2-2. Connecting the Cables

You can connect up the cables required for printing to the printer. They all connect to the connector panel on the back of the printer, which is shown below :

Before connecting any of the cables, make sure that both the printer and the computer are turned off.

2-2-1. Interface Connector

<D -SUB 25 Female Serial Port>

<D -SUB Centronics Parallel Port>

<4Pin "B " Type USB Port>

- Serial interface

PIN	SIGNAL	I/O	DESCRIPTION
2	TxD	Output	Printer transmit data line RS-232C level
3	RxD	Input	Printer receive data line RS-232C level
4, 20	DTR	Output	Printer handshake to host line RS-232C level
6	DSR	Input	Data Send Ready
1, 7	GND	-	System Ground

36	SELLECT IN -	Input	Printer select signal

2-2-2. Cash Drawer Connector

The printer can operate two cash drawers with a 6 pin RJ-11 modular connector. The driver is capable of supplying a maximum current of 1.0A for 510ms or less when not printing.

PIN	SIGNAL	DESCRIPTION
1	Signal GND	-
2	Drawer kick-out drive signal 1	Output
3	Drawer open/close signal	Input
4	+24V	-
5	Drawer kick-out drive signal 2	Output
6	Signal GND	-

2-3. Loading the Roll Paper

Notes: Be sure to use paper rolls that meet the specifications. Do not use paper rolls that have the paper glued to the core because the printer cannot detect the paper end correctly. (Turn off power switch)

? Turn off power switch.

1. Make sure that the printer is not receiving data; Otherwise, data may be lost.
2. Open the paper roll cover by pulling down the cover-open lever.

3. Remove the used paper roll core if there is one inside.
4. Insert new paper roll as shown.

5. Be sure to note the correct direction that the paper comes off the roll.

6. Pull out a small amount of paper, as shown. Then, close the cover.

7. Tear off the paper as shown.

2-4. DIP SWITCH SETTING

The WRP8055 is set up at the factory to be appropriate for almost all users. It does, however, offer some settings for users with special requirements.

It has DIP switches that allow you to change communication setting, such as handshaking and parity check, as well as print density.

Your printer has two sets of DIP switches. The functions of the switches are shown in the following tables.

? Note : Power off. And open the cover of Dip Switch and change setting.

2-4 -1. Serial Interface Specification

DIP Switch Set 1 Functions

SW	FUNCTIONS	ON	OFF	DEFAULT

Paper low detect (? 1)

SW	FUNCTIONS	ON	OFF
6	Paper Low	Detect	Do not Detect

(? 1) The detecting function of [Paper Low] is an option.

Please set Dip Switch (2-6) [OFF] if you don 't need any option.

If Dip Switch is [ON] without any special option purpose. Printer detects [Paper is Low] and it could cause error.

? CAUTION:

Turn off the printer while removing the DIP switch cover to prevent an electric short, which can damage the printer.

1. Make sure the printer is turned off.
2. Remove the screw from the DIP switch cover. Then, take off the DIP switch cover as shown in the illustration below.

3. Set the switches using a pointed tool, such as tweezers or a small screwdriver.
4. Replace the DIP switch cover. Then, secure it with the screw.

The new settings take effect when you turn on the printer.

? CAUTION:

When the paper is jammed with cutter, the top cover might be stuck. In this case, repeat power on and off several times.

If the top cover is still stuck, please follow the steps to release the papers from jamming.

1. Make sure the printer is turned off.
2. Take out cutter cover as shown.

3. Turn screw with drivers to a direction until paper is released from the cutter.

3. Control panel and other functions.

3-1. Control panel

You can control the basic paper feeding operations of the printer with the button on the control panel. The indicator lights help you to monitor the printer's status.

Control Panel

Button

The button can be disabled by the ESC c 5 command.

Press the FEED button once to advance paper one line. You can also hold down the FEED button to feed paper continuously.

3-2. Error indicating

This section explains the different patterns signaled by the two LED indicators located on the top cover of the WRP8055.

STATUS	PAPER	ERROR	POWER	REMARKS
	RED	RED	GREEN	
Power off	OFF	OFF	OFF	Normal power is not supplied to the printer
Power on	OFF	OFF	ON	Normal power is supplied to the printer
On line	OFF	OFF	ON	Normal error-free mode
Cover open	OFF	ON	ON	Close cover
Paper empty	OFF	ON	ON	Insert new paper roll
Paper near end	ON	OFF	ON	Paper is low
Test mode	OFF	OFF	ON	Ignored error led

4. Self Test

The self-test lets you know if your printer is operating properly. It checks the control circuits, printer mechanisms, print quality, ROM version and DIP switch settings.

This test is independent of any other equipment or software.

Running the self test

1. Make sure the printer is turned off and the printer cover is closed properly.
2. While holding down the FEED button, turn on the printer using the switch on the front of the printer to begin the self-test. The Self Test prints the printer settings and then prints the following, Cuts the paper, and pauses. (Error LED On)

Self test Printing

Please press the PAPER FEED button.

3. Press the FEED button to continue printing. The printer prints a pattern using the built-in character set.
4. The self test automatically ends and cuts the paper after printing the following:

***** Completed *****

The printer is ready to receive data as soon as it completes the self-test.

5. Hexadecimal Dump

This feature allows experienced users to see exactly what data is coming to the printer. This can be useful in finding software problems.

When you turn on the hex dump functions, the printer prints all commands and other data in hexadecimal format along with a guide section to help you find specific commands.

To use the hex dump feature, follow these steps:

1. After you make sure that the printer is off and Dip s/w 1-2 is ON, turn on the printer.
2. Run any software program that sends data to the printer. The printer prints "Hexadecimal Dump" and then all the codes it receives in a two-column format. The first column contains the hexadecimal codes and the second column gives the ASC? characters that correspond to the codes.

Hexadecimal Dump

1B 21 00 1B 26 02 40 40 .!..& . @ @

1B 25 01 1B 63 34 00 1B .%.. c4 ..

41 42 43 44 45 46 47 48 ABCDEFGH

? A period (.) is printed for each code that has no ASC? equivalent.

3. Turn off the printer, and make sure that Dip sw 1-2 off.
4. Turn on the printer.

6. Specifications

Important!

When using a printer power supply other than optional AC adaptor (HT -U1135, LSE 9901B2460), be sure that the following cautions are observed.

Use a power supply of DC 24V $\pm$ 10% and more than 1.5A.

Be careful about installing the printer in an area where there is noise.

Take the appropriate measure to protect against electrostatic AC line noise, etc.

6-1. Environmental Requirments

(1)Operating

Temperature 5°C to 45°C

Humidity 10% to 90% RH (without condensation)

(2)Transport/Storage (except paper)

Temperature -20°C to 60°C

Humidity 10% to 90% RH (without condensation)

6-2. Reliability

(1)MCBF 50 million lines (based on an average printing rate of 12.5% with paper thickness in the range 65 μ m to 75 μ m)

35 million lines (based on an average printing rate of 12.5% with paper thickness in the range 76 μ m to 150 μ m)

(2)Head Life 100 million pulses, 100Km

(3)Cutter Life 1.0 million cuttings (if the paper thickness is between 65 and 90 μ m)

6-3. Certification

(1)FCC PART15 CLASS A

(2)CE EMCD/LVD

(3)UL/cUL
