

INSTRUMENTS

AirLink 7010 Gas Monitor Operator's Manual

Part Number: 71-0537

Revision: P2

Released: 7/13/21

Product Warranty

RKI Instruments, Inc. (Manufacturer) warrants its products to be free of defects in workmanship and materials—under normal use and service—for one year from the date of purchase from the manufacturer or from the product's authorized reseller.

The manufacturer is not liable (under this warranty) if its testing and examination disclose that the alleged defect in the product does not exist or was caused by the purchaser's (or any third party's) misuse, neglect, or improper installation, testing or calibrations. Any unauthorized attempt to repair or modify the product, or any other cause of damage beyond the range of the intended use, including damage by fire, lightning, water damage or other hazard, voids liability of the manufacturer.

Any repaired or replaced product or part has either a 90-day warranty or the remainder of the initial warranty period (whichever is longer).

Chapter 1: Introduction

Overview

This chapter briefly describes the AirLink 7010 Gas Monitor. This chapter also describes the *AirLink 7010 Gas Monitor Operator's Manual* (this document). Table 1 at the end of this chapter lists the specifications for the AirLink 7010.

About the AirLink 7010 Gas Monitor

The AirLink 7010 can receive up to 32 WireFree sensors (depending on the radio's configurations) or up to 28 WireFree sensors and up to four 4-20mA wired sensor assemblies. All configured channels are displayed every three seconds (scanned). When one channel indicates a gas reading, the monitor locks to that channel. If two or more channels are indicating a gas reading, the monitor scans those channels every three seconds. The user can manually scan channels by pressing *SCAN* or *ADD* to move forward through channels or *SUB* to move backward through channels. The scanned channel will stay at that channel for one minute and then go back to normal scanning.

All channels can be configured to detect WireFree gas sensor assemblies, or up to four wired (4-20mA) sensor assemblies. The last four channels (29-32) can be configured to accept a 4-20mA signal. By default, the system comes with the first 28 channels configured for WireFree sensor assemblies and the last four channels configured for wired sensor assemblies. Any channel can be turned “off”, and any channel can be configured to any valid WireFree address, 1-255.

There are four 5 Amp relays with 4 Amp fuses. The fourth relay may be configured as a Fault relay. This Fault relay will activate if any Fault is generated by the monitor or if any sensor that the monitor is configured to monitor goes into Fault. The Fault relay is removed from any further configurable options from Channel Setup—leaving only three relays for each channel. All relays can be configured to be either latching or auto resetting. The relays can be configured with different set points for alarm conditions for each channel, allowing each channel to have their own gas level set points.

An optional strobe and/or horn can be ordered. The strobe is installed on the top of the housing and is wired into the first relay. The horn is installed on the bottom of the housing and is wired into the second relay.

All relays have a 10% of value of hysteresis on the set points. This prevents the relays from rapidly switching on and off during a potentially jumpy gas sensor reading. Once the threshold value of a relay is reached, the relay is activated. However, the AirLink 7010 screen will not lock on the channel with a triggered relay while the reading is below the Relay Set Point (the user must scroll through the channels to find the channel with a triggered relay). When the gas reading decreases below the threshold value, the relay must be 90% of the initial threshold value to deactivate.

About this Manual

The *AirLink 7010 Gas Monitor Operator's Manual* uses the following conventions for notes, cautions, and warnings:

NOTE: Describes additional or critical information.

CAUTION: *Describes potential damage to equipment.*

WARNING: *Describes potential danger that can result in injury or death.*

Caution: refer to accompanying documentation

~ Vac (AC voltage)

— Vdc (DC voltage)

Specifications

Table 1 lists specifications for the AirLink 7010.

Table 1: AirLink 7010 Specifications

Description	Specification
Input Power	110/240V ~ or 12 - 35 V <u> </u>
Current Draw	175 mA max at 24 VDC (monitor without sensor assemblies); 6.6 Watts max
Operating Temperature	-22°F to 158°F (-30°C to 70°C)
Input Signal	<ul style="list-style-type: none"> • Up to 32 WireFree sensor assemblies OR • Up to 28 WireFree sensor assemblies and up to 4 4-20 mA input sensor assemblies
Output	RS-485 Modbus
Construction (housing)	Fiberglass with clear window (NEMA 4)
Dimensions	27.8 in. H x 10 in. W x 6.5 in. D (70.6 cm H x 25.4 cm W x 16.5 cm D)
Weight	10 lbs.
Mounting	4 mounting feet (6" W x 12.25" T); 1/4" diameter max mounting bolt/screw size
User Controls	Program buttons: RESET/ESC, SCAN/HOLD, MENU, ADD, SUB
Display	Graphical LCD (128x64), transfective, sunlight readable, LED backlight
Relays	<ul style="list-style-type: none"> • 4 relays with 4A fuses • SPDT, Form C (common, normally open, and normally closed contacts)
Radio Options	<ul style="list-style-type: none"> • 2.4 GHz, ISM, 125 mW OR • 900 MHz, 200 mW
Standard Accessory	Operator's manual (this document)
Optional Accessories	<ul style="list-style-type: none"> • Strobe • Horn

Terminal Board

Figure 2: Terminal Board

Internal Components

Note: Delta power supply only included with AC-powered version.

Figure 3: Internal Components

Chapter 3: Installation

Mounting the AirLink 7010 Gas Monitor

1. Select the mounting site. When you select the mounting site, consider the following factors:
 - Is an AC or DC power source available?
 - Is a vertical surface available to mount the AirLink 7010?
 - Is there enough room to open the housing door and make wiring connections?
 - Are the display screen and status lights visible?
2. Close and latch the housing door.
3. Prepare the selected mounting site as required to mount the AirLink 7010. It should be mounted at eye level (4 1/2 to 5 feet from the floor). Refer to Figure 4 for the outline and mounting dimensions.
4. Position the monitor on the vertical mounting surface.
5. Insert maximum 1/4" bolts or screws through the slots in the mounting feet at each corner of the housing to secure the housing to the mounting surface.

Figure 4: Outline and Mounting Dimensions

Wiring the AirLink 7010 Gas Monitor

This section describes procedures for DC power source wiring, AC power source wiring, Modbus out wiring, fault indicator wiring, sensor connection, and relay wiring.

The following wiring connections must be made before starting up the AirLink 7010.

CAUTION: *The internal components can be static sensitive. Use caution when opening the enclosure and handling internal components.*

WARNING: *Make all connections to the AirLink 7010 before you plug in or turn on the AC or DC power source. Before you make any wiring adjustments, always verify that all power sources are not live.*

Connecting a DC Power Source

NOTE: The AirLink 7010 is configured for AC or DC operation, depending on how it is ordered. If you are using AC power as the primary power source, go to the next section, “Connecting an AC Power Source”.

Provide a clean and stable 12-35 VDC. Failure to do so may cause the unit (and any wired sensors that are connected to the unit) to not operate properly.

Voltage spikes higher than 35 VDC may damage the unit.

1. Open the enclosure box to expose the Front Panel.
2. Unscrew the two thumb screws on the Front Panel.
3. Open the Front Panel so that the Terminal Board is exposed (back of Front Panel).
4. Locate the Power Terminal (on the lower right side of the Back Panel) and connect the DC-live wire (red) to the terminal marked “+12-35 VDC”.
5. Connect the DC-ground wire (black) to the terminal marked “GND”.
6. If desired, connect an Earth Ground wire (green) to the terminal marked “EGND” (required for surge suppression).

Figure 5: DC Wiring

7. Close the Front Panel.
8. Screw in the thumb-screws.
9. Close the enclosure box.
10. Clamp down the enclosure latches.

Connecting an AC Power Source

NOTE: The AirLink 7010 is configured for AC or DC operation, depending on how it is ordered. If you are using DC power as the primary power source, go to the previous section, “Connecting a DC Power Source”.

WARNING: *Verify that the power source is unplugged or turned off before you continue with this procedure.*

1. Open the enclosure box to expose the Front Panel.
2. Unscrew the two thumb-screws on the Front Panel.
3. Open the Front Panel so that the AC (Delta) Power Supply is exposed.

- The power supply is factory wired to the Terminal Board.

- For versions that came with a pre-wired AC line cord: there are three wires (black, white and green) pre-wired from the Delta power supply terminals “L” (AC Load IN), “N” (AC Neutral IN), and “EG” (Chassis GND or Earth GND). This set of wires will be used to plug into an AC power outlet ONCE ALL WIRING CONFIGURATIONS ARE COMPLETE.

6. For versions that did not come with a pre-wired AC line cord:
 - Connect a line wire from the AC power source to the power supply's "L" terminal.
 - Connect a neutral wire from the AC power source to the power supply's "N" terminal.
 - Connect a ground wire from the AC power source to the power supply's "EG" terminal.

NOTE: If the AirLink 7010 was not ordered with any housing holes, at least one hole will have to be drilled to bring in AC power.

Figure 6: AC Wiring

7. Close the Front Panel.
8. Screw in the thumb-screws.
9. Close the enclosure box.
10. Clamp down the enclosure latches.

RS-485 Modbus Wiring (Modbus Out)

1. Open the enclosure box to expose the Front Panel.
2. Unscrew the two thumb-screws on the Front Panel.
3. Open the Front Panel so that the back of the Terminal Board is exposed.
4. Locate the Modbus Out Terminal Block.
5. Connect the yellow wire from a DB-9 connector (or the connector-type that best suits your application) to the terminal labeled “A” on the Modbus Out Terminal Block.
6. Connect the white wire from a DB-9 connector to the terminal labeled “GND” on the Modbus Out Terminal Block.
7. Connect the brown wire from a DB-9 connector to the terminal labeled “B” on the Modbus Out Terminal Block.
8. Plug the DB-9 connector into a PLC.

Figure 7: Modbus Out Wiring

9. Close the Front Panel.
10. Screw in the thumb-screws.
11. Close the enclosure box.
12. Clamp down the enclosure latches.

Fault Indicator Connection

The Fault terminal provides an output to power some form of Fault indicator. The Fault terminal is wet contact, uses the same supply voltage that is fed into the board, provides 500 mA maximum, and is a DC only output.

The fault terminal's failsafe operation can be configured as described in step 4 on page 34.

1. Open the enclosure box to expose the Front Panel.
2. Unscrew the two thumb-screws on the Front Panel.
3. Open the Front Panel so that the back of the Terminal Board is exposed.
4. Locate the Fault Terminal Block on the terminal board.
5. Connect a positive (red) wire to the terminal labeled "+".
6. Connect a negative (black) wire to the terminal labeled "-".

Figure 8: Fault Indicator Wiring

Connecting Sensors

The AirLink 7010 allows up to 32 WireFree sensor assemblies or up to 28 WireFree sensor assemblies and 4 wired 4-20 mA type sensor assemblies to be monitored.

1. Open the enclosure box to expose the Front Panel.
2. Unscrew the two thumb-screws on the Front Panel.
3. Open the Front Panel so that the back of the Terminal Board is exposed.
4. Locate the Sensor Terminal Blocks on the Terminal Board.
5. For each of up to 4 wired 4-20 mA type sensor assemblies:
 - Connect the sensor assembly's positive (red) wire to the terminal labeled "+VDC".
 - Connect the sensor assembly's signal (green) wire to the terminal labeled "4-20 mA".
 - Connect the sensor assembly's neutral (black) wire to the terminal labeled "GND".

Figure 9: Sensor Wiring

Relay Wiring

The AirLink 7010 has four relays. Each of the four relays may be setup as Normally Open (NO) or Normally Closed (NC). See page 42 for more explanation about relay actuation.

NOTE: If installed, the strobe is factory wired to the Relay 1 terminals and the horn is factory wired to the Relay 2 terminals.

1. Open the enclosure box to expose the Front Panel.
2. Unscrew the two thumb-screws on the Front Panel.
3. Open the Front Panel so that the back of the Terminal Board is exposed.
4. Locate the Relay Terminal Blocks on the Terminal Board.
5. Connect the alarm device's "+ (H)" terminal to the **NO** or **NC** terminal on the relay terminal block.

NOTE: It is recommended that the relay connections are wired as normally-open (NO). However, normally-closed (NC) wiring configurations provide an inherent fail-safe and may be preferred.

6. Connect the alarm device's "- (N)" terminal to an external power source's "- (N)" terminal.
7. Connect the external power source's "+ (H)" terminal to the COM terminal on the relay terminal block.

Figure 10: Relay Wiring

Chapter 4: Startup and Operation

Power On/Off

Powering on the device activates its functions. When powered on, the device is fully functional and access to system and settings menus is allowed.

CAUTION: *The internal components can be static sensitive. Use caution when opening the enclosure and handling internal components.*

Once power is supplied to the AirLink 7010—by being plugged into an AC outlet or by being wired to a DC power supply—the display screen and LEDs will illuminate.

To cycle the Terminal Board power, flip the Power Switch (located on the lower right side of the Terminal Board) to the OFF (and then ON) position.

Figure 11: Power Switch Location

Normal Operation

The AirLink 7010 can monitor up to 32 WireFree sensor assemblies or up to 28 WireFree sensor assemblies and up to 4 wired sensor assemblies.

When in Normal Operating Mode, configured channels are scanned through, 2 channels at a time, every 3 seconds.

Figure 12: Normal Operating Mode

Holding Channels

This feature can be used to monitor a select channel, rather than the continuous scanning of channels while in Normal Operating Mode.

1. Open the enclosure box.
2. Locate *SCAN/HOLD* on the Front Panel.
3. Press *SCAN/HOLD* once to “freeze” the channel scan sequence.
4. Press *ESC* to return to Normal Operating Mode.

NOTE: The device will automatically return to Normal Operating Mode after five minutes of inactivity.

5. Close the enclosure box.
6. Clamp down the enclosure latches.

LED Functionality

LED	Color / Status	Description
ALARM 1	off	No alarm condition has occurred on relay 1 since the last reset or power up
	solid red	An alarm condition is currently happening on relay 1
	blinking red	An alarm condition has occurred on relay 1, but condition has now gone
ALARM 2	off	No alarm condition has occurred on relay 2 since the last reset or power up
	solid red	An alarm condition is currently happening on relay 2
	blinking red	An alarm condition has occurred on relay 2, but condition has now gone
ALARM 3	off	No alarm condition has occurred on relay 3 since the last reset or power up
	solid red	An alarm condition is currently happening on relay 3
	blinking red	An alarm condition has occurred on relay 3, but condition has now gone
ALARM 4	off	No alarm condition has occurred on relay 4 since the last reset or power up
	solid red	An alarm condition is currently happening on relay 4
	blinking red	An alarm condition has occurred on relay 4, but condition has now gone
Fault	off	No Fault condition has occurred on any sensor unit since the last reset or power up
	solid orange	A Fault condition is currently happening on at least one sensor unit
POWER/STATUS	red	A Fault condition is occurring on the monitor
	blue	Normal Operating Mode

1. Press and release *RESET/ESC* to clear an alarm indication once the alarm condition has cleared.

Chapter 5: Setup Mode

Overview

This mode is used for: Channel Settings (On/Off, Wired/WireFree, gas, range, decimals, radio address), Relay Settings (On/Off, Decreasing/Increasing, Value, Latching/Auto Resetting), and System Information.

NOTE: Each channel must be set up individually.

NOTE: To save any changes and exit Setup Mode at any time, press ESC. The AirLink 7010 automatically saves any changes and returns to Normal Operating Mode 15 minutes after the last button press.

Entering Setup Mode

1. Open the enclosure box.
2. From Normal Operating Mode, press and hold *MENU*, *ADD*, and *SUB* for 5 seconds to enter Setup Mode.

Channel Settings

1. Channel Selection: Once in Setup Mode, press *ADD* (increase) or *SUB* (decrease) to select the channel you want to set up (1-32).

NOTE: To view system information, scroll up from channel 32 or down from channel 1.

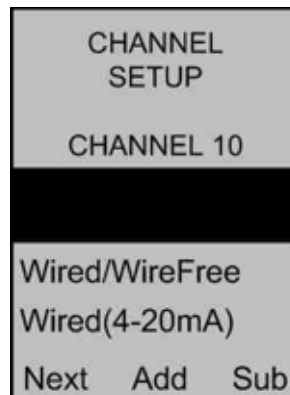

2. Press *MENU* (Next).

3. Channel On/Off: Press *ADD* or *SUB* to change the state of the channel to On or Off.

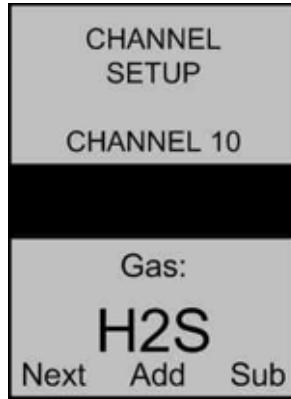

4. Press *MENU* (Next).
5. Wired/WireFree (for channels 29-32 only): Press *ADD* or *SUB* to change the channel type to Wired or WireFree.

NOTE: Any sensors wired directly to the AirLink 7010 must be set up on channels 29-32.

6. Press *MENU* (Next).

7. Sensor Type (wired only): Press *ADD* or *SUB* to select a sensor type. The choices are: H2S, SO2, O2, CO, C12, CO2, LEL, VOC, FEET, HCl, NH3, H2, CLO2, HCN, F2, HF, CH2O, NO2, O3, INCHES, 4-20, None, Degrees C, Degrees F, CH4, NO, PH3, HBr, Eto, CH3SH, AsH3, R410A, R1234, R32, SF6, SiH4, B2H6, BF3.

8. Press *MENU* (Next).
9. Sensor Scale (wired only): Press *ADD* (increase) or *SUB* (decrease) to select a sensor scale (1-65,000).

10. Press *MENU* (Next).

11. Decimals (wired only): Press *ADD* (increase) or *SUB* (decrease) to set the number of decimals. The number of decimals available depends on the sensor scale.
- 3 decimals: Scale 1 or less
 - 2 decimals: Scale 10 or less
 - 1 decimal: Scale 100 or less
 - 0 decimals: Scale greater than 100 (decimal screen does not appear in this case)

12. Press *MENU* (Next).
13. Radio Address (wirefree only): Press *ADD* (increase) or *SUB* (decrease) to set to radio address (1-255).

14. Press *MENU* (Next).

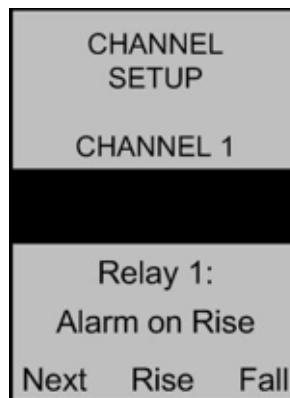

Relay Settings

See page 42 for more explanation about relay actuation.

1. Relay On/Off: Press *ADD* or *SUB* to manipulate the relay's On/Off status. The On/Off status affects whether a relay is active on the selected channel or not.

2. Press *MENU* (Next).
3. Relay Increasing/Decreasing: Press *ADD* or *SUB* to manipulate the relay's Increasing/Decreasing status.

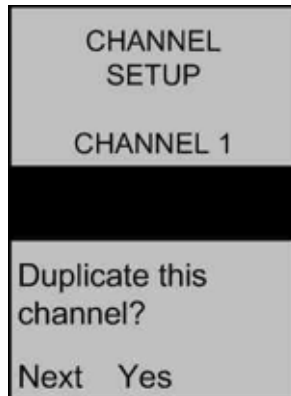

4. Press *MENU* (next).
5. Relay Threshold: Press *ADD* (increase) or *SUB* (decrease) to manipulate the threshold value (1-65,000).

6. Press *MENU* (Next).
7. Relay Latch/Auto Reset: Press *ADD* or *SUB* to manipulate the relay's Latching/Auto Reset status.

8. Press *MENU* (Next).
9. Repeat step 1 through step 8 for the remaining relays.
10. Once all four relays have been setup, the display screen will show the following:

11. Based on the specific application, choose one of the following steps to complete:
 - Press *MENU* (Next) to setup the next channel (or continue to system information)
 - Press *ADD* (Yes) to duplicate the settings to all consecutive channels—and *ADD* (Yes) again to confirm the operation
 - Press *ESC* to exit Setup Mode

View System Information

After the last channel is set, press *MENU* to view the system's information, including the:

- Build Date (Example: 01/01/2011)
- Serial # (Example: H00001)
- Radio (type)
- Radio error

Exiting Setup Mode

Complete the following steps to exit Setup Mode at any time.

1. Press *ESC* at any time to exit Setup Mode.
2. Close the enclosure box.
3. Clamp down the enclosure latches.

NOTE: The AirLink 7010 automatically saves any changes and returns to Normal Operating Mode 15 minutes after the last button press.

Chapter 6: Advanced Configuration Menu

Overview

This mode is used to: adjust LCD contrast, restore factory default settings, set up the fault relay, set up global Modbus parameters, and set up WireFree parameters.

Entering the Advanced Configuration Menu

1. Open the enclosure box to expose the Front Panel.
2. Cycle the unit's power (turn OFF, then ON). For instructions on how to cycle the unit's power, see page 22.
3. When the RKI Logo is shown on the Display Screen, press *MENU*.

NOTE: The AirLink 7010 automatically saves any changes and returns to Normal Operating Mode 15 minutes after the last button press.

Adjusting Contrast

1. Press *ADD* (increase) or *SUB* (decrease) to manipulate the screen's LCD contrast.

2. Press *MENU*.

Adjusting the Lower Screen's LCD Contrast

1. Press *ADD* (increase) or *SUB* (decrease) to manipulate the lower screen's LCD contrast.

2. Press *MENU*.

Restore Factory Default Settings

1. Press *ADD* or *SUB* (Yes/No—as indicated on the display screen) to set the unit back to the factory's default settings. To leave the settings as they are, press *MENU* (Next).

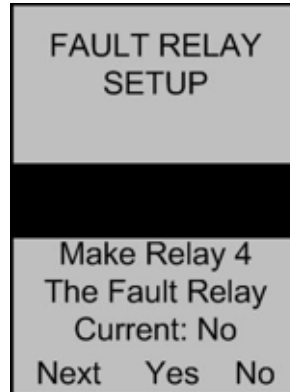

Factory settings are:

- Channels 1-28 set to WireFree
- Channels 29-32 set to Wired
- Relays set at “10, 15, 20 and 25”
- All relays set to “Auto Reset” / “Increasing”
- Modbus Output Baud set at 9600
- Radio Timeout set to 10 minutes
- Network ID set to 5
- Secondary Monitor

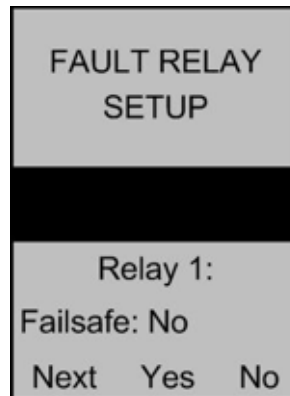

Relay Setup

1. Set Fault Relay: Press *ADD* or *SUB* (Yes/No—as indicated on the display screen) to setup Relay 4 as the Fault Relay. To leave the setting as it is, press *MENU* (Next).

NOTE: With this feature enabled, if any Fault occurs (on any channel) the Fault Relay is engaged. In addition, Relay 4 is removed from all setup options.

2. Failsafe: Press *ADD* or *SUB* (Yes/No—as indicated on the display screen) to setup Relay 1 as failsafe (or not failsafe). To leave the setting as it is, press *MENU* (Next).

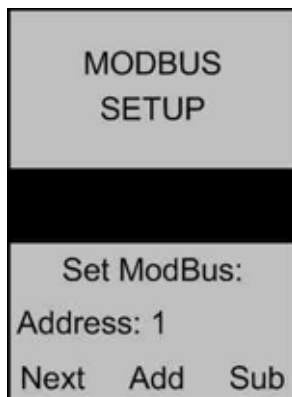

3. Repeat step 2 for Relays 2, 3, and 4.
4. Fault Terminal Failsafe: Press *ADD* or *SUB* (Yes/No—as indicated on the display screen) to setup the Fault terminal as failsafe (or not failsafe). To leave the setting as it is, press *MENU* (Next).

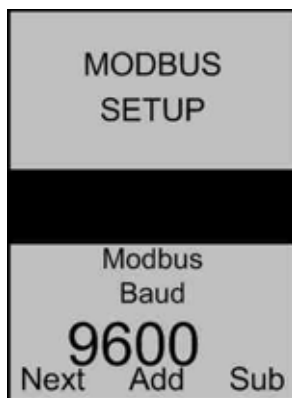

Modbus Setup

1. Global Modbus Address: Press *ADD* (increase) or *SUB* (decrease) to manipulate the global Modbus Address setting (between 1 and 247).

2. Press *MENU* (Next).
3. Global Baud: Press *ADD* (increase) or *SUB* (decrease) to manipulate the global Baud setting to: 4800, 9600, or 19200.

NOTE: Baud default is 9600.

4. Press *MENU* (Next).

WireFree Setup

1. Radio Timeout: Press *ADD* (increase) or *SUB* (decrease) to manipulate the Radio Timeout setting (between 6 and 255 minutes).

2. Press *MENU* (Next).
3. Network Channel: Press *ADD* (increase) or *SUB* (decrease) to manipulate the Network Channel setting (between 1 and 52 for 900 MHz networks; between 1 and 78 for 2.4 GHz networks).

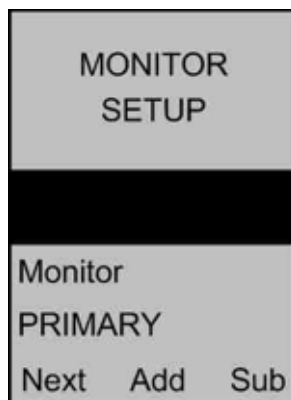

NOTE: All monitors and sensor assemblies must have the same Network Channel in order to communicate.

4. Press *MENU* (Next).
5. Primary/Secondary: Press *ADD* or *SUB* to switch the monitor to “Primary” or “Secondary”.

NOTE: There can only be one Primary monitor on a network. All other monitors must be set up as Secondary monitors.

If an AirLink 7010 is set as a Secondary monitor when there is no Primary monitor, the AirLink 7010 will go into a Fault 15 status. The POWER/STATUS LED will be green if the monitor becomes the Primary monitor; otherwise the POWER/STATUS LED will be blue.

6. Press *MENU* (Next) to return to Normal Operating Mode.

Exiting the Advanced Configuration Menu

1. Press *ESC* at any time to exit the Advanced Configuration Menu.
2. Close the enclosure box.
3. Clamp down the enclosure latches.

NOTE: The AirLink 7010 automatically saves any changes and returns to Normal Operating Mode 15 minutes after the last button press.

Chapter 7: Maintenance

Calibration Mode

Entering Calibration Mode disables the relays and allows the sensors to be calibrated without triggering alarms. Once in Calibration Mode, the unit will remain in this state for two hours—unless *RESET/ESC* is pressed.

1. Open the enclosure box to expose the Front Panel.
2. To enter Calibration Mode, from Normal Operating Mode, press and hold *MENU* for 5 seconds.
3. Once in Calibration Mode, the display screen will show “CAL” on the upper right side.

4. To return to Normal Operating Mode, press *RESET/ESC*.

NOTE: If *RESET/ESC* is not pressed, the unit will remain in Calibration Mode for two hours.

5. Close the enclosure box.
6. Clamp down the enclosure latches.

Relay Test Mode

Relay Test Mode activates each relay and can be used to determine whether or not the relays and attached alarms are functioning properly.

1. Open the enclosure box to expose the Front Panel.
2. To enter Relay Test Mode, from Normal Operating Mode, press and hold *RESET/ESC*.
3. Starting with Relay 1, the relays will activate in 5-second intervals.
4. To return to Normal Operating Mode, release and press *RESET/ESC*.
5. Close the enclosure box.
6. Clamp down the enclosure latches.

Troubleshooting

Table 2 describes symptoms, probable causes, and recommended actions for the most common problems you may encounter with the AirLink 7010.

NOTE: This troubleshooting guide describes AirLink 7010 problems only. See the detector head operator's manuals for preventive maintenance procedures that apply to the detector heads installed on your AirLink 7010.

Table 2: Troubleshooting the AirLink 7010

Condition	Probable Causes	Recommended Action
F1 (Only for T3A/VOC Pro with Radio)	The top card has lost communication with the digital sensor board (the board potted into the sensor housing).	1. Check the connections and/or try new digital sensor board.
F3 (battery powered detector only)	The Low Power IR sensor is beyond repair.	1. Replace the IR sensor.
F4	<ul style="list-style-type: none"> The top card is losing communication to the analog sensor board On T3A/VOC Pro units, F4 means that the Analog to Digital Conversion (ADC) on the analog sensor board is not communicating to the digital sensor board. On the AirLink 6900, F4 means the top card is not communicating with the analog sensor board. For IR sensors, the sensor element itself could be the issue. Also, there might not be an issue because sometimes sensor assemblies will show F4 for a few seconds after boot up. This is normal and is due to the boot up of the sensor element itself. 	<ol style="list-style-type: none"> Check the orientation of the analog sensor board and/or try a new analog sensor board. Check the connections from the top card all the way to the analog sensor board. If that does not fix the fault, try replacing the analog sensor board and/or the sensor housing.
F5	The sensor assembly did not zero correctly.	<ol style="list-style-type: none"> Confirm that no gas is present. Replace the sensor.
F6	The sensor assembly did not auto cal correctly.	<ol style="list-style-type: none"> Confirm the gas concentration is correct and that it is flowing to the sensor. Replace the sensor.

Table 2: Troubleshooting the AirLink 7010 (Continued)

Condition	Probable Causes	Recommended Action
F8	There are 2 sensor assemblies with the same address trying to communicate with the monitor.	1. Make sure all sensor assemblies have unique addresses.
F9	The monitor has not received a communication from the faulting sensor assembly address for the timeout period set on page 36.	1. Check the sensor assembly for a dead battery, broken antenna, bad antenna cable, missing antenna, obstacle, weather, etc.
F10 (4-20 mA wired detector only)	When using a monitor with wired sensor assemblies attached, the sensor is not communicating with the monitor. The problem could be that the sensor assembly is not connected properly, or there may be board issues with the sensor or monitor.	1. Check all connections. Use a current meter inline to see if the current is correct.
F11 (battery powered detector only)	The IR sensor is changing temperature too quickly.	1. The sensor will clear once the temperature stops changing too quickly.
F13 (4-20 mA wired detector only)	When using a monitor with a 4-20mA wired connection, F13 may appear when the sensor assembly is in a fault condition.	1. Since it is 4-20mA, the monitor does not know the exact fault condition. Therefore, check the sensor assembly to see what the fault is and then consult other items in this chart for a solution.

Chapter 8: Parts List

Table 3 lists the part numbers and descriptions for replacement parts and accessories offered for the AirLink 7010 Gas Monitor.

Table 3: Parts List, AirLink 7010 Gas Monitor

Part No.	Description
18-0107RK	Conduit hub (3/4 in.)
51-0040-RED	Strobe/horn, 20 - 28 VDC, Cl. I Div. 1 Zone 1
71-0537	AirLink 7010 Gas Monitor Operator's Manual (this document)

Appendix A: Relay Operation

Relays are offered in certain RKI devices for the purpose of activating alarms, horns, and other equipment upon the detection of gas.

There are two key terms to remember when using relays.

- Deactivated: refers to a relay in its normal state
- Activated: refers to a relay in an alarm state

“Dry” Contact and “Wet” Contact Relays

In regard to power, there are two types of relays.

1. Dry Contact Relays: This type of relay does not provide power to the equipment attached to it (i.e. if there is a light hooked up to this type of relay, it must be powered by another source).
2. Wet Contact Relays: This type of relay does provide power to the equipment attached to it (i.e. if a light was hooked up to this type of relay, it would be powered by the relay). When using a Wet Contact Relay, power should run through the “COMM” terminal to the end equipment.

Figure 13: “Dry” Contact Relay Configured as a “Wet” Contact

Failsafe Setting's Effect on Normally-Open/Normally-Closed Contacts

If Failsafe is set to No, the relays are de-energized in normal operation and energize when the appropriate alarm circuit is activated. The NO (normally open) relay contacts are open during non-alarm operation and close when the appropriate alarm condition occurs. The NC (normally closed) relay contacts are closed during non-alarm operation and open when the appropriate alarm condition occurs.

If Failsafe is set to Yes, the relays are energized in normal operation and de-energize when the appropriate alarm circuit is activated. The NO (normally open) relay contacts are closed during non-alarm operation and open when the appropriate alarm condition occurs. The NC (normally closed) relay contacts are open during non-alarm operation and close when the appropriate alarm condition occurs.

Figure 14: Relay Circuit Schematic

Appendix B: Introduction to 4-20 mA Current Loop Signals

This appendix is only an introduction. The information should serve as a brief overview of 4-20 mA current loop signal ranges and should not be considered a complete reference for proper implementation or use.

Industry standards pertaining to 4-20 mA current loop signals and other aspects of electronics are assumed to be known by the technician. For proper connection to a controller or Programmable Logic Controller (PLC), refer to the manufacturer's specific manual or instructions for that device.

Overview

When using 4-20 mA wired output signal devices, the 4-20 mA defines the current loop analog signal range, with 4 mA representing the lowest end of the range and 20 mA the highest. The relationship between the current loop and the gas value is linear. In addition, the VOC Pro uses values below 4 mA to indicate special status conditions, as shown below:

4-20 mA Ranges	
Current	Detector Status
2.5 mA	Sensor Fault
3 mA	Sensor in Menu Mode
3.5 mA	Sensor in Calibration Mode

The 4 mA allows the receiving controller/PLC to distinguish between a zero signal, a broken wire, or an unresponsive instrument. Benefits of 4-20 mA convention are that it is: an industry standard, low-cost to implement, can reject some forms of electrical noise, and the signal does not change value around the "loop" (as opposed to voltage). The key advantage of the current loop is that the accuracy of the signal is not affected by a potential voltage drop in the interconnected wiring. Even with significant resistance in the line, the current loop VOC Pro will maintain the proper current for the device, up to its maximum voltage capability.

Only one current level can be present at any time. Each device that operates via a 4-20 mA current loop signal must be wired directly to the controller. Units that are wired in a daisy chain configuration for the 4-20 mA current loop signal will not properly transmit data communications to the controller.

Calculations

$$I_{(4-20)} = \left(\frac{(16)(\text{value})}{\text{scale}} \right) + 4$$

$I_{(4-20)}$ = Current of loop, measured in mA

value = ppm (or %) of gas concentration

scale = full scale of sensor

Measuring Current

If the value measured is 0 mA, then: the loop wires are broken, the sensor assembly is not powered up, the sensor assembly is malfunctioning, or the controller is malfunctioning. A digital multi-meter (DMM), or current meter, may be used in conjunction with the controller and/or to test the 4-20 mA current loop signal. To measure the current, place the meter probes in line with the current loop.

Appendix C: RS-485 Modbus Output

Modbus Terms

Modbus: RTU

Setting: Baud Rate = 9600

Data Bits: 8

Parity: None

Stop Bits: 1

Time Out: 1000 ms

Device Address: 1-247

Data Type: Holding Registers

Start Address: The first register the user would like to view (must be between 1-255)

Length: Depends on the number of addresses the user would like to view

Scan Rate: 1000 ms

Data Format: Hex, Decimal, Float

Register Map

AirLink 7010 Modbus Register Map

Register Address (Hexadecimal)	Register Address (Decimal)	Data Description	R/W	Length (In Bits)	Units	Valid Response
Radio Data						
1	1	Channel 1 Radio Address	R/W	16	INTEGER	Radio Address (1-255)

3EF	1007	Channel 3 Time Since Last Nulled	R	16	UINT	Number of days since last nulled. (Added in Firmware 5.1.3)
3F0	1008	Channel 4 Time Since Last Nulled	R	16	UINT	Number of days since last nulled. (Added in Firmware 5.1.3)
3F1	1009	Channel 5 Time Since Last Nulled	R	16	UINT	Number of days since last nulled. (Added in Firmware 5.1.3)
3F2	1010	Channel 6 Time Since Last Nulled	R	16	UINT	Number of days since last nulled. (Added in Firmware 5.1.3)
3F3	1011	Channel 7 Time Since Last Nulled	R	16	UINT	Number of days since last nulled. (Added in Firmware 5.1.3)
3F4	1012	Channel 8 Time Since Last Nulled	R	16	UINT	Number of days since last nulled. (Added in Firmware 5.1.3)
3F5	1013	Channel 9 Time Since Last Nulled	R	16	UINT	Number of days since last nulled. (Added in Firmware 5.1.3)
3F6	1014	Channel 10 Time Since Last Nulled	R	16	UINT	Number of days since last nulled. (Added in Firmware 5.1.3)
3F7	1015	Channel 11 Time Since Last Nulled	R	16	UINT	Number of days since last nulled. (Added in Firmware 5.1.3)
3F8	1016	Channel 12 Time Since Last Nulled	R	16	UINT	Number of days since last nulled. (Added in Firmware 5.1.3)
3F9	1017	Channel 13 Time Since Last Nulled	R	16	UINT	Number of days since last nulled. (Added in Firmware 5.1.3)
3FA	1018	Channel 14 Time Since Last Nulled	R	16	UINT	Number of days since last nulled. (Added in Firmware 5.1.3)
3FB	1019	Channel 15 Time Since Last Nulled	R	16	UINT	Number of days since last nulled. (Added in Firmware 5.1.3)
3FC	1020	Channel 16 Time Since Last Nulled	R	16	UINT	Number of days since last nulled. (Added in Firmware 5.1.3)
3FD	1021	Channel 17 Time Since Last Nulled	R	16	UINT	Number of days since last nulled. (Added in Firmware 5.1.3)
3FE	1022	Channel 18 Time Since Last Nulled	R	16	UINT	Number of days since last nulled. (Added in Firmware 5.1.3)
3FF	1023	Channel 19 Time Since Last Nulled	R	16	UINT	Number of days since last nulled. (Added in Firmware 5.1.3)
400	1024	Channel 20 Time Since Last Nulled	R	16	UINT	Number of days since last nulled. (Added in Firmware 5.1.3)

42B	1067	Channel 31 Time Since Last Calibrated	R	16	UINT	Number of days since last Calibrated. (Added in Firmware 5.1.3)
42C	1068	Channel 32 Time Since Last Calibrated	R	16	UINT	Number of days since last Calibrated. (Added in Firmware 5.1.3)
Modbus and Build Data						
1771	6001	Modbus Address	R/W	16	INTEGER	1 – 247
1772	6002	Modbus Baud Rate	R/W	16	INTEGER	Any Valid Baud Rate. See Below.
1773	6003	Month	R	16	INTEGER	1 – 12
1774	6004	Day	R	16	INTEGER	1 – 31
1775	6005	Year	R	16	INTEGER	2009 –
1776	6006	Serial Number Character	R	16	ENUMERATION	0 – 52 See Serial Number below
1777	6007	Serial Number	R	32	LONG INT	1 – 99999
Settings in Startup Menu						
177A	6010	Can Change Startup Menu Options	R	16	ENUMERATION	0 – 1, 1 can change startup menu items. 0 cannot change.
177B	6011	Restore to Factory Default	R/W	16	ENUMERATION	When read will be 0. When you want to restore write a 1.
177C	6012	Relay 4 as Fault Relay	R/W	16	ENUMERATION	0 – 1, 0 means normal relay, 1 means Fault Relay
177D	6013	Relay 1 Fail Safe	R/W	16	ENUMERATION	0 – 1, 0 means not Fail Safe, 1 means Fail Safe
177E	6014	Relay 2 Fail Safe	R/W	16	ENUMERATION	0 – 1, 0 means not Fail Safe, 1 means Fail Safe
177F	6015	Relay 3 Fail Safe	R/W	16	ENUMERATION	0 – 1, 0 means not Fail Safe, 1 means Fail Safe
1780	6016	Relay 4 Fail Safe	R/W	16	ENUMERATION	0 – 1, 0 means not Fail Safe, 1 means Fail Safe
1781	6017	Fault Terminal Fail Safe	R/W	16	ENUMERATION	0 – 1, 0 means not Fail Safe, 1 means Fail Safe
1782	6018	Radio Timeout	R/W	16	INTEGER	6-255. This is the timeout in minutes.
1783	6019	Network Channel	R/W	16	INTEGER	1–78
1784	6020	Primary Secondary	R/W	16	ENUMERATION	0 – 1, 0 means Primary, 1 means Secondary.
Relays in Alarm State						
1785	6021	Relay 1 is in Alarm	R	16	ENUMERATION	0 – 1, 0 means not in Alarm, 1 means in Alarm
1786	6022	Relay 2 is in Alarm	R	16	ENUMERATION	0 – 1, 0 means not in Alarm, 1 means in Alarm
1787	6023	Relay 3 is in Alarm	R	16	ENUMERATION	0 – 1, 0 means not in Alarm, 1 means in Alarm
1788	6024	Relay 4 is in Alarm	R	16	ENUMERATION	0 – 1, 0 means not in Alarm, 1 means in Alarm
1789	6025	Fault Relay is in Alarm	R	16	ENUMERATION	0 – 1, 0 means not in Alarm, 1 means in Alarm
178A	6026	Channels 1-32 in Alarm	R	32	ENUMERATION	Each bit corresponds to a Channel. 1 means in Alarm
178C	6028	Not used on 32 Channel 7010		32		
178E	6030	Reset Relays	R/W	16	ENUMERATION	Reads always a 0. Write 1 to reset the relays.
178F	6031	Channels in Fault	R	16	ENUMERATION	0 – 3, 0 no fault, 1 fault 1-16, 2 fault 17-32, 3 fault on both
1790	6032	Not used on 32 Channel 7010		16		
1791	6033	Fault: There is another Primary Monitor	R	16	ENUMERATION	0-1, 0 means no fault, 1 means there is another Primary
1792	6034	Put into Cal Mode	R/W	1	ENUMERATION	0-1, 0 means not in Cal Mode (Added in Firmware 5.1.6)
17A5	6053	Monitor supply voltage	R	32	FLOAT	Supply voltage in volts, only accurate up to about 12 volts (Added in Firmware 5.1.3)
Signal Strength (Section Added in Firmware 5.1.5)						
1839	6201	Channel 1 RSSI	R	16	INTEGER	0-100% Receive Signal Strength
183A	6202	Channel 2 RSSI	R	16	INTEGER	0-100% Receive Signal Strength
183B	6203	Channel 3 RSSI	R	16	INTEGER	0-100% Receive Signal Strength
183C	6204	Channel 4 RSSI	R	16	INTEGER	0-100% Receive Signal Strength

183D	6205	Channel 5 RSSI	R	16	INTEGER	0-100% Receive Signal Strength
183E	6206	Channel 6 RSSI	R	16	INTEGER	0-100% Receive Signal Strength
183F	6207	Channel 7 RSSI	R	16	INTEGER	0-100% Receive Signal Strength
1840	6208	Channel 8 RSSI	R	16	INTEGER	0-100% Receive Signal Strength
1841	6209	Channel 9 RSSI	R	16	INTEGER	0-100% Receive Signal Strength
1842	6210	Channel 10 RSSI	R	16	INTEGER	0-100% Receive Signal Strength
1843	6211	Channel 11 RSSI	R	16	INTEGER	0-100% Receive Signal Strength
1844	6212	Channel 12 RSSI	R	16	INTEGER	0-100% Receive Signal Strength
1845	6213	Channel 13 RSSI	R	16	INTEGER	0-100% Receive Signal Strength
1846	6214	Channel 14 RSSI	R	16	INTEGER	0-100% Receive Signal Strength
1847	6215	Channel 15 RSSI	R	16	INTEGER	0-100% Receive Signal Strength
1848	6216	Channel 16 RSSI	R	16	INTEGER	0-100% Receive Signal Strength
1849	6217	Channel 17 RSSI	R	16	INTEGER	0-100% Receive Signal Strength
184A	6218	Channel 18 RSSI	R	16	INTEGER	0-100% Receive Signal Strength
184B	6219	Channel 19 RSSI	R	16	INTEGER	0-100% Receive Signal Strength
184C	6220	Channel 20 RSSI	R	16	INTEGER	0-100% Receive Signal Strength
184D	6221	Channel 21 RSSI	R	16	INTEGER	0-100% Receive Signal Strength
184E	6222	Channel 22 RSSI	R	16	INTEGER	0-100% Receive Signal Strength
184F	6223	Channel 23 RSSI	R	16	INTEGER	0-100% Receive Signal Strength
1850	6224	Channel 24 RSSI	R	16	INTEGER	0-100% Receive Signal Strength
1851	6225	Channel 25 RSSI	R	16	INTEGER	0-100% Receive Signal Strength
1852	6226	Channel 26 RSSI	R	16	INTEGER	0-100% Receive Signal Strength
1853	6227	Channel 27 RSSI	R	16	INTEGER	0-100% Receive Signal Strength
1854	6228	Channel 28 RSSI	R	16	INTEGER	0-100% Receive Signal Strength
1855	6229	Channel 29 RSSI	R	16	INTEGER	0-100% Receive Signal Strength
1856	6230	Channel 30 RSSI	R	16	INTEGER	0-100% Receive Signal Strength
1857	6231	Channel 31 RSSI	R	16	INTEGER	0-100% Receive Signal Strength
1858	6232	Channel 32 RSSI	R	16	INTEGER	0-100% Receive Signal Strength
Diagnostics Data						
2704	9988	Reset	R/W	16	INTEGER	Read 0. If user sets to 1, resets the unit.
2705	9989	Serial Receive Good Count	R	16	UINT	0 – 65535
2706	9990	Serial Receive Error Count	R	16	UINT	0 – 65535
2707	9991	Serial Transmit Good Count	R	16	UINT	0 – 65535
2708	9992	Serial Transmit Error Count	R	16	UINT	0 – 65535
2709	9993	Radio Receive Good Count	R	16	UINT	0 – 65535
270A	9994	Radio Receive Error Count	R	16	UINT	0 – 65535
270B	9995	Radio Transmit Good Count	R	16	UINT	0 – 65535
270C	9996	Radio Transmit Error Count	R	16	UINT	0 – 65535
270D	9997	Uptime Days	R	16	UINT	0 – 65535
270E	9998	Uptime Hours	R	16	UINT	0 – 65535
270F	9999	Uptime Minutes	R	16	UINT	0 – 65535
