

## Phone Specifications

Dimensions (WxDxH): 46.5\*\*110\*15.4MM

Lithium battery

Rated capacity: 3.7V 800mAh

Continuous standby duration: (Relates to network status) 250-300 hours

Continuous conversation duration: (Relates to network status) 4-5 hours

Please refer to their labels for other data related to the battery and the charger

### 1 Phone overview

### 2 Getting started

#### 2.1 Installing the SIM Cards

An SIM card carries useful information, including your mobile phone number, PIN (Personal Identification Number), PUK (PIN Unlocking Key), IMSI (International Mobile Subscriber Identity), network information, contacts data, and short messages data.

- 1) Hold the End key for a while to power off the mobile phone.
- 2) Pull the middle-bottom breach of the back cover outward and then lift the back cover away.
- 3) Lift the battery away.

- 4) Insert the SIM card into the SIM card slot lightly with the corner cutting of the card aligning to the notch of the slot and the gold plate of the card facing down, till the SIM card cannot be further pushed in.

- 5) With the metallic contacts of the battery facing the metallic contacts in the battery slot, press the battery down until it locks into place, then fix its back cover.

## 2.2 Linking to the Network

After the SIM card and the mobile phone are successfully unlocked, the mobile phone automatically searches for an available network.

### 3 Input method

This mobile phone provides English input mode in both upper and lower case.

#### 3.1 To Shift Entry Methods

Press # key to switch between input methods.

#### 3.2 English Input

Each key is used to represent multiple characters. Quickly and continuously press a key till the character you want appears. Input the next character after

the cursor moves.

### **3.3 Inserting a Symbol**

Press the \* key to enter the **Symbol** interface and select a symbol you want.

## **4 Using the Menus**

### **4.1 Call logs**

Through this function, you can view a list of missed calls, dialed calls and received calls etc.

### **4.2 STK**

STK service is the tool kit of SIM card. This phone supports the service function .The specific items are depended by SIM card and network. Service menu will be auto added to the phone menu when supported by network and SIM card.

### **4.3 Fun & Games**

One game named F1 Race is embedded in the phone. For specific operation, please refer to 'help' option of the game.

### **4.4 Multimedia**

#### **File manager**

The phone supports the memory card. You can use the file manager to manage various directories and files on the memory card.

#### **Audio player**

Use this function to play audio files. In music player interface, you can press up or down direction key to tune volume.

#### **Video player**

Use this function to play video files. In video player interface, you can press up or down direction key to tune volume.

#### **Sound recorder**

You can record AMR & WAV format audio files through this function.

#### **FM radio**

Before using this function, please insert earphone into its corresponding slot. In FM radio screen, you can press up or down direction key to tune volume, left or right direction key to tune channels manually.

### **4.5 Phonebook**

The mobile phone can store up to 100 telephone numbers.

### **4.6 Messages**

You are able to create, read, send and delete messages through this function.

**Note:** If the short message memory is full, a blinking message icon appears

on the top of the screen. To normally receive short messages, you need to delete some of the existing short messages

#### 4.7 Organizer

- ◆ **Stopwatch:** Stopwatch is simple application for measuring time with possibility to register several results and suspend/resume measurement.
- ◆ **Torch:** You can use this function to turn on/off the torch which situates at the top of the phone.  
**Note:** In idle screen, you can long press OK key to turn on/off the torch.
- ◆ **Calendar:** Once you enter this menu, there is a monthly-view calendar for you to keep track of important appointments, etc.
- ◆ **To do list:** This function enables you to create new memos.
- ◆ **Alarm:** Through this function you can set Alarm status, time, alarm tone, etc.
- ◆ **World clock:** Access this menu to view time of main cities in various time zones.
- ◆ **Calculator:** The calculator can add, subtract, multiply and divide.

#### 4.8 Profiles

The mobile phone provides multiple user profiles, including General, Meeting, Outdoor, Indoor and Headset.

#### 4.9 Settings

##### Date and time

You can set date and time, the format or turn on/off the time zone update through this function.

##### Display

Through this function, you can set wallpaper, LCD backlight, brightness, etc..

##### Phone settings

- ◆ **Language:** Select the display language for the mobile phone.
- ◆ **Shortcuts:** Dedicated key: Customize the shortcut functions of the Up, Down, Left, and Right direction keys. In the standby interface, you can press a direction key to directly enter the function menu corresponding to that direction key. My shortcuts: You can set some most used menus as shortcut functions through this item.
- ◆ **Greeting text:** This feature enables you to set greeting text status and content.
- ◆ **Set home city:** Select a city as home city.
- ◆ **Auto keypad lock:** Once turned on, your mobile will be locked automatically if you performed no operations during a long period.

◆ **Input method settings:** Set input method through this function.

### Call settings

◆ **Caller ID:** You can select the ID set by the network, hide the ID, or send the ID. By default, the ID set by the network is chosen.

◆ **Call waiting:** Network dependent

◆ **Call divert:** This network function enables you to forward incoming calls to another number you have previously specified.

◆ **Call barring:** The call barring function enables you to bar calls as needed. When setting this function, you need to use a network barring code, which can be obtained from the network operator.

◆ **Line switching:** Switch to Line 1 or Line 2. By default, Line 1 is used.

**Note:** If you choose Line 2, dialing may fail. This depends on the implementation of the network operator.

◆ **Call time reminder:** To set single or periodic tone in a call to make you know the time.

◆ **Auto redial:** Set it to **On** or **Off** to enable or disable auto redial. To end the auto redial process, press the **End** key.

◆ **Closed user group:** This function requires network support. For details, consult the local network operator.

◆ **Answer mode:** Once select Any key, you can press any key except the end key to answer an incoming call.

### Network settings

Through this function, you can check network status.

### Network status

Through this function, you can check network status.

### Security settings

This function provides you with related settings about safety use.

### Restore factory settings

Use this function to restore factory settings. Note: The initial phone lock code is 0000.

## 5 FCC

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

(1) This device may not cause harmful interference.

(2) This device must accept any interference received, including interference that may cause undesired operation.

**NOTE:** Changes or modifications not expressly approved by the party

responsible for compliance could void the user's authority to operate the equipment.

**NOTE:** This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation.

If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

---Reorient or relocate the receiving antenna.

---Increase the separation between the equipment and receiver.

---Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.

---Consult the dealer or an experienced radio/TV technician for help.

### **Body-worn Operation**

This device was tested for typical body-worn operations. To comply With RF exposure requirements, a minimum separation distance of 1.5cm must be maintained between the user's body and the handset, including the antenna. Third-party belt-clips, holsters, and similar including the antenna. Third-party belt-clips, holsters, and similar accessories used by this device should not contain any metallic components. Body-worn accessories that do not meet these requirements may not comply with RF exposure requirements and should be avoided.

### **Specific Absorption Rate (SAR)**

This Model wireless phone meets the government's requirements for exposure to radio waves.

Your mobile device is a radio transmitter and receiver. It is designed and manufactured to not exceed limits for exposure to radio frequency (RF) energy set by the Federal Communications Commission (FCC) of the U.S. government and by the Canadian regulatory authorities. These limits are part of comprehensive guidelines and establish permitted levels of RF energy for the general population. The guidelines are based on standards that were

developed by independent scientific organizations through periodic and thorough evaluation of scientific studies. The standards include a substantial safety margin designed for the safety of all persons, regardless of age or health.

The exposure standard for wireless mobile phones employs a unit of measurement known as the Specific Absorption Rate, or SAR. The SAR limit set by the FCC is 1.6 W/Kg. Tests for SAR are conducted using standard operating positions accepted by the FCC with the phone transmitting at its highest certified power level in all tested frequency bands. Although the SAR is determined at the highest certified power level, the actual SAR level of the phone while operating can be well below the maximum value. This is because the phone is designed to operate at multiple power levels so as to use only the power required to reach the network. In general, the closer you are to a wireless base station, the lower the power output. Before a phone model is available for sale to the public in the U.S, it must be tested and certified to the FCC that it does not exceed the limit establish for safe exposure. The tests are performed in positions and locations (e.g. at the ear and worn on the body) reported to the FCC.

Before a phone model is available for sale to the public in the U.S, it must be tested and certified to the FCC that it does not exceed the limit establish for safe exposure. The tests are performed in positions and locations (e.g. at the ear and worn on the body) reported to the FCC. While there may be differences between the SAR levels of various phones and at various positions, they all meet the governmental requirements for safe exposure. Please note that improvements to this product model could cause differences in the SAR value for later products, in all cases, products are designed to be within the guidelines.

Additional information on Specific Absorption Rates (SAR) can be found on the Cellular Telecommunications & Internet Association (CTIA) Web site: <http://www.phonefacts.net>
