

Chapter 8

Master Budgeting

Solutions to Questions

8-1 A budget is a detailed quantitative plan for the acquisition and use of financial and other resources over a given time period. Budgetary control involves using budgets to increase the likelihood that all parts of an organization are working together to achieve the goals set down in the planning stage.

8-2

1. Budgets encourage managers to *think about* and *plan* for the future.
2. Budgets *communicate* financial goals throughout the organization.
3. Budgets *allocate resources* within the organization where they can be used most effectively.
4. Budgets *coordinate* the plans and activities of departmental managers.
5. Budgets uncover potential *bottlenecks* before they occur.
6. Budgets can be compared to actual results to improve the efficiency and effectiveness of operations and to evaluate and reward employees.

8-3 A perpetual budget is a 12-month budget that continuously rolls forward one month (or quarter) at a time as the current month (or quarter) is completed. This approach keeps managers continually focused one year ahead.

8-4 A master budget represents a summary of all of management's plans and goals for the future, and outlines the way in which these plans are to be accomplished. The master budget is composed of a number of smaller, specific budgets encompassing sales, production, raw materials, direct labor, manufacturing overhead, selling and administrative expenses, and inventories. The

master budget usually also contains a budgeted income statement, budgeted balance sheet, and cash budget.

8-5 The level of sales impacts virtually every other aspect of the firm's activities. It determines the production budget, cash collections, cash disbursements, and selling and administrative budget that in turn determine the cash budget and budgeted income statement and balance sheet.

8-6 No. Planning and control are different, although related, concepts. Planning involves developing goals and developing budgets to achieve those goals. Control, by contrast, involves the means by which management attempts to ensure that the goals set down at the planning stage are attained.

8-7 Creating a "budgeting assumptions" tab simplifies the process of determining how changes to a master budget's underlying assumptions impact all supporting schedules and the projected financial statements.

8-8 A self-imposed budget is one in which persons with responsibility over cost control prepare their own budgets. This is in contrast to a budget that is imposed from above. The major advantages of a self-imposed budget are: (1) It shows respect for the opinions of lower-level managers. (2) It leverages the knowledge of lower-level managers to provide more accurate estimates than those imposed by top managers who have less intimate knowledge of day-to-day operations. (3) It increases the lower-level managers' motivation to achieve their own self-imposed goals. (4) It empowers lower-level managers to take ownership of the budget and to be accountable for deviations from it.

Self-imposed budgets do carry with them the risk of budgetary slack. The budgets prepared by lower-level managers should be carefully reviewed to prevent too much slack.

8-9 The direct labor budget and other budgets can be used to forecast workforce staffing needs. Careful planning can help a company avoid erratic hiring and laying off of employees.

8-10 The principal purpose of the cash budget is NOT to see how much cash the company will have in the bank at the end of the year. Although this is one of the purposes of the cash budget, the principal purpose is to provide information on probable cash needs *during* the budget period, so that bank loans and other sources of financing can be anticipated and arranged well in advance.

The cash disbursements for raw materials have increased from \$1,035,980 to \$1,095,980 because the increased unit sales in the second quarter require additional purchases of raw materials.

Chapter 8: Applying Excel (continued)

- a. The total expected cash collections for the year under this revised budget are \$2,165,000.
- b. The total required production for the year under this revised budget is 335,000 units.
- c. The total cost of raw materials to be purchased for the year under this revised budget is \$1,358,800.
- d. The total expected cash disbursements for raw materials for the year under this revised budget are \$1,305,900.
- e. The production constraint of 90,000 units per quarter is a problem in the third quarter of Year 2 and may be a problem later in Year 3. This problem can be approached in a variety of ways. First, the excess capacity in the first and second quarters could be used to build up finished goods inventories beyond the usual levels. Second, management could investigate acquiring another of the milling machines. Third, improvement efforts can be focused on the milling machine; if these efforts are successful, the capacity of the milling machine can be increased and consequently the capacity of the entire plant can be increased. Fourth, management could investigate hiring another company with such a milling machine to do some of the work.

The Foundational 15

1. The budgeted sales for July are computed as follows:

Unit sales (a)	10,000
Selling price per unit (b)	\$70
Total sales (a) × (b)	\$700,000

2. The expected cash collections for July are computed as follows:

	<i>July</i>
June sales:	
\$588,000 × 60%	\$352,800
July sales:	
\$700,000 × 40%	<u>280,000</u>
Total cash collections	<u>\$632,800</u>

3. The accounts receivable balance at the end of July is:

July sales (a).....	\$700,000
Percent uncollected (b).....	60%
Accounts receivable (a) × (b).....	\$420,000

4. The required production for July is computed as follows:

	<i>July</i>
Budgeted sales in units.....	10,000
Add desired ending inventory*	<u>2,400</u>
Total needs	12,400
Less beginning inventory**	<u>2,000</u>
Required production	<u>10,400</u>

*August sales of 12,000 units × 20% = 2,400 units.

**July sales of 10,000 units × 20% = 2,000 units.

The Foundational 15 (continued)

5. The raw material purchases for July are computed as follows:

	<i>July</i>
Required production in units of finished goods.....	10,400
Units of raw materials needed per unit of finished goods	<u>5</u>
Units of raw materials needed to meet production	52,000
Add desired units of ending raw materials inventory*	<u>6,100</u>
Total units of raw materials needed	58,100
Less units of beginning raw materials inventory**	<u>5,200</u>
Units of raw materials to be purchased	<u><u>52,900</u></u>

*61,000 pounds \times 10% = 6,100 pounds.

**52,000 pounds \times 10% = 5,200 pounds.

6. The cost of raw material purchases for July is computed as follows:

Units of raw materials to be purchased (a)	52,900
Unit cost of raw materials (b)	\$2.00
Cost of raw materials to be purchased (a) \times (b)	\$105,800

7. The estimated cash disbursements for materials purchases in July is computed as follows:

	<i>July</i>
June purchases:	
\$88,880 \times 70%	\$62,216
July purchases:	
\$105,800 \times 30%	<u>31,740</u>
Total cash disbursements	<u><u>\$93,956</u></u>

8. The accounts payable balance at the end of July is:

July purchases (a)	\$105,800
Percent unpaid (b).....	70%
Accounts payable (a) \times (b)	\$74,060

The Foundational 15 (continued)

9. The estimated raw materials inventory balance at the end of July is computed as follows:

Ending raw materials inventory (pounds) (a)	6,100
Cost per pound (b)	\$2.00
Raw material inventory balance (a) × (b)	\$12,200

10. The estimated direct labor cost for July is computed as follows:

	<i>July</i>
Required production in units.....	10,400
Direct labor hours per unit	<u>× 2.0</u>
Total direct labor-hours needed (a) ..	20,800
Direct labor cost per hour (b)	\$15
Total direct labor cost (a) × (b)	<u>\$312,000</u>

11. The estimated unit product cost is computed as follows:

	<i>Quantity</i>	<i>Cost</i>	<i>Total</i>
Direct materials	5 pounds	\$2 per pound	\$10.00
Direct labor	2 hours	\$15 per hour	30.00
Manufacturing overhead	2 hours	\$10 per hour	<u>20.00</u>
Unit product cost.....			<u>\$60.00</u>

12. The estimated finished goods inventory balance at the end of July is computed as follows:

Ending finished goods inventory in units (a)	2,400
Unit product cost (b)	\$60.00
Ending finished goods inventory (a) × (b)	\$144,000

The Foundational 15 (continued)

13. The estimated cost of goods sold for July is computed as follows:

Unit sales (a)	10,000
Unit product cost (b)	\$60.00
Estimated cost of goods sold (a) × (b).....	\$600,000

The estimated gross margin for July is computed as follows:

Total sales (a)	\$700,000
Cost of goods sold (b)	<u>600,000</u>
Estimated gross margin (a) – (b).....	<u>\$100,000</u>

14. The estimated selling and administrative expense for July is computed as follows:

	<i>July</i>
Budgeted unit sales	10,000
Variable selling and administrative	
expense per unit.....	× <u>\$1.80</u>
Total variable expense	\$18,000
Fixed selling and administrative expenses ..	<u>60,000</u>
Total selling and administrative expenses...	<u>\$78,000</u>

15. The estimated net operating income for July is computed as follows:

Gross margin (a)	\$100,000
Selling and administrative expenses (b)	<u>78,000</u>
Net operating income (a) – (b).....	<u>\$ 22,000</u>

Exercise 8-1 (20 minutes)

1.	<i>April</i>	<i>May</i>	<i>June</i>	<i>Total</i>
February sales:				
\$230,000 × 10%	\$ 23,000			\$ 23,000
March sales: \$260,000				
× 70%, 10%	182,000	\$ 26,000		208,000
April sales: \$300,000 ×				
20%, 70%, 10%	60,000	210,000	\$ 30,000	300,000
May sales: \$500,000 ×				
20%, 70%		100,000	350,000	450,000
June sales: \$200,000 ×				
20%			<u>40,000</u>	<u>40,000</u>
Total cash collections	<u>\$265,000</u>	<u>\$336,000</u>	<u>\$420,000</u>	<u>\$1,021,000</u>

Notice that even though sales peak in May, cash collections peak in June. This occurs because the bulk of the company's customers pay in the month following sale. The lag in collections that this creates is even more pronounced in some companies. Indeed, it is not unusual for a company to have the least cash available in the months when sales are greatest.

2. Accounts receivable at June 30:

From May sales: \$500,000 × 10%	\$ 50,000
From June sales: \$200,000 × (70% + 10%)	<u>160,000</u>
Total accounts receivable at June 30	<u>\$210,000</u>

1. Production budget:

	<i>July</i>	<i>August</i>	<i>Septem- ber</i>	<i>October</i>
Budgeted unit sales	35,000	40,000	50,000	30,000
Add desired units of ending finished goods inventory*	<u>11,000</u>	<u>13,000</u>	<u>9,000</u>	<u>7,000</u>

* October: 3,000 units + (20,000 units × 20%) = 7,000 units.

2. During July and August, the company is building inventories in anticipation of peak sales in September. Therefore, production exceeds sales during these months. In September and October, inventories are being reduced in anticipation of a forthcoming decrease in sales. Therefore, production is less than sales during these months.

Exercise 8-10 (continued)

3. Direct materials budget:

Units of raw materials to be purchased	<u>117,000</u>	<u>132,000</u>	<u>111,000</u>	<u>360,000</u>

* 28,000 units (October production) × 3 cc per unit = 84,000 cc;
84,000 cc × 1/2 = 42,000 cc.

As shown in part (1), production is greatest in September; however, as shown in the raw material purchases budget, purchases of materials are greatest a month earlier—in August. The reason for the large purchases of materials in August is that the materials must be on hand to support the heavy production scheduled for September.

Exercise 8-17 (continued)

- Students may be inclined to conclude that the financial projections in requirement 2 indicate a decline in performance for two reasons. First, the net operating income in the two scenarios is the same. Second, the total assets dropped by \$7,065.

This interpretation overlooks the importance of cash flows and working capital management. For professors wishing to explore this discussion further, we recommend computing and comparing the operating cycle (as discussed in the chapter titled Financial Statement Analysis) for requirements 1 and 2.

The accounts receivable turnover in requirement 1 is 1.70 ($\$156,000 \div \$91,800$). The average collection period is 17.65 days ($30 \text{ days} \div 1.70$). The inventory turnover is 3.27 ($\$108,000 \div \$33,075$). The average sale period is 9.17 days ($30 \div 3.27$). The operating cycle is 26.82 days (17.65 days + 9.17 days).

The accounts receivable turnover in requirement 2 is 1.86 ($\$156,000 \div \$84,000$). The average collection period is 16.13 days ($30 \text{ days} \div 1.86$). The inventory turnover is 4.95 ($\$108,000 \div \$21,825$). The average sale period is 6.06 days ($30 \div 4.95$). The operating cycle is 22.19 days (16.13 days + 6.06 days).

The operating cycle drops by 4.63 days in requirement 2.

Problem 8-22 (30 minutes)

1. The budget at Springfield is an imposed “top-down” budget that fails to consider both the need for realistic data and the human interaction essential to an effective budgeting/control process. The President has not given any basis for his goals, so one cannot know whether they are realistic for the company. True participation of company employees in preparation of the budget is minimal and limited to mechanical gathering and manipulation of data. This suggests there will be little enthusiasm for implementing the budget.

The sales by product line should be based on an accurate sales forecast of the potential market. Therefore, the sales by product line should have been developed first to derive the sales target rather than the reverse.

The initial meeting between the Vice President of Finance, Executive Vice President, Marketing Manager, and Production Manager should have been held earlier. This meeting was held too late in the budget process.

2. Springfield should consider adopting a “bottom-up” budget process. This means that the people responsible for performance under the budget would participate in the decisions by which the budget is established. In addition, this approach requires initial and continuing involvement of sales, financial, and production personnel to define sales and profit goals that are realistic within the constraints under which the company operates. Although time consuming, the approach should produce a more acceptable, honest, and workable goal-control mechanism.

The sales forecast should be developed considering internal sales-forecasts as well as external factors. Costs within departments should be divided into fixed and variable, controllable and noncontrollable, discretionary and nondiscretionary. Flexible budgeting techniques could then allow departments to identify costs that can be modified in the planning process.

Problem 8-22 (continued)

3. The functional areas should not necessarily be expected to cut costs when sales volume falls below budget. The time frame of the budget (one year) is short enough so that many costs are relatively fixed. For costs that are fixed, there is little hope for a reduction as a consequence of short-run changes in volume. However, the functional areas should be expected to cut costs should sales volume fall below target when:
- a. control is exercised over the costs within their function.
 - b. budgeted costs were more than adequate for the originally targeted sales, i.e., slack was present.
 - c. budgeted costs vary to some extent with changes in sales.
 - d. there are discretionary costs that can be delayed or omitted with no serious effect on the department.

Problem 8-26 (45 minutes)

1. a. The reasons that Marge Atkins and Pete Granger use budgetary slack include the following:

- These employees are hedging against the unexpected (reducing uncertainty/risk).
- The use of budgetary slack allows employees to exceed expectations and/or show consistent performance. This is particularly important when performance is evaluated on the basis of actual results versus budget.
- Employees are able to blend personal and organizational goals through the use of budgetary slack as good performance generally leads to higher salaries, promotions, and bonuses.

b. The use of budgetary slack can adversely affect Atkins and Granger by:

- limiting the usefulness of the budget to motivate their employees to top performance.
- affecting their ability to identify trouble spots and take appropriate corrective action.
- reducing their credibility in the eyes of management.

Also, the use of budgetary slack may affect management decision-making as the budgets will show lower contribution margins (lower sales, higher expenses). Decisions regarding the profitability of product lines, staffing levels, incentives, etc., could have an adverse effect on Atkins' and Granger's departments.

Problem 8-26 (continued)

2. The use of budgetary slack, particularly if it has a detrimental effect on the company, may be unethical. In assessing the situation, the specific standards contained in “Standards of Ethical Conduct for Management Accountants” that should be considered are listed below.

Competence

Clear reports using relevant and reliable information should be prepared.

Confidentiality

The standards of confidentiality do not apply in this situation.

Integrity

- Any activity that subverts the legitimate goals of the company should be avoided.
- Favorable as well as unfavorable information should be communicated.

Objectivity

- Information should be fairly and objectively communicated.
- All relevant information should be disclosed.

Case 8-32 (45 minutes)

1. The budgetary control system has several important shortcomings that reduce its effectiveness and may cause it to interfere with good performance. Some of the shortcomings are explained below.
 - a. *Lack of Coordinated Goals.* Emory had been led to believe high-quality output is the goal; it now appears low cost is the goal. Employees do not know what the goals are and thus cannot make decisions that further the goals.
 - b. *Influence of Uncontrollable Factors.* Actual performance relative to budget is greatly influenced by uncontrollable factors (i.e., rush orders, lack of prompt maintenance). Thus, the variance reports serve little purpose for performance evaluation or for locating controllable factors to improve performance. As a result, the system does not encourage coordination among departments.
 - c. *The Short-Run Perspectives.* Monthly evaluations and budget tightening on a monthly basis results in a very short-run perspective. This results in inappropriate decisions (i.e., inspect forklift trucks rather than repair inoperative equipment, fail to report supplies usage).
 - d. *System Does Not Motivate.* The budgetary system appears to focus on performance evaluation even though most of the essential factors for that purpose are missing. The focus on evaluation and the weaknesses take away an important benefit of the budgetary system—employee motivation.
2. The improvements in the budgetary control system should correct the deficiencies described above. The system should:
 - a. more clearly define the company's objectives.
 - b. develop an accounting reporting system that better matches controllable factors with supervisor responsibility and authority.
 - c. establish budgets for appropriate time periods that do not change monthly simply as a result of a change in the prior month's performance.

The entire company from top management down should be educated in sound budgetary procedures.
