PREFACE FOR VOLUME 2

This document provides quick reference information for the current HP Vectra product line. It is intended to be used by HP-qualified service personnel to help with the installation, servicing, and repair of HP Vectra personal computers.

HP Vectra products covered by this handbook are listed below:

286 Vectra PCs

- HP Vectra 286/12 PC

386 Vectra PCs

- HP Vectra QS PC Series
- HP Vectra 386/25 PC
- HP Vectra 386N PC Series
- HP Vectra 386/33N & NI PC Series
- HP Vectra 386s PC Series
- HP Vectra RS PC Series

486 Vectra PCs

- HP Vectra 486 & 486T PC Series
- HP Vectra 486ST PC Series
- HP Vectra 486s/20 PC
- HP Vectra 486U PC Series
- HP Vectra 486N PC Series
- HP Vectra 486N & NI PC Series
- HP Vectra 486N2 PC Series
- HP Vectra 486M & MI PC Series
- HP Vectra 486VL PC Series
- HP Vectra 486XM PC Series
- HP Vectra M2 PC Series
- HP Vectra VE 4/xx PC Series
- HP Vectra VL2 & VL2e PC Series
- HP Vectra XM2 PC Series

The Vectras listed below are beyond their guaranteed support life. Use the edition of the PC Service Handbook listed to find information about these PCs.

HP Vectra ES and ES/12 PCs	8th Edition (5963-6103)
HP Vectra QS/16	7th Edition (5963-3468)

WHAT'S IN VOLUME 1?

All Pentium and Pentium Pro based Vectra PCs are covered in Volume 1. For the detailed list of Vectras covered in Volume 1, refer to the back cover of Volume 1.

INFORMATION ON VECTRA 500 SERIES

For information on HP Vectra 500 Series PCs and accessories, refer to the Vectra 500 Service Handbook 5063-7985.

WHAT'S NEW IN THIS EDITION?

This edition is split into two separate volumes and has a completely new layout. This volume (Volume 2) contains the 286, 386 and 486 based Vectra PCs. Volume 1 contains the Pentium™ and Pentium™ Pro based Vectra PCs.

For the list of Vectra PCs new in this edition, refer to Volume 1.

Each Vectra is described in its own chapter. The contents of each chapter are organized as follows:

- Models and Accessories
- System Board, BIOS/Setup and Memory
- Part Numbers

There are four appendices that contain information that applies to all Vectras in this volume.

- A HP Vectra POST Routine and Error Codes
- B HP Vectra Hardware IRQs and Memory Map
- C HP Utilities and Operating System Quick Reference
- D HP Vectra PC Service Notes

Service notes which have become inactive have been removed from this edition. For information on HP LAN Servers refer to their service documentation.

A revision bar indicates the changes made to the manual.

INTRODUCTION

This chapter provides information on the HP Bulletin Board System (BBS), the tools required for servicing HP Vectra PCs, and gives an overview of the Vectra PCs described in this volume. (To see which Vectras are described in each volume, refer to the quick reference lists on the back cover of each volume.)

A list of model numbers for the Vectras described in this volume is given in the last section of this chapter.

HP ELECTRONIC SERVICES

HP operates electronic services that can be accessed by HP Support personnel. These services include an electronic bulletin board system (BBS), a World Wide Web site, and an FTP site. The FTP site is accessible via the World Wide Web as well as through the Internet.

HP Electronic Services can be used to obtain patches, drivers, and system utilities. If a BIOS upgrade is available from HP Electronic Services, it is indicated in the handbook by 'Refer to HP Electronic Services' or 'Refer to HP internal BBS'. Contact your HP Support Organization for more information.

Connecting to the HP BBS:

Number:	+1 (208) 344-1691
Baud Rate:	300, 1200, 2400, 4800, 9600, 14400

Connecting to the HP World Wide Web:

World Wide Web:	www.hp.com/go/vectra
-----------------	--

Connecting to the HP FTP site via the Internet:

Alias:	ftp-boi.external.hp.com
Name:	anonymous
Password:	<Enter your email address>

Connecting to the HP FTP site via a World Wide Web browser:

FTP site via WWW:	ftp://ftp.hp.com
-------------------	---

TOOLS REQUIRED FOR SERVICING HP VECTRA PCS

The tools required to service the equipment described in this manual include:

- Electrically Conductive Field Service Kit (P/N 9300-1155)
- CE Peripheral Exerciser Disk Kit (45935-63210)
- Datacomm Test Hood, 9-Pin (24540-60010)
- Datacomm Test Hood, 25-Pin parallel (24540-60011)
- Datacomm Test Hood, 25-Pin serial (02620-60062)
- 1/4-Inch Flat Blade Screwdriver
- ACX-15 Torx Screwdriver
- PLCC IC Extractor (5041-2553)

OVERVIEW OF VECTRA PCS IN THIS VOLUME

286 Vectra PCs

<u>Vectra Model</u>	<u>Micro-processor</u>	<u>Co-processor</u>	<u>Accessory Slots*</u>	<u>Disk Controller</u>	<u>Video Controller</u>	<u>Max. RAM</u>
Classic Desktop Vectras (three shelves for disks)						
286/12 PC						
286/12	286-12	287-12	One 8-bit & four 16-bit ISA slots	ST-506 or IDE board	Integrated Super VGA (256 KB)	8 MB (on memory board)

*Accessory slots may be occupied by a disk controller board and a video board.

386 Vectra PCs

<u>Vectra Model</u>	<u>Micro-processor</u>	<u>Co-processor</u>	<u>Accessory Slots*</u>	<u>Disk Controller</u>	<u>Video Controller</u>	<u>Max. RAM</u>
Classic Desktop Vectras (three shelves for disks)						
QS PCs						
QS/16S	386SX-16	387SX-16 or 387SL	One 8-bit & six 16-bit ISA slots	ST-506, or IDE** or ESDI** board	VGA or Super VGA board	8 MB
QS/20	386DX-20	387DX-20				16 MB***
386/25 PC						
286/12	286-12	287-12	One 8-bit & four 16-bit ISA slots	ST-506 or IDE board	Integrated Super VGA (256 KB)	8 MB (on memory board)
Low-Profile Desktop Vectras (two shelves for disks)						
386/16N, 386/20N, 386/25N PCs						
386/16N	386SX-16	387SX-16 or 387SL	Three 16-bit ISA slots	Integrated IDE	Integrated Super VGA (256 KB)	16 MB
386/20N	386SX-20	387SX-20 or 387SL				
386/25N	386SX-25	387SX-25 or 387SL				

*Accessory slots may be occupied by a disk controller board and a video board.

**ST: Seagate Technology; IDE: Integrated Drive Electronics, also known as embedded AT; ESDI: Enhanced Small Device Interface.

*** (8 MB on processor board and 8 MB on memory board).

386 Vectra PCs (continued)

<u>Vectra Model</u>	<u>Micro-processor</u>	<u>Co-processor</u>	<u>Accessory Slots*</u>	<u>Disk Controller</u>	<u>Video Controller</u>	<u>Max. RAM</u>
Low-Profile Desktop Vectras (two shelves for disks)						
386/33N & NI PC Series						
386/33N & NI**	386SX-33	387SL Cyrix®	Three 16-bit ISA slots	Integrated IDE	Integrated Ultra VGA+ (512 KB, upgradable to 1 MB)	16 MB
Full-Height Desktop Vectras (four shelves for disks)						
386s PC						
386s/20	386SX-20	387SX-20 or 387SL	Five 16-bit ISA slots	Integrated IDE	Integrated Super VGA (256 KB, upgradable to 512 KB)	16 MB
386s/25	386SX-25	387SX-25 or 387SL				
Deskside Vectras (six shelves for disks)						
RS PCs						
RS/16	386DX-16	387DX or Weitek 3167	Two 8-bit & six 16-bit ISA	ST-506, or ESDI, or high-perf	VGA board	16 MB
RS/20	386DX-20			ESDI, or		
RS/25	386DX-25			ESDI, or IDE		
RS/33	386DX-33			board		

*Accessory slots may be occupied by a disk controller board and a video board.

**The Vectra 386/33NI system boards have an integrated LAN adapter.

486 Vectra PCs

<u>Vectra Model</u>	<u>Micro-processor</u>	<u>Co-processor</u>	<u>Accessory Slots*</u>	<u>Disk Controller</u>	<u>Video Controller</u>	<u>Max. RAM</u>
Deskside Vectras (six shelves for disks)						
486/25 PC and 486T PCs						
486/25	486DX-25	Integrated in 486DX processor. Plus Weitek4167 on 486/33T	Eight 32-bit EISA slots	Integrated IDE	None	64 MB
486/25T	486DX-25					
486/33T	486DX-33					
486ST PCs						
486/33ST	486DX-33	Integrated in 486DX processor	Eight 32-bit EISA slots	Integrated IDE	Integrated Ultra VGA+ (512 KB, upgradable to 1 MB)	64 MB
486/66ST	486DX2-66					
Full-Height Desktop Vectras (four shelves for disks)						
486s/20 PC						
486s/20	486SX-20	487SX-20	Five 32-bit EISA slots	Integrated IDE	Ultra VGA board	64 MB
486U PC Series						
486/25U	486SX-25	487SX-25	Five 32-bit EISA slots	Integrated IDE	Integrated Ultra VGA+ (512 KB, upgradable to 1 MB)	64 MB
486/33U	486DX-33	Integrated in 486DX processor				
486/50U						
486/66U						
Low-Profile Desktop Vectras (two shelves for disks)						
486N (D26xxA) 486N & NI (D27xxA) PC Series**						
486/25N & NI	486SX-25	487SX-25	Three 16-bit ISA slots	Integrated IDE	Integrated Ultra VGA+ (512 KB, upgradable to 1 MB)	48 MB
486s/33N & NI	486SX-33	487SX-33				
486/33N & NI	486DX-33	Integrated in 486DX processor				
486/50N	486DX2-50					
486/66N	486DX2-66					

*Accessory slots may be occupied by a disk controller board and a video board.

**The Vectra NI has an integrated LAN adapter.

486 Vectra PCs (Continued)

<u>Vectra Model</u>	<u>Micro-processor</u>	<u>Co-processor</u>	<u>Accessory Slots*</u>	<u>Disk Controller</u>	<u>Video Controller</u>	<u>Max. RAM</u>
Low-Profile Desktop Vectras (two shelves for disks)

SETUP AND BIOS HISTORY

Setup version "C.xx.xx" is used on Vectra 286/12 PCs.

BIOS Ver.	Date	Description	Kit Part No.	Min Setup
H.03.01	Mar 90	First release	-	C.02.00
H.03.02	Nov 90	Second release	-	
H.03.03	Dec 90	Support for floppy-less config & VMI video board Fix spelling error in an invalid Real Time Clock message	-	C.02.00
H.03.04	Dec 91	Change to revision of video BIOS*	5062-1319	

*Vectra 286/12 video BIOS: refer to notes in appendix D.

MAIN MEMORY EXTENSION BOARD (D2401A)

The HP Vectra 286/12 PC system board has 1 MB of main memory. The HP D2401A Main Memory Extension Board can be installed in slot 6 to add up to 8 MB of main memory to the HP Vectra 286/12 PC.

D2401A Vectra 286/12 Main Memory Extension Board

Main Memory Configuration									
For a TOTAL mem of:	Install Memory Modules in these banks (each bank has two sockets):								Using This Kit(s):
	A	A	B	B	C	C	D	D	
2 MB					256 KB	256 KB	256 KB	256 KB	1 1-MB kit
3 MB					1 MB	1 MB			1 2-MB kit
5 MB					1 MB	1 MB	1 MB	1 MB	2 2-MB kits
6 MB*	1 MB	1 MB	1 MB	1 MB	1 MB	1 MB			3 2-MB kits
8 MB	1 MB	1 MB	1 MB	1 MB	1 MB	1 MB	1 MB	1 MB	4 2-MB kits

*For 6 MB or 8 MB, the original 1 MB on the system board is automatically ignored.

HP VECTRA 286/12 PC 800×600 EXTENDED SUPER VGA MODE USERS

1. The new video BIOS version of the Vectra 286/12 PC (version 7.04) includes changes to the vertical refresh rate of the video display. This code is included in the BIOS ROM versions H.03.04 and higher.

In this version, the refresh rate for 800x600 modes is now 60 Hz instead of 56 Hz. This requires displays capable of running a 38 KHz horizontal scan rate.

As a result, some displays may no longer work. A known product having this problem is the NEC 2A monitor.

For users experiencing this incompatibility, when changing the Vectra 286/12 BIOS ROM, two possible solutions may be used:

- * Keep the old BIOS ROM version (H.03.03) on the system board.
or
- * Use the previous revision (2.75) of the ALTPARM.COM driver.

The following table will help you understand the problem:

	BIOS rev H.03.03	BIOS rev H.03.04
ALTPARM.COM version 2.75	Always set to 56 Hz	Use 60 Hz if ALTPARM not loaded Use 56 Hz if ALTPARM loaded
ALTPARM.COM version 2.78	Use 56 Hz if ALTPARM not loaded Use 60 Hz if ALTPARM loaded	Always set to 60 Hz.

- 2 A known incompatibility exists between the new video BIOS, contained in ROM BIOS H.03.04 and above, and older revisions of the AUTOCAD super VGA driver. When using the new video BIOS and the old AUTOCAD driver (for AUTOCAD Rel 10 only), some colors may disappear.

The solution to this problem is to use the newer AUTOCAD driver, supporting AUTOCAD Rel 10 and 11. This driver is available on HP internal PCG bulletin boards.

BIOS Ver.	Date	Description	Kit Part No.	Min Setup
HP Vectra QS/20 PC				
D.02.01	Feb 89	First release	-	Any "B" version
D.02.02	Mar 89	Provides fixes for product line defects. One major fix is for Toshiba floppy drive	-	
D.02.03	Oct 89	Support for 3rd party disk drive and HP D1665A, D1666A, D1660A and D1661A Provides fix for system power up/reset to be compatible with IBM and Compaq	-	
D.02.04	Jun 90	Support for HP D1679A and D1680A hard disks to replace HP D1445A, D1446A, D1674A, D1675A, D1676A Add fix to support VMI video board	-	
D.02.05	Oct 90	Provides fixes for Western Digital hardcard 40 & the Ungermann-Bass Network interface board 2237A	D1430-83004	
D.02.06	Feb 92	Provides fixes for problems with: - Sigma L-View video boards - 387 intermittent hang Supports Hard disks greater than 528 MB	D1430-83005	
D.02.07	Aug 93	Adds support for: - Novell NE2100 board - Intel Rapid CAD	D1430-83006	

MAIN MEMORY

The QS/16S processor/memory board has eight sockets for main memory modules, for a maximum of up to 8 MB. Each pair of sockets (labeled 0, 1, 2, and 3) forms a bank.

HP Vectra QS/16S PC Main Memory Configuration

For a TOTAL mem of:	Install Memory Modules in these banks (each bank has two sockets):							
	0	0	1	1	2	2	3	3
1 MB	256 KB	256 KB	256 KB	256 KB				
2 MB	256 KB	256 KB	256 KB	256 KB	256 KB	256 KB	256 KB	256 KB
2 MB	1 MB	1 MB						
3 MB*	256 KB	256 KB	256 KB	256 KB	1 MB	1 MB		
4 MB	1 MB	1 MB	1 MB	1 MB				
5 MB*	256 KB	256 KB	256 KB	256 KB	1 MB	1 MB	1 MB	1 MB
6 MB	1 MB	1 MB	1 MB	1 MB	1 MB	1 MB		
8 MB	1 MB	1 MB	1 MB	1 MB	1 MB	1 MB	1 MB	1 MB

*For 3 MB & 5 MB configurations, the 256 KB modules must be in banks 0 and 1.

The QS/20 processor/memory board has eight sockets for main memory modules, for a maximum of up to 8 MB. Each pair of sockets (labeled A0 to A3 and B0 to B3) forms a bank.

The main memory of the QS/20 can be expanded further by installing the HP D1440A Main Memory Extension Board (onto the processor/memory board). This board has eight main memory sockets, for a maximum of 8 MB, in two banks labeled C and D.

D1440A Vectra QS Main Memory Extension Board

HP Vectra QS/20 PCs Main Memory Configuration

<u>For a TOTAL main memory of:</u>	<u>Install:</u>	<u>In these sockets:</u>
1 MB	Four 256 KB modules	All A sockets
2 MB	Eight 256 KB modules	All A and B sockets
4 MB	Sixteen 256 KB modules	All A, B, C, and D sockets
4 MB	Four 1 MB modules	All A sockets
8 MB	Eight 1 MB modules	All A and B sockets
10 MB	Eight 256 KB modules and eight 1 MB modules	All A and B sockets All C and D sockets
16 MB	Sixteen 1 MB modules	All A, B, C, and D sockets

VIDEO MEMORY

The PC is supplied with 512 KB of video memory for a resolution of up to 1024 x 768 in 16 colors. An additional 512 KB of video memory can be installed in four video sockets (to make a total of 1 MB) for a resolution of up to 1024 x 768 in 256 colors. If additional video memory is added, all four sockets must be filled.

MAIN MEMORY

HP Vectra 386/33N & NI PCs have 2 MB of main memory soldered on the system board, and two banks of sockets on the system board labeled A and B. Each bank contains two sockets (numbered 0 and 1). Main memory modules can be installed, in pairs, up to a maximum of 16 MB.

The soldered 2 MB must be disabled if 16 MB of main memory is installed.

<u>For a TOTAL memory of:</u>	<u>Install main memory modules in these banks:</u>				<u>Set Switch Block SW-B to:</u>

<u>Description</u>	<u>Rev</u>	<u>Date</u>	<u>Part #</u>	<u>Info.</u>
First release. Supports Novell Netware on Ethernet	A.01.00	Sept 92	5062-2673	For Vectra 386/16N, 386/20N and 386s/20
Adds LAN Manager	A.02.00	Apr 92	5063-2697	For Vectra 386N (D24xxx) PC Series and 386s/20
Adds Novell Netware, LAN Manager, IBM PC Server, and IBM Server for Token-Ring	A.03.00	Aug 92	5063-0828	For Vectra 386N (D24xxx) PC Series and 386s PC Series

VIDEO MEMORY

The PC is supplied with 256 KB of video RAM. An additional 256 KB of video RAM can be installed in eight video sockets (to make a total of 512 KB video memory). Four of the video sockets are located under the disk drive bridge.

MAIN MEMORY

The PC has eight sockets for main memory modules. Each pair of sockets (labeled A, B, C, and D) forms a bank.

Main Memory Configuration

For a TOTAL mem of:	Install Memory Modules in these banks (each bank has two sockets):								Using This Kit(s):
	A	A	B	B	C	C	D	D	
2 MB	1 MB	1 MB							Standard
4 MB	1 MB	1 MB	1 MB	1 MB					One 2 MB kit
6 MB	1 MB	1 MB	1 MB	1 MB	1 MB	1 MB			Two 2 MB kits
8 MB	1 MB	1 MB	1 MB	1 MB	1 MB	1 MB	1 MB	1 MB	Three 2 MB kits
10 MB	1 MB	1 MB	4 MB	4 MB					One 8 MB kit
12 MB	1 MB	1 MB	1 MB	1 MB	4 MB	4 MB			One 2 MB kit and one 8 MB kit
14 MB	1 MB	1 MB	1 MB	1 MB	1 MB	1 MB	4 MB	4 MB	Two 2 MB kits and one 8 MB kit
16 MB	4 MB	4 MB	4 MB	4 MB					Two 8 MB kits*

*Remove the original 2 MB (2x1 MB modules) from bank A.

SYSTEM BOARD, BIOS, AND MEMORY

PASSWORD BYPASS SWITCH

The password bypass switch is located on the mouse/keyboard adapter board.

Password Bypass Switch

Switch #		Function	Default
1	ON	Passwords — disabled To disable the password, set the switch to ON.	OFF
	OFF	Passwords — enabled To enable (or re-enable) the password, set the switch to OFF and run EASY CONFIG to enter a new password.	

HP VECTRA 486/33T PROCESSOR BOARD CLEAR CMOS JUMPER

The clear CMOS jumper is located on the Vectra 486/33T processor board.

Clear CMOS Jumper

Position		Function	Default
1	1	Preserves contents of CMOS To disable the password, set the switch to ON.	1
	2	Clears the CMOS To clear the contents of CMOS RAM: 1. Switch off the computer. 2. Move the jumper to position 2 for about 30 seconds. 3. Move the jumper back to position 1. 4. Switch on the computer. 5. Reconfigure computer with EASY CONFIG (use saved SCI file if available).	

SETUP AND BIOS HISTORY

EASY CONFIG version "A.xx.xx" is used on Vectra 486T PCs.

<u>BIOS Ver.</u>	<u>Date</u>	<u>Description</u>	<u>Kit Part No.</u>	<u>Min Setup</u>
Vectra 486 & 486T PCs				
HP Vectra 486 and 486/25T PCs				
G.03.01	Feb 90	First release	—	EC* version
G.03.02	Jun 90	Support for HP D1679A & D1680A Support for VMI video board Fixes problems with IBM monochrome board, INT 15 Mouse drive and memory count which does not display on the correct row	—	A.02.01
G.03.03	Sep 90	Provides fixes for: Banyan Vines/386 network software TI "Cezanne" Hi Res video board, Matrox video board & Western Digital 8514A Hi Res video board Western Digital Filecard	—	
G.03.04	-	Not available	—	
G.03.05	Feb 91	Supports larger than 528 MB volumes on 670 MB internal ESDI hard-disk. Fixes Quadtel EMM driver and Memory miss-compare POST errors due to incomplete EISA initialization	—	
G.03.06	May 91	Fixes boot failures during POST due to coprocessor hanging	D2226-83004	
G.03.07	Nov 91	Supports D1681A shipped from Nov 15, 91 and the new versions of HPMM.SYS and RELOCATE.SYS which does not load if DOS 5.0 is found.	D2226-83005	
G.03.09	Jun 92	Fixes problems associated with coprocessor, EISA ports, 8042 keyboard, and improves hard disk R/W Access.	D2226-83006

SETUP AND BIOS HISTORY

SAM version "D.xx.xx" is used on Vectra 486ST PCs

BIOS Ver.	Date	Description	Kit Part No.	Min Setup
HP Vectra 486ST PC				
R.01.00	Aug 92	First release	D2635-89011	SAM* version R.01.00
R.04.01	Feb 93	Second release	Available on HP PC BBS	

*System Administrator Manager on Vectra 486ST PCs.

VIDEO MEMORY

The HP Vectra 486ST PC Series is supplied with 512 KB of video memory for 1024 x 768 in 16 colors. An additional 512 KB of video memory can be installed in four video sockets (to make a total of 1 MB video memory). If additional video memory is added, all four sockets must be filled.

MAIN MEMORY

The HP Vectra 486ST PC Series have eight sockets for main memory modules (labeled 1 through to 8). The main memory modules must be installed as shown in the main memory configuration table.

Main Memory Configuration

Video Switches

Switch #		Function	Default
1	OFF	Specifies 512 KKB Video Memory installed	OFF
	ON	Specifies 1 MB Video Memory installed	
2/3	OFF	Reserved — do not use	OFF
	ON	Reserved — do not use	
4	OFF	Enables built-in video	OFF
	ON	Disables built-in video	

Configuration Switches

Switch #		Function	Default
1	OFF	Enables configuration (validates configuration in memory)	OFF
	ON	Clears configuration (invalidates configuration in memory)	
2	OFF	Enables password	OFF
	ON	Clears password	
3	OFF	Unlocks configuration (allows changes)	ON*
	ON	Locks configuration (prevents changes)	

BIOS Switch

Switch #		Function	Default
1	OFF	Locks BIOS (no write)	OFF
	ON	Unlocks BIOS (writable) should always be locked except to update	

CPU Switches see next table

Switch #		Function	Default
1	OFF	Sets upgrade socket for 487SX type pinout	OFF
	ON	Sets upgrade socket for 486DX/DX2 type pinout	
2	OFF	Enables Primary Processor except when an SX type processor is installed in the upgrade socket	OFF
	ON	Disables Primary processor	
3	OFF	25 MHz Local Bus Speed	OFF**
	ON	33 MHz Local Bus speed	

*Leave in the ON position except when making configuration changes.

**CPU Switch 3 determines the speed for both processor sockets (switches 1 and 2 determine the active processor).

SETUP AND BIOS HISTORY

SAM version "C.xx.xx" is used on Vectra 486U PCs.

<u>BIOS Ver.</u>	<u>Date</u>	<u>Description</u>	<u>Kit Part No.</u>	<u>Min Setup</u>
Vectra 486U PC Series				
HP Vectra 486U PC Series				
P.04.00	June 92	First release	Available on HP PC Internal BBS	SAM* version C.00.02
P.04.02	Jun 92	Fixes disk and hang problems		
P.04.04	Feb 93	Fixes security problems		

*System Administration Manager on Vectra 486S and 486U PC Series.

VIDEO MEMORY

The HP Vectra 486U PC Series is supplied with 512 KB of video RAM for 1024 x 768 in 16 colors. An additional 512 KB of video RAM can be installed in four video sockets (to make a total of 1 MB Video Memory). If additional memory is added, all four sockets must be filled.

MAIN MEMORY

The HP Vectra 486U Series PC has eight sockets for memory modules (labeled 1 through to 8). The modules must be installed as shown in the memory configuration table.

SYSTEM BOARD, BIOS, AND MEMORY

System Board Switches - SW-A

Switch	Function	Default
1 MHZ-1	Selects the speed of the processor's clock (see Frequency Selection table below)	-
2 MHZ-2		-
3 OFF	Sets the super I/O controller* I/O port address to 398-399 (hex).	OFF
ON	Sets the super I/O controller* I/O port addresses to 26E-26F (hex).	
4 OFF	System ROM can be updated using HPROMInit diskette.	OFF
ON	System ROM cannot be updated.	

*Super I/O controller: the integrated parallel port controller, serial port controller, flexible disk controller, and IDE hard disk interface.

Frequency Selection (SW-A(1) & SW-A(2))

MHZ-1	MHZ-2	Processor External Clock Speed	Used on
OFF	ON	25 MHz	HP Vectra 486/25N and 486/50N
ON	ON	33 MHz	HP Vectra 486/33N and 486/66N

System Board Switches - SW-B

Switch #	Function	Default
1 OFF	Mouse interrupt IRQ 12 — enabled	OFF
ON	Mouse interrupt IRQ 12 — disabled (disable mouse if an accessory board uses IRQ 12)	
2 OFF	Video interrupt IRQ 9 — disabled	OFF
ON	Video interrupt IRQ 9 — enabled	
3 OFF	Built-in VGA controller — enabled	OFF
ON	Built-in VGA Controller — disabled (disable built-in video if another video board is used)	
4 OFF	Passwords — enabled	OFF
ON	Passwords — disabled (erased)	
5 OFF	EEPROM stored config information — valid	OFF
ON	EEPROM stored config information — erased	
6 OFF	Security mode — disabled	OFF
ON	Security mode — configuration cannot be changed using Setup	
7 OFF	If only 512KB of video is available	OFF
ON	If the second 512KB of video memory is installed	
8 OFF	The first microprocessor — enabled	OFF
ON	If a second microprocessor is installed

SYSTEM BOARD, BIOS, AND MEMORY

System Board Switch Block SW-A

Switch	Function	Default
1	OFF Mouse interrupt IRQ12 — enabled ON Mouse interrupt IRQ12 — disabled (disable mouse if an accessory board uses IRQ12)	OFF
2	OFF Video interrupt IRQ9 — disabled ON Video interrupt IRQ9 — enabled	OFF
3	OFF Integrated Ultra VGA controller — enabled ON Integrated Ultra VGA Controller — disabled (disable built-in video if another video board is used)	OFF
4	OFF Passwords — enabled ON Passwords — disabled (erased)	OFF
5	OFF EEPROM stored configuration information — valid ON EEPROM stored configuration information — erased	OFF
6	OFF Security mode — disabled ON Security mode — configuration cannot be changed using Setup	OFF
7	OFF Flash ROM updates — enabled ON Flash ROM updates — disabled	OFF
8	OFF Not used	OFF

System Board Switch Block SW-B

Switch	Name	Function
1	Reserved	Not used (OFF)
2	IO399	Sets the super I/O controller's* I/O port addresses (hex): OFF: 398 — 399 (default) ON: 26E — 26F
3	MHZ-2	OFF OFF MHZ-1 and MHZ-2 set the speed of the processor's external clock — Set to 25 MHz for Overdrive/25 (50 MHz internal clock) and 33 MHz for Overdrive/33 (66 MHz internal clock).
4	MHZ-1	OFF ON 25 MHz 33 MHz Setting a speed higher than the processor's rated bus speed could damage the processor

*Super I/O controller: the integrated parallel port controller, serial port controller, flexible disk controller, and IDE hard disk interface.

SETUP AND BIOS HISTORY

Setup version "D.xx.xx" is used on Vectra 486N & NI, PCs

BIOS Ver.	Date	Description	Kit Part No.	Min Setup
Vectra 486N & NI (D27xxA) PC Series				
HP Vectra 486N & NI (D27xxA) PC Series				
V.04.04	April 93	First release	—	N/A
V.04.08	May 94	Current release	Available on HP PC Internal BBS	N/A

VIDEO MEMORY

The PC is supplied with 512 KB of video memory for a resolution of up to 1024 x 768 in 16 colors. An additional 512 KB of video memory can be installed in four video sockets (to make a total of 1 MB) for a resolution of up to 1024 x 768 in 256 colors. If additional video memory is added, all four sockets must be filled.

MAIN MEMORY

HP Vectra 486N & NI (D27xxA) PCs have three sockets on the system board labeled A, B, and C. Main memory modules can be installed in any combination in *any of the three sockets* up to a maximum of 48 MB.

Vectra N2 PC Series				
HP Vectra N2 PC Series				
GB.04.03	June 94	First release	N/A	N/A

CACHE MEMORY

HP Vectra N2 PCs have one cache memory socket, allowing a 128 KB or 256 KB second-level cache memory kit to be installed.

VIDEO MEMORY

The PC is supplied with 1 MB of video memory for 1024 x 768 in 256 colors. An additional 1 MB of video memory (two 512 KB video memory modules) can be installed in the video memory sockets (to make a total of 2 MB for 1024 x 68 in 64 K colors).

MAIN MEMORY

HP Vectra N2 PC has three sockets on the system board, and are supplied with 4 MB or 8 MB main memory standard, depending on the model. 4 MB, 8 MB, 16 MB, and 36 MB, 36-bit main memory modules can be installed in *any combination* in the two sockets up to a maximum of 96 MB.

SYSTEM BOARD, BIOS, AND MEMORY

System Board Switch Block SW-A

Switch	Function	Default
1	OFF Mouse interrupt IRQ12 — enabled	OFF
	ON Mouse interrupt IRQ12 — disabled (disable mouse if an accessory board uses IRQ12)	
2	OFF Video interrupt IRQ9 — disabled	OFF
	ON Video interrupt IRQ9 — enabled	
3	OFF Integrated Ultra VGA controller — enabled	OFF
	ON Integrated Ultra VGA Controller — disabled (disable built-in video if another video board is used)	
4	OFF Passwords — enabled	OFF
	ON Passwords — disabled (erased)	
5	OFF EEPROM stored configuration information — valid	OFF
	ON EEPROM stored configuration information — erased	
6	OFF Security mode — disabled	OFF
	ON Security mode — configuration cannot be changed using Setup	
7	OFF Flash ROM updates — enabled	OFF
	ON Flash ROM updates — disabled	
8	OFF Not used	OFF

System Board Switch Block SW-B

Switch	Name	Function		
1	Reserved	Not used (OFF)		
2	IO399	Sets the super I/O controller's* I/O port addresses (hex): OFF: 398 — 399 (default) ON: 26E — 26F		
3	MHZ-2	OFF	OFF	MHZ-1 and MHZ-2 set the speed of the processor's external clock — Set to 25 MHz for Overdrive/25 (50 MHz internal clock) and 33 MHz for Overdrive/33 (66 MHz internal clock). Setting a speed higher than the processor's rated bus speed could damage the processor
4	MHZ-1	OFF	ON	
		25 MHz	33 MHz	

*Super I/O controller: the integrated parallel port controller, serial port controller, flexible disk controller, and IDE hard disk interface.

SETUP AND BIOS HISTORY

Setup version "D.xx.xx" in used on Vectra 486M & MI PCs.

BIOS Ver.	Date	Description	Kit Part No.	Min Setup
Vectra 486M & MI PC Series				
HP Vectra 486M & MI PC Series				
W.04.04	April 93	First release	Available on HP PC Internal BBS	N/A

VIDEO MEMORY

The PC is supplied with 512 KB of video memory for 1024 x 768 in 16 colors. An additional 512 KB of video memory can be installed in four video sockets (to make a total of 1 MB) for 1024 x 768 in 256 colors. If additional video memory is added, all four sockets must be filled.

MAIN MEMORY

HP Vectra 486M & MI PCs have three sockets on the system board labeled A, B, and C. Main memory modules can be installed in any combination *in any of the three sockets* up to a maximum of 48 MB.

Keyboard Error	Loose cable or connector / Keyboard
No ROM BASIC	HDD Cable / HDD set-up / HDD

*Most likely component listed first.

**Customers are advised to change the battery on a yearly basis.

CACHE MEMORY

128 KB of second-level cache memory may be installed (except in the 486/25VL). All four chips must be installed.

VIDEO MEMORY

If additional video memory is added, all four sockets must be filled.

MAIN MEMORY

2 MB, 4 MB, 8 MB, and 16 MB 32-bit main memory modules can be installed in *any combination* in the two sockets up to a maximum of 32 MB.

SYSTEM BOARD, BIOS, AND MEMORY

486XM PC Switch Block SW-A

Switch	Function	Default
1	OFF Mouse interrupt IRQ12 — enabled ON Mouse interrupt IRQ12 — disabled (disable mouse if an accessory board uses IRQ12)	OFF
2	OFF Video interrupt IRQ9 — disabled ON Video interrupt IRQ9 — enabled	OFF
3	OFF Integrated Ultra VGA controller — enabled ON Integrated Ultra VGA Controller — disabled (disable built-in video if another video board is used)	OFF
4	OFF Passwords — enabled ON Passwords — disabled (erased)	OFF
5	OFF EEPROM stored configuration information — valid ON EEPROM stored configuration information — erased	OFF
6	OFF Security mode — disabled ON Security mode — configuration cannot be changed using Setup	OFF
7	OFF Flash ROM updates — enabled ON Flash ROM updates — disabled	OFF
8	OFF Not used	OFF

486XM PC Switch Block SW-B

Switch	Name	Function		
1	Reserved	Not used (OFF)		
2	IO399	Sets the super I/O controller's* I/O port addresses (hex): OFF: 398 — 399 (default) ON: 26E — 26F		
3	MHZ-2	OFF	OFF	MHZ-1 and MHZ-2 set the speed of the processor's external clock — Set to 25 MHz for Overdrive/25 (50 MHz internal clock) and 33 MHz for Overdrive/33 (66 MHz internal clock). Setting a speed higher than the processor's rated bus speed could damage the processor
4	MHZ-1	OFF	ON	
		25 MHz	33 MHz	

*Super I/O controller: the integrated parallel port controller, serial port controller, flexible disk controller, and IDE hard disk interface.

SETUP AND BIOS HISTORY

Setup version "D.xx.xx" is used on Vectra 486XM PCs.

BIOS Ver.	Date	Description	Kit Part No.	Min Setup
Vectra 486XM PC Series				
HP Vectra 486XM PC Series				
W.04.01	June 93	First release	Available on HP PC Internal BBS	N/A

CACHE MEMORY

HP Vectra 486XM PC has a second-level cache memory socket. A 128 KB second-level cache memory module or a 256 KB second-level cache memory module may be installed.

VIDEO MEMORY

The PC is supplied with 1 MB of video memory for 1280 x 1024 in 256 colors. An additional 1 MB video memory module can be installed in a video memory socket (to make a total of 2 MB) for 1280 x 1024 in 64 K colors.

MAIN MEMORY

HP Vectra 486XM PC has four sockets on the system board labeled A, B, C, and D. Main memory modules can be installed in any combination *in any of the four sockets* up to a maximum of 64 MB.

SYSTEM BOARD, BIOS, AND MEMORY

M2 Configuration Jumpers

Jumper Setting	Function	Default
JP1	1-2	PENTIUM Overdrive: Level-one cache write through mode.
	2-3	PENTIUM Overdrive: Level-one cache write back mode.
JP2	9-10	Select IRQ 7 for LPT
	11-12	Select IRQ 5 for LPT
JP3*	1-2	Select 33 MHz processor speed
	2-3	Select 25 MHz processor speed
JP4	1-2	Select > 33 MHz processor speed
	2-3	Select 25/33 MHz processor speed
JP7	1-2	VESA ID bit (CPU speed <= 33 MHz)
	2-3	VESA ID bit (CPU speed > 33 MHz)
JP8*	1-2	IntelDX4 processor
	2-3	Other processor

*Default setting dependent on model.

M2 System Board Switches

Switch #	Function	Default
1 SECUR	CLOSED Enables security mode to prevent changes to the PC's configuration	CLOSED
	OPEN Disables security mode to allow changes to the PC's configuration	
2 VGAEN	OPEN Enables VGA	OPEN
	CLOSED Disables VGA	
3 CONFIG	OPEN Retain the configuration stored in CMOS	OPEN
	CLOSED Clear the configuration stored in CMOS Switch to CLOSED if you need to clear the PC's configuration information, for example, if the configuration is corrupted.	
4 PSWRD	OPEN Enables the passwords to be set and stored in CMOS	OPEN
	CLOSED Disables the passwords Switch to CLOSED if you need to clear the current password.	

IRQS AND I/O ADDRESSES

IRQ	Function	I/O Port Hex
IRQ 3	Serial Port B (COM2) or LAN	3F8-3FF
IRQ 4	Serial Port A (COM1) or LAN	2F8-2FF
IRQ 6	Flexible Disk Controller	3F0-3F7
IRQ 7 (5)*	Parallel Port 1 (LPT1)	378-37F
IRQ 14	IDE Hard Disk Controller	1F0-1F7
-	Video controller	3B0-3DF

*Numbers in brackets indicate alternate IRQ selected by jumper on the system board. See the Configuration Jumpers table for details.

SETUP AND BIOS HISTORY

The HP BIOS includes a SETUP program.

See the HP Vectra M2 *Familiarization Guide* for details.

CACHE MEMORY

HP Vectra M2 PCs have one cache memory socket. A 128 KB or 256 KB second-level cache memory kit may be installed in all HP Vectra M2 PCs except the HP Vectra 4/100. The HP Vectra 4/100 PC has 256 KB second-level cache memory as standard.

VIDEO MEMORY

The PC is supplied with 1 MB of video memory for 1024 x 768 in 256 colors. An additional 1 MB of video memory (two 512 KB video memory modules) can be installed in the video memory sockets (to make a total of 2 MB for 1024 x 768 in 64 K colors).

MAIN MEMORY

The HP Vectra M2 PC has three sockets on the system board and is supplied with 8 MB main memory as standard. Main memory modules (36-bit) of 4 MB, 8 MB, 16 MB, and 32 MB can be installed in *any combination* in the sockets, up to a maximum of 96 MB.

Input Devices

HP Logitech-type Mouse	C3751B
Keyboard	C3757B

Note: Part number suffix B indicates new color scheme.

SYSTEM BOARD, BIOS, AND MEMORY

VIDEO MEMORY UPGRADE

The upgrade is achieved by installing two chips into surface mount technology sockets. The chips must be installed with the bevelled edge on each component aligned to the back of the PC. You will need the PLLC Extractor Tool (part number 5041-2553) to remove the chips.

IDE CONNECTORS

Two IDE connectors are present. Any IDE compatible device can be attached to any connector.

VE 4/xx Configuration Jumpers

Jumper Setting		Function	Default
JP5	1-2	Enable CMOS configuration	1-2
	2-3	Clear CMOS	
JP8	1-2	486DX2 or DX4 with write-back internal cache (called P24D and P24C)	See footnote*
	2-3	486DX2 or DX4 standard internal cache	
JP13	1-2	33 MHz processor speed selection	See footnote**
	2-3	25 MHz processor speed selection	

*Default setting dependent on model: 1-2 for VE 4/50 and VE 4/66, 2-3 for VE 4/100.

**Default setting dependent on model: 1-2 for VE 4/660 and VE 4/100, 2-3 for VE 4/50.

VE 4/xx IRQs and I/O Addresses

IRQ	Function	I/O Port Hex
IRQ 3	Serial Port A (COM1)	3F8-3FF
IRQ 4	Serial Port B (COM2)	2F8-2FF
IRQ 5	Parallel Port 2 (LPT2)	378-37F
IRQ 6	Flexible Disk Controller	3F0-3F7
IRQ 7	Parallel Port 1 (LPT1)	3BC-3BE
	Parallel Port 3 (LPT3)	278-27F
IRQ 14	IDE Hard Disk Controller	1F0-1F7
-	Video Controller	3B0-3DF

BIOS HISTORY

BIOS Ver.	Date	Description	Kit Part No.
Vectra VE 4/xx PC Series			
GP.05.00	April 95	First release	Available on HP BBS
GP.05.01	May 95	Fixes bug with mouse when leaving sleep mode in Windows 3.11	
GP.05.02	June 95	Fixes bug with mouse that hangs system when loading QuatroPro in DOS	
GP.05.03	Aug 95	Added support for AMD microprocessor (requires D3501-630020). Added activation options for PnP boards. Improves DDC1 detection for D2815A display.	
GP.05.04	Sept 95	Fixes bugs in Windows 95: – with LBA formatted HDD – with Plug and Play code Fixes bug with Plug and Play ROM allocation for token ring LAN boards.	
GP.05.05	Oct 95	Improves 840 MB HDD detection.	
GP.05.06	Nov 95	Fixes bugs: – with Siemens 8 MB memory modules – with Intel Etherxpress board – with DEC LAN DE205 board – detection of disabled FDD in Windows 95

WARNING

There is a danger of explosion if the battery is incorrectly installed. For your safety, never attempt to recharge, disassemble or burn, the old battery. In order to protect the environment, do not dispose of batteries in household waste. Please return used batteries to the shop from which you bought them, or to the dealer from whom you purchased your PC, or to HP, so that they can be either recycled or disposed of in an environmentally sound way. After removing the old battery, install a replacement battery (order 1420-0312) or an external battery (order 1420-0513).

SYSTEM BOARD, BIOS, AND MEMORY

The 486DX2 and 486DX4 processors require a heatsink assembly, which is clipped on top of the processor.

VL2 & VL2e Configuration Jumpers

Jumper Setting	Function	Default
JP10 1-2	Select P24T write through mode.	2-3
2-3	Select P24T write back mode.	
JP2 1-2	Clears CMOS RAM Configuration.	2-3
2-3	Enables CMOS RAM Configuration.	
JP8 1-2	Disables on board VGA circuitry.	2-3
2-3	Enables on board VGA circuitry.	
JP5 -	Reserved for factory use - do not move.	
JP4*	1-2 33 MHz processor speed selection.	
	2-3 25 MHz processor speed selection.	
JP12	(VL2 DX4 models only) Reserved for factory use - do not move.	
IRQ7	Parallel port 1.	yes
IRQ5	Alternative parallel port 1.	no

*Default setting dependent on model.

IRQs and I/O Addresses for the VL2 & VL2e

IRQ	Function	I/O Port Hex
IRQ 3	Serial Port A (COM1)	3F8-3FF
IRQ 4	Serial Port B (COM2)	2F8-2FF
IRQ 6	Flexible Disk Controller	3F0-3F7
IRQ 7 (5)*	Parallel Port 1 (LPT1)	378-37F
IRQ 14	IDE Hard Disk Controller	1F0-1F7
—	Video controller	3B0-3DF

*Numbers in brackets indicate alternate IRQ selected by jumper on the system board. See the Configuration Jumper table for details.

System Board Parts List for HP Vectra XM2 PC Series 3

Description	Replacement Part Number	Exchange Part Number
System Board (includes integrated IDE disk and Ultra VGA2 controllers)*		
Vectra XM2	D3201-63001*	D3201-69001*
Vectra XM2i (Integrated Ethernet)	D3202-63001*	D3202-69001*
Important: When replacing the system board, make sure you have a heatsink and frame assembly (5063-5772) since processor socket may not have the necessary heatsink attachment.		
LAN Adapters:		
Coaxial Adapter board (D2746A)	D2746-63001	—
Processors:		
Intel 486DX-50	5063-4583	—
Intel 486DX2-66	5063-4584	—
Intel 486DX4-100	5063-5371	—
Heatsink and Frame Assembly	5063-5772	—
Heatsink with Clip to ZIP socket	5063-5740	—
Cache Memory Modules:		
256 KB level-two Cache Memory module (D2944A)	5063-0880	—
Main Memory Modules:		
8 MB DRAM kit, 70 ns, 32 bits	5063-4549	—
Video Memory Modules:		
1 MB Video Memory Module kit (D3241A)	5063-5710	—

*These replacement assemblies are supplied without a processor chip.

**Parity not supported for XM2.

Support Manuals for HP Vectra XM2 PC Series 3

Technical Reference Manual: Hardware and BIOS	5962-3416*

*Electronic File only.

A HP VECTRA POST ROUTINE AND ERROR CODES

POST (POWER-ON SELF-TEST) ROUTINE

This appendix details POST and error messages common to most Vectra PCs. Certain models of the HP Vectra may have a slightly different POST. If the POST of a Vectra is very different, the error messages are provided in the chapter describing that Vectra. See the chapter contents list for error code entries.

POST No.	Power-On Self-Test Name
1	LED Test
2	Processor Test
3	System (BIOS) ROM Test
4	RAM Refresh Timer Test
5	Interrupt RAM Test
6	Shadow the System ROM BIOS
7	CMOS RAM Test
8	Internal Cache Memory Test
9	Initialize the Video Card
10	Test External Cache
11	Shadow Option ROMs
12	Memory Subsystem Test
13	Initialize EISA/ISA Hardware
14	8042 Self-Test
15	Timer 0/Timer 2 Test
16	DMA Subsystem Test
17	Interrupt Controller Test
18	RAM Address Line Independence Test
19	Size Extended Memory
20	Real-Mode Memory Test (First 640 K)
21	Shadow RAM Test
22	Protected Mode RAM Test (Extended RAM)
23	Real-Time Clock Test
24	Keyboard Test
25	Mouse Test
26	Hard Disk Test
27	LAN Test
28	Flexible Disk Controller Subsystem Test
29	Internal Numeric Coprocessor Test
30	Weitek Coprocessor Test
31	Clock Speed Switching Test
32	Serial Port Test
33	Parallel Port Test

For more information on the POST routines, refer to the PCs' reference manual.

ERROR CODES

Error Code (hex):	Description:
000F	Microprocessor error
001X	BIOS ROM Error
008X	Video ROM Error
009X	Option ROM Error while testing address range C800-DFFFh
00AX	
00BX	
00CX	Option ROM Error while testing address range E000-EFFFh
00DX	
011X	RTC Error while testing the CMOS register
0120	RTC Error
0130	RTC/System Configuration Error
0240	CMOS Memory/System Configuration Error
0250	Invalid Configuration
0241	CMOS Memory Error
0280	
02C0	EEPROM Error
02C1	
02D0	Serial # not present
030X	Keyboard/Mouse Controller Error
0311	
0312	
032X	
033X	
03E0	
03E1	
03E2

A00X	Numeric Coprocessor Error
B300	Cache Controller Error
B320	Memory Cache Module Error
CXXX	Extended RAM Error*
EXXX	Bus Memory Error

B HP VECTRA HARDWARE IRQS AND MEMORY MAP

HP VECTRA INTERRUPTS (IRQS) AND I/O ADDRESSES

These Interrupts and I/O addresses are common to most HP Vectras. The exceptions for each Vectra are described in the Vectras individual chapter. For example, the HP Vectra 486VL is described in Chapter 6.

Interrupt Vector # Hex	Interrupt Vector Address Hex	IRQ	Typical Function	I/O Port Hex
08	20-23	IRQ 0	Timer	040-043
09	24-27	IRQ 1	Keyboard controller chip	060, 064
0A	28-2B	IRQ 2	Cascade from INTC2*	-
0B	2C-2F	IRQ 3**	Serial Port 1*** (COM2)	2F8-2FF
0C	30-33	IRQ 4	Serial Port 0*** (COM1)	3F8-3FF
0D	34-37	IRQ 5**	Parallel Port 1**** (LPT2)	278-27F
0E	38-3B	IRQ 6	Flexible Disk Controller	3F0 — 3F7
0F	3C-3D	IRQ 7	Parallel Port 0**** (LPT1)	378-37F

*INTC2: interrupt controller 2, also known as PIC #2 (programmable interrupt controller 2).

**Be default the network software may configure your LAN board to use IRQ3. If Serial port 1 is being used by a printer/plotter, then the LAN board must be reconfigured to use IRQ5 (if this is available).

***The BIOS references serial ports as Serial Port 0 to Serial Port 3. MS-DOS references the serial ports as COM1 to COM4. In addition, MS-DOS only counts the serial ports that are present. For example, if Serial Ports 0, 1 and 2 are present, MS-DOS calls them COM1, COM2, and COM3 respectively. If only Serial Port 3 is present, MS-DOS calls it COM1.

****The BIOS references parallel ports as Parallel Port 0 and Parallel Port 1. MS-DOS references the parallel ports as LPT1 and LPT2. In addition, MS-DOS only counts the parallel ports that are present. For example, if Parallel Ports 0 and 1 are present, MS-DOS calls them LPT1 and LPT2 respectively. If only Parallel Port 0 is present, MS-DOS calls it LPT1.

Interrupt Vector # Hex	Interrupt Vector Address Hex	IRQ	Typical Function	I/O Port Hex
70	1C0-1C3	IRQ 8	Real-time Clock	070-071
71	1C4-1C7	IRQ 9	VGA controller	
72	1C8-1CB	IRQ 10	Serial Port 2 (COM3)	3E8-3EF
73	1CC-1CF	IRQ 11	Serial Port 3 (COM4)	2E8-2EF
74	1D0-1D3	IRQ 12	mini-DIN Mouse or HIL	Mouse: 060, 064 HP-HIL: 068, 06C to 06F
75	1D4-1D7	IRQ 13	Math coprocessor	0F0-0FF
76	1D8-1DB	IRQ 14	Hard Disk Controller	1F0-1F7
77	1DC-1DF	IRQ 15	Reserved	-

For more information on a PC's address space, memory map, a list of the interrupts, the IRQ numbers and I/O addresses currently used by a PC you can use the Microsoft Diagnostic utility supplied with Windows version 3.1, MS-LAN Manager version 2.10 or more recently MS-DOS version 6.0.

To start the utility, type **MSD** [ENTER].

For more information about the Microsoft diagnostic utility (MSD.EXE), refer to Appendix C of this handbook.

HP VECTRA MEMORY MAP

C HP UTILITIES AND DOS QUICK REFERENCE

OVERVIEW

This chapter provides information on some useful MS-DOS commands and HP utilities. For the latest information about commands for your version of MS-DOS refer to the *MS-DOS User Reference* manual.

MICROSOFT DIAGNOSTIC UTILITY

(MS-DOS 6.0, MS-Windows 3.1, MS-LAN Manager 2.10 and above)

The Microsoft diagnostic utility provides detailed technical information about the PC under the following categories.

Computer	Displays computer manufacturer, processor type, and bus type; ROM BIOS manufacturer, version and date; keyboard type; DMA controller configuration; and math coprocessor status.
Memory	Displays a map of the upper memory area (UMA)-the memory region from 640K to 1024K.
Video	Shows your video card manufacturer, model, and type; video BIOS version and date; and current video mode.
Network	Displays network-specific configuration information.
Operating System	Displays the operating system version, location of MS-DOS in memory, the drive the computer was started from, the current environment settings, and the path from which MSD was run.
Mouse	Shows the MS-DOS mouse driver version, mouse type, mouse interrupt request line (IRQ) number, and other information specific to the configuration of the mouse.
Other Adapters	Displays the game card status for up to two game devices or joysticks.
Disk Drives	Displays the size and number of bytes free on local and remote drives.
LPT Ports	Displays the port addresses of all installed parallel ports, and displays the status of each port.
COM Ports	Displays the port addresses and current communications parameters of all installed serial ports, and displays the status of each port.
IRQ Status	Displays the configuration of the hardware IRQs.
TSR Programs	Displays the name, location in memory, and size of each program loaded in memory at the time MSD was run.
Device Drivers	Displays the names of all device drivers installed at the time MSD was run.

Starting the diagnostic utility

If you want to examine some technical information about the PC, start the diagnostic utility by typing the following at the command prompt:

MSD [ENTER]

The utility has an interface that makes it easy for you to access detailed technical information about the PC.

Creating a report

If you want to create a file called REPORT.TXT that contains a detailed technical report about the PC. To do this, you could type the following at the command prompt:

MSD /P REPORT.TXT [ENTER]

If you want to create a detailed report about the PC and you wanted the report to include such information as your name, company, address, and phone number, you would type the following at the command prompt:

MSD /F REPORT.TXT [ENTER]

MSD.EXE Switches	Description
<i>/I</i>	Specifies that MSD does not initially detect hardware. Use the /I switch if you are having problems starting MSD or if MSD is not running properly.
<i>/F[drive:][path]filename</i>	Prompts you for name, company, address, country, phone number, and comments, then writes a complete MSD report to the file you specify.
<i>/P[drive:][path]filename</i>	Writes a complete MSD report to the file you specify, without prompting you for information.
<i>/S[drive:][path]filename</i>	Writes a summary MSD report to the file you specify, without prompting you for information. If you do not specify any of the parameters, MSD writes the report to the screen.
<i>/B</i>	Runs MSD in black and white instead of color. Use the /B switch when you have a monitor that does not correctly display MSD in color.

DIAGNOSTIC UTILITY (HP)

The HP Vectra PC diagnostic utility is a low-level DOS-based hardware diagnostic utility. The following table summarizes which tests can be used on which PCs. Note that the diagnostic utility will not test third party accessories.

PC *	Flex. Disk	Hard Disk	SCSI	Tape	Data- comm	Video	Memory	SPU	Key- board**	LAN
Classic Desktop Vectras***										
ES	Y	Y		Y						
QS	Y	Y		Y	Y	Y	Y	Y		
286/12	Y	Y		Y	Y	Y	Y	Y	Y	
386/25	Y	Y		Y	Y	Y	Y	Y	Y	
Low-Profile Desktop Vectras****										
386N	Y	Y	Y		Y	Y	Y	Y	Y	Y
386/33 N & NI	Y	Y	Y		Y	Y	Y	Y	Y	Y
486N & NI	Y	Y	Y		Y	Y	Y	Y	Y	Y
N2	Y	Y	Y		Y	Y	Y	Y	Y	Y
Medium-Profile Desktop Vectras****										
486M & MI	Y	Y	Y		Y	Y	Y	Y	Y	Y
486XM	Y	Y	Y		Y	Y	Y	Y	Y	Y

XP	Y	Y	Y		Y	Y	Y	Y	Y	Y
XM2	Y	Y	Y		Y	Y	Y	Y	Y	Y
VL2	Y	Y	Y		Y	Y	Y	Y	Y	Y
M2	Y	Y	Y		Y	Y	Y	Y	Y	Y
Full-Height Desktop Vectras										
386s	Y	Y	Y		Y	Y	Y	Y	Y	Y
486S/2 0	Y	Y	Y	Y	Y	Y	Y	Y	Y	
XU	Y	Y	Y		Y	Y	Y	Y	Y	Y
Deskside Vectras										
RS	Y	Y	Y *****	Y	Y	Y	Y	Y		
486	Y	Y	Y	Y	Y	Y	Y	Y	Y	

*Vectra 486U and 486ST tests are not available. Use a third party test.

**Keyboard interface test only (keyboard itself is not tested).

***Tests for these Vectras are included with the Diagnostic Utility 5.25-inch diskette Rev: A.03.06 P/N 5063-0843.

****Tests for these PCs are included with the Vectra Diagnostic Utility Rev: B.00.03 (available June '94 on HP Support BBS).

*****SCSI tests are only available on the RS/25C.

PART NUMBERS FOR DIAGNOSTIC TOOLS

Description	Part Number
HP Vectra PC Diagnostic Utility Kit (ver. B.00.03)	Available on HP internal BBS
9-pin Datacomm Test Hood	24540-60010
25-pin Serial Datacomm Test Hood	02620-60062
25-pin Parallel Datacomm Test Hood	24540-60011
Memory Module Extractor Tool (Vectra 386/25)	5181-4810
Peripheral Exerciser Disk Kit	45935-63210
Electrically Conductive Field Service Grounding Kit	9300-1609
Vectra RS Cache Memory Board Removal Tool	D2010-40001
PLCC IC extractor tool	5041-2553
486 Microprocessor Removal Tool	8710-1944

DOS HELP (MS-DOS 5.0 AND ABOVE)

For information on MS-DOS 5.0 command syntax, type HELP command.

For example, for help on the format command, type HELP FORMAT.

(For more information relevant to your version of MS-DOS, refer to the *MS-DOS User Reference* manual.)

EASY CONFIG — FOR DESKSIDE EISA PCS (HP)

EASY CONFIG is used on HP Vectra 486, 486/25T and 486/33T EISA-bus computers. When you install boards and options in an EISA computer, or change the amount of memory installed, you must reconfigure the computer with the EASY CONFIG utility.

EASY CONFIG examines the details of all the boards and options installed, to determine the best conflict-free configuration. This configuration is saved in a file called SYSTEM.SCI.

To run EASY CONFIG, enter either

`SD [ENTER]`

or

`CF [ENTER]`

Running CF bypasses the main EASY CONFIG menu and jumps directly to:

Configure computer - advanced method

Advanced method allows you to add, remove, or move all types of boards, to change the functions and resources on these boards, and to look at more detailed information about them.

EASY CONFIG options

- /B* this option should be used with any non-standard display.
- /E* sets Easy Configuration mode - only works with CF.
- /F* sets Fast Configuration mode - only works with CF.
- /H* displays hi-resolution text on EGA and VGA displays.
- /K* disables the mouse during EASY CONFIG sessions.
- /M* enables monochrome display of EASY CONFIG screens.
- /N* runs EASY CONFIG in "Modeling Mode". This mode can be used to create an alternative SYSTEM.SCI system configuration file. This only works with CF.
- /T* displays a detailed view of the present configuration. This only works with CF.

FORMAT COMMAND (MS-DOS)

FORMAT is an external DOS command used to prepare a disk for use.

FORMAT drive /1 /4 /8 /N:sectors /T:tracks /V:label /S

FORMAT drive /1 /B /N:sectors /T:tracks

FORMAT drive /V:label /F:size /S

DOS 5.0: *FORMAT drive /V:label [/Q] [/U] /F:size [BVS]*

- /1* formats 5.25-inch diskettes as single-sided (160/180 KB single-sided and 320/360 KB double-sided diskettes only).
- /4* formats 5.25-inch single- and double-sided diskettes in a high density (1.2 MB) drive (160/180 KB single-sided and 320/360 KB double-sided diskettes only).
- /8* formats a diskette with only eight sectors per track (160/180 KB single-sided and 320/360 KB double-sided diskettes only).
- /N:sectors* specifies number of sectors per track. Specify 80 for a 3.5-inch 720 KB diskette. Always use */T: tracks* with */N: sectors*. (When possible, use */F* instead of */T*.)
- /T:tracks* specifies number of tracks per side. Specify 80 for a 3.5-inch 720 KB diskette. Always use */T: tracks* with */N: sectors*. (When possible, use */F* instead of */T*.)
- /V:label* assigns "label" as the volume label for the diskette (or disk).
- /F:size* specifies the size of the diskette to format. *Size* can be one of the following: 160 KB, 180 KB, 320 KB, 720 KB, 1.2 MB or 1.44 MB; and for DOS 5.0, 2.8 MB 3.5-inch. */T: tracks* and */N: sectors* cannot be used with this parameter.
- /B* formats a disk with eight sectors per track and reserves space for DOS bootstrap information to be written to it using the SYS command. This parameter provides backward compatibility for earlier versions of MS-DOS. Do not use */B* and */S* together.
- /S* writes system bootstrap information to the disk when the format has completed.
- /Q* (DOS 5.0) quick format — deletes the file allocation table but does not check the disk for bad sectors.
- /U* (DOS 5.0) unconditional formatting — destroys existing data on the disk.

(For more information relevant to your version of MS-DOS, refer to the MS-DOS User Reference manual.)

MEMORY MANAGERS

MEMMAKER (DOS 6.0 AND ABOVE)

For PCs with DOS 6.0 and above use MemMaker to optimize extended memory. This automatically detects the available memory and modifies the CONFIG.SYS, AUTOEXEC.BAT and WIN.INI files make the best use of it.

The MemMaker syntax is:

MEMMAKER [/B] [/BATCH] [/T] [/UNDO] [W:n,m]

For example, to run MemMaker in batch mode and direct it not to reserve any upper memory for Windows translation buffers, use the following command.

MEMMAKER /BATCH /W:0,0

If you wish to return to the previous configuration before running MemMaker, use the following command.

MEMMAKER /UNDO

(For more information relevant to your version of MS-DOS, refer to the MS-DOS User Reference manual.)

EMM386.EXE (DOS 5.0 AND ABOVE)

EMM386.EXE is the MS-DOS 5.0 expanded memory manager for 386 and 486 PCs. It converts extended memory to expanded memory for programs that need expanded memory. If it is on the hard disk, it can be activated by including these default commands in the CONFIG.SYS file:

*DEVICE=HIMEM.SYS
DEVICE=EMM386.EXE*

Once activated it can be turned on/off by typing: *EMM386.EXE [ON/OFF]*

You will need to customize the EMM386.EXE syntax if you have an accessory board that uses reserved memory address space (such the ScanJet board). The EMM386.EXE syntax is:

*DEVICE= [drive:] [path] EMM386.EXE [ON/OFF/AUTO] [MEMORY] [W=ON/W=OFF]
[Mx]FRAME=address/Pmmmm] [Pn=address]
[X=mmmm-nnnn] [I=mmmm-nnnn] [B=address] [L=minXMS] [A=altregs] [H=handles]
[D=nnn] [RAM] [NOEMS]*

The RAM and NOEMS options allow you to use lost upper memory bytes.

For more information relevant to your version of MS-DOS, refer to the MS-DOS User Reference manual.

HIMEM.SYS (DOS 5.0 AND ABOVE)

HIMEM.SYS is the MS-DOS 5.0 extended memory manager. If it is on the hard disk, it can be activated by including this default command in the CONFIG.SYS file:

DEVICE=HIMEM.SYS

HIMEM.SYS must be the first driver that uses extended or expanded memory in your CONFIG.SYS file.

The HIMEM.SYS syntax is:

```
DEVICE=[drive:] [path] HIMEM.SYS [/HMAMIN=m] [/ NUMHANDLES=n] [/INT15=xxxx]  
[/MACHINE:xxxx] [/A20CONTROL:ON|OFF]  
[/SHADOWRAM:ON|OFF] [/CPUCLOCK:ON|OFF]
```

For more information relevant to your version of MS-DOS, refer to the MS-DOS User Reference manual.

HPMM.SYS (DOS 4.0 AND EARLIER)

It is recommended that you install EMM386.EXE in preference to HPMM.SYS.

HPMM.SYS is HP's expanded memory manager supplied with 386- and 486-based PCs.

If HPMM.SYS is on the hard disk, it can be activated by including this default command in the CONFIG.SYS file: *DEVICE=HPMM.SYS*

The HPMM.SYS syntax is:

```
DEVICE=[drive:] [path] HPMM.SYS [size] [state] [FRAME=nnnn] [W=on|off]  
[INCLUDE=xxxx-yyyy] [EXCLUDE=zzzz-aaaa] [EXT=nnnn] [DMA=nnn] [NOXRAM]  
[AMRS=xx] [NOHMA] [HMAMIN=nn] [RELOCATE=xxxx-yyyy]
```

You will not be able to run Windows 3.0 in 386 Enhanced Mode if the Weitek FPA support is enabled with *W=ON*.

For more information, refer to the documentation that came with the PC.

HPEMM.SYS (VECTRA 286/12 PC)

HPEMM.SYS is HP's Expanded Memory Manager supplied with the HP Vectra 286/12 PC. If it is on the hard disk, it can be activated by including this default command in the CONFIG.SYS file: *DEVICE=HPEMM.SYS*

The HPEMM.SYS syntax is:

```
DEVICE=[drive:] [path] HPEMM.SYS [FRAME=nnnn] [INCLUDE=xxxx-yyyy]  
[EXCLUDE=zzzz-aaaa] [EXT=nnnn] [NOXRAM] [TEST] [HANDLES=nn]  
[CONTEXTS=nnn] [DEPTH=nn] [AUTOSIZE]
```

For more information, refer to the documentation that came with the PC.

HPEMM386.SYS (VECTRA RS AND QS PCS)

It is recommended that you install EMM386.EXE in preference to HPEMM386.SYS. HPEMM386.SYS is HP's original Expanded Memory Manager for the HP Vectra RS and QS PCs. If it is on the hard disk, it can be activated by including this default command in the CONFIG.SYS file: *DEVICE=HPEMM386.SYS*

The HPEMM386.SYS syntax is:

```
DEVICE=[drive:] [path] HPEMM386.SYS [size] [state] [FRAME=nnnn] [W=on|off]
[INCLUDE=xxxx-yyyy] [EXCLUDE=zzzz-aaaa] [EXT=nnnn] [DMA=nnn] [NOXRAM]
[AMRS=xx] [LOWFRAME] [REBOOT] [NOHMA] [NOWARMBOOT] [NUMHANDLES=nn]
[HMAMIN=nn]
```

For more information, refer to the documentation that came with the PC.

HPMODE UTILITY (VECTRA QS AND RS PCS)

HPMODE is supplied with PCs equipped with an HP-HIL interface.

HPMODE can be used to temporarily change the processor speed, cache memory, or the HP-Human Interface Link (if the EX-BIOS is present).

HPMODE SPE speed

speed is the PC speed: *LOW* 8 MHz *HIGH* highest speed of the computer *AUTO* "HIGH" with automatic switch to "LOW" for flexible disk access If no speed is specified, the current setting is displayed.

HPMODE MEM setting

setting is the state of the cache memory, when applicable. Can be *ON* or *OFF*.

HPMODE HIL setting

setting can be *ON* or *OFF*.

HPROMINIT UTILITY (HP)

The HPROMInit utility is supplied with HP Vectra 386/33N & NI, HP Vectra 486N & NI PCs, HP Vectra 486M & MI PCs and HP 486XM PCs.

It is used to update the system ROM and set the language for SETUP, the error message utility, and system error messages.

To re-initialize the system ROM:

1. If the HPROMInit utility is on the hard disk drive, copy it onto a "bootable" diskette as follows:
 - a. Insert a diskette in drive A, then type:
FORMAT A: /S [ENTER]
 - b. When the formatting has finished, type:
COPY C:\HPUTILS\HPINIT*. * A: [ENTER]
2. When the copying has finished, leave the diskette in drive A and press the Reset button. Wait for the ROM initialization procedure to finish.
3. Remove the HPROMInit diskette.
4. Switch the PC OFF and then ON.

HPUPDATE UTILITY (HP)

HPUpdate is supplied on the Vectra HPUpdate diskette shipped with the HP Vectra 486s/20, 486U PC Series, and 486ST PCs.

HPUpdate can be used to update (flash) the BIOS into the FLASH ROM of the Vectra 486s/20, 486U PC Series, and 486ST PCs.

HPUVGA UTILITY (HP)

HPUVGA is supplied on the Vectra 486s/20, 486U PC Series, and 486ST PCs.

It can be used to manage UVGA on the 486s/20 and UVGA+ on the 486U PC Series and 486ST. For example, it can be used to identify the type of video, the amount of video memory, and the video BIOS version of the PC. It can also select a display, compatibility model, and resolution.

HPVIEW UTILITY (HP)

HPVIEW is supplied on the Vectra diskette #1 shipped with the HP Vectra 486U PC Series and 486ST PCs. It can be used to display and print out the PC's configuration.

MEM COMMAND (MS-DOS)

MEM is an external DOS command, available since DOS 4.0, that displays the amount of used and free memory, lists allocated memory and free memory, and lists programs loaded.

MEM /P[ROGRAM]	displays status of programs loaded in memory
MEM /D[EBUG]	displays status of programs and internal drivers, and other information
MEM /C[LASSIFY]	lists the size of programs and amount of memory used, and lists largest memory block used

For more information relevant to your version of MS-DOS, refer to the MS-DOS User Reference manual.

MODE COMMAND (MS-DOS)

MODE is an external DOS command that sets the parameters for displaying device status, video display, serial communication, parallel printers, parallel output redirection, keyboard auto-repeat rate, and code page switching modes.

Serial Communication Mode

MODE COMn : BAUD=*b* PARITY=*p* DATA=*d* STOP=*s* RETRY=*ra*

n	Serial port number COM1, COM2, COM3, or COM4
b	Baud rate — 110, 150, 300, 600, 1200, 2400, 4800, 9600, or 19200 (only the first two digits of any value are required). Default: 2400.
p	Parity — N (no), O (odd) or E (even). Default: E
d	Data bits — 5, 6, 7, or 8. Default: 7
s	Stop bits — 1, 1.5, or 2. Default: 1
ra	Retry action (do not use <i>ra</i> if MODE is used over a network):

E return error from busy port
B return busy from busy port, continuously retry
R return ready from busy port
NONE no retry action is taken
Default: *E*

Parallel Printer Mode

MODE LPTn: COLS=c LINES=l RETRY=ra

n Parallel printer device — LPT1, LPT2 or LPT3
c Horizontal spacing — 80 or 132 characters per line.
l Vertical spacing — 6 or 8 lines per inch
ra Retry action (do not use *ra* if MODE is used over a network):
 E return error from busy port
 B return busy from busy port, continuously retry
 R return ready from busy port
 NONE no retry action is taken
Default: *E*

For more information relevant to your version of MS-DOS, refer to the *MS-DOS User Reference* manual.

PRINTCFG — FOR DESKTOP EISA PCS (HP)

PrintCFG is an HP Utility that lets you view information about which board a configuration (CFG) file is associated with. PrintCFG is supplied on the Vectra diskette #2 shipped with the HP Vectra 486s/20, 486U PC Series, and 486ST PCs.

To run PrintCFG, enter:

PRINTCFG [*drive:*] [*path*] [*filename.cfg*] [>PRN]

filename.cfg is the name of the CFG file. You must use the CFG extension.
>PRN sends the information to the printer.

SAM — FOR DESKTOP EISA PCS (HP)

EISA Configuration with System Administration Manager

The System Administration Manager is supplied on the Vectra diskette #1, shipped with the HP Vectra 486s/20, 486U PC Series, and 486ST PCs.

The HP Vectra 486s/20, 486U PC Series, and 486ST are EISA-bus PCs. When you install boards and options, or change the amount of memory installed, you must reconfigure the PC using the System Administration Manager utility.

System Administration Manager examines the details of all the boards and options installed to determine the best conflict-free configuration. This configuration is saved in a file called SYSTEM.SCI.

To run System Administration Manager, boot the Vectra #1 diskette.

SAM options

/A this option selects the advanced/dealer mode. It is used to display features that are not available when running the EISA Configuration Utility in normal mode.
/B this option should be used with any non-standard display.
/H displays hi-resolution text on EGA and VGA displays.
/K disables the mouse during EASY CONFIG sessions.
/M enables Monochrome display of EASY CONFIG screens.

SETUP UTILITY (VERSIONS B AND C)

Setup is an HP utility on the Vectra Setup and Utilities Disk supplied with the HP Vectra ES, QS, RS, 286/12, and 386/25. It can be used to change the configuration information stored in CMOS RAM and initialize ST-506 hard disks. Some of the Setup command line options described below are not available on all Vectras.

Setup options

/BAK	makes a backup disk of the Setup master disk. This option creates a backup Setup work disk from the Setup and Utilities Disk.
/C	specifies the drive characteristics for an "unknown" hard disk drive type.
/D	manually marks hard disk defects. This option allows you to manually enter hard disk defects. A list of known defects is usually supplied with the hard disk.
/E	re-initialize ESDI drive types 39, 40, 41, 42, 43, 45, 46 or 47. These drives are normally pre-initialized.
/F	fast initialization. This option performs an initialization only, without a media scan or surface analysis. This option <i>does not</i> mark defects on a hard disk.
/GBS	enables/disables global BIOS shadowing (Vectra 286/12 only).
/H	displays all available options. This option displays all of the Setup command line options available for the Vectra on which Setup is running.
/I	sets the hard disk interleave factor. (Do not change this value unless you understand the reasons for doing so.)
/M	displays the Setup screens in monochrome.
/MEM	enables/disables cache memory.
/ORS	enables/disables option ROM shadowing (Vectra 286/12 and 386/25 only).
/SA	saves a system configuration to a file. This option saves the present Setup configuration (stored in CMOS RAM) to a file.
/R	loads a system configuration from a file.
/S	loads the Setup shell. This option displays the main menu of the Setup program.
/T	displays the disk drive type table (from version B.06.00)
/VBS	enables/disables video BIOS shadowing (Vectra 286/12 and 386/25 only). Enabling video BIOS shadowing copies the video BIOS to RAM.
/X	scans the hard disk to list marked defects. This option confirms that any defects found on the disk at the factory have been marked on the disk as defective.

SETUP (VERSION D)

Setup version D is a menu-driven utility with context-sensitive help built into the HP Vectra 386s, 386N & NI, 486N & NI, 486M & MI, and 486XM PC Series. It can be used to change the configuration information stored in CMOS RAM.

Setup is started by pressing the **[F2]** key after the PC completes its power-on self-test.

SSTOR.SYS UTILITY (DOS 5.0 AND ABOVE)

You cannot use the Volume Expansion disk partitioning utility HARDRIVE.SYS (which was designed for MS-DOS 3.3) to partition your hard disk when you are running MS-DOS 5.0.

If, however, you have already partitioned the hard disk drive using the partitioning utility, you can still use the hard disk drive partitions with MS-DOS 5.0. To do this, you must add the following command to the CONFIG.SYS file:

```
DEVICE=[drive:]\[DOS5.0 path]\SSTOR.SYS
```

For example, DEVICE=C:\DOS\SSTOR.SYS

UNDELETE COMMAND (DOS 5.0 AND ABOVE)

The UNDELETE command attempts to restore files previously deleted using the DEL command.

UNDELETE [*drive:*] [*path*] [*filename*] [/list|all] [/dos|dt]

- | | |
|------|---|
| list | lists the deleted files available for recovery but does not recover any files. |
| all | recovers deleted files without asking for confirmation. |
| dos | recovers files deleted by DOS, prompts for confirmation. |
| dt | recovers files listed in the deletion-tracking file produced by the mirror command. |

WHATIS UTILITY (VECTRA 386S AND 386N PC SERIES)

The WHATIS utility (located in the \EU directory of the Vectra 386N PC Series and 386s PC setup disk) displays information on the POST error codes. Type:

WHATIS [xxxx]

where xxxx is the four-digit hex error code.

D HP VECTRA PC SERVICE NOTES

OVERVIEW

This appendix contains the current Service Notes for the HP Vectra product line in product/chronological order.

The Service Notes are available on a System Support Division server that is updated fortnightly. To access this server from a connected DOS-based Vectra using MS LAN Manager, type the following:

```
C:\ ADDNAME WCSOLMX 15.24.176.18 [ENTER]
C:\ NET USE J: \\WCSOLMX\SNOTES [ENTER]
```

The new J: drive contains an index and subdirectories for the service note issues. There are only a limited number of connections to the server. So copy the information you require and then disconnect by typing:

```
C:\ NET USE J: /D [ENTER]
```

This will free the connection for someone else.

Unix users can use the FTP protocol to log onto the server. When you make the connection type SNOTES and press the carriage return key as the password.

NOTE	FTP from DOS does not work because of password restrictions.
-------------	--

To print the Service Note

Use the DOS copy command to print the service note. For example,

C:\ COPY *notename.C00* LPT1 /B where *notename.C00* is the service note laserjet image.

SERVICE NOTES

Service Note: Hard Disk 8311 Error

HP Vectra PCs — All Models

SUPERSEDES: None

Hard Disk Error 8311

Situation:

This information has been prepared to assist you in troubleshooting HP Vectra hard disk drive failures. The first troubleshooting tree focuses on hard disk drive error 8311, which is the most common problem. The second tree is useful with most other hard disk drive failures.

In investigating hard disk errors, we have seen many customer service orders (CSOs) and have noticed that often the components replaced were not faulty.

We feel that these troubleshooting trees will help to cut down the time spent in fault finding.

Refer to the *HP Vectra Accessory Service Handbook* for details on the hard disk drive jumper settings when installing HP disk drives.

Symptoms:

The system failed the Power-On Self Test for the Flexible drive A: and/or for the System Configuration

To be Performed by: HP-qualified personnel

Parts Affected:

Flexible disk drive cable

Problem Description:

When the flexible disk cable is not connected to a drive, the exposed connector could touch the chassis.

DATE: 19 November 1993

ADMINISTRATIVE INFORMATION

Service note classification:

MODIFICATION RECOMMENDED

Action category:	• immediately • on specified failure • agreeable time	Standards:		Labor: 0.5 hours
Location category:	• customer installable • on-site • HP location	Service inventory	• return • scrap • see text	Used parts: • return • scrap • see text
Availability:	Product's support life	Responsible entity:	6300	Until: 1 Nov 1995
Author: JV	Entity: 6300	Additional information: The CSO must refer to this service note.		

Solution/Action:

The problem is caused by the twists placed in the cable at manufacture. The solution is to unfold the 90× fold nearest connector B and make a 180× bend to avoid it touching the chassis.

See the illustration below:

Old Cable

New Cable

This modification is recommended during any SPU repair.

Permanent Solution:

The flexible drive cable has been changed at manufacturing. The old cable part number 5182-0312 has been replaced with a new cable part number 5182-1089.

New Windows 3.1 Drivers

A new and improved version of the Windows 3.1 driver set for the 486N (D26xxA) PC Series Models has been released.

DATE: 5 November 1993

ADMINISTRATIVE INFORMATION

Service note classification:

MODIFICATION RECOMMENDED

Action category:	• immediately • on specified failure • agreeable time	• performance enhancement • service/reliability enhancement			
Location category:	• customer installable • on-site • HP location	Responsible entity:	6300	Until:	Product support life
Author: JPB	Entity: 6300	Additional information:			

Situation

This new driver set eliminates the "snowy screen" syndrome which has been reported by some customers. Because of its very low occurrence, it has mainly been observed on site with a large installed base.

The fully documented standard Windows video driver installation process must be followed and can be performed by the end-user at his/her convenience.

Local HP Response Centers should be contacted to obtain the revised driver set.

Parts affected:

System board D2701-69001 and D2703-69001.
Third party coprocessor accessory: Cyrix™ 387SL

Symptoms

The PC does not work after coprocessor installation.

ADMINISTRATIVE INFORMATION

Service note classification:

MODIFICATION RECOMMENDED

Action category:	• immediately • on specified failure • agreeable time	Standards:		Parts Only: 5182-1026
Location category:	• customer installable • on-site • HP location	Service inventory	• return • scrap • see text	Used parts: • return • scrap • see text
Availability:	Product's support life	Responsible entity:	6300	Until: May 1995
Author: PG	Entity: 6300	Additional information: Please reference service note number on the CSO.		

Description

Units belonging to the above indicated date code range, may not have the coprocessor socket beveled corner, that indicates pin 1, aligned with the silk-screened index dot on the system board.

The Setting Up manual supplied with each PC correctly instructs the user to align the corner marker on the coprocessor with the corner marker on the system board itself (a large white dot). The coprocessor manufacturer's documentation also warns the user against wrongly inserting and refers him/her to the PC manual in case of doubt.

Because previous designs had a systematic coincidence of the socket and board markings, some users may install the coprocessor (Cyrix™ 387SL or 387SX/33), aligning its beveled corner with socket's one. In the above units, this will result in destruction of the coprocessor.

Problem fix:

Provide a replacement coprocessor to the user with instructions to refer to the Vectra N & NI PC Series Setting Up manual for correct installation. (White dot marking on the system board should match the beveled corner of the coprocessor.)

Coprocessor socket corner marker is aligned with the system board marker on production units after date code 3312.

Service inventory

In order to replace damaged customer components, the Cyrix™ 387SL (Also referred to as Cyrix™ 387SX/33) coprocessor has been made available on the HP parts price list, via part centers, under P/N 5182-1026.

Proof of purchase of the original component should be provided to HP personnel to claim for replacement (either the bill or the damaged component itself).

Location category:	• customer installable • on-site • HP location	Service inventory	• return • scrap • see text	Used parts: • return • scrap • see text
Availability:	Product's support life	Responsible entity:	6300	Until: 1 Nov 1995
Author: JV	Entity: 6300	Additional information: The CSO must refer to this servicenote number.		

Reason:

The existing power supply is experiencing a higher than normal failure rate due to an intermittently unreliable diode failure. As a result, some small quantities of power supplies have been reported to have failed leaving the PC inoperable.

This failure does NOT cause any other cards in the system to fail NOR is it a safety problem.

Symptoms are:

Fails on power up. The fan is not turning and the power supply is dead!

Parts affected:

System BIOS, version L.03.02

Symptoms:

" Bad Memory Configuration" message:

From time to time, during its execution the Power-On self test detects a bad memory configuration and displays the error message: 20XA (two memory modules of different size in same bank). But in fact, there are no memory modules in this bank.

DATE: 24 December 1992

ADMINISTRATIVE INFORMATION

Service note classification:

MODIFICATION RECOMMENDED

Action category:	• immediately • on specified failure • agreeable time	Standards:		Parts Only: 5182-1026
Location category:	• customer installable • on-site • HP location	Service inventory	• return • scrap • see text	Used parts: • return • scrap • see text
Availability:	Product's support life	Responsible entity:	6300	Until: November 1994
Author: PG	Entity: 6300	Additional information:		

Problem Description:

The Power-On self test algorithm used to identify the system memory configuration may not be compatible with some signals on the system board (D2490-6x005). The timing for the test is near the limits for certain signals in the system board, resulting in intermittent failures on a small percentage of products.

Problem fix:

A new revision of the system BIOS, version N.03.04 or higher, fixes the problem by changing the memory identification process.

The BIOS, version N.03.04 (P/N 5063-0860) replaces the first version N.03.02 (P/N 5063-0822).

Note for service inventory:

Old BIOS kit version L.03.04 (P/N 5063-0822) is still usable on Vectra 386s/20. This part is therefore "Use Till Gone" for those models.

Service Note: D3021A-04 D3022A-04 D3025A-04 D3026A-04 D3028A-04**HP D302xA Vectra 486/VL Personal Computer**

------------------	---	---

Location category:	• customer installable • on-site • HP location	Available Until:	January 1996
--------------------	--	------------------	--------------

Author: DPL	Entity: 6300	Additional information:
-------------	--------------	-------------------------

Situation:

The system board part numbers of the Vectra 486/VL are changing for both exchange and replacement parts.

The reason for the change is to give visibility to the BIOS change for specific configurations.

Starting with BIOS revision AA.05.01, and going on with BIOS revision AA.05.02, the following feature has been added to the HP Vectra 486/VL:

- * Support of CGA/EGA/Hercules monochrome add-on video cards

HP Vectra 486VL PCs with serial numbers listed above don't work with CGA/EGA/Hercules monochrome add-on video cards.

New version of replacement and exchange parts are shipped with AA.05.02 BIOS.

BIOS And System Board Identification Procedure

The BIOS revision level appears in the system configuration screen each time the Vectra 486/VL is powered on.

Service Inventory

D3021-69001 and D3025-69001 can be use-till-gone as it is expected that a very low percentage of Vectra 486/VL is used with add-on monochrome cards.

WARNING: Use of the newer D3021-69002 or D3025-69002 is mandatory when the customer configuration includes a monochrome CGA/ EGA/Hercules add-on board.

Limitation of Warranty

Extended warranty is granted to customers that install a monochrome CGA/EGA/Hercules add-on card on an HP Vectra 486/VL having an AA.05.00 revision of BIOS in the serial number range defined in this service note.

The warranty location corresponds to the normal PC warranty conditions :

first year after purchase is on-site
beyond first year until January '96 is return to HP.

Product Serial Numbers:

- All above listed PC models with Dxxxx-60x01 part numbers.

Parts affected:

Intel Pentium 60 and Pentium 90 processors, early stepping versions.

Symptoms:

Loss of precision for floating point operations:

The first stepping levels of the Intel Pentium 60 and Pentium 90 processors demonstrate a loss of precision for floating point divisions on certain operand pairs. Most PC applications are not affected.

DATE: 15 March 1995

ADMINISTRATIVE INFORMATION

Service note classification:

MODIFICATION RECOMMENDED

Action category:	• immediately • on specified failure • agreeable time	Standards:		Labor: 0.5 hours
Location category:	• customer installable • on-site • HP location	Service inventory	• return • scrap • see text	Used parts: • return • scrap • see text
Availability:	Product's support life, from Intel	Responsible entity:	6300	Until: February 1996
Author: MB	Entity: 6300	Additional information:		

Problem Description:

The first stepping levels of the Intel Pentium processors show a loss of precision for floating point divides on a few specific operand pairs. Due to the rarity of these operand pairs, and the fact that the loss of precision only starts from the fourth place after the decimal point, most PC applications are not affected.

Problem fix:

Intel has released new steppings of the Pentium that do not have the problem, and has set up a replacement program. HP customers who want the new steppings of the chip will have to call Intel hot lines and request a replacement chip. Intel hot lines can be contacted at these phone numbers:

United States	1-800-628-8686
France	05 90 81 79
Germany	0130 818921
Netherlands	0602 24939
Italy	1670 10475
Spain	(91) 3082552
UK	01 793 696 776
Rest of Europe	44 1 793 696 776
Australia	+61-2-975-3300
Singapore	+65-735-3811
Hong Kong	852-844--4555
Taiwan	886-2-514-4200
India	91-80-2215065
PRC	86-1-505-0386
Japan	0120-868686, 298-47-1841
Rest of World	1-916-356-3551

A few customers are requesting on-site replacement. For these customers, HP will pay for CE labor and Travel under conditions stated below:

- * Many customers will have to wait up to 60 days
- * Escalations and hot-lines are not accepted
- * Internal HP customers are requested not to place orders until July 1995.

Note for service inventory: It is critical that the field support organization return the defective chip back to SMO in the prepaid mailer, in order for HP to be reimbursed by Intel.

ADMINISTRATIVE INFORMATION

Service note classification:

MODIFICATION RECOMMENDED

Action category:	• immediately • on failure • agreeable time	Billing to responsible division: 1 travel charge per site of up to 30 units. 10 minutes labor per updated unit. 1 CSO per updated unit.			
Location category:	• customer installable • on-site • HP location	Service inventory	• return • scrap • see text	Used parts:	• return • scrap • see text
Availability:	Support life of product	Responsible entity:	6300	Until:	January 1996
Author: UB	Entity: 6300	Additional information:			

Problem Description

The on-board coin battery life will be shorter than expected in units in the listed serial number range if they are switched off for more than 14 hours per day. Problem will not manifest on units which are switched on 24 hours per day. Units on which the pre-loaded power management tools are activated will be affected less.

Problem Reason

The power requirement of the real-time clock component is too high for the capacity of the on-board battery.

Problem Fix

If the battery is dead, replace the on-board coin battery with a BR 2335 coin battery AND an external long-life battery. This will ensure a satisfactory battery life. Order the following parts:

P/N 1420-0513 4.5V long life external battery

and

P/N 1420-535 BR2335 coin battery.

You must make the exchange in the following order or the clock will operate too quickly:

1. take out the old coin battery
2. put in the new coin battery
3. install external long-life battery.

Changing the system board will not solve the problem.

All units with serial number prefixes equal to, or greater than 3450, have been reworked so that the battery life will be normal.

When one unit has failed, the same modification should be made to other units on the same site which have the same serial number range.

No preventive action is required on customer sites where no unit has failed.

Availability:	Product's support life	Responsible entity:	6300	Until:	March 1998
Author: UB	Entity: 6300	Additional information:			

Problem Description:

On units in the listed serial number range, the on-board 3 V coin battery life time will be shorter than expected because the power consumption of the real time clock component is too high for the battery. The problem will not show up on units which are always powered-on, or on units which have the preloaded power management tools activated.

Problem fix:

Replace the battery. You cannot put in a new coin battery and an external battery as described in service note D3168A-02, as it is not possible to use an external battery.

Note for service inventory:

Use the BR2335 coin battery, part number 1420-0535.

Service Note: D3210A-04 D3211A-04 D3212A-04 D3213A-04 D3220A-04 D3221A-04 D3221B-04 D3222A-04 D3222B-04 D3224A-04 D3224B-04 D3230A-04 D3231A-04 D3231B-04 D3232A-04 D3232B-04 D3233A-04 D3233B-04

Parts affected:

1MB video upgrade accessory (D3241A) for the XM2 causing corrupted video problems.

Symptoms:

Video corruption immediately when upgrade accessory is installed (display looks as if using an unsuitable video driver).

DATE: 11 April 1995

ADMINISTRATIVE INFORMATION

Service note classification:

MODIFICATION RECOMMENDED

Action category:	• immediately • on specified failure • agreeable time	Standards:	Part: 5063-5710 Veido Simm Only Labor: 0.2 hours (average time for exceptional cases as customers have to conform to the standard Return-to-HP accessory Warranty, and not call for a CE on-site.		
Location category:	• customer installable • on-site • HP location	Service inventory	• none	Used parts:	• return • scrap • see text
Availability:	Product's support life	Responsible entity:	6300	Until:	1 May 1998
Author: CTE	Entity: 6300	Additional information:			

Problem Description:

Corrupted display at power on following installation of upgrade accessory HP D3241A. Some D3241A accessories have been loaded with the wrong memory chips.

This only applies to accessories purchased after February 15th,1995.

Before changing the CPU board, make sure that the video problem is not caused by a faulty DRAM in the video upgrade SIMM accessory. To identify a defective video upgrade SIMM accessory, look for the date-code on the label of the accessory packaging. The code is below the HP Part Number. The date codes are either 34xx or 35xx. Codes 34xx are not affected.

Codes 3507, 3508 and 3509 are suspect. Codes 3510, 3511 and higher are not affected.

Or, if the accessory packaging has been discarded, peel off the paper label on the DRAM chip. Codes MT4C16270DJ-7 is good, but **MT4C16257DJ-6 is faulty.**

Problem fix:

Replace accessory with Part Number 5063-5710. If you do not have a replacement accessory, as a temporary solution, you can remove the defective accessory and work can be continued with the standard on-board 1MB video memory.

Only change the video upgrade SIMM accessory. Do not change the CPU board.

If you observe this failure while on site with a customer, you should also check any other XM2 platforms in which the customer has installed additional video memory so that you can change all suspect video memory SIMM accessories at one time.

IMPORTANT No XM2 was sold with this accessory bundled, therefore you need only check XM2 platforms in which the customer has installed additional video memory.

Symptoms:

The PC boots, but the display screen remains blank.

DATE: 27 January 1995

ADMINISTRATIVE INFORMATION

Service note classification:

INFORMATION ONLY

Author: BP Entity: 6300

Additional information:

Problem Description:

Approximately 325 Vectra XM2 PCs were shipped with the previous (not the latest) release of software. The BIOS (GD.05.14) does not support the new video RamDac on the system board. Only European shipments are affected.

Problem fix:

Reflash the machine with the latest BIOS release. To do this when the display is not operating, create a bootable diskette with the latest BIOS release and the *hpinit.exe* utility. Modify the diskette's autoexec.bat file by adding the following statement:

HPINIT/M

Booting from this diskette will then reflash the machine automatically.

Do not change the system board.

VECTRA 486T TROUBLESHOOTING

The following table lists some common workarounds for the Vectra 486T PCs:

Symptom(s)	Problem	Workaround (fix)
Memory Parity Error	Samsung memory modules	Replace Samsung memory modules with HP qualified modules (i.e. Toshiba)
Configuration: • ISA Master Board i.e. HP 1540 or CMS equivalent • Samsung memory modules	No evidence of Data corruption	Make sure that the memory modules are 80ns types
System does not boot from SCSI disk driveSystem does not recognize boards in lower numbered slots Failures occur in boards in lower numbered slots (slots 1, 2, & 3) Configuration: • Out-of-spec EISA boards in upper slots (slots 6, 7, or 8)	EISA Bus Loading	Install all EISA boards starting from the lower numbered slots, working up, installing ISA boards last. Put the HP 1740 Board(s) in the lowest slot (slots 1 or 2) Avoid placing EISA boards in upper slots (i.e. slots 7 & 8) Slots 3 & 5 cannot be used for EISA bus Master Boards
Intermittent Hard Disk Errors (i.e. 83xx errors)	Current Back-flow drains CMOS	Connect external device into the system's built-in parallel ports

Configuration:

- ESDI Controller or S/P board
- Laserjet or externally powered mass storage device

Any externally powered device (such as Laserjet) that is connected to the system through:

- Extra parallel port (HP 2454A board)
- Other interface board connected to the backplane

Power-up system first, before external device(s)

Power-down peripheral if system is being powered off for an extended period

NOTE: HP VECTRA 286/12 PC 800X600 EXTENDED SUPER VGA MODE USERS

1. The new video BIOS version of the Vectra 286/12 PC (version 7.04) includes changes to the vertical refresh rate of the video display. This code is included in the BIOS ROM versions H.03.04 and higher.

In this version, the refresh rate for 800x600 modes is now 60 Hz instead of 56 Hz. This requires displays capable of running a 38 KHz horizontal scan rate.

As a result, some displays may no longer work. A known product having this problem is the NEC 2A monitor.

For users experiencing this incompatibility, when changing the Vectra 286/12 BIOS ROM, two possible solutions may be used:

Keep the old BIOS ROM version (H.03.03) on the system board.

or

Use the previous revision (2.75) of the ALTPARM.COM driver.

The following table will help you understand the problem:

	<u>BIOS rev H.03.03</u>	<u>BIOS rev H.03.04</u>
ALTPARM.COM version 2.75	Always set to 56 Hz	Use 60 Hz if ALTPARM not loaded Use 56 Hz if ALTPARM loaded
ALTPARM.COM version 2.78	Use 56 Hz if ALTPARM not loaded Use 60 Hz if ALTPARM loaded	Always set to 60 Hz.

2. A known incompatibility exists between the new video BIOS, contained in ROM BIOS H.03.04 and above, and older revisions of the AUTOCAD super VGA driver. When using the new video BIOS and the old AUTOCAD driver (for AUTOCAD Rel 10 only), some colors may disappear.

The solution to this problem is to use the newer AUTOCAD driver, supporting AUTOCAD Rel 10 and 11. This driver is available on HP internal PCG bulletin boards.
