EVAL BOARD USER'S MANUAL

Evaluation Board Description

The TMPIM evaluation board supports the evaluation of transfer molded power modules NXH35C120L2C2SG and NXH50C120L2C2ESG working together with NCD57000 gate drivers when designing a motor control application. This manual describes the board function, schematics, bill of material, board layout and operation.

The evaluation board contains a transfer-molded power integrated module in CIB (converter – inverter – brake) topology. This module contains a B6 diode rectifier, six IGBTs for inverter and a brake chopper. The gate driver stage consists of seven NCD57000 high current galvanically isolated gate drivers. The driver provides 5 kV insulation between primary and secondary side.

The evaluation board can be connected to an external controller providing PWM inputs and handling fault signals. Use of an external sensor for over current and over voltage protection is recommended.

Evaluation Board Operation

The board is designed as ROHS compliant. Design of the board was not qualified for manufacturing. No tests were made on whole operating temperature range. No lifetime tests were performed. The board must be used in lab environment only and must be operated by skilled personal familiar with all safety standards. Further details of used components are located in respective datasheets.

Features

- Transfer Molded Power Module in CIB Configuration
- 7 Isolated Gate Drivers with 5 kV Insulation
- Short Circuit Protection
- On Board NTC for Rectifier Protection
- Selectable PWM Polarity
- Fault Output with Automatic Reset Function
- Low Inductance PCB Layout

APPLICATION INFORMATION

Mechanical Dimensions

Board outline dimensions are 185 mm x 127.25 mm. The board outline is shown in Figure 3.

Figure 3. Board Mechanical Dimensions

Electrical Rating

The board is rated to AC voltage input 3 x 400 V/231 V AC 50 Hz. Nominal voltage in the DC link is 600 V. Maximum voltage in the DC link is 800 V. There is no protection for exceeding maximum DC link voltage. While using external NTC for inrush current limit, current has to be limited to 10 A rms. For higher current, the user of the evaluation board must replace the inrush current limit NTC by higher current version; or must use an AC power source having a current limit circuit.

WARNING: Inrush current NTC will get very hot during operation, special caution has to be made to avoid injuries. When inrush current NTC is hot its resistance drops to very low values, turning on the board with heated inrush current NTC can cause rectifier diode damage!

Power Supply Connection

For the primary side of the gate drivers, the user must connect an external regulated voltage of 5 V/1 A to connector P1.

For the secondary side voltage of the gate driver, there are three options. The first option is that the user connects external voltage to the connector P7. This connector supplies the low side gate drivers, high side gate drivers are supplied through bootstrap diodes. The second option is that the user connects an external regulated voltage on 34 pin flat cable P2. In order to use external supply voltage solder

jumpers SJ2 – SJ6 has to be open (not connected). The solder jumpers SJ2, SJ3 and SJ4 are located on the bottom side of the pcb.

The third option is to use the DC–DC board. The DCDC board is not provided with the application board. But the schematics and gerber files are located on the ON Semiconductor webpage. On the DC/DC board the user must connect an external regulated voltage of 5 V/1 A to connector P1DCDC.

The DC–DC board consists of four isolated Murata voltage sources and output capacitors. The board provides isolated voltage for all gate drivers. DC–DC source insulation voltage is 5 kV.

Figure 4. DC–DC Voltage Source

Table 1. CONNECTOR P1DCDC – DC–DC SOURCE POWER CONNECTOR

Pin Name	Pin Function	Comment
1	GND	DC–DC primary ground
2	N.C.	Not connected
3	+5 V	Input voltage for DC–DC sources

Output connector of the DC–DC source P2DCDC follows the pinout of the connector P2 on the main board, not connected pins are removed.

Figure 5. Board with Connected DC–DC Source

PWM Active High/Low Setting and Enable

The board can accommodate PWM with active H or active L, TTL logic levels. Enable pin is needed to run PWM through the driver, enable pin can also work as active low or active high. The selection of logic is realized with two XOR ICs and user selected jumper on connector P4. Table 2 shows the jumper position and PWM input polarity respectively.

Short Circuit Behavior

The power integrated module is capable of surviving short circuit of duration 10 μs. Repeated short circuit conditions could result in thermal overload and destruction of the module. The on-board desat system can detect and turn off the short in 4 μs. Testing was performed during phase – ground short circuit at phase U at output connector. DC link voltage 600 V, 125°C module case temperature. Waveform is captured in Figure 8.

Figure 7. Behavior during Short Circuit Event

Auto Fault Resetting Circuit

When there is a fault condition detected by the gate driver IC, the fault pin is switched to logic 0. Gate driver stays in the fault condition until there is a falling edge on the reset pin. To automatically reset the fault pin the board is equipped with 74VHC123 – Dual Retriggerable Monostable Multivibrator. 74VHC123 monitors the voltage on the Fault pin. When there is a logic 0 condition, 74VHC123 generates a delayed reset pulse. The delay between the fault and the reset pulse is set by the capacitors C1 and C2. By default the time is set to 10 ms. Automatic fault reset can be disabled by disconnecting jumper from terminal P3, but it is recommended to solder out the 74VHC123 IC. Reset pulse then must be generated from micro controller.

Brake Chopper

Board is equipped with gate driver controlling module brake chopper. Braking resistor can be connected to power terminals MP6 and MP7.

NTC Module Temperature Sensing

Module built-in NTC is monitoring the case temperature of the module. NTC is connected to terminal P6. When

applying 5 V to PIN1–P6 and GND to PIN2–P6, PIN3–P6 will be triggered active H (3.3 V) when the NTC inside the module reaches 100°C. The voltage divider circuit can be bypassed by solder jumper SJ1 for direct NTC sensing

Switching Losses

The switching was tested on the board with double pulse test. Tested was U phase leg, bottom igt commuting with high side diode. The waveform shows no oscillation during switching and the measured values align with datasheet.

Figure 8. a) Turn-on Losses, b) Turn-off Losses, c) Reverse Recovery Losses, d) Switching Waveform for XH35C120L2C2SG

Board Usage

For using the board needed equipment is 5 V/1 A laboratory source, 15 V/1 A laboratory voltage source, 3phase mains power supply, PWM generator, DC link, heatsink and load motor. Connect 5 V to terminal P1 and connect 15 V to terminal P7. Connect 3 phase mains supply to terminals MP1, MP2, MP3 (R, S, T), connect the load motor to terminals MP8, MP9, MP10 (U, V, W). Connect DC link to terminals MP6 and MP7. Connect PWM generator to the terminal P5. Select PWM polarity on terminal P4. Turn on the 5 V power source. Turn on the 15 V power source. Turn on the mains power source. Start PWM operation.

The evaluation board/kit (research and development board/kit) (hereinafter the "board") is not a finished product and is not available for sale to consumers. The board is only intended for research, development, demonstration and evaluation purposes and will only be used in laboratory/development areas by persons with an engineering/technical training and familiar with the risks associated with handling electrical/mechanical components, systems and subsystems. This person assumes full responsibility/liability for proper and safe handling. Any other use, resale or redistribution for any other purpose is strictly prohibited.

THE BOARD IS PROVIDED BY ONSEMI TO YOU "AS IS" AND WITHOUT ANY REPRESENTATIONS OR WARRANTIES WHATSOEVER. WITHOUT LIMITING THE FOREGOING, ONSEMI (AND ITS LICENSORS/SUPPLIERS) HEREBY DISCLAIMS ANY AND ALL REPRESENTATIONS AND WARRANTIES IN RELATION TO THE BOARD, ANY MODIFICATIONS, OR THIS AGREEMENT, WHETHER EXPRESS, IMPLIED, STATUTORY OR OTHERWISE, INCLUDING WITHOUT LIMITATION ANY AND ALL REPRESENTATIONS AND WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, TITLE, NON-INFRINGEMENT, AND THOSE ARISING FROM A COURSE OF DEALING, TRADE USAGE, TRADE CUSTOM OR TRADE PRACTICE.

onsemi reserves the right to make changes without further notice to any board.

You are responsible for determining whether the board will be suitable for your intended use or application or will achieve your intended results. Prior to using or distributing any systems that have been evaluated, designed or tested using the board, you agree to test and validate your design to confirm the functionality for your application. Any technical, applications or design information or advice, quality characterization, reliability data or other services provided by **onsemi** shall not constitute any representation or warranty by **onsemi**, and no additional obligations or liabilities shall arise from **onsemi** having provided such information or services.

onsemi products including the boards are not designed, intended, or authorized for use in life support systems, or any FDA Class 3 medical devices or medical devices with a similar or equivalent classification in a foreign jurisdiction, or any devices intended for implantation in the human body. You agree to indemnify, defend and hold harmless **onsemi**, its directors, officers, employees, representatives, agents, subsidiaries, affiliates, distributors, and assigns, against any and all liabilities, losses, costs, damages, judgments, and expenses, arising out of any claim, demand, investigation, lawsuit, regulatory action or cause of action arising out of or associated with any unauthorized use, even if such claim alleges that **onsemi** was negligent regarding the design or manufacture of any products and/or the board.

This evaluation board/kit does not fall within the scope of the European Union directives regarding electromagnetic compatibility, restricted substances (RoHS), recycling (WEEE), FCC, CE or UL, and may not meet the technical requirements of these or other related directives.

FCC WARNING – This evaluation board/kit is intended for use for engineering development, demonstration, or evaluation purposes only and is not considered by **onsemi** to be a finished end product fit for general consumer use. It may generate, use, or radiate radio frequency energy and has not been tested for compliance with the limits of computing devices pursuant to part 15 of FCC rules, which are designed to provide reasonable protection against radio frequency interference. Operation of this equipment may cause interference with radio communications, in which case the user shall be responsible, at its expense, to take whatever measures may be required to correct this interference.

onsemi does not convey any license under its patent rights nor the rights of others.

LIMITATIONS OF LIABILITY: **onsemi** shall not be liable for any special, consequential, incidental, indirect or punitive damages, including, but not limited to the costs of requalification, delay, loss of profits or goodwill, arising out of or in connection with the board, even if **onsemi** is advised of the possibility of such damages. In no event shall **onsemi's** aggregate liability from any obligation arising out of or in connection with the board, under any theory of liability, exceed the purchase price paid for the board, if any.

The board is provided to you subject to the license and other terms per **onsemi's** standard terms and conditions of sale. For more information and documentation, please visit www.onsemi.com.
