Password	user

Wireless Parameters:

SSID: _____

Key : _____

In order to avoid hacker to attache the wireless AP,WPA2-PSK and AES authentication method is suggested (see Page 8) and change the user password

Introduction

P-6101C is 802.11n ADSL2+ wireless 4 port router and provide high-rate internet service. Its internal switch can connect at most 4 pcs. IEEE 802.11n wireless (AP) can provide wireless internet service.

This Manual will provide the steps how to set P-6101C for Internet services and you need to have the account info provided by the ISP.

Hardware Connection

1. ADSL : Please connect the telephone line to the wall jack to get the Internet service. If you need to use the attached ADSL splitter, first connect one side of the telephone line to the Ethernet port, then the other side

to the Splitter, then connect the Splitter line port to the wall jack of the telephone

Splitter has three interfaces :

- LINE : Connect to the Phone wall jack
- MODEM : Connect to the device' s ADSL jack
- PHONE : Connect to Phone

2. ETHERNET : Use Ethernet Cable to connect the Ethernet ports to PC or STB (Set-Top- Box) in order to connect to the Internet and get VOD.

3. POWER : ON/OFF to power on/shut off P-6101C

4. CONSOLE: Management Port for engineering usage

Check LED

If LED cannot be on, please plug off the power and re-check the hardware

Wall Mounted Function

If you want to mount this product onto the wall, please follow below step.

- Step 1: use screws (Dimension:4.0mm) fix bracket into the wall
Step 2: put equipment mount on bracket

Product Spec

- Antenna : 1* Embedded Antenna
- Band : 2.4 GHz (11g/n) USA (FCC): 2.412 to 2.462 GHz
- Max. output power :
 - a. 11b/g 54Mbps 15dbm
6Mbps 19dbm
 - b. 11g/n 20MHz 15dbm
40MHz 15dbm
- Wired transfer rate : 10/100Mbps (full-duplex/half-duplex)
- LAN : 4*port
- WLAN:
 - a. Max. transfer rate : 150Mbps
 - b. WMM support
 - c. WEP support
 - d. WPA/WPA2-PSK support
 - e. WPA2 support
 - f. WPA/WPA2-Enterprise Support

ADSL Spec

- ADSL line code: DMT modulation

- Handshake protocol: ITU-T Rec. G.994.1
- SNR margin: display real-time SNR margin for both upstream and downstream on demand
- ATM transmission convergence: ITU-T G.992.5 Annex K.
- Spectra bound should be configurable
- Spectra Mask:
 - Transmitter signal comply with Power Spectrum Density (PSD) mask specified in Annex A of ITU-T Rec. G.992.5 and the pass-band PSD ripple should be no greater than +1.0dB.
 - Support ITU-T G.992.5 Annex M
- Controllable spectrum bound: ITU-T G.992.5
- EOC and Overhead Channel Access : ITU-T Rec G.992.5 and ITU-T Rec G.997.1
- Latency path function: ITU-T Rec G.992.5
- Rate Adaptive modes: ITU-T Rec G.992.5 and ITU-T Rec G.997.1
- Selectable pilot subcarrier for downstream direction: ITU-T Rec G.992.5
- Power Management Link state (including L0,L2 and L3): specified in ITU Rec G.992.5 and L2, L3 should be configurable.
- Power Management: ITU-T Rec G.992.5 and the transitions between L0 and L2 states in downstream should comply with ITU-T Rec G.992.5 and ITU-T Rec G.997.1

- The loop diagnostics function: ITU-T Rec G.992.5
- Seamless Rate Adaptation (SRA): On-line configuration specified in ITU-T Rec G.992.5
- Non-overlapped spectrum operation: ITU-T Rec G.992.5
- Trellis Coding: ITU-T Rec G.992.5
- Dying Gasp Message: ITU-T Rec G.992.5
- Backward compatibility: ADSL G.dmt and an ADSL2 line by auto-handshake technique
- Impulse Noise Protection: ITU-T Rec G.992.5
- Should show near-end Errored Second (ES), Severely Errored Second (SES) and Unavailable Second (UAS)
- Support to show near-end Code Violation
- Target Noise margin, Max. Noise Margin, Min. Noise Margin, Up-shift Noise Margin, Down-shift Noise Margin, Max. Interleaving Delay, Min.Net Data Rate, Max.Net Data Rate, INP_min, and the Max. normal transmit PSD for downstream should be supported and configurable.
- AAL 5 PVC supporting UBR, the configurable parameter shall include PCR and CDVT
- F5 End-to End OAM loopback function (ITU-T Rec.1.610)

WEB GUI Page

1. Type the blew IP in the browser 「192.168.1.1」。
2. Type the username:
user , Password: user.
Enter OK

3. Main page

ZyXEL ADSL Router

Status	Interface Setup	Maintenance	Firewall	Status
	System Status	Log Out		
System Info	Firmware Version : 1.13(VUC.0)65 MAC Address : CC:5D:4E:E5:AC:C0			
LAN				
IPv4	IP Address : 192.168.1.1 Subnet Mask : 255.255.255.0 DHCP Server : Enable			
WLAN				
IPv4	SSID : Ralink_AP Channel : 6 Authentication Type : OPEN			
WAN				
IPv4	Status : Not Connected IP Address : N/A Subnet Mask : N/A Default Gateway : N/A DNS Server : N/A			

Basic Functions:

Status Page

Status will show info such as FW version, MAC, WAN, LAN, WLAN and so on

ZyXEL		ADSL Router	
Status	Interface Setup	Maintenance	Firewall
	System Status	Log Out	
System Info	Firmware Version : 1.13(VUC.0)b5 MAC Address : CC:5D:4E:E5:AC:C0		
LAN	IPv4 IP Address : 192.168.1.1 Subnet Mask : 255.255.255.0 DHCP Server : Enable		
WLAN	IPv4 SSID : Rainlink_AP Channel : 6 Authentication Type : OPEN		
WAN	IPv4 Status : Not Connected IP Address : N/A Subnet Mask : N/A Default Gateway : N/A DNS Server : N/A		

Interface Setup

You can set WAN\LAN\WLAN under Interface Setup

Interface	Interface Setup			Maintenance	Firewall	Status
	WAN	LAN	WLAN			
PPPoE/PPPoA	Username : <input type="text"/> Password : <input type="text"/>					
<input type="button" value="Apply"/> <input type="button" value="CANCEL"/>						

WAN

Make settings for the Internet services, ISP will provide you the related PPPoE/PPPoA account info. The device will automatically dial and your PC doesn't need to do any dial operation. With this setting, please refer to LAN/DHCP.

Interface	Interface Setup			Maintenance	Firewall
	WAN	LAN	WLAN		
PPPoE/PPPoA	Username : <input type="text"/> Password : <input type="text"/>				
<input type="button" value="Apply"/> <input type="button" value="CANCEL"/>					

LAN

Set IP address of the LAN network and run DHCP server

Interface	Interface Setup			Maintenance
	WAN	LAN	WLAN	
Router Local IP	IP Address: <input type="text" value="192.168.1.1"/>			
	IP Subnet Mask: <input type="text" value="255.255.255.0"/>			
DHCP Server	DHCP: <input type="radio"/> Disabled <input checked="" type="radio"/> Enabled			
	Start IP: <input type="text" value="192.168.1.50"/>			
	IP Pool Count: <input type="text" value="100"/>			
<input type="button" value="SAVE"/> <input type="button" value="CANCEL"/>				

Current IP address

Choose Enabled to run DHCP server

IP Range

WLAN

WLAN Setting options:

- Channel: Wireless transfer channel
- Output Power: Adjust the wireless coverage
- SSID: Wireless AP Name , Type in English or Number
- Broadcast SSID: Choose Yes, when you search the wireless AP, will see the SSID name; If Choose No, will not see the SSID name, need to type the SSID to make the computer to connect to the device
- Authentication Type: Choose the secure authentication methods (WEP、WPAPSK、WPA2PSK) or unsecure authentication way (OPEN)。

Interface	Interface Setup		Maintenance	Firewall
	WAN	LAN	WLAN	
Access Point Settings	Channel : 06 Output Power : 100%			
SSID Settings	SSID : Raink_AP Broadcast SSID : <input checked="" type="radio"/> Yes <input type="radio"/> No Authentication Type : OPEN			
<input type="button" value="SAVE"/> <input type="button" value="CANCEL"/>				

- Secure mode and pre-shared key : E.g. under Authentication Type , choose WPA2-PSK。 Under Encryption and PreShared Key fill in the passwords

Interface	Interface Setup		Maintenance	Firewall	Status
	WAN	LAN	WLAN		
Access Point Settings	Channel : 06 Output Power : 100%				
SSID Settings	SSID : Raink_AP Broadcast SSID : <input checked="" type="radio"/> Yes <input type="radio"/> No Authentication Type : WPA2PSK				
WPA-PSK	Encryption : AES Pre-Shared Key : 12345678 (8-63 characters or 64 Hex string)				
<input type="button" value="SAVE"/> <input type="button" value="CANCEL"/>					

After this, click save button to save all the settings.

Test Wireless:

1. Wireless clients search the SSID of P-6101C
2. Choose the same authentication way as P-6101C and fill the same key
3. Get the LAN IP assigned by the device

If wireless clients can't connect to the Internet, check the DSL connection and Internet account info

Firewall

Set the router to make the servers behind your router can be seen outside

The screenshot shows the Firewall configuration page in a router's web interface. The page has a navigation bar with tabs for "Firewall", "Interface Setup", "Maintenance", and "Firewall". Below the navigation bar, there are sub-tabs for "WLAN MAC Filter", "Port Forwarding", and "DMZ". The "WLAN MAC Filter" sub-tab is selected. The main content area shows the "WLAN MAC Filter" configuration. It includes an "Active" section with radio buttons for "Activated" and "Deactivated". Below this is an "Action" dropdown menu set to "Allow" and a text label "the follow Wireless LAN station(s) association.". There are eight input fields for "Mac Address #1" through "Mac Address #8". At the bottom of the page, there are "SAVE" and "CANCEL" buttons.

Firewall	Interface Setup	Maintenance	Firewall
WLAN MAC Filter	Port Forwarding	DMZ	

WLAN MAC Filter

Active : Activated Deactivated

Action : Allow the follow Wireless LAN station(s) association.

Mac Address #1 :

Mac Address #2 :

Mac Address #6 :

Mac Address #7 :

Mac Address #8 :

SAVE CANCEL

Port Forwarding

First, Interface Setup > WAN set PPPoE/ PPPoA account info

Firewall Interface Setup Maintenance Firewall Status

WLAN MAC Filter Port Forwarding DMZ

Virtual Server

Virtual Server for : Single IP Account/ PVC0

Select a Service : Select One

Custom Service :

Server IP Address :

Active	External Start Port	External End Port	Protocol	Internal Start Port	Internal End Port
<input type="checkbox"/>	<input type="text"/>	<input type="text"/>	TCP <input type="button" value="v"/>	<input type="text"/>	<input type="text"/>
<input type="checkbox"/>	<input type="text"/>	<input type="text"/>	TCP <input type="button" value="v"/>	<input type="text"/>	<input type="text"/>
<input type="checkbox"/>	<input type="text"/>	<input type="text"/>	TCP <input type="button" value="v"/>	<input type="text"/>	<input type="text"/>
<input type="checkbox"/>	<input type="text"/>	<input type="text"/>	TCP <input type="button" value="v"/>	<input type="text"/>	<input type="text"/>
<input type="checkbox"/>	<input type="text"/>	<input type="text"/>	TCP <input type="button" value="v"/>	<input type="text"/>	<input type="text"/>
<input type="checkbox"/>	<input type="text"/>	<input type="text"/>	TCP <input type="button" value="v"/>	<input type="text"/>	<input type="text"/>
<input type="checkbox"/>	<input type="text"/>	<input type="text"/>	TCP <input type="button" value="v"/>	<input type="text"/>	<input type="text"/>
<input type="checkbox"/>	<input type="text"/>	<input type="text"/>	TCP <input type="button" value="v"/>	<input type="text"/>	<input type="text"/>
<input type="checkbox"/>	<input type="text"/>	<input type="text"/>	TCP <input type="button" value="v"/>	<input type="text"/>	<input type="text"/>
<input type="checkbox"/>	<input type="text"/>	<input type="text"/>	TCP <input type="button" value="v"/>	<input type="text"/>	<input type="text"/>

Then:

1. Select a Service : Choose the service you need and fill in the IP address of the Server
2. Check the port number of the server service , If correct , choose Active , then APPLY.

WLAN MAC Filter

MACfilter will deny or allow the corresponding wireless clients to connect to the router via wireless.

1. Choose Activated
2. Allow or Deny the corresponding wireless client
3. Fill in MAC address , then Click Save button.

The screenshot shows the 'WLAN MAC Filter' configuration page. The page has a top navigation bar with 'Firewall' selected, and sub-tabs for 'WLAN MAC Filter', 'Port Forwarding', and 'DMZ'. The main content area includes:

- Active:** Radio buttons for 'Activated' (selected) and 'Deactivated'. A blue arrow points to this section, labeled with a circled '1'.
- Action:** A dropdown menu set to 'Allow' with the text 'the follow Wireless LAN station(s) association.'. A blue arrow points to this dropdown, labeled with a circled '2'.
- Mac Address #1 through #8:** Eight empty text input fields. A blue arrow points to this group of fields, labeled with a circled '3'.

A blue curved arrow highlights the 'Mac Address #1' through '#8' fields. At the bottom of the page are 'SAVE' and 'CANCEL' buttons.

Password

Set password of the device in the below page

Step:Type the original password(user) , then type the new password , fill in twice , then click SAVE button.

ATTENTION !

Federal Communications Commission (FCC) Interference Statement

The device complies with Part 15 of FCC rules. Operation is subject to the following two conditions:

- . This device may not cause harmful interference.
- . This device must accept any interference received, including interference that may cause undesired operations.

This device has been tested and found to comply with the limits for a Class B digital device pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This device generates, uses, and can radiate radio frequency energy, and if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation.

If this device does cause harmful interference to radio/television reception, which can be determined by turning the device off and on,

the user is encouraged to try to correct the interference by one or more of the following measures:

- 1 Reorient or relocate the receiving antenna.
- 2 Increase the separation between the equipment and the receiver.
- 3 Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- 4 Consult the dealer or an experienced radio/TV technician for help.

FCC Radiation Exposure Statement

. This transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.

. IEEE 802.11b or 802.11g or 802.11n(20MHz) operation of this product in the U.S.A. is firmware-limited to channels 1 through 11. IEEE 802.11n(40MHz)operation of this product in the U.S.A. is firmware-limited to channels 3 through 9.

. To comply with FCC RF exposure compliance requirements, a separation distance of at least 20 cm must be maintained between the antenna of this device and all persons.

The user manual or instruction manual for an intentional or unintentional radiator shall caution the user that changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment. In cases where the manual is provided only in a form other than paper, such as on a computer disk or over the Internet, the information required by this section may be included in the manual in that alternative form, provided the user can reasonably be expected to have the capability to access information in that form.
