

# EPX

Extreme Performance SD-WAN Platform

## Base Chassis

| EPX Main Chassis (EPX-M8)        |   |        |
|----------------------------------|---|--------|
| Router Throughput                | 30 Gbps   |        |
| PepVPN / SpeedFusion Throughput* | No Encryption:  | 4 Gbps |
|                                  | 256-bit AES:  | 2 Gbps |
| Recommended Users                | 5000-20000+   |        |
| Max PepVPN/SpeedFusion Peers     | 4000  |        |
| Power Input                      | AC Input 100V - 240V  |        |
| Power Consumption                | 215 W*  |        |
| Dimensions                       | 18.9 x 21.7 x 3.6 inches<br>480 x 550 x 90 mm   |        |
| Weight (No Modules)              | 31.3 pounds<br>14.2 kilograms   |        |
| Operating Temperature            | 32° – 113°F (0° – 45°C)   |        |
| Humidity                         | 5% – 90% (non-condensing)   |        |
| Certifications                   | FCC, IC, CE-RED<br>EN 50155: Railway Applications<br>EN 61373:1999 IEC 61373:1999 : Shock and Vibration Resistance<br>EN 50121: Rolling Stock EMC, Signalling and Telecom Apparatus |        |
| Warranty                         | 1-Year Limited Warranty   |        |

\* 200W consumption for the main chassis,  
15W consumption for the optional LCD module.

## Ordering Information

| Product Code | Description   |
|--------------|---|
| EPX-M8       | EPX Base Model, 1x LCD Module   |
| EXM-LCDT     | Expansion Module with 1TB SSD, Features Content Hub, Docker Support and LCD Controls (Replaces existing LCD module) |
| EPX-LC-MFA   | License Key to enable MediaFast with Content Hub & Docker (requires own disk drive to mount to the LCD Module)      |

# EPX

Extreme Performance SD-WAN Platform

Introducing the industry's highest performing SD-WAN platform. The EPX is a rapidly deployable, powerful, and versatile SD-WAN router that connects a wide range of WAN options from LTE-A, satellite modems, to fixed line networks. At a 19" 2U rack mountable form factor, it can combine up to 18x LTE-A connections for absolute connection reliability.

Need Ability to Scale Capacity With Demand?

Need More Cellular Bandwidth?

Need Different Types of Connectivity?

Futureproof and Scalable

Purchase just the modules for the connectivity you need. When you need more in the future, you can expand anytime. When future technologies like 5G and FirstNet appear, we will have modules to connect with those as well.

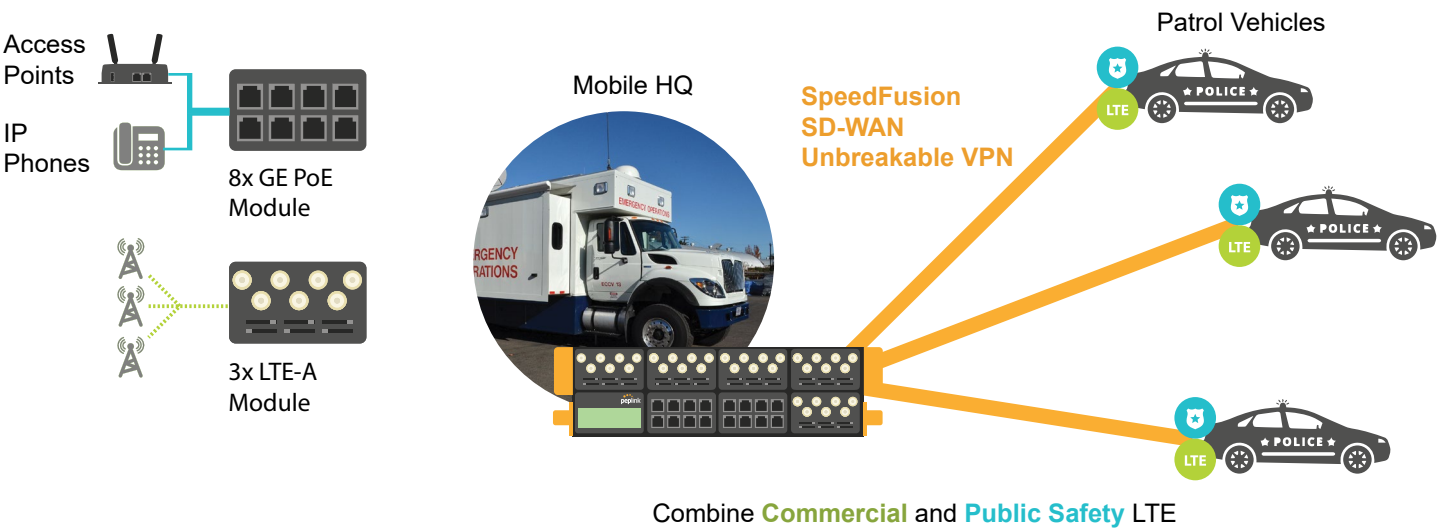

Gigabit Bandwidth On-The-Go

In its cellular configuration, the EPX is the most powerful wireless SD-WAN router in the industry. It can combine the bandwidth of up to 18 connections, supporting 36 SIM cards and providing gigabits of bandwidth on-the-go.

Multiple Module Types

The EPX can support different technologies depending on which modules you purchase. Also, when 5G technology appears, there will be modules for it too, ensuring that your investment is future-proof.

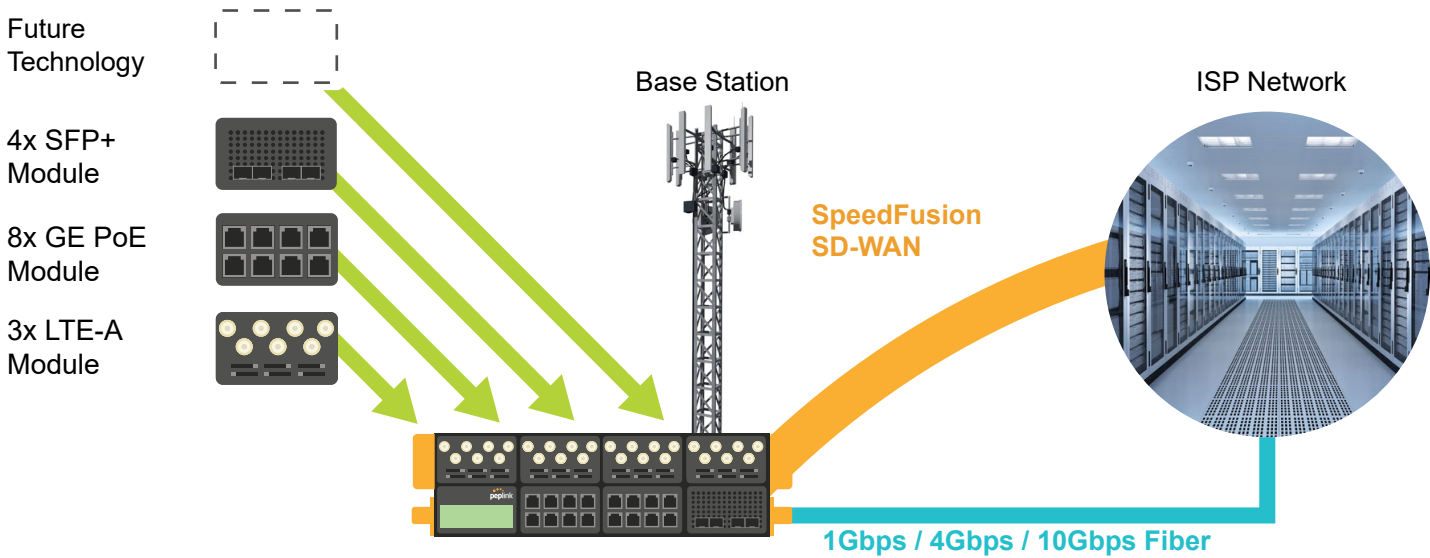

# Rapidly Deployable, Scalable, Unbreakable Connectivity for Mobile Command.

Equipped with an EPX, mobile headquarters can combine private LTE, commercial LTE and satellite links to form a fast, unbreakable VPN connection to headquarters and to patrol vehicles. With this configuration, patrol vehicles benefit from increased

cellular coverage. Even if they are outside the range of one cellular provider, they will still be in within the range of others. In addition, each cellular modem supports 2 SIM cards, effectively doubling the number of providers supported.

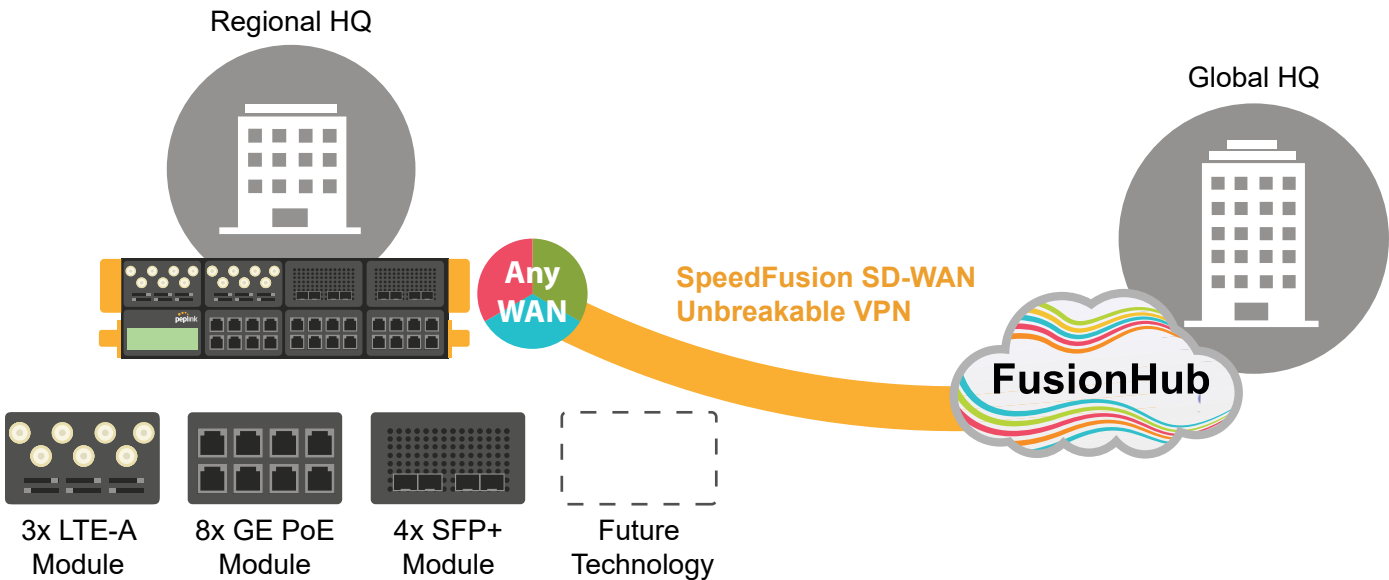

# Add Flexible SD-WAN Backhaul to Any Network

Whether providing Internet service with a SLA, or building a video surveillance streaming network, ensuring service continuity is crucial. The EPX enables service providers to build

a flexible SD-WAN backhaul to the main network, incorporating as many Ethernet, Fiber, and cellular links as needed to provide fast and solid connectivity. What's more, Peplink's cloud-based management software provides you with complete visibility and control of WAN usage.

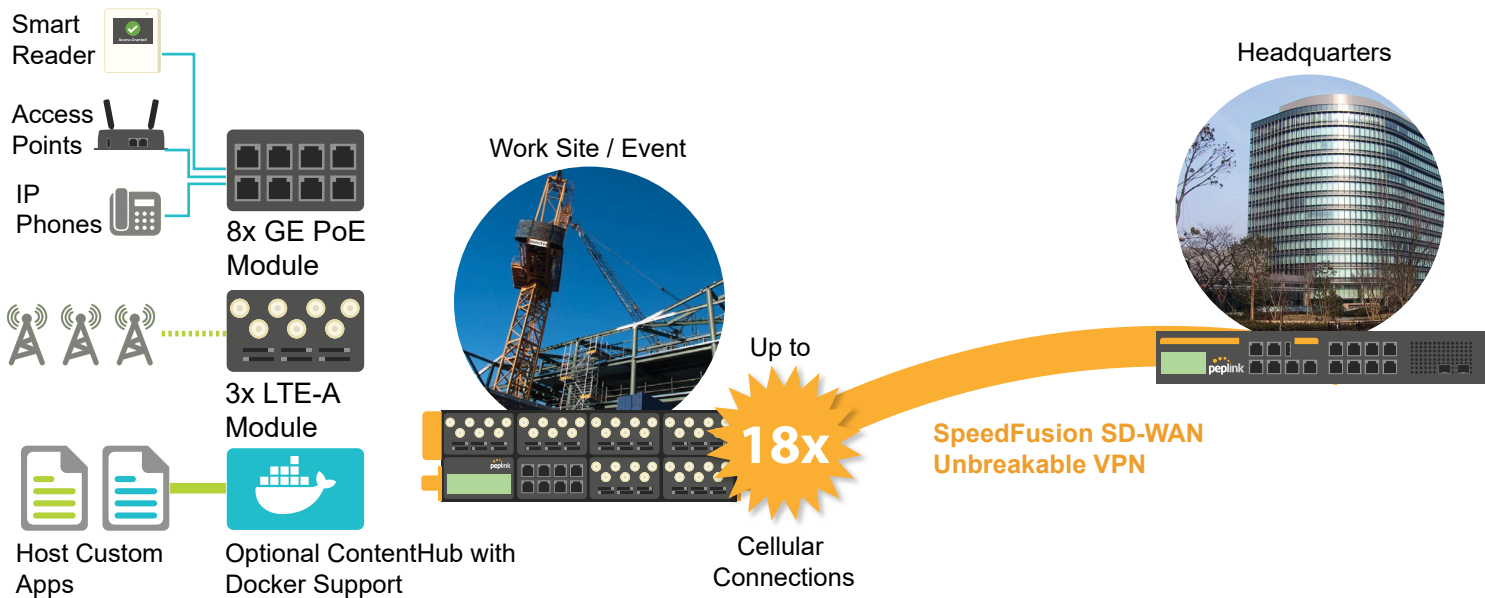

# Futureproof, Scalable, Unbreakable Cellular Backup for Regional Offices.

With its modular construction, the EPX enables regional offices to add WAN connections of any type as they grow in size. With the ability to add cellular modules, the EPX also provides as much cellular connectivity as needed for

the company network to operate at full speed even if land lines lose connectivity. In the future when 5G gains popularity, there will be modules for it too. This makes the EPX futureproof for both bandwidth demand and for upcoming technology.

# Instant Connectivity and Application Hosting for Work Sites and Events

Getting a connection to a work site or to an event normally involves building a landline, potentially taking months. With the EPX, temporary sites could get connected in minutes. The EPX can combine up to 18

cellular connections for high-definition video streaming and high-volume data transfers. The EPX can also host docker containers, giving you the ability to host your own custom apps onsite to simplify management.
