Overview

Fortinet (NASDAQ: FTNT) is a global provider of highperformance network security and specialized security solutions that provide our customers with the power to protect and control their IT infrastructure. Our purpose-built, integrated security technologies, combined with our FortiGuard security intelligence services, provide the high performance and complete content protection our customers need to stay abreast of a constantly evolving threat landscape.

The Fortinet Security Fabric brings together all components in your network. It is Broad, Powerful and Automated. In addition to Fortinet products, the Security Fabric also integrates with 3rd Party partners to extend the power of the Security Fabric to other parts of an organization. For more information regarding our Security Fabric Partners, please refer to our Technology Alliances here: <https://www.fortinet.com/partners/partnerships/alliancepartners.html>

The leading provider of business-driven security management solutions, AlgoSec helps the world's largest organizations align security with their business processes. With the AlgoSec Security Management Suite, users can discover, map and migrate business application connectivity, proactively analyze risk from the business perspective, tie cyber-attacks to business processes and intelligently automate network security changes with zero touch – across their cloud, SDN and on-premise networks. Over 1,500 enterprises, including 20 of the Fortune 50, utilize AlgoSec's solutions to make their organizations more agile, more secure and more compliant – all the time. Since its inception, AlgoSec has offered the industry's only money-back guarantee.

Today's business environment is characterized by continual changes, and business needs rapidly evolve across various organizational functions of companies. In this dynamic and rapidly changing business environment, IT often struggles to gain adequate visibility and control, to ensure security policies and regulatory guidelines are complied with. Effective security policy management that accommodates the dynamic nature of today's organizations is a key challenge for many IT departments.

Fortinet and AlgoSec have partnered to deliver an industry-leading security solution to address these needs. Bringing together AlgoSec's business-driven security policy automation with Fortinet's industry-leading FortiGate® network security firewall platform enables customers to benefit from AlgoSec's comprehensive security policy management capabilities, while simultaneously leveraging the best-validated security protection in the industry provided by Fortinet.

Architecture Overview

FortiManager Configuration

Create and configure an administrator account for AlgoSec.

From System Settings go to Admin > Administrators > Create New.

Deployment Prerequisites

- Fortinet FortiManager version 5.4.3 or newer
- AlgoSec Security Management Suite (AlgoSec), including AlgoSec Firewall Analyzer, FireFlow and BusinessFlow version 6.11, already configured

Note: AlgoSec also supports Fortinet FortiGate but it is not covered in this guide. For details on how to configure AlgoSec and FortiGate refer to the AlgoSec Firewall Analyzer Administration Guide.

Enter a User Name, New Password and Confirm the Password.

Set the Admin Profile to Super_User and click OK at the bottom.

The screen should look like the image below.

Enable the Web Service from the Network settings.

Remote Procedure Call (RPC) needs to be set to read-write when using FortiManager version 5.2.3 and above (see link to the Technical Note at the end for more details).

Connect to the FortiManager CLI to change the AlgoSec administrator account permissions.

Enter the following CLI commands:

```
FMG-VM64 # config system admin user
(user)# edit algosec
(algosec)# set rpc-permit read-write
(algosec)# end
```

Configure FortiManager to send Syslog to the AlgoSec IP address.

From System Settings go to Advanced > Syslog Server and click Create New.

Enter a Name.

Enter the IP Address or FQDN of the AlgoSec server.

Click OK.

AlgoSec Security Management Suite Configuration

Configure AlgoSec to monitor FortiManager.

Go to Administration > Devices Setup.

Click New and select Devices.

For Device Type select Fortinet FortiManager and click Next.

For Access Information enter the FortiManager IP address, User Name and Password.

Enable Active Change.

Set the Syslog-ng server to Localhost and click Next.

Note: if you wish to use your own Syslog server click New and configure the following.

The Syslog Server Settings dialog box contains the following fields and controls:

- Syslog-ng host:** A text input field with a placeholder text: "First time configuration for syslog-ng server required (?)".
- User Name:** A text input field with a placeholder text: "Root user is recommended. Otherwise, manual intervention is required (?)".
- Password:** A text input field.
- Test Connectivity:** A button.
- OK:** A button.
- Cancel:** A button.

Under Baseline Configuration Compliance click Configure.

The Firewall Analyzer Administration page shows the Baseline Configuration Compliance section. The "Configure" button is highlighted with a red box. Below the table, the "Options" section includes:

- ☒ Real-time change monitoring
- ☒ Set user permissions

Buttons at the bottom: Cancel, Back, Finish.

Enter the Host IP, User Name and Password. For Baseline Profile select Fortinet – FortiGate. Click Test Connectivity.

The Direct Access Configuration dialog box contains the following table:

Device Name	Host IP	User Name	Password	Baseline Profile
SYSLOG_0A65203B_root				None
FGVM040000101072_root	10.101.32.59	admin	*****	Fortinet - FortiGate

A red arrow points to the "Test Connectivity" button at the bottom.

Enter the Host IP, User Name and Password. For Baseline Profile select Fortinet – FortiGate. Click Test Connectivity.

The Success message dialog box displays the following text:

Success

Connection established to 10.101.32.59

OK

Click OK and OK.

Your screen should look similar to the following.

Click Finish.

Note: if you selected Set user permissions then the Edit Users dialog box appears.

Set which users will have access to the reports produced by the device (see below).

When configuration is completed you will see the following screen.

Switch to the Devices page, and select ALL_FIREWALLS in the firewall tree on the left.

Then click 'Analyze' on the right pane to run a full risk, compliance and cleanup analysis on all the newly added Fortinet firewalls.

All Devices screen.

Devices Policy screen.

Conclusion

You are now ready to use the AlgoSec Security Management Solution with your Fortinet Firewalls. Refer to AlgoSec Firewall Analyzer, FireFlow and BusinessFlow user guides for more information on the various capabilities you can use.
