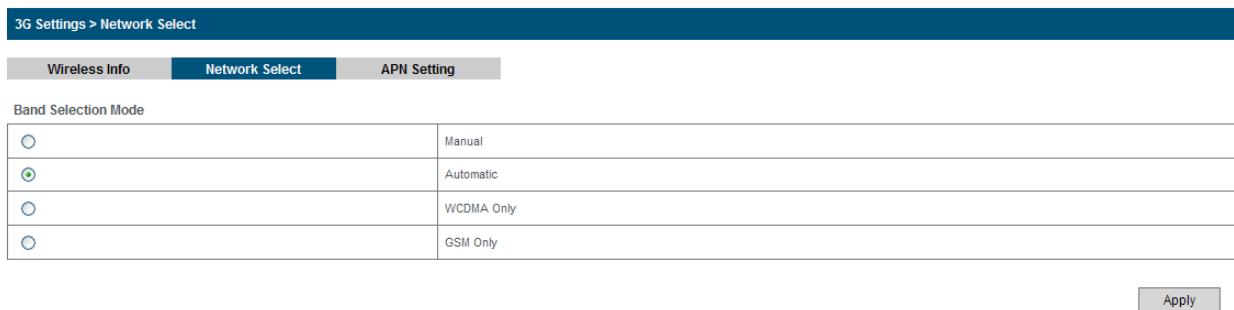

Select **Settings > 3G Settings > Wireless Info**, the 3G wireless information is shown in the following figure:

Click **Refresh** to update the wireless information.

Network Select

Select **Settings > 3G Settings > Network Select**, the Band Selection Mode is shown in the following figure:

- **Manual:** Search the available network manually.
- **Automatic:** Device searches for available network.
- **WCDMA Only:** Device searches for WCDMA network only.
- **GSM Only:** Device searches for GSM network only.

Click **Apply** to confirm your configuration.

APN Setting

Select **Settings > 3G Settings > APN Setting**, the APN parameters are shown in the following figure:

3G Settings > APN Setting

Country Code	United States		
Frequency (Channel)	Auto		
Rate	Auto		
MAX Station Number	5		

Notice: You maybe need reconnect the wireless network after committing this page.

Apply Cancel

- **Network Mode:** If all of the wireless devices connect with this device in the same transmission mode, performance will be improved by choosing the appropriate wireless mode.
- **Network Name(SSID):** Service Set Identifier(SSID). Enter a string less than 32 characters as the name for your wireless local area network(WLAN).

- **Broadcast Network Name(SSID):** Disable or Enable(Default) this function. If **Enable** is selected, the device broadcasts the SSID, and other devices can search and connect to it. When you select **Disable**, other devices can not search out the SSID. If you want someone to connect, you need tell them the SSID, and let them setup manually.
- **AP Isolation:** When **Enabled** is selected, each of your wireless clients will not be able to communicate with each other.
- **Country Code:** Choose the right country code.
- **Frequency(Channel):** Choose the appropriate channel to optimize the performance and coverage of your wireless network.
- **Rate:** Choose the speed rate.
- **MAX Station Number:** Choose the maximum number of the stations which connect the AP simultaneously.

Click **Apply** to confirm your configuration.

Security

Select **Settings > Wi-Fi Settings > Security**, the Security parameters are shown in the following figure:

Unless one of these encryption modes is selected, wireless transmissions to and from your wireless network can be easily intercepted and interpreted by unauthorized users.

- **Security Mode:** The security modes are described below:

Mode	Description
OPEN	You can authenticate successfully with a SSID, whether it is valid or empty.
SHARED	The WLAN clients who have the same WEP key with wireless gateway can pass the authentication and access the wireless network.
WPA-PSK	WPA Pre-Shared Key, Enter the Pre-Shared key as a plain text (ASCII)

	pass-phrase.
WPA2-PSK	It is the securer version of WPA with implementation of the 802.11i standard.
WPA-PSK/WPA2-PSK	Apply both the WPA-PSK and WPA2-PSK scheme.

- **WPA Algorithm:** TKIP, AES or AUTO.
- **Pass phrase:** Enter the password manually.

If the Authentication type is **SHARED**, the bottom part of the configuration page displays parameters as shown:

The screenshot shows the 'Security Policy' configuration page. At the top, there is a breadcrumb 'Wi-Fi Settings > Security'. Below it are tabs for 'Station List', 'Basic', 'Security' (which is selected), and 'WPS'. Under 'Security Policy', the 'Security Mode' is set to 'SHARED'. Below that is the 'Wire Equivalence Protection (WEP)' section. It includes a 'Default Key' dropdown set to 'Key 1' and a table for 'WEP Keys' with four rows (WEP Key 1 to 4). Each row has a text input field and a dropdown menu set to 'Hex'. At the bottom right, there are 'Apply' and 'Cancel' buttons. A note at the bottom left states: 'Note: After you click Apply any connected Wi-Fi devices will need to reconnect.'

- **WEP Keys:** At most four keys can be set in the blank. Choose the primary key index. The primary key is the only key in use at a given time. Whatever keys you enter for an access point, you must also enter the same keys for the client adapter in the same order. In other words, WEP key 1 on the AP must match WEP key 1 on the client adapter, WEP key 2 on the AP must match WEP key 2 on the client adapter, etc. A WEP can be in HEX form either 10 or 26 hexadecimal digits (0~9,a~f and A~F) and in ASCII form either 5or 13 ASCII code.

If the Authentication type is **OPEN**, the bottom part of the configuration page displays WPA parameters.

Wi-Fi Settings > Security

Comment	<input type="text"/>	

The maximum rule count is 10.

Apply Reset

Current MAC/IP/Port filtering rules in system:

No.	MAC address	Dest. IP Address	Source IP Address	Protocol	Dest. Port Range	Source Port Range	Action	Comment
Others would be accepted								

Delete Reset

- **Default Policy:** Set how to handle the packet if none of the rules matches.
- **MAC address:** Set the MAC address that will be filtered.
- **Dest. IP Address:** Set the destination IP address that will be filtered.
- **Source IP Address:** Set the source IP address that will be filtered.
- **Protocol:** Set which protocol will be used for filtering.
- **Dest. Port Range:** Set the destination port numbers that will be filtered
- **Source Port Range:** Set the source port numbers that will be filtered.
- **Action:** Set how to handle the packet if it matches with the rule.

- **Comment:** Type comment for the filter settings.

Notes:

Filtering rules are matched one by one, if met this provision, it will not continue to match the rules listed below.

Click **Apply** to confirm your configuration.

Click **Delete** to delete the rule which you selected.

Click **Reset** to clear what you select or input.

To add a new rule:

1. Select **Enable** in the **Basic Settings** area.
2. Click **Apply**.
3. Input the detail information in the **Mac/IP/Port Filtering** area.
4. Click **Apply** in the **Mac/IP/Port Filtering** area.

Port Forwarding

You can setup virtual servers to provide services on the Internet. Select **Settings > Firewall > Port Forwarding**, the virtual server settings are shown in the following figure:

Firewall > Port Forwarding

MAC/IP/Port Filtering | Port Forwarding | System Security

Virtual Server Settings

Virtual Server Settings: Disable

Apply

If you select **Enable**, the Virtual Server Settings will appear:

Select **Settings > Advanced > PIN Manage**, the PIN manage is shown in the following figure:

Advanced > PIN Manage	
Status	Management
Restore	PIN Manage
Router	
PIN Manage	
PIN Status	Disable
Action	Enable <input type="button" value="v"/>
PIN	<input type="text"/>
Remaining times: 3	
<input type="button" value="Apply"/>	
PIN Save Management	
PIN	<input type="text"/>
PIN Save	<input type="checkbox"/> Save
<input type="button" value="Apply"/>	

- **PIN Status:** Show the current PIN status.
- **Action:** Choose one option, and then click **Apply** to active corresponding function.
- **PIN:** Type the PIN code.
- **PIN Save:** Check the box, then click **Apply** to enable PIN save function. After you enable this function, the device will save your PIN code, and you do not need to input PIN code every time after power on.

If you select **Modify**, the modification parameters are shown in the following figure:

Advanced > PIN Manage

Status Management Restore PIN Manage Router

PIN Manage

PIN Status	Disable
Action	Modify
PIN	<input type="text"/>
New PIN	<input type="text"/>
Confirm New PIN	<input type="text"/>
Remaining times: 3	

Apply

PIN Save Management

PIN	<input type="text"/>
PIN Save	<input type="checkbox"/> Save

Apply

Type the old PIN code, and then type two times the new PIN code. Click **Apply** to confirm your configuration.

Notes:

- Three times consecutive wrong PIN code entries will block the SIM card.
- After you changed the PIN code, you still need input PIN code again, even though you enable PIN save function.

Router

Select **Settings > Advanced > Router**, the router information is shown in the following figure:

Advanced > Router

Status Management Restore PIN Manage Router

LAN Interface Setup

IP Address	<input type="text" value="192.168.0.1"/>
Subnet Mask	<input type="text" value="255.255.255.0"/>
MAC Address	00:00:66:66:66:66
DHCP Server	Enable
DHCP IP Pool	<input type="text" value="192.168.0.100"/> - <input type="text" value="192.168.0.200"/>
DHCP Lease Time	<input type="text" value="24"/> hour(s)

Notice: You maybe need reconnect the wireless network after committing this page.

Apply Cancel

- **IP Address:** IP address for LAN interface.
- **Subnet Mask:** Subnet mask for the IP address.
- **MAC Address:** MAC address for the LAN interface.
- **DHCP Server:** Enable or disable DHCP Server function.

- **DHCP IP Pool:** Allocate begin and end IP address for IP pool.
- **DHCP Lease Time:** Define how long the leased IP address will be expired, and will relocate new IP address.

Click **Apply** to confirm your configuration.

Phonebook

This function allows you store contacts.

Adding new contact

1. Select **Phonebook > Add New** to access the following figure:

2. Set the related parameters.

Parameters	Description
Location	Select the device or SIM card to save your contacts
Name	Enter the contact's name
Mobile number	Enter the contact's phone number

3. Click **Save** to confirm your configuration.

Operation in native

Select **Phonebook > Native** to access the following figure:

All contacts stored in your device will be displayed here.

- Click **Edit** to edit the selected contact.
- Click **Delete** to delete the selected contact.
- Click **Delete All** to delete all the contacts.

Operation in SIM Card

Select **Phonebook > SIM Card** to access the following figure:

PhoneBook->SIM Card (1 / 250)

•Native •SIM Card •Add New

	Name	Telephone
<input type="checkbox"/> 1	Mary	4589123

All contacts stored in your SIM card will be displayed here, detailed operation please refer to chapter **Operation in native**.

SMS

This function allows you to send or receive short messages.

Configing SMS

1. Select **SMS > SMS Settings** to access the following figure:

SMS Settings

SMS Settings

Validity	The longest period ▾
Center Number	+8615900290006
Save New Message	<input checked="" type="radio"/> Native <input type="radio"/> SIM Card
Delivery Report	<input checked="" type="checkbox"/> Enable

2. Set the related parameters.

Parameters	Description
Validity	Configure the validity period of outgoing messages
Center Number	Enter the short message center number, detailed please consult your service provider
Save New Message	Select the device or SIM card to save your messages

Parameters	Description
Delivery Report	Receive or reject a popup message to inform you when the message is delivered to the recipient

3. Click **Save** to confirm your configuration.

Sending new SMS

1. Select **SMS > New Message** to access the following figure:

2. Enter the recipient’s phone number.

3. Enter a message.

4. Click **Send** to send the message.

Operation in native

You can check the messages saved in your device.

Inbox

Select **SMS > Native > Inbox** to access the following figure:

No.	Name	Phone Number	Contents	Received
<input type="checkbox"/> 1	10857516990021920100	10857516990021920100	test (YangRunHu...	10/10/26,09:41:26

All the received messages saved in your device will be displayed here.

- Click **View** to view the selected message.
- Click **Reply** to reply to the selected message sender.
- Click **Delete** to delete the selected message.

- Click **Delete All** to delete all the messages.

Outbox

Select **SMS > Native > Outbox** to access the following figure:

All the successfully sent messages in your device will be displayed here.

Drafts

Select **SMS > Native > Drafts** to access the following figure:

All the drafts and unsuccessfully sent messages saved in your device will be displayed here.

- Click **View** to access the selected message edited interface, then click **Send** to send it.

Operation in SIM Card

You can check the messages saved in your SIM card.

Select **SMS > SIM Card > Inbox/Outbox/Drafts** to access the corresponding figure, detailed operation please refer to the chapter **Operation in native**.

WAN Connection

Click **WAN Connection**, you can configure how to connect to the Internet in the following figure:

There are two connection modes:

- **Always On:** The device will automatically connect to WAN when it is powered on.
- **Manual:** Connect to the Internet manually.

Click **Apply** to confirm your configuration.

Usage of WPS

If your client device supports WPS, you need not to input the password manually after WPS has been available. Please do the following:

1. Start up your device.
2. Launch the client device connected to your device.
3. Enable the WPS function of your device.
4. Enable the WPS function of the client.

Notes:

For the detailed operations about the client, please refer to the client's instruction.

Logout

Select **Logout**, a pop-up window will appear as the following figure shown:

Click **OK** to logout the web page.

Disconnecting from the Internet

1. Select **Disconnect Internet** from **WAN Connection** page.
2. Click **Apply** to disconnect from the Internet.

Notes:

Turn off the device can also terminate Internet connection.

Sleep Mode

When you enable the Wi-Fi function and use the battery to supply power to the device, once no user connects to the device within 10 minutes or you press the WPS button, the device will enter the sleep mode, and the LED screen will be turned off. In the sleep mode, the Wi-Fi function will

be also disabled. Press **Power** or **WPS** button to wake up the device, and all LEDs will be turned on.

Notes:

With USB connection if no Wi-Fi user connects to the device within 10 minutes, only the Wi-Fi function will be disabled. Press **WPS** button to enable this function.

Chapter 4

Warning and Notice

To the Owner

- Some electronic devices are susceptible to electromagnetic interference sent by device if inadequately shielded, such as the electronic system of vehicles. Please consult the manufacturer of the device before using the device if necessary.
- Operating of laptop and desktop PCs and the device may interfere with medical devices like hearing aids and pacemakers. Please always keep them more than 20 centimeters away from such medical devices when they are turned on. Turn the device off if necessary. Consult a physician or the manufacturer of the medical device before using the device.
- Be aware of the usage limitation when using a device at places such as oil warehouses or chemical factories, where there are explosive gases or explosive products being processed. Turn off your device if required.
- The use of electronic transmitting devices is forbidden in aircrafts, at petrol stations and in hospitals. Please observe and obey all warning signs and switch off your device in these conditions.
- Do not touch the inner antenna area if not necessary. Otherwise it will affect your device's performance.
- Store the device out of the reach of little children. The device may cause injury if used as a toy.
- Do not touch the metallic parts of the device so as to avoid a burn, when the device is working.

Using Your Device

- Please use original accessories or accessories that are authorized. Using any unauthorized accessories may affect your device's performance, and violate related national regulations about telecom terminals.
- Avoid using the device near or inside metallic structures or establishments that can emit electromagnetic waves. Otherwise it may influence signal reception.
- The device is not waterproof. Please keep it dry and store in a shady and cool place.
- Do not use the device immediately after a sudden temperature change. In such case, it will produce dew inside and outside the device, so don't use it until it becomes dry.
- Handle the device carefully. Do not drop, bend or strike it. Otherwise the device will be damaged.
- No dismantling by non-professionals and only qualified technicians can undertake repair work.

- Operating temperature range of 0°C ~ +35°C and humidity range of 5% ~ 95% are recommended.

Using Battery

- Do not short-circuit the battery, as this can cause excessive heat and fire.
- Do not store battery in hot areas or dispose of it in a fire to avoid explosion.
- Do not disassemble or modify the battery.
- When not using the battery for a long period, remove it from the phone and store it in a cool dry place.
- Never use any charger or battery damaged or worn out.
- Return the wear-out battery to the provider or put it in the appointed recycle place. Do not put it in familial rubbish.
- Do not disassemble or modify the battery.
- When not using the battery for a long period, remove it from the phone and store it in a cool dry place.

Warning:

If the battery is broken, keep away from content. If it taints your skin, wash your skin with abundant fresh water and ask doctor help if necessary.

Limited Warranty

- This warranty does not apply to defects or errors in the Product caused by:
 - i. Reasonable abrasion.
 - ii. End User's failure to follow ZTE's installation, operation or maintenance instructions or procedures.
 - iii. End User's mishandling, misuse, negligence, or improper installation, disassembly, storage, servicing or operation of the Product.
 - iv. Modifications or repairs not made by ZTE or a ZTE-certified individual.
 - v. Power failures, surges, fire, flood, accidents, actions of third parties or other events outside ZTE's reasonable control.
 - vi. Usage of third-party products, or usage in conjunction with third-party products provided that such defects are due to the combined usage.
 - vii. Any other cause beyond the range of normal usage intended for the Product.

End User shall have no right to reject or return the Product, or receive a refund for the Product from ZTE under the above-mentioned situations.

- This warranty is End User's sole remedy and ZTE's sole liability for defective or nonconforming items, and is in lieu of all other warranties, expressed, implied or statutory, including but not limited to the implied warranties of merchantability and fitness for a particular purpose, unless otherwise required under the mandatory provisions of the law.

Limitation of Liability

ZTE shall not be liable for any loss of profits or indirect, special, incidental or consequential damages resulting from or arising out of or in connection with using of this product, whether or not ZTE had been advised, knew or should have known of the possibility of such damages, including, but not limited to lost profits, interruption of business, cost of capital, cost of substitute facilities or product, or any downtime cost.

FCC Compliance

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions:

(1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Caution: Changes or modifications not expressly approved by the manufacturer could void the user's authority to operate the equipment.

NOTE: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/ TV technician for help.

Radio Frequency (RF) Energy

This model device meets the government's requirements for exposure to radio waves.

This device is designed and manufactured not to exceed the emission limits for exposure to radio frequency (RF) energy set by the Federal Communications Commission of the U.S. Government:

The exposure standard for wireless devices employs a unit of measurement known as the Specific Absorption Rate, or SAR. The SAR limit set by the FCC is 1.6W/kg. *Tests for SAR are conducted using standard operating positions accepted by the FCC with the device transmitting at its highest certified power level in all tested frequency bands. Although the SAR is determined at the highest certified power level, the actual SAR level of the device while operating can be well below the maximum value. This is because the device is designed to operate at multiple power levels so as to use only the power required to reach the network. In general, the closer you are to a wireless base station antenna, the lower the power output.

The highest SAR value for the model device as reported to the FCC when worn on the body, as described in this user guide, is **1.080 W/kg** (Body-worn measurements differ among device models, depending upon available enhancements and FCC requirements.)

While there may be differences between the SAR levels of various devices and at various positions, they all meet the government requirement.

The FCC has granted an Equipment Authorization for this model device with all reported SAR levels evaluated as in compliance with the FCC RF exposure guidelines. SAR information on this model device is on file with the FCC and can be found under the Display Grant section of <http://www.fcc.gov/oet/fccid> after searching on **FCC ID: Q78-ZTEMF60**.

Chapter 5

Troubleshooting

Problem	Suggested Solution
Can not establish the USB connection between your device and PC	1. You need install the software. Run the installation program in path of My Computer >Portable Hotspot .
	2. If the driver of your device is abnormal, please install the software again. You need uninstall the software first.
Can not establish the Wi-Fi connection between your device and client	1. Make sure Wi-Fi LED is blue blinking.
	2. Refresh network list and select SSID named “MF60_XXXXXX”.
	3. Check the IP address to make sure your client to obtain an IP address automatically in the Internet protocol (TCP/IP) properties.
	4. Type the correct network key when you connect to the device.
The client connected to the device can not access the Internet	1. Make sure your SIM card is available.
	2. Change the location to find a place with good signal.
	3. Check WAN Connection mode setting.
	4. Contact with your service provider and confirm your APN settings.
Forget the password	1. For the Wi-Fi connection password, please check the label on the battery compartment of your device .
	2. For the webGUI configuration page password, the default password is Admin .
	3. If you changed the password, and forgot the new password. You need to restore the device to the factory default settings.
