

911 Operator Training Using the DLE-300

The DLE-300 line simulator is ideal for 911 operator classroom training. It has a special "911 mode" that is activated by setting dip switch 5 to on and dip switch 6 to off. In this mode, only calls that have dialed 911 are allowed to ring through and if caller ID is used, "911" and "EMERGENCY CALL" appear in the phone number and name positions on the caller ID display.
