

Secure File Upload & Transfer Tool for SharePoint

Brimit's upload tool helps to collect files from your customers and partners to SharePoint via an intuitive and branded User Interface

1 Create an upload link for any folder without sharing content of the folder

2 Send the link to anyone

3 Upload files without authentication hassle

4 Have the same high level of security

SharePoint has best-in-class document storage and sharing capabilities.

But if you want to collect files and documents without logins but still securely, there's space for improvement.

1 SharePoint's out-of-the box upload functionality may confuse newbies

There are redundant interface elements that may distract users. It is not possible to brand the user interface where files are uploaded, it will have a standard SharePoint look.

2 The portal requires extra configuration in order to share a folder with a person and send a link to him/her

By default, employees can't provide unauthenticated users with a link to upload files to SharePoint. In order to enable this option, portal administrators need to make extra efforts. Enabling this option will reduce security of the whole site.

3 Users need to have a Microsoft account, verify it, and sign in every time in order to upload files

By default, in order to upload files to a shared folder, users need to join the company's Active Directory as an external user and sign in every time they want to use a shared folder.

4 Everyone who has a link to a shared folder can see its contents

If someone occasionally or intentionally gets a link to a shared folder, he/she will also be able to see the contents of the folder. It's not possible to share a single link with multiple customers or partners without compromising the contents of the shared folder

How Brimit improves the upload functionality

Items to improve

SharePoint's out-of-the box upload functionality may confuse newbies

The portal requires extra configuration in order to share a folder with a person and send a link to him/her

Users need to have a Microsoft account, verify it, and sign in every time in order to upload files

Everyone who has a link to a shared folder can see its contents

Brimit's solution

An intuitive User Interface (UI) with drag-and-drop feature

The SharePoint UI is extended with menu items available to every site contributor

No sign in is required to upload files. Folder owners create a link and send it to anyone

A user with an upload link sees only the files which he or she has just uploaded. A single link can be shared with many users

Brimit's Essential Upload Tool for SharePoint

Step 1: Create an upload link

The image shows a screenshot of the SharePoint interface for a document library named "Accounting for Brimit". The library is in "Documents" view. A document titled "Customer's invoices" is selected, and its context menu is open. The "Upload Link" option is highlighted with a green box and a red circle containing the number "1". The interface includes a top navigation bar with "SharePoint" and a search bar, and a right-hand pane showing "Customer's invoices" details, including "Has access" and "Properties".

Step 2: Configure, Copy or Send link via email

The screenshot displays the SharePoint interface for the 'Accounting for Brimit' site. A dialog box titled 'Upload link for "Customer's invoices" folder' is open, allowing configuration of an upload link. The dialog includes the following fields and options:

- Set expiration date:** A date picker set to 'Thu Apr 01 2021'.
- Set password:** An empty text input field.
- Add emails to send the link to (optional):** A text input field containing 'romanv@brimit.com'.
- Add a message (optional):** A text area containing 'Roman, please upload Q1 invoices using the link'.
- Checkboxes:**
 - Get notified when files are uploaded
 - Request sender name upon upload
 - Create subfolder for files received from each person
- Buttons:** 'Copy' and 'Send' buttons at the bottom.

The background shows the 'Customer's invoices' folder in the 'Documents' library, with a 'Has access' panel on the right showing three users and a 'Properties' panel with 'Title: Customer's invoices' and 'Name: Customer's invoices'.
