Combat Malnutrition

Malnutrition is increasingly becoming a high priority for facilities and state inspections. Between 35% and 85% of nursing home residents are undernourished.¹ Malnutrition can lead to increased incidences of pressure ulcers, morbidity, mortality, longer length of stay in hospitals, increased readmissions, and reduced quality of life.¹

The costs associated with malnutrition can be considerable. More than \$355 million is spent annually on pressure ulcer treatment in long-term care settings.² Additional costs are associated with liability and litigation.²

**ACCORDING TO THE ACADEMY OF NUTRITION AND DIETETICS,
\$1.00 SPENT ON NUTRITION SCREENING AND INTERVENTION
SAVES AT LEAST \$3.25 IN HEALTHCARE COSTS.³**

MEDLINE'S MEDICAL NUTRITION PRODUCTS AND SOLUTIONS

SELECTION

Medline's complete selection includes all the national brands you know and trust, along with high-quality Medline-brand products. With Medline, you'll simplify ordering and receiving, and enjoy exceptional value.

CONVENIENCE

Enjoy fast and dependable delivery, with fewer backorders, with Medline's outstanding infrastructure. Our 33 distribution centers have over 8 million square feet of full distribution capabilities, so you can think of us as your warehouse.

PARTNERSHIP

With custom solutions, competitive prices and clinical expertise, we strive to be more than just a supplier – we want you to think of us as a partner.

QUALITY

In our commitment to providing the finest quality, we maintain over 30 quality-assurance locations with over 400 people dedicated to managing Medline quality.

Enteral Feeding Devices

With Medline, you can cut out the middleman and enjoy manufacturer-direct savings. Choose from innovative products, such as our Safety Spike Plus™ pump set, featuring an ergonomic, easy-to-use “Y” adapter; there’s no need to disconnect the set from the feeding tube when administering medications or flushing with water. Medline brand enteral devices offer exceptional value and meet stringent quality standards (ISO 13485:2003).

- Manufacturer-direct savings
- Dependable quality
- Featuring Safety Spike Plus™ pump set with "Y" Adapter (see page 8)

Common Enteral Feeding Methods

NON-SURGICAL METHODS

There are two primary non-surgical methods for tube feeding. Clinicians can insert a **nasogastric** or **nasojejunal** feeding tube through the nose into the stomach or jejunum.

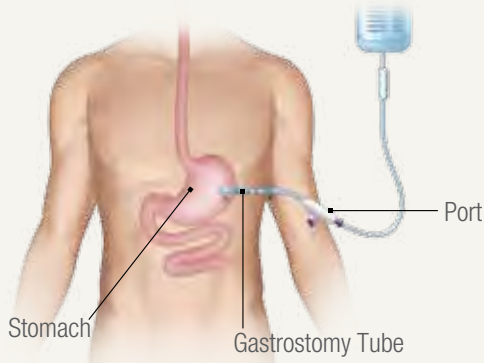

Nasogastric And Nasojejunal Tubes

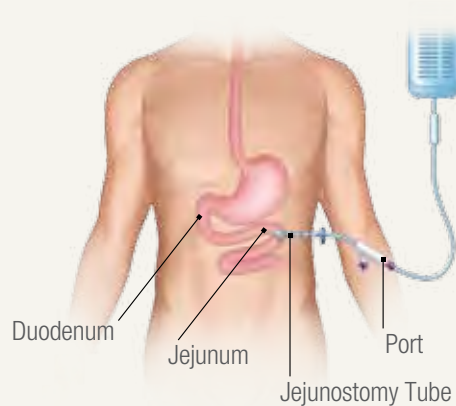

SURGICAL METHODS

At other times, a surgeon or gastroenterologist creates a surgical opening through the skin into the stomach or jejunum and then inserts a **gastrostomy** or **jejunostomy** feeding tube. Through these tubes, clinicians administer tube feeding formulas containing protein, carbohydrates, fats, vitamins and minerals.⁴

Gastrostomy Tube

Jejunostomy Tube

Enteral Pumps

SENTINEL® ENTERAL PUMP

The easy-to-program, reliable and accurate Sentinel Enteral Pump is essential for patients who are unable to feed themselves or gain nourishment and nutrients through an oral diet.

For the administration of all enteral feeding formulas.

- Easy 3-step operation: press *On*, select *up* or *down* to set flow rate, press *run* or *stop* to start or stop feeding
- Ergonomic shamrock-shaped rotor for quick-view monitoring
- Feeding system prevents unintentional set removal
- Polycarbonate housing withstands hard impacts
- Large Display
- 6-hour battery life at 125 ml/hr

Tubes and Adapters

Medline offers a wide range of high-quality and cost-effective gastrostomy tubes (G-tubes) and nasogastric tubes (NG-tubes). Feeding tubes help caregivers and clinicians provide medically necessary nutrition in short-term and long-term situations.

MEDLINE 3-PORT GASTROSTOMY TUBE: RADIOPAQUE

Rounded tips ensure easy insertion and closure caps seal the tube between feedings.

- Gastric balloon expands evenly with sterile water or saline solution for a secure, comfortable fit
- Circular skin disk easily adjusts to maintain proper tube position and allow stoma observation
- Made of 100% medical-grade silicone
- Latex free

Securement Solutions

MYPOKIT

Safe and comfortable for adults and children, the MyPokit system provides an innovative way to protect feeding tubes and other infusion lines. The top flap secures the tube, while openings in the front and back allow the tube to enter and exit MyPokit.

MYPOKIT Series

- Helps prevent tubes from accidentally getting pulled or kinked – even during use!
- Helps maintain a secure connection to the infusion tubing
- Promotes independence– with the front strap attachment, patients can put it on and remove it without assistance
- Can be easily adjusted while patients lay in the supine position
- Available in a variety of solid colors
- Fits discreetly beneath clothing
- To learn more, visit www.mypokit.com

CLINICAL REFERENCE

The Phases of Wound Healing^{5,6,7,8}

WOUND PHASES	INFLAMMATORY PHASE	PROLIFERATIVE PHASE	MATURATION PHASE
TIMEFRAME	First few days	Few days to few weeks	Few weeks up to several years
WHAT TO EXPECT	<ul style="list-style-type: none"> • Decreased bleeding • Clot formation • Wound is cleared of bacteria and other debris 	<ul style="list-style-type: none"> • Increase in blood flow • New blood vessel formation • Collagen formation and deposition 	<ul style="list-style-type: none"> • Collagen assists with cellular growth and increased tensile strength • Wound size decreases • Ultimately wound heals
NUTRIENTS INVOLVED	<ul style="list-style-type: none"> • Protein • Amino acids: arginine and glutamine • Vitamins: A and C 	<ul style="list-style-type: none"> • Protein • Amino acids: arginine and glutamine • Vitamin C • Minerals: iron, copper and zinc 	<ul style="list-style-type: none"> • Protein • Vitamin C • Copper
NUTRITIONAL NEEDS	<ul style="list-style-type: none"> • Adequate calories from any combination of enteral nutrition, oral nutritional supplementation or oral diet • Adequate protein intake • Adequate hydration 		

Medline Active® Liquid Proteins*

Protein is part of every cell, tissue, and organ in our bodies. Protein helps compensate for inadequate protein intake, which can be associated with protein energy malnutrition (PEM) and other conditions.^{9,10,11} Adequate protein intake is essential for maintaining and repairing tissue, and for facilitating healing. If the patient is unable to meet their protein needs by diet alone, they may require additional oral protein supplements in the form of liquids or powders added to food or tube feeding.

EXCELLENT NUTRITION AND SUPERB TASTE, FOR EXCEPTIONAL VALUE

Active Liquid Protein has high protein content, contains arginine and other key nutrients to help you provide patients and residents with the nutrients they need. Active Liquid Protein's Citrus Berry Punch and Orange Crème flavors are surprisingly palatable and leave no unpleasant aftertaste. And Active Liquid Protein's optimal viscosity facilitates tube feeding and helps prevent clogging.

EASY ADMINISTRATION

Because Active is in liquid form, there's no need for mixing. It's easy to add Active Liquid Protein to hot or cold food or beverages, or to administer it orally or via feeding tube. When used as directed, Active Liquid Protein won't clog feeding tubes, so you'll replace them less frequently.

GREAT TASTE

Active Liquid Protein is very suitable for oral consumption. With fewer complaints about the taste, you'll experience improved compliance with charted dietary needs. Choose from delicious Citrus Berry Punch and Orange Crème flavors. Both flavors are available in great-tasting sugar-free formulas that are suitable for diabetic patients; the Critical Care formula is available in Citrus Berry Punch.

ENT697

ENT693OC

ENT693SFCB

ACTIVE LIQUID PROTEIN

Ordering Information

Item No.	Description	Pkg	HCPCS
ENT693CB	Active Liquid Protein, Citrus Berry, 32-oz.	4/cs	B4155
ENT693OC	Active Liquid Protein, Orange Creme, 32-oz.	4/cs	B4155

Contains milk and whey isolate. This product should be used under medical supervision or as directed by a healthcare professional.

ACTIVE LIQUID PROTEIN, SUGAR FREE

Ordering Information

Item No.	Description	Pkg	HCPCS
ENT693SFCB	Active Liquid Protein, Sugar-Free Citrus Berry, 32-oz.	4/cs	B4155
ENT693SFOC	Active Liquid Protein, Sugar-Free Orange Creme, 32-oz.	4/cs	B4155

Contains milk and whey isolate. This product should be used under medical supervision or as directed by a healthcare professional.

ACTIVE LIQUID PROTEIN, CRITICAL CARE

One 30 ml (1 oz.) serving of Active Critical Care provides 21 g of protein. More protein can mean fewer daily servings are needed to reach charted dietary needs.

Basic Modular Powders

Medline's high-quality modular products are designed with both residents and staff in mind. They're easy to mix and will not compromise the taste or appearance of food, helping to maintain patient dignity and quality of life.

THE IMPORTANCE OF PROTEIN IN LONG-TERM CARE

Protein plays an important role in improving many conditions commonly found in long-term care, from malnutrition and sarcopenia to wound healing. Protein supplies the building blocks for cell proliferation, collagen synthesis, and remodeling; maintains tissue pressure; and prevents excess edema.

For older adults, the daily requirement for exogenous protein is at least 1.0 gram per kilogram of body weight.¹³ Additional amounts may be needed to heal wounds, fight infection, or build new tissue to replace normal losses.¹³ Nursing home residents, however, are often unable to meet their protein requirements through diet alone, typically because of poor meal consumption due to:

- Lack of appetite
- Chewing/swallowing difficulties
- Disease states

Thickeners, protein and fiber supplements can help you overcome these obstacles and provide significant benefits to residents' health and quality of life.

Medline Active Powders

ACTIVE PROTEIN POWDER

High-quality protein mixes very easily into most food and beverages without clumping.

- 6 grams of whey protein per serving
- A well-balanced amino acid profile
- Appropriate to mix with water and flush through NG or PEG tube
- Lactose-free

Ordering Information

Item No.	Description	Pkg	HCPCS
ENT32108	Active Protein Powder, 8-oz.	6/cs	B4155

Contains whey isolate. Made in the same plant with soy, wheat, milk and egg products.
This product should be used under medical supervision or as directed by a healthcare professional.

Medline Active Powders (continued)

ACTIVE FIBER POWDER

Will not alter the food or beverage because it has no flavor or grit, and it will not thicken.

- 100% natural fiber with 3 grams of dietary fiber per serving
- Mixes easily into just about any food or beverage
- Sugar free

Ordering Information

Item No.	Description	Pkg	HCPCS
ENT32308	Active Fiber Powder, 8-oz.	4/cs	B4104

Made in the same plant with soy, wheat, milk and egg products.
This product should be used under medical supervision or as directed by a healthcare professional.

ACTIVE INSTANT THICKENER POWDER

Active Instant Thickener Powder provides thickness and the desired consistency when added to food without producing a clumpy mess.

- As an instant thickener, it's quick, easy and will not compromise the taste or over-thicken
- Specifically designed for food and beverage preparations to aid individuals with swallowing problems (Dysphagia)
- Will thicken hot or cold foods and beverages to any consistency desired
- Corn-based modified food starch

Pressure Ulcer Prevention Program

Improve patient care with the comprehensive training and education in Medline's Pressure Ulcer Prevention Program (PUPP).

The centerpiece of the program is the training for nurses and certified nursing assistants. The training includes a thorough course on the role that proper nutrition plays in wound care and prevention.

The course explains:

- The mnemonic PEARLS – Protein, Energy, Amino acids, RDAs/RDIs, Lab data and Sarcopenia
- Current nutritional assessment tools
- Possible causes of inadequate nutrition
- Ways to ensure proper nutrition
- Supplements
- Hydration

For more details about PUPP, register for a free informational webinar at www.medline.com/pupp-webinar
