915 MHz Wireless Sensor System - 1202 Sensors

100m

The 1202 series IDEAL Wireless Sensors are battery powered sensors for HVAC used for monitoring and controlling of indoor air quality (IAQ), energy savings, and occupant safety. The CO2 sensor is self-calibrating and the Differential Pressure sensor requires no calibration. Both sensors have adjustable data reporting interval options. They are wall mountable, powered with long life replaceable batteries providing battery life up to 15 years.

Data is transmitted to a G2 Series wireless gateway or repeaters, which extends operation to unlimited distance. The G2 Series gateway receives data from up to 100 sensor devices and interfaces to a wide range of standard BAS protocols including BACnet®, Modbus, LonWorks®, and Metasys® N2. SNMP and XML protocols are available for IT systems.
