Pulpmatic: The Ultimate range of Macerators

Benefits of a Macerator Disposal System:

Why choose a Pulpmatic macerator system over conventional washing and disinfecting?

With single use pulp items and disposal in a Pulpmatic macerator the possibility of cross infection can be reduced. This modern, hygienic and environmentally friendly method of disposal has become the standard and best practice in both private and NHS hospitals in the UK. Significantly reducing water and electricity consumption and at the same time saving nursing time, as there is no need to unload the machine, nursing staff can leave the machine once started to complete the disposal cycle.

Healthcare Associated Infections (HAICs)

These are a major problem in hospitals around the world putting patients at risk and significantly adding to overall costs. The single use item system can break the cycle of cross infection simply and easily.

Unique Hands Free Operation

The Pulpomatics are the only machines with complete hands-free operation, making them not only more convenient, but also more hygienic to use than other macerators and reduces the potential for cross contamination.

Efficient and Economical

Pulpomatics offer greater efficiency, made possible by the unique design features including the Nine-blade maceration disc allowing faster and quieter operation. Not only does this help you cope better with workload peaks, but it translates into significant operating cost savings in terms of staff time and of water and electrical consumption per cycle.

Dual Antimicrobial Action

In addition to using the latest antimicrobial material Microbesafe – Silver Nanotechnology in its lid construction, the Pulpomatics offers automatic disinfection of the internal maceration chamber. The chamber is rinsed thoroughly, with water and DDC disinfectant EcoCleanse+ leaving it clean and smelling fresh.

Environmentally Friendly

The Pulpmatic Disposal system uses recycled paper products and offers low water and electricity consumption, helping to reduce environmental impact.

Simple to Install/ Easy Servicing Programme

The overall design of the machine and its electrical and water connections make installation a simple and quick process and after-sales service is handled by a team of fully trained engineers, guaranteeing the very best in response times and specialist knowledge.

Versatile Operation

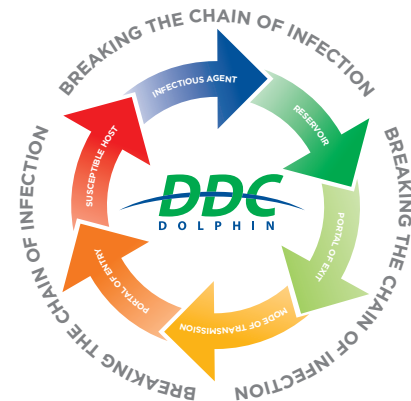

Compatible with all makes and manufacturers medical disposable pulp products.

DDC Dolphin's Patented completely handsfree operation with Silver Nanotechnology incorporated into the lid design

In England research has shown that Hospital Associated Infections (HAI's) have huge cost implications to the health sector, as well as causing distress to the patient, their family and those who care for them after leaving hospital. HAI's effect one in ten patients, resulting in a hospital stay of 2.5 times longer than unaffected patients and cost the health sector almost £3,000 more to treat. Those affected are also more likely to require additional treatment following their hospital stay. Overall HAI's are reported to cost the health section almost £1bn per year in additional costs.

Everything we do, from our equipment supplies to our service and maintenance programmes, are designed to help reduce Healthcare Associated Infections.

Pulpmatic Range

PULPMATIC ULTIMA

Pulpmatic macerators offer the most comprehensive range of macerators with the lowest running costs and environmental impact

Pulpmatic Ultima:

Pulp macerator 6-8 pulp items per cycle 120 secs

For busy dirty utility rooms the Pulpmatic Ultima can cope with high use areas efficiently, saving water and electricity.

Pulpmatic Eco:

Eco-friendly pulp macerator 4-6 pulp items per cycle 95 secs

Specially designed to cope with most regular usage patterns, ensuring disposal with minimum use of water and electricity.

Pulpmatic Uno:

Compact pulp macerator 1-2 pulp items per cycle 65 secs

For low demand areas or single bed wards and ensuite facilities the Pulpmatic UNO is ideal with a compact size, low noise and extremely low water and electricity consumption.

| Environmental Performance |  Cycle Time |  Water (Litres) |  Electricity (Watts) |  Cost/cycle (Pence) |
|-------------------------------------|------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------|
| Multiple Item Use Macerators | | | | |
| Pulpmatic Ultima | 120 secs | 23L | 28w | 5.03p |
| Competition A | 120 secs | 24L | 33w | 5.30p |
| Pulpmatic Eco | 95 Secs | 13L | 20w | 3.02p |
| Competition B | 85 Secs | 16L | 14w | 3.42p |
| Single Item use Macerators | | | | |
| Pulpmatic Uno | 65 Secs | 10L | 15w | 2.23p |
| Competition A | 53 Secs | 11L | 7w | 2.31p |

HYGENEX[®]

DDC Dolphin ancillary products:

Hygenex Pulp Products

DDC Dolphin offer a complete range of disposable pulp products, which all conform to the required standards including British standard PAS29:1999.

Hygenex Pulp Supports

Our medical pulp product ancillary range is completed with individual supports for the disposable pulp range, manufactured with antibacterial Silver Nano-technology Microbesafe material .

Hygenex Wall racks and holders

Dirty Utility rooms need to be clean and organised. We therefore provide a comprehensive range of storage racks, which have been designed to carry our dispenser cases and individual products.

Hygenex EcoCleanse+ Antibacterial Maceratable Wipes clean and sanitise frequently touched items. The wipes are impregnated with a highly effective sanitiser and are dermatologically tested.

The Complete Solution

DDC Dolphin is dedicated to excellence and innovation in sluice room and dirty utility room design, and equipment manufacture, installation, testing and servicing. With twenty years' experience we provide comprehensive and meaningful advice and support throughout the planning, design and specification of new or existing facilities, and enable you to meet modern infection control standards.

Our complete range of state-of-the-art equipment includes:

- Panamatic® – Bedpan Washer Disinfectors
- Incomatic® – Incontinence Waste Macerator
- Pulpmatic® – Pulp Product Macerator
- Hygenex® – Stainless Steel Equipment
 - Consumable products and chemicals

Certificate No. 1161
ISO 9001
