DIRECTIONAL ATHERECTOMY SYSTEMS

HawkOne™
Directional Atherectomy
System

HawkOne™

Directional Atherectomy System

The versatile HawkOne™ device — the latest addition to the Medtronic directional atherectomy portfolio — restores blood flow in patients with peripheral arterial disease (PAD) by removing plaque from blocked arteries. The HawkOne device is a comprehensive system that treats all morphologies, including severe calcium, above and below the knee, and offers physicians the flexibility to create a channel or maximize luminal gain.

	Model Name	Reference Number	Vessel Diameter (mm)	Sheath Compatibility (F)	Crossing Profile (mm)	Working Length [†] (cm)	Effective Length ^{**} (cm)	Tip Length (cm)	Max. Cut Length (mm)	Packing Device
7 F	HawkOne LS Standard Tip	H1-LS	3.5 to 7.0	7	2.6	114	107	6.6	50	■
7 F	HawkOne LX Extended Tip	H1-LX	3.5 to 7.0	7	2.6	114	104	9.6	75	■
6 F	HawkOne M Standard Tip	H1-M	3.0 to 7.0	6	2.2	135	129	5.9	40	■
6 F	HawkOne S Extended Tip	H1-S	2.0 to 4.0	6	2.2	151	145	5.9	40	■

Max guidewire is 0.014" for all HawkOne devices.

[†]Working length — distal end of preloaded flush tool, in the proximal position, to the distal end of tip.

^{**}Effective length — distal end of preloaded flush tool, in the proximal position, to the proximal end of cutter window.

TurboHawk™

Peripheral Plaque Excision System

The TurboHawk™ plaque excision system treats peripheral arterial disease (PAD) by removing soft to moderately calcified plaque buildup in leg arteries. This second-generation device uses a directional cutting blade to shave plaque from the vessel — maximizing luminal gain. The plaque is captured in the nosecone and safely removed from the vessel.

Product Name	Reference Number	Vessel Diameter (mm)	Sheath Compatibility [†] (F)	Crossing Profile (mm)	Working Length ^{**} (cm)	Effective Length ^{††} (cm)	Tip Length (cm)	Max Cut Length (mm)	Packing Device
LX-M	TH-LX-M	3.5 to 7.0	7/8	2.7	113	104	9.0	75	■
SX-C	THS-SX-C	2.0 to 4.0	6	2.2	135	129	5.9	40	■
SS-CL	THS-SS-CL	2.0 to 4.0	6	2.2	149	145	3.9	20	

Max guidewire is 0.014" for all TurboHawk devices.

[†]Sheath compatibility — per the Instructions For Use, the large vessel devices with smooth cutter are compatible with 8 F sheaths. A physician survey of device usage indicated 7 F sheaths may have an internal diameter (ID) that will accommodate the crossing profile of the LX-M device. Data on file with manufacturer.

^{**}Working length — distal end of strain relief to the distal end of tip.

^{††}Effective length — distal end of strain relief to the proximal end of cutter window.

SilverHawk™

Peripheral Plaque Excision System

The first-generation SilverHawk™ plaque excision system treats peripheral arterial disease (PAD) by removing soft-to-mild plaque buildup in leg arteries. SilverHawk system technology uses a directional cutting blade to shave plaque from the vessel. The plaque is captured in the nosecone and safely removed from the vessel.

Product Name	Reference Number	Vessel Diameter (mm)	Sheath Compatibility (F)	Crossing Profile (mm)	Working Length [†] (cm)	Effective Length ^{**} (cm)	Tip Length (cm)	Max Cut Length (mm)	Packing Device
EXL	P4044	2.0 to 3.0	6	2.0	135	129	6.0	15	■
DS	P4028	1.5 to 2.0	6	1.9	135	132	2.6	10	

Max guidewire is 0.014" for all SilverHawk devices.

[†]Working length — distal end of strain relief to the distal end of tip.

^{**}Effective length — distal end of strain relief to the proximal end of cutter window.

DRUG-COATED BALLOONS

IN.PACT™ AV
Drug-Coated Balloon

IN.PACT™ Admiral™
Drug-Coated Balloon

IN.PACT™ Admiral™

Drug-Coated Balloon

The IN.PACT™ Admiral™ Drug-Coated Balloon (DCB) is a clinically proven, primary endovascular therapy that treats femoropopliteal disease, reduces interventions, and preserves future treatment options.¹

¹ Laird JA, Schneider PA, Jaff MR, et al. Long-Term Clinical Effectiveness of a Drug-Coated Balloon for the Treatment of Femoropopliteal Lesions. 5-year results from the IN.PACT SFA Trial. *Circ Cardiovasc Interv.* June 2019;12(6):e007702.

IN.PACT™ AV

Drug-Coated Balloon

The IN.PACT AV Drug-Coated Balloon (DCB) is a clinically demonstrated endovascular therapy for AV fistula maintenance for patients with end-stage renal disease (ESRD). It delivers an antiproliferative drug (paclitaxel) to the vessel to inhibit AV fistula stenosis. The IN.PACT AV DCB may enable dramatically fewer AV fistula reinterventions, which could keep patients out of the hospital longer.¹ It can make an impact clinically, financially,² and emotionally.

ENDOAVF

Ellipsys™
Vascular Access System

Ellipsys™

Vascular Access System

Designed for end-stage renal disease (ESRD) patients requiring hemodialysis, the Ellipsys system is a unique single-catheter, nonsurgical option for physicians to create an arteriovenous (AV) fistula, a traditionally invasive procedure that — until the advent of percutaneous AVF technology — had not changed in more than 50 years. It transforms the standard surgical AV fistula creation into a reproducible, minimally invasive procedure that requires no implant or suture, and allows patients to leave with just a single needle stick.¹

¹ Hull JE, Jennings WC, Cooper RI, Waheed U, Schaefer ME, Narayan R. The Pivotal Multicenter Trial of Ultrasound-Guided Percutaneous Arteriovenous Fistula Creation for Hemodialysis Access. *J Vasc Interv Radiol*. February 2018;29(2):149-158.e5.

Reference Number	Description	Recommended Introducer Sheath (F)	Guidewire Compatibility (in)	Vessel Size (mm)
AMI 6005	Ellipsys catheter†	6**	0.014	2.0 +

†Requires AMI-1001 Ellipsys™ Power Controller (110-240v, 50/60HZ, reusable).

**Maximum sheath length 10 cm. Prior to using a specific sheath, ask your sales or clinical representative if the sheath is compatible with the Ellipsys catheter. Sheaths that are too long may cover the working portion at the device tip.

Ellipsys Vascular Access System Accessories

Reference Number	Description	Units per Pack
AMI1001	Ellipsys Power Controller	1 each
K21-00022	EndoAVF Access Kit Hydrophilic Sheath††	5 each

††Includes 21 ga x 7 cm echo-tip micropuncture needle, 0.018" guidewire, and 6F x 10 cm thin-walled radial artery sheath. Additional devices: Crossing Needle Model No. AMI-3000.

EMBOLIC PROTECTION

SpiderFX™

Embolic Protection Device

The SpiderFX™ device is used to capture and remove debris that becomes dislodged during an interventional procedure. The SpiderFX device can be delivered over any 0.014" or 0.018" guidewire, or through any 0.035" catheter.† The SpiderFX device has the broadest indication among distal embolic filters. It is indicated for use in carotid arteries, coronary saphenous vein bypass grafts, and lower extremity procedures.

†Lower extremity procedures.

Reference Number	Filter Size (mm)	Target Vessel Size (mm)	Capture Wire		Delivery End	Recovery End	Guide Catheter/ Sheath
			Wire Length OTW/RX (cm)	Wire Diameter (in/mm)	Crossing Profile (F)	Diameter (F)	Minimum ID (in)

The 320 cm wire lengths are scored to allow for snapping down to a 190 cm wire length if desired.

MO.MA Ultra™

Proximal Cerebral Protection Device

Use the MO.MA Ultra™ proximal cerebral protection device to contain and remove all sizes of debris that can dislodge during interventional procedures in the carotid arteries. The MO.MA Ultra device with double-occlusion balloon system allows for proximal embolic protection to be established prior to crossing a carotid lesion.

TECHNICAL SPECIFICATIONS

Balloon material	Compliant elastomeric rubber	
Balloon marker distance	6 cm	
Recommended guidewire	0.035" (0.89 mm)

INTRAPROCEDURAL MONITORING

FlowMet™
Peripheral Blood Flow Monitoring System

FlowMet™

Peripheral Blood Flow Monitoring System

When it comes to gauging the impact of a peripheral arterial disease (PAD) revascularization, angiography cannot fully assess distal blood flow.^{1,2} Is there a way to reduce procedural uncertainty by directly measuring blood flow? The FlowMet System provides continuous and objective blood flow measurements on the table, offering treating physicians a way to monitor changes throughout the intervention. The system supplements angiography for real-time procedural insight,³ and is noninvasive, simple, and easy to use.

CTO DEVICES

Enteer™
Re-entry System

Viance™
Crossing Catheter

Viance™

Crossing Catheter

The Viance™ crossing catheter is designed to efficiently cross chronic total occlusions via the true lumen. The low-profile catheter, with its fast-spin torque handle, is designed to find small microchannels in a lesion, while leaving the control of crossing in the physician's hands.

Reference Number	Description	Working Length (cm)	Guidewire Compatibility (in)	Crossing Profile (max in)	Sheath Compatibility
VNC-FX-150	Flexible	150	0.014	0.038	5 F
VNC-SD-150	Standard	150	0.014	0.038	5 F

Enteer™ Re-entry System

The Enteer™ system, consisting of the Enteer re-entry balloon catheter and the Enteer guidewire, provides the physician with control to reliably target the true lumen from the subintimal channel above or below the knee. The Enteer catheter's unique balloon design self-ori-ents toward the true lumen within the subintimal space when inflated. Offset exit ports are located on either side of the device, allowing the Enteer guidewire to reenter into the true lumen.

Re-entry Balloon Catheter

STENTS

EverFlex™
Self-expanding Peripheral
Stent System

Visi-Pro™
Balloon-expandable Peripheral
Stent System

EverFlex™ Self-expanding Peripheral Stent with Entrust™ Delivery System

You asked for simple deployment with reduced variability — and we delivered. When you need to stent, trust the precision, strength, and flexibility of the #1 peripheral stent[†]: EverFlex self-expanding peripheral stent with Entrust delivery system. The Entrust™ system is a one-handed stent delivery system with a low 5 F profile. This low profile was achieved without compromising the design of the EverFlex™ stent or the 0.035" guidewire compatibility. The device was engineered specifically for control and accuracy¹ based on physician feedback during extensive interviews and procedural observations. The device is indicated for use in the superficial femoral artery and/or proximal popliteal arteries, and is available in lengths from 20 mm to 150 mm.

[†]EverFlex Self-expanding Peripheral Stent, U.S. only. DRG market share data for peripheral self-expanding bare metal stents.

EverFlex™

Self-expanding Peripheral Stent System

When you need to stent, trust the precision, strength, and flexibility of the EverFlex stent,^{1,2} indicated for use in the superficial femoral and proximal popliteal arteries (SFA/PPA), common iliac, and/or external iliac arteries. The EverFlex stent is available in lengths from 20 to 200 mm (SFA/PPA) or 20–120 mm (iliac). The broad size matrix, all deliverable through a 6 F catheter, provides the most appropriate single-stent fit. Peak-to-peak connection nodes disperse force uniformly, enhancing durability, while the spiral-cell connection and three-wave peak design optimize flexibility.

¹ Data on file at Medtronic.

Protégé™ GPS™

Self-expanding Peripheral and Biliary Stent System

The Protégé™ GPS™ self-expanding peripheral and biliary stent system is a self-expanding, nitinol stent system indicated for the common and external iliac arteries (excluding 14 mm sizes), and designed for the palliative treatment of malignant neoplasms in the biliary tree. The stent is made of a nickel titanium alloy (nitinol) and comes pre-mounted on a 6 F over-the-wire delivery system. The stent is cut from a nitinol tube into an open lattice design and has tantalum radiopaque markers at the proximal and distal ends of the stent.

Visi-Pro™

Balloon-expandable Peripheral Stent System

The Visi-Pro™ stent system is indicated for use in the common and external iliac arteries. It is made from a stainless steel tube that is cut into an open lattice design and has tantalum radiopaque markers at the proximal and distal ends of the stent. The stent is mounted (crimped) onto a tightly folded balloon catheter and expanded and deployed by inflating the balloon.

IntraStent™

Biliary Stent System

The IntraStent™ biliary stent system consists of unmounted large diameter stents designed for flexibility and strength, while remaining low profile. These stents are designed to be manually crimped onto a noncompliant PTA balloon catheter that is indicated for biliary stent expansion.

Admiral Xtreme™

PTA Balloon Catheter OTW 0.035"

Treat longer peripheral arterial disease (PAD) lesions above the knee with Admiral Xtreme™ PTA balloon catheter. Offered in 250 and 300 mm lengths, with 0.035" guidewire compatibility, featuring large inflation lumen for rapid inflation and deflation.

TECHNICAL SPECIFICATIONS

Catheter design	Over the wire (OTW)
Balloon material	Flexitec™ Xtreme
Balloon marker	2 swaged (zero profile) platinum-iridium
Usable shaft lengths	80, 130 cm
Shaft diameter	5 F–5.3 F
Guidewire compatibility	0.035"

Fortrex™

0.035" OTW HP PTA Balloon Catheter

The Fortrex™ PTA balloon is the next-generation high pressure solution for AV access, and it is also intended for use in the peripheral vascular system. Engineered specifically for peak performance at rated burst pressure, the Fortrex balloon offers the deliverability, predictability, and procedural efficiency desired by physicians.

Pacific™ Xtreme

PTA Balloon Catheter OTW 0.018"

Treat longer lesions with the Pacific™ Xtreme PTA balloon catheter OTW 0.018" that is offered in lengths from 150 to 300 mm. These balloons are well-suited for use in treating long lesions in the femoral and popliteal vessels.

TECHNICAL SPECIFICATIONS

Catheter design	Over the wire (OTW), coaxial shaft
Balloon material	Flexitec™ Xtreme
Balloon coating	Hydrophilic
Balloon marker	2 swaged, platinum-iridium
Usable shaft lengths	90, 130 cm
Shaft diameter	3.9 F-4.2 F
Guidewire compatibility	0.018"

PTA SPECIALTY BALLOON

Chocolate™*
PTA Balloon Catheter

Chocolate™*

PTA Balloon Catheter

The Chocolate™* PTA balloon is designed to minimize vessel trauma, dissections, and the need for bailout stenting above or below the knee. The balloon's unique nitinol constraining structure creates pillows and grooves that provide a predictable, uniform, and atraumatic dilatation.

SNARES

Amplatz Goose Neck™
Snare

Amplatz Goose Neck™

Snare Kit

The Amplatz Goose Neck™ snare kit is intended for use in the retrieval of atraumatic foreign bodies. Each kit contains one snare, one catheter, one introducer, and one torque device. The snare is constructed of nitinol cable and a gold-plated tungsten loop. Because of the snare's preformed loop and superelastic construction, it can be introduced through catheters without risk of snare deformation. The snare catheter has a platinum-iridium radiopaque marker band. The Amplatz Goose Neck snare kit is intended for the cardiovascular and peripheral vascular systems.

GUIDEWIRES

Wholey™*
Guidewire System

Nitrex™
Guidewire

Wholey™*

Guidewire System

The Wholey™* guidewire is intended to facilitate the placement and exchange of interventional devices during diagnostic or therapeutic interventional procedures. Wholey guidewires provide enhanced torqueability and lubricity, allowing interventionalists to approach challenging cases with confidence. Each Wholey wire, excluding the extension system, is packaged with a torque device.

Babywire™

Nitinol Guidewire

The Babywire™ guidewire assists in the placement of initial catheters and exchange of small vessel anatomy. Babywire guidewires are straight 0.012" nitinol guidewires designed with double-ended round tips and flexible ends. Babywire guidewires are kink-resistant and provide 1:1 torque.

Reference Number (10/Package)	Diameter (in)	Length (cm)
BW1200	0.012	18
BW1201	0.012	50

Nitrex™

Guidewire

Nitrex™ guidewires are kink-resistant and provide 1:1 torque. They are constructed of a superelastic nitinol core wire with a gold-plated tungsten coil for enhanced visualization. The wires have proprietary silicone coating for ease in placement. A torque device is packaged with 0.014" and 0.018" Nitrex guidewires. The 0.014" and 0.018" Nitrex guidewires are intended for use in the peripheral and coronary vasculatures. The 0.025" and 0.035" Nitrex guidewires are indicated for use in the peripheral vasculature.

SUPPORT CATHETERS AND GUIDE CATHETERS

TrailBlazer™
Angled Support Catheter

TrailBlazer™

Support Catheter

The TrailBlazer™ catheter is an over-the-wire, single-lumen, seamless catheter with three embedded radiopaque markers, an atraumatic tapered tip, and a 40 cm hydrophilic distal tip coating. The TrailBlazer catheter is designed for high visibility, optimal wire support, and ease of lesion entry for difficult-to-cross lesions.

BRIEF STATEMENTS AND REFERENCE STATEMENTS

Admiral™ Xtreme™ 0.035" PTA Balloon Catheter

Indications for Use: The Admiral Xtreme PTA Balloon Dilatation Catheter is intended to dilate stenoses in the iliac, femoral, iliofemoral, popliteal, infra-popliteal, and renal arteries, and for the treatment of obstructive lesions of native or synthetic arteriovenous dialysis fistulae. Test data is on file at Medtronic Inc. Bench test results may not be indicative of clinical performance.

Chocolate™ PTA Balloon

Indications for Use: The Chocolate™ PTA Balloon Catheter is intended for balloon dilatation of lesions in the peripheral vasculature, including the iliac, femoral, iliofemoral, popliteal, infra-popliteal, and renal arteries.

Babywire™ Guidewire

Indications for Use: The Babywire™ Guidewire is intended for assisting in the placement of initial catheters and/or exchange in the small vessel anatomy. The Babywire Guidewire is compatible with a 24 gauge needle or 2.0 French catheter. The Babywire Guidewire is not indicated for coronary use.

Cragg-McNamara™ Valved Infusion Catheters

Indications for Use: The Cragg-McNamara™ Valved Infusion Catheter is intended to be used for the controlled selective infusion of physician-specified pharmacologic agents or radiopaque contrast media into the general vasculature. All pharmacologic agents utilized with the Micro Therapeutics Infusion Catheter should be fully prepared and used according to the instructions for use of the specific pharmacologic agent. The Micro Therapeutics Infusion Catheter is not intended for coronary, pediatric, or neonatal use.

Ellipsys™ System

The Ellipsys™ system is indicated for the creation of a proximal radial artery to perforating vein anastomosis via a retrograde venous access approach in patients with a minimum vessel diameter of 2.0 mm and less than 1.5 mm of separation between the artery and vein at the fistula creation site who have chronic kidney disease requiring dialysis.

Contraindications: The Ellipsys™ system is contraindicated for use in patients with target vessels that are < 2 mm in diameter. The Ellipsys™ System is contraindicated for use in patients who have a distance between the target artery and vein > 1.5 mm.

Warnings

- The Ellipsys™ system has only been studied for the creation of an AV fistula using the proximal radial artery and the adjacent perforating vein. It has not been studied in subjects who are candidates for surgical fistula creation at other locations, including sites distal to this location.
- The Ellipsys™ system is not intended to treat patients with significant vascular disease or calcification in the target vessels.
- The Ellipsys™ system has only been studied in subjects who had a patent palmar arch and no evidence of ulnar artery insufficiency.
- Use only with the Ellipsys™ Power Controller, Model No. AMI-1001.
- The Ellipsys™ Catheter has been designed to be used with the 6 F Terumo Glidesheath Slender™. If using a different sheath, verify the catheter can be advanced through the sheath without resistance prior to use.
- Use ultrasound imaging to ensure proper placement of the catheter tip in the artery before retracting the sheath, since once the distal tip of the catheter has been advanced into the artery, it cannot be easily removed without creation of the anastomosis. If the distal tip is advanced into the artery at an improper location, complete the procedure and remove the catheter as indicated in the directions for use. It is recommended that a follow-up evaluation of the patient is performed using appropriate clinical standards of care for surgical fistulae to determine if any clinically significant flow develops that require further clinical action.

Precautions

- This product is sterilized by ethylene oxide gas.
- Additional procedures are expected to be required to increase and direct blood flow into the AVF target outflow vein and to maintain patency of the AVF. Care should be taken to proactively plan for any fistula maturation procedures when using the device.
- In the Ellipsys™ study, 99% of subjects required balloon dilatation (PTA) to increase flow to the optimal access vessel and 62% of subjects required embolization coil placement in competing veins to direct blood flow to the optimal access vessel. Prior to the procedure, care should be taken to assess the optimal access vessel for maturation, the additional procedures that may be required to successfully achieve maturation, and appropriate patient follow-up. Please refer to the "Arteriovenous Fistula (AVF) Maturation" section of the labeling for guidance about fistula flow, embolization coil placement, and other procedures to assist fistula maturation and maintenance.

- The Ellipsys™ System is intended to only be used by physicians trained in ultrasound guided percutaneous endovascular interventional techniques using appropriate clinical standards for care for fistula maintenance and maturation including balloon dilatation and coil embolization.

- Precautions to prevent or reduce acute or longer-term clotting potential should be considered. Physician experience and discretion will determine the appropriate anticoagulant/antiplatelet therapy for each patient using appropriate clinical standards of care.

Potential Adverse Events: Potential complications that may be associated with creation and maintenance of an arteriovenous fistula include, but may not be limited to, the following:

- Total occlusion, partial occlusion or stenosis of the anastomosis or adjacent outflow vein
- Stenosis of the central AVF outflow requiring treatment per the treatment center's standard of care
- Failure to achieve fistula maturation
- Incomplete vessel ligation when using embolization coil to direct flow
- Steal Syndrome
- Hematoma
- Infection or other complications
- Need for vessel superficialization or other maturation assistance procedures.

CAUTION: Federal (USA) law restricts this device to sale by or on the order of a physician.

Important Information: Indications, contraindications, warnings, and instructions for use can be found in the product labeling supplied with each device.

Enteer™ Re-entry Catheter

Indications for Use: The Enteer™ Re-entry Catheter is indicated for directing, steering, controlling, and supporting a guidewire in order to access discrete regions of the peripheral vasculature. When used as part of the Peripheral System, the Enteer Catheter is indicated for use to facilitate the intraluminal placement of conventional guidewires beyond stenotic peripheral lesions (including chronic total occlusions) prior to placement of other interventional devices.

Enteer™ Re-entry Guidewire

Indications for Use: The Enteer™ Re-entry Guidewire is intended to facilitate placement of balloon dilatation catheters or other intravascular devices during percutaneous transluminal angioplasty (PTA). The Enteer Guidewire is not to be used in cerebral blood vessels. When used as part of the Peripheral System, the Enteer Guidewire is indicated for use to facilitate the intraluminal placement of conventional guidewires beyond stenotic peripheral lesions (including chronic total occlusions) prior to placement of other interventional devices.

EverCross™ 0.035" PTA Balloon Catheter

Indications for Use: The EverCross™ 0.035" OTW PTA Dilatation Catheter is intended to dilate stenoses in the iliac, femoral, iliofemoral, popliteal, infrapopliteal, and renal arteries, and for the treatment of obstructive lesions of native or synthetic arteriovenous dialysis fistulae. This device is also indicated for stent post-dilatation in the peripheral vasculature.

EverFlex™ Self-expanding Peripheral Stent System

Indication: The EverFlex™ Self-Expanding Peripheral Stent System is intended to improve luminal diameter in the treatment of symptomatic de novo or restenotic lesions up to 180 mm in length in the native superficial femoral artery and/or proximal popliteal arteries with reference vessel diameters ranging from 4.5 mm-7.5 mm. The EverFlex Self-Expanding Peripheral Stent System is indicated for improving luminal diameter in patients with atherosclerotic disease of the common and/or external iliac arteries up to and including 100 mm in length, with a reference vessel diameter of 4.5 mm-7.5 mm. The Protégé EverFlex Self-expanding Biliary Stent System is intended as a palliative treatment of malignant neoplasms in the biliary tree.

Contraindications: Use of the EverFlex™ Self-Expanding Peripheral Stent System is contraindicated in patients with known hypersensitivity to nickel titanium and in patients contraindicated for anticoagulant and/or antiplatelet therapy, patients who are judged to have a lesion that prevents complete inflation of an angioplasty balloon or proper placement of the stent or stent delivery system. Potential Adverse Events: Potential adverse events which may be associated with the use of a stent in the SFA and proximal popliteal arteries include, but are not limited to: Allergic reaction, Amputation, Artery perforation or rupture, Bleeding requiring transfusion, Infection, Pseudoaneurysm, Restenosis, Stent collapse or fracture, Stent migration, Surgical or endovascular intervention, Thrombosis/occlusion of the stent.

See the Instructions for Use provided with the product for a complete list of warnings, precautions, adverse events, and device information.

Important Information: Indications, contraindications, warnings, and instructions for use can be found in the product labeling supplied with each device. CAUTION: Federal (USA) law restricts these products for sale by or on the order of a physician.

Medtronic reserves the right to modify specifications without prior notice.

BRIEF STATEMENTS AND REFERENCE STATEMENTS

EverFlex™ Self-expanding Peripheral Stent with Entrust™ Delivery System

Indication: The EverFlex™ Self-Expanding Peripheral Stent with Entrust™ Delivery System is intended to improve luminal diameter in the treatment of symptomatic de-novo or restenotic lesions up to 140 mm in length in the native Superficial Femoral Artery (SFA) and/or proximal popliteal arteries with reference vessel diameters ranging from 4.5 mm-7.5 mm.

Contraindications: Use of the EverFlex™ Self-Expanding Peripheral Stent with Entrust™ Delivery System is contraindicated in patients with known hypersensitivity to nickel titanium; patients contraindicated for anticoagulant and/or antiplatelet therapy; patients who have a lesion that prevents complete inflation of an angioplasty balloon or proper placement of the stent or stent delivery system. The EverFlex™ Self-Expanding Peripheral Stent with Entrust™ Delivery System is contraindicated for use in the carotid artery.

Potential Adverse Events: Potential adverse events which may be associated with the use of a stent in the SFA and proximal popliteal arteries include, but are not limited to: Allergic reaction, Amputation, Artery perforation or rupture, Bleeding requiring transfusion, Infection, Pseudoaneurysm, Restenosis, Stent collapse or fracture, Stent migration, Surgical or endovascular intervention, Thrombosis/occlusion of the stent.

See the Instructions for Use provided with the product for a complete list of warnings, precautions, adverse events, and device information.

Fortrex™ 0.035" PTA Balloon Catheter

Indications for Use: The Fortrex™ 0.035" OTW PTA balloon catheter is intended to dilate stenoses in the iliac, femoral, iliofemoral, popliteal, infra-popliteal, and renal arteries, and for the treatment of obstructive lesions of native or synthetic arteriovenous dialysis fistulae. This device is also indicated for stent post-dilatation in the peripheral vasculature.

FlowMet™ System

Important: Indications, contraindications, warnings, and instructions for use can be found in the product labeling supplied with each device.

Indications for Use: The FlowMet™ is a noninvasive probe that is affixed to the fingers or toes and intended to quantify tissue blood flow rate.

CAUTION: Federal (USA) law restricts this product for sale by or on the order of a physician.

Goose Neck™ Microsnare

Indications for Use: The Amplatz Goose Neck microsnare kit is intended for use in the retrieval and manipulation of atraumatic foreign bodies located in the coronary and peripheral cardiovascular system and the extracranial neurovascular anatomy.

Goose Neck™ Snare

Indications for Use: The Amplatz Goose Neck snare is intended for use in the cardiovascular system or hollow viscus to retrieve and manipulate foreign objects. Manipulation procedures include indwelling venous catheter repositioning, indwelling venous catheter fibrin sheath stripping, and central venous access venipuncture procedure assistance.

HawkOne™ Directional Atherectomy System

Indications for Use: The HawkOne™ peripheral directional atherectomy system is intended for use in atherectomy of the peripheral vasculature. The HawkOne catheter is indicated for use in conjunction with the SpiderFX embolic protection device in the treatment of severely calcified lesions. The HawkOne catheter is NOT intended for use in the coronary, carotid, iliac, or renal vasculatures.

IN.PACT™ Admiral™ Drug-Coated Balloon

Indications for Use: The IN.PACT™ Admiral™ Paclitaxel-coated PTA Balloon Catheter is indicated for percutaneous transluminal angioplasty, after appropriate vessel preparation, of *de novo*, restenotic, or in-stent restenotic lesions with lengths up to 360 mm in superficial femoral or popliteal arteries with reference vessel diameters of 4-7 mm.

Contraindications

The IN.PACT Admiral DCB is contraindicated for use in:

- Coronary arteries, renal arteries, and supra-aortic/cerebrovascular arteries
- Patients who cannot receive recommended antiplatelet and/or anticoagulant therapy
- Patients judged to have a lesion that prevents complete inflation of an angioplasty balloon or proper placement of the delivery system
- Patients with known allergies or sensitivities to paclitaxel

- Women who are breastfeeding, pregnant or are intending to become pregnant or men intending to father children. It is unknown whether paclitaxel will be excreted in human milk and whether there is a potential for adverse reaction in nursing infants from paclitaxel exposure.

Warnings

- A signal for increased risk of late mortality has been identified following the use of paclitaxel-coated balloons and paclitaxel-eluting stents for femoropopliteal arterial disease beginning approximately 2-3 years post-treatment compared with the use of non-drug coated devices. There is uncertainty regarding the magnitude and mechanism for the increased late mortality risk, including the impact of repeat paclitaxel-coated device exposure. Physicians should discuss this late mortality signal and the benefits and risks of available treatment options with their patients.
- Use the product prior to the Use-by Date specified on the package.
- Contents are supplied sterile. Do not use the product if the inner packaging is damaged or opened.
- Do not use air or any gaseous medium to inflate the balloon. Use only the recommended inflation medium (equal parts contrast medium and saline solution).
- Do not move the guidewire during inflation of the IN.PACT Admiral DCB.
- Do not exceed the rated burst pressure (RBP). The RBP is 14 atm (1419 kPa) for all balloons except the 200 and 250 mm balloons. For the 200 and 250 mm balloons the RBP is 11 atm (1115 kPa). The RBP is based on the results of in vitro testing. Use of pressures higher than RBP may result in a ruptured balloon with possible intimal damage and dissection.
- The safety and effectiveness of using multiple IN.PACT Admiral DCBs with a total drug dosage exceeding 34,854 µg of paclitaxel in a patient has not been clinically evaluated.

Precautions

- This product should only be used by physicians trained in percutaneous transluminal angioplasty (PTA).
- This product is designed for single patient use only. Do not reuse, reprocess, or resterilize this product. Reuse, reprocessing, or resterilization may compromise the structural integrity of the device and/or create a risk of contamination of the device, which could result in patient injury, illness, or death.
- Assess risks and benefits before treating patients with a history of severe reaction to contrast agents.
- The safety and effectiveness of the IN.PACT Admiral DCB used in conjunction with other drug-eluting stents or drug-coated balloons in the same procedure or following treatment failure has not been evaluated.
- The extent of the patient's exposure to the drug coating is directly related to the number of balloons used. Refer to the *Instructions for Use* (IFU) for details regarding the use of multiple balloons and paclitaxel content.
- The use of this product carries the risks associated with percutaneous transluminal angioplasty, including thrombosis, vascular complications, and/or bleeding events
- Vessel preparation using only pre-dilatation was studied in the clinical study. Other methods of vessel preparation, such as atherectomy, have not been studied clinically with IN.PACT Admiral DCB.
- This product is not intended for the expansion or delivery of a stent.

Potential Adverse Effects

The potential adverse effects (e.g. complications) associated with the use of the device are: abrupt vessel closure; access site pain; allergic reaction to contrast medium, antiplatelet therapy, or catheter system components (materials, drugs, and excipients); amputation/loss of limb; arrhythmias; arterial aneurysm; arterial thrombosis; arteriovenous (AV) fistula; death; dissection; embolization; fever; hematoma; hemorrhage; hypotension/hypertension; inflammation; ischemia or infarction of tissue/organ; local infection at access site; local or distal embolic events; perforation or rupture of the artery; pseudoaneurysm; renal insufficiency or failure; restenosis of the dilated artery; sepsis or systemic infection; shock; stroke; systemic embolization; vessel spasms or recoil; vessel trauma which requires surgical repair.

Potential complications of peripheral balloon catheterization include, but are not limited to the following: balloon rupture; detachment of a component of the balloon and/or catheter system; failure of the balloon to perform as intended; failure to cross the lesion.

Although systemic effects are not anticipated, potential adverse events that may be unique to the paclitaxel drug coating include, but are not limited to: allergic/immunologic reaction; alopecia; anemia; gastrointestinal symptoms; hematologic dyscrasia (including leucopenia, neutropenia, thrombocytopenia); hepatic enzyme changes; histologic changes in vessel wall, including inflammation, cellular damage, or necrosis; myalgia/arthritis; myelosuppression; peripheral neuropathy.

Refer to the Physician's Desk Reference for more information on the potential adverse effects observed with paclitaxel. There may be other potential adverse effects that are unforeseen at this time.

Important Information: Indications, contraindications, warnings, and instructions for use can be found in the product labeling supplied with each device. CAUTION: Federal (USA) law restricts these products for sale by or on the order of a physician.

Medtronic reserves the right to modify specifications without prior notice.

BRIEF STATEMENTS AND REFERENCE STATEMENTS

Please reference appropriate product *Instructions for Use* for a detailed list of indications, warnings, precautions and potential adverse effects. This content is available electronically at www.manuals.medtronic.com.

CAUTION: Federal (USA) law restricts this device to sale by or on the order of a physician.

IntraStent™ Biliary Stent System

Indications for Use: The stent is intended as a palliative treatment of malignant neoplasms in the biliary tree.

WARNING: The safety and effectiveness of this device for use in the vascular system have not been established.

Launcher™ Peripheral Guide Catheter

Indications for Use: The Launcher™ Peripheral Guide Catheter is designed to provide a pathway through which therapeutic devices are introduced. The guiding catheter is intended to be used in the coronary or peripheral vascular system.

WARNINGS

- For single patient use only. Do not reuse, reprocess, or resterilize this product. Reuse, reprocessing, or resterilization may compromise the structural integrity of the device and/or create a risk of contamination of the device, which could result in patient injury, illness, or death. Cleaning, disinfection, and resterilization may compromise the essential material and design characteristics of the device leading to device failure.
- Do not use if package is opened or damaged.
- Due to the size and relative stiffness of the guiding catheters, extreme care must be taken to avoid damage to the wall of the vessels through which this catheter passes.
- Due to the size of the non-tapered tip, this catheter may occlude smaller vessels. Care must be taken not to completely block flow.
- When there is limited clearance between devices and the guide catheter lumen, devices must be advanced and withdrawn slowly with the valve open to reduce the risk of embolism.
- Use catheters prior to the expiration date specified on the package.

Precautions

- The large internal diameter of the catheter permits injection with little force being required on the syringe. Inject slowly whenever attempting to opacify the vessels via this catheter.
- Guiding Catheters are designed for use by physicians engaged in the practice of a specialized branch of medicine. Use of these devices should be restricted to those specialists trained to perform the procedure.
- This device has been delivered **STERILE**. Careful inspection prior to use should verify the size, shape, and condition of the catheter as suitable for the specific procedure.
- Store catheters straight in a cool, dark area. Do not expose catheters to solvents or ionizing radiation.
- If resistance is encountered at any time during the insertion of the interventional device through the lumen of the guiding catheter, do not force passage. Determine the cause of resistance before proceeding. If the cause of resistance cannot be determined, remove the entire dilatation system.
- If the guide catheter is torqued when kinked, it may cause damage that could result in separation along the catheter shaft. In the event the catheter shaft becomes kinked, withdraw the guide catheter, guidewire, and catheter sheath introducer.
- After use, this product may be a potential biohazard. Handle and dispose of in accordance with accepted medical practice and applicable local, state, and federal laws and regulations.

Adverse effects

Use of Guiding Catheters may give rise to the following complications:

- Hemorrhage or Hematoma
- Allergic reaction to contrast medium
- Infection
- Embolism
- Vessel or heart dissection, perforation
- Vessel spasm
- Thrombosis
- Myocardial infarction
- Stroke
- Death
- Vascular occlusion

IN.PACT™ AV Paclitaxel-coated PTA Balloon

INDICATIONS FOR USE: The IN.PACT™ AV Paclitaxel-coated PTA Balloon Catheter is indicated for percutaneous transluminal angioplasty, after appropriate vessel preparation, for the treatment of obstructive lesions up to 100 mm in length in the native arteriovenous dialysis fistulae with reference vessel diameters of 4 to 12 mm.

CONTRAINDICATIONS:

The IN.PACT AV DCB is contraindicated for use in the following anatomy and patient types:

- Coronary arteries, renal arteries, and supra-aortic/cerebrovascular arteries
- Patients who cannot receive recommended antiplatelet and/or anticoagulant therapy
- Patients judged to have a lesion that prevents complete inflation of an angioplasty balloon or proper placement of the delivery system
- Patients with known allergies or sensitivities to paclitaxel
- Women who are breastfeeding, pregnant, or are intending to become pregnant, or men intending to father children. It is unknown whether paclitaxel will be excreted in human milk and whether there is a potential for adverse reaction in nursing infants from paclitaxel exposure

WARNINGS:

- A signal for increased risk of late mortality has been identified following the use of paclitaxel-coated balloons and paclitaxel-eluting stents for femoropopliteal arterial disease beginning approximately 2-3 years post-treatment compared with the use of non-drug coated devices. There is uncertainty regarding the magnitude and mechanism for the increased late mortality risk, including the impact of repeat paclitaxel-coated device exposure. Inadequate information is available to evaluate the potential mortality risk associated with the use of paclitaxel-coated devices for the treatment of other diseases/conditions, including this device indicated for use in arteriovenous dialysis fistulae. Physicians should discuss this late mortality signal and the benefits and risks of available treatment options for their specific disease/condition with their patients.
- Use the product prior to the Use-by date specified on the package.
- Contents are supplied sterile. Do not use the product if the inner packaging is damaged or opened.
- Do not use air or any gaseous medium to inflate the balloon. Use only the recommended inflation medium (equal parts contrast medium and saline solution).
- Do not move the guidewire during inflation of the IN.PACT AV DCB.
- Do not exceed the rated burst pressure (RBP). The RBP is based on the results of in vitro testing. Use of pressures higher than RBP may result in a ruptured balloon with possible intimal damage and dissection.
- The safety of using multiple IN.PACT AV DCBs with a total drug dosage exceeding 15,105 µg paclitaxel has not been evaluated clinically.

PRECAUTIONS:

- This product should only be used by physicians trained in percutaneous transluminal angioplasty (PTA).
- Assess risks and benefits before treating patients with a history of severe reaction to contrast agents. Identify allergic reactions to contrast media and antiplatelet therapy before treatment and consider alternatives for appropriate management prior to the procedure. This product is not intended for the expansion or delivery of a stent.
- Do not use the IN.PACT AV DCB for pre-dilatation or for post-dilatation.
- This product is designed for single patient use only. Do not reuse, reprocess, or resterilize this product. Reuse, reprocessing, or resterilization may compromise the structural integrity of the device and/or create a risk of contamination of the device, which could result in patient injury, illness, or death.
- The use of this product carries the risks associated with percutaneous transluminal angioplasty, including thrombosis, vascular complications, and/or bleeding events
- The safety and effectiveness of the IN.PACT AV DCB used in conjunction with other drug-eluting stents or drug-coated balloons in the same procedure has not been evaluated.
- The extent of the patient's exposure to the drug coating is directly related to the number of balloons used. Refer to the Instructions for Use (IFU) for details regarding the use of multiple balloons and paclitaxel content.
- Appropriate vessel preparation, as determined by the physician to achieve residual stenosis of ≤ 30%, is required prior to use of the IN.PACT AV DCB. Vessel preparation of the target lesion using high-pressure PTA for pre-dilatation was studied in the IN.PACT AV Access clinical study. Other methods of vessel preparation, such as atherectomy, have not been studied clinically with IN.PACT AV DCB.

Important Information: Indications, contraindications, warnings, and instructions for use can be found in the product labeling supplied with each device. **CAUTION:** Federal (USA) law restricts these products for sale by or on the order of a physician.

BRIEF STATEMENTS AND REFERENCE STATEMENTS

POTENTIAL ADVERSE EFFECTS: Potential adverse effects which may be associated with balloon catheterization may include, but are not limited to, the following: abrupt vessel closure, allergic reaction, arrhythmias, arterial or venous aneurysm, arterial or venous thrombosis, death, dissection, embolization, hematoma, hemorrhage, hypotension/hypertension, infection, ischemia or infarction of tissue/organ, loss of permanent access, pain, perforation or rupture of the artery or vein, pseudoaneurysm, restenosis of the dilated vessel, shock, stroke, vessel spasms or recoil.

Potential complications of peripheral balloon catheterization include, but are not limited to, the following: balloon rupture, detachment of a component of the balloon and/or catheter system, failure of the balloon to perform as intended, failure to cross the lesion. These complications may result in adverse effects. Although systemic effects are not anticipated, potential adverse effects not captured above that may be unique to the paclitaxel drug coating include, but are not limited to, the following: allergic/immunologic reaction, alopecia, anemia, gastrointestinal symptoms, hematologic dyscrasia (including leucopenia, neutropenia, thrombocytopenia), hepatic enzyme changes, histologic changes in vessel wall, including inflammation, cellular damage, or necrosis, myalgia/arthritis, myelosuppression, peripheral neuropathy. Refer to the Physician's Desk Reference for more information on the potential adverse effects observed with paclitaxel. There may be other potential adverse effects that are unforeseen at this time.

Please reference appropriate product Instructions for Use for a detailed list of indications, warnings, precautions and potential adverse effects. This content is available electronically at www.manuals.medtronic.com.

CAUTION: Federal law (USA) restricts this device to sale by or on the order of a physician.

Mo.Ma™ Ultra Cerebral Protection Device

Indications for Use: The Mo.Ma™ Ultra Proximal Cerebral Protection Device is indicated as an embolic protection system to contain and remove embolic material (thrombus/debris) while performing angioplasty and stenting procedures involving lesions of the internal carotid artery and/or the carotid bifurcation.

The reference diameter of the external carotid artery should be between 3-6 mm and the reference diameter of the common carotid artery should be between 5-13 mm.

Test data is on file at Medtronic Inc.

Bench test results may not be indicative of clinical performance

NanoCross™ Elite 0.014" PTA Balloon Catheter

Indications for Use: The NanoCross™ Elite 0.014" Over-the-Wire PTA Balloon Dilatation Catheter is intended to dilate stenoses in the iliac, femoral, iliofemoral, popliteal, infra-popliteal, and renal arteries, and for the treatment of obstructive lesions of native or synthetic arteriovenous dialysis fistulae. This device is also indicated for stent post-dilatation in the peripheral vasculature.

Nitrex™ Guidewire

Indications for Use: The 0.014 in. (0.36 mm) and 0.018 in. (0.46 mm) diameter NITREX Nitinol Guidewires are intended for use in the peripheral and coronary vasculature. The 0.025 in. (0.64 mm) and 0.035 in. (0.89 mm) diameter NITREX Nitinol Guidewires are indicated for use in the peripheral vasculature.

Pacific™ Plus 0.018" PTA Balloon Catheter

Indications for Use: The Pacific Plus PTA Catheter is intended to dilate stenoses in the iliac, femoral, iliofemoral, popliteal, infrapopliteal, and renal arteries; and for the treatment of obstructive lesions of native or synthetic arteriovenous dialysis fistulae.

WARNING:

- Prior to use, refer to the Instructions for Use supplied with these devices for indications, contraindications, side effects, suggested procedure, warnings, and precautions.

- Do not exceed the rated burst pressure.

CAUTION: Larger models of the Pacific™ Plus PTA catheter may exhibit slower deflation times, particularly on long catheter shafts.

Potential Adverse Events: Possible adverse events associated with use of the Pacific™ Plus PTA Catheter include, but are not limited to, complications related to puncture such as, but not limited to, local hematoma, infection and hemorrhage; dilatation related complications including, but not limited to, dissection, perforation and restenosis; angiography related complications such

as, but not limited to, hypotension, drug/allergic reactions, and death.

Test data is on file at Medtronic Inc.

Bench test results may not be indicative of clinical performance.

Pacific™ Xtreme™ 0.018" PTA Balloon Catheter

Indications for Use: The PACIFIC XTREME™ PTA Balloon Dilatation Catheter in 150 mm, 200 mm, 250 mm, and 300 mm balloon length is intended to dilate stenoses in femoral, popliteal, and infrapopliteal arteries.

Test data is on file at Medtronic Inc.

Bench test results may not be indicative of clinical performance.

Protégé™ GPS™ Self-expanding Peripheral and Biliary Stent System

Indication: The Protégé™ GPS™ Self-Expanding Peripheral Stent Systems is indicated for improving luminal diameter in patients with atherosclerotic disease of the common and/or external iliac arteries up to and including 100 mm in length, with reference vessel diameters of 7.5-11 mm. The stent is intended as a palliative treatment of malignant neoplasms in the biliary tree.

Contraindications: Use of the Protégé™ GPS™ Self-Expanding Peripheral Stent System is contraindicated in patients with known hypersensitivity to nickel titanium; patients contraindicated for anticoagulant and/or antiplatelet therapy; patients who have a lesion that prevents complete inflation of an angioplasty balloon or proper placement of the stent or stent delivery system.

Potential Adverse Events: Potential adverse events which may be associated with the use of a stent in the common and/or external iliac arteries include, but are not limited to: Abrupt or sub-acute closure, Allergic reaction to device materials or procedure medications, Allergic reaction to Nitinol, Amputation, Aneurysm, Angina, Arrhythmia, Arterio-venous fistula, Artery injury (e.g., dissection, perforation, or rupture), Bleeding requiring transfusion, Bruising, Contrast medium reaction/renal failure, Death, Device breakage, Edema, Embolism, Failure to deploy stent, Fever, Gastrointestinal bleeding due to Anticoagulation, Hematoma, Hypertension/Hypotension, Infection, Inflammation, Intraluminal thrombus, Myocardial infarction Pain, Partial stent deployment, Pseudoaneurysm, Renal failure, Renal insufficiency, Restenosis, Sepsis, Shock, Stent collapse or fracture, Stent migration, Stent misplacement, Stroke, Surgical or endovascular Intervention, Thrombosis/occlusion of the stent, Transient ischemic attack, Venous thromboembolism, Vessel spasm, Worsening claudication or rest, pain.

See the Instructions for Use provided with the product for a complete list of warnings, precaution, adverse events, and device information.

Protégé™ RX Self-expanding Carotid Stent System

Indications: The Protégé™ RX Carotid Stent System, when used in conjunction with the ev3 embolic protection system, is indicated for the treatment of patients at high risk for adverse events from carotid endarterectomy who require percutaneous carotid revascularization and meet the following criteria: 1. Patients with carotid artery stenosis ($\geq 50\%$ for symptomatic patients by ultrasound or angiography or $\geq 80\%$ for asymptomatic patients by ultrasound or angiography) of the Common or Internal Carotid Artery, AND 2. Patients must have a reference vessel diameter within the range of 4.5 mm and 9.5 mm at the target lesion.

Contraindications: Use of the Protégé RX Carotid Stent System is contraindicated under these circumstances: Patients in whom anticoagulant, antiplatelet therapy or thrombolytic drugs is contraindicated; patients with vascular tortuosity or anatomy, which precludes the safe introduction of the sheath, guide catheter, embolic protection system, or stent system; patients with known hypersensitivity to nickel-titanium; patients with uncorrected bleeding disorders; lesions in the ostium of the common carotid artery.

WARNING: Only physicians who have received appropriate training and are familiar with the principles, clinical applications, complications, side effects and hazards commonly associated with carotid interventional procedures should use this device

Potential Adverse Events: Potential adverse events which may be associated with the use of a stent in the carotid arteries include, but are not limited to: Abrupt closure, Allergic reactions to procedural medications, contrast dye or device materials, Amaurosis fugax, Aneurysm, Angina/coronary ischemia, Arrhythmia, Arterial occlusion or thrombosis at puncture site or remote site, Arteriovenous fistula, Bacteremia or septicemia, Bleeding from anticoagulant or antiplatelet medications, Bleeding, with or without transfusion, Cerebral edema, Cerebral hemorrhage, Cerebral ischemia or transient ischemic attack

Important Information: Indications, contraindications, warnings, and instructions for use can be found in the product labeling supplied with each device. **CAUTION:** Federal (USA) law restricts these products for sale by or on the order of a physician.

Medtronic reserves the right to modify specifications without prior notice.

BRIEF STATEMENTS AND REFERENCE STATEMENTS

(TIA), Congestive heart failure (CHF), Death, Detachment of a component of the device system, Embolism (air, tissue, thrombus), Emergent or urgent endarterectomy surgery (CEA), Fever, Filter thrombosis or occlusion, Fluid overload, Groin hematoma, with or without surgical repair, Hemorrhage, with or without transfusion, Hyperperfusion syndrome, Hypotension or hypertension, Infection and/or pain at the puncture site, Ischemia or infarction of tissue/organ, Myocardial infarction (MI), Pain (head, neck), Pseudoaneurysm (femoral), Renal failure/insufficiency (new or worsening), Restenosis of stented segment, Seizure, Severe unilateral headache, Slow/no flow during procedure, Stent/filter collapse or fracture, Stent/filter entanglement or damage, Stent/filter failure to deploy, Stent embolization, migration, or misplacement, Stent or vessel thrombosis/occlusion, Stroke/cerebrovascular accident (CVA), Total occlusion of carotid artery, Vessel dissection, flap, perforation, or rupture, Vessel spasm or recoil.

RapidCross™ 0.014" Rapid Exchange PTA Balloon Catheter

Indications for Use: The RapidCross™ PTA Rapid Exchange Balloon Dilatation Catheter is intended to dilate stenoses in the iliac, femoral, iliofemoral, popliteal, infra-popliteal, and renal arteries, and for the treatment of obstructive lesions of native or synthetic arteriovenous dialysis fistulae. This device is also indicated for stent post-dilatation in the peripheral vasculature.

SilverHawk™ Plaque Excision System

Indications for Use: The SilverHawk™ Peripheral Plaque Excision System is intended for use in atherectomy of the peripheral vasculature. The catheter is NOT intended for use in the coronary, carotid, iliac, or renal vasculature.

SpiderFX™ Embolic Protection Device

Indications for Use: Lower Extremity (LE) Interventions

The SpiderFX™ Embolic Protection Device is indicated for use as a guidewire and embolic protection system to contain and remove embolic material in conjunction with the TurboHawk™ Peripheral Plaque Excision System, either during standalone procedures or together with PTA and/or stenting, in the treatment of severely calcified lesions in arteries of the lower extremities. The vessel diameter at the filter basket placement site should be between 3.0 mm and 6.0 mm.

Carotid Interventions

The SpiderFX Embolic Protection Device is indicated for use as a guidewire and embolic protection system to contain and remove embolic material (thrombus/debris) while performing angioplasty and stenting procedures in carotid arteries. The diameter of the artery at the site of filter basket placement should be between 3.0 mm and 7.0 mm.

Saphenous Vein Graft (SVG) Interventions

The SpiderFX Embolic Protection Device is indicated for use as an embolic protection system to contain and remove embolic material (thrombus/debris). The device also acts as the guidewire while performing percutaneous transluminal coronary angioplasty or stenting procedures in coronary saphenous vein bypass grafts with reference vessel diameters of 3.0 mm to 6.0 mm. The safety and effectiveness of this device as an embolic protection system has not been established in the cerebral vasculature.

TrailBlazer™ Support Catheter

Indications for Use: TrailBlazer™ Support Catheters are percutaneous, single-lumen catheters designed for use in the peripheral vascular system. TrailBlazer™ Support Catheters are intended to guide and support a guidewire during access of the vasculature, allow for wire exchanges, and provide a conduit for the delivery of saline solutions or diagnostic contrast agents.

TrailBlazer™ Angled Support Catheter

Indications for Use: TrailBlazer™ Angled Support Catheters are percutaneous, single-lumen catheters designed for use in the peripheral vascular system. TrailBlazer™ Support Catheters are intended to guide and support a guidewire during access of the vasculature, allow for wire exchanges, and provide a conduit for the delivery of saline solutions or diagnostic contrast agents.

TurboHawk™ Plaque Excision System

Indications for Use: The TurboHawk™ Peripheral Plaque Excision System is intended for use in the atherectomy of the peripheral vasculature. The TurboHawk catheter is NOT intended for use in the coronary, carotid, iliac, or

renal vasculature. The TurboHawk Catheter is indicated for use in conjunction with the SpiderFX™ Embolic Protection Device in the treatment of severely calcified lesions (LS-C and LX-C only).

Viance™ Crossing Catheter

Indications for Use: The Viance™ Catheter is intended for use with a guidewire to access discrete regions of the peripheral vasculature. When used as part of the Peripheral System, the Viance Catheter is indicated for use to facilitate the intraluminal placement of conventional guidewires beyond stenotic peripheral lesions (including chronic total occlusions) prior to placement of other interventional devices.

Visi-Pro™ Balloon-expandable Peripheral Stent System

Indications: The Visi-Pro™ Balloon-expandable Peripheral Stent System is indicated for improving luminal diameter in patients with atherosclerotic disease of the common and/or external iliac arteries up to 100 mm in length, with a reference vessel diameter of 5 to 10 mm. The Visi-Pro™ Balloon-expandable Biliary Stent System is intended as a palliative treatment of malignant neoplasms in the biliary tree.

Contraindications: Use of the Visi-Pro™ Balloon-expandable Peripheral Stent System is contraindicated in patients with known hypersensitivity to stainless steel or its components; patients contraindicated for anticoagulant and/or antiplatelet therapy; patients who exhibit persistent acute intraluminal thrombus of the proposed lesion site; perforation at the angioplasty site; aneurysm of the artery to be treated. All of the customary contraindications for PTA.

Potential Adverse Events: Potential adverse events which may be associated with the use of a stent in the iliac arteries include, but are not limited to: Abrupt or sub-acute closure, Allergic reaction to 316L stainless steel, Allergic reaction to device materials or procedure medications Amputation, Aneurysm, Angina, Arrhythmia, Arterio-venous fistula, Artery injury (e.g., dissection, perforation or rupture), Bleeding requiring transfusion, Contrast medium reaction/renal failure, Death Device breakage, Embolism, Failure to deploy stent, Fever, Gastrointestinal bleeding due to anticoagulation, Hematoma, Hypertension/Hypotension, Infection, Inflammation, Intraluminal thrombus, Myocardial infarction, Pain, Partial stent deployment, Pseudoaneurysm, Renal insufficiency, Restenosis, Sepsis, Shock, Stent collapse or fracture, Stent migration, Stent misplacement, Stroke, Surgical or endovascular intervention, Thrombosis/occlusion of the stent, Transient increase in glomerular filtration rate, Transient ischemic attack, Venous thromboembolism, Vessel spasm, Worsening claudication or rest pain.

See the Instructions for Use provided with the product for a complete list of warnings, precautions, adverse events, and device information.

Wholey™ Guidewire System

Indications for Use: The Wholey™ guidewire system is intended to facilitate the placement and exchange of interventional devices during diagnostic or therapeutic interventional procedures. The guidewire can be torqued to facilitate navigation through tortuous arteries and/or avoid unwanted side branches.

Important Information: Indications, contraindications, warnings, and instructions for use can be found in the product labeling supplied with each device. **CAUTION:** Federal (USA) law restricts these products for sale by or on the order of a physician.
