# 1. Summary of Conformance Test

# What is the Conformance Test?

## Conformance Test: CT

The CT is a 3GPP-defined (TS36.521\*<sup>1</sup> and TS36.523\*<sup>1</sup>) test case consisting of a set of fundamental tests. Passing these tests certifies that the DUT is 3GPP compliant.

\*1: In case of LTE

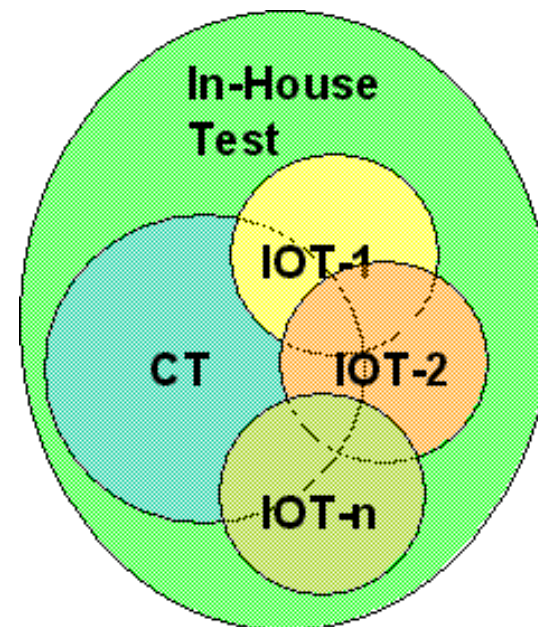

### <Reference>

## Inter Operability Test: IOT

The IOT is a CT with actual carriers (base stations). Because the 3GPP standard has a nearly infinite permutation of parameters, connectivity with actual base stations must be verified. The IOT is formulated for each carrier (base station) based on service details offered by carriers and base station vendors.

## In-House Test:

This in-house test is performed by UE vendors for quality assurance of their products. UE vendors create their own unique tests based on the design functions and data.

# How Does the CT Fit Overall Product Verification?

- Network problems caused by non-compliant terminals not permitted
- Standard compliance important
- Conformance Test required for design inspection

## Testing Real Network

- Proves terminal works with current
  - ◆ Network equipment
  - ◆ Configurations
  - ◆ Services

## Conformance Testing

- Ensures terminal still works when:
  - ◆ Network equipment upgraded
  - ◆ New services added
  - ◆ Network architecture evolves

# Who Should Do the Conformance Testing?

- Mobile terminal manufacturers
  - ◆ Proving to customers (network operators) that mobile terminals standard compliant

- Chipset and software component manufacturers supplying components or reference designs to mobile phone integrators
  - ◆ Proving that chipset designs standard compliant

- Specialist test houses
  - ◆ Offering conformance test and validation to manufacturers

- Network operators
  - ◆ Performing acceptance testing and QA

# Race to Introduce LTE Service

## 3GPP Specifications Still Evolving

### How to Test Conformance?

Which regulation version should we comply with?

What test range required for “Conformance?”

Who approves?

Where is CT done?

Possible in own facilities?

**Define International Rule and Procedures!**

**GCF (Global Certification Forum)**

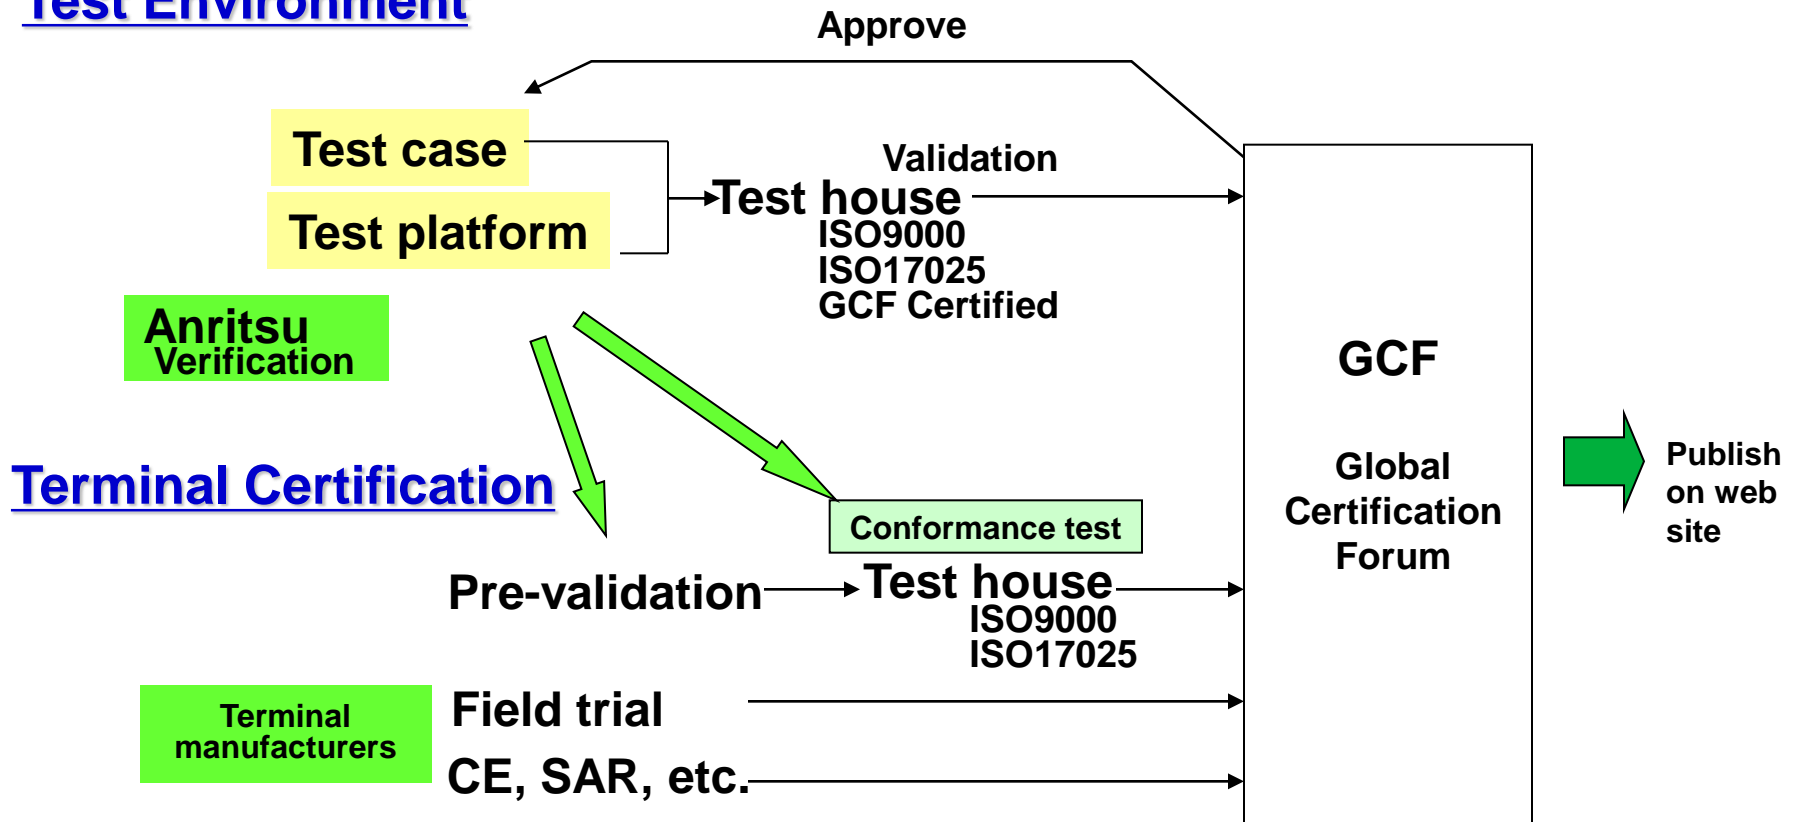

# GCF(Global Certification Forum) PTCRB(PCS Type Certification Review Board)

- The GCF and PTCRB were formed by network operators and UE manufacturers to provide consistent standards for product conformance testing.
- It is a forum where various parties, test houses, test equipment companies, operators, and manufacturers can make declarations, present evidence, and receive approval.
- The GCF itself does not perform any validation or conformance testing.
- The GCF also approves test equipment (**Conformance Test System**) that is 3GPP compliant.

# Features

- Full 3GPP compliance
- World First: Achieves 80% GCF Test Platform Approval
- Support TS36.521-1 TRX/Performance, TS36.521-3 RRM, and TS34.121-1 HSPA Rel-7/8 (partially)
- Support FDD/TDD
- Reduce Down Time Using the Tunable Filter
- R&TTE\*<sup>1</sup> Test
- LTE to CDMA2000/TD-SCDMA InterRAT Test
- Operator Acceptance Test
- Global Support
- Upgradeable from ME7873/74F
- LTE/UMTS Parallel Capability with ME7873L + W-CDMA option

# Upgrade from ME7873F/74F

Customers using the W-CDMA industry-standard ME7873F/ME7874F can optimize their investment by adding LTE functions to make the most of existing equipment.

Supports W-CDMA

LTE Upgrade

**ME7873L + W-CDMA**

Supports W-CDMA + LTE

# UMTS/LTE Parallel Test Capability

Because the ME7873L + W-CDMA configuration performs parallel W-CDMA and LTE tests, the measurement time is the same as using two separate test sets\*1 but the cost is almost halved.

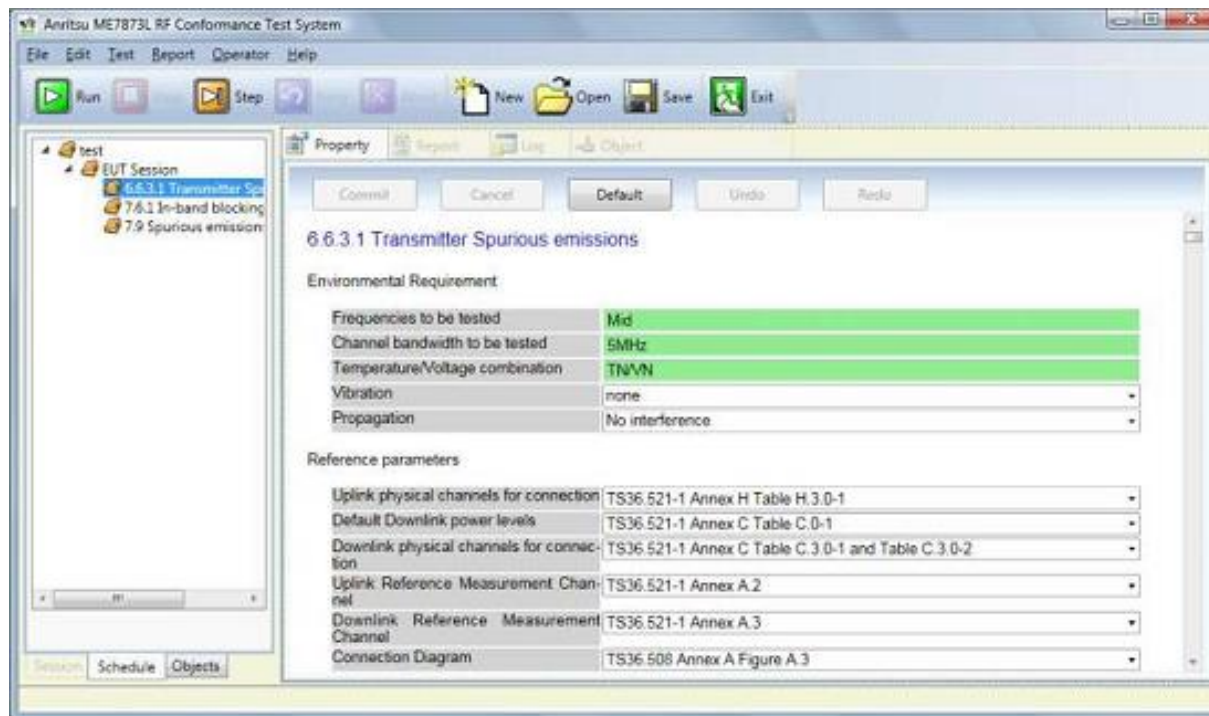

\*1: Some test cases are not supported parallel testing.

# R&D Functions (1/8)

## ◆ Change parameters, such as level and frequency

Default parameters are set to 3GPP-standard values. Parameters, such as level, frequency, and RBs are changed easily by the control software. Non-default parameters are displayed in green.

# R&D Functions (2/8)

## ◆ Real-time SS Log Trace

An SS log is displayed automatically when measurement starts. Real-time confirmation of message exchanges between the SS and terminal supports effective operation verification.

## ◆ SS Log display function

An SS log is created automatically for each measurement item when measurement finishes. The logs can be checked using viewer software bundled with the ME7873L to troubleshoot test problems between the UE and test platform.

The screenshot displays the 'MD8430/MD8480 Signalling Tester Trace Log Viewer Ver2.12a\_s1' application. The main window shows a table of log entries with columns for No., PHY MAC RLC PDCP TE RRC NAS, BTS, Primitive, Channel, Message, and Progress Time. Entry 287 is highlighted in blue, showing 'LTE\_PDCP\_DATA\_IND' and 'RRC CONNECTION SETUP COMPLETE'.

# R&D Functions (4/8)

## ◆ Search mode function

To develop reliable UE terminals with stable performance, the performance limits must be confirmed. The Search mode function performs tests while changing conditions to confirm UE performance.

The ME7873L can measure in two ways: “Hard Condition” with tight conditions and “Easy Condition” with looser conditions.

### Hard Condition

It changes to severer measurement conditions, such as downlink and interference signal levels, and SNR, etc., at fixed steps.

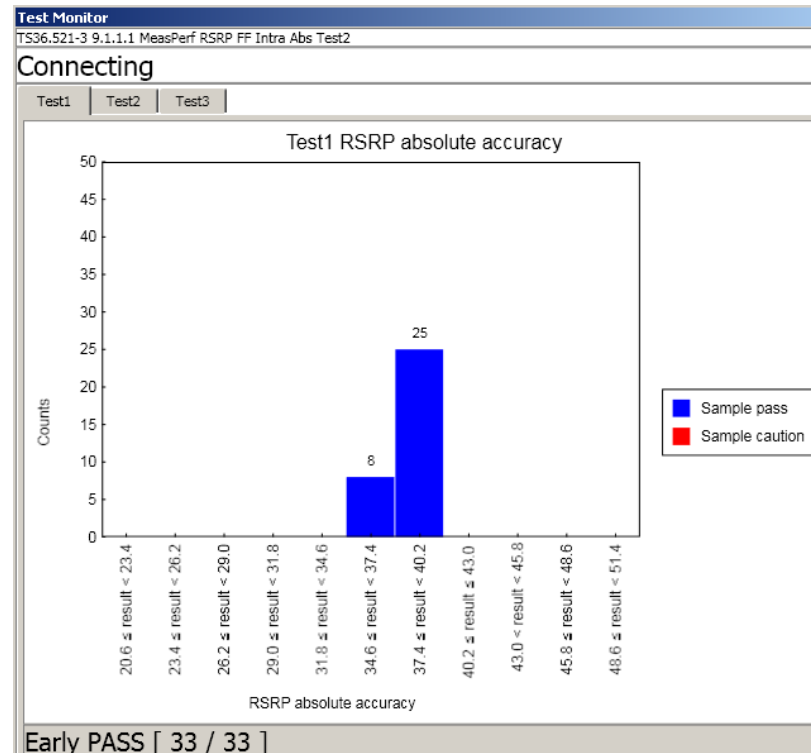

### Easy Condition

It changes to easier measurement conditions, such as downlink and interference signal levels, and SNR, etc., at fixed steps.

# R&D Functions (5/8)

## ◆ RRM Graphical Tool

Test items and results are displayed in real time as a histogram showing the UE operation trends at a glance.

# R&D Functions (6/8)

## ◆ Auto re-measurement function for Fail test

When multiple items are tested by one sequence file, Fail items are re-measured automatically.

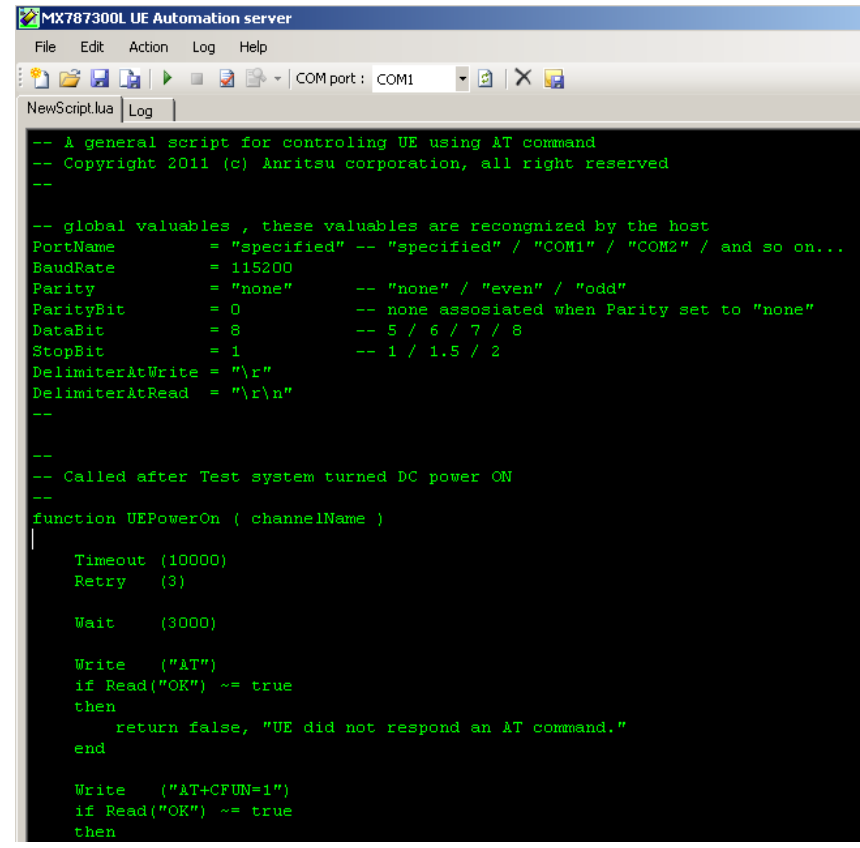

## ◆ Auto-measurement optimization to minimize measurement time

When multiple items are tested by one sequence file, the test system automatically measures in the order that minimizes measurement times.

# R&D Functions (7/8)

## ◆ UE Automation Tool

The UE Automation tool is a standard function. Customers can use it to send AT commands, simplifying automated measurement of various terminal types.

# Calibration and Correction

The measurement system uncertainty at each test procedure must comply with the 3GPP standards. The ME7873L has the following three calibration and correction functions to assure compliance.

- Fundamental correction at delivery
- Internal calibration at work start
- Run-time correction before each measurement

# 3. Support Service Proposal

# Support Service Outline

The support service includes hardware and software from operation to maintenance to assure stable ME7873L operation.

## Technical Support

- **Technical support**
  - Operational technical support and troubleshooting
- **Customer system status management**
  - Understand customer's system status on regular basis for quick response

## Software Update

- **3GPP follow up**
  - Update ME7873L according to 3GPP standards
- **Validation**
  - Acquire validation for GCF-defined target 3GPP standard

## Calibration

- **Calibration service**
  - Calibration at customer's site
  - System calibration to assure reliable measurement accuracy
  - Correction, calibration and result report

## Hardware Maintenance

- **Repair service**
  - Hardware repair
  - Backup loan unit during repair
- **Regular checks**
  - Regularly checks of electrical parts that may degrade with time

# 4. Summary

# Anritsu offers a future-proof conformance test system with wide scalability and high reliability

## Reliability

- ❑ Full 3GPP compliance (GCF Approved Test System)
- ❑ Various correction/calibration functions to improve measurement reliability

## Evolving

- ❑ Fast and flexible response to new technology
- ❑ Updates to evolving 3GPP standard

## Scalability

- ❑ Measurement functions implemented selectively
- ❑ Operating bands implemented selectively
- ❑ Future-proof upgrades based on existing platform

# System Installation

# Customer Supplied Parts (1/2)

## ● DC Power Supply

The following models is required when controlling the power supply using the ME7873L.

Model	Name	pcs	Manufacturer
N6700B	Mainframe	1	Keysight Technologies, Inc
N6732B <sup>*1</sup>	8 V, 6.25 A, 50 W DC Power Module	4 <sup>*2</sup>	
N6709A	Low-Profile MPS Mainframe Rack Mount Kit	1	

\*1: At rack mounting, the maximum current is 2 A. To draw more than 2 A of current, use a separate cable to supply DC to the terminal. However, since this will prevent rack mounting, decide on the installation location for the DC power supply in advance.

When using a power supply other than the N6732B, ask the power supply manufacture for details.

\*2: Four modules are required when testing up to four mobiles continuously.

In addition, the following equipment can also be controlled. However, since rack-mounting is not possible when using the 2306-PJ, decide on the installation location for the DC power supply in advance.

Model	Name	pcs	Manufacturer
2306-PJ	Dual-Channel Battery/Charger Simulator with 500mA Range	2 <sup>*3</sup>	Keithley Instruments

\*3: Two sets of the 2306-PJ are required when testing up to four mobiles continuously.

## ● Temperature Chamber

One of the following equipment is required to control the temperature chamber from the ME7873L.

Model	Name	Manufacturer
SH-241 <sup>*1</sup>	Temperature & Humidity Chamber	ESPEC Corp.
SH-242 <sup>*1</sup>	Temperature & Humidity Chamber	
VT4002 <sup>*2</sup>	EMC Shielding with Temperature	Votsch
105 <sup>*1</sup>	Benchtop Temperature Chamber	TestEquity
107 <sup>*1</sup>	Benchtop Temperature Chamber	
115 <sup>*1</sup>	Temperature Chamber	

**\*1: GPIB Cable (Double-Shield, 2m) is required to control this chamber automatically.**

**\*2: USB-RS232C Converter Cable (2m) is required to control this chamber automatically.**

# Delivery (1/2)

- **Delivery Time**

**3 months (changes with stock situation)**

- **Onsite Installation**

**Anritsu engineer visits delivery site to perform system setup calibration. Required time varies with system composition**

- ◆ **System Setup (assembly, wiring, software installation)**
- ◆ **System Correction**
- ◆ **UE Functional Tests**
- ◆ **System Performance Tests**
- ◆ **Explanation at Delivery Acceptance**

## ● Support After Delivery

The following warranty is offered for free of charge after product delivery.

### Duration

- ◆ Newly Purchased: 1 year (from next month after installation)
- ◆ Upgrade: 3 month (from next month after installation)

### Support Contents

- ◆ Hardware guarantee: Repair faults for all products in the system and re-calibration if needed

Support service applies to new hardware and software. Guarantee for customer-provided parts follows the upgrade guarantee on condition of calibrating each instrument.

Hardware guarantee in upgrading is applied only when a hardware is added or modified.

Free-of-charge guarantee period extendable by charged service contract.

# System Installation Environment

The system installation environment must meet the following specifications.

Items	Condition	Remarks
