Firepower Management Center REST API Quick Start Guide, Version 6.7.0

First Published: 2020-10-28

Last Modified: 2020-10-28

CONTENTS

CHAPTER 1

About the Firepower Management Center REST API

The Firepower Management Center REST API provides a lightweight API to manage a Firepower Management Center.

About the Firepower Management Center REST API

With the release of Cisco's Firepower Management Center REST API, you now have light-weight, easy-to-use option for managing Firepower Threat Defense and legacy Firepower devices through a Firepower Management Center.

The REST API is an application programming interface (API), based on "RESTful" principles, which you can quickly enable on any Firepower Management Center running version 6.1 or higher, and use with a REST client.

After installing a REST client, you can contact the specific Firepower Management Center's REST agent and use standard HTTP methods to access current configuration information, and issue additional configuration parameters.

Enabling the REST API

In Firepower Management Center, the REST API is enabled by default. However, if you are intending to use the REST API, you should confirm that it is enabled.

Note If you are using UCAPL mode, check that the REST API is not enabled.

Step 1 Navigate to System>Configuration>REST API Preferences>Enable REST API

Step 2 Check the "Enable REST API" checkbox.

Step 3 Click "Save". A "Save Successful" dialog will display when the REST API is enabled.

Best Practices

Cisco recommends the following best practices for optimal results with the REST API:

- Keep UI users and script users separate. Especially do not use the admin account as an API user.

- Do not give script users more privilege than needed.

- Always validate the content coming from the server.

- Validate/sanitize JSON content, as it may include embedded executable code.

- If you are using CC or UCAPL mode you should disable REST API access to the Firepower Management Center and managed devices.

Additional Resources

Additional resources for the Firepower Management Center REST API can be found on Cisco DevNet at
https://developer.cisco.com/firepower/.

CHAPTER **2**

About the API Explorer

About the API Explorer

The API Explorer provides a limited interface for the REST API as well as giving a view of the abilities of the REST API.

The API Explorer resides on the Firepower Management Center, and can be accessed via the Firepower Management Center at:

```
https://<management_center_IP_or_name>:<https_port>/api/api-explorer
```

Version 6.4 uses a new API Explorer, based on the OpenAPI Specification (OAS). You can still access the legacy API Explorer if you prefer.

As part of the OAS, you now use CodeGen to generate sample code.

This explorer provides the list of APIs available on the Firepower Management Center, and their details.

Authentication to the API Explorer

The REST API relies on the same authentication as the Firepower Management Center. Each function in the REST API maps to permissions in the Firepower Management Center.

You can log into the API Explorer using any account on the Firepower Management Center, but you will only be able to perform the functions for which the account has permissions. For more information on setting permissions for user roles, see the *Firepower Management Center Configuration Guide*.

The first time you connect to the API Explorer you may receive an error that the connection is not secure due to an invalid certificate. You will need to add an exception in your browser to use the certificate and accept the connection.

Logging into API Explorer

The REST API uses the same authentication and permission model as the Firepower Management Center. See the *Firepower Management Center Configuration Guide* for more information.

Before you begin

Make sure you have an account on your Firepower Management Center with the required permissions to perform the tasks you want to perform using the REST API.

Step 1 Navigate to the following URL: https://<management_center_IP_or_name>:<https_port>/api/api-explorer

If you experience an extended load time for the logon screen when using a Firefox browser, enter **about:support** in the search bar and click the **Refresh Firefox** option, then view the Firepower Management Center interface with self-signed certificates in the same Firefox browser. For more information, see https://support.mozilla.org/en-US/kb/refresh-firefox-reset-add-ons-and-settings.

Step 2 Log in with your username and password and click "Sign In"

What to do next

Locate the desired resource and request.

Setting the Domain

The REST API can perform functions globally, in the default domain, or in specific domains.

Before you begin

You must have a configured Firepower Management Center, an account with permissions to access the REST API in one or more domains configured on your FMC.

In the upper right, drop down the Domains menu and select the desired domain.

What to do next

Locate the desired resource and request type.

Accessing the Legacy API Explorer

The API Explorer has changed for 6.4.0. While the newer API Explorer retains nearly all of the previous functionality, some users may prefer the older interface.

Before you begin

| Note | The Legacy Explorer will be removed in future releases of Firepower Management Center. Please use the Open API Specification for access to current REST API functionality in the future. |

Make sure you have an account on your Firepower Management Center with the required permissions to perform the tasks you want to perform using the REST API.

Log in to the API Explorer at https://<management_center_IP_or_name>:<https_port>/api/api-explorer.

In the upper right-hand corner click on `Legacy Explorer`.

What to do next

Use the Legacy API Explorer as you would normally.

Obtaining Sample Code with CodeGen

You can use the CodeGen utility on the Open API Spec to generate sample code in a number of different languages. This utility is an open-source tool you can download online. The resultant code is meant primarily as an educational and bootstrapping tool.

The CodeGen utility creates sample code for the entire Open API Spec. As such, it generates sample code for every allowed method and endpoint in the REST API. The sample code can be in a variety of languages, including HTML, Perl, Python, and Java.

For complete documentation of the CodeGen utility go to https://repo1.maven.org/maven2/io/swagger/swagger-codegen-cli/

Downloading the Open API Spec

The Open API Spec is a standardized specification of a REST API. The Open API Spec for the Firepower Management Center REST API contains details about the endpoints, fields, parameters, and requirements of the API. You can use the API Spec to generate sample code as well as find specific information about API functionality.

The Open API Spec is a JSON file. It can be read by most text editors.

Before you begin

Have an account on the Firepower Management Center which is able to access the API Explorer.

Make sure that your browser is able to download from sites with self-signed certificates.

Step 1   Navigate to the following URL: https://<management_center_IP_or_name>:<https_port>/api/api-explorer

Step 2   Click on `Download Spec` in the upper right corner. Depending on your browser configuration, you will either be given a prompt to save the file, or be shown the file directly.

Step 3   Save the file. Be sure to note the destination and filename.

What to do next

Run the CodeGen utility on the downloaded file.

Generating Sample Code with the CodeGen Utility

The Swagger CodeGen utility allows you to generate sample code from an Open API Spec. This sample code can be in a variety of languages including Java, HTML, Python, and Perl.

Before you begin

Download the Swagger CodeGen Utility. It can be found at
https://repo1.maven.org/maven2/io/swagger/swagger-codegen-cli/

Have a Jave Runtime Environment installed on your computer

Download the Firepower Managemenr Center REST API Open API Spec

Set environment variables to allow you to run the CodeGen utility

From the command line, run the command `java -jar ./swagger-codegen-cli-<VERSION>.jar generate -o <OUTPUT_PATH> -l <LANGUAGE> -i <OPEN_API_SPEC_FILE>`

Example:

```
java -jar ./swagger-codegen-cli-2.3.1.jar generate -o C:\work\code\api_schema\html -l html -i
fmc_swagger.json
```

`<VERSION>` is the specific version of the CodeGen utility you are using. It must match the filename of the CodeGen .jar file.

`<OUTPUT_PATH>` is the path to which you want to output the generated code.

`<LANGUAGE>` is the language which you want CodeGen to generate. Suggested options include `html`, `java`, `perl`, and `python`. Other options are possible, check the CodeGen documentation for the complete list of choices.

`<OPEN_API_SPEC_FILE>` is the Open API Spec file which you downloaded. This is the source from which CodeGen is generating example code. Without it, CodeGen cannot provide output.

What to do next

Find the generated code in the output path and use as desired. Generated code should be considered an example, and may not perform as desired unless modified to meet your needs.

Viewing API Parameters

Each resource has a set of parameters and fields associated with it. You can view the parameters and fields by performing any of the supported operations for that resource within API Explorer.

Before you begin

You must have a configured Firepower Management Center and an account on that center with the permissions required to use the desired REST API functions.

Step 1 Select the desired resource.

Step 2 Select one of the supported operations for that resource.

Viewing API Parameters

CHAPTER 3

Connecting with a Client

You can access the REST API using any REST API client. Typically REST API clients are available as browser plugins, but any REST API client is allowed.

> **Note** If connecting to the REST API for the first time, you will receive a certificate warning. You need to accept the certificate in order to use the REST API.

Authentication from a REST API Client

Cisco recommends that you use different accounts for interfacing with the API and the Firepower User Interface. Credentials cannot be used for both interfaces simultaneously, and will be logged out without warning if used for both.

The first time you connect to the REST API you may receive an error that the connection is not secure due to an invalid certificate. Add an exception in your browser to use the certificate and accept the connection.

With Token Based Authentication you obtain a token by providing your username and password. You use this token to access an HTTP service for a limited time period without the need for the username and password with every request. In other words, to eliminate the need for authenticating with your username and password with each request, you replace user credentials with a uniquely generated access token, which you use for accessing resources for up to 30 minutes and can refresh up to three times.

The diagram below illustrates the concept of token-based authentication:

Token-Based Authentication
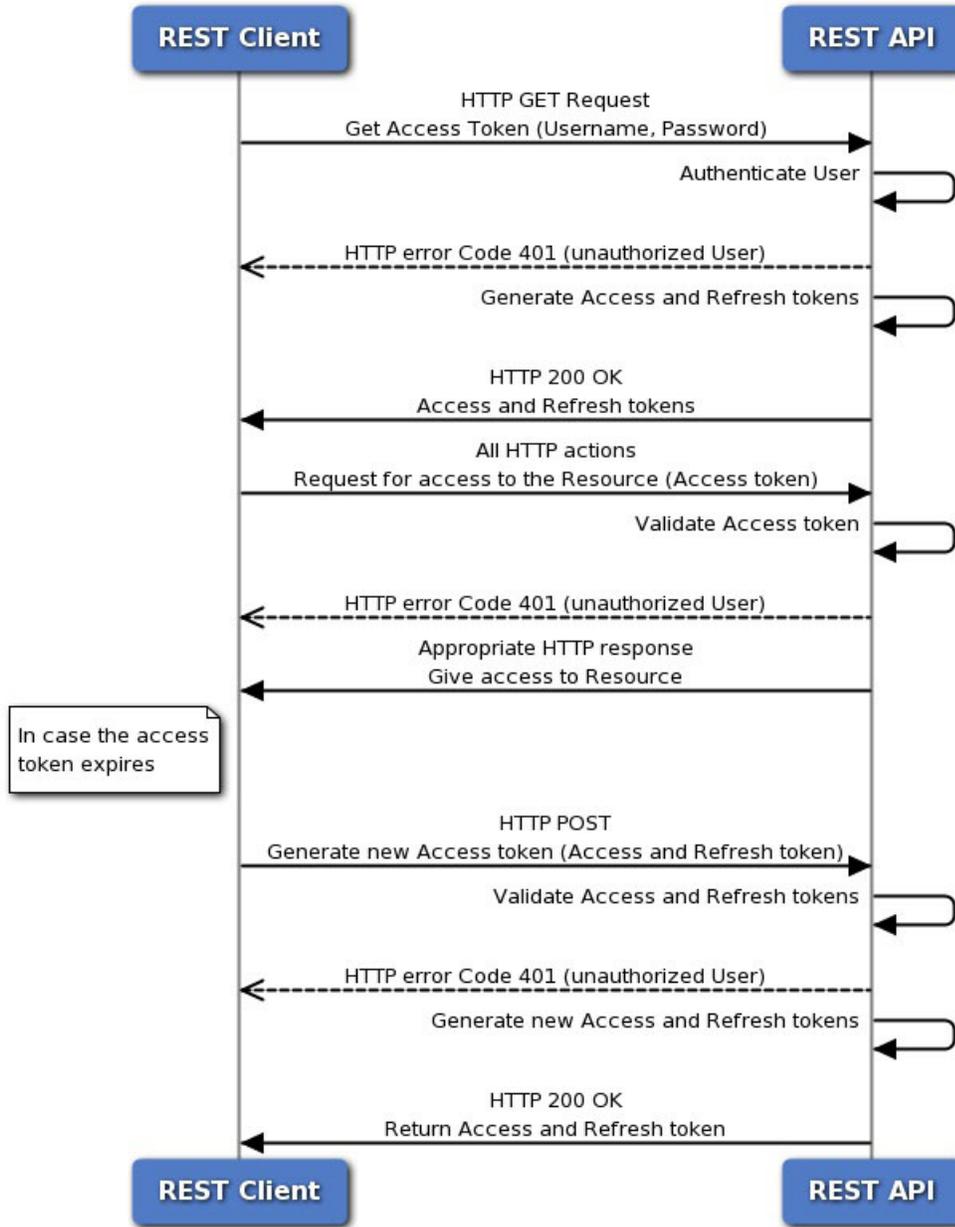

Requesting an Authentication Token

The Token Generation Utility provides an authentication token which can be used in your REST API client.

Before you begin

You must have a configured Firepower Management Center and an account on that center with credentials to use the REST API. You must also have a REST API Client which can perform basic authentication.

Step 1   Open your REST API Client.

Step 2   Set the client to make a POST command to the following URL:
`https://<management_center_IP_or_name>/api/fmc_platform/v1/auth/generatetoken`.

Step 3   Include the username and password as a basic authentication header. The POST body should be blank.

What to do next

Add the header `X-auth-access-token:<authentication token value>` in requests to the API.

Add the headers `X-auth-access-token:<authentication token value>` and
`X-auth-refresh-token:<refresh token value>` in requests to refresh the token as described in Authentication from a REST API Client, on page 9

Use the `Domain_UUID` from the authentication token in all REST requests to the server.

Refreshing an Authentication Token

Firepower Management Center REST API authentication tokens are valid for 30 minutes, and can be refreshed up to three times.

Before you begin

Obtain valid authentication and refresh tokens from the Firepower Management Center REST API. Ensure these tokens have been refreshed less than three times.

Step 1   Open your REST API Client.

Step 2   Set the client to make a POST command to the following URL:
https://<management_center_IP_or_name>/api/fmc_platform/v1/auth/refreshtoken with the headers
`X-auth-access-token:<authentication token value>` and `X-auth-refresh-token:<refresh token value>`.

What to do next

Add the header `X-auth-access-token:<new authentication token value>` in requests to the API.

Add the header `X-auth-refresh-token:<new refresh token value>` in requests to refresh the token.

Objects in the REST API

Request Structure

Request Structure:

Requests are sent to the Firepower Management Center as HTTPS requests with the Uniform Resource Identifier (URI) of the form described below:

```
https://<management_center_IP_or_name>:<https_port>/<object_URL>/object_UUIDoptions
```

Where:

- `<management_center_IP_or_name>`

  is the IP address or Fully Qualified Domain Name of the Firepower Management Center

- `<https_port>`

  is the port number used by the Firepower Management Center for HTTPS connections. This port is always 443.

- `<object_URL>`

  is the specific URL for the desired resource. These URLs are unique for each resource and are given below.

- *options*

  are the options given with the request. Options can be used to modify the output and filter results.

- *{UUID}*

  Many URLs contain one or more UUIDs which must be specified. Most URIs include the domain UUID, which can be found in the Authentication Token. When deleting or modifying an object, or requesting information about a specific object, the URI will end with the object UUID.

Available request methods are:

- `GET`

  – Retrieves data from the specified object. GET is a read-only operation.

- `PUT`

  – Adds the supplied information to the specified object; returns a 404 Resource Not Found error if the object does not exist.

  Note Currently PUT may be used to create a new object, but this ability may be removed in later releases. Use POST to create new objects and PUT to modify existing objects.

- `POST`

  – Creates the object with the supplied information. POST operations should be followed with a payload consisting of the JSON object to be created, enclosed in braces:

  `{object]`

  Note The maximum number of rules you can use depends on memory of the device. There is no set limit, because complex rules use more memory. For rule performance and optimization guidelines, see the Firepower Management Center Configuration Guide.

- `DELETE`

  – Deletes the specified object.

- `PATCH`

  – **Not supported.**

The API supports query parameters for almost all requests. For GET requests, the following query parameters can be used to control the number of of returned objects and the pagination:

- `expanded`

  - This is a True/False value which indicates whether you get a full listing of an item in a list or only a reference. Some fields will only show if this flag is set to true.

- `offset`

  - Indicates the position in the list where you want to start.

- `limit`

  - Indicates the number of items you want to retrieve in a page.

The API supports filtering on the basis of query parameters passed with a request. Filtering can be done based on specific attributes in a model. The parameters available for filtering vary by object, and are listed with the request below.

Bulk Rule Posting

Multiple access control rules can be added with a POST command using the bulk insert feature. This feature allows as many as 1,000 rules to be addded at once.

This feature is only available for access rules.

The URL for this feature is:

`https://{fmc_IP_or_name}:{https_port}/api/fmc_config/v1/domain/{domain_UUID}/policy/accesspolicies/{policy_UUID}/accessrules?bulk=true`

The option:

`?bulk=true`

indicates that that multiple rules will be used in the payload of this request.

All objects in the payload of the bulk POST request must be of the same type. You cannot mix different objects in the same bulk request.

Unlike a normal POST operation, the bulk POST requires a list of JSON objects. This list may have as many as 1,000 objects or as few as one. The individual JSON objects must be enclosed in braces. Each object must be separated by commas, and the entire list is enclosed in brackets:

`[{object}]`

`[{object1},{object2},{object3},{object4},{object5} …]`

The following query parameters are supported in bulk POST requests:

- `bulk=true`

  This parameter specifies that the bulk POST feature is being used in the query. This parameter is **required** for bulk rule posting.

- `section=mandatory/default`

  This parameter specifies the section into which the rules will be added. If this parameter is not used the section will be the default section. Only `mandatory` and `default` are allowed values. If a section is specified it must exist or the request will fail. If a section is specified, a category cannot be specified.

- `category=<Name of the category>`

  This parameter specifies the category into which the rules will be added. If a category is specified it must exist or the request will fail. If a category is specified, a section cannot be specified.

- `insertAfter=<Index of rule>`

  This parameter specifies that the rules will be inserted after the specified rule index. If no section or category is specified, the rules will be added to the section or category after the insertion point.

- `insertBefore=<Index of rule>`

  This parameter specifies that the rules will be inserted before the specified rule index.If no section or category is specified, the rules will be added to the section or category before the insertion point. insertBefore takes precedence over insertAfter - if both are specified, the insertBefore parameter will apply.

When a rule or group of rules are inserted at an index which is part of either a section or a category, the category or section parameter can be used along with index to specify the insertion location of the rule(s). If an index is given along with a section or category, but the index is not in that section or category, you will receive an error.

If no index is specified, rules will be inserted after the end of the access policy. If a category or section is specified but no index is specified, rules will be inserted at the end of the category or section.

In any given POST all of the rules will be inserted at a single point. You cannot specify multiple insertion locations in a POST request.

Note Rule order affects how orders are parsed by the Firepower Management Center.

Response Structure

Note The REST API will serve only 25 results per page. This can be increased up to 1000 using the limit query parameter.

The response structure can be:

- LOCATION – Newly created resource ID; for POST only—holds the new resource ID (as a URI representation).

- CONTENT-TYPE – Media type describing the response message body; describes the representation and syntax of the response message body.

- Each response includes an HTTP status or error code. Available codes fall into these categories:

- 20x - A two-hundred series code indicates successful operation, including:

- `200 200`

  – "OK". Standard response for successful requests.

- `201 201`

    – "Created". Request completed; new resource created.

- `202 202`

    – "Accepted". Request accepted, but processing not complete.

- `204 204`

    – "No Content". Server successfully processed request; no content is being returned.

- 4xx - A four-hundred series code indicates a client-side error, including:

- `400 400`

    –"Bad Request". Invalid query parameters, including unrecognized parameters, missing parameters, or invalid values.

    This can indicate that the object was edited or deleted via REST API such that the corresponding policy is invalidated.

- `404 404`

    – "Not Found". The provided URL does not match an existing resource. For example, an HTTP DELETE may fail because the resource is unavailable.

- `405 405`

    – "Method Not Allowed". An HTTP request was presented that is not allowed on the resource; for example, a POST on a read-only resource.

- `422 422`

    – "Unprocessable Entity". The payload is too large. This will occur when you send a payload greater than 2048000 bytes.

    – The payload contains an unprocessable or unreadable entity such as a invalid attribut name or incorrect JSON syntax.

- `429 429`

    – "Too Many Requests". Too many requests were sent to the API. This error will occur if you send more than 120 requests per minute.

    – Too many concurrent requests. The system cannot accept more than 10 parallel requests from all clients.

    – Too many write operations per server. The API will only allow one PUT, POST, or DELETE request per user on a server at a time.

- 5xx - A five-hundred series code indicates a server-side error.

In the case of an error, in addition to the error code, the return response may include an error object containing more details about the error. The JSON error/warning response schema is as follows:

```
{
"error": {
"category": "FRAMEWORK",
"messages": [
{
```

```
 "description": "Action is mandatory to be specified."

}

 ],

"severity": "ERROR"

}

}
```

where the object properties are:

Table 1: Object Properties

Property	Type	Description
messages	List of Dictionaries	List of error or warning messages
code	String	Error/Warning/Info code
details	String	Detailed message corresponding to Error/Warning/Info

Rate Limiting

The Firepower Management Center REST API implements rate limiting to reduce network load.

The API will accept no more than 120 messages per minute from an individual IP address. It will only allow 10 simultaneous connections per IP address. These are not configurable parameters.

If a client exceeds these limits, the API will give an HTTP 429 error.

Payload Limiting

The API cannot accept a message with a payload greater than 2048000 bytes. This applies to both the REST API and to API Explorer. This is not a configurable parameter.

If a message exceeds this limit, the API will give an HTTP 422 error.

Object Overrides

An override defines an alternate value for an object, which the system uses for the device or domain specified. In a single request user can create multiple overrides for multiple objects using bulk operation.

When an object is overriden, the alternate values will be provided for that object when it is requested. This does not overwrite the original values, which will return if the override is removed. The override gives alternate values for all fields in the object except for the `Name` and `Description` fields.

The URL for this feature is:

```
https://:{fmc_ip_or_name}:{https_port}/api/fmc_config/v1/domain/{Domain_uuid} /object/hosts
```

Request payload to create an override for object "testhost" on domain ""Global \\ RETAIL" with the override value being "1.2.3.5":

```
{
  "type": "Host",
  "value": "1.2.3.5",
  "overrides": {
    "parent": {
      "id": <Parent UUID>
      "type": "Host"
    },
    "target": {
      "name": "Global \\ RETAIL",
      "id": <target domain UUID>,
      "type": "Domain"
    }
  },
  "overridable": true,
  "description": " ",
  "name": "testhost",
}
```

Optional:

```
?bulk=true
```

indicates the override creation for more than one object.

GET:

URL to list all overrides on a particular object:
`/api/fmc_config/v1/domain/{domain_UUID}/object/hosts/{host_UUID}/overrides`

URL for override for an object on a particular domain or device:
`/api/fmc_config/v1/domain/{domain_UUID}/object/hosts/{host_UUID}?overrideTargetId={target_UUID}`

URL for all the overrides on a particular domain or device:
`/api/fmc_config/v1/domain/{domain_UUID}/object/hosts?overrideTargetId={target_UUID}`

Note When overridden, the parent object value will never change.

Audit Services

GET auditrecords

Request Type: **GET**

Description: Retrieves audit records.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/audit/auditrecords`

URL for GET by ID: `/api/fmc_config/v1/domain/{domain_UUID}/audit/auditrecords/{objectID}`

Permissions: System > Monitoring > Audit

Parameters available for filtering: username, subsystem, source, starttime, endtime

Users

•

GET authroles

Request Type: **GET**

Description: Retrieves the list of all existing user roles in the system.

URL: `/api/fmc_config/v1/domain/{domainUUID}/users/authroles`

Permissions: System > User Management

Parameters available for filtering: none

GET SSO Config

Request Type: **GET**

Description: Retrieves the Single Signon Configuration for the device.

URL: `/api/fmc_config/v1/domain/{domainUUID}/users/ssoconfigs/{objectId}`

Permissions: System > User Management > Single Sign-On

Parameters available for filtering: none

PUT SSO Config

Request Type: **PUT**

Description: Modifies the Single Signon configuration for the device.

URL: `/api/fmc_config/v1/domain/{domainUUID}/users/ssoconfigs/{objectId}`

Permissions: System > User Management > Single Sign-On

Deployment Services

GET deployabledevices

Request Type: **GET**

Description: Retrieves list of all devices with configuration changes, ready to be deployed.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/deployment/deployabledevices`

Permissions: Deploy Configuration to Devices

Parameters available for filtering: name

GET deployments

Request Type: **GET**

Description: Retrieves deployment details for device.

URL:
`/api/fmc_config/v1/domain/{domainUUID}/deployment/deployabledevices/{containerUUID}/deployments`

Permissions: Deploy Configuration to Devices

Parameters available for filtering: startTime, endTime

GET pendingchanges

Request Type: **POST**

Description: Retrieves all the policy and object changes for the selected device.

URL:
`/api/fmc_config/v1/domain/{domainUUID}/deployment/deployabledevices/{containerUUID}/pendingchanges`

Permissions: Deploy Configuration to Devices

POST deploymentrequests

Request Type: **POST**

Description: Creates a request for deploying configuration changes to the specified device.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/deployment/deploymentrequests/{object_UUID}`

Permissions: Deploy Configuration to Devices

GET jobhistories

Request Type: **GET**

Description: Retrieves all the deployment jobs.

URL: `/api/fmc_config/v1/domain/{domainUUID}/deployment/jobhistories`

Permissions: Deploy Configuration to Devices

Parameters available for filtering: deviceUUID

POST rollbackrequests

Request Type: **POST**

Description: Creates a request for rollback configuration to devices.

URL: `/api/fmc_config/v1/domain/{domainUUID}/deployment/rollbackrequest`

Permissions: Deploy Configuration to Devices

Device Group Services

DELETE devicegrouprecords

Request Type: **DELETE**

Description: Deletes a device group with the specified object ID.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/devicegroups/devicegrouprecords/{object_UUID}`

Permissions: Devices > Device Management > Modify Devices

PUT devicegrouprecords

Request Type: **PUT**

Description: Modifies a device group with the specified object ID.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/devicegroups/devicegrouprecords/{object_UUID}`

Permissions: Devices > Device Management > Modify Devices

POST devicegrouprecords

Request Type: **POST**

Description: Creates a device group with the specified object ID.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/devicegroups/devicegrouprecords`

Permissions: Devices > Device Management > Modify Devices

GET devicegrouprecords

Request Type: **GET**

Description: Retrieves the device group associated with the specified ID. If no ID is specified, retrieves list of all device groups.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/devicegroups/devicegrouprecords`

URL for GET by ID:
`/api/fmc_config/v1/domain/{domain_UUID}/devicegroups/devicegrouprecords/{object_UUID}`

Permissions: Devices > Device Management > View Devices

Device Clusters

GET ftddevicecluster

Request Type: **GET**

Description: Retrieves or modifies the FTD Cluster record associated with the specified ID. If no ID is specified for a GET, retrieves list of all FTD Clusters.

URL: `/api/fmc_config/v1/domain/{domainUUID}/deviceclusters/ftddevicecluster/`

URL for GET by ID:
`/api/fmc_config/v1/domain/{domainUUID}/deviceclusters/ftddevicecluster/{objectId}`

Permissions: Devices > Device Management > View Devices

Device HA Pair Services

DELETE ftddevicehapair

Request Type: **DELETE**

Description: Deletes a device high availability pair with the specified object ID.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/devicehapairs/ftddevicehapairs/{object_UUID}`

Permissions: Devices > Device Management > Modify Devices

Note   Run the *configure high-availability disable* command to remove the failover configurations from FTD devices.

PUT ftddevicehapair

Request Type: **PUT**

Description: Sets any one of the following actions for the Firepower Threat Defense high availability device:

  • Sets the failover trigger criteria for the device

  • Switches states within the device

  • Breaks or force-breaks the device

URL:
`/api/fmc_config/v1/domain/{domain_UUID}/devicehapairs/ftddevicehapairs/{ha_container_UUID}`

Permissions: Devices > Device Management > Modify Devices

POST ftddevicehapairs

Request Type: **POST**

Description: Creates a high availability device pair with the specified primary and secondary object IDs. Do not perform the POST operation for more than one high availability pair at a time. Ensure that the current POST operation is completed successfully before proceeding to the next POST operation.

Note Typically, the first POST operation responds within 60 seconds. Cisco recommends that you perform subsequent POST operations at least 120 seconds after the first POST operation was initiated. The response of the POST operation includes a task object, with a task ID and task status. You can monitor the completion of the task by performing a GET operation on the task object with its task ID. For more information, see GET taskstatuses, on page 101.

URL:`/api/fmc_config/v1/domain/{domain_UUID}/devicehapairs/ftddevicehapairs`

Permissions: Devices > Device Management > Modify Devices

GET ftddevicehapairs

Request Type: **GET**

Description: Retrieves the details associated with the specified high availability container ID. If no ID is specified, retrieves a list of all high availability container objects.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/devicehapairs/ftddevicehapairs`

URL for GET by ID:
`/api/fmc_config/v1/domain/{domain_UUID}/devicehapairs/ftddevicehapairs/{ha_container_UUID}`

Permissions: Devices > Device Management > Modify Devices

DELETE failoverinterfacemacaddressconfigs

Request Type: **DELETE**

Description: Deletes the Firepower Threat Defense high availability failover policy interface MAC addresses record associated with the specified Firepower Threat Defense high availability pair.

URL:

`/api/fmc_config/v1/domain/{domain_UUID}/devicehapairs/ftddevicehapairs/ {hacontainer_UUID}/failoverinterfacemacaddressconfigs`

Permissions: Devices > Device Management > Modify Devices

GET failoverinterfacemacaddressconfigs

Request Type: **GET**

Description: Retrieves the Firepower Threat Defense high availability failover policy interface MAC addresses record associated with the specified FTD HA pair. If no ID is specified for a GET, it retrieves the list of all Firepower Threat Defense high availability failover policy interface MAC addresses records.

URL:

`/api/fmc_config/v1/domain/{domain_UUID}/devicehapairs/ftddevicehapairs/ {hacontainer_UUID}/failoverinterfacemacaddressconfigs`

URL for GET by ID :

` /api/fmc_config/v1/domain/{domain_UUID}/devicehapairs/ftddevicehapairs/ {hacontainer_UUID}/failoverinterfacemacaddressconfigs/{object_UUID}`

Permissions: Devices > Device Management

POST failoverinterfacemacaddressconfigs

Request Type: **POST**

Description: Creates the Firepower Threat Defense high availability failover policy interface MAC addresses record associated with the specified Firepower Threat Defense high availability pair.

URL:

```
/api/fmc_config/v1/domain/{domain_UUID}/devicehapairs/ftddevicehapairs/
{hacontainer_UUID}/failoverinterfacemacaddressconfigs
```

Permissions: Devices > Device Management > Modify Devices

PUT failoverinterfacemacaddressconfigs

Request Type: **PUT**

Description: Modifies the Firepower Threat Defense high availability failover policy interface MAC addresses record associated with the specified Firepower Threat Defense high availability pair.

URL:

```
/api/fmc_config/v1/domain/{domain_UUID}/devicehapairs/ftddevicehapairs/
{hacontainer_UUID}/failoverinterfacemacaddressconfigs/{object_UUID}
```

Permissions: Devices > Device Management > Modify Devices

GET monitoredinterfaces

Request Type: **GET**

Description: Retrieves the Firepower Threat Defense high availability Monitored interface policy record associated with the specified FTD HA pair. If no ID is specified for a GET, it retrieves the list of all Firepower Threat Defense high availability monitored interface policy records.

URL:

```
/api/fmc_config/v1/domain/{domain_UUID}/devicehapairs/ftddevicehapairs/
{hacontainer_UUID}/monitoredinterfaces
```

URL for GET by ID :

```
/api/fmc_config/v1/domain/{domain_UUID}/devicehapairs/ftddevicehapairs/
{hacontainer_UUID}/monitoredinterfaces/{object_UUID}
```

Permissions: Devices > Device Management

PUT monitoredinterfaces

Request Type: **PUT**

Description: Modifies the Firepower Threat Defense high availability Monitored interface policy record associated with the specified Firepower Threat Defense high availability pair.

URL:

```
/api/fmc_config/v1/domain/{domain_UUID}/devicehapairs/ftddevicehapairs/
{hacontainer_UUID}/monitoredinterfaces
```

Permissions: Devices > Device Management > Modify Devices

Health Services

·

GET Health Alerts

Request Type: **GET**

Description: Retrieves health alerts.

URL: `/api/fmc_config/v1/domain/{domainUUID}/health/alerts`

Permissions: System > Health > Health Events

Parameters available for filtering: startTime, endTime, deviceUUIDs, status, moduleIDs

GET Health Metrics

Request Type: **GET**

Description: Retrieves health monitor metrics for the device.

URL: `/api/fmc_config/v1/domain/{domainUUID}/health/metrics`

Permissions: System > Health > Health Events

Parameters available for filtering: deviceUUIDs, metric, startTime, endTime, step, regexFilter, queryFunction

Device Services

POST copyconfigrequests

Request Type: **POST**

Description: Copies device configuration to the specified Firepower Threat Defense device.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/devices/copyconfigrequests`

Permissions: Devices > Device Management > Modify Devices

DELETE devicerecords

Request Type: **DELETE**

Description: Unregisters the specified device.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{object_UUID}`

Permissions: Devices > Device Management > Modify Devices

PUT devicerecords

Request Type: **PUT**

Description: Modifies the device record associated with the specified ID.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{object_UUID}`

Permissions: Devices > Device Management > Modify Devices

POST devicerecords

Request Type: **POST**

Description: Registers the specified device to the Firepower Managemenr Center.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords`

Permissions: Devices > Device Management > Modify Devices

GET devicerecords

Request Type: **GET**

Description: Retrieves device information. If a device ID is specified, the information for the specificed device is retrieved. If no ID is specified, retrieves information for all devices.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords`

URL for GET by ID: `/api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{object_UUID}`

Permissions: Devices > Device Management

Parameters available for filtering: hostName

PUT fpphysicalinterfaces

Request Type: **PUT**

Description: Modifies a physical interface on the specified device.

URL:
`/api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{containerUUID}/fpphysicalinterfaces/{object_UUID}`

Permissions: Devices > Device Management > Modify Device

GET fpphysicalinterfaces

Request Type: **GET**

Description: Retrieves information on the physical interface associated with the specified NGIPS device ID and interface ID. If no ID is specified, retrieves list of all physical interfaces associated with the specified NGIPS device ID.

URL:
`/api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{container_UUID}/fpphysicalinterfaces`

URL for GET by ID:
`/api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{container_UUID}/fpphysicalinterfaces/{object_UUID}`

Permissions: Devices > Device Management

Parameters available for filtering: name

DELETE fplogicalinterfaces

Request Type: **DELETE**

Description: Deletes logical interfaces on the specified device.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{containerUUID}/fplogicalinterfaces/{object_UUID}`

Permissions: Devices > Device Management > Modify Device

PUT fplogicalinterfaces

Request Type: **PUT**

Description: Modifies a logical interface on the specified device.

URL:
`/api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{container_UUID}/fplogicalinterfaces/{object_UUID}`

Permissions: Devices > Device Management > Modify Device

POST fplogicalinterfaces

Request Type: **POST**

Description: Creates logical interfaces on the specified device.

URL:
`/api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{container_UUID}/fplogicalinterfaces`

Permissions: Devices > Device Management > Modify Device

GET fplogicalinterfaces

Request Type: **GET**

Description: Retrieves the logical interface associated with the specified NGIPS device ID and interface ID. If no ID is specified, retrieves list of all logical interfaces associated with the specified NGIPS device ID.

URL:
`/api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{container_UUID}/fplogicalinterfaces`

URL for GET by ID:
`/api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{container_UUID}/fplogicalinterfaces/{obect_UUID}`

Permissions: Devices > Device Management

Parameters available for filtering: name

DELETE inlinesets

Request Type: **DELETE**

Description: Deletes inline sets on the specified device.

URL:
/api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{containerUUID}/inlinesets/{object_UUID}

Permissions: Devices > Device Management > Modify Device

PUT inlinesets

Request Type: **PUT**

Description: Modifies an inline set on the specified device.

URL:
/api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{container_UUID}/inlinesets/{object_UUID}

Permissions: Devices > Device Management > Modify Device

POST inlinesets

Request Type: **POST**

Description: Creates inline sets on the specified device.

URL: /api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{container_UUID}/inlinesets

Permissions: Devices > Device Management > Modify Device

GET inlinesets

Request Type: **GET**

Description: Retrieves information on the inline set associated with the specified NGIPS device ID and inline set ID. If no inline set ID is specified, retrieves list of all inline sets associated with the specified NGIPS device ID.

URL: /api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{container_UUID}/inlinesets

URL for GET by ID:
/api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{container_UUID}/inlinesets/{object_UUID}

Permissions: Devices > Device Management

Parameters available for filtering: name

GET commands

Request Type: **GET**

Description: Retrieves the list of all command line interface commands available on the device. If a command is specified in the payload, retries the output of that command.

The below table lists the commands which can be used with the `commands` service. Some commands are only allowed with certain parameters, or specific parameters may not be allowed, as specified in the **Blocked** column.

Command	Blocked
show version	
show failover	
show dhcpd	show dhcpd binding, show dhcpd statistics
show ip	
show aaa-server	
show logging	show logging asdm, show logging queue
show snmp-server	
show running-config {any}	show running-config {no parameters}
show ssl	
show firewall	
show logging	
show network	
show ntp	
show banner	

URL:
`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/operational/commands`

Permissions: Devices > Device Management

GET Metrics

Request Type: **GET**

Description: Retrieves HealthMonitor metrics for the device.

URL:
`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/operational/metrics`

Permissions: Devices > Device Management

Parameters available for filtering: metric

GET staticroutes

Request Type: **GET**

Description: Retrieves the static route associated with the specified NGFW device ID and interface ID. If no interface ID is specified, retrieves list of all static routes associated with the specified NGFW device ID.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/staticroute`

URL for GET by ID:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/staticroutes/{objectId}`

Permissions: Devices > Device Management

GET virtualrouters

Request Type: **GET**

Description: Retrieves the the virtual router with the specified ID. If no ID is specified, retrieves list of all virtual routers.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters`

URL for GET by ID:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{objectId}`

Permissions: Devices > Device Management

PUT virtual routers

Request Type: **PUT**

Description: Modifies a virtual router on the specified device.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{objectId}`

Permissions: Devices > Device Management > Modify Device

POST virtual routers

Request Type: **POST**

Description: Creates virtual routers associated with the specified container.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters`

Permissions: Devices > Device Management > Modify Device

DELETE virtual routers

Request Type: **DELETE**

Description: Deletes the specified virtual router.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{objectId}`

Permissions: Devices > Device Management > Modify Device

GET virtual BGP

Request Type: **GET**

Description: Retrieves specified BGP (ipv4 and ipv6) on the specified virtual router. If no ID is specified, retrieves list of all BGP on the virtual router.

URL:
/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/ipv6staticroutes

URL for GET by ID:
/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/ipv6staticroutes/{objectId}

Permissions: Devices > Device Management

GET virtual ipv4staticroutes

Request Type: **GET**

Description: Retrieves specified IPv4 static route on the specified virtual router. If no ID is specified, retrieves list of all IPv4 static routes on the virtual router.

URL:
/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/ipv4staticroutes

URL for GET by ID:
/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/ipv4staticroutes/{objectId}

Note The methods and payload are same as for static route endpoints. If there is a route leak, a warning is returned with response code 400. However, if you make the REST call with query parameter ignoreWarning=true, the warning is ignored. This behavior is applicable with Global VRF static route as well.

Permissions: Devices > Device Management

PUT virtual ipv4 static routes

Request Type: **PUT**

Description: Modifies an IPv4 static route on the specified device.

URL:
/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/ipv4staticroutes/{objectId}

Note The methods and payload are same as for static route endpoints. If there is a route leak, a warning is returned with response code 400. However, if you make the REST call with query parameter ignoreWarning=true, the warning is ignored. This behavior is applicable with Global VRF static route as well.

Permissions: Devices > Device Management > Modify Device

POST virtual ipv4 static routes

Request Type: **POST**

Description: Creates IPv4 static routes associated with the specified virtual router.

URL:

/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/ipv4staticroutes

Note For static routes (IPv4), the methods and payload are same as for static route endpoints. If there is a route leak, a warning is returned with response code 400. However, if you make the REST call with query parameter ignoreWarning=true, the warning is ignored. This behavior is applicable with Global VRF static route as well.

Permissions: Devices > Device Management > Modify Device

DELETE virtual ipv4 static routes

Request Type: **DELETE**

Description: Deletes the specified IPv4 static route.

URL:

/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/ipv4staticroutes/{objectId}

Note The methods and payload are same as for static route endpoints. If there is a route leak, a warning is returned with response code 400. However, if you make the REST call with query parameter ignoreWarning=true, the warning is ignored. This behavior is applicable with Global VRF static route as well.

Permissions: Devices > Device Management > Modify Device

GET virtual ipv6staticroutes

Request Type: **GET**

Description: Retrieves specified IPv6 static route on the specified virtual router. If no ID is specified, retrieves list of all IPv6 static routes on the virtual router.

URL:

/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/ipv6staticroutes

URL for GET by ID:

/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/ipv6staticroutes/{objectId}

Note The methods and payload are same as for static route endpoints. If there is a route leak, a warning is returned with response code 400. However, if you make the REST call with query parameter ignoreWarning=true, the warning is ignored. This behavior is applicable with Global VRF static route as well.

Permissions: Devices > Device Management

PUT virtual ipv6 static routes

Request Type: **PUT**

Description: Modifies a bridge group interface on the specified device.

URL:
/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/ipv6staticroutes/{objectId}

Note The methods and payload are same as for static route endpoints. If there is a route leak, a warning is returned with response code 400. However, if you make the REST call with query parameter ignoreWarning=true, the warning is ignored. This behavior is applicable with Global VRF static route as well.

Permissions: Devices > Device Management > Modify Device

POST virtual ipv6 static routes

Request Type: **POST**

Description: Creates IPv6 static routes associated with the specified virtual router.

URL:
/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/ipv6staticroutes

Note The methods and payload are same as for static route endpoints. If there is a route leak, a warning is returned with response code 400. However, if you make the REST call with query parameter ignoreWarning=true, the warning is ignored. This behavior is applicable with Global VRF static route as well.

Permissions: Devices > Device Management > Modify Device

DELETE virtual ipv6 static routes

Request Type: **DELETE**

Description: Deletes the specified IPv6 static route.

URL:
/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/ipv6staticroutes/{objectId}

Note The methods and payload are same as for static route endpoints. If there is a route leak, a warning is returned with response code 400. However, if you make the REST call with query parameter ignoreWarning=true, the warning is ignored. This behavior is applicable with Global VRF static route as well.

Permissions: Devices > Device Management > Modify Device

GET virtual ospf interface

Permissions: Devices > Device Management

POST redundantinterfaces

Request Type: **POST**

Description: Creates redundant interfaces on a specified device.

URL:
`/api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{container_UUID}/redundantinterfaces`

Permissions: Devices > Device Management

PUT redundantinterfaces

Request Type: **PUT**

Description: Modifies redundant interfaces on a specified device.

URL:
`/api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{container_UUID}/redundantinterfaces`

Permissions: Devices > Device Management > Modify Device

DELETE redundantinterfaces

Request Type: **DELETE**

Description: Removes redundant interfaces on a specified device.

URL:
`/api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{container_UUID}/redundantinterfaces`

Permissions: Devices > Device Management

GET bgp routing

Request Type: **GET**

Description: Retrieves list of all BGP (ipv4 and ipv6) associated with the specified device for specified vrf. If no device is specified, retrieves list of all BGP.

URL: `/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/bgp`

URL for GET by ID:
`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/bgp/{objectId}`

Permissions: Devices > Device Management

GET bgp general settings

Request Type: **GET**

Description: Retrieves BGP general settings associated with the specified device. If no device is specified, retrieves list of all BGP general settings.

URL:
`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/bgpgeneralsettings`

URL for GET by ID:
`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/bgpgeneralsettings/{objectId}`

Permissions: Devices > Device Management

GET etherchannelinterfaces

Request Type: **GET**

Description: Retrieves the ethernet channel interface associated with the specified NGFW device ID and interface ID. If no ID is specified, retrieves list of all ethernet channel interfaces associated with the specified NGFW device ID.

URL:
`/api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{container_UUID}/etherchannelinterfaces`

URL for GET by ID:
`/api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{container_UUID}/etherchannelinterfaces/{object_UUID}`

Permissions: Devices > Device Management

Parameters available for filtering:

POST etherchannelinterfaces

Request Type: **POST**

Description: Creates ethernet channel interfaces on the specified device.

URL:
`/api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{container_UUID}/ethernetchannelinterfaces`

Permissions: Devices > Device Management > Modify Device

PUT etherchannelinterfaces

Request Type: **PUT**

Description: Modifies an ethernet channel interfaces on the specified device.

URL:
`/api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{containerUUID}/ethernetchannelinterfaces/`

Permissions: Devices > Device Management > Modify Device

DELETE etherchannelinterfaces

Request Type: **DELETE**

Description: Removes ethernet channel interfaces from a specified device.

URL:
`/api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{container_UUID}/ethernetchannelinterfaces`

Permissions: Devices > Device Management

GET subinterfaces

Request Type: **GET**

Description: Retrieves the sub-interface associated with the specified NGFW device ID and interface ID. If no interface ID is specified, retrieves list of all sub-interfaces associated with the specified NGFW device ID.

URL:
`/api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{container_UUID}/subinterfaces`

URL for GET by ID:
`/api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{container_UUID}/subinterfaces/{object_UUID}`

Permissions: Devices > Device Management

POST subinterfaces

Request Type: **POST**

Description: Creates sub interfaces on a specified device.

URL:
`/api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{container_UUID}/subinterfaces`

Permissions: Devices > Device Management

PUT subinterfaces

Request Type: **PUT**

Description: Modifies a sub interface on the specified device.

URL:
`/api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{container_UUID}/subinterfaces/`

Permissions: Devices > Device Management > Modify Device

DELETE subinterfaces

Request Type: **DELETE**

Description: Deletes sub interfaces on a specified device.

URL:
`/api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{container_UUID}/subinterfaces`

Permissions: Devices > Device Management

GET fpinterfacestatistics

Request Type: **GET**

Description: Retrieves list of statistics for all interfaces associated with the specified NGIPS device ID.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/devices/`
`devicerecords/{container_UUID}/fpinterfacestatistics`

Permissions: Devices > Device Management

Parameters available for filtering: name

POST interfaceevents

Request Type: **POST**

Description: Creates netmod events on the specified device.

URL:
`/api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{container_UUID}/interfaceevents`

Permissions: Devices > Device Management > Modify Device

GET interfaceevents

Request Type: **GET**

Description: Retrieves list of all netmod events on the device.

URL:
`/api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{container_UUID}/interfaceevents`

Permissions: Devices > Device Management

GET commands

Request Type: **GET**

Description: Retrieves the list of all command line interface commands available on the device. If a command is specified in the payload, retries the output of that command.

The below table lists the commands which can be used with the `commands` service. Some commands are only allowed with certain parameters, or specific parameters may not be allowed, as specified in the **Blocked** column.

Command	Blocked
show version	
show failover	
show dhcpd	show dhcpd binding, show dhcpd statistics
show ip	
show aaa-server	
show logging	show logging asdm, show logging queue
show snmp-server	
show running-config {any}	show running-config {no parameters}
show ssl	
show firewall	
show logging	
show network	
show ntp	
show banner	

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/operational/commands`

Permissions: Devices > Device Management

Intelligence Services

POST collections

Request Type: **POST**

Description: Adds a collections from a TAXII source.

URL: `/api/fmc_tid/v1/domain/{domain_UUID}/taxiiconfig/collections`

Permissions: Intelligence

POST discoveryinfo

Request Type: **POST**

Description: Adds information about TAXII collections available from a source.

URL: `/api/fmc_tid/v1/domain/{domain_UUID}/taxiiconfig/discoveryinfo`

Permissions: Intelligence

GET element

Request Type: **GET**

Description: Retrieves the intelligence-enabled sensor associated with the specified ID. If no ID is specified, retrieves list of all intelligence-enabled sensors.

URL: `/api/fmc_tid/v1/domain/{domain_UUID}/tid/element`

URL for GET by ID: `/api/fmc_tid/v1/domain/{domain_UUID}/tid/element/{object_UUID}`

Permissions: Intelligence

DELETE incident

Request Type: **DELETE**

Description: Deletes an incident.

URL: `/api/fmc_tid/v1/domain/{domain_UUID}/taxiiconfig/incident/{object_UUID}`

Permissions: Intelligence

PUT incident

Request Type: **PUT**

Description: Modifies an intelligence incident with the specified object ID.

URL: `/api/fmc_tid/v1/domain/{domain_UUID}/tid/incident/{object_UUID}`

Permissions: Intelligence

GET incident

Request Type: **GET**

Description: Retrieves the intelligence incident associated with the specified ID. If no ID is specified, retrieves list of all intelligence incidents. By default 25 results will be displayed on each page, this can be increased up to 40 using the `limit` parameter.

URL: `/api/fmc_tid/v1/domain/{domain_UUID}/tid/incident`

URL for GET by ID: `/api/fmc_tid/v1/domain/{domain_UUID}/tid/incident/{object_UUID}`

Permissions: Intelligence

PUT indicator

Request Type: **PUT**

Description: Modifies an indicator with the specified object ID.

URL: `/api/fmc_tid/v1/domain/{domain_UUID}/tid/indicator/{object_UUID}`

Permissions: Intelligence

GET indicator

Request Type: **GET**

Description: Retrieves the indicator associated with the specified ID. If no ID is specified, retrieves list of all indicators. By default 25 results will be displayed on each page, this can be increased up to 40 using the `limit` parameter.

URL: `/api/fmc_tid/v1/domain/{domain_UUID}/tid/indicator`

URL for GET by ID: `/api/fmc_tid/v1/domain/{domain_UUID}/tid/indicator/{object_UUID}`

Permissions: Intelligence

PUT observable

Request Type: **PUT**

Description: Modifies an observable with the specified object ID.

URL: `/api/fmc_tid/v1/domain/{domain_UUID}/tid/observable/{object_UUID}`

Permissions: Intelligence

GET observable

Request Type: **GET**

Description: Retrieves the observable associated with the specified ID. If no ID is specified, retrieves list of all observables. By default 25 results will be displayed on each page, this can be increased up to 40 using the `limit` parameter.

URL: `/api/fmc_tid/v1/domain/{domain_UUID}/tid/observable`

URL for GET by ID: `/api/fmc_tid/v1/domain/{domain_UUID}/tid/observable/{object_UUID}`

Permissions: Intelligence

PUT settings

Request Type: **PUT**

Description: Activates or deactivates an intelligence setting.

URL: `/api/fmc_tid/v1/domain/{domain_UUID}/tid/settings/{value}`

Permissions: Intelligence

GET settings

Request Type: **GET**

Description: Retrieves the on/off settings for the specified value. If no ID is specified, retrieves list of all TID settings.

URL: `/api/fmc_tid/v1/domain/{domain_UUID}/tid/settings`

URL for GET by value: `/api/fmc_tid/v1/domain/{domain_UUID}/tid/settings/{value}`

Permissions: Intelligence

DELETE source

Request Type: **DELETE**

Description: Deletes an intelligence source from the device.

URL: `/api/fmc_tid/v1/domain/{domain_UUID}/taxiiconfig/source/{object_UUID}`

Permissions: Intelligence

PUT source

Request Type: **PUT**

Description: Modifies an intelligence source with the specified object ID.

URL: `/api/fmc_tid/v1/domain/{domain_UUID}/tid/source/{object_UUID}`

Permissions: Intelligence

POST source

Request Type: **POST**

Description: Adds a source for intelligence information.

URL: `/api/fmc_tid/v1/domain/{domain_UUID}/tid/source`

Permissions: Intelligence

GET source

Request Type: **GET**

Description: Retrieves the intelligence source associated with the specified ID. If no ID is specified, retrieves list of all intelligence sources. By default 25 results will be displayed on each page, this can be increased up to 40 using the `limit` parameter.

URL: `/api/fmc_tid/v1/domain/{domain_UUID}/tid/source`

URL for GET by ID: `/api/fmc_tid/v1/domain/{domain_UUID}/tid/source/{object_UUID}`

Permissions: Intelligence

PUT cloudeventsconfigs

Request Type: **PUT**

Description: Modifies the cloud event configuration associated with the specified ID.

URL: `/api/fmc_config/v1/domain/{domainUUID}/integration/cloudeventsconfigs/{objectId}`

Permissions: Object Manager > Modify Object Manager

GET cloudeventsconfigs

Request Type: **GET**

Description: Retrieves the cloud event configuration associated with the specified ID. If no ID is specified for a GET, retrieves a list of all cloud event configuration objects.

URL for listing: `/api/fmc_config/v1/domain/{domainUUID}/integration/cloudeventsconfigs`

URL for GET by ID:
`/api/fmc_config/v1/domain/{domainUUID}/integration/cloudeventsconfigs/{objectId}`

Permissions: Object Manager

PUT cloudregions

Request Type: **PUT**

Description: Modifies the cloud region configuration associated with the specified ID.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/integration/cloudregions/{object_UUID}`

Permissions: System > Integration > Cloud Services

GET cloudregions

Request Type: **GET**

Description: Retrieves the cloud region configuration associated with the specified ID. If no ID is specified for a GET, retrieves list of all cloud regions.

URL for listing: `/api/fmc_config/v1/domain/{domain_UUID}/integration/cloudregions/`

URL for GET by ID:
`/api/fmc_config/v1/domain/{domain_UUID}/integration/cloudregions/{object_UUID}`

Permissions: System > Integration > Cloud Services

DELETE externallookups

DELETE externallookups

Description: Deletes the external lookup objects with the specified UUID.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/integration/externallookups/{object_UUID}`

Permissions: Object Manager>Modify Object Manager

PUT externallookups

Request Type: **PUT**

Description: Modifies externallookups objects.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/integration/externallookups/{object_UUID}`

Permissions: Object Manager>Modify Object Manager

POST externallookups

POST externallookups

Description: Creates externallookups objects with the specified parameters.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/integration/externallookups`

Permissions: Object Manager>Modify Object Manager

GET externallookups

GET externallookups

Retrieves the externallookups object associated with the specified ID. If no ID, retrieves list of all externallookups objects.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/integration/externallookups`

URL for GET by ID:
`/api/fmc_config/v1/domain/{domain_UUID}/integration/externallookups/{object_UUID}`

Permissions: Object Manager>Modify Object Manager

Parameters available for filtering:

DELETE packetanalyzerdevices

Request Type: **DELETE**

Description: Deletes the packet analyzer object with the specified UUID.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/integration/packetanalyzerdevices/{object_UUID}`

Permissions: Object Manager>Modify Object Manager

PUT packetanalyzerdevices

Request Type: **PUT**

Description: Modifies the packet analyzer object with the specified UUID.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/integration/packetanalyzerdevices/{object_UUID}`

Permissions: Object Manager>Modify Object Manager

POST packetanalyzerdevices

Request Type: **POST**

Description: Creates PKI enrollments objectswith the specified parameters.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/packetanalyzerdevices`

Permissions: Object Manager

GET packetanlyzerdevices

Request Type: **GET**

Description: Retrieves the packetanlayzerdevices object associated with the specified ID. If no ID, retrieves list of all packetanalyzerdevices objects.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/integration/packetanalyzerdevices`

URL for GET by ID:
`/api/fmc_config/v1/domain/{domain_UUID}/integration/packetanalyzerdevices/{object_UUID}`

Permissions: Object Manager>Modify Object Manager

Parameters available for filtering:

GET External Storage

Request Type: **GET**

Description: Retrieves the external event storage configuration associated with the specified ID. If no ID is specified for a GET, retrieves a list of all external event storage configurations.

URL for listing: `/api/fmc_config/v1/domain/{domainUUID}/integration/externalstorage`

URL for GET by ID:
`/api/fmc_config/v1/domain/{domainUUID}/integration/externalstorage/{objectId}`

Permissions: System > Integration

Parameters available for filtering: None

PUT External Storage

Request Type: **PUT**

Description: Modifies the external event storage configuration associated with the specified ID.

URL: `/api/fmc_config/v1/domain/{domainUUID}/integration/externalstorage/{objectId}`

Permissions: System > Integration

URL for GET by ID:
`/api/fmc_config/v1/domain/{domain_UUID}/object/applicationcategories/{object_UUID}`

Permissions: Object Manager

GET applicationfilters

Request Type: **GET**

Description: Retrieves the application filter object associated with the specified ID. If no ID is specified, retrieves list of all application filter objects.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/applicationfilters`

URL for GET by ID:
`/api/fmc_config/v1/domain/{domain_UUID}/object/applicationfilters/{object_UUID}`

Permissions: Object Manager

GET applicationproductivities

Request Type: **GET**

Description: Retrieves the application productivity object associated with the specified ID. If no ID is specified, retrieves list of all application productivity objects.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/applicationproductivities`

URL for GET by ID:
`/api/fmc_config/v1/domain/{domain_UUID}/object/applicationproductivities/{object_UUID}`

Permissions: Object Manager

GET applicationrisks

Request Type: **GET**

Description: Retrieves the application risk object associated with the specified ID. If no ID is specified, retrieves list of all application risk objects.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/applicationrisks`

URL for GET by ID:
`/api/fmc_config/v1/domain/{domain_UUID}/object/applicationrisks/{object_UUID}`

Permissions: Object Manager

GET applications

Request Type: **GET**

Description: Retrieves the application object associated with the specified ID. If no ID is specified, retrieves list of all application objects.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/applications`

URL for GET by ID: `/api/fmc_config/v1/domain/{domain_UUID}/object/applications/{object_UUID}`

Permissions: Object Manager

GET applicationtags

Request Type: **GET**

Description: Retrieves the application tag object associated with the specified ID. If no ID is specified, retrieves list of all application tag objects.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/applicationtags`

URL for GET by ID: `/api/fmc_config/v1/domain/{domain_UUID}/object/applicationtags/{object_UUID}`

Permissions: Object Manager

GET applicationtypes

Request Type: **GET**

Description: Retrieves the application type object associated with the specified ID. If no ID is specified, retrieves list of all application type objects.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/applicationtypes`

URL for GET by ID:
`/api/fmc_config/v1/domain/{domain_UUID}/object/applicationtypes/{object_UUID}`

Permissions: Object Manager

GET aspathlists

Request Type: **GET**

Description: Retrieves the autonoous system path list associated with the specified ID. If no ID is specified, retrieves list of all autonomous system paths.

URL: `/api/fmc_config/v1/domain/{domainUUID}/object/aspathlists`

URL for GET by ID: /api/fmc_config/v1/domain/{domainUUID}/object/aspathlists/{objectId}

Permissions: Object Manager

GET certenrollments

Request Type: **GET**

Description: Retrieves the PKI enrollments object associated with the specified ID. If no ID is specified for a GET, retrieves list of all PKI enrollment objects.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/devicegroups/certenrollments`

URL for GET by ID:
`/api/fmc_config/v1/domain/{domain_UUID}/devicegroups/certenrollments/{parent_object_UUID}`

Permissions: Devices > Device Management > View Devices

GET communitylists

Request Type: **GET**

Description: Retrieves the community list associated with the specified ID. If no ID is specified, retrieves all community lists.

URL: `/api/fmc_config/v1/domain/{domainUUID}/object/communitylists`

URL for GET by ID: `/api/fmc_config/v1/domain/{domainUUID}/object/communitylists/{objectId}`

Permissions: Object Manager

GET continents

Request Type: **GET**

Description: Retrieves the continent object associated with the specified ID. If no ID is specified, retrieves list of all continent objects.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/continents`

URL for GET by ID: `/api/fmc_config/v1/domain/{domain_UUID}/object/continents/{object_UUID}`

Permissions: Object Manager

GET countries

Request Type: **GET**

Description: Retrieves the country object associated with the specified ID. If no ID is specified, retrieves list of all country objects.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/countries`

URL for GET by ID: `/api/fmc_config/v1/domain/{domain_UUID}/object/countries/{object_UUID}`

Permissions: Object Manager

DELETE dnsservergroups

Request Type: **DELETE**

Description: Deletes a DNS server group with the specified object ID.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/dnsservergroups/{object_UUID}`

Permissions: Devices > Device Management > Modify Devices

PUT dnsservergroups

Request Type: **PUT**

Description: Modifies a DNS server group with the specified object ID.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/dnsservergroups`

Permissions: Devices > Device Management > Modify Devices

POST dnsservergroups

Request Type: **POST**

Description: Creates a DNS server group group with the specified object ID.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/dnsservergroups`

Permissions: Devices > Device Management > Modify Devices

GET dnsservergroups

Request Type: **GET**

Description: Retrieves the DNS server group associated with the specified ID. If no ID is specified, retrieves list of all dns server groups.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/dnsservergroups`

URL for GET by ID: `/api/fmc_config/v1/domain/{domain_UUID}/object/dnsservergroups/{object_UUID}`

Permissions: Devices > Device Management > View Devices

GET endpointdevicetypes

Request Type: **GET**

Description: Retrieves the endpoint device type object associated with the specified ID. If no ID is specified, retrieves list of all endpoint device type objects.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/endpointdevicetypes`

URL for GET by ID:
`/api/fmc_config/v1/domain/{domain_UUID}/object/endpointdevicetypes/{object_UUID}`

Permissions: Object Manager

GET expanded community lists

Request Type: **GET**

Description: Retrieves the expanded community list associated with the specified ID. If no ID is specified, retrieves all community lists.

URL: `/api/fmc_config/v1/domain/{domainUUID}/object/expandedcommunitylists`

URL for GET by ID:
`/api/fmc_config/v1/domain/{domainUUID}/object/expandedcommunitylists/{objectId}`

Permissions: Object Manager

GET extended access lists

Request Type: **GET**

Description: Retrieves extended access list associated with the specified ID. If no ID is specified, retrieves list of all extended access lists.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/extendedaccesslists`

URL for GET by ID:
`/api/fmc_config/v1/domain/{domain_UUID}/object/extendedaccesslists/{object_UUID}`

Permissions: Devices > Device Management > View Devices

DELETE fqdns

Request Type: **DELETE**

Description: Deletes the FQDN object associated with the specified ID.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/fqdns/{object_UUID}`

URL to DELETE overrides on a particular object:
`/api/fmc_config/v1/domain/{domain_UUID}/object/fqdns/{object_UUID}?overrideTargetId={target_UUID}`

Permissions: Object Manager > Modify Object Manager

PUT fqdns

Request Type: **PUT**

Description: Modifies the FQDN object associated with the specified ID.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/fqdns/{object_UUID}`

URL to edit or update an override on a particular object:
`/api/fmc_config/v1/domain/{domain_UUID}/object/fqdns/{parent_object_UUID}`

Permissions: Object Manager > Modify Object Manager

POST fqdns

Request Type: **POST**

Description: Creates or overrides the FQDN objects with the specified parameters.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/fqdns`

URL for Bulk Post: `/api/fmc_config/v1/domain/{domain_UUID}/object/fqdns?bulk=true`

Permissions: Object Manager > Modify Object Manager

GET fqdns

Request Type: **GET**

Description: Retrieves the FQDN object associated with the specified ID. If no ID is specified for a GET, retrieves list of all FQDN objects.

URL for listing: `/api/fmc_config/v1/domain/{domain_UUID}/object/fqdns`

URL for all the overrides on a particular domain or device:
`/api/fmc_config/v1/domain/{domain_UUID}/object/fqdns?overrideTargetId={target_UUID}`

URL for GET by ID: `/api/fmc_config/v1/domain/{domain_UUID}/object/fqdns/{object_UUID}`

URL to list all overrides on a particular object:
`/api/fmc_config/v1/domain/{domain_UUID}/object/fqdns/{fqdn_UUID}/overrides`

URL for override for an object on a particular domain or device:
`/api/fmc_config/v1/domain/{domain_UUID}/object/fqdns/{object_UUID}?overrideTargetId={target_UUID}`

Permissions: Object Manager

GET geolocation

Request Type: **GET**

Description: Retrieves the geolocation object associated with the specified ID. If no ID is specified, retrieves list of all geolocation objects.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/geolocations`

URL for GET by ID: `/api/fmc_config/v1/domain/{domain_UUID}/object/geolocations/{object_UUID}`

Permissions: Object Manager

GET global time zones

Request Type: **GET**

Description: Retrieves the global time zone object associated with the specified ID. If no ID is specified, retrieves list of all global time zone objects.

URL: `/api/fmc_config/v1/domain/{domainUUID}/object/globaltimezones`

URL for GET by ID: `/api/fmc_config/v1/domain/{domainUUID}/object/globaltimezones/{objectId}`

Permissions: Object Manager

DELETE hosts

Request Type: **DELETE**

Description: Deletes the specified host object.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/hosts/{object_UUID}`

URL to DELETE overrides on a particular object:
`/api/fmc_config/v1/domain/{domain_UUID}/object/hosts/{object_UUID}?overrideTargetId={target_UUID}`

Permissions: Object Manager > Modify Object Manager

PUT hosts

Request Type: **PUT**

Description: Modifies a host object.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/hosts/{object_UUID}`

URL to edit or update an override on a particular object:
`/api/fmc_config/v1/domain/{domain_UUID}/object/hosts/{parent_object_UUID}`

Permissions: Object Manager > Modify Object Manager

POST hosts

Request Type: **POST**

Description: Creates or overrides the host objects with the specified parameters.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/hosts`

URL for Bulk Post: `/api/fmc_config/v1/domain/{domain_UUID}/object/hosts?bulk=true`

Permissions: Object Manager > Modify Object Manager

GET hosts

Request Type: **GET**

Description: Retrieves the host object associated with the specified ID. If no ID is specified, retrieves list of all host objects.

URL for listing: `/api/fmc_config/v1/domain/{domain_UUID}/object/hosts`

URL for all the overrides on a particular domain or device:
`/api/fmc_config/v1/domain/{domain_UUID}/object/hosts?overrideTargetId={target_UUID}`

URL for GET by ID: `/api/fmc_config/v1/domain/{domain_UUID}/object/hosts/{object_UUID}`

URL to list all overrides on a particular object:
`/api/fmc_config/v1/domain/{domain_UUID}/object/hosts/{host_UUID}/overrides`

URL for override for an object on a particular domain or device:
`/api/fmc_config/v1/domain/{domain_UUID}/object/hosts/{host_UUID}?overrideTargetId={target_UUID}`

Permissions: Object Manager

DELETE icmpv4objects

Request Type: **DELETE**

Description: Deletes the specified ICMPv4 port.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/icmpv4objects/{object_UUID}`

URL to DELETE overrides on a particular object:
`/api/fmc_config/v1/domain/{domain_UUID}/object/icmpv4objects/{object_UUID}?overrideTargetId={target_UUID}`

Permissions: Object Manager > Modify Object Manager

PUT icmpv4objects

Request Type: **PUT**

Description: Modifies ICMPv4 port objects.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/icmpv4objects/{object_UUID}`

URL to edit or update an override on a particular object:
`/api/fmc_config/v1/domain/{domain_UUID}/object/icmpv4objects/{parent_object_UUID}`

Permissions: Object Manager > Modify Object Manager

POST icmpv4objects

Request Type: **POST**

Description: Creates or overrides the ICMPv4 port objects with the specified parameters.

GET icmpv4objects

Request Type: **GET**

Description: Retrieves the ICMPv4 object associated with the specified ID. If no ID, retrieves list of all ICMPv4 objects.

URL for listing: `/api/fmc_config/v1/domain/{domain_UUID}/object/icmpv4objects`

URL for all the overrides on a particular domain or device:
`/api/fmc_config/v1/domain/{domain_UUID}/object/icmp4objects?overrideTargetId={target_UUID}`

URL for GET by ID: `/api/fmc_config/v1/domain/{domain_UUID}/object/icmpv4objects/{object_UUID}`

URL to list all overrides on a particular object:
`/api/fmc_config/v1/domain/{domain_UUID}/object/icmp4objects/{icmpv4object_UUID}/overrides`

URL for override for an object on a particular domain or device:
`/api/fmc_config/v1/domain/{domain_UUID}/object/icmp4objects/{icmp4object_UUID}?overrideTargetId={target_UUID}`

Permissions: Object Manager

DELETE icmpv6objects

Request Type: **DELETE**

Description: Deletes the specified ICMPv6 port objects.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/icmpv6objects/{object_UUID}`

URL to DELETE overrides on a particular object:
`/api/fmc_config/v1/domain/{domain_UUID}/object/icmpv6objects/{object_UUID}?overrideTargetId={target_UUID}`

Permissions: Object Manager > Modify Object Manager

PUT icmpv6objects

Request Type: **PUT**

Description: Modifies ICMPv6 port objects.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/icmpv6objects/{object_UUID}`

URL to edit or update an override on a particular object:
`/api/fmc_config/v1/domain/{domain_UUID}/object/icmpv6objects/{parent_object_UUID}`

Permissions: Object Manager > Modify Object Manager

POST icmpv6objects

Request Type: **POST**

Description: Creates or overrides the ICMPv6 port objects with the specified parameters.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/icmpv6objects`

URL for Bulk Post: `/api/fmc_config/v1/domain/{domain_UUID}/object/icmpv6objects?bulk=true`

Permissions: Object Manager > Modify Object Manager

GET icmpv6objects

Request Type: **GET**

Description: Retrieves the ICMPv6 object associated with the specified ID. If no ID is specified, retrieves list of all ICMPv6 objects.

URL for listing: `/api/fmc_config/v1/domain/{domain_UUID}/object/icmpv6objects`

URL for all the overrides on a particular domain or device:
`/api/fmc_config/v1/domain/{domain_UUID}/object/icmp6objects?overrideTargetId={target_UUID}`

URL for GET by ID: `/api/fmc_config/v1/domain/{domain_UUID}/object/icmpv6objects/{object_UUID}`

URL to list all overrides on a particular object:
`/api/fmc_config/v1/domain/{domain_UUID}/object/icmp6objects/{icmpv6object_UUID}/overrides`

URL for override for an object on a particular domain or device:
`/api/fmc_config/v1/domain/{domain_UUID}/object/icmp6objects/{icmp6object_UUID}?overrideTargetId={target_UUID}`

Permissions: Object Manager

DELETE ikev1ipsecproposals

Request Type: **DELETE**

Description: Deletes the IKEv1 IPsec Proposal associated with the specified ID.

URL:
`/api/fmc_config/v1/domain/{domain_UUID}/object/ikev1ipsecproposals/{ikev1ipsecproposal_UUID}`

Permissions: Object Manager > Modify Object Manager

PUT ikev1ipsecproposals

Request Type: **PUT**

Description: Modifies the IKEv1 IPsec Proposal associated with the specified ID.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/ikev1ipsecproposals/{ikev1ipsecproposal_UUID}`

Permissions: Object Manager > Modify Object Manager

POST ikev1ipsecproposals

Request Type: **POST**

Description: Creates the IKEv1 IPsec Proposal associated with the specified ID.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/ikev1ipsecproposals`

Permissions: Object Manager > Modify Object Manager

GET ikev1ipsecproposals

Request Type: **GET**

Description: Retrieves the IKEv1 IPsec Proposal associated with the specified ID. If no ID is specified for a GET, retrieves list of all IKEv1 IPsec Proposal objects.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/policy/ikev1ipsecproposals`

URL for GET by ID: `/api/fmc_config/v1/domain/{domain_UUID}/object/ikev1ipsecproposals/{ikev1ipsecproposal_UUID}`

Permissions: Object Manager

DELETE ikev1policies

Request Type: **DELETE**

Description: Deletes the IKEv1 policy object associated with the specified ID.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/ikev1policies/{ikev1policy_UUID}`

Permissions: Object Manager > Modify Object Manager

PUT ikev1policies

Request Type: **PUT**

Description: Modifies the IKEv1 policy object associated with the specified ID.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/ikev1policies/{ikev1policy_UUID}`

Permissions: Object Manager > Modify Object Manager

POST ikev1policies

Request Type: **POST**

Description: Creates the IKEv1 policy object associated with the specified ID.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/ikev1policies`

Permissions: Object Manager > Modify Object Manager

GET ikev1policies

Request Type: **GET**

Description: Retrieves the IKEv1 policy object associated with the specified ID. If no ID is specified for a GET, retrieves list of all IKEv1 policy objects.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/policy/ikev1policies`

URL for GET by ID:
`/api/fmc_config/v1/domain/{domain_UUID}/object/ikev1policies/{ikev1policy_UUID}`

Permissions: Object Manager

DELETE ikev2ipsecproposals

Request Type: **DELETE**

Description: Deletes the IKEv2 IPsec Proposal associated with the specified ID.

URL:
`/api/fmc_config/v1/domain/{domain_UUID}/object/ikev2ipsecproposals/{ikev2ipsecproposal_UUID}`

Permissions: Object Manager > Modify Object Manager

PUT ikev2ipsecproposals

Request Type: **PUT**

Description: Modifies the IKEv2 IPsec Proposal associated with the specified ID.

Request Type: **POST**

Description: Creates the IKEv2 object associated with the specified ID.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/ikev2policies`

Permissions: Object Manager > Modify Object Manager

GET ikev2policies

Request Type: **GET**

Description: Retrieves the IKEv2 object associated with the specified ID. If no ID is specified for a GET, retrieves list of all IKEv2 IPSec Proposal objects.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/policy/ikev2policies`

URL for GET by ID:
`/api/fmc_config/v1/domain/{domain_UUID}/object/ikev2policies/{ikev2policy_UUID}`

Permissions: Object Manager

DELETE interfacegroups

Request Type: **DELETE**

Description: Deletes the Interface group objects associated with the specified ID.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/interfacegroups/{object_UUID}`

URL on a particular object:
`/api/fmc_config/v1/domain/{domain_UUID}/object/interfacegroups/{object_UUID}?overrideTargetId={target_UUID}`

Permissions: Object Manager > Modify Object Manager

PUT interfacegroups

Request Type: **PUT**

Description: Modifies the Interface group objects associated with the specified ID.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/interfacegroups/{object_UUID}`

URL to edit or update an override on a particular object:
`/api/fmc_config/v1/domain/{domain_UUID}/object/interfacegroups/{parent_object_UUID}`

Permissions: Object Manager > Modify Object Manager

POST interfacegroups

Request Type: **POST**

Description: Creates or overrides the Interface group objects associated with the specified ID.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/interfacegroups`

URL for Bulk Post: `/api/fmc_config/v1/domain/{domain_UUID}/object/interfacegroups?bulk=true`

Permissions: Object Manager > Modify Object Manager

GET interfacegroups

Request Type: **GET**

Description: Retrieves the Interface group objects associated with the specified ID. If no ID is specified for a GET, retrieves list of all interface group objects.

URL for listing: `/api/fmc_config/v1/domain/{domain_UUID}/object/interfacegroups`

URL for all the overrides on a particular domain or device:
`/api/fmc_config/v1/domain/{domain_UUID}/object/interfacegroups?overrideTargetId={target_UUID}`

URL for GET by ID: `/api/fmc_config/v1/domain/{domain_UUID}/object/interfacegroups/{object_UUID}`

URL to list all overrides on a particular object:
`/api/fmc_config/v1/domain/{domain_UUID}/object/interfacegroups/{interfacegroups_UUID}/overrides`

URL for override for an object on a particular domain or device:
`/api/fmc_config/v1/domain/{domainUUID}/object/interfacegroups/{interfacegroups_UUID}?overrideTargetId={target_UUID}`

Permissions: Object Manager

GET interfaceobjects

Request Type: **GET**

Description: Retrieves list of all the interface objects both security zones and interface groups.

URL for listing: `/api/fmc_config/v1/domain/{domain_UUID}/object/interfaceobjects`

URL for all the overrides on a particular domain or device:
`/api/fmc_config/v1/domain/{domain_UUID}/object/interfaceobjects?overrideTargetId={target_UUID}`

URL for GET by ID:
`/api/fmc_config/v1/domain/{domain_UUID}/object/interfaceobjects/{object_UUID}`

URL to list all overrides on a particular object::
`/api/fmc_config/v1/domain/{domain_UUID}/object/interfaceobjects/{interfaceobjects_UUID}/overrides`

URL for override for an object on a particular domain or device:
`/api/fmc_config/v1/domain/{domain_UUID}/object/interfaceobjects/{interfaceobjects_UUID}?overrideTargetId={target_UUID}`

Permissions: Object Manager

GET ipv4prefixlists

Request Type: **GET**

Description: Retrieves the IPv4 prefix list associated with the specified ID. If no ID is specified, retrieves all IPv4 prefix lists.

URL: `/api/fmc_config/v1/domain/{domainUUID}/object/ipv4prefixlists`

URL for GET by ID: `/api/fmc_config/v1/domain/{domainUUID}/object/ipv4prefixlists/{objectId}`

Permissions: Object Manager

GET ipv6prefixlists

Request Type: **GET**

Description: Retrieves the IPv6 prefix list associated with the specified ID. If no ID is specified, retrieves all IPv6 prefix lists.

URL: `/api/fmc_config/v1/domain/{domainUUID}/object/ipv6prefixlists`

URL for GET by ID: `/api/fmc_config/v1/domain/{domainUUID}/object/ipv6prefixlists/{objectId}`

Permissions: Object Manager

GET isesecuritygrouptags

Request Type: **GET**

Description: Retrieves the ISE security group tag object with the specified ID. If no ID is specified, retrieves list of all ISE security group tag objects.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/isesecuritygrouptags`

URL for GET by ID:
`/api/fmc_config/v1/domain/{domain_UUID}/object/isesecuritygrouptags/{object_UUID}`

Permissions: Object Manager

GET keychain

Request Type: **GET**

Description: Retrieves the keychain object associated with the specified ID. If no ID is specified for a GET, retrieves list of all keychain objects.

URL for listing: `/api/fmc_config/v1/domain/{domain_UUID}/object/keychains`

URL for GET by ID: `/api/fmc_config/v1/domain/{domain_UUID}/object/keychains/{keychain_UUID}`

URL to list all overrides on a particular object. If the object ID is not specified, displays all keychain objects:
`/api/fmc_config/v1/domain/{domain_UUID}/object/keychains/{keychains_UUID}/overrides/{objectId}`

URL for all the overrides on a particular domain or device:
`/api/fmc_config/v1/domain/{domain_UUID}/object/keychains?overrideTargetId={target_UUID}`

URL for override for an object on a particular domain or device:

`/api/fmc_config/v1/domain/{domain_UUID}/object/keychains/{keychain_UUID}?overrideTargetId={target_UUID}`

Note   The target UUID could be that of a domain or a device.

Permissions: Object Manager

DELETE keychain

Request Type: **DELETE**

Description: Deletes the keychain object associated with the specified ID.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/keychains/{keychain_UUID}`

URL to DELETE overrides on a particular object:

`/api/fmc_config/v1/domain/{domain_UUID}/object/keychains/{keychain_UUID}?overrideTargetId={target_UUID}`

Note   The target UUID could be that of a domain or a device.

Permissions: Object Manager > Modify Object Manager

PUT keychain

Request Type: **PUT**

Description: Modifies the keychain object associated with the specified ID.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/keychains/{keychain_UUID}`

URL to edit or update an override on a particular object:
`/api/fmc_config/v1/domain/{domain_UUID}/object/keychains/{keychain_UUID}`

Permissions: Object Manager > Modify Object Manager

POST keychain

Request Type: **POST**

Description: Creates or overrides the keychain objects with the specified parameters.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/keychains`

URL for Bulk Post:

`/api/fmc_config/v1/domain/{domain_UUID}/object/keychains?bulk=true`

URL to create an override on a particular object:
`/api/fmc_config/v1/domain/{domain_UUID}/object/keychains`

⚠️

Attention If override was not set when creating the key chain object:

1. Using PUT, update the override property of the key chain object to "true".

2. Create the POST override for the key chain object.

PUT securityzones

Request Type: **PUT**

Description: Modifies a securityzone object.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/securityzones/{object_UUID}`

Permissions: Object Manager>Modify Object Manager

POST securityzones

Request Type: **POST**

Description: Creates or overrides the securityzone objects with the specified parameters.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/securityzones`

URL for Bulk Post: `/api/fmc_config/v1/domain/{domain_UUID}/object/securityzones?bulk=true`

Permissions: Object Manager > Modify Object Manager

GET securityzones

Request Type: **GET**

Description: Retrieves the security zone objects associated with the specified ID. If no ID is specified, retrieves list of all security zone objects.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/securityzones`

URL for GET by ID: `/api/fmc_config/v1/domain/{domain_UUID}/object/securityzones/{object_UUID}`

Permissions: Object Manager

Parameters available for filtering: name

GET siurlfeeds

Request Type: **GET**

Description: Retrieves the Security Intelligence url feed object associated with the specified ID. If no ID is specified, retrieves list of all Security Intelligence url feed objects.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/siurlfeeds`

URL for GET by ID: `/api/fmc_config/v1/domain/{domain_UUID}/object/siurlfeeds/{object_UUID}`

Permissions: Object Manager

GET siurllists

Request Type: **GET**

Description: Retrieves the Security Intelligence url list object associated with the specified ID. If no ID is specified, retrieves list of all Security Intelligence url list objects.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/siurllists`

URL for GET by ID: `/api/fmc_config/v1/domain/{domain_UUID}/object/siurllists/{object_UUID}`

Permissions: Object Manager

DELETE slamonitors

Request Type: **DELETE**

Description: Deletes the sla monitor object associated with the specified ID.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/slamonitors/{object_UUID}`

Permissions: Object Manager > Modify Object Manager

PUT slamonitors

Request Type: **PUT**

Description: Modifies the sla monitor object associated with the specified ID.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/slamonitors/{object_UUID}`

Permissions: Object Manager > Modify Object Manager

POST slamonitors

Request Type: **POST**

Description: Creates or overrides a SLA monitor with the specified parameters.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/slamonitors`

URL for Bulk Post: `/api/fmc_config/v1/domain/{domain_UUID}/object/slamonitors?bulk=true`

Permissions: Object Manager > Modify Object Manager

GET slamonitors

Request Type: **GET**

Description: Retrieves the SLA Monitors associated with the specified ID. If no ID is specified, retrieves list of all SLA Monitors.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/slamonitors`

URL by GET by ID: `/api/fmc_config/v1/domain/{domain_UUID}/object/slamonitors/{object_UUID}`

Permissions: Object Manager

GET standard access lists

Request Type: **GET**

Description: Retrieves the standard community list associated with the specified ID. If no ID is specified, retrieves all standard community lists.

URL: `/api/fmc_config/v1/domain/{domainUUID}/object/standardaccesslists`

URL for GET by ID: `/api/fmc_config/v1/domain/{domainUUID}/object/standardaccesslists/{objectId}`

Permissions: Object Manager

GET standard community lists

Request Type: **GET**

Description: Retrieves the standard community list associated with the specified ID. If no ID is specified, retrieves all standard community lists.

URL: `/api/fmc_config/v1/domain/{domainUUID}/object/standardcommunitylists`

URL for GET by ID:
`/api/fmc_config/v1/domain/{domainUUID}/object/standardcommunitylists/{objectId}`

Permissions: Object Manager

GET time ranges

Request Type: **GET**

Description: Retrieves the time range object associated with the specified ID. If no ID is specified, retrieves list of all time range objects.

URL: `/api/fmc_config/v1/domain/{domainUUID}/object/timeranges`

URL for GET by ID: `/api/fmc_config/v1/domain/{domainUUID}/object/timeranges/{objectId}`

Permissions: Object Manager

PUT time ranges

Request Type: **PUT**

Description: Modifies a time range object.

URL: `/api/fmc_config/v1/domain/{domainUUID}/object/timeranges/{objectId}`

Permissions: Object Manager

POST time ranges

Request Type: **POST**

Description: Creates or overrides a time range object with the specified parameters.

URL: `/api/fmc_config/v1/domain/{domainUUID}/object/timeranges`

Permissions: Object Manager > Modify Object Manager

DELETE time ranges

Request Type: **DELETE**

Description: Deletes the time range object associated with the specified ID.

URL: `/api/fmc_config/v1/domain/{domainUUID}/object/timeranges/{objectId}`

Permissions: Object Manager > Modify Object Manager

GET time zone objects

Request Type: **GET**

Description: Retrieves the time zone object associated with the specified ID. If no ID is specified, retrieves list of all time zone objects.

URL: `/api/fmc_config/v1/domain/{domainUUID}/object/timezoneobjects`

URL for GET by ID: `/api/fmc_config/v1/domain/{domainUUID}/object/timezoneobjects/{objectId}`

URL to list all overrides:
`/api/fmc_config/v1/domain/{domainUUID}/object/timezoneobjects/{containerUUID}/overrides`

Permissions: Object Manager

PUT time zone objects

Request Type: **PUT**

Description: Modifies a time zone object.

URL: `/api/fmc_config/v1/domain/{domainUUID}/object/timezoneobjects/{objectId}`

Permissions: Object Manager

POST time zone objects

Request Type: **POST**

Description: Creates or overrides a time zone object with the specified parameters.

URL: `/api/fmc_config/v1/domain/{domainUUID}/object/timezoneobjects`

Permissions: Object Manager > Modify Object Manager

DELETE time zone objects

Request Type: **DELETE**

Description: Deletes the time zone object associated with the specified ID.

URL: `/api/fmc_config/v1/domain/{domainUUID}/object/timezoneobjects/{objectId}`

Permissions: Object Manager > Modify Object Manager

DELETE tunneltags

Request Type: **DELETE**

Description: Deletes the tunnel tag object associated with the specified ID.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/tunneltags/{object_UUID}`

Permissions: Object Manager > Modify Object Manager

PUT tunneltags

Request Type: **PUT**

Description: Modifies the tunnel tag object associated with the specified ID.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/tunneltags/{object_UUID}`

Permissions: Object Manager > Modify Object Manager

POST tunneltags

Request Type: **POST**

Description: Creates or overrides a tunnel tag with the specified parameters.

URL: `/api/fmc_config/v1/domain/{domainUUID}/object/tunneltags`

Permissions: Object Manager > Modify Object Manager

GET tunneltags

Request Type: **GET**

Description: Retrieves the tunnel tag object associated with the specified ID. If no ID is specified, retrieves list of all tunnel tag objects.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/tunneltags`

URL for GET by ID: `/api/fmc_config/v1/domain/{domain_UUID}/object/tunneltags/{object_UUID}`

Permissions: Object Manager

GET urlcategories

Request Type: **GET**

Description: Retrieves the url category object associated with the specified ID. If no ID is specified, retrieves list of all url category objects.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/urlcategories`

URL for GET by ID: `/api/fmc_config/v1/domain/{domain_UUID}/object/urlcategories/{object_UUID}`

Permissions: Object Manager

DELETE urlgroups

Request Type: **DELETE**

Description: Deletes the specified urlgroup objects.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/urlgroups/{object_UUID}`

URL to DELETE overrides on a particular object:
`/api/fmc_config/v1/domain/{domain_UUID}/object/urlgroups/{object_UUID}?overrideTargetId={target_UUID}`

Permissions: Object Manager > Modify Object Manager

PUT urlgroups

Request Type: **PUT**

Description: Modifies urlgroup objects.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/urlgroups/{object_UUID}`

URL to edit or update an override on a particular object:
`/api/fmc_config/v1/domain/{domain_UUID}/object/urlgroups/{parent_object_UUID}`

Permissions: Object Manager > Modify Object Manager

POST urlgroups

Request Type: **POST**

Description: Creates or overrides the urlgroup objects with the specified parameters.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/urlgroups`

URL for Bulk Post : `/api/fmc_config/v1/domain/{domain_UUID}/object/urlgroups?bulk=true`

Permissions: Object Manager > Modify Object Manager

GET urlgroups

Request Type: **GET**

Description: Retrieves the url group objects associated with the specified ID. If no ID is specified, retrieves list of all url group objects.

URL for listing: `/api/fmc_config/v1/domain/{domain_UUID}/object/urlgroups`

URL for all the overrides on a particular domain or device:
`/api/fmc_config/v1/domain/{domain_UUID}/object/urlgroups?overrideTargetId={target_UUID}`

URL for GET by ID: `/api/fmc_config/v1/domain/{domain_UUID}/object/urlgroups/{object_UUID}`

URL to list all overrides on a particular object:
`/api/fmc_config/v1/domain/{domain_UUID}/object/urlgroups/{urlgroup_UUID}/overrides`

URL for override for an object on a particular domain or device:
`/api/fmc_config/v1/domain/{domain_UUID}/object/urlgroups/{urlgroup_UUID}?overrideTargetId={target_UUID}`

Permissions: Object Manager > Modify Object Manager

DELETE urls

Request Type: **GET**

Description: Deletes the specified URL.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/urls/{object_UUID}`

URL to DELETE overrides on a particular object:
`/api/fmc_config/v1/domain/{domain_UUID}/object/urls/{object_UUID}?overrideTargetId={target_UUID}`

Permissions: Object Manager > Modify Object Manager

PUT urls

Request Type: **PUT**

Description: Modifies a URL.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/urls/{object_UUID}`

URL to edit or update an override on a particular object:
`/api/fmc_config/v1/domain/{domain_UUID}/object/urls/{parent_object_UUID}`

Permissions: Object Manager

POST urls

Request Type: **POST**

Description: Creates or overrides the URLs with the specified parameters.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/urls`

URL for Bulk Post : `/api/fmc_config/v1/domain/{domain_UUID}/object/urls?bulk=true`

Permissions: Object Manager > Modify Object Manager

GET urls

Request Type: **GET**

Description: Retrieves the url objects associated with the specified ID. If no ID is specified, retrieves list of all url objects.

URL for listing: `/api/fmc_config/v1/domain/{domain_UUID}/object/urls`

URL for all the overrides on a particular domain or device:
`/api/fmc_config/v1/domain/{domain_UUID}/object/urls?overrideTargetId={target_UUID}`

URL for GET by ID: `/api/fmc_config/v1/domain/{domain_UUID}/object/urls/{object_UUID}`

URL to list all overrides on a particular object:
`/api/fmc_config/v1/domain/{domain_UUID}/object/urls/{url_UUID}/overrides`

URL for override for an object on a particular domain or device:
`/api/fmc_config/v1/domain/{domain_UUID}/object/urls/{url_UUID}?overrideTargetId={target_UUID}`

URL for listing only unused objects:
`/api/fmc_config/v1/domain/{domain_UUID}/object/urls?filter=unusedOnly:true`

URL for searching by name or value:
`/api/fmc_config/v1/domain/{domain_UUID}/object/urls?filter=nameOrValue:{name_or_value}`

Permissions: Object Manager

GET variablesets

Request Type: **GET**

Description: Retrieves the variable set object associated with the specified ID. If no ID is specified, retrieves list of all variable set objects.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/variablesets`

URL for GET by ID: `/api/fmc_config/v1/domain/{domain_UUID}/object/variablesets/{object_UUID}`

Permissions: Object Manager

DELETE vlangrouptags

Request Type: **DELETE**

Description: Deletes the specified vlangrouptag objects.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/vlangrouptags/{object_UUID}`

URL to DELETE overrides on a particular object:
`/api/fmc_config/v1/domain/{domain_UUID}/object/vlangrouptags/{object_UUID}?overrideTargetId={target_UUID}`

Permissions: Object Manager > Modify Object Manager

PUT vlangrouptags

Request Type: **PUT**

Description: Modifies vlangrouptag objects.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/vlangrouptags/{object_UUID}`

URL to edit or update an override on a particular object:
`/api/fmc_config/v1/domain/{domain_UUID}/object/vlangrouptags/{parent_object_UUID}`

Permissions: Object Manager > Modify Object Manager

POST vlangrouptags

Request Type: **POST**

Description: Creates or overrides the VLAN group tags with the specified parameters.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/vlangrouptags`

URL for Bulk Post : `/api/fmc_config/v1/domain/{domain_UUID}/object/vlangrouptags?bulk=true`

Permissions: Object Manager > Modify Object Managers

GET vlangrouptags

Request Type: **GET**

Description: Retrieves the vlan group tag objects associated with the specified ID. If no ID is specified, retrieves list of all vlan group tag objects.

URL for listing: `/api/fmc_config/v1/domain/{domain_UUID}/object/vlangrouptags`

URL for all the overrides on a particular domain or device:
`/api/fmc_config/v1/domain/{domain_UUID}/object/vlangrouptags?overrideTargetId={target_UUID}`

URL for GET by ID: `/api/fmc_config/v1/domain/{domain_UUID}/object/vlangrouptags/{object_UUID}`

URL to list all overrides on a particular object:
`/api/fmc_config/v1/domain/{domain_UUID}/object/vlangrouptags/{vlangrouptag_UUID}/overrides`

URL for override for an object on a particular domain or device:
`/api/fmc_config/v1/domain/{domain_UUID}/object/vlangrouptags/{vlangrouptag_UUID}?overrideTargetId={target_UUID}`

URL for listing only unused objects:
`/api/fmc_config/v1/domain/{domain_UUID}/object/vlangrouptags?filter=unusedOnly:true`

URL for searching by name or value:
`/api/fmc_config/v1/domain/{domain_UUID}/object/vlangrouptags?filter=nameOrValue:{name_or_value}`

Permissions: Object Manager > Modify Object Manager

DELETE vlantags

Request Type: **DELETE**

Description: Deletes the specified VLAN tag objects.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/vlantags/{object_UUID}`

URL to DELETE overrides on a particular object:
`/api/fmc_config/v1/domain/{domain_UUID}/object/vlantags/{object_UUID}?overrideTargetId={target_UUID}`

Permissions: Object Manager > Modify Object Manager

PUT vlantags

Request Type: **PUT**

Description: Modifies VLAN tag objects.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/vlantags/{object_UUID}`

URL to edit or update an override on a particular object:
`/api/fmc_config/v1/domain/{domain_UUID}/object/vlantags/{parent_object_UUID}`

Permissions: Object Manager > Modify Object Manager

POST vlantags

Request Type: **POST**

Description: Creates or overrides the VLAN tags with the specified parameters.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/vlantags`

URL for Bulk Post : `/api/fmc_config/v1/domain/{domain_UUID}/object/vlantags?bulk=true`

Permissions: Object Manager > Modify Object Manager

GET vlantags

Request Type: **GET**

Description: Retrieves the vlantag objects associated with the specified ID. If no ID is specified, retrieves list of all vlantag objects.

URL for listing: `/api/fmc_config/v1/domain/{domain_UUID}/object/vlantags`

URL for all the overrides on a particular domain or device:
`/api/fmc_config/v1/domain/{domain_UUID}/object/vlantags?overrideTargetId={target_UUID}`

URL for GET by ID: `/api/fmc_config/v1/domain/{domain_UUID}/object/vlantags/{object_UUID}`

URL to list all overrides on a particular object:
`/api/fmc_config/v1/domain/{domain_UUID}/object/vlantags/{vlantag_UUID}/overrides`

URL for override for an object on a particular domain or device:
`/api/fmc_config/v1/domain/{domain_UUID}/object/vlantags/{vlantag_UUID}?overrideTargetId={target_UUID}`

URL for listing only unused objects:
`/api/fmc_config/v1/domain/{domain_UUID}/object/vlantags?filter=unusedOnly:true`

URL for searching by name or value:

Permissions: Policies > Access Control > Access Control Policy > Modify Access Control Policy

POST categories

Request Type: **POST**

Description: Creates a category for access control policies.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/policy/accesspolicies/{container_UUID}/categories`

Permissions: Policies > Access Control > Access Control Policy > Modify Access Control Policy

GET categories

Request Type: **GET**

Description: Retrieves the category associated with the specified policy ID. If no ID is specified, retrieves list of all categories associated with the specified policy ID.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/policy/accesspolicies/{container_UUID}/categories`

URL for GET by ID:

`/api/fmc_config/v1/domain/{domain_UUID}/policy/accesspolicies/{container_UUID}/categories/{object_UUID}`

Permissions: Policies > Access Control > Access Control Policy

PUT defaultactions

Request Type: **PUT**

Description: Modifies the default action associated with the specified access control policy ID and default action ID.

URL:
`/api/fmc_config/v1/domain/{domain_UUID}/policy/accesspolicies/{container_UUID}/defaultactions/{object_UUID}`

Permissions: Policies>Access Control>Access Control Policy>Modify Access Control Policy

GET defaultactions

Request Type: **GET**

Description: Retrieves the default action associated with the specified access control policy ID and default action ID. If no default action ID is specified, retrieves list of all default actions associated with the specified access control policy ID.

URL:
`/api/fmc_config/v1/domain/{domain_UUID}/policy/accesspolicies/{container_UUID}/defaultactions`

URL for GET by ID:
`/api/fmc_config/v1/domain/{domain_UUID}/policy/accesspolicies/{container_UUID}/defaultactions/{object_UUID}`

Permissions: Policies>Access Control>Access Control Policy

GET loggingsettings

Request Type: **GET**

Description: Retrieves the logging setting associated with the specified access control policy ID and default action ID. If no default action ID is specified, retrieves list of all default actions associated with the specified access control policy ID.

URL:
`/api/fmc_config/v1/domain/{domainUUID}/policy/accesspolicies/{containerUUID}/loggingsettings`

URL for GET by ID:
`/api/fmc_config/v1/domain/{domainUUID}/policy/accesspolicies/{containerUUID}/loggingsettings/{object_UUID}`

Permissions: Policies

PUT loggingsettings

Request Type: **PUT**

Description: Modifies the logging setting associated with the specified access control policy ID and default action ID.

URL:
`/api/fmc_config/v1/domain/{domainUUID}/policy/accesspolicies/{containerUUID}/loggingsettings/{objectId}`

Permissions: Policies>Access Control Policy>Modify Access Control Policy

GET filepolicies

Request Type: **GET**

Description: Retrieves the file policy object associated with the specified ID. If no ID is specified, retrieves list of all file policy objects.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/policy/filepolicies`

URL for GET by ID: `/api/fmc_config/v1/domain/{domain_UUID}/policy/filepolicies/{object_UUID}`

Permissions: Policies>Access Control>Malware & File Policy

DELETE ftdnatpolicies

Request Type: **DELETE**

Description: Deletes the Firepower Threat Defense NAT policy with the specified ID.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/policy/ftdnatpolicies/{object_UUID}`

Permissions: Devices>NAT>NAT List >Modify NAT policy

PUT ftdnatpolicies

Request Type: **PUT**

Description: Modifies an Firepower Threat Defense NAT policy with the specified ID.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/policy/ftdnatpolicies/{object_UUID}`

Permissions: Devices>NAT>NAT List >Modify NAT policy

POST ftdnatpolicies

Request Type: **POST**

Description: Creates a Firepower Threat Defense device NAT policy with the specified parameters.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/policy/ftdnatpolicies`

URL for Bulk Post: `/api/fmc_config/v1/domain/{domain_UUID}/policy/ftdnatpolicies?bulk=true`

Permissions: Devices>NAT>NAT List >Modify NAT policy

GET ftdnatpolicies

Request Type: **GET**

Description: Retrieves the Firepower Threat Defense NAT policy associated with the specified ID. If no ID is specified, retrieves a list of all Firepower Threat Defense NAT policies.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/policy/ftdnatpolicies`

URL for GET by ID: `/api/fmc_config/v1/domain/{domain_UUID}/policy/ftdnatpolicies/{object_UUID}`

Permissions: Devices>NAT>NAT List

DELETE ftds2svpns

Request Type: **DELETE**

Description: Deletes the Firepower Threat Defense Site to Site VPN topology associated with the specified ID.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/policy/ftds2svpns/{topology_UUID}`

Permissions: Devices > VPN > Modify VPN

PUT ftds2svpns

Request Type: **PUT**

Description: Modifies a Firepower Threat Defense Site to Site VPN topology associated with the specified ID.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/policy/ftds2svpns/{topology_UUID}`

Permissions: Devices > VPN > Modify VPN

POST ftds2svpns

Request Type: **POST**

Description: Creates a Firepower Threat Defense Site to Site VPN topology with the specified parameters.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/policy/ftds2svpns`

Permissions: Devices > VPN > Modify VPN

GET ftds2svpns

Request Type: **GET**

Description: Retrieves the Firepower Threat Defense Site to Site VPN topology associated with the specified ID. If no ID is specified, retrieves a list of all Firepower Threat Defense Site to Site VPN topologies.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/policy/ftds2svpns`

URL for GET by ID: `/api/fmc_config/v1/domain/{domain_UUID}/policy/ftds2svpns/{topology_UUID}`

Permissions: Devices > VPN

PUT advancedsettings

Request Type: **PUT**

Description: Modifies advanced settings inside a VPN Site to Site Topology.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/policy/ftds2svpns/{topology_UUID}/advancedsettings/{advancedsetting_UUID}`

Permissions: Devices > VPN > Modify VPN

GET advancedsettings

Request Type: **GET**

Description: Retrieves an advanced settings inside a VPN Site to Site Topology. If no ID is specified for a GET, retrieves list containing a single AdvancedSettings entry of the topology.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/policy/ftds2svpns/{topology_UUID}/advancedsettings`

URL for GET by ID: `/api/fmc_config/v1/domain/domain_UUID/policy/ftds2svpns/{topology_UUID}/advancedsettings/{advancedSetting_UUID}`

Permissions: Devices > VPN

DELETE endpoints

Request Type: **DELETE**

Description: Deletes all endpoints in a topology or a specific endpoint associated with the specified ID inside a VPN Site to Site Topology.

URL:
`/api/fmc_config/v1/domain/{domain_UUID}/policy/ftds2svpns/{topology_UUID}/endpoints/{endpoint_UUID}`

Permissions: Devices > VPN > Modify VPN

PUT endpoints

Request Type: **PUT**

Description: Modifies all endpoints in a topology or a specific endpoint associated with the specified ID inside a VPN Site to Site Topology.

URL:
`/api/fmc_config/v1/domain/{domain_UUID}/policy/ftds2svpns/{topology_UUID}/endpoints/{endpoint_UUID}`

Permissions: Devices > VPN > Modify VPN

POST endpoints

Request Type: **POST**

Description: Creates all endpoints in a topology or a specific endpoint associated with the specified ID inside a VPN Site to Site Topology.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/policy/ftds2svpns/{topology_UUID}/endpoints`

Permissions: Devices > VPN > Modify VPN

GET endpoints

Request Type: **GET**

Description: Retrieves all endpoints in a topology or a specific endpoint associated with the specified ID inside a VPN Site to Site Topology. If no ID is specified for a GET, retrieves list of all Endpoints of a topology.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/policy/ftds2svpns/{topology_UUID}/endpoints`

URL for GET by ID:
`/api/fmc_config/v1/domain/{domain_UUID}/policy/ftds2svpns/{topology_UUID}/endpoints/{endpoint_UUID}`

Permissions: Devices > VPN

PUT ikesettings

Request Type: **PUT**

Description: Modifies the IKE Settings associated with the specified ID inside a VPN Site to Site Topology.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/policy/ftds2svpns/{topology_UUID}/ikesettings/{ikesetting_UUID}`

Permissions: Devices > VPN > Modify VPN

GET ikesettings

Request Type: **GET**

Description: Retrieves the IKE Settings associated with the specified ID inside a VPN Site to Site Topology. If no ID is specified for a GET, retrieves IKE Settings of a topology.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/policy/ftds2svpns/{topology_UUID}/ikesettings`

URL for GET by ID:
`/api/fmc_config/v1/domain/{domain_UUID}/policy/ftds2svpns/{topology_UUID}/ikesettings/{ikesetting_UUID}`

Permissions: Devices > VPN

PUT ipsecsettings

Request Type: **PUT**

Description: Modifies an IPsec Proposal settings inside a VPN Site to Site Topology.

URL:
`/api/fmc_config/v1/domain/{domain_UUID}/policy/ftds2svpns/{topology_UUID}/ipsecsettings/{ipsecsetting_UUID}`

Permissions: Devices > VPN > Modify VPN

GET ipsecsettings

Request Type: **GET**

Description: Retrieves an IPsec Proposal Settings inside a VPN Site To Site Topology. If no ID is specified for a GET, retrieves list containing a single IPsec Settings entry of the topology.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/policy/ftds2svpns/{topology_UUID}/ipsecsettings`

URL for GET by ID: `/api/fmc_config/v1/domain/DomainUUID/policy/ftds2svpns/{topology_UUID}/ipsecsettings/{ipsecsetting_UUID}`

Permissions: Devices > VPN

DELETE autonatrules

Request Type: **DELETE**

Description: Deletes a NAT rule with the specified parameters.

URL:
`/api/fmc_config/v1/domain/{domain_UUID}/policy/ftdnatpolicies/{container_UUID}/autonatrules/{object_UUID}`

Permissions: Devices>NAT>NAT List >Modify NAT policy

PUT autonatrules

Request Type: **PUT**

Description: Modifies a NAT rule with the specified parameters.

URL:
`/api/fmc_config/v1/domain/{domain_UUID}/policy/ftdnatpolicies/{container_UUID}/autonatrules/{autonatrule_UUID)`

Permissions: Devices>NAT>NAT List >Modify NAT policy

POST autonatrules

Request Type: **POST**

Description: Creates a NAT policy with the specified parameters.

URL:
`/api/fmc_config/v1/domain/{domain_UUID}/policy/ftdnatpolicies/{container_UUID}/autonatrules`

Permissions: Devices>NAT>NAT List >Modify NAT policy

GET autonatrules

Request Type: **GET**

Description: Retrieves the NAT rule associated with the specific ID. If no ID is specified, retrieves a list of all NAT rules.

URL:
`/api/fmc_config/v1/domain/{domain_UUID}/policy/ftdnatpolicies/{container_UUID}/autonatrules`

URL for GET by ID:
`/api/fmc_config/v1/domain/{domain_UUID}/policy/ftdnatpolicies{container_UUID}/autonatrules/{object_UUID}`

Permissions: Devices>NAT>NAT List

DELETE manualnatrules

Request Type: **POST**

Description: Deletes a manual NAT rule in the specified NAT policy.

URL:
`/api/fmc_config/v1/domain/{domain_UUID}/policy/ftdnatpolicies/{container_UUID}/manualnatrules/{object_UUID}`

Permissions: Devices>NAT>NAT List >Modify NAT policy

PUT manualnatrules

Request Type: **PUT**

Description: Modify a manual NAT rule in the specified NAT policy.

URL:
`/api/fmc_config/v1/domain/{domain_UUID}/policy/ftdnatpolicies/{container_UUID}/manualnatrules/{object_UUID}`

Permissions: Devices>NAT>NAT List >Modify NAT policy

POST manualnatrules

Request Type: **POST**

Description: Creates manual NAT rules with the specified parameters.

URL:
`/api/fmc_config/v1/domain/{domain_UUID}/policy/ftdnatpolicies/{container_UUID}/manualnatrules`

Permissions: Devices>NAT>NAT List >Modify NAT policy

GET manualnatrules

Request Type: **GET**

Description: Retrieves the manual NAT rule associated with the specified ID. If no ID is specified, retrieves a list of all manual NAT rules.

URL:
`/api/fmc_config/v1/domain/{domain_UUID}/policy/ftdnatpolicies/{container_UUID}/manualnatrules`

URL for GET by ID:
`/api/fmc_config/v1/domain/{domain_UUID}/policy/ftdnatpolicies/{container_UUID}/manualnatrules/{object_UUID}`

Permissions: Devices>NAT>NAT List

GET natrules

Request Type: **GET**

Description: Retrieves the list of all NAT rules (manual and auto) associated with the specified NAT policy.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/policy/ftdnatpolicies/{container_UUID}/natrules`

Permissions: Devices>NAT>NAT List

PUT inheritancesettings

Request Type: **PUT**

Description: Modifies the inheritance settings associated with specified Access Policy.

URL:
`/api/fmc_config/v1/domain/{domain_UUID}/policy/accesspolicies/{container_UUID}/inheritancesettings/{object_UUID}`

Permissions: Policies > Access Control Policy > Modify Access Control Policy

GET inheritancesettings

Request Type: **GET**

Description: Retrieves the inheritance settings associated with specified Access Policy. If no ID is specified, retrieves a list of all inheritance settings.

URL:
`/api/fmc_config/v1/domain/{domain_UUID}/policy/accesspolicies/{container_UUID}/inheritancesettings/`

URL for GET by ID:
`/api/fmc_config/v1/domain/{domain_UUID}/policy/accesspolicies/{container_UUID}/inheritancesettings/{object_UUID}`

Permissions: Policies > Access Control Policy

GET intrusionpolicies

Request Type: **GET**

Description: Retrieves the intrusion policy associated with the specified ID. If no ID is specified, retrieves list of all intrusion policies.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/policy/intrusionpolicies`

URL for GET by ID:
`/api/fmc_config/v1/domain/{domain_UUID}/policy/intrusionpolicies/{object_UUID}`

Permissions: Policies>Access Control>Intrusion Policy

DELETE prefilterpolicies

Request Type: **DELETE**

Description: Deletes a prefilter policy associated with the specified ID.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/policy/prefilterpolicies/{object_UUID}`

Permissions: Policies > Access Control > Prefilter Policy > Modify Prefilter Policy

PUT prefilterpolicies

Request Type: **PUT**

Description: Modifies a prefilter policy associated with the specified ID.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/policy/prefilterpolicies/{object_UUID}`

Permissions: Policies > Access Control > Prefilter Policy > Modify Prefilter Policy

POST prefilterpolicies

Request Type: **POST**

Description: Creates a prefilter policy associated with the specified ID.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/policy/prefilterpolicies/{object_UUID}`

Permissions: Policies > Access Control > Prefilter Policy > Modify Prefilter Policy

GET prefilterpolicies

Request Type: **GET**

Description: Retrieves the prefilter policy associated with the specified ID. If no ID is specified, retrieves a list of all prefilter policies.

URL: `/api/fmc_config/v1/domain/{domainUUID}/policy/prefilterpolicies`

URL for GET by ID:
`/api/fmc_config/v1/domain/{domainUUID}/policy/prefilterpolicies/{object_UUID}`

Permissions: Policies > Access Control > Prefilter Policy

DELETE hitcounts

Request Type: **DELETE**

Description: Deletes the hit count information and resets the hit count to zero for an assigned policy or rule in a device, from the Firepower Management Center.

Note that the DELETE operation returns a 200 (OK) message upon successful completion of the operation.

URLs:

- `/api/fmc_config/v1/domain/{domainUUID}/policy/accesspolicies/{containerUUID}/operational/hitcounts?filter="{filterString}"`

- `/api/fmc_config/v1/domain/{domainUUID}/policy/prefilterpolicies/{containerUUID}/operational/hitcounts?filter="{filterString}"`

Permisssions:

- Policies>Access Control Policy>Modify Access Control Policy

- Policies>Prefilter Policy>Modify Prefilter Policy

PUT hitcounts

Request Type: **PUT**

Description: Retrieves the latest hit count information for a device against an assigned policy, and stores it in the Firepower Management Center.

URLs:

- `/api/fmc_config/v1/domain/{domainUUID}/policy/accesspolicies/{containerUUID}/operational/hitcounts?filter="{filterString}"`

- `/api/fmc_config/v1/domain/{domainUUID}/policy/prefilterpolicies/{containerUUID}/operational/hitcounts?filter="{filterString}"`

Permisssions:

- Policies>Access Control Policy>Modify Access Control Policy

- Policies>Prefilter Policy>Modify Prefilter Policy

GET hitcounts

Request Type: **GET**

Description: Retrieves the last collected hit count information for a device against an assigned policy or its rules, from the Firepower Management Center.

Note that during the GET operation, hit counts will be automatically pre-fetched from the device if it is the first retrieval being done against a specific device.

URLs:

- `/api/fmc_config/v1/domain/{domainUUID}/policy/accesspolicies/{containerUUID}/operational/hitcounts?filter="{filterString}"`

- `/api/fmc_config/v1/domain/{domainUUID}/policy/prefilterpolicies/{containerUUID}/operational/hitcounts?filter="{filterString}"`

Permissions:

- Policies>Access Control Policy>Modify Access Control Policy

- Policies>Prefilter Policy>Modify Prefilter Policy

DELETE prefilterrules

Request Type: **DELETE**

Description: Deletes the prefilter rule associated with the specified rule ID.

URL:
`/api/fmc_config/v1/domain/{domain_UUID}/policy/prefilterpolicies/{container_UUID}/prefilterrules/{object_UUID}`

Permissions: Policies > Access Control > Prefilter Policy > Modify Prefilter Policy

PUT prefilterrules

Request Type: **PUT**

Description: Modifies the prefilter rule associated with the specified rule ID.

URL:
`/api/fmc_config/v1/domain/{domain_UUID}/policy/prefilterpolicies/{container_UUID}/prefilterrules/{object_UUID}`

Permissions: Policies > Access Control > Prefilter Policy > Modify Prefilter Policy

POST prefilterrules

Request Type: **POST**

Description: Creates a prefilter rule.

URL:
`/api/fmc_config/v1/domain/{domain_UUID}/policy/prefilterpolicies/{container_UUID}/prefilterrules`

Permissions: Policies > Access Control > Prefilter Policy > Modify Prefilter Policy

GET prefilterrules

Request Type: **GET**

Description: Retrieves the prefilter rule associated with the specified rule ID. If no ID is specified, retrieves list of all prefilter rules.

URL:
`/api/fmc_config/v1/domain/{domain_UUID}/policy/prefilterpolicies/{container_UUID}/prefilterrules/`

URL for GET by ID:
`/api/fmc_config/v1/domain/{domain_UUID}/policy/prefilterpolicies/{container_UUID}/prefilterrules/{object_UUID}`

Permissions: Policies > Access Control > Prefilter Policy

GET snmpalerts

Request Type: **GET**

Description: Retrieves the SNMP alert object associated with the specified ID. If no ID is specified, retrieves a list of all SNMP alert objects.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/policy/snmpalerts`

URL for GET by ID: `/api/fmc_config/v1/domain/{domain_UUID}/policy/snmpalerts/{object_UUID}`

Permissions: Policies > Actions > Alerts > View Alerts

GET syslogalerts

Request Type: **GET**

Description: Retrieves the syslog alert object associated with the specified ID. If no ID is specified, retrieves a list of all syslog alert objects.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/policy/syslogalerts`

URL for GET by ID: `/api/fmc_config/v1/domain/{domain_UUID}/policy/syslogalerts/{object_UUID}`

Permissions: Policies > Actions > Alerts

Policy Assignment Services

PUT policyassignments

Request Type: **PUT**

Description: Modifies an assigned access policy to add a new device or a new device group.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/assignment/policyassignments/{object_UUID}`

Permissions:

POST policyassignments

Request Type: **POST**

Description: Assigns an unassigned access policy to devices or device groups.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/assignment/policyassignments`

Permissions:

GET policyassignments

Request Type: **GET**

Description: Retrieves the policy assignment associated with the specified ID. If no ID is specified, retrieves a list of all policy assignments to target devices.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/assignment/policyassignments`

URL for GET by ID:
`/api/fmc_config/v1/domain/{domain_UUID}/assignment/policyassignments/{object_UUID}`

Permissions:

Parameters available for filtering: name

Status Services

GET taskstatuses

Description: Retrieves information about a previously submitted pending job/task with the specified ID. This is currently supported for device registration and deployment jobs.

URL for GET by ID: `/api/fmc_config/v1/domain/{domain_UUID}/job/taskstatuses/{object_UUID}`

Permissions: Modify Devices/Deployment

System Information

GET domain

Request Type: **GET**

Description: Requests version information for the domain. If no ID is specified, retrieves a list of all domains.

URL: `/api/fmc_platform/v1/info/domain/{domain_UUID}/`

URL for GET by ID: `/api/fmc_platform/v1/info/domain/{domain_UUID}/{object_UUID}`

Permissions: System > Domains

GET serverversion

Request Type: **GET**

Description: Requests version information for the server. If no ID is specified, retrieves a list of all servers.

URL: `/api/fmc_platform/v1/info/serverversion`

URL for GET by ID: `/api/fmc_platform/v1/info/serverversion/{objectID}`

Permissions:

Update Packages

POST Cancel Upgrades

Request Type: **POST**

Description: This POST operation cancels software upgrade packages to applicable devices running Firepower Threat Defense.

URL:`/api/fmc_platform/v1/updates/cancelupgrades`

Permissions: System > Updates

POST Retry Ugrades

Request Type: **POST**

Description: This POST operation retries software upgrade packages to applicable devices running Firepower Threat Defense.

URL:`/api/fmc_platform/v1/updates/retryupgrades`

Permissions: System > Updates

DELETE upgradepackages

Request Type: **DELETE**

Description: Deletes a specific Firepower Threat Defense upgrade package from the managing Firepower Management Center.

URL: `/api/fmc_platform/v1/updates/upgradepackages/{package_UUID}`

GET upgradepackages

Request Type: **GET**

Description: Retrieves a list of locally available Firepower Threat Defense upgrade packages, including major upgrades, maintenances release upgrades, and hotfixes.

URL: `/api/fmc_platform/v1/updates/upgradepackages`

URL for GET by ID: `/api/fmc_platform/v1/updates/upgradepackages/{package_UUID}`

GET listapplicabledevices

Request Type: **GET**

Description: Lists registered device containers that support the specific upgrade package.

URL: `/api/fmc_platform/v1/updates/upgradepackages/{container_UUID}/applicabledevices`

POST upgradepackage

Request Type: **POST**

Description: Dependent on the parameters, this POST operation either pushes available software upgrade packages to applicable devices running Firepower Threat Defense or initiates the upgrade process for applicable devices running Firepower Threat Defense. This process is applicable for standalone, clustered, or high availability pairs with the following limitations:

- For all configurations, ensure that the current POST operation is completed successfully before proceeding to the next POST operation.

- Perform the POST operation on the primary node of a high availability pair. Do not perform the POST operation for more than one high availability pair at a time.

- Perform the POST operation on the

Note Typically, the first POST operation responds within 60 seconds. Cisco recommends that you perform subsequent POST operations at least 120 seconds after the first POST operation was initiated. The response of the POST operation includes a task object, with a task ID and task status. You can monitor the completion of the task by performing a GET operation on the task object with its task ID. For more information, see GET taskstatuses, on page 101.

URL: `/api/fmc_platform/v1/updates/upgrades/`

GET upgradepackages: Monitor

Request Type: **GET**

Description: Monitors the upgrade process once you have executed the POST upgrade task.

URL: `/api/fmc_platform/v1/domain/{domain_UUID}/job/taskstatuses/{task_ID}`
