HydraCradle Tank

HydraCradle Tank

HydraCradle Tank

1 - General Information

HydraMaster's latest addition to its accessory product line is the HydraCradle™ Tank, a 125-gallon rotomolded fresh water tank with an integrated multi-reel system. It is compatible with most truckmounts on the market and all of HydraMaster truckmounts, including slide-ins.

The HydraCradle Tank is an innovative combination of durable, rustproof rotomolded components and powder coated aluminum and stainless steel. Its one-piece, frameless self-venting design is virtually leakproof.

Standard features of the HydraCradle Tank include a 38" diameter, rotomolded vacuum hose reel which holds a full 250 ft* of 2" diameter vacuum hose.

* The amount of hose that conveniently fits onto each reel can be affected by the diameter of the hose, the type and size of cuffs or connections, and the pliability of the hose itself.

HydraCradle Tank

The 14" diameter, rotomolded solution hose reel, with a manual crank and an optional live center, holds up to 250 ft of solution hose or up to 50 ft. of garden hose.

A convenient toggle switch, located on the front of the unit, lets you automatically retract the vacuum hose when you are finished cleaning. The switch is protected by a relay which allows the unit to operate smoothly no matter how much resistance is on the hose while being retracted.

Also located on the front of the unit is an easily accessible fresh water fill connector. When the tank is full, the HydraCradle Tank's water fill sensor automatically shuts off the water, preventing spill over.

The centralized up-front electrical panel houses the pump-in pump, the pump's filter and 15 Amp fuse relay switch, and the 30 Amp fuse for the hose reel motor.

Although the HydraCradle Tank has been designed and built to give you years of reliable service, it still requires proper installation and operation, as well as regular maintenance. This Owner's Manual contains installation and operation instructions, and information required for proper maintenance. Please follow the instructions carefully and you will be rewarded with years of profitable, trouble-free operation.

It is imperative that no section be overlooked when preparing for operation of this equipment.

This section of the manual contains the following helpful information. If you are viewing the digital version of the manual, click on the bulleted items to access those subsections.

Contact Information

If you have any questions regarding the operation, maintenance or repair of this machine, please contact your local distributor.

To find a local distributor, please visit our website at
<https://hydramaster.com/dealer-locator/>

If your question cannot be resolved by your distributor or by the information within this manual, you may contact HydraMaster direct using the following phone numbers.

HOURS	TELEPHONE NUMBERS	E-MAIL ADDRESSES
Monday-Friday 7:00 a.m. to 5:00 p.m. Pacific Time	Technical Support (800) 426-1301 FAX : (800) 426-4225	Technical Support techsupport@hydramaster.com
	Customer Service/Parts (800) 426-1301 FAX : (800) 426-4225	Customer Service/Parts parts@hydramaster.com

When calling your distributor, be sure to reference the serial number and date of purchase.

HydraCradle Tank

Warnings, Cautions and Notices

WARNING

HydraMaster uses this WARNING symbol throughout the manual to warn of possible injury or death.

CAUTION

This CAUTION symbol is used to warn of possible equipment damage.

NOTICE

This NOTICE symbol indicates that federal or state regulatory laws may apply, and also emphasizes supplemental information.

HydraCradle Tank

Warnings and Cautions specific to the HydraCradle Tank include:

⚠ WARNING

HEARING PROTECTION: The Occupational Safety and Health Administration (OSHA) recommends the use of hearing protection when a technician is exposed to an average of 85 decibels (this is an average of exposure over an 8-hour period). The carpet cleaning equipment used in conjunction with the HydraCradle Tank can produce sound levels as high as 85 decibels to a distance of 10 ft (3 m). Please check with your local state agencies to see if OSHA standards apply to your application.

⚠ WARNING

MOVING PARTS: Never touch any part of the tank assembly or the reel that is in motion. Severe bodily injury may result.

⚠ WARNING

SECURING TANK TO VEHICLE: When the HydraCradle Tank is full of water, the tank can weigh more than a 1,000 lbs (454 kg). A sudden or crash stop will cause the machine to rocket forward if not properly secured. To prevent serious personal injury, ensure that the tank is well secured to the floor of the vehicle with the hardware supplied. Protect yourself and the machine.

CAUTION

HARD WATER PROTECTION: Failure to take appropriate measures to prevent scale build up can result in system failure and loss of warranty on affected parts. Test the water in your immediate and surrounding areas with hard water test strips. Assume all water obtained from wells is hard. If you are operating in a hard water area at 3.0 grains or more per gallon, use a water softening system.

CAUTION

FREEZE PROTECTION: Failure to take appropriate measures to prevent equipment damage due to freezing can result in system failure and loss of warranty on affected parts.

HydraCradle Tank

Tank Configuration

* Small reels can be configured with live solution or non-live garden hose, or both.

HydraCradle Tank

Specifications

HydraCradle		
Tank Capacity	125 gallons (473 litres)	
Tank Construction	Rotomolded LLDPE *	
Mounting Components	Stainless Steel and 5052-h32 Aluminum.	
Dimensions Configuration	47¼" H x 65" L x 34" W (120 cm x 165 cm x 86.4 cm)	
Weight (without hoses) Tank and one reel	195 lbs. (88.5 kg)	
Pump Fuse	15 Amp	
Hose Reel Motor Fuse	30 Amp	
Available		
Weight (without hoses) Tank with two reels	215 lbs. (97.5 kg)	
38" (96.5-cm) Diameter Vacuum Hose Reel - Standard - (for 2" (5.1-cm) Diameter Hose)	Maximum Capacity ***	250 ft. (76.2 m)
	Construction	Rotomolded LLDPE*
	Electrical Operation	Power Retraction - Standard
14" (35.6-cm) Diameter Hose Reels **		
Solution (for 1/4" [6.35-mm] Diameter Hoses)	Maximum Capacity	250 ft. (76.2 m)
	Construction	Rotomolded LLDPE
Garden (for 5/8" [15.9 mm] Diameter Hoses)	Maximum Capacity	50 ft. (15.2 m)
	Construction	Rotomolded LLDPE

* LLDPE = Linear Low Density Polyethylene

** Hose reels are offered with optional configurations; see the next subsection.

*** The amount of hose that conveniently fits onto each reel can be affected by the diameter of the hose, the type and size of cuffs or connections, and the pliability of the hose itself.

HydraCradle Tank

Configurations

Refer to the following table before placing your order for the HydraCradle Tank configurations.

HydraCradle Configurations	
Part #	Description
000-163-600L	Freshwater Tank (1 Solution Hose Reel LIVE)
000-163-601G	Freshwater Tank (1 Garden Hose Reel NON-LIVE)
000-163-606	Freshwater Tank (1 Solution Hose Reel LIVE, 1 Garden Hose Reel NON-LIVE)
000-163-631L	Custom Color Freshwater Tank (1 Solution Hose Reel LIVE)
000-163-632G	Custom Color Freshwater Tank (1 Garden Hose Reel NON-LIVE)
000-163-633	Custom Color Freshwater Tank (1 Solution Hose Reel LIVE, 1 Garden Hose Reel NON-LIVE)

The Freshwater HydraCradle Tank shipment includes the following components needed to install the tank:

- Pump-in pump barb insert, elbow and quick connect hardware
- Drain valve and PVC nipple
- Crank handle and fastening hardware for the 1st Hose Reel
- Fresh water tank mounting hardware (Tie Down Kit, PN: 000-078-200)
- 2 ring terminal connectors for the battery cables, and 2 quick connectors (1 female, 1 male) for the pump-in pump cable

Your shipment also includes the pump-in pump hose and the overflow hose that can be cut to the desired lengths.

If you decide to add one or both optional hose reels aftermarket, refer to the following table before placing your order.

HydraCradle Tank

Tank Configuration with Hose Reels

Part # 000-163-600L

- 125 Gallon Freshwater Tank
- 200-250' Feet Vacuum Hose Reel*
- 1 Solution Hose Reel LIVE

Part # 000-163-601G

- 125 Gallon Freshwater Tank
- 200-250' Feet Vacuum Hose Reel*
- 1 Garden Hose Reel NON LIVE

Part # 000-163-606

- 125 Gallon Freshwater Tank
- 200-250' Feet Vacuum Hose Reel*
- 1 Solution Hose Reel LIVE
- 1 Garden Hose Reel NON LIVE

* The amount of hose that conveniently fits onto each reel can be affected by the diameter of the hose, the type and size of cuffs or connections, and the pliability of the hose itself.

HydraCradle Tank

This page intentionally left blank.

HydraCradle Tank

Hoses

The vacuum hose and solution/garden hoses are purchased separately when you order a standard HydraCradle Tank. Refer to the following table to order hoses. Please note that you can mix or match colors for the vacuum and solution hoses; the garden hose is only available in green.

Part Number	Description
000-068-035	50-ft (15.2-m) Garden Hose, Green 5/8" (15.9-mm) Diameter
000-068-048	50-ft (15.2-m) Vacuum Hose, Orange with 2" (5.1-cm) Diameter; 000-052-168 Vacuum Hose Coupler *
000-068-053	150-ft (45.7-m) Solution Hose, Orange, 1/4" (6.35 mm) Diameter with 1/4" (6.35 mm) Insert and Bend Protectors
000-068-065	50-ft (15.2-m) Vacuum Hose, Blue with 2" (5.1-cm) Diameter; 000-052-168 Vacuum Hose Coupler *
000-068-206	150-ft (45.7-m) Solution Hose, Blue 1/4" (6.35-mm) Diameter with 1/4" (6.35 mm) Insert and Bend Protectors
000-068-815	100-ft (30.5-m) Solution Hose, Orange, 1/4" (6.35-mm) Diameter with 1/4" (6.35 mm) Insert and Bend Protectors
000-068-816	100-ft (30.5-m) Solution Hose, Blue 1/4" (6.35-mm) Diameter with 1/4" (6.35 mm) Insert and Bend Protectors

* For each 2 sections of 50-ft (15.2-m) vacuum hose ordered, order 1 hose coupler.

NOTICE

Each 250-ft (76.2-m) solution hose is a combination of one 150-ft (45.7-m) hose and one 100-ft (30.5-m) hose, connected with quick connectors. Combining shorter lengths of hose to make 250 ft (76.2 m) is not recommended; extra connectors would require more space than is available on the reel..

HydraCradle Tank

Responsibilities

Prior to the arrival of the unit, the vehicle in which the HydraCradle Tank will be installed should be delivered to the installer.

Purchaser's Responsibility

If you are the purchaser, it is your responsibility to read this Owner's Manual and to familiarize yourself with the information contained herein, paying special attention to all Warnings and Cautions.

Sales Representative's Responsibility

Acceptance of Shipment

1. If the HydraCradle Tank shows any outward signs of damage, do not sign the delivery receipt until you have closely inspected the unit and noted any damage on the delivery receipt.
2. The sales representative from whom you purchased your HydraCradle Tank is responsible for supervising the correct installation of the unit into your vehicle and thoroughly training you in its operation, maintenance and precautions.

Installation

- Correctly installing the HydraCradle Tank in your vehicle and securing it with bolts and tie down washers.
- Checking all water and vacuum connections including the vacuum reel rotation prior to starting the carpet cleaning unit.
- Checking all hoses, tools/wands and accessories for correct operation.

Training

- A thorough review of the Owner's Manual with the purchaser.
- Instruction in and familiarization with:
 1. How to correctly fill and drain the tank.
 2. How to correctly clean the tank.
 3. How the unit's systems work, how to troubleshoot the tank.
 4. How to do basic repairs.
 5. Safety precautions and their importance
 6. How to avoid freezing damage
 7. How to avoid hard water damage
- A thorough review of the unit warranty and warranty procedures.
- A thorough review of hard water precautions and warnings.
- How to determine hard water areas.
- Use of water softening systems.

HydraCradle Tank

Local Water Precautions

The quality of water varies greatly. Many areas have an excess of minerals in the water which results in what is commonly called “hard water.” These minerals tend to adhere to the insides of heater coils and other parts of the machines causing damage and a loss of cleaning effectiveness. This influences the reliability and efficiency of equipment in direct proportion to the level of hardness.

Hard Water Advisory

HydraMaster recognizes that any hard water deposits which might occur within the water system of our truckmounts and tanks is a serious problem. Hard water deposits will ultimately decrease the performance of the system and are expected to seriously lower the reliability of the machine.

To validate a machine’s warranty, HydraMaster requires that all machines operating in designated “Hard Water Areas” (3.0 grains or more per gallon) be fitted with a water softening system, or a properly installed magnetic-type descaler must be used and maintained. Periodic descaling or acid-rinsing alone is not adequate in these areas. HydraMaster does not recommend any particular type or brand; however, the relative effectiveness of some types of magnetic descalers or softeners may require additional periodic use of descaling agents.

HydraMaster also recommends, in the strongest possible terms, that machines in all areas be fitted with a water softening system for improved operation and reliability.

CAUTION

Failure to take appropriate measures to prevent scale build up can result in system failure and loss of warranty on affected parts.

HydraCradle Tank

Hard Water Area Map

The hard water map, shown in Figure 1-2, defines hard water areas in the lower 48 United States which compromise fluid related components such as hoses, fittings, pumps, and valves. For other countries, hard water area maps can be obtained from geological societies.

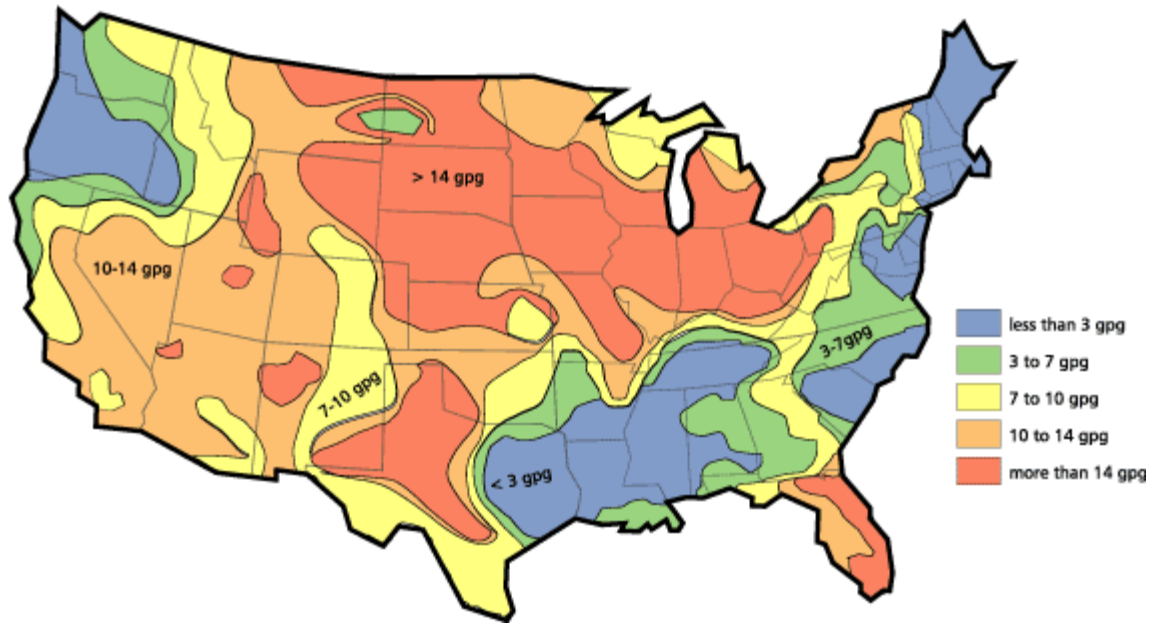

Figure 1-2. Hard Water Map of Mainland United States

NOTICE

The map shown in Figure 1-2 is provided for general reference only. Water hardness in your geographical location should be confirmed by testing.

HydraCradle Tank

Water Softener

Cleaning efficiency and equipment life is increased, chemical use decreased, and the appearance of cleaned carpets enhanced when water softeners are incorporated in hard water areas. HydraMaster strongly urges the use of water softener units with the HydraCradle Tank in areas exceeding 3.0 grains per gallon.

Failure to use a water softener in these areas will invalidate the tank's warranty. Referring to the hard water area map shown Figure 1-2, determine the quality of water in your area and take immediate action if the water hardness exceeds 3.0 grains per gallon.

The relatively low cost of a water softener service is more than made up for by an increased life of machine parts, reduced chemical costs and continued cleaning efficiency. The water softener will also increase the effectiveness of the cleaning chemicals, therefore less chemical will be needed.

For example: If the softener will treat 900 gallons of water and the machine uses an average of 30 gallons per hour, for an average of 5 hours a day, this equals 150 gallons per day. In 6 days the machine would use 900 gallons of water. Therefore, the softener would need to be charged every 6 working days for maximum softening.

Contact a water softener distributor in your area for information on the rental of a simple water treatment unit to carry in your vehicle. Be sure to charge the water softener in accordance with the capability of the softener.

HydraCradle Tank

This page intentionally left blank.

2 - Operating Instructions

This section of the HydraCradle Tank Owner's Manual includes information concerning:

- Start Up
- Daily Shut Down
- Shut Down for Extended Storage
- Freeze Guarding

If your HydraCradle Tank is configured with the Garden Hose Reel, Non-Live configuration, follow this connection procedure:

1. Unreel all the garden hose from the hose reel.
2. Disconnect the garden hose from the reel using the quick disconnect.
3. Connect the quick connect to the front of the HydraCradle Tank.
4. Connect the garden hose to a water source (outside house faucet).
5. Turn on the faucet to fill the tank.

CAUTION

When operating the HydraCradle Tank during the colder months of the year, ensure that you properly freeze guard the system. Failure to take appropriate measures to prevent equipment damage due to freezing can result in system failure and loss of warranty on affected parts.

NOTICE

Following the recommended HydraCradle Tank maintenance procedures will further extend the life of the HydraCradle Tank and also help ensure the best cleaning results.

HydraCradle Tank

Start Up

1. Ensure that all electrical cables, hoses and wands/tools have been properly connected.
2. Manually unwind the vacuum hose a few feet off of the vacuum reel, and press on the toggle switch to test for power retraction of the hose.

⚠ WARNING

Never touch the vacuum hose reel when it is in motion. Severe bodily injury may result.

3. Start the HydraMaster cleaning unit and begin the cleaning process as recommended in the cleaning unit's owner's manual.

Daily Shut Down

After finishing each cleaning job, follow the recommended procedure in the appropriate owner's manual for shutting down the HydraMaster cleaning unit and properly disposing of the recovered cleaning solution.

To shut down the HydraCradle Tank after daily use:

1. Clean out the vacuum hose and, pressing on the toggle switch, rewind the vacuum hose onto its reel.
2. Rewind the other hoses.
3. Place prespray bottles and cleaning tools/wands in the tank's storage area.

CAUTION

When operating the HydraCradle Tank during the colder months of the year, ensure that you properly freeze guard the system. Failure to take appropriate measures to prevent equipment damage due to freezing can result in system failure and loss of warranty on affected parts.

NOTICE

In colder climates, insulating the vehicle walls and floor boards will help protect the equipment.

NOTICE

When the van is not in operation, placing an electric heater in the vehicle or parking the vehicle indoors will help ensure against freezing, but should not be the primary method of freeze protection.

HydraCradle Tank

Shut Down for Extended Storage

If you want to shut down and store the HydraCradle Tank for an extended period of time:

1. Remove the hose from the pump-in pump connector, positioning the hose so it is pointing outside the van.
2. Turn on the pump-in pump and run for 1 - 2 minutes until all the water is purged from the hose.
3. Remove the recovery tank hose from the cleaning unit's recovery tank and the HydraCradle Tank; rinse with clean water and allow the recovery tank hose to drain.
4. Drain the remainder of the water in the tank by opening the drain valve (see Figure 2-3).
5. Manually unwind the vacuum hose and remove it from the reel, rinse the hose with clean water and allow it to drain before rewinding it on the reel.
6. Unwind the garden hose(s), detach from the reel(s) and completely drain the hose(s) before rewinding them onto the reel(s).
7. Remove and clean the filters as instructed in Section 5 of this Owner's Manual.
8. Place prespray bottles and cleaning tools/wands in the tank's storage area.

Figure 2-3 Turn Drain Valve

CAUTION

Failure to take appropriate measures to prevent equipment damage due to freezing can result in system failure and loss of warranty on affected parts.

HydraCradle Tank

Freeze Guarding

Water freezes at 32° F (0° C), but, to be on the safe side, you should protect your HydraCradle Tank and hoses for any temperature below 35° F (1.67° C).

CAUTION

When operating the HydraCradle Tank during the colder months of the year, ensure that you properly freeze guard the system. Failure to take appropriate measures to prevent equipment damage due to freezing can result in system failure and loss of warranty on affected parts.

The following precautions are recommended prior to and during cleaning:

1. Run the HydraMaster cleaning unit HydraCradle Tank before leaving for the first job to ensure nothing has frozen the night before, including hoses and tool/wand.
2. Drain the remainder of the water in the tank by opening the drain valve (see Figure 1-2).
3. Insulate the fresh water hose (that connects from the outside water faucet to the HydraCradle Tank) from the cold ground by routing the hose through an extra 1½" (3.8 cm) vacuum hose.
4. Close the van doors until you begin cleaning; afterwards, open the doors only slightly.

NOTICE

In colder climates, insulating the vehicle walls and floor boards will help protect the equipment.

5. Do not procrastinate during the cleaning operation or the hot water solution line will also freeze on the ground. The solution line should be insulated in extremely cold climates.
6. Whenever possible, store the van in a heated garage at night or over the weekend. If not possible, place a 1,500 Watt electric heater inside the vehicle, aimed directly at the equipment.
7. Follow steps detailed in the preceding Daily Shut Down procedure.

NOTICE

When the van is not in operation, placing an electric heater in the vehicle or parking the vehicle indoors will help ensure against freezing, but should not be the primary method of freeze protection.

HydraCradle Tank

3 - Electrical System

The HydraCradle's electrical system has been designed to be powered just by the vehicle's or truckmount's 12 V battery (see Figure 3-2). No special power sources are required.

Although the electrical configuration is fairly straightforward and easy to follow as you can see in Figure 3-2, you should note the following if you are the distributor, installer or service technician:

If installing the HydraCradle tank in a van with a HydraMaster truckmount:

- The white/black pump-in pump cable connects to the white/black cable on the truckmount.
- The grey pump-in pump cable connects to the grey cable on the truckmount.

If installing the HydraCradle tank in a van with a HydraMaster CDS:

- The white/black pump-in pump cable connects to the white cable on the CDS.
- The grey pump-in pump cable connects to the yellow cable on the CDS.

Also, the HydraCradle's 2 fuses (15 Amp for the pump-in pump and 30 Amp for the toggle switch/gear motor), indicated in Figure 3-2, are both easily accessible from the front panel of the HydraCradle.

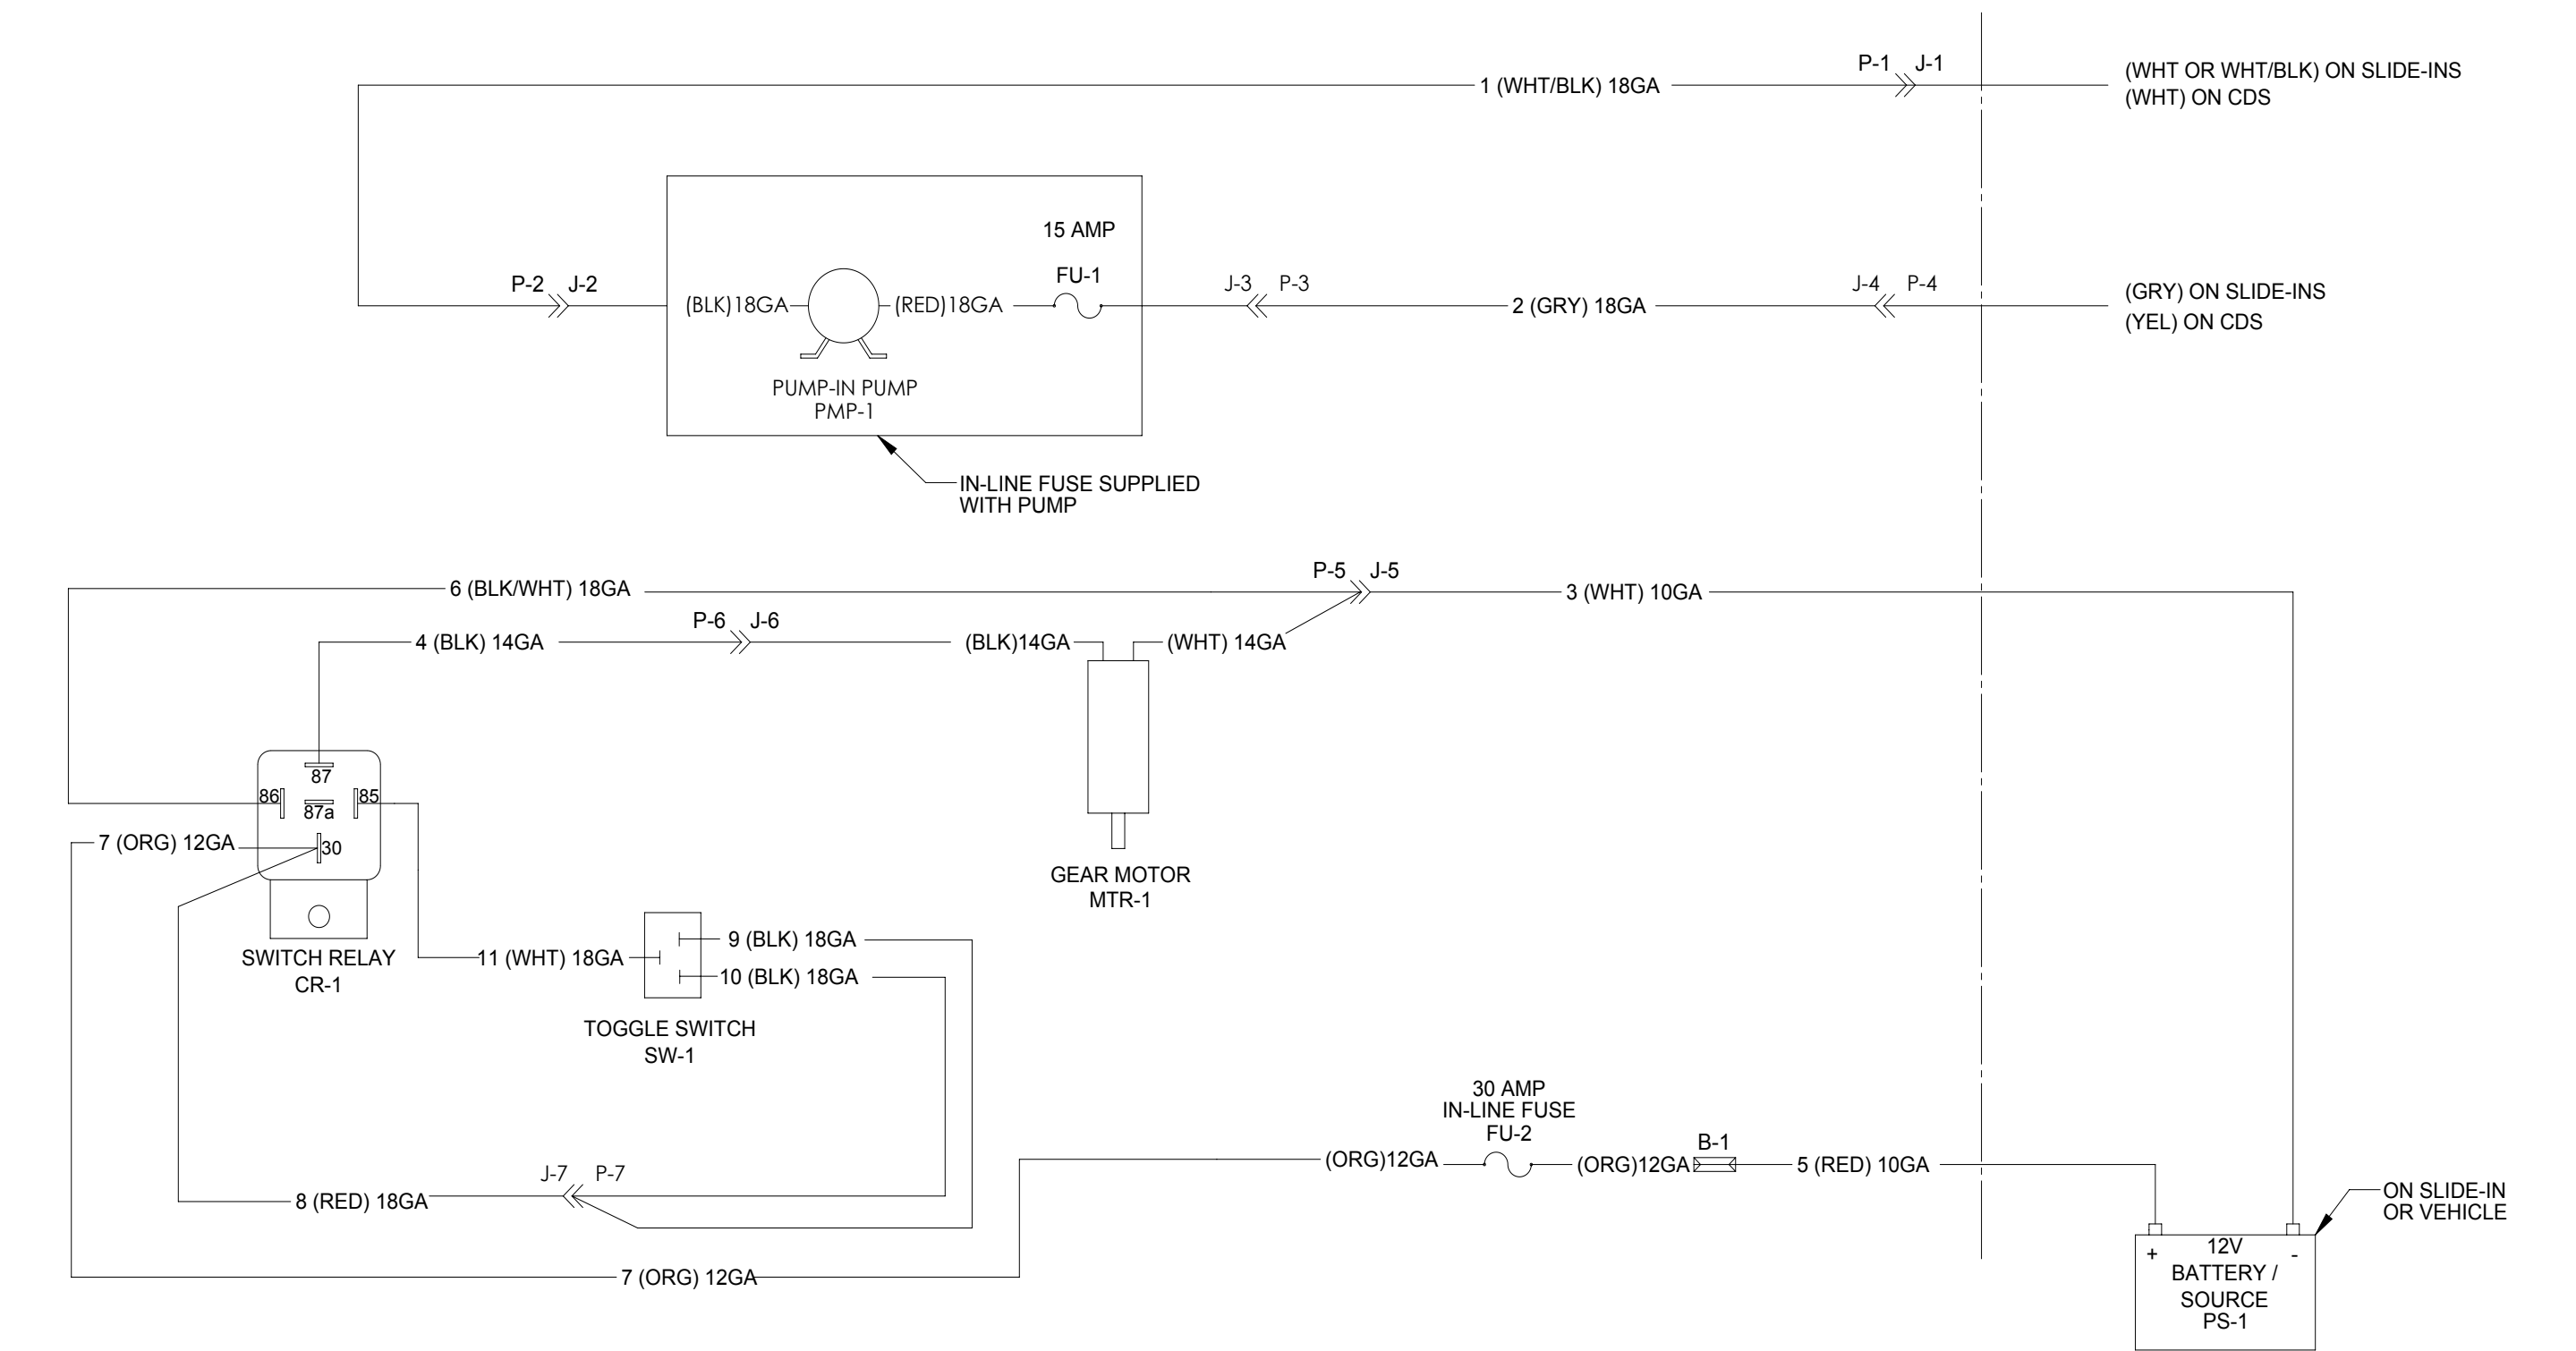

Figure 3-2, which shows a layout of the HydraCradle's wiring harness, has been included in this manual as a convenient reference and also to provide more connection details for distributors/installers.

NOTICE

A spare fuse (P/N 000-056-011) in a bag is also included in the Cable Harness parts.

HydraCradle Tank

Figure 3-2 Wiring Diagram
000-179-044 Rev. D

4 - Assemblies and Parts Lists

This section of the manual provides detailed illustrations and parts lists for the following assemblies.

NOTICE

When ordering parts for assemblies, first refer to the appropriate assembly listed here and then find the part number listed on that specific page. In most cases, you do not have to order the entire assembly to get a part.

If you have an electronic copy (a .pdf) of this manual, you can search for the part number by pressing the **CTRL** key and the **F** key at the same time. This will “pop up” the Find window on your monitor. Type the part number, including dashes, into the Find window and press the **Enter** key.

5 - Maintenance and Troubleshooting

To avoid costly repairs and down-time, it is imperative to develop and practice good maintenance procedures. Periodic procedures fall into daily and weekly increments, and are outlined in this section. All recommended maintenance must be performed by competent service personnel.

This section is divided into the following topics:

- Operational Maintenance
- Appearance Maintenance
- Troubleshooting

Operational Maintenance

This section contains recommendations for maintenance that will affect the service life of your HydraCradle. HydraMaster recommends that you follow maintenance schedules as stated.

Belt Tension

Each month, check the tension on the V belt by:

1. Removing power from the HydraCradle by detaching the HydraCradle's battery cables from the 12 V battery.
2. Removing the 5 screws and 5 washers that secure the belt cover to the HydraCradle frame and then remove the belt cover.
3. Pressing in on the V belt to test the tension. If the belt can be pressed in more than 1" (25.4 mm), it needs to be tightened.
4. After checking and/or adjusting the belt, re-attach the belt cover frame and re-apply power.

HydraCradle Tank

Pump-in Pump Filter Check

Remove, inspect and clean the pump-in pump filter on at least a monthly basis.

1. If the tank is not empty, drain it by opening the drain valve.

NOTICE

If the tank is not drained prior to changing the filter, water will drain from the filter opening when the filter is removed.

2. Remove, inspect and clean the pump-in pump filter.

Unscrew See-through Cap (Left Photo);
Remove and Inspect Filter (Right Photo)

NOTICE

For easier access to the cap, you have the option of removing the pump access cover first, as shown below, using a 7/16" (11 mm) wrench.

Remove Pump Access Cover

HydraCradle Tank

Descaling

Scale deposits on the interior of the HydraCradle can cause a noticeable loss in performance. Deposits of this kind result from hard water deposits. The frequency with which descaling procedures are required will vary. If your area has particularly hard water or you see evidence of deposits in the HydraCradle and the solution/garden hoses, you may have to descale monthly.

To descale your system:

1. Add an appropriate descaler chemical to your HydraCradle.
2. Pump the descaler through the HydraCradle system according to the directions on the descaler container's label.
3. Flush and repeat as necessary.
4. Clean the pump-in pump filter and check it frequently following descaling.

Appearance Maintenance

Maintaining the original appearance of your HydraCradle is important for two reasons:

1. It represents a big dollar investment for your cleaning business and its appearance should reflect that fact. A dirty machine does not look professional.
2. Maintenance, troubleshooting and repair is much easier to accomplish on a clean, well-maintained unit. Regular cleaning of the tank offers you an opportunity to visually inspect all parts of the tank and spot potential problems before they occur.

The following maintenance is recommended at the frequency indicated:

Daily

- Wipe tank thoroughly with a damp cloth.
- Wipe down hoses as needed.

Weekly

- Visually inspect hoses for cuts and abrasions.
- Thoroughly clean hoses.
- Remove large debris which may have accumulated under the vacuum hose, at the bottom of the tank, and wipe away any remaining smaller debris.

HydraCradle Tank

Troubleshooting

1.0. No vacuum hose retraction - toggle switch will not power on

Solution	Probable Cause
1.1 Check toggle switch	Connections are not secure; reseal connectors.
	Check continuity on toggle switch cables; if defective, replace toggle switch.
1.2. Check hose reel motor	30 Amp fuse is bad; replace fuse.
	Drive belt is loose or broken; adjust or replace belt.
1.3. Check battery	Battery is weak or dead; replace battery.
	Battery connections are not tight; reseal connectors
	Check continuity on battery cables; if defective, repair or replace.

2.0. Pump-in pump does not power on

Solution	Probable Cause
2.1. Check pump-in pump motor.	15 Amp fuse is bad; replace fuse.
	Cable connections are not secure; reseal connectors.
	Check continuity on cables; if defective, repair or replace cables
2.2. Check battery.	Battery is weak or dead; replace battery.
	Battery connections are not tight; reseal connectors
	Battery cables may be bad; if defective, replace.

3.0. Solution/garden hoses losing pressure or have no pressure

Solution	Probable Cause
3.1 Quick connects may have come loose.	Tighten or replace as necessary.
3.2 Hoses may be leaking.	Repair or replace as necessary.

HydraCradle Tank

4.0. HydraCradle Tank is empty or fills slowly

Solution	Probable Cause
4.1. No water coming from source.	Check water supply at the house faucet or water's source.
4.2 There is a restriction in the water supply system.	Inspect the supply system from the source through the incoming quick connect for kinks, clogs or restricted filters. Clean or repair as necessary.
4.3. The float valve in the tank has jammed or is stuck open.	Remove the round cover on the rear of the tank; determine the cause of the obstruction and remove it from the tank..
4.4. The float valve in the tank is defective.	Replace float valve.

5.0. HydraCradle Tank overflows

Solution	Probable Cause
5.1. There is a restriction in the drainage system.	Inspect the drain line for kinks or clogs. Clean or repair as necessary.
5.2. The float valve in the tank has jammed or is stuck open.	Remove the round cover on the rear of the tank; determine the cause of the obstruction and remove it from the tank.
5.3. The float valve in the tank is defective.	Replace float valve.

6 - How to Order Parts

To order warranty replacement parts or repairs, it is important that you read this section which includes:

- Warranty Parts Orders
- Parts Orders
- Emergencies

Warranty Parts Orders

1. Call the local distributor where you purchased your equipment and ask for the Service Department.
2. Have the following information ready:
 - a. Date of Purchase
 - b. Description of Malfunction
3. Once it has been determined which parts are needed to correct the problem with your machine, make arrangements with your distributor to either perform the repairs or ship the parts to you.

Any questions you have regarding the warranty program should be directed to the Customer Care Department at (800) 426-1301, 8 a.m. to 5 p.m. Monday through Friday (PT).

We shall always endeavor to be fair in our evaluation of your warranty claim and shall provide you with a complete analysis of our findings.

HydraMaster warranty covers only defective materials and/or workmanship for the periods listed. Diagnostic reimbursement is specifically excluded.

Parts Orders

Call your local distributor. In most instances, they either stock or have access to parts through a regional service center.

Emergencies

If, for any reason, your distributor is unable to supply you with the necessary parts, they may call us and arrange for expedited shipping.

HydraMaster sells parts only through authorized distributors and service centers.

7 - Warranty Information

To avoid misunderstandings which might occur between machine owners and the manufacturer, we are listing causes of component failure that specifically voids warranty coverage. Such causes listed in this section shall constitute abuse or neglect.

Pump

- Failure to protect pump-in pump against freezing.
- Failure to use water softener in hard water areas.

Vacuum and Solution Hoses

- Failure to protect hoses against freezing.
- Failure to protect hoses against burns from engine and blower exhaust.
- Damage to hoses from being run over by vehicles.
- Kinking or cracking from failure to store or unroll hoses correctly.
- Normal wear and tear from everyday use.

Hard Water Deposits

- Failure to use or maintain a water softening system or a properly installed magnetic-type descaler, whichever might be necessary, with machines operating in designated "Hard Water Areas" (3.0 grains or more per gallon).

Warranty Procedure

Warranty coverage is available to you through your local distributor.

If you have moved to a new area or have purchased a used machine and need information regarding your local distributor, call HydraMaster at (800) 426-1301 or email us at: techsupport@hydramaster.com.

When calling your distributor, be sure to have the machine's information; model and serial number, ready for the service representative.

8 - Accessories

HydraMaster's machine accessories are the most innovative collection available in the cleaning industry.

The full line of machines, accessories and chemicals can enhance cleaning performance while reducing your labor costs, and include:
