# Using This Guide

Congratulations on your purchase of your Avid iNEWS Command system.

Avid iNEWS Command offers a considerable amount of functionality for the state-of-the-art newsroom, including newsroom system integration and playout control. With Command, newsroom personnel can easily create and manage playlists.

This publication provides information on how to use the Command system.

*The documentation describes the standard features of a basic system configuration. Therefore, your system might contain certain features and hardware that are not covered in the documentation.*

## Who Should Use This Guide

This guide is written for journalists, producers, directors, writers, and various technical personnel responsible for using the Command system in a broadcast newsroom. This guide is intended for all users, from beginning to advanced.

It is strongly recommended that system users have prior experience in or classroom knowledge of Windows-based operating systems.

## About This Guide

This guide leads you through even the most complex procedures with task-oriented instructions, illustrated for a more realistic presentation of the actual icons and images you encounter. The information provides basic user procedures, while adding a complete explanation of all the tools and techniques required to create, apply, and adjust various settings, including useful tips, shortcuts, and custom options.

The Contents lists all topics included in the book. They are presented with the following overall structure:

- The Introduction helps you get oriented with beginning concepts and general workflow and provides valuable pointers to keep in the back of your mind as you proceed.

## Using This Guide

- The main body of the guide follows the natural flow of your work, with clear and comprehensive step-by-step procedures.
- Finally, a detailed Index helps you quickly locate specific topics.

This guide provides instruction for your system in the following areas:

- An overview of system architecture and workflow
- The Command Workstation and iNEWS Workstation
- Various procedures and uses for iNEWS Command

Use this guide for help in using your system after you have installed all components according to requirements and specifications. Before installing any equipment, the site must already have a configured network.

## Symbols and Conventions

Avid documentation uses the following symbols and conventions:

Symbol or Convention	Meaning or Action
	A note provides important related information, reminders, recommendations, and strong suggestions.
	A caution means that a specific action you take could cause harm to your computer or cause you to lose data.
	A warning describes an action that could cause you physical harm. Follow the guidelines in this document or on the unit itself when handling electrical equipment.
>	This symbol indicates menu commands (and subcommands) in the order you select them. For example, File > Import means to open the File menu and then select the Import command.
▶	This symbol indicates a single-step procedure. Multiple arrows in a list indicate that you perform one of the actions listed.
<i>Italic font</i>	Italic font is used to emphasize certain words and to indicate variables.
<b>Courier Bold font</b>	Courier Bold font identifies text that you type.
Ctrl+key or mouse action	Press and hold the first key while you press the last key or perform the mouse action. For example, Ctrl+drag or Ctrl+S. This also applies to Alt and Shift keys.

## If You Need Help

### If you are having trouble using the Avid iNEWS Command system:

1. Retry the action, carefully following the instructions given for that task in this guide. It is especially important to check each step of your workflow.
2. Check for the latest information in one of two locations:
  - If release notes are available, they ship with your application.
  - If ReadMe files are available, they are supplied in your Avid application folder.

*Release notes and ReadMe files are also available on the Avid Knowledge Base.*

3. Check any printed documentation that came with your Avid application or your hardware for maintenance or hardware-related issues.
4. Visit the online Knowledge Base at [www.avid.com/onlinesupport](http://www.avid.com/onlinesupport). Online services are available 24 hours per day, 7 days per week. Search this online Knowledge Base to find answers, to view error messages, to access troubleshooting tips, to download updates, and to read/join online message-board discussions.
5. For Technical Support, call 800-800-AVID (800-800-2843).  
For Broadcast On-Air Sites and Call Letter Stations, call 800-NEWSDNG (800-639-7364).

## Related Documentation

The following documents provide more information about Command:

- *Avid iNEWS Command Installation and Administration Guide*
- Avid iNEWS Command ReadMe files (located on the installation CD)

The Online Library that ships with most Avid editing applications includes a Master Glossary of all specialized terminology used in the documentation for Avid products.

*For the latest product information, see the Avid Knowledge Base:*  
[www.avid.com/support](http://www.avid.com/support)

## How to Order Documentation

To order additional copies of any Avid documentation from within the United States, call Avid Sales at 800-949-AVID (800-949-2843). If you are placing an order from outside the United States, contact your local Avid representative.

## Using This Guide

### Avid Educational Services

For information on courses/schedules, training centers, certifications, courseware, and books, visit [www.avid.com/training](http://www.avid.com/training) or call Avid Sales at 800-949-AVID (800-949-2843).

## Chapter 1

# Introduction to iNEWS Command

Avid iNEWS Command is a device automation system that integrates with any iNEWS or MOS-enabled newsroom computer system (NRCS) and provides broadcasters precise control over a range of playout devices, including video servers, still stores, and character generators in a broadcast news environment. Backup services and mirrored playout make this system reliable while the user interface allows you to control multiple production devices. Avid iNEWS Command works with Avid Interplay Framework applications and services to insure you always have the best system performance.

This chapter contains the following main sections:

- [Overview](#)
  - [Architecture and Workflow](#)
  - [Features](#)
- [Starting the Client Software](#)
- [The User Interface](#)
- [Support Dialog Box](#)

# Overview

The basic iNEWS Command system is comprised of iNEWS Command Servers, workstations that run the client software, and devices, such as Avid AirSpeed video servers, Thunder production servers and Deko graphics system. The system is designed to be an extension of your current Avid system. It allows you to receive playlists from Avid iNEWS (or a MOS-based newsroom computer system) while controlling your video and graphics devices, or even create standalone playlists using drag-and-drop functionality from an inventory of media items. The iNEWS Command system supports industry standard protocols that make it compatible with many other products.

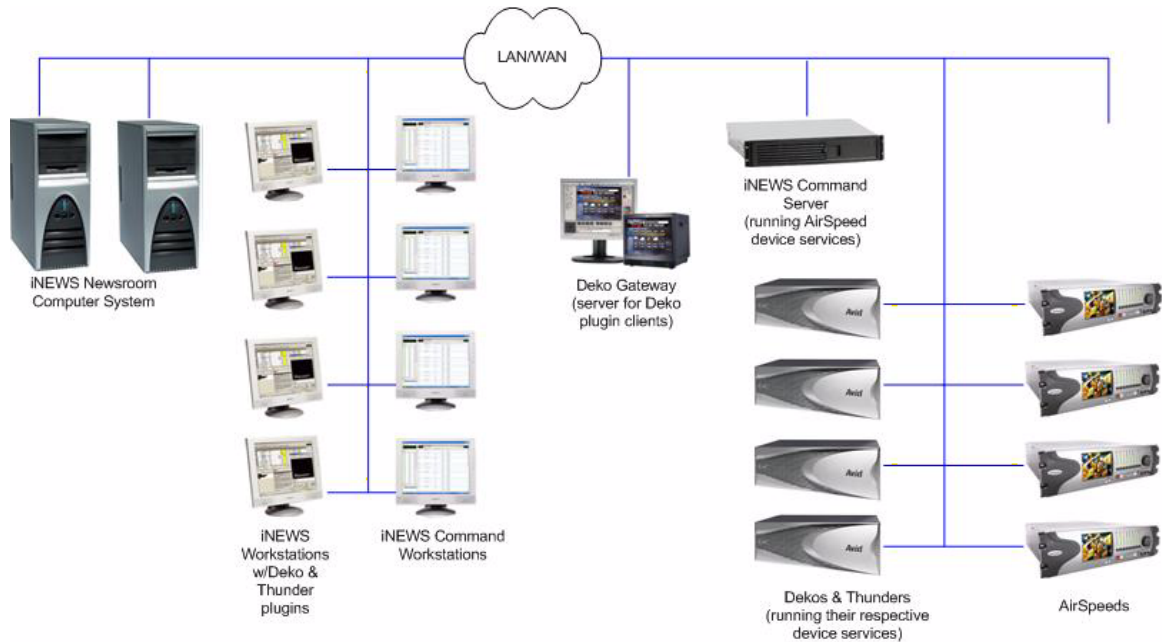

For newscast control your iNEWS Command system provides automated playlists, tracks script changes, and automates control of production and playback devices including video servers, and character generators. It integrates with the iNEWS rundown—or any other MOS-enabled newsroom computer system—allowing a producer to change a show while it is on air, and reflecting those changes in their iNEWS Command system. MOS commands are provided so that journalists can use MOS plug-ins within the newsroom computer system script. Production playout devices, including Avid Deko and Avid Thunder on-air graphics solutions and AirSpeed video servers, are triggered based on the events in the rundown.

News graphic and text templates for news elements can include logos and station IDs, lower-third captions or superimposed graphics, and full-screen backgrounds with text. Journalists, using iNEWS newsroom computer system, fill in the templates and insert them into their stories in a variety of ways. For instance, machine control commands can be entered using Deko Select or Thunder Select plug-ins. They can be entered manually or by using a macro. They may also include clips and stills in their script by entering the ID of the graphic in the story as a production cue. At air time an iNEWS Command operator triggers the graphics playlist, which is synchronized with the iNEWS rundown.

## Architecture and Workflow

Avid iNEWS Command is scalable and can adapt to work in traditional newsroom-based playlist creation to production-centric workflows where running orders are created inside the iNEWS Command playback application. All of the components can run on a single computer, or they can be spread out across multiple computers with redundant services configured to take control if the primary services should become unavailable.

An example of a basic Command system architecture is shown in the following illustration:

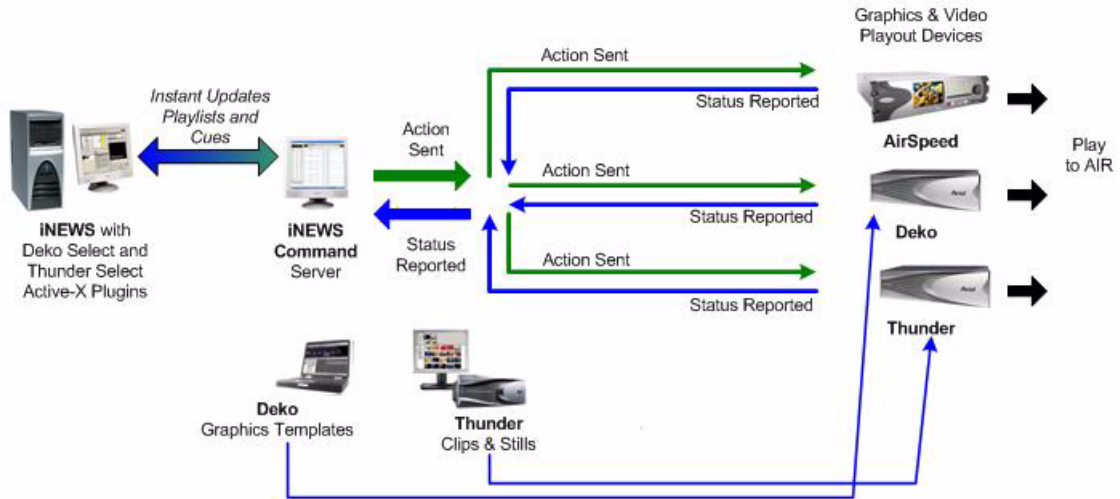

In the most common news workflow, playlists are created using the iNEWS newsroom computer system and the video and graphic assets are referenced in stories using their IDs or by dragging and dropping them from an Active-X plugin, such as Deko Select.

Playlists can be saved to use later, standalone playlists can be created, and multiple playlists can be embedded in a single running order. You can set a playlist to playback at a specified time, or you can set groups of assets within a playlist to play in follow-on mode.

## 1 Introduction to iNEWS Command

A basic workflow is shown in the following illustration.

## Features

The Avid iNEWS Command system provides the features described in the following table.

Feature	Description
Playlist Functionality	You can load a playlist from the newsroom computer system or create the playlist manually within Avid iNEWS Command. You can also embed within other playlists. This provides the flexibility to control event playout locally, at the desktop, or from a rundown. It also allows seamless transitions between shows or segments produced by separate editorial teams.
Manual and Automated Triggering	Items can be played back manually by the operator, triggered via GPI, linked with other clips to block play, or—as in the case of time of day playlists—automatically played based on the time of day. This provides total integration with the facility, its systems, processes, and staff.
Redundant Failover	Mirrored playback allows a single Play command to initiate playback on two channels simultaneously for seamless failover. All Command services are redundant.
Advanced Playback Feature	You can cue items as needed if and when playlists change, and provide simultaneous playback while video files are still being transferred, saving time.

<b>Feature (Continued)</b>	<b>Description (Continued)</b>
Frame Accuracy	Avid iNEWS Command provides frame accurate video playout for follow-on items assigned to the same channel.
Flexible Device Configuration	Actual device channels can be configured into multiple virtual possibilities through channel groups.
Flexible Integration	You can configure the Avid iNEWS Command system to control any combination of Avid Thunder, Avid AirSpeed, and Avid Deko systems that are operating in an Avid iNEWS, ENPS, or other MOS environment.
User Interface	The intuitive user interface provides visual tools, including clocks that show time elapsed and time remaining, channel assignments for easy identification of transmission paths, and color-coded status indicators that illustrate the inventory of assets based on availability and playability on all devices. This improves operation, reduces training time, and ensures complete synchronization of devices with the playlist
Status Updates	The Command user interface reflects playability status of inventory assets; display of playout and channel group lock status; and status-based colors and fonts for stories and items at a glance. These status updates speed up decision-making saving time, while maintaining accuracy.

## Starting the Client Software

Avid iNEWS Command client software requires no password to log in and is easy to start.

### To start iNEWS Command at a workstation:

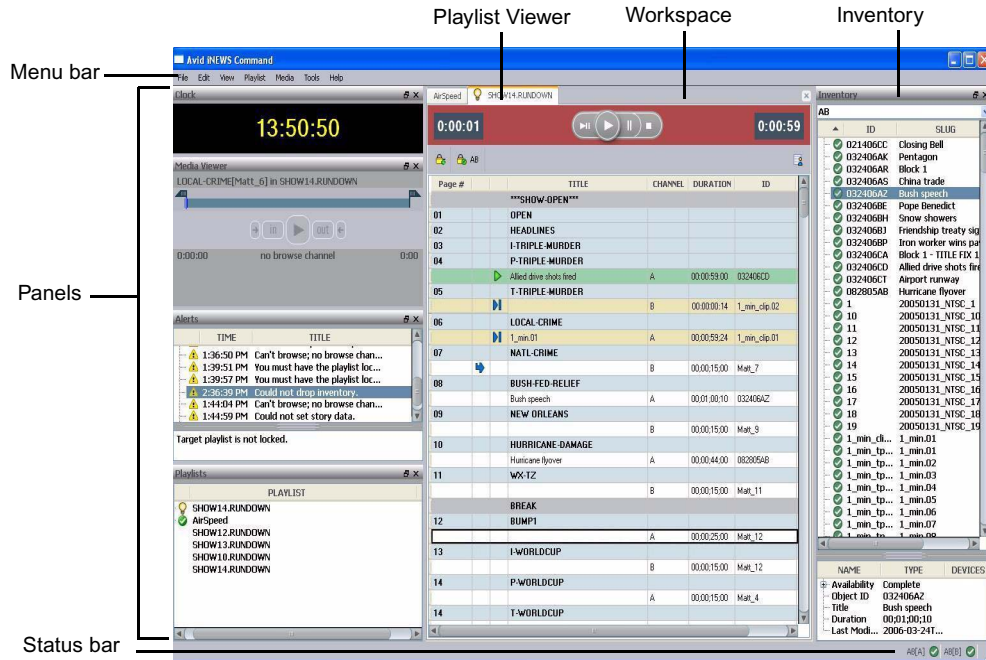

1. Do one of the following:
  - ▶ Double click the iNEWS Command icon on the desktop.

- ▶ Click the Start button and select Programs > Avid > Avid iNEWS Command.

The iNEWS Command window opens as shown in the following illustration:

## 1 Introduction to iNEWS Command

# The User Interface

The Avid iNEWS Command window is the graphical user interface that contains panels, a menu bar, a status bar, and a workspace area.

## Panels

Panels are components that appear in the application and provide information in various ways. The iNEWS Command window contains panels that you can dock, undock, move, resize, or even hide from view. Each panel is easily identified by the name appearing in its title bar.

For more information about the panels, including the Inventory Explorer, used in iNEWS Command, see “Panels” on page 31.

## Menu Bar

The menu bar for iNEWS Command contains the following:

- File
- Edit

- View
- Playlist
- Item
- Tools
- Help

Each menu, its options and descriptions are described in the following tables:

<b>Menu</b>	<b>Submenu</b>	<b>Menu Option</b>	<b>Shortcut Keys</b>	<b>Description</b>
File	New	Playlist	Ctrl+Shift+N	Opens the Create New Playlist dialog box.
		Story	Ctrl+N	Opens a Create New Story dialog box.
File	Import Playlist			Imports a playlist to Command.
	Export Playlist			Exports a playlist from Command.
	Exit			Closes the Command program.
Edit	Cut		Ctrl+X	Cut selection.
	Copy		Ctrl+C	Copy selection.
	Paste		Ctrl+V	Paste selection.
	Delete			Delete selection.
View	Playlist Explorer		Ctrl+Shift+E	Displays or closes the Playlist Explorer.
	Inventory		Ctrl+Shift+I	Displays or closes the Inventory.
	Clock			Displays or closes the Clock.
	Media Viewer		Ctrl+Shift+M	Displays or closes the Media Viewer.
	Alerts		Ctrl+Shift+A	Displays or closes the Alerts.
Playlist	View	Next	Ctrl+Tab	Displays next playlist
		Previous	Ctrl+Shift+Tab	Displays previous playlist
		Set Focus	Ctrl+F	Sets the keyboard focus to the active view.
		Close	Ctrl+W	Closes the current playlist.
		Close All	Ctrl+Shift+W	Closes all playlists.
Playlist	Select	Next item	Ctrl+Down	Select next item in current playlist.

## 1 Introduction to iNEWS Command

Menu	Submenu	Menu Option	Shortcut Keys	Description (Continued)
		Previous Item	Ctrl+Up	Select previous item in current playlist.
		Next Row	Alt+Down	Select next item in current playlist.
		Previous Row	Alt+Up	Select previous item in current playlist.
		Item In Following Story	Ctrl+Page Down	Select next item after story.
Playlist	Properties			
Playlist	Edit	Edit Selection	Ctrl+E	Edit current selection in playlist.
		Edit Channel	Ctrl+- (hyphen)	Sets focus to current playlist item's Channel column so the user can manually assign a channel.
		Edit Trigger	Ctrl+* (asterisk)	Sets focus to current playlist item's Trigger column so the user can select manual or follow-on playout. For more information, see <a href="#">"Playout Media from Command Workstation"</a> on page 97.
		Cut		Cut selection.
		Copy		Copy selection.
		Paste		Paste selection.
		Delete		Delete selection.
Playlist	Insert	New Story	Ctrl+N	Insert new story.
		New Break		Insert new break.
Playlist	Channel	Assign	Ctrl+R	Assign channel.
Playlist	Playout	Cue	. (period)	Cue media in a playlist.
		Play	Enter	Play media in a playlist.
		Pause	+ (plus)	Pause media playing in a playlist.
		Stop	0 (zero)	Stops media from playing.
Media	Play		Ctrl+Space	Play media.
	Go To Mark In		Alt+Q	Go to the marked In point.
	Go To Mark Out		Alt+W	Go to marked Out point.

Menu	Submenu	Menu Option	Shortcut Keys	Description (Continued)
	Set Mark In		Alt+I	Mark the In point.
	Set Mark Out		Alt+O	Mark the Out point.
	Forward One Frame		Alt+.	Move forward one frame.
	Forward One Second		Ctrl+.	Move forward one second.
	Forward ten Seconds		Ctrl+Alt+.	Move forward ten seconds.
	Backward One Frame		Alt+,	Move backward one frame.
	Backward One Second		Ctrl+,	Move backward one second.
	Backward Ten Seconds		Ctrl+Alt+,	Move backward ten seconds.
	Restart		Alt+6	Restart media.
Tools	Options			Opens the Options dialog box.
	System Settings			Opens the System Settings dialog box. These options apply to the workstation only and are not system-wide settings.
Help	About			Display information about iNEWS Command.
	Contents			Displays help information for users.
	Support			Opens the Support dialog box.

## Support Dialog Box

The Support dialog box is provided for Command users to log information about any issues encountered that might require contacting Avid Customer Support.

### To log support information:

1. Select Help > Support.
2. Enter a description of the issue in the Support dialog box. For instance, the following example shows a sentence regarding a GPI device:

## 1 Introduction to iNEWS Command

3. Click Save.
4. Select the name and location where you want the zipped file to be saved.
5. Click OK.

The system saves your comments inside a zipped file that also contains other vital information, such as system settings and software versions, which enable support personnel to troubleshoot the issue. This file can then be e-mailed to Avid Technical Support. For more information, see [“If You Need Help” on page 11](#).

## Chapter 2

# Services

The services for iNEWS Command enable it to interface with newsroom computer systems as well as providing for playlist control. Some of the services can be defined as Main services—those responsible for communicating with newsroom computer systems and for playlist control. Other services are known as Device services—those responsible for controlling other devices, such as video servers, still stores, and character generators in a broadcast news environment.

This chapter contains the following main sections:

- [Main Services](#)
- [Device Services](#)
- [Redundancy/Failover](#)
- [Viewing Status of Services](#)
- [Starting and Stopping Services](#)

## Main Services

The main services are vital components that enable interfacing with a newsroom system, as well as playlist control.

The two services that pertain to newsroom computer system interfacing are:

- **Avid iNEWS Communication Service**—An iNEWS Command system uses this service as the communication portal to load and unload iNEWS rundowns from an iNEWS workstation. The service receives playlist messages from the iNEWS monitor server, distributes them to the appropriate Command components, and reports item status and inventory messages back to iNEWS. A single iNEWS Command system can have multiple iNEWS communication services for redundancy.
- **Avid MOS Communication Service**—An iNEWS Command system uses this service to load and unload rundowns from a MOS-compliant newsroom system, such as ENPS. The service receives MOS playlist messages from the newsroom computer system, distributes them to the appropriate Command components, and reports item status and inventory messages back to the newsroom computer system.

The services related to playout control of playlists are:

- **Avid Playlist Controller**—The playlist controller drives playout of the media on locked channel groups from the playlist it controls. When one or more channel groups are locked, a playlist controller is allocated by the Playlist Manager. A single iNEWS Command system can have multiple playlist controllers. One playlist controller is necessary for each concurrent on-air playlist. Separate controllers are not needed to control embedded playlists.
- **Avid Playlist Manager**—This service assigns a playlist controller (and its backup, if any) to a playlist when the first channel group is locked. It also manages the locks on other channel groups of the playlist. Playlists that have locked channel groups are prevented from being deleted. An iNEWS Command system can only have one primary Playlist Manager, but may have others as backups.
- **Avid Playlist Store**—This service is the data store or repository for all loaded (newsroom) playlists and standalone playlists. It communicates playlist changes to other Command components.

The services related to inventory are:

- **Avid Inventory Manager**—This service maintains an inventory of media metadata for all physical devices connected to any channel group in an iNEWS Command system. This inventory is sent to the Inventory Manager via the individual device services. An iNEWS Command system can only have one primary Inventory Manager, but might have backups.

*While an iNEWS Command system can have only one primary service of each Playlist Store, Playlist Manager, and Inventory Manager, multiple instances of each service can be installed and used as backups.*

## Device Services

The Device services are those services responsible for controlling other devices, such as video servers, still stores, and character generators in a broadcast news environment.

- **Avid AirSpeed Device Service**—This service provides control of a single AirSpeed high resolution video server. One is required for each AirSpeed. It runs on the iNEWS Command servers, not on the device like other device services.
- **Avid Deko Device Service**—This service provides control of a single Deko device. One is required for each Deko device. It runs on the device.
- **Avid Thunder Device Service**—This service provides control of a single Thunder device. One is required for each Thunder device. It runs on the device.
- **Avid GPI Service**—This service interfaces to a GPI input card on the server.
- **Avid Maney Panel Service**—This service interfaces to a Maney panel.

## Redundancy/Failover

Avid iNEWS Command operates on a primary/backup basis. There can be only one primary service, but there can be several backup services. It is best to dedicate a computer to be a Command Server. Avid does not recommend running the Command services on a workstation, Deko, or Thunder.

When a primary service goes down, Command conducts an election, and changes the backup service to primary. The new primary service will remain primary until it goes down. When the old primary service comes back up, it becomes the backup service. If the primary Command Server were to go down, all of the services on the backup server would become primary.

Command determines primary and backup based on the length of time the service has been running. The server that has been running longer is the primary. If you were to lose network connectivity to the primary Command Server, the services do not actually go down, and so their duration remains longer than the backup. After the network connection is restored, those services become primary again.

## 2 Services

*If you have an on-air failover on the primary Command Server due to a loss of network connectivity, you must stop the services on the primary server. Otherwise, those services will once again become primary when the connection is restored, which will interrupt on-air playability. After the connection is restored, and at a non-crucial time, you should start those services again.*

### Non-redundant services

There are some services that are not redundant:

- **Lookup Service** — This Command service acts independently. If a second one is running, it is doing the same work; they basically work as two primary services. In a failover scenario, the second lookup service is already working, and services would continue seamlessly.
- **iNEWS Communication Service**— This Command service is server specific, meaning that services on different computers act independently. In a failover scenario, the Command playlist will become disconnected, users can continue playout functions. To get an updated playlist, the user can reload the iNEWS rundown to the second Command Server and continue.
- **Deko & Thunder Device Services**— These Command services must run on the Deko and Thunder respectively, and you cannot install a second service on a device.
- **Service Starter Service, Machine Monitor Service, Time Synchronization**— These Avid Interplay Framework services are computer specific, so redundancy does not apply.

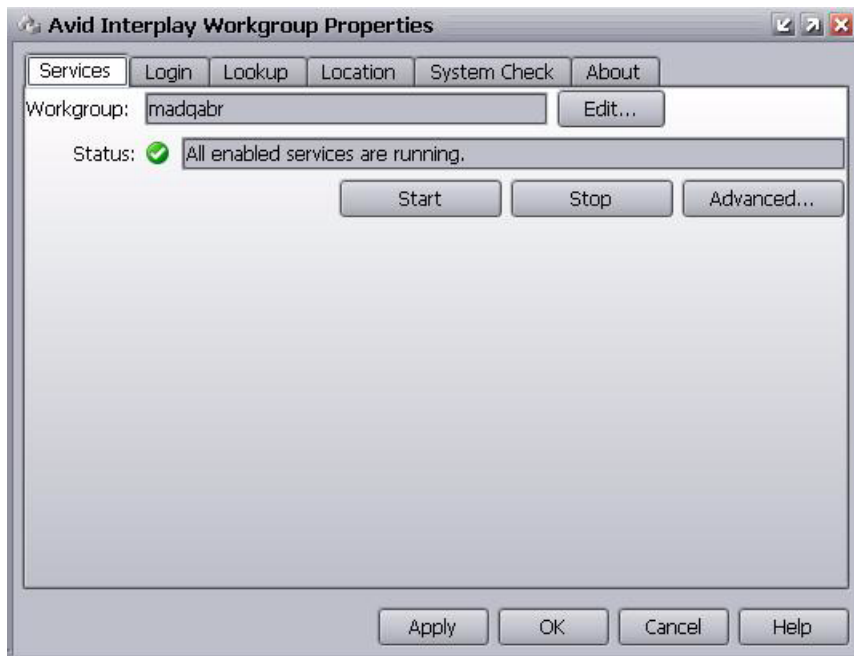

## Viewing Status of Services

Avid Command uses Avid Interplay Framework as its structure for discovering and communicating with services.

### To start Interplay Workgroup Properties:

1. Click the Start button and select > All Programs > Avid > Interplay Framework > Avid Interplay Workgroup Properties.

The Avid Interplay Workgroup Properties window opens.

When you start the Interplay Workgroup Properties application, the Services tab appears by default displaying the name of the workgroup, to which this computer belongs, in the Workgroup text box. Also shown, in the Status text box, is the status of all Avid services running on the local computer.

The Interplay Workgroup Properties application uses colored icons—in combination with text—on the Services tab to show the status (started and/or enabled) of all Avid services. A user can click the Advanced button to see more information about individual services. The icons displayed provide fast, easy identification of the current status of an Avid service.

Status Icon	Status Icon Description
	When all of the enabled Avid components are running on the local machine a green circle with a check mark in the center is shown next to the Status text box and the sentence—All enabled services are running—is displayed.
	When some of the enabled Avid components are running on the local machine a caution symbol (yellow triangle with an exclamation mark in the center) is shown next to the Status text box and the sentence—Some services are enabled but not running—is displayed.
	When none of the enabled Avid components are running on the local machine a red square is shown next to the Status text box and the sentence—No services are running—is displayed.

For more information on viewing Avid services using the Interplay Workgroup Properties application, see the *Avid Interplay Framework User's Guide*.

## Starting and Stopping Services

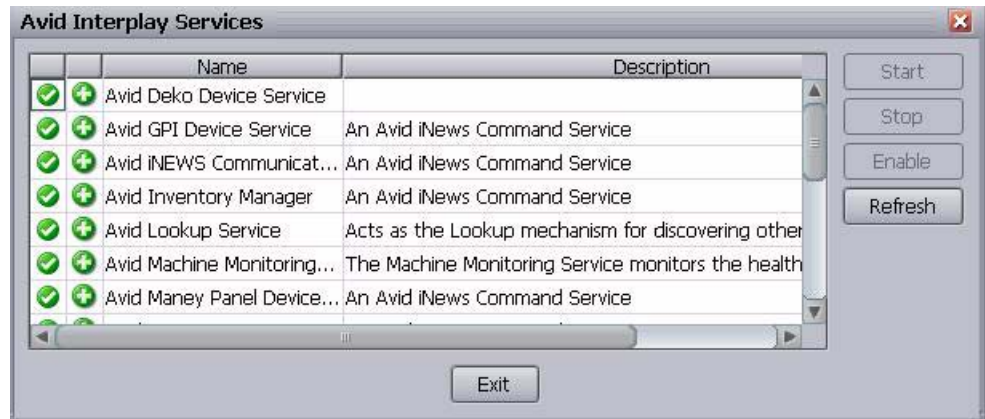

The Services tab allows you to edit the workgroup to which the computer belongs, view the status of all the Avid services running on the local computer, or start, stop, and restart the local Avid workgroup services.

The Advance button on the Services tab opens the Avid Interplay Services dialog box. This dialog box allows you to stop, start, enable, or disable individual or multiple Avid services running on the local computer.

### To stop, start, enable, or disable Avid services:

1. From the Services tab in the Avid Interplay Workgroup Properties window, click the Advanced button.

The Avid Interplay Services dialog box opens.

2. Select a row on which to perform the stop, start, enable, or disable action.

Multiple rows can be selected. The Action buttons are enabled with the Start button changing to Restart if all of the services are running.

For more information on starting and stopping services using the Interplay Workgroup Properties application see the *Avid Interplay Framework User's Guide*.

## 2 Services

# Chapter 3

## Panels

The iNEWS Command interface is made up of panels, which provide information in various ways.

This chapter contains the following main sections:

- [Working with Panels](#)
- [Playlist Explorer](#)
- [Inventory](#)
- [Clock](#)
- [Alerts](#)
- [Media Viewer](#)

## Working with Panels

The iNEWS Command window contains numerous panels that a user can dock, undock, move, resize, or even hide from view in the main window. Each panel is easily identified by its title bar that bears its name.

The available panels are:

- [Playlist Explorer](#) (shown)
- [Inventory](#)
- [Clock](#)
- [Media Viewer](#)
- [Alerts](#)

### To hide a panel:

- ▶ Click the X button on the title bar of the panel you want to hide.

### To view a hidden panel:

- ▶ Select View > Tools, and then the name of the panel from the submenu.

### To dock or undock a panel, do one of the following:

- ▶ Click the Restore button located on the panel's title bar, next to the X button.
- ▶ Click on the panel's title bar and drag it to and from its docked location.

### To resize a panel:

1. Position your mouse pointer on the edge of a panel. The pointer will change to a resize indicator.
2. Click and drag to the new size.

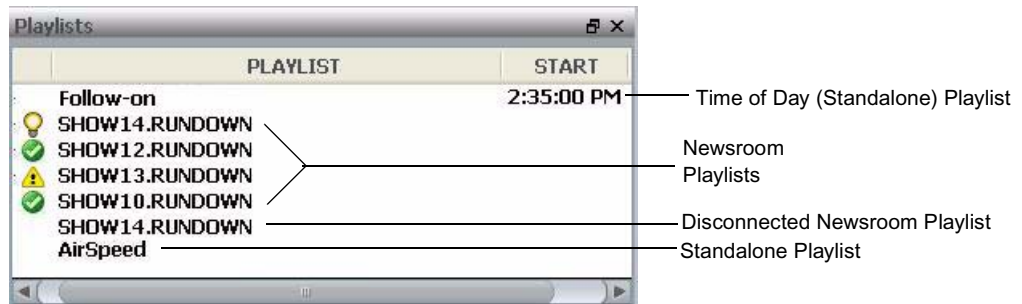

# Playlist Explorer

The Playlist Explorer shows a list of:

- All newsroom playlists that have been loaded to iNEWS Command from an iNEWS newsroom computer system.
- All MOS playlists that have been marked ready-to-air from a MOS-enabled newsroom computer system, such as ENPS.
- All standalone playlists.

When the green check mark appears, iNEWS Command has received all items and/or stories in the rundown. Double-clicking one of the playlists will open it with its stories, media, channels, and so forth in preparation of locking channel groups and taking a show to air. When a lightbulb appears, the playlist is on air.

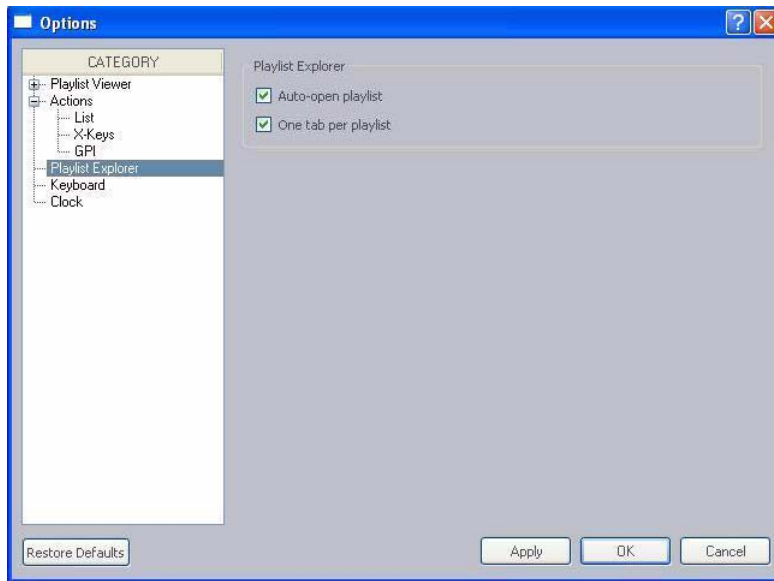

*The green check mark does not apply to standalone playlists created at a Command Workstation or newsroom playlists that have been disconnected from the rundown and are therefore considered standalone playlists.*

The Playlist Explorer can be configured to open a playlist automatically when it's loaded directly from iNEWS or when it's marked ready-to-air from a MOS-enabled newsroom computer system.

### 3 Panels

**To configure Playlist Explorer to automatically open loaded playlists:**

1. Select Tools > Options. The Options dialog box opens.

2. In Category, select Playlist Explorer.
3. Select Auto-open playlist.
4. Click OK.

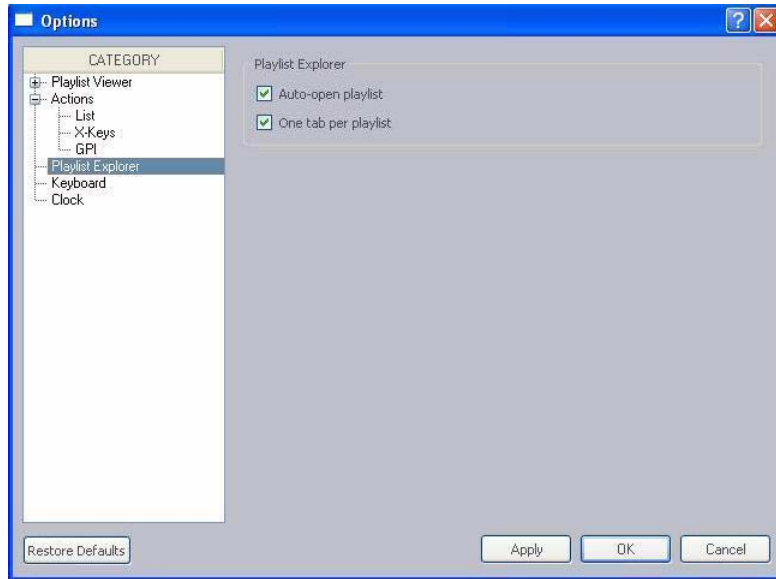

### Tabs

Whether the same playlist can be opened onto multiple tabs in the Playlist Viewer is a configurable setting.

Changing this setting does not affect existing tabs already opened in the current session.

**To turn on or off the multi-tab option for playlists:**

1. Select Tools > Options. The Options dialog box opens.

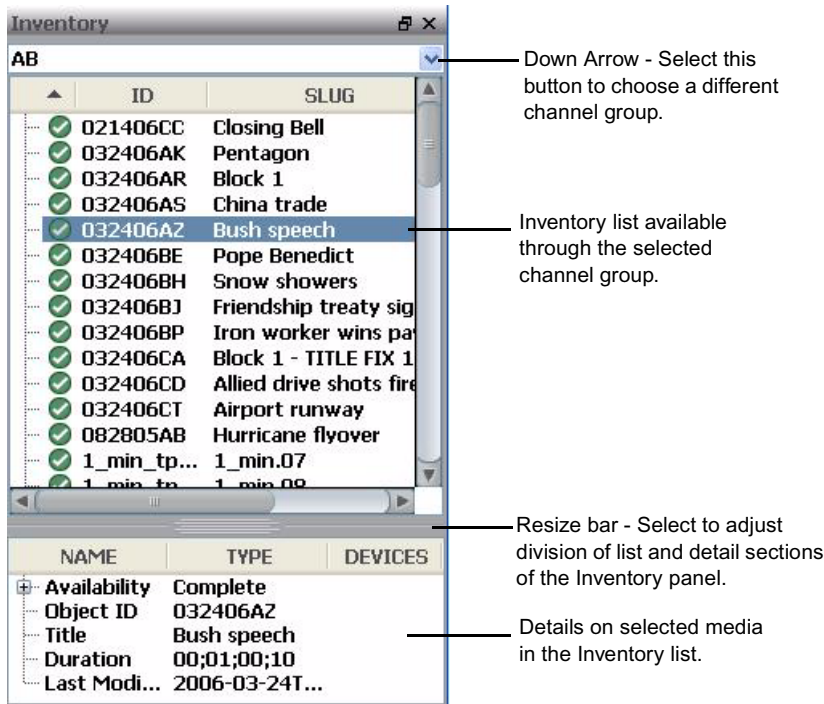

2. In Category, select Playlist Explorer.
3. Do one of the following:
  - ▶ Select One tab per playlist if you want any playlist opened from the Playlist Explorer to appear on only one tab. If its already open, its tab will appear on top of other tabs. Avid recommends using this setting.
  - ▶ Deselect One tab per playlist if you want a playlist to appear on a new tab each time it's opened from the Playlist Explorer.
4. Click OK.

*For more information on the Auto-open playlist option, see “Playlist Explorer” on page 33.*

# Inventory

The Inventory panel shows the inventory (media) for a selected channel group in a table or spreadsheet-style format. You can see the media’s availability, clip ID, name (slug), duration, and the time when it was last modified. For more information about channel groups, see [“Working with Channel Groups” on page 54.](#)

**To view inventory from a different Channel Group:**

- ▶ Click the down arrow (indicated in the above graphic), and select a different Channel Group from the list.

The user can select any column header to sort the table by that column. The user can also rearrange the order of columns.

**To sort inventory:**

- ▶ Select the column by which you want to sort, such as Slug.

**To rearrange column order:**

- ▶ Click on a column header and drag it to a new position.

The Inventory panel provides graphical indicators to show status of availability.

Inventory Status	Detailed Status
 Available on all	 Available on specific device
 Unavailable on some	 Unavailable on specific device

When an item appears unavailable on some, you can view the specific devices by clicking the plus (+) to the left of Availability in the Details section of the Inventory panel.

Command users can drag media directly from the Inventory panel to the Playlist Viewer and drop it into an open, locked standalone playlist with the same channel group assigned to it.

## Clock

The Clock panel displays the current time based on the Command Workstation's time. It is not associated with the clocks featured in the Playlist Viewer.

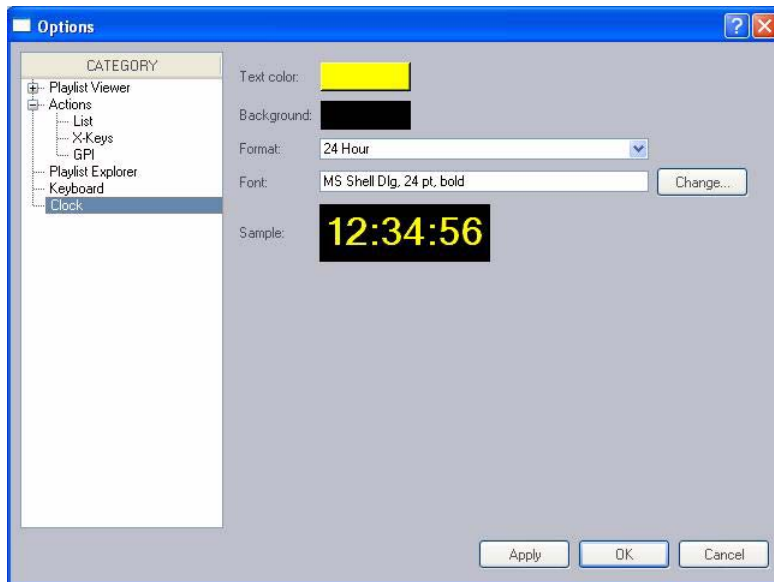

The Clock can be set to a 12- or 24-hour format. The font, background, and foreground colors are also configurable.

### 3 Panels

#### To configure the clock:

1. Select Tools > Options. The Options dialog box opens.

2. In Category, select Clock.
3. Set the clock's text color and background color.
4. Set the clock to either a 12- or 24-hour format.
5. Click the Change button to set the clock's font.
6. A sample of your settings is provided as a preview. When done, click OK.

## Alerts

The Alerts window provides a list of recent alerts. The alerts contains these properties:

- Title (mandatory)
- Text (optional-not shown in the list)
- Alert type

The types of alerts include:

-  Critical
-  Warning
-  Information
-  Succeeded

*The succeeded alert with its check mark icon will only appear as a followup to previously reported warnings and critical alerts.*

Each alert will appear along with a timestamp for when the alert was issued.

If the alert's title extends beyond the size of the panel, resize the panel or mouse over the alert to view the entire title in a tooltip. A user can also select any alert and view additional details as well as clear alerts from the list.

**To view details:**

- ▶ Select an alert.

**To clear alerts:**

- ▶ Right-click and select Clear Alerts.

# Media Viewer

The Media Viewer provides Browse controls within the Command user interface that you can use to play, stop, and mark in and out points of video on devices, such as an Avid AirSpeed video server.

*A browse channel must be configured in the channel group to browse video, using an external video monitor.*

The Browse controls are:

The Play button changes to a Stop button when media is playing.

The clock on the bottom left of the Media Viewer displays the timecode of current position indicated on the position bar. The clock on the right provides the duration.

*The duration between marked in and out points is shown on the item in the playlist.*

# Chapter 4

## Playlist Viewer

The iNEWS Command interface provides an area known as the Playlist Viewer, with which users can view and manage playlists for on-air playout.

This chapter contains the following main sections:

- [Types of Playlists](#)
- [Overview of Playlist Viewer](#)
  - [Toolbars](#)
  - [Customizing the Playlist Viewer](#)
- [Locking and Unlocking Playlists](#)
- [Working with Channel Groups](#)
- [Working with Standalone Playlists](#)
- [Working with Embedded Playlists](#)
- [Using Time of Day Playlists](#)

## Types of Playlists

There are different types of playlists. For instance, a playlist created at a Command Workstation is considered a *standalone playlist*. It can be locked and managed from any Command Workstation on the Command system.

A playlist created through a newsroom computer system and uploaded to the Command system is called a *newsroom playlist*. When the newsroom rundown is uploaded to Command, the resulting playlist can be viewed at the Command Workstation, but the newsroom system retains the lock on the playlist.

*Although the newsroom system retains the playlist lock, a user at a Command Workstation can still control playout functionality by obtaining the locks on channel groups associated with the newsroom playlist. Channel group locks for playout are not the same as playlist locks, which prevent altering the structure of the playlist itself.*

A user at a Command Workstation can obtain the playlist lock from a newsroom system, in which case the newsroom playlist becomes a standalone playlist. For more information, see [“Locking and Unlocking Playlists” on page 53](#).

When a playlist is inserted into another one, the one inserted is called an *embedded playlist*. The one containing the embedded playlist is known as the *container playlist*. A standalone playlist can contain a newsroom playlist or another standalone playlist as its embedded playlist. A newsroom playlist can contain a standalone playlist or another newsroom playlist.

## Overview of Playlist Viewer

Among the many capabilities featured in the Playlist Viewer, a user can:

- View existing playlists—standalone, time-of-day, or newsroom playlists
- Create standalone playlists
- Lock channel groups
- Control a playlist for broadcast
- Embed a playlist into standalone playlists

When you double-click on a playlist in the Playlist Explorer, iNEWS Command will open it on a tab to display all the stories with attached media, including character generator graphics (CGs), if any.

The window can also have different playlists open simultaneously. All are accessible through tabs located at the top of the Playlist Viewer.

*The workspace cannot be split to view multiple playlists simultaneously; only one tab can be viewed at a time.*

The appearance and some behavior of the playlist is customizable. For more information, see [“Customizing the Playlist Viewer” on page 47](#).

## 4 Playlist Viewer

Page #	TITLE	CHANNEL	DURATION	ID

## Toolbars

Below each tab is the Playout toolbar containing two clocks and several buttons for playout control. With the toolbar, a user at the Command workstation can play, pause, or stop events.

Left Clock: 0:00:00

Control Buttons: Cue, Play, Pause, Stop

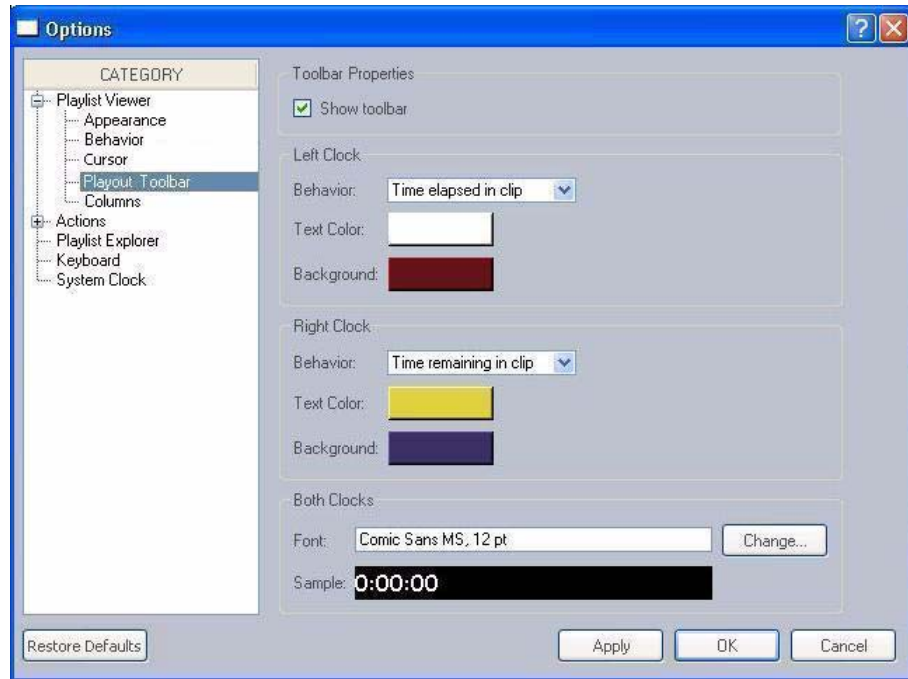

Right Clock: 0:00:00

Control buttons allow users to control playout of events on locked devices associated with the loaded playlist. For more information about the clocks on the Playout toolbar, see [“Clocks” on page 51](#).

A user can choose whether to display the Playout toolbar.

**To hide the Playout toolbar:**

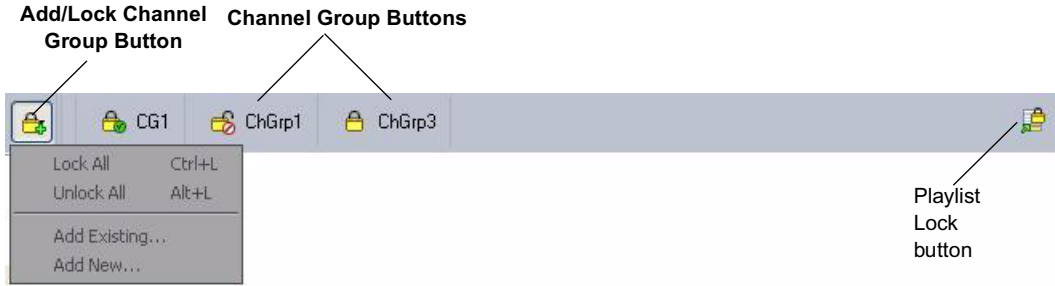

1. Select Tools > Options. The Options dialog box will appear.

2. In Category, expand the Playlist Viewer and select Playout Toolbar.

Below the Playout toolbar is the Playlist toolbar, which enables users to lock, unlock and add channel groups to playlists. It also contains a button used to lock playlists and disconnect playlists from rundowns.

## 4 Playlist Viewer

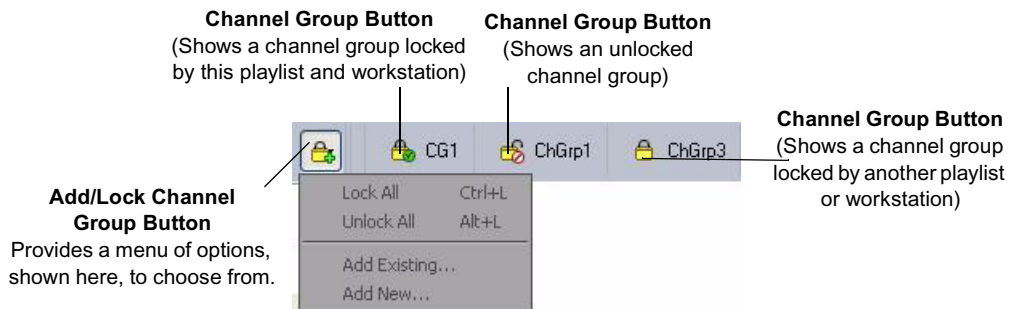

*The buttons that appear on the Playlist toolbar will vary depending on what channel groups, if any, are available, whether the playlist is a time of day playlist or standalone playlist, and whether its locked.*

### Channel Group Buttons

Channel Group buttons represent a channel group that is associated with the loaded playlist and are used to individually lock channel groups for playout control and unlock them afterward. Use the Add/Lock Channel Group button to simultaneously lock or unlock all of a playlist's channel groups.

When playlists are loaded to Command from a newsroom computer system, the Channel Group button for the appropriate channel group associated with that playlist will automatically appear in the Playlist toolbar. If multiple channel groups are configured for the playlist, then more than one button will appear. For standalone playlists created at the Command workstation, a channel group must be added to the playlist, using the Add/Lock Channel Group button.

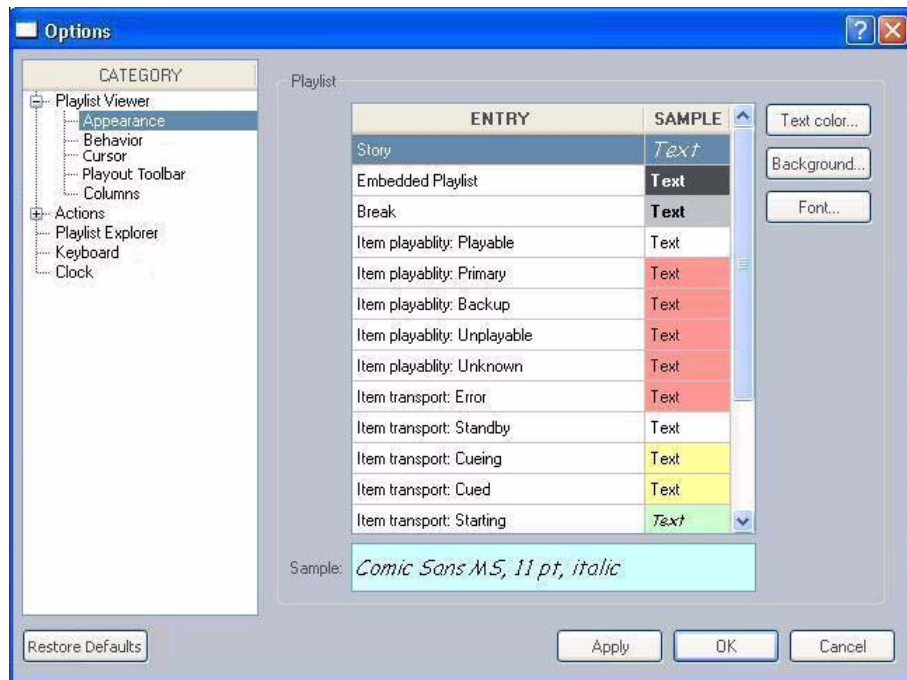

If a user drags an item from the Inventory panel into a standalone playlist, Command will prompt the user to automatically add the channel group associated with that item. For more information, see [“Working with Channel Groups” on page 54](#).

## Customizing the Playlist Viewer

When first installed, Avid iNEWS Command uses default colors and fonts to display information about playlist events; however users can customize how that data is displayed on the Playlist Viewer tabs. For instance, a user might want an unplayable event to appear in red so that it easily stands out on the screen.

**To customize the appearance and behavior of the Playlist Viewer:**

1. Select Tools > Options. The Options dialog box opens.

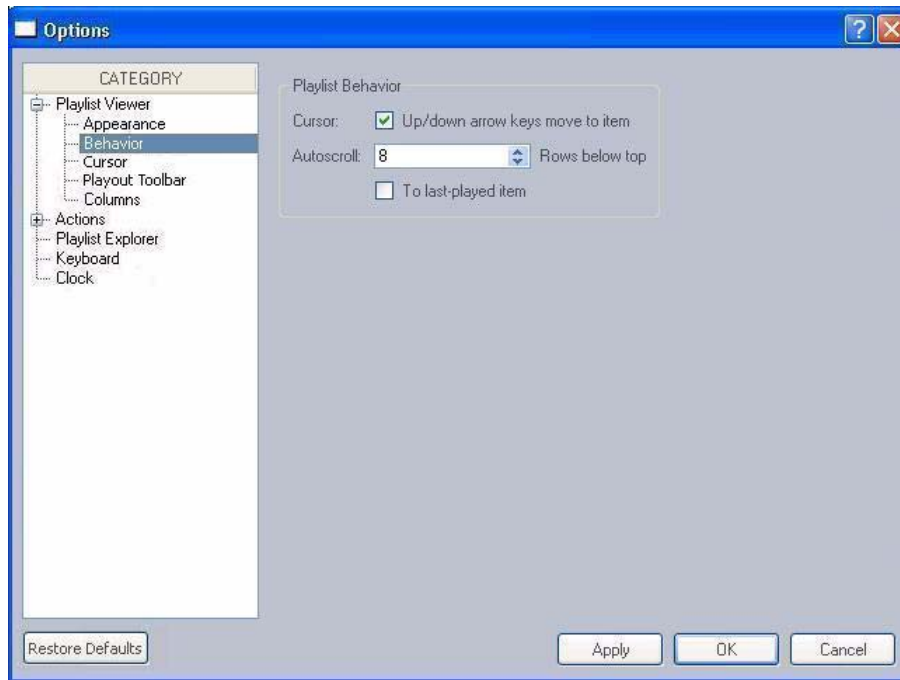

2. In Category, expand Playlist Viewer and select Appearance.
3. You can alter the font, as well as the color of text and backgrounds. As you click on each entry in the Playlist section, your settings for that entry will appear in the Sample section at the bottom of the dialog box. You can select and modify multiple entries simultaneously.
4. (Optional) Click Apply to save the settings without closing the dialog box, so further modification can continue.

*The Restore Defaults button is used to restore settings to the system's original default settings.*

## 4 Playlist Viewer

### 5. Select Behavior.

6. Select whether to allow use of arrow keys to move the cursor up or down a playlist to the nearest media or next adjacent row.
7. Select how many rows should remain displayed above the cursor. This will lock the cursor in place—once it reaches the row specified—so that the playlist scrolls up or down instead of the cursor moving up or down.
8. Select whether the autoscroll lock applies to the row containing the last-played item, instead of cursor position.
9. Click OK to save the settings.

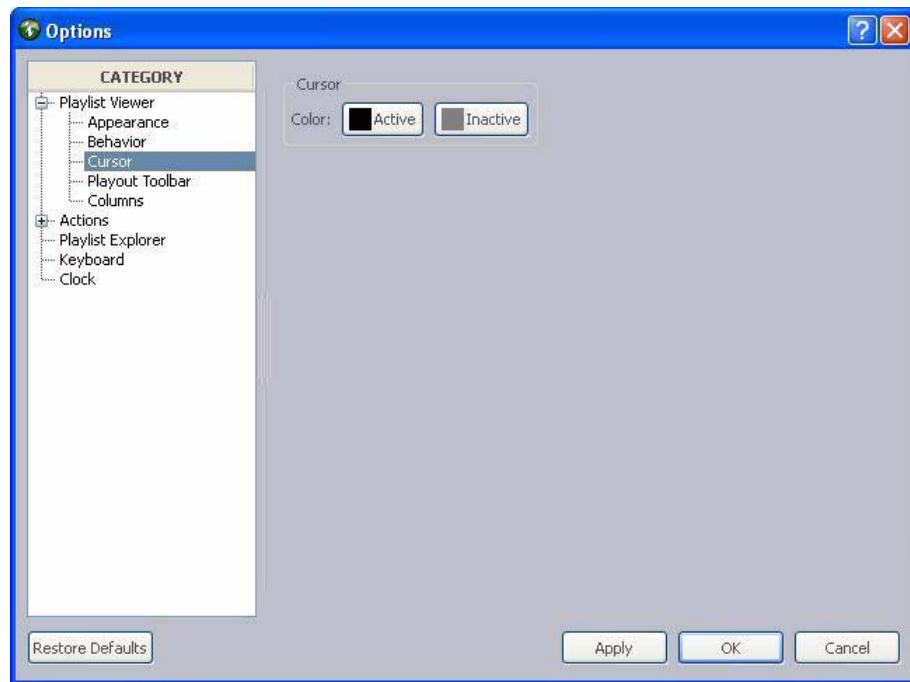

## Cursor

The cursor, as shown on [page 44](#), can appear as a rectangle around a row in the Playlist Viewer or as a solid bar in all or specified fields.

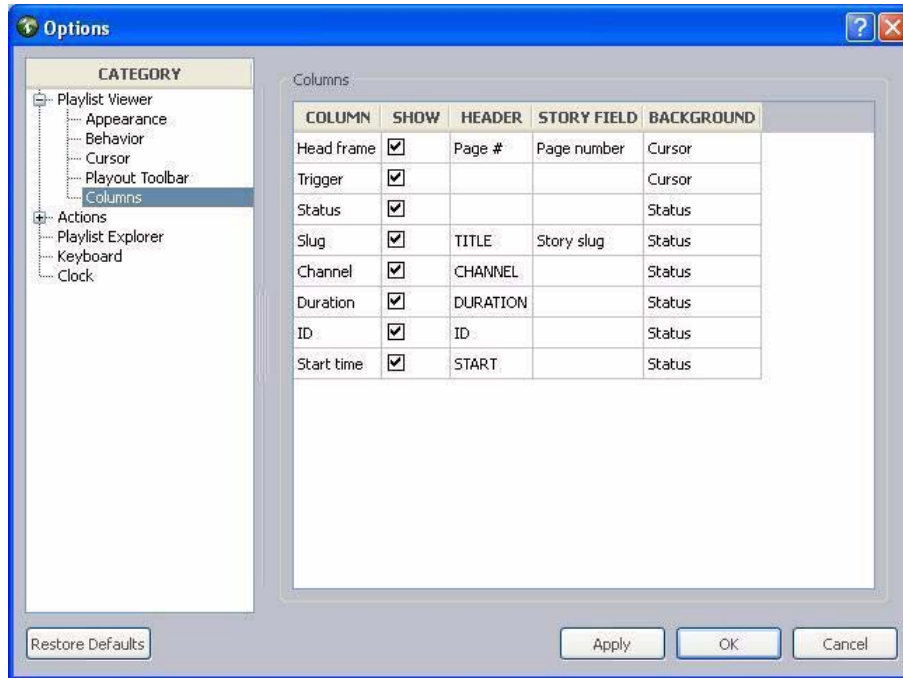

**To change the cursor's appearance:**

1. Select Tools > Options. The Options dialog box opens.

2. In Category, expand Playlist Viewer and select Cursor.
3. Set the color of the cursor accordingly. Active represents the color of the cursor when the focus is on the Playlist Viewer. Inactive represents the color of the cursor when the focus is on a different panel in the iNEWS Command window or on another software application.
4. (Optional) Click Apply to save changes without closing the Options dialog box.
5. Select Columns.

## 4 Playlist Viewer

6. Set the Background options per column accordingly. Options include:

**Cursor** — The cursor's color will also apply to the field's background. This makes the cursor in that column appear to be a solid bar.

**Status** — The cursor's color only applies as an outline on the field. This allows the background in that column to reflect status colors, such as playability or transport status.

For instance, if the cursor's active color is set to black, then the Head frame and Trigger columns are set to Cursor, while the rest set to Status, the cursor—located on the video item between story lines 04 and 05—would appear as shown:

Page #	TITLE	CHANNEL	DURATION	ID
***SHOW-OPEN***				
01	OPEN			
02	HEADLINES			
03	I-TRIPLE-MURDER			
04	P-TRIPLE-MURDER			
	Allied drive shots fired	A	00:00:59:00	032406CD
05	T-TRIPLE-MURDER			

7. Click OK to save settings and close the Options dialog box.

## Clocks

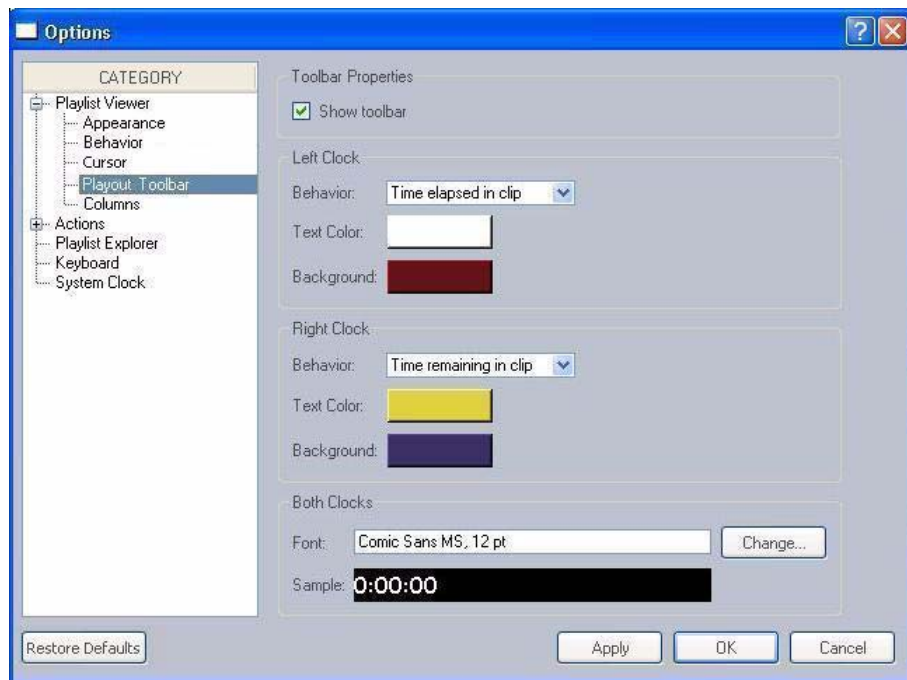

The clocks on either side of the toolbar can be hidden or customized to provide certain timing functions, which include:

- Time elapsed in clip
- Time remaining in clip
- Time remaining in show

Each clock's background color, as well as the font and color of text, can be altered from the defaults, which are: black, 24 pt., bold MS Shell Dlg font on a yellow background. While the font setting is shared by both clocks, the colors can be set independently of one another.

### To change clock functions:

1. Select Tools > Options. The Options dialog box will appear.

2. In Category, expand Playlist Viewer and select Playout Toolbar.
3. Set each clock's behavior, text color, and background color.
4. To change the font used for both clocks, click the Change button.
5. When finished modifying the look and behavior of the clocks, click OK.

## 4 Playlist Viewer

### Columns

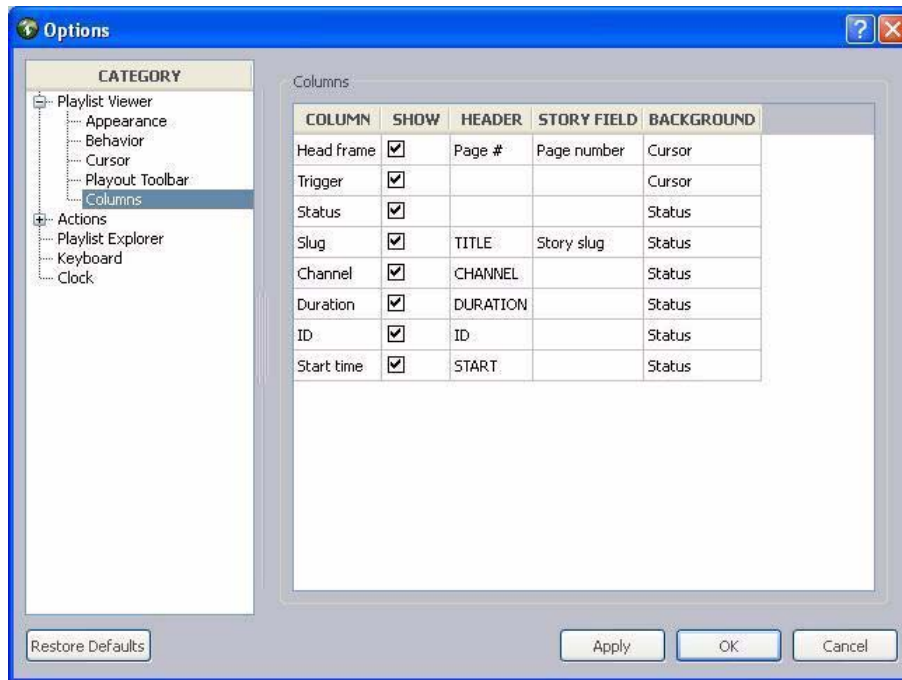

A Command user can rearrange, rename, and hide any column or columns in a playlist.

#### To rearrange columns:

- ▶ Click on the column header and drag it right or left to a new location.

#### To show, hide, or rename a column:

1. Select Tools > Options. The Options dialog box opens.

2. In Category, expand Playlist Viewer and select Columns.
3. Select or deselect the check box for each column you want to display or hide.
4. Under Header, double-click the text field corresponding to the column you want to rename and type in the new name.
5. Click OK.

*The Story Field option enables the user to display—in the playlist—certain metadata obtained from the newsroom computer system related to a story. Options include: Page number, Story slug, and Story ID. This data will appear only on a story line in the playlist in the specified column.*

The Background column setting pertains to the appearance of the column fields when the cursor is on them in the Playlist Viewer. For more information, see “Cursor” on page 48.

## Locking and Unlocking Playlists

When a playlist is uploaded from a newsroom computer system, iNEWS Command sends that system updates any time changes occur to the playlist at the Command workstation and receives updates from the newsroom computer system when changes are made to the rundown. The playlist is considered “locked” by the newsroom system. However, should that connection be broken, the playlist is considered to be “disconnected” and the Playout toolbar will appear red to warn the user at the Command workstation, as shown:

When the Playout toolbar is red, playout on the locked devices can continue from the Command workstation that locked the devices; however, any changes to the playlist in Command will not be sent to the rundown in the newsroom computer system. Also the playlist will not display any modifications that might be made to the rundown. At that point, it is equivalent to a stand-alone playlist.

**If a disconnect occurs, reloading the playlist from the newsroom computer system will restore the connection and provide the most up-to-date playlist in the Playlist Explorer or, if configured to do so, on a new tab in the Playlist Viewer. The channel groups (devices) locked to the original (disconnected) playlist must be manually unlocked, and then relocked from the reloaded playlist on the new tab.**

On the far right side of the Playlist toolbar is the Playlist Lock button. Its appearance varies depending on the status of the playlist.

## 4 Playlist Viewer

This icon indicates that the playlist is locked by a newsroom rundown. Clicking it will prompt the user with an Override Lock dialog box. The user must type in the system administrator password to override the lock and disconnect the playlist from the newsroom rundown. When it is disconnected, the icon will change to indicate the playlist is now locked by the user at the Command Workstation.

This icon indicates that the playlist is locked by the user at the Command Workstation. When locked, the user can insert, move, or delete items in the playlist. Clicking it will unlock the playlist at the workstation. When it is unlocked, the icon will change to indicate the playlist is unlocked.

This icon indicates that the playlist is unlocked. Clicking it will lock the playlist at the Command Workstation.

This icon indicates that the playlist is locked by a user at a different Command Workstation. When locked by another user, only that user can insert, move, or delete items in the playlist. Clicking the icon will override the other user's lock. The user must type in the system administrator password to override the lock.

This icon indicates an unusual lock condition, such as when a newsroom system still has the lock on a newsroom playlist, but connection to the newsroom computer system is down.

## Working with Channel Groups

A *channel group* is a group of one or more device channels that might or might not be across multiple devices.

*Avid recommends that each channel group pertains to the same “type” of device. For instance, a channel group called AS is a grouping of channels from two or more AirSpeed video servers, while a different channel group named CG is a grouping of channels on a Deko character generator.*

For instance, a station has two AirSpeed video servers, each with two channels that are numbered 2 and 3. Let's call the first AirSpeed AS1 and the second one AS2. With channel groups on Command, the station's system administrator can set up numerous different channel groups and call them anything, such as:

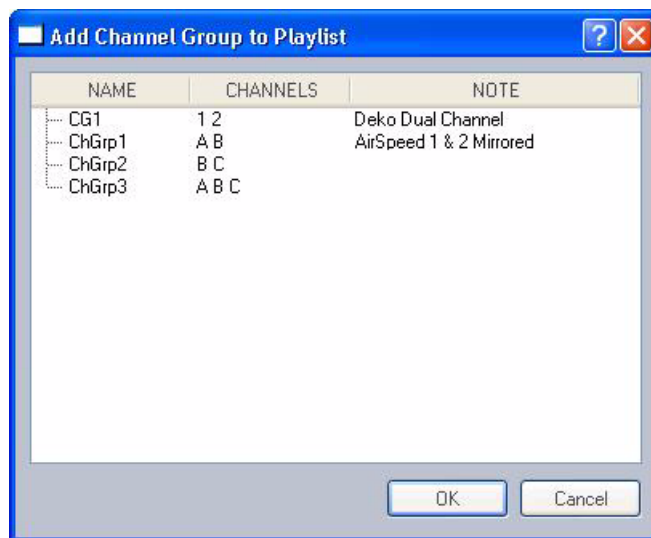

Channel Group	Channel Names	Actual Device Channels	Purpose
AS-Noon	A	AS1 - channel 2	Playout
	B	AS1 - channel 3	Playout
	C	AS2 - channel 2	Browse

Channel Group	Channel Names	Actual Device Channels	Purpose
AS-5PM	A	AS1 - channel 2	Playout
	B	AS1 - channel 3	Playout
	C	AS2 - channel 2	Playout
	D	AS2 - channel 3	Playout
AS-10PM	A	AS1 - channel 2	Playout
	C	AS2 - channel 2	Mirrored
	B	AS1 - channel 3	Playout
	D	AS2 - channel 3	Mirrored

In the Playlist Viewer, users can add new or existing channel groups to standalone playlists, as well as lock or unlock channel groups. For more information on assigning channels, see “[Changing Channels](#)” on page 81.

**To add an existing channel group to a standalone playlist:**

1. With the playlist open, click the Add/Lock Channel Group button (shown on [page 46](#)).
2. Select Add Existing.
3. Choose one or more of the channel groups from the list. To select multiple channel groups, hold the Ctrl key down and click the groups.

4. Click OK. A button or buttons for selected channel groups appears on the Playlist bar.

## 4 Playlist Viewer

There is also another way to add an existing channel group to a standalone playlist. When dragging and dropping media from the Inventory into a standalone playlist, if the media belongs to a channel group not already added to the playlist, an Add Channel Group dialog will appear (shown below) asking the user to confirm the addition of the channel group to the playlist. Clicking OK adds the channel group.

### To add a new channel group:

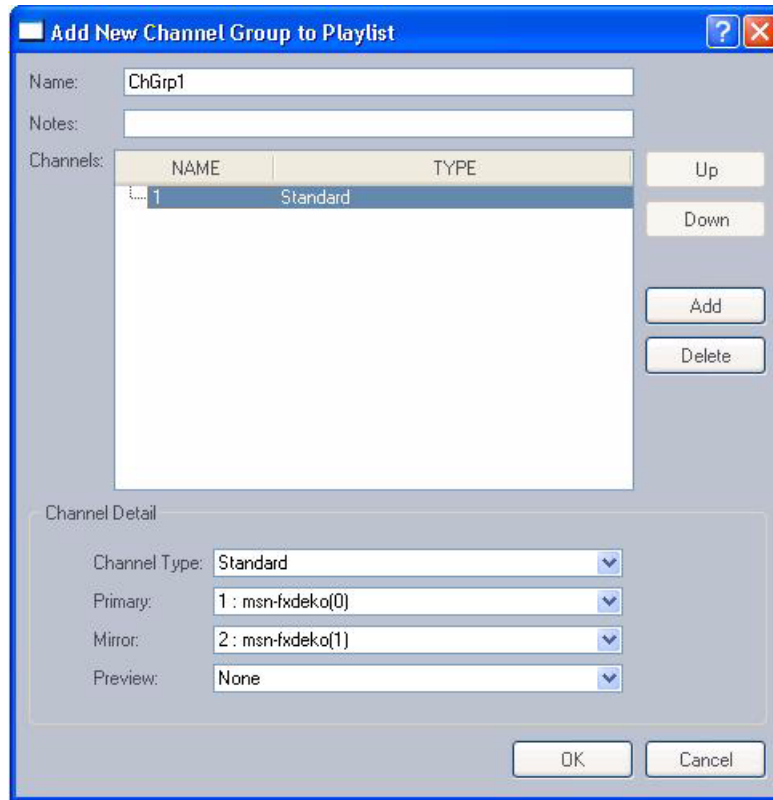

1. With the playlist open, click the Add/Lock Channel Group button.
2. Select Add New.

3. When prompted for the administrator password, type it in and click OK.

The Add New Channel Group to Playlist dialog box opens.

4. Enter the name of the new channel group and any notes you want.
5. Click Add to add a channel to the group.
6. In the Channel Details section, select the Channel Type, Primary, Mirror, and Preview options for that channel.
7. Repeat steps 5 and 6 as needed. You can use the Up and Down buttons to rearrange the order of channels in the group.
8. Click OK.

**To remove a channel group from a playlist:**

1. Remove any media in that group from the playlist.
2. Right-click the button for that channel group on the Playlist toolbar.
3. Select Remove from the menu.

## 4 Playlist Viewer

### Subtopics

[Channel Group Locks](#)

[Assigning Channels](#)

## Channel Group Locks

Channel group locks are not the same as playlist locks. A channel group lock pertains to control of playout on channels in a group. A playlist lock pertains to ability to modify the structure of the playlist itself. Users can lock one or more channel groups for a playlist from a Command Workstation.

### To lock or unlock a specific channel group:

- ▶ With the playlist open, click the Channel Group button you want to lock. The icon on the button will change to indicate whether it is locked or unlocked. For more information, see “[Channel Group Buttons](#)” on page 46.

*The keystroke combination for locking an individual channel group is: Ctrl+1 for the first channel group, Ctrl+2 for the second, and so forth. To unlock, use the Alt key instead of Ctrl.*

### To lock or unlock all channel groups for a playlist:

1. With the playlist open, click the Add/Lock Channel Group button (shown on [page 46](#)).
2. Do one of the following:
  - ▶ Select Lock All to lock all channel groups.
  - ▶ Select Unlock All to unlock all channel groups.

*The keystroke combination for locking all channel groups is Ctrl+L. Pressing Alt+L will unlock all of them.*

When a channel group is locked, the status of those locks appears on the status bar at the bottom right corner of the window. In the following example, a closeup of the locked status for both channels A and B of a channel group named AB is shown.

## Assigning Channels

After a channel group is added to a playlist, channels can be assigned to or edited for specific items in the playlist.

For some sites, channels are automatically assigned when the playlist's channel group is locked. Whether this occurs depends on system settings in Avid iNEWS Command. Contact your system administrator for more information.

There are other methods for assigning channels at a workstation as well.

#### **To assign channels in Command:**

- ▶ Do one of the following:
  - a. Click the field in the Channel column of the playlist opened in the Playlist Viewer and type the first character of the channel name, such as A, B, or C.
  - b. Right-click and select Channel > Assign.
  - c. Type Ctrl+R.

*Steps b and c will result in the assignment of alternating channels throughout the playlist. For instance, if there are two channels, A and B, then Command will automatically assign A to the first item, B to the second, A to the third, and so forth. Auto-assignment only applies to channels that are locked.*

A user can select multiple items in a playlist and assign all of them to a single channel.

#### **To assign a channel to multiple items:**

1. Click the first item to select it.
2. Do one of the following:
  - ▶ Hold the Shift key down to select all items between your first selection and your last.
  - ▶ Hold the Control key down to select multiple non-sequential items. As shown in the following graphic, items for pages 06, 08, and 10 are selected, while 07, 09, and 11 are not.

## 4 Playlist Viewer

Page #	TITLE	CHANNEL	DURATION
06	LOCAL-CRIME	B	00:00:15:00
07	NATL-CRIME	B	00:00:15:00
08	BUSH-FED-RELIEF	B	00:00:15:00
09	NEW ORLEANS	B	00:00:15:00
10	HURRICANE-DAMAGE	B	00:00:15:00
11	WX-TZ	A	00:00:15:00
BREAK			

3. Do one of the following:

- ▶ Press Ctrl+- (hyphen) to set the focus on the Channel field, then type the first letter of the channel you want. (This will change all selected items.)
- ▶ With the Shift or Ctrl key still held down, as chosen in the previous step, double-click in the last item's cell located in the Channel column. This will give you a drop-down arrow. Then, click the arrow and select the channel from the list, as shown in the previous graphic.

4. Click anywhere else in the playlist. It's at this point that the channel is reassigned to the selected items. In the following graphic, the user clicked on row 11 as indicated by the black outline, and the channel assigned to items 06, 08, and 10 is now A.

Page #	TITLE	CHANNEL	DURATION
06	LOCAL-CRIME	A	00:00:15:00
07	NATL-CRIME	B	00:00:15:00
08	BUSH-FED-RELIEF	A	00:00:15:00
09	NEW ORLEANS	B	00:00:15:00
10	HURRICANE-DAMAGE	A	00:00:15:00
11	WX-TZ	A	00:00:15:00
BREAK			

# Working with Standalone Playlists

A standalone playlist is one that is not directly associated with (or disconnected from) a newsroom rundown. Users can create standalone playlists at the Command Workstation.

## To create a standalone playlist:

1. Select File > New > Playlist (or use the shortcut keystroke combination, Ctrl+Shift+N).
2. When the Create New Playlist dialog box opens, enter a name for the new playlist.
3. Click OK.
4. Assign a channel group or groups to the new standalone playlist by clicking the Add/Lock Channel Group button (shown on [page 46](#)). You can add either a new channel group or an existing one. For more information see “[Working with Channel Groups](#)” on [page 54](#).
5. Drag and drop items (existing machine control events) from the Inventory Explorer into your playlist.
6. Repeat step 5 as needed.

After a standalone playlist is created, the items in that list can be modified as needed, such as rearranging the order or deleting items.

## To edit a standalone playlist:

1. Open the playlist.
2. Do any of the following:
  - ▶ Add new items to the playlist by dragging them from the Inventory Explorer.

*If the channel group associated with the item is not already assigned to the playlist, then a dialog box will appear to confirm the assignment of the channel group to the playlist. Once confirmed, the channels are assigned to the playlist and the item added.*

- ▶ Delete items by selecting the item and pressing the Delete key.
- ▶ Rearrange the order by dragging and dropping items into new locations within the playlist.

## To delete a standalone playlist:

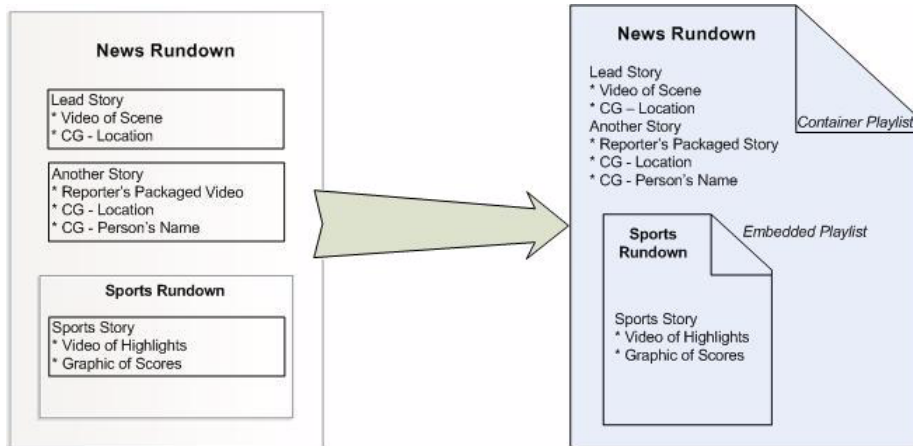

1. Select the playlist in the Playlist Explorer.
2. Press the Delete key.

**To delete a playlist, it must *not* be on air.**

## Working with Embedded Playlists

Avid iNEWS Command supports embedding playlists, which enables users to insert one playlist into another one. For instance, a newsroom producer is setting up a newscast in which there will be a segment on sports. The ability to embed playlists enables a user to work on one rundown without requiring access to another—the person setting up the sports segment no longer needs full producer-level access to the newscast rundown. Instead, two rundowns can be created: one for the overall newscast and another for the sports segment. The newsroom producer can embed the sports rundown inside the news rundown.

Another example of this workflow is a newscast that contains segments produced at different locations. The primary rundown could contain one or more embedded rundowns from remote sites.

A user can embed playlists from the Command Workstation or from the iNEWS Workstation.

*When using Command Workstation, the playlist can be embedded only into a standalone playlist. When using the iNEWS Workstation, the playlist can be embedded only into a newsroom rundown, which appears as a newsroom playlist in Command once the monitor server is loaded.*

### To embed a playlist using Command:

1. Open (or create) the container playlist in the Playlist Viewer.
2. Select a playlist you want to embed from the Playlist Explorer.
3. Drag it to the location in container (standalone) playlist. It must be dropped before a story, not an item; otherwise, the system will display a warning to that effect.

-  An icon (shown at left) appears in the container playlist as the system is embedding the playlist.
-  If a problem occurs, another icon (shown at left) might appear to indicate that the system was unable to embed the playlist, resulting in an error. Mousing over the row referencing the embedded playlist will provide a tooltip with more details about the error. An example of an error is: `This embedded playlist was deleted.`

When the playlist is successfully embedded, no icon appears, but the color of the top row is different, as is a matching bar that continues down the left side to indicate all items included as part of the embedded playlist.

		<b>BREAK</b>				
<b>12</b>		<b>BUMP1</b>				
		Bump	A	00;00;15;00	Matt_12	00;00;00;00
		<b>Special</b>				
		<b>Media</b>				
		China Trade	B	00;00;55;00	032406A5	00;00;00;00
		Bush speech	A	00;01;00;10	032406AZ	00;00;00;00
		Pope Benedict	B	00;01;00;02	032406BE	00;00;00;00
		Closing Bell	A	00;00;44;00	021406CC	00;00;00;00
<b>13</b>		<b>I-WORLDCUP</b>				

In the previous example, the embedded playlist is called **Special** and contains four items—the first of which is called **China Trade** and is playing, and the last of which is called **Closing Bell**. The cursor is on the last item in the embedded playlist, as indicated by the row's black rectangular outline. The **I-WORLDCUP** story is not part of the embedded playlist, as indicated by the absence of the bar on the left edge.

#### To embed a playlist using the Avid iNEWS newsroom computer system:

1. Open the rundown in which you want to embed another rundown.
2. Insert a new story where you want the other rundown embedded.
3. In the Title field (usually named Slug), type **EMBED:** followed by the pathname of the rundown that you want to embed. For instance: **EMBED: SHOWS . 6 PM . RUNDOWN**  
The **EMBED:** token is configurable, so check with your system administrator.

*Do not add machine control events to the story.*

### Editing Embedded Playlists

Embedded playlists are not copies of the original playlist. So, changes made to the actual playlist will appear when viewing the embedded playlist. Like stories in an iNEWS rundown, embedded playlists can be moved or floated.

Whether editing can be done is determined by the type of playlist regardless of whether that playlist is a container for an embedded playlist or the embedded one itself. Users can edit a standalone playlist (or a disconnected newsroom playlist) from the Command Workstation. Newroom playlists locked by the newsroom computer system must be edited from a workstation running the newsroom computer system software.

If the embedded playlist is a standalone playlist, to edit it, you must open the actual playlist in the Playlist Viewer at a Command Workstation. Do not try to edit it from its embedded location.

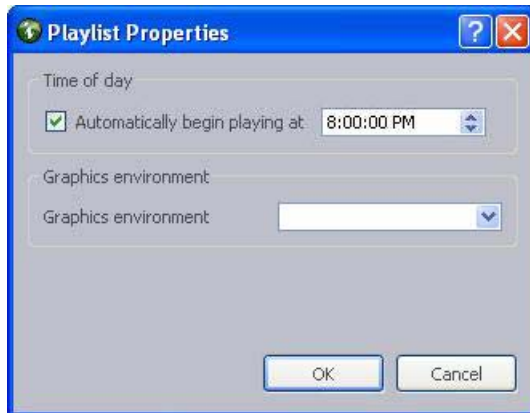

### Using Time of Day Playlists

In Avid iNEWS Command, playlists can be set to air at specific times. These playlists are called time of day playlists.

#### To set a playlist to air at a certain time of day:

1. Open (or create) a playlist in the Playlist Viewer.
2. Select Playlist > Edit > Properties.

The Playlist Properties dialog box opens.

3. Select the check box and set the time you want Command to automatically begin playing the playlist.

*A minimum thirty second lead time is required when setting up time of day playlists.*

4. Click OK.

A new button (shown at left) will appear on the Playlist toolbar along with the time the playlist is set to begin.

*You can click on the Time of Day button to open the Playlist Properties dialog at any time, such as if you want to change the time setting or remove the scheduled time altogether.*

## 4 Playlist Viewer

## Chapter 5

# iNEWS Integration

The iNEWS Command system is a device automation system for on-air operations, which can be integrated into the iNEWS newsroom computer system, or into another MOS-enabled newsroom computer system. The interface between Avid iNEWS Command and the Avid iNEWS newsroom computer system provides for rundown updates between the products. Command can also operate in a standalone environment if the Avid iNEWS connection is lost.

This chapter contains the following main sections:

- [Overview](#)
- [Inserting Machine Control Events into Stories](#)
- [Loading Rundowns to Command](#)
- [Changing Channels](#)

## Overview

This section provides an overview of the Avid iNEWS workspace and instructions on different methods for inserting machine control events into scripts in iNEWS for the iNEWS Command system.

The Avid iNEWS workspace consists of three main panels:

- Directory panel—the portion of the workspace that displays the directory or file structure of the Avid iNEWS database.
- Queue panel—the portion of the workspace that displays a list of stories in a queue. Stories are added, deleted, moved, and ordered through this panel.
- Story panel—the portion of the workspace that displays the story text; however, the panel may be split, as shown in the figure below, into the following three subpanels:
  - Instruction panel—for production cues and machine control instructions. It appears on the bottom left side of the Story panel.
  - Story Form panel—containing fields for data typically appearing in the queue (rundown). It appears across the top of the Story panel.
  - Story Text panel—containing the script of a story and production cue markers also known as grommets that coincide with production cues and machine control instructions in the Instruction panel. It appears on the bottom right side of the Story panel.

*The Story Text panel is the only subpanel that always appears; the other two may be removed from view by users at iNEWS Workstations.*

The screenshot shows the iNEWS workstation interface. At the top, there is a menu bar (File, Edit, View, Go To, Story, Format, Tools, Communicate, Window, Help) and a toolbar with various icons. Below the toolbar is a status bar showing the time 15:53:59 and several function buttons like Load Sys, Load Prod, KillMess, Go Map, Go Resro, Go Wf-Diz, Go Group, Go 251, Conn A, and Conn B. The main window is titled "[NRCS]SHOW:NOON.RUNDOWN.OSWALD".

On the left side, there is a tree view showing a hierarchy of folders: NRCS, \*HELP, \*UPDATE, \*ARCHIVE, \*ASSIGN, \*DEAD, \*PEOPLE, \*PHONES, \*SCHEDULES, \*SHOW, \*NOON, \*RUNDOWN, \*CG, \*SS, \*VIDEO, \*MASTER, \*HOLD, \*RUNDOWN-SAVE, \*SCRIPTWRITING, \*PRODUCING, \*TEST, \*MOSSWE, \*VID-ID, \*SYSTEM, and \*WIRES.

The main area contains a table with columns: PAGE, TAL, SLUG, FORMAT, GRAPHICS, VID-ID, CH, STATU, READ, SOT, TOT, BACKTIM, AIR-DATE, CG, WR, EP. The table lists several items, with A10 highlighted. Below the table is a detailed view of item A10, showing fields for PAGE, SLUG, VID-ID, CAM, SHOT, TAL, FORMAT, GRAPHICS, READ, SOT, TOTAL, BACKTIME, CG, and EP. Below this is a section for machine control events, including "KATY ON CAM", "TAKE V/O", and "CG a0125". The right side of the interface shows the story text for "KATY ON CAM", which includes a paragraph about Ted Oswald's remorse and a paragraph about his sentencing and parole eligibility.

At the bottom of the window, there is a status bar showing "Show is 0:11 over", "TTC - 0:00:10", "BLK - - - - -", "EST - 0:00:40", and several buttons: MON=OFF, REF, NUM.

## Inserting Machine Control Events into Stories

Users cannot add machine control events to a newsroom playlist from a Command Workstation. This does not apply to standalone playlists, which could be a disconnected newsroom playlist. For more on how to edit standalone playlists, see [“Working with Standalone Playlists”](#) on page 61.

For newsroom playlists, the iNEWS Workstation provides a scripting function that places unformatted stories into a split-screen script format with production cues, in the left column (also referred to as the Instruction panel) and story text in the right column (also referred to as the Story Text panel).

## 5 iNEWS Integration

### To insert a machine control event into an iNEWS story:

1. From an iNEWS Workstation, open the script into the Story panel.

PG	TAL	STORY	TYPE	CG	VIDEO	CH	STATUS	EST	RUNS	TOTAL	CLOCK	EP
A06	MZW	ANTI TERROR AC	VO	RE				0:38	0:00	0:38	12:00:20	avs
CMD	CAM	SHOT	ESS	WRI	MODIFIED:	BY:	TAPE#	TIMECODE				
		NKK			10/7/2003 9:06:53	mzweg						

\*(MIKE)  
THE FBI HAS DONE A POOR JOB WITH AN ANTI-TERRORISM LAW THAT PERMITS UNPRECEDENTED LEVELS OF DOMESTIC SURVEILLANCE, THE SENATE JUDICIARY COMMITTEE SAID TUESDAY.  
THE REPORT CONTENDED THAT THE FBI AND THE JUSTICE DEPARTMENT WERE GUILTY OF EXCESSIVE SECRECY, INADEQUATE TRAINING, WEAK INFORMATION ANALYSIS AND THE STIFLING OF INTERNAL DISSENT IN USING THE FOREIGN INTELLIGENCE SURVEILLANCE ACT, A KEY TOOL IN THE WAR ON TERRORISM.  
(VO)\*  
THE REPORT FOCUSED ON THE CASE OF ZACARIAS MOUSSAOUI, THE ONLY PERSON ACCUSED IN THE UNITED STATES OF CONSPIRING WITH THE SEPT. 11, 2001, HIJACKERS. IT DETAILS HOW FBI HEADQUARTERS THWARTED EFFORTS BY AGENTS IN MINNEAPOLIS TO OBTAIN A FISA WARRANT TO SEARCH MOUSSAOUI'S LAPTOP COMPUTER AND BELONGINGS BEFORE THE ATTACK.  
(SOT)\*

TTC - 0:00:00      BLK - -:-:--      EST - 0:00:38

2. Click in the Story panel at the location where the production cue is to be placed.
3. Type Alt+Insert.

An Instruction panel appears to the left of the Story Text panel. The Instruction panel has a Production Cue text box where the cursor is placed so that a production cue can be entered.

- A production cue marker (also known as a grommet) is inserted in the script text at the cursor position.

Production cues might include the following: Take VO, On Camera, Take SOT, Take Live, and so forth. When interfacing with iNEWS Command, production cues in the iNEWS newsroom computer system might include commands for devices, such as character generators (CGs) and high-resolution video servers.

*By default, Avid iNEWS generally refers to all video playback devices—for instance, Avid AirSpeed video servers—as “video” type devices.*

A production cue containing a command for a device is known as a *machine control event*. Each command is preceded by an asterisk (\*) and should be written in a special format.

The format for machine control events, following the asterisk, starts with a code for the type of device the instruction is for, such as CG for a character generator or Deko for an Avid Deko graphics system. For Command, this “code name for the device” is the name of the channel group.

After the command, the format specifies a particular item or template. If additional comments or information, such as replaceable text, is required it would follow on succeeding lines in the same Production Cue text box.

For example, in iNEWS, a machine control event for a 2-line character generator graphic might look like the one shown below.

In the above example, the Story panel is split to show both the Instruction and Story Text panels, but not the Story Form panel. The Take VO production cue is information for the director; it is not a machine control event. The machine control event for the character generator is in the second Production Cue text box.

*Machine control event formats will vary based on styles set up by your system administrator. Check with your system administrator for a list of styles used at your location.*

## Using Plug-Ins

Deko Select is a plug-in for a newsroom computer system's interface that allows a user, such as a reporter, to drag and drop graphic templates directly into the story, as well as alter replaceable text or graphics in the selected template.

Any Deko graphic can be used as a template for Deko Select if the following conditions are met:

- Appropriate layers are designated as replaceable.
- Replaceable layers are properly identified, ordered, and named.
- Default playout channel is designated.

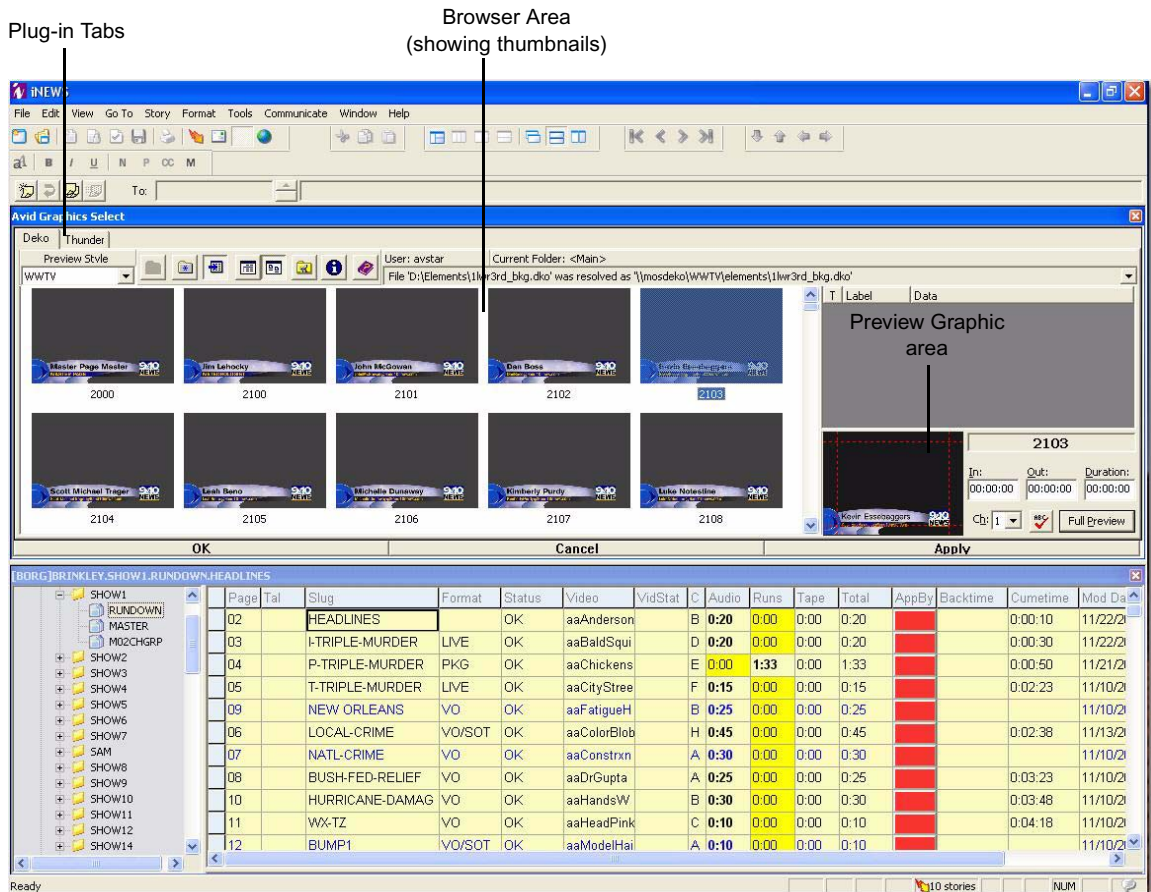

For more information, see the *Avid Deko Select Installation and User's Guide*.

## 5 iNEWS Integration

### To access Deko Select at an iNEWS Workstation:

1. Log in to iNEWS.
2. Select Tools > Options > Deko Select.

The plug-in will open in a new workspace within the iNEWS window. It might appear at the top (as shown) or bottom, depending on the user's preferences.

Another plug-in available from Avid is Thunder Select. If both the Deko Select and Thunder Select plug-ins are installed, the name that will appear in the Tools > Options menu will be Avid Graphics Select. When chosen, both plug-ins will open in the workspace, with each plug-in available via tabs (shown) in the upper left corner of the workspace.

## Inserting Deko Select Events into iNEWS Stories

Deko Select events can be inserted directly into the body of a news story or inserted into the story form as a primary machine control event.

*Dropping events into the story form is available only if the Deko is the primary device, which is usually not the case when a video device is also used, such as an AirSpeed video server.*

### To insert a Deko event into the story form:

1. From an iNEWS Workstation, open the story in which you want to insert the Deko Select event.
2. With the Deko Select workspace open in the iNEWS window, select a Deko Select event from the Preview Graphic area and drag it to the Story Form panel in the iNEWS workspace. See [“Overview” on page 68](#) for more information on the Story Form panel.

*You do not have to drop the event onto a specific field in the form.*

### To insert a Deko event into an iNEWS story using Deko Select:

1. From an iNEWS Workstation, open the story in which you want to insert the Deko event.
2. (Optional) Position cursor in the story where you want the production cue marker to be, and insert it by typing Alt+Insert.
3. With the Deko Select workspace open in the iNEWS window, double-click on a template’s file name or thumbnail. See [“Using Plug-Ins” on page 71](#) for more information on accessing the Deko Select plug-in. A preview of the template will appear on the bottom right of the workspace.

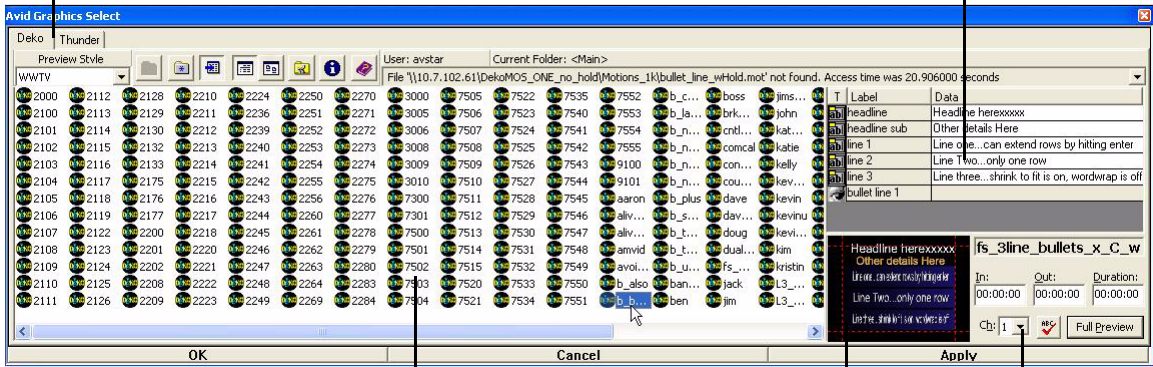

*When multiple plug-ins are installed, such as Deko Select and Thunder Select, the workspace is known as the Avid Graphics Select workspace; the individual plug-ins are then accessible by clicking on tabs available in the upper left corner of the workspace.*

## 5 iNEWS Integration

### Plug-in Tabs

### Replaceable Fields

Browser Area  
(showing file names)

Preview Graphic  
area

Channel List

4. Above the preview, type information into the replaceable fields as needed. If default text was included in the template, it will appear automatically, but can be replaced.
5. (Optional) The selected template displays its default channel assignment, but a different channel can be selected from the Channel list.
6. (Optional) To view a larger preview of the currently selected template with the edited fields, do one of the following:
  - ▶ Double-click on the preview graphic.
  - ▶ Click the Full Preview button.
7. (Optional) Use the Spell Check button to check spelling of text in the replaceable fields.

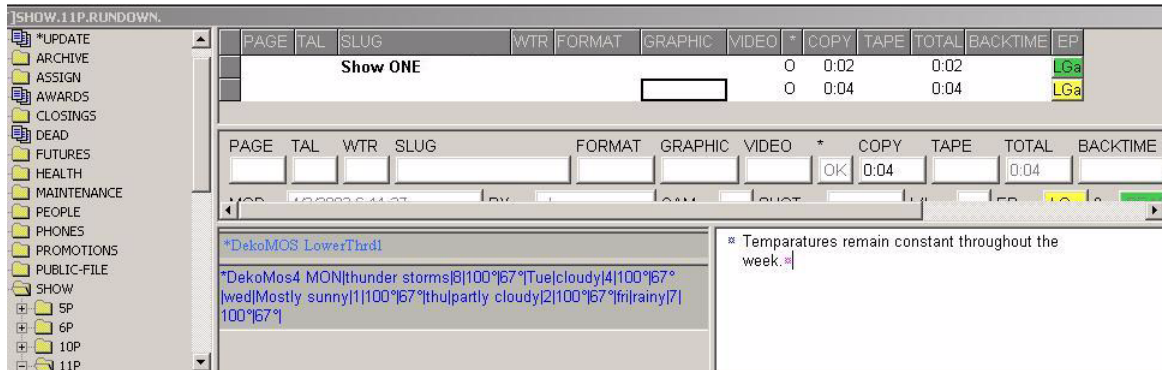

*If In-line spelling is enabled, Deko Select will underline spelling errors as the user types in the fields. The underline will not appear in the graphic output.*

8. (Optional) Enter In and Out or Duration settings for a “tagged” event.
  - d. An example of a *tagged event* is when a character generated graphic is set to automatically go on-air at a specific time and for a specific duration based on the first video event of the story. Timecode information specified in the plug-in is forwarded to the Command Workstation and appears in the playlist so that the operator knows when this automatic event will occur.

*Administrators at sites that want to take such events to air manually can turn off the automatic functionality by modifying a system setting in Avid iNEWS Command. For more information, see the Avid iNEWS Command Installation and Configuration Guide.*

- When finished editing, drag and drop the preview graphic into the story. A production cue marker is inserted in the story's text and the Deko Select information will appear in the Instruction panel on the left side of the Story panel. The font will be blue to indicate a machine control event as opposed to a production cue.

When the story is completed and saved, any Deko Select events become part of the story. When a rundown's monitor server is loaded, the playlist, including any Deko Select events will be published to iNEWS Command.

**To edit the replaceable fields of a Deko Select event in an iNEWS story:**

- Open the story and do one of the following:
  - ▶ Double-click the Production Cue text box containing the machine control event, displayed in the Instruction panel.
  - ▶ With the cursor in the Production Cue text box, press Enter.

When the Deko Select plug-in opens, an image of the template will appear as a preview graphic, above which the current contents of the replaceable fields will be displayed.

- (Optional) Change the background by pressing Enter and selecting another one.
- Edit the replaceable fields as needed.
- (Optional) Edit the In, Out, and Duration time.
- Set the channel, if needed.
- Click Apply to save without exiting the plug-in or OK to save and exit the plug-in. The edited graphic will replace its previous version in the story.

## Loading Rundowns to Command

This section provides some basic user information about the Avid iNEWS monitor server, which is used to load iNEWS rundowns to Command. The *monitor server* is not an actual part of Avid iNEWS Command software, but is a utility program on the iNEWS Server.

For iNEWS Command, it is used to scan stories in the iNEWS rundown, check that show's event requests for errors, and search for machine control events to build event lists (playlists) for the production devices. It continues monitoring the rundown for changes to machine control events and sends them to the iNEWS Command system until the show goes off the air.

Monitor servers must be set up on iNEWS Servers to ensure proper integration between Avid iNEWS Command and an iNEWS newsroom computer system.

The monitor server is turned on when a user at an iNEWS Workstation turns it on. When on, monitor server checks its assigned rundown for machine control events, and builds playlists. It continues to monitor the rundown for changes and performs as much error checking as it can without communicating with any broadcast equipment, including Command. The monitor server loads data to the Command system when a user instructs it to do so from an iNEWS Workstation.

*It is recommended that producers or production assistants turn the monitor server on as show time approaches so it can check the rundown queue throughout much of the show's development. Monitor server scans through the scripts and builds Event Lists for CG and video if these events are present in the scripts. Monitor server will also create a Composite list if configured to do so. Instructing the monitor server to load data should be done later, such as just before taking the show to air.*

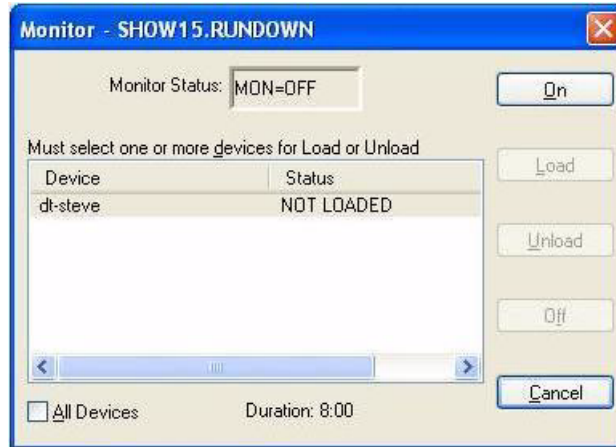

## Loading and Unloading Playlists from iNEWS

The monitor server is used to monitor playlists before broadcasting, load newsroom playlists to Command and unload them.

### **To load a playlist from Avid iNEWS to Command, using the monitor server:**

1. Log in to an iNEWS Workstation.
2. Open the appropriate rundown in the Queue panel.
3. Select Tools > Monitor.

The Monitor dialog box opens.

The system displays the current status for and name of all devices available for the opened rundown.

The duration (or automatic quit time, if configured) appears at the bottom of the dialog box. For more information, see [“Duration” on page 78](#).

4. Select a monitor mode based on the following options:

---

On	—	Turns the monitor server on and creates an event list for each device in the rundown queue.
Load	—	Instructs the monitor server to load event lists to devices you select. See <a href="#">“Monitor LOAD” on page 78 for more information</a> .
Unload	—	Disconnects from the selected device or server without turning the monitor server off. (If all devices/servers are unloaded, the monitor server returns to the On mode. See <a href="#">“Monitor Off and Unload” on page 79 for more information</a> .
Off	—	Turns the monitor server off, overriding the Duration setting. See <a href="#">“Monitor Off and Unload” on page 79 for more information</a> .

---

If you select Load, specify the device or server to load from the Devices list, or select the All Devices checkbox to load all devices associated with the rundown queue. To select up to three devices from the list, without selecting all, press the Ctrl key while you click on each item. If you select a server, the data will be loaded to all devices associated with that server.

## 5 iNEWS Integration

### Item Status After Load to Command

## Duration

Monitor server uses a large amount of system resources. If monitor servers are left on after the end of their shows, they could degrade the efficiency of the Avid iNEWS system.

To protect system resources, a quit time or a duration can be set by the system administrator. A quit time will automatically switch off the monitor server at the specified time, ensuring the integrity of the system. A duration will automatically switch off the monitor server after the allotted time is achieved. However, for the best results, Avid recommends that monitor servers be manually turned off at the end of each show.

If configured, the quit time or duration time appears at the bottom of the Monitor dialog box. The monitor server's quit time or duration is determined by configuration settings in the SYSTEM.MAP story of iNEWS. For more information, see the iNEWS documentation for system administration and configuration.

## Monitor LOAD

Before Command is able to view the list of machine control events (known as items in Command) in an iNEWS rundown and control those events for playback, they must be loaded from the rundown in iNEWS. The procedure for using monitor server to load events from a newsroom rundown to iNEWS Command is on [page 76](#).

Events are loaded from Avid iNEWS to Command and then communicated to appropriate devices. After Command receives the entire list, it will notify the user that it has received the list by sending a message to the iNEWS Workstation. Confirmation messages might look like the following:

```
LIST RECEIVED "SHOW.5P.Rundown"
SHOW.5P.RUNDOWN: Download Complete
```

If the monitor server is not on, loading events will automatically switch the monitor server on.

## Monitor Off and Unload

Monitor Off is used after the show is over. Switching the monitor server off stops the system from scanning scripts for updates and sending those updates to Command.

If a user at a Command Workstation disconnects the show, the broadcast can continue with playout controlled from that workstation instead of the newsroom computer system; however, no updates to the rundown from Avid iNEWS will be received in Command and no changes to the disconnected playlist are sent to iNEWS. Turning the monitor server off, back on, and loading it will create a new newsroom playlist in the Playlist Explorer, which will bear the same name as the original “disconnected” playlist.

Monitor Unload clears the playlist, if Command has not disconnected it from the show, but continues to scan the scripts and update the event lists with changes.

## Event List Queue

After the monitor server is on for a few seconds, event lists are built. In iNEWS, the Event List queues—each one representing a different channel group—are generally built in the same folder as the rundown, such as:

```
Rundown:           SHOW . 6PM . RUNDOWN
CG Event List:     SHOW . 6PM . CG
Video Event List:  SHOW . 6PM . VIDEO
```

Any script or rundown changes will be picked up automatically by the monitor server, which will then make the appropriate changes in the event lists. All changes must be made in the rundown queue, not in the event build queues.

## 5 iNEWS Integration

The following figure shows a CG event queue for a rundown, listing the CGs for that show.

PAGE	SLUG	STYLE	PAGE	TEXT	DekoMOS Text

## Composite Queue

It is possible to configure Avid iNEWS to also create a Composite List queue. This is a single queue that contains a list of all machine control events for all channel groups (for all devices associated with a rundown) that are required during the show. This list represents what will be seen on the newsroom playlist at a Command Workstation. The Composite List Queue is usually found in the same folder as the rundown, such as:

Composite List Queue:      SHOW . 6 PM . COMPOSITE

## Item Status After Load to Command

Playability is shown in Command through a variety of icons. For a quick reference on what each icon means, see [“Icon and Button Quick Reference”](#) on page 105.

## Changing Channels

Channel assignment can be accomplished from either a Command Workstation or an iNEWS Workstation. In iNEWS, depending on how a rundown is configured, there are multiple locations where channel assignment is displayed and therefore a variety of ways to assign channels or change channel assignments.

Channel Column

Page	Anchor	Slug	Format	Status	Video	VidStat	Ch	Audio	Runs	Tape	Total	AppBy	Backtir

## 5 iNEWS Integration

### To assign channels in iNEWS:

- ▶ Do one of the following:
  - a. Type the channel name, such as A, B, or C, in the Channel column of the rundown opened in the Queue panel.
  - b. Type the channel name in the Channel field of story's Story Form panel.
  - c. Type Shift-Alt-C and enter the channel in the Assign Channel dialog box (shown), then click OK.

## 5 iNEWS Integration

## Chapter 6

# Working with Stories

In Avid iNEWS Command, when a newsroom playlist is loaded, it presents the machine control events grouped by story according to the order of the rundown from which it was loaded.

During the final preparations and as a show goes to air, that order might change as producers add, remove, or rearrange stories in the rundown to reflect the changing demands of late-breaking news and production developments.

While a newsroom playlist is locked to the rundown in iNEWS, updates will appear in both the rundown and the playlist whenever a change is made at an iNEWS Workstation. While the newsroom computer system retains the playlist lock, changes cannot be made to the newsroom playlist from a Command Workstation.

However, if a standalone playlist is created at a Command Workstation or if a newsroom playlist is disconnected from the rundown and the lock obtained from a Command Workstation, then changes to the stories in those playlists can be done from the Command Workstation.

This chapter contains the following main sections:

- [Inserting New Stories](#)
- [Deleting Stories](#)
- [Updating Stories](#)
- [Rearranging Stories](#)
- [Floating & Unfloating Stories](#)

## Inserting New Stories

New stories can be inserted in a standalone or disconnected newsroom playlist at a Command Workstation.

### To insert a new story in a playlist in Command:

1. Position the cursor in the playlist on a story, not an item.

*If a user attempts to insert a new story before an item, the system will display a warning instructing the user to insert the story before another pre-existing story.*

2. Do one of the following:
  - ▶ Press Ctrl+N.
  - ▶ Select Playlist > Insert > New Story.

The Create New Story dialog box opens.

3. Enter the name for the new story.
4. Click OK or press Enter.

## Deleting Stories

Stories can be deleted from a standalone or disconnected newsroom playlist at a Command Workstation.

### To delete a story from a standalone or disconnected newsroom playlist:

1. At a Command Workstation, select the story you want to remove.
2. Do one of the following:
  - ▶ Select Playlist > Edit > Delete.
  - ▶ Press Delete.

**Deleting a story in a standalone playlist will remove all events in that story from the playlist.**

Deleting a story from a rundown at an iNEWS Workstation can be accomplished even after the show's newsroom playlist has been loaded to Command.

**To delete a story from a rundown:**

1. At an iNEWS Workstation, select the story you want to remove by clicking on the selector button to the left of the story.
2. Do one of the following:
  - ▶ Select Edit > Kill.
  - ▶ Press Delete.
3. When the confirmation dialog box opens. Click OK.

*Deleting a story from a rundown (and therefore from its newsroom playlist) does not delete the story and its machine controls events from the newsroom computer system's database. It only removes the story from appearing in the show's rundown and newsroom playlist.*

## Updating Stories

Although a show's newsroom playlist is loaded to Command, updates to a story in the rundown can still occur, such as the need to add or alter a machine control event. For newsroom playlists in which the playlist lock is retained by the iNEWS newsroom computer system, updating can be accomplished only from an iNEWS Workstation, unless the newsroom playlist is disconnected from the newsroom and therefore becomes a standalone playlist locked by the Command Workstation.

For more information, see [“Inserting Machine Control Events into Stories” on page 69](#).

*Updating the text in the body of a story must be done from the newsroom computer system and not Command.*

For more information about editing iNEWS stories, see the *Introduction to the iNEWS Workstation Training Manual* available on the Avid Knowledge Base.

## Rearranging Stories

Changing and updating the order in which stories appear in the course of a show is a frequent task for a show's producer. As new stories develop and urgent bulletins come in, a producer must decide the sequence in which stories should appear in the course of a news program and update the show's rundown accordingly.

## 6 Working with Stories

The integration between Command and the Avid iNEWS newsroom computer system provides for seamless communication regarding the changes that occur in the iNEWS rundown and the order of events in the newsroom playlist in Command. When the order of stories in a show is altered after the monitor server has loaded its playlist to Command, the order of events associated with each story is also rearranged accordingly.

**This updating occurs in newsroom rundowns for which the playlist lock is retained by the newsroom system. If the playlist is disconnected from the newsroom rundown, then updates will no longer be communicated between Command and iNEWS, or vice versa.**

### **To rearrange stories in a standalone or disconnected newsroom playlist:**

- ▶ At a Command Workstation, select the story and drag it from its current location to its new location within the playlist.

*For standalone playlists, Avid iNEWS Command provides the standard copy and paste functionality as options in the Playlist > Edit menu.*

### **To rearrange stories in an iNEWS rundown:**

1. From an iNEWS Workstation, select the story in the rundown by clicking the selector button to the left of the story. (To select multiple stories, hold the Ctrl key down first.)
2. Drag and drop the story's button to its new location within the rundown.

## Floating & Unfloating Stories

The Avid iNEWS system provides producers with a way to “float” stories when they are unsure where they should go in the rundown, if at all.

Floating stories can only be accomplished from the iNEWS Workstation, not a Command Workstation. However, if the rundown's playlist is already loaded to Command, then floating an iNEWS story removes it, including any associated machine control events, from the newsroom playlist in Command.

*Floated stories appear in the iNEWS rundown in a different color (usually blue text) than other stories, and their times are removed from the rundown's show timing.*

### **To float an iNEWS story:**

1. From an iNEWS Workstation, select the story in the rundown by clicking the selector button to the left of the story.
2. Select Story > Float.

To unfloat a story, repeat the above procedure.

# Chapter 7

## Playout Control

Playout control through Avid iNEWS Command varies from site to site depending on workflow. Some television stations might want to control playout through the software's graphical user interface, while others choose to use USB or GPI keypads.

This chapter contains the following main sections:

- [UI Controlled](#)
- [USB Keypad Controlled](#)
- [GPI Controlled](#)

# UI Controlled

Playout control from a Command Workstation is accomplished through the use of the tabbed workspace known as the Playlist Viewer. While some functionality is described in this section, for additional information such as customization options, see [“Playlist Viewer” on page 41](#).

Command uses various icons, as well as color, to indicate the status of machine control events (items) in the playlist. Some of which are shown in the following closeup graphic:

## Playout Media from Command Workstation

Users can cue, play, pause or stop the playout of media from a Command Workstation, using the control buttons on the Playlist toolbar or keys on the numeric keypad. For information on the buttons, see “[Toolbars](#)” on page 44.

### To control playout, using the numeric keypad on a keyboard:

1. Select the event in the playlist.
2. Do one of the following:
  - ▶ Press the Decimal key (.) to cue the media.
  - ▶ Press Enter to play the media.
  - ▶ Press the Plus key (+) to pause the media.
  - ▶ Press zero (0) to stop playing the media.

*Playout options are also available by right-clicking on the event and selecting the options from the Playout submenu.*

Users can set playout of an item in a playlist to automatically occur immediately following the completion of the previous item. This functionality is called follow-on playout and is indicated by an icon in the playlist that looks like a bent blue arrow.

### To set follow-on playout for an item(event):

1. At a Command Workstation, in the Playlist Viewer, click the field in the Trigger column corresponding with the item that you want set for follow-on playout. (The Trigger column is narrow and usually has no label on its column header. Its location in the playlist might also vary.)

Page #	Trigger Column	Status Column	TITLE	CHANNEL	DURATION
		▶		A	00:01:00:02
05			T-TRIPLE-MURDER		
06		▶	LOCAL-CRIME	B	00:00:15:00
	Manual Play ▼			A	00:00:15:00
07	Manual Play		CRIME		
	▶ Follow... Play			B	00:00:15:00

2. When the menu appears, select Follow-On Playout. (The menu option might appear truncated.)

## 7 Playout Control

3. Do one of the following:

- ▶ Click elsewhere on the playlist.
- ▶ Press Enter on the main keyboard.
- ▶ Move the cursor with keyboard shortcuts.

It's only at this point that the playout method is saved.

### **To set an item to manual playout:**

1. At a Command Workstation, in the Playlist Viewer, click the field in the Trigger column corresponding with the item that you want set for manual playout.
2. When the menu appears, select Manual Playout.
3. Do one of the following:

- ▶ Click elsewhere on the playlist.
- ▶ Press Enter on the main keyboard.
- ▶ Move the cursor with keyboard shortcuts.

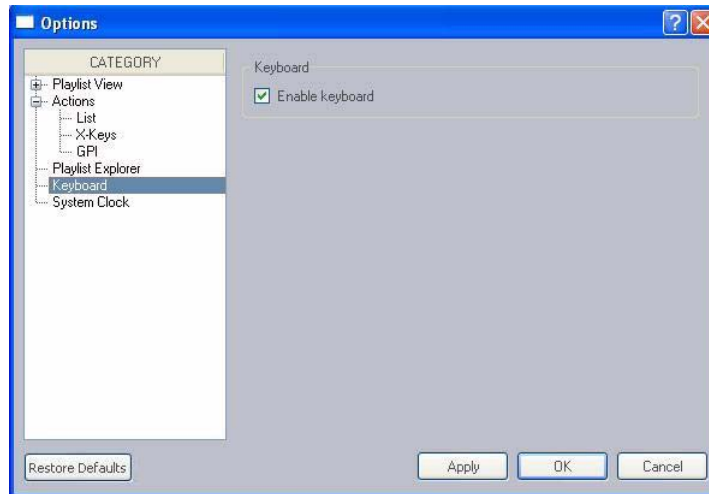

It's only at this point that the playout method is saved.

## **Disabling the Keyboard at the Command Workstation**

Some sites use alternative devices to control playout from Command, such as a GPI device or an X-keys USB keypad, and therefore do not want the computer keyboard at the workstation enabled.

**To enable or disable the keyboard:**

1. Select Tools > Options.

2. In Category, select Keyboard.
3. Do one of the following:
  - ▶ Select Enable keyboard.
  - ▶ Deselect Enable keyboard.
4. Click Apply.
5. Click OK.

*If the keyboard is disabled, the numeric keypad cannot be used to control playout from the Command Workstation. Disabling the keyboard does not affect the use of the keyboard for software on the workstation PC unrelated to the Command client software.*

## USB Keypad Controlled

Avid iNEWS Command interfaces with the X-keys<sup>®</sup> USB keypad for playout control. An X-keys USB keypad connects to the USB port the Command Workstation and offers up to twenty user-reprogrammable keys for one-button access to playout functionality.

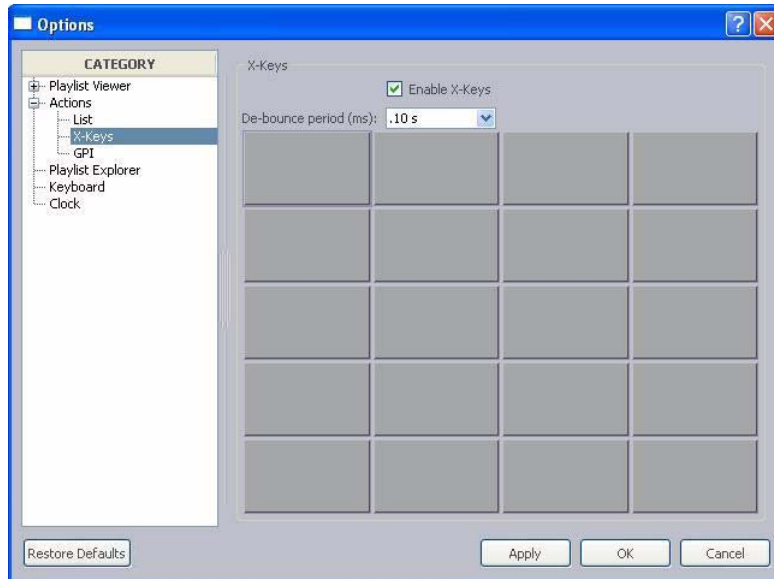

## 7 Playlist Control

*X-keys is a third-party hardware solution, so for more information on the X-keys USB keypad, see that manufacturer's documentation on [www.xkeys.com](http://www.xkeys.com).*

### To program the X-keys from the Command Workstation:

1. Select Tools > Options.
2. In Category, expand Actions and select X-keys.

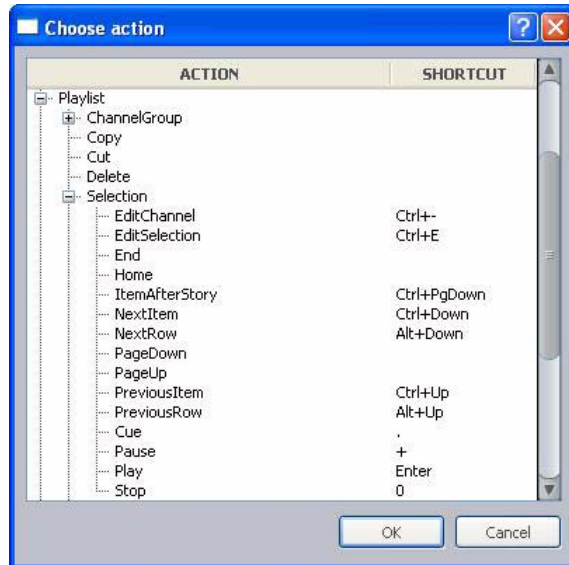

3. Select Enable X-keys.
4. Set the de-bounce period. Designed to avoid inadvertent repetition, this is the span of time (in milliseconds) during which the system should ignore duplicated signals.
5. Click on a gray box that represents (or corresponds to) the key on the keypad.

*Some sites might use key caps that cover 2 or 4 buttons on the keypad, turning a set of buttons into a single key. If that is the case, select the left box to set the “2-button” key. For 4-button keys, select the upper left box.*

- Assign an action to the key by selecting it from the list of those available in the Choose Action dialog box.

- Click OK.
- Repeat steps 5-7 as needed.
- Click Apply.
- Click OK.

The following graphic shows a closeup of the first row of keys after they were assigned to the four playlist control options of play, cue, pause, and stop.

### Channel-Specific Actions

Keys can also be assigned to an action associated with a specific channel on a device. An example of this would be for a key to initiate a play command on a single channel.

#### To assign channel specific actions to a key:

1. Complete steps 1 - 5 of the procedure to program X-keys on [page 100](#).
2. In Category, expand Actions and select Playlist, then Channel.
3. Select the action, such as Play.
4. Select the indice, such as 01, that corresponds to the device channel.
5. Click Apply.
6. Click OK.

*Indices for channel specific actions in the list are pre-configured through system settings at the Command Workstation, which requires an administrative password. For more information, see the Avid iNEWS Command Installation and Administration Guide.*

### GPI Controlled

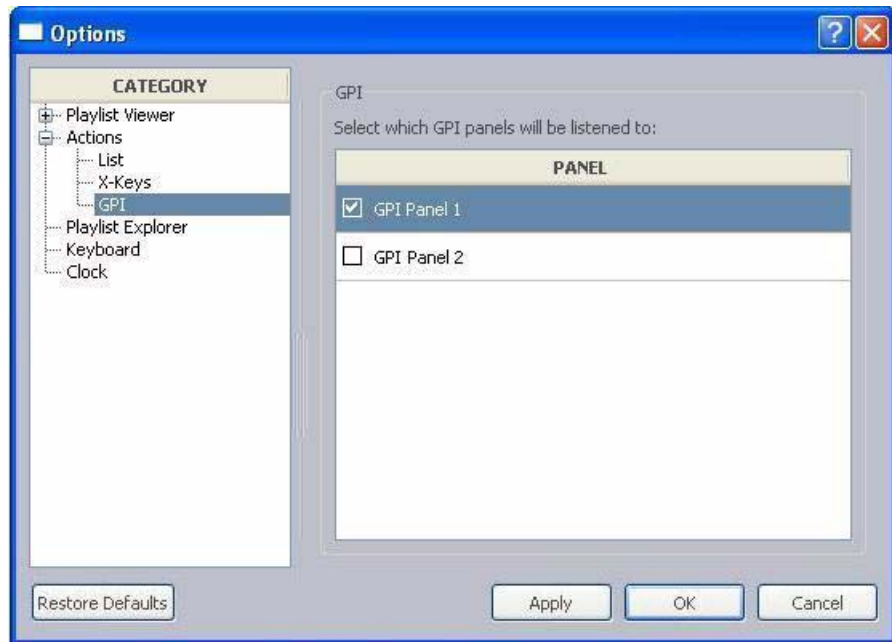

A GPI panel is another alternative keypad device that can be used to control playout through Command. The GPI panel, such as a Maney panel (shown below), connects to a GPI card installed in the Command Server.

The GPI panel allows a user to select up to four channels, with each channel having its own set of Control buttons for play, cue, pause, and stop functionality.

**To enable a GPI panel to control a playlist:**

1. At the Command Workstation, select Tools > Options.
2. In Category, expand Actions and select GPI.

3. Select a GPI panel from the list.
4. Click Apply.
5. Click OK.

*System administrators must configure system settings to provide a list of GPI panels in the Options dialog box. For more information see the Avid iNEWS Command Installation and Configuration Guide.*

## 7 **Playout Control**

## Appendix A

# Icon and Button Quick Reference

iNEWS Command has many different tools, icons, and buttons, which are used to alert you to information and status as well as making your actions quick and precise. This appendix is intended to serve as a quick reference to some of the icons and buttons used throughout your Command system. It is not all inclusive.

### Playlist Viewer Buttons

This section describes buttons in the user interface, some of which have icons on them that will change depending on a certain status, such as whether a channel group is locked.

Playout	Channel Groups	Playlist
 Cue	 Add/Lock Channel Groups	 Playlist Locked by Newsroom
 Play	 Locked Channel Group by Command Workstation	 Playlist Locked by Command Workstation
 Pause	 Channel Group Locked by Other Workstation	 Playlist Locked by Other Command Workstation
 Stop	 Unlocked Channel Group	 Unlocked Playlist
	 Unknown	 Time of Day Playlist
		 Unusual Lock Condition

## A Icon and Button Quick Reference

## Appendix B

# Action Quick Reference

iNEWS Command enables users to assign actions to X-keys, which can speed up frequently performed tasks. This appendix is intended to serve as a quick reference to those actions available in the Options dialog box—accessible through the Tools > Options menu of your Command system—and the Choose Action dialog box (shown below), which opens when you select an X-key to assign an action to in the Options dialog box. The reference list here is not all inclusive.

# Actions

This list of actions available are shown in a tree-style format that contain categories, subcategories, and actions.

Category/Subcategory	Subcategory/Action	Description
Alerts	ShowDiagnostics	Open the Alert Diagnostics dialog box.
	Clear	Clear alerts.
MediaViewer	BackwardOneFrame	Navigate back one frame of video.
	BackwardOneSecond	Navigate back one second.
	BackwardTenSeconds	Navigate back ten seconds.
	ForwardOneFrame	Navigate forward one frame of video.
	ForwardOneSecond	Navigate forward one second.
	ForwardTenSeconds	Navigate forward ten seconds.
	GoToMarkIn	Navigate to the marked In point.
	GoToMarkOut	Navigate to the marked Out point.
	Play	Play media (in the Media Viewer)
	Restart	Restart media.
Edit	SetMarkIn	Set In point at current timecode location.
	SetMarkOut	Set Out point at current timecode location.
	Copy	Copy selection.
	Cut	Cut selection.
Edit	Delete	Delete selection.
	Paste	Paste cut or copied data to current cursor location.
	 <i>The Edit actions apply to current focus within the user interface and whether editing functionality is supported.</i>	
MainWindow	Exit	Exit the application.
View	Help	Open the Help system.
	About	Display information about the application.

Category/Subcategory (Continued)	Subcategory/Action (Continued)	Description (Continued)
	Support	Open the Support dialog box.
	Versions	Display software version.
	Alerts	Show the Alerts panel.
	Clock	Show the Clock panel.
	Inventory	Show the Inventory panel.
	PlaylistExplorer	Show the Playlist Explorer.
	MediaViewer	Show the Media Viewer.
	SystemSettings	Opens the System Settings dialog box.
	UIOptions	Opens the Options dialog box.
Playlist/ChannelGroup	AddExisting	Open the Add Channel Group Playlist dialog box.
	AddNew	Open the Add New Channel Group Playlist dialog box.
	AutoAssign	Initiate auto-assignment of channels in the playlist.
Playlist/ChannelGroup	Lock/1-9	Lock the specified channel group.
	LockAll	Lock all channel groups.
	Remove/1-9	Remove the specified channel group.
	Replace/1-9	Replace the specified channel group.
	SetChannel/Index/01-16	Changes the channel of all the items to the channel specified for the index as configured in the System Settings dialog box.
	SetChannel/Name/A-Z	Changes the channel of all the items to the specified channel, whose name is a single character of the English alphabet. Won't work if channel isn't in group.
	SetGroup/1-9	Switches all selected playlist items to the specified channel group.
	Unlock/1-9	Unlock the specified channel group.
	UnlockAll	Unlock all channel groups.

*The numeric values correspond to the Channel buttons as they appear from left to right on the Playlist toolbar (or from right-to-left depending on your locale). For more information, see “Channel Group Buttons” on page 46.*

## B Action Quick Reference

<b>Category/Subcategory (Continued)</b>	<b>Subcategory/Action (Continued)</b>	<b>Description (Continued)</b>
Playlist	Copy	Copy the selected item(s) in the active playlist.
	Cut	Cut the selected item(s) in the active playlist.
	Delete	Delete the selected item(s) in the active playlist.
Playlist/Selection	EditChannel	Opens the channel list for the topmost selected item. This is the same as clicking in the Channel column of a playlist.
	EditSelection	Edit the selected row. (For video items with a browse channel, the In and Out points can be set using the Media Viewer.)
	End	Move cursor to end of playlist.
	Home	Move cursor to top of playlist.
	ItemAfterStory	Move cursor to the next item after the current story.
	NextItem	Move cursor to the next item.
	NextRow	Move cursor to the next row.
	PageDown	Move down one page in the playlist.
	PageUp	Move up one page in the playlist.
	PreviousItem	Move to previous item.
	PreviousRow	Move to previous row.
	Cue	Cue selected item.
	Pause	Pause selected item.
	Play	Play selected item.
	Stop	Stop selected item.
Playlist	EditProperties	Open the Playlist Properties dialog box.
	InsertBreak	Insert a break before the selected row in the playlist.
	InsertStory	Create a new story in the playlist.
	Lock	Obtain the playlist's lock.
	Paste	Paste cut or copied rows in the playlist above the cursor location.

<b>Category/Subcategory (Continued)</b>	<b>Subcategory/Action (Continued)</b>	<b>Description (Continued)</b>
	Unlock	Release the playlist's lock.
	Export	Export the playlist.
	Import	Import a playlist.
Playlist/View	CloseAll	Close all playlist views (tabs) in the Playlist Viewer.
	Close	Close the active playlist (topmost tab) in the Playlist Viewer.
	Next	Switch to the next playlist view—the next tab in the Playlist Viewer.
	Previous	Switch to the previous playlist view—the next tab in the Playlist Viewer.
	Refresh View	Refreshes the view in the Playlist Viewer. This does <i>not</i> reload newsroom or system data to the Command Workstation from iNEWS or the Command Server.
	SetFocus	Sets the keyboard focus to the active view.
PlaylistExplorer	DeleteSelectedPlaylists	Delete the selected playlist(s) in the Playlist Explorer. The system will ask for confirmation.
	NewPlaylist	Create a new standalone playlist.
PlaylistExplorer/View	Refresh	Refreshes the view in the Playlist Explorer. This does <i>not</i> reload newsroom or system data to the Command Workstation from iNEWS or the Command Server.
