## Panelboards Overview

Choices to quickly change feeder breakers in electrical distribution equipment have evolved over the years. While using drawout switchgear with power air circuit breakers remains a highly reliable solution, requests for drawout molded case circuit breakers (MCCBs) have increased. And, customers need a wall-mounted panelboard solution with front-accessibility and front-connected equipment to meet space requirements and application needs.
Eaton's drawout MCCB Pow-R-Line ${ }^{\circledR}$ 4DX (PRL4DX) panelboard provides this solution.

This is the first design to offer twoand three-pole MCCBs in a mechanical drawout design. Breaker ratings from 20 A to 600 A use unique drawout cassettes. Breakers are inserted and removed via a mechanical removal system similar to other drawout designs associated with switchgear; however, these breakers are horizontally mounted in a traditional panelboard groupmounted manner.

## Market and Segment Applications

While the drawout MCCB panelboard design may be substituted for nearly any traditional application with feeder MCCBs, it has been specifically designed to meet the needs of several industries, including:

- Electrical distribution systems where a changeout of circuit breakers is needed to upgrade equipment to a new process
- Data centers

■ Industrial facilities to minimize downtime

- Institutions
- Laboratories
- Healthcare facilities
- Critical load applications

## Standards and Certifications

■ UL ${ }^{\circledR} 67$ Listed for wall-mounted applications from 600 A to 1200 A
■ National Electrical Code ${ }^{\circledR}$

## Available Ratings

The panelboards are rated at 240 Vac , 480 Vac and 600 Vac . Fault current is available up to 200 kAIC at 240 Vac , 100 kAIC at 480 Vac and 65 kAIC at 600 Vac . The short-circuit current rating of the panelboard is determined by the low short-circuit current rating of the lowest rated overcurrent device in the panelboard.
Boxes and trims are UL 50 Listed and labeled. Both the box and the trim are painted ANSI-61 light gray. Deadfront covers are also painted ANSI-61 light gray to match box and trim.
Drawout feeder MCCBs are available in two- and three-pole offerings from 20 A to 600 A . Main breakers above 600 A are fixed-mounted using a traditional bolt-on design. Main breakers 600 A and below are available with either the traditional fixed-mounted, bolt-on design or in a drawout cassette. For drawout mains or feeders above 600 A, please use Eaton's switchboard offering.

## Panelboard Options

- Copper and silver-plated copper
- Copper lugs
- Density-rated bus
- Ground bars
- Customer-owned meters
- Service entrance equipment construction
- Surge protective devices
- Seismically qualified panelboards

## General Construction Features

Eaton's assembled panelboards are designed for sequence phase connection of branch circuit devices. This allows complete flexibility of circuit arrangement (single-, two- or three-poles) to allow balance of the electrical load on each phase.
Sturdy, rigid chassis assembly ensures accurate alignment of interior with panel front; prevents flexing and minimizes possibility of loosening or damage to current carrying parts during and after installation.

Four point in-and-out adjustment of panel interior is provided to meet critical depth dimensions on flush installations. This compensates for possible misalignment of box at installation.
Main lugs are mechanical solderless type and approved for copper and aluminum conductors.

## Enclosures

Boxes are code-gauge galvanized steel except for column type panelboards, which include a painted box finished in ANSI-61 light gray to match the trim. Standard panelboard cabinets are designed for indoor use. Alternate types are available for outdoor and special purpose applications.

All enclosures are furnished in accordance with UL standards and include wiring gutters with proper wire bending space. Special cabinets can be provided at an additional charge.
The box dimensions shown are inside dimensions. For outside dimensions, add 0.25 -inch ( 6.4 mm ).

Standard panelboard boxes are supplied without knockouts (blank endwalls).

## EZ ${ }^{\text {TM }}$ Trim

The EZ Box and EZTrim are provided standard for Pow-R-Line 1X and Pow-RLine 2 X lighting panelboards, as well as Pow-R-Line 3X mid-range panelboards.

EZTrim Provides Standard Door-in-Door Construction With No Exposed Hardware or Sharp Ridges. No Tools are Required for Installation.

The trims for lighting and appliance branch circuit panelboards and small power distribution panelboards include a door with rounded corners and concealed hinges. A flush-type latch and lock assembly is included. All locks are keyed alike. These trims are available in both surface and flush mounted designs.

Fronts for power distribution panelboards use a unique breaker front cover design in which each device has a dedicated bolt-on steel cover. The individual covers form a single deadfront for the panelboard that is used in conjunction with two wiring gutter covers to complete the trim. A door is not finished as part of the standard offering on these panelboards but can be provided, for an additional charge, using a deeper than standard box.

## Combination AFCI Circuit Breakers

Eaton's 125 Vac AFCI single- and two-pole, 15 A and 20 A bolt-on breakers in panelboards meet Article 210.12 of the NEC ${ }^{\circledR}$. See the NEC for definitions and details.

## Pow-R-Line 1X, 2X and 3X

- Robust design using Eaton circuit breakers
■ Increased ratings (with Series Rated main circuit breakers) provide higher short-circuit ratings
■ Pow-R-Line 3X can accommodate branch breakers dual-mounted through 150 A and single-mounted through 225 A
- Lock and Door opening mechanism includes a positive slide catch and right- or left-hand installation
- Surface or flush trims
- UL tested and listed. Meets NEC and NEMA ${ }^{\circledR}$ standards

## Application Considerations and Definitions

## Standards

All Eaton's panelboards are designed to meet the following applicable industry standards, except where noted:

1. Underwriters Laboratories
a. Panelboards: UL 67
b. Cabinets, boxes and trims: UL 50

Note: Only panelboards containing UL listed devices can be UL labeled.
2. National Electrical Code
3. NEMA Standards: PB 1
4. Federal Specification W-P-115c

Circuit breaker-Type I Class 1
Fusible switch-Type II Class 1

## Panelboard Selection Factors

In selecting a panelboard, the following factors must be considered:
a. Service (voltage and frequency).
b. Interrupting capacity (fully or series rated).
c. Ampere rating of main.
d. Ampere ratings of branches.
e. Installation environment.

Codes and standards mandates.

## Panelboard Short-Circuit Rating

The short-circuit rating of Eaton's assembled panelboards are test verified by, and listed with, Underwriters Laboratories. Generally, these ratings are that of the lowest interrupting rated device in the panel.

Certain exceptions to this rule exist where branch devices have been UL tested in combination with specific main devices having a higher interrupting rating. Where these defined main breaker and branch breaker combinations are used, the series short-circuit rating of the assembled panelboard will be the same as the series tested rating of the approved rated main breaker. Available main and branch breaker combinations are tabulated on Page 22.1-32 through Page 22.1-42. All combinations shown are UL tested and listed.

These series ratings apply to panels having main devices, or main lug only panelboards fed remotely by the device listed in the series ratings chart as the main, for which UL listed tests were conducted.

## Selective Coordination

Please refer to Molded Case Circuit Breakers Design Guides for detailed information on overcurrent protective device combinations for use on selectively coordinated systems.

## Service Entrance Equipment

NEC Articles 230.F and G, and UL, require that:
a. Panels used as service entrance equipment must be located near the point where the supply conductors enter the building.
b. A panelboard having main lugs only shall have a maximum of six service disconnects to de-energize the entire panelboard from the supply conductors. Where more than six disconnects are required, a main service disconnect must be provided.
c. Must include connector for bonding and grounding neutral conductor.
d. A service-entrance-type UL label must be factory installed.
e. Ground fault protection of equipment shall be provided for solidly grounded wye electrical services of more than 150 V to ground, but not exceeding 600 V phase-to-phase for each service disconnecting means rated 1000 A or more.
Service entrance panels must be identified as such on the order entry to the manufacturing location.

## Column Type Panelboards

The same general code restrictions apply as for standard width panels except where trough extensions are used.

## Multi-Section Panelboards

When more than 42 overcurrent protective devices are required, two or more separate enclosures may be required. Separate fronts for each box are standard.

## Interconnecting Multi-Section Panelboards

When a panelboard, for connection to one feeder, must be furnished in more than one section (box), each section must be furnished with main bus and terminals of the same rating, unless a main overcurrent device is provided in each section.
Sub-feed or through-feed provisions must also be added to provide connection capability to the second section.

Note: Sub-feed or through-feed lugs cannot be used on any panelboard that is not protected by a single main overcurrent device either in the panelboard or immediately upstream, i.e., service entrance panelboards with main lugs only using the six disconnect rule.

## Sub-Feed Lugs (Figure 22.1-1)

Sub-feed lugs are one means of interconnecting multi-section panels. The sub-feed (second set of) lugs are mounted directly beside the main lugs. These are required in each section except the last panel in the lineup. The feeder cables are brought into the wiring gutter of the first section and connected to the main lugs. Another set of the same size cables are connected to the sub-feed lugs (Section 1) and are carried over to the main lugs of the adjacent panel. Cross connection cables are not furnished by Eaton. Sub-feed lugs are only available on main lug only panels.

Note: Sub-feed lugs may not be used on main lug only (six disconnect rule) service entrance panels.

Figure 22.1-1. Sub-Feed Lugs

## Through-Feed Lugs (Figure 22.1-2)

Through-feed lugs are another method to interconnect multi-section panelboards. The incoming feeder cables are connected to the main lugs or main breaker at the bottom of panel (Section 1). Another set of lugs (through-feed) are located at the opposite end of the main bus. The interconnecting cables are connected to the through-feed lugs in Section 1 and are carried over to the main lugs in Section 2. The connection arrangement could be reversed, i.e., main lugs at top; throughfeed lugs at bottom end of panel. Cross cables are not furnished by Eaton.
Note: Through-feed lugs may not be used on main lug only (six disconnect rule) service entrance panels.

Figure 22.1-2. Through-Feed Lugs

## Multiple Section PanelboardFlush Mounted

Shown below is the standard method for flush mounting multiple section lighting and distribution panelboards using standard flush trims.

Figure 22.1-3. Multiple Section PanelboardFlush Mounted-Dimensions in Inches (mm)

## Branch Circuit Loading for

 Lighting PanelsThe size of mains and branches should be selected based on the following:
a. Lighting circuits: NEC Article 210, 215, 220 and 240.
b. Distribution circuits, actual or continuous loads: NEC Article 384.16.
c. Motor circuits: NEC Article 430.
d. Diversity factor.
e. Provision for future loading.

## Overcurrent Protection

National Electrical Code Article 408 states a panelboard shall be protected by an overcurrent protective device having a rating not greater than that of the panelboard. The overcurrent protective device shall be located within or at any point on the supply side of the panelboard.

Exceptions to Article 408 selectively apply. Refer to the National Electrical Code Article 408 for specifics.

## Ground Fault Protection

Ground fault protection (GFP) may be added to most panelboards using Eaton's integral molded case circuit breaker GFP and included feeder devices on power panelboards and mains on all panelboards.

## Arcflash Reduction Maintenance System ${ }^{\text {TM }}$

Eaton's Arcflash Reduction Maintenance System is available on many molded case circuit breakers from 70 A to air power circuit breakers at 5000 A. Recognized by the 2011 National Electrical Code and the National Electrical Safety Code (NFPA 70E), the Arcflash Reduction Maintenance System allows breakers to trip quickly thus significantly reducing the available arc flash potential.

## Ambient Temperatures

The primary function of an overcurrent device is to protect the conductor and its insulation against overheating. In selecting the size of the devices and conductors, consideration should be given to the ambient temperature surrounding the conductors within and external to the panelboard. Cumulative heating within the panelboard may cause premature operation of the overcurrent protective devices.

UL test procedures are based, in part, on $80 \%$ loading of panelboard branch circuit devices. Article 408 of the NEC limits the loading of overcurrent devices in panelboards to $80 \%$ of rating where in normal operation the load will continue for three hours or more.

Further derating may be required, depending on such factors as ambient temperature, duty cycle, frequency or altitude.
Exception:There is one exception to this rule in both UL and NEC. It applies to assemblies and overcurrent devices that have been approved for continuous duty at $100 \%$ of its rating. This exception is covered in NEC 210.20 (a). Also see Molded Case Circuit Breakers Design Guides for additional information.

## Special Conditions

Standard panelboards, assembled with standard components, are adequate for most applications. However, special consideration should be given to those required for application under special conditions such as:
a. Excessive vibration or shock.
b. Frequencies above 60 cycles.
c. Altitudes above $6600 \mathrm{ft}(2012 \mathrm{~m})$.
d. Damp environment (possible fungus growth).
e. Compliance with federal, state and municipal electrical codes and standards.

## Seismic Qualification

Refer to Power Distribution Systems Design Guides for information on seismic qualification for this and other Eaton products.

## Harmonic Currents

Standard panelboard neutrals are rated for $100 \%$ of the panelboard current. However, because harmonic currents can cause overheated neutrals, an option is provided for neutrals to be rated at 200\% (1200 A maximum neutral for 600 A main bus) of the panelboard phase current. Panelboards with the $200 \%$ rated neutral are UL listed as suitable for use with nonlinear loads.
Prior to specifying the $200 \%$ rated neutral, Eaton recommends a harmonic survey be conducted of the distribution system, be it new or existing.

## Surge Protective Devices (SPD)

The quality of power feeding sensitive electronic loads is critical to the reliable operation of any facility. In modern offices, hospitals and manufacturing facilities, the most frequent causes of microprocessor-based equipment downtime and damage are voltage transients and electrical noise.
Electrical loads and microprocessorbased equipment are highly susceptible to both high and low energy transients. High energy transients include lightning induced surges and power company switching. These high energy transients can destroy components instantly.

More frequently the electrical system experiences low energy transients and high frequency noise.

The effects of continual low energy transients and high frequency noise can cause erratic equipment performance or sudden failure of electronic circuit board components.

Eaton can provide protective and diagnostic systems integral to panelboards. The SPD is integrated into the panelboards using a "zero lead length" direct bus bar connection. Integral disconnect is used on all Pow-R-Line 4 panels.

## Eaton SPDs May be Integrated

 into Most PanelboardsThe SPD protects sensitive electronic equipment from the damaging effects of high and low energy transients.

For complete product description and available ratings, refer to Surge Protection (SPD) \& Power Conditioning Products Design Guides.

## Compact Panelboard Meter

Most Eaton panelboards can integrate a compact meter for reading the panelboard power and energy usage. Eaton's Power Xpert Meter 350 has ANSI $12.200 .5 \%$ accuracy, a bright backlit LCD display, real energy pulse output, phase loss alarm and optional RS-485 communication capability.

## Pow-R-Line 1X

Pow-R-Line 1X

## General Description

## Panelboard Ratings

## Voltage

- 240 Vac maximum

## Main Lugs

■ 100-600 A

## Main Breakers

■ 100-600 A

## Branch Breakers

- 15-100 A
(Bolt-on or plug-on chassis)
Short-Circuit Current Ratings (Symmetrical)
- $240 \mathrm{Vac}: 10 \mathrm{kA}$ and 22 kA fully rated
- $240 \mathrm{Vac}: 22-200 \mathrm{kA}$ series rated

## Service

■ Three-phase, four-wire 208Y/120V and 240/120 V delta
■ Single-phase, three-wire 120/240 V
■ Single-phase, two-wire 120 V
■ Three-phase, three-wire 208 V and 240 V

Suitable for service entrance applications when specified.

## Mains

For available mains, refer to Table 22.1-1.
Main breakers, 100 A,Types BAB and QBH are horizontally mounted, same as branch breakers. All other main breakers are vertically mounted.

## Branch Circuits

For available branch devices, refer to Table 22.1-2.

## Main Lugs Only

The short-circuit rating of the MLO assembled panelboard will be fully rated based upon the lowest rated branch device or may be series rated with an approved upstream device.

Main lugs only ampere ratings: $100,225,400$ and 600.

## Main Circuit Breakers

The short-circuit rating shown is that of the main breaker only. The short-circuit rating of the assembled panelboard is the rating of the lowest fully rated main or branch device or the rating of an approved series rated combination.

## Series Rated Combinations

Refer to series rating tables beginning on Page 22.1-34 for the approved series rated combinations available for the branch circuit breakers listed in Table 22.1-2.

## Table 22.1-1. Main Circuit Breakers

| Breaker <br> Frame <br> Amperes | Breaker <br> Type | Interrupting Rating <br> (kA Symmetrical) <br> at 240 Vac |

(1) HID (High Intensity Discharge) rated breaker.
(2) Switching neutral breaker. Single-pole device requires two-pole space, two-pole device requires three-pole space.
(3) Solenoid operated breaker.
(4) 50 A is two-pole only.
(5) Arc fault breaker.

## Pow-R-Line 2X

Pow-R-Line 2X

## General Description

## Panelboard Ratings

Voltage

- 240 Vac maximum

■ 480Y/277 Vac maximum
Note: PRL2X panelboards are suitable for use on three-phase, three-wire applications when derived from a three-phase, four-wire $480 \mathrm{Y} / 277 \mathrm{Vac}$ service where the neutral is not brought to the panelboard. For three-phase, three-wire 480 Vac delta services, use a PRL3X panelboard.

■ 250 Vdc maximum

## Main Lugs

- 100-600 A

## Main Breakers

■ 100-600 A

## Branch Breakers

■ 15-100 A (bolt-on)

## Short-Circuit Current Ratings (Symmetrical)

■ $240 \mathrm{Vac}: 65 \mathrm{kA}$ fully rated

- 240 Vac: $100-200 \mathrm{kA}$ series rated
- $480 \mathrm{Y} / 277 \mathrm{Vac}: 14 \mathrm{kA}$ fully rated

■ 480Y/277 Vac: 22-150 kA series rated
■ $250 \mathrm{Vdc}: 10 \mathrm{kA}$ and 14 kA fully rated

## Service

■ Three-phase, four-wire $208 \mathrm{Y} / 120 \mathrm{~V}$ and 240/120 V delta and 480Y/277V
■ Single-phase, three-wire $120 / 240 \mathrm{~V}$
■ Single-phase, two-wire 120 V
■ Three-phase, three-wire 208 and 240 V

- Two-wire 125 Vdc
- Two-wire 250 Vdc

Suitable for service entrance applications when specified.

## Mains

For available mains, refer to Table 22.1-3.
The GHB main breaker is horizontally mounted, same as branch breakers. All other main breakers are vertically mounted.

## Branch Circuits

For available branch devices, refer to Table 22.1-4.

## Main Lugs Only

The short-circuit rating of the MLO assembled panelboard will be fully rated based upon the lowest rated branch device or may be series rated with an approved upstream device.

Main lugs only ampere ratings:
100,225 and 400.

## Main Circuit Breakers

The short-circuit rating shown is that of the main breaker only. The short-circuit rating of the assembled panelboard is the rating of the lowest fully rated main or branch device or the rating of an approved series rated combination.

## Series Rated Combinations

Refer to series rating tables beginning on Page 22.1-34 for the approved series rated combinations available for the branch circuit breakers listed in Table 22.1-4.

Table 22.1-3. Main Circuit Breakers

| Breaker Frame <br> (Amperes) | Breaker <br> Type | Interrupting Rating (kA Symmetrical) |  |  |

## Pow-R-Line 3X

Pow-R-Line 3X

## General Description

## Panelboard Ratings

## Voltage

- 240 Vac maximum
- 480 Vac maximum
- 600 Vac maximum
- 250 Vdc maximum

## Main Lugs

- 100-800 A

## Main Breakers

■ 100-600 A

## Branches

- $240 \mathrm{Vac} 15-225 \mathrm{~A}$
- $480 \mathrm{Vac} 15-225 \mathrm{~A}$
- 600 Vac $15-225 \mathrm{~A}$ (bolt-on)

Interrupting Capacity (Symmetrical)
■ 240 Vac: $10-200$ kA fully rated
■ 240 Vac: 22-200 kA series rated
■ 480 Vac: 14-100 kA fully rated
■ 480 Vac: 22-150 kA series rated
■ 250 Vdc : $10-22 \mathrm{kA}$ fully rated

## Service

■ Three-phase, four-wire $208 \mathrm{Y} / 120 \mathrm{~V}$, 240/120 V delta and 480Y/277V
■ Single-phase, three-wire 120/240 V
■ Single-phase, two-wire 120 V
■ Three-phase, three-wire 240, 480 and 600 V
■ Two-wire 125 Vdc

- Two-wire 250 Vdc

Suitable for service entrance applications when specified.

## Mains

For available mains, refer to Table 22.1-5.
Main breakers, 100, 150 and 225 A, Types PDG2xF, PDG2xG, PDG3xG, PDG2xM, HFDE and PDG2xP may be horizontally mounted, same as branch breakers. All other main breakers are vertically mounted.

## Branch Circuits

For available branch devices, refer to Table 22.1-6.

## Main Lugs Only

The short-circuit rating of the MLO assembled panelboard will be fully rated based upon the lowest rated branch device or may be series rated with an approved upstream device.
Main lugs only ampere ratings: 100, 250, 400, 600 and 800.

## Main Circuit Breakers

The short-circuit rating shown is that of the main breaker only. The short-circuit rating of the assembled panelboard is the rating of the lowest fully rated main or branch device, or the rating of an approved series rated combination.

Table 22.1-5. Main Circuit Breakers

| Breaker Frame (Amperes) | Breaker Type | Interrupting Rating (kA Symmetrical) |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | $\mathbf{2 4 0 V a c}$ | 480 Vac | 600 Vac | 250 Vdc |

(1) 100,000 AIC based on NEMA test procedure.
(2) $100 \%$ rated breaker. Requires copper bus. Not available inType 12, 4 or 4X enclosure.

## Series Rated Combinations

Refer to series rating tables beginning on Page 22.1-34 for the approved series rated combinations available for the branch circuit breakers listed in Table 22.1-6.

Table 22.1-6. Branch Circuit Breakers

| Breaker Type | Ampere Rating | Number of Poles | Interrupting Rating (kA Symmetrical) Volts |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

(1) HID (High Intensity Discharge) rated breaker.
(2) Switching neutral breaker. Single-pole device requires two-pole space, two-pole device requires three-pole space.
(3) Solenoid operated breaker.
(4) 50 A is two-pole only.
(5) Arc fault breaker
(6) For use on $480 \mathrm{Y} / 277 \mathrm{Vac}$ systems only.
(7) Single-pole breaker rated 277 Vac .

## Circuit Breaker Technical Data

Table 22.1-7. Electrical Characteristics of Circuit Breakers

(1) DC ratings apply to substantially non-inductive circuits.
(2) DC rated single-pole, 15-70 A only.
(3) Rating $480 \mathrm{Y} / 277 \mathrm{Vac}$ maximum.
(4) Available with integral ground fault protection.
(5) 100\% rated breaker.
(6) DC rating not available with PXR trip units.

Table 22.1-7. Electrical Characteristics of Circuit Breakers (Continued)

(1) DC ratings apply to substantially non-inductive circuits.
(2) Available with integral ground fault protection.
(3) 100k based on NEMA test procedure.
(4) DC rating not available with PXR trip units.
(5) Non-interrupting trip type.

## Terminal Wire Ranges, Pressure-Type AI/Cu Terminals Except as Noted

Where copper-aluminum terminals are supplied on designated panelboard types, best results are obtained if a suitable joint compound is applied when aluminum conductors are used.
Table 22.1-8. Standard Main Lug Terminals

| Panel Type | Wire Size Ranges for Ampere Capacity |  |  |  |  |  |  |

## Power Xpert Release Trip Unit for Molded Case Circuit Breakers

## Description

Eaton's Power Xpert Release (PXR) trip units are programmable communicating microprocessor-based low-voltage electronic trip unit systems for Eaton molded case circuit breakers. PXR trip units are available in four models: PXR 10, PXR 20, PXR 20D and PXR 25.

## Standards and Certifications

The PXR trip units are listed by Underwriters Laboratories (UL) and Canadian Standards Association (CSA) for use in Frame PD-2, PD-3, PD-4, PD-5 and PD-6 molded case circuit breakers. All PXR units have also passed the IEC 60947-2 test program that includes EMC testing. All trip units meet the low-voltage and EMC directives and carry the CE mark.

## Features

The PXR electronic trip units provide an enhanced and easy-to-use interface that enables end users and maintenance engineers to more easily change set points, test and configure circuit breakers, and review energy and power information. Also, the Power Xpert Protection Manager software provides the capability of secondary injection tests and reports on-demand without the need of expensive test kits.

Advanced features include:
■ Industry-first breaker health algorithms provide real-time monitoring and communication of breaker condition

- Cause of trip LED indication and trip event data storage
■ Zone selective interlocking (ZSI) verification and testing indication
- Adjustable Arcflash Reduction Maintenance System ${ }^{\text {TM }}$ (ARMS) settings
- LCD display with programmable settings

Arcflash Reduction Maintenance System (ARMS)

| Power and energy metering accurate to 1\% |  |  |  | Standard |

## Metering Devices

Power Xpert Meter 350

## Power Xpert Meter 350

The Power Xpert Meter 350 (PXM350) is a revenue grade energy meter that delivers a cost-effective solution for energy and submetering applications. This DIN rail mounted, three-phase energy meter provides high accuracy in a small form factor. The user-friendly LCD display is ideal for building energy management, energy monitoring and metering systems.

Meter features include:

- Data collection and management for energy and multi-parameters measurement
- Demand measurement and forecasting of current, active power, reactive power and apparent power
■ System event logging with configurable parameter alarms
■ LCD display with backlight support
■ Electronic and physical sealing to prevent tampering

Power Xpert Meters 2000

## The Power Xpert 2250 Meter

This meter provides all the core functions for monitoring power consumption and power quality, ethernet connectivity and onboard gateway card limits. This unit uses D/A technology to sample circuits at 400 samples per cycle for extremely accurate measurement of power factor and energy consumption. In addition, the meter has 256 MB for logging meter data.

## The Power Xpert 2260 Meter

This meter adds the ability to monitor total harmonic distortion and the ability to set onboard meter limits. The meter also will illuminate LEDs on the faceplate, indicating that a limit has been exceeded and provides 512 MB for data logging.

## The Power Xpert 2270 Meter

This meter adds the ability to monitor individual harmonics and visualize waveforms on your desktop using the embedded web server and raises the storage to 768 MB for data logging.

Meter series benefits include:
■ Fully understand your facility's power quality

- Detailed event information; pinpoint the root causes of problems-or prevent them from occurring
- Measure, trend and analyze power via information through onboard web and comma separated values (CSV) exporting capabilities
■ Up to 768 MB of storage; typically 15 years of storage capability depending on the meter model and frequency of events
- Local or remote configuration

IQ 100/200

## IO 130/140/150

Providing the first line of defense against costly power problems, Eaton's IQ 100 electronic power meters can perform the work of an entire wall of legacy metering equipment using today's technology.

- 24-bit AD converters that sample at more than 400 samples per cycle
- Meet ANSI C12.20 standards for accuracy of 0.5 percent
- Confidently used for primary revenue metering and submetering applications
- Direct-reading metered values such as watts, watt demand, watthours, voltage amperes (VA), VA-hours, vars, varhours and power factor
- Also available in Eaton's enclosed meter product

## IO 250/260

The IQ 250 and IQ 260 electronic meters provide capabilities you wouldn't normally expect in an affordable, ultracompact meter-such as fast sampling rate and accurate metering for a full range of power attributes. Built-in slots allow for future upgrades.
■ Comprehensive metering

- High-end accuracy
- Self-test capability to validate accuracy
- Large, easy-to-read display
- Local or remote configuration
- Industry-standard communication protocols
■ Mix-and-match input/output options
- Integration with Eaton's Power Xpert Architecture
- Field-upgradeable

For information on other available power meters, visit www.eaton.com/meters.

## Monitoring Equipment and Surge Protective Devices

Power Xpert Branch Circuit Monitor

## Power Xpert Branch Circuit Monitor

Eaton's Power Xpert Branch Circuit Monitor (PXBCM) provides remote access to live energy readings and facilitates data integration for data center intensive industries, facilities working to optimize server capacity and companies with a critical need to maintain uptime. By combining monitoring capabilities down to the plug level with overload alerts, which indicate when circuits are close to exceeding thresholds, the PXBCM helps minimize or prevent downtime.

For more information, visit www.eaton.com/meters.

Power Xpert Gateway

## Power Xpert Gateway

Eaton's Power Xpert Gateway (PXG) bridges the IT and facilities management worlds by bringing disparate panelboards, switchboards and other power equipment onto the network. The PXG takes the complexity out of connecting power equipment to the network. The web-enabled PXG is an out-of-the-box device that can support up to 96 devices, translate most industrial communication protocols, and offer user-selectable events and real-time trending. It also features e-mail notification of events, waveform capture and data/event logging-all with no special software. Adding basic meters or the utility's meter, the PXG assists in tracking energy usage. The PXG recognizes the interdependence of IT systems and power systems, and delivers what organizations need to bring these worlds together for seamless, end-to-end system reliability.
The PXG consolidates data available breakers, meters, motor controllers and protective relays, and presents the information in a variety of ways (a web browser being the most widely used method). The PXG is a stand-alone solution. As needs change and grow, the PXG can be integrated through Power Xpert Software into a broader solution that encompasses other intelligent hardware and can integrate with thirdparty network management systems (NMS) or building management systems (BMS) for system-wide monitoring and reporting of power and IT.

For detailed information, please visit www.eaton.com/meters.

Integrated Surge Protective Devices

## Integrated Surge Protective Devices

Eaton integrates our industry-leading surge protective devices (SPD) into switchboards. Lead length is kept to a minimum to maximize SPD performance. SPD units are available with ratings up through 400 k , and are UL listed and labeled to UL 1449 3rd Edition.

All switchboards with integrated SPD units are connected to a lineside overcurrent protective device for disconnecting means. When applied on the lineside of a service entrance main, the disconnecting means does not count as a service disconnect per National Electrical Code Article 230.71[A].
For complete SPD product description, application and ratings, visit www.eaton.com/spd.

## PRL1X Layout Guide

## Technical Data and Specifications

## Bussing

100-400 A:Tin-plated aluminum is standard, copper is available as an option.

600 A: Only copper density is available for these applications.

## Boxes

Boxes are made from code-gauge galvanized steel.

Blank ends are supplied as standard, knockouts are available upon request.

## EZTrim

Trims are made from code-gauge steel and painted ANSI 61 gray.

All panelboards have door-in-door as standard with multi-point catch and lock, and concealed mounting hardware.

Modifications

## Shunt Trips

Shunt trips are available on breakers. BAB, HOP, QBHW and OPHW require one additional pole space for shunt trip, i.e., single-pole is two-pole size, two-pole is three-pole size and three-pole is four-pole size.

## Ground Bar

Standard bolted in box. Aluminum is standard, copper is available as an option.

## Enclosures

Types 1, 12, 3R, 4 and 4X.

## Surge Protective Device (SPD)

Integrated onto panelboard chassis.
For complete product description and available ratings, refer to Surge Protection (SPD) \& Power Conditioning Products Design Guides.

## Box Sizing and Selection

Box size for allType 1 panelboards are available from Table 22.1-15.

## Instructions

1. Select the rating and type of mains required.
2. Count total number of branch circuit poles (including spaces) required in the panelboard. Do not count main breaker poles. Convert two- or three-pole branch breakers to single-poles, i.e., three-pole breaker, count as three poles.

Note: For horizontal mounted mains (BABType), use main lug table, include space in branch section for mains.
3. Using correct table, type of mains and ampere rating per Step 1, find total number of poles.

Note: Where total number of poles (Step 2) fall between number in table, use the next higher number.
4. Read box size across columns to the right.

## Top and Bottom Gutters (Minimum)

5.50 inches ( 139.7 mm ).

## Side Gutters

20.00-inch ( 508.0 mm ) wide box: 6.50 inches ( 165.1 mm ).

Table 22.1-15. Type 1 Panelboards-Dimensions in Inches (mm)

(1) Smaller panelboard box sizes are available if required. Contact Eaton for application information.
(2) Add 8.00 inches $(203.2 \mathrm{~mm})$ for SPD.
(3) 28.00 inches ( 711.2 mm ) optional width is available for panelboards with high circuit counts.
(4) JD, JDC is same space requirement as 400 A PDD3xGy, PDG3xM*, PDG3xP*.

(1) Smaller panelboard box sizes are available if required. Contact Eaton for application information.
(2) Add 8.00 inches ( 203.2 mm ) for SPD.
(3) 28.00 inches ( 711.2 mm ) optional width is available for panelboards with high circuit counts.

## PRL2X Layout Guide

Pow-R-Line 2X

## Technical Data

## Bussing

100-400 A:Tin-plated aluminum is standard, copper is available as an option.

600 A : Only copper density is available for these applications.

## Boxes

Boxes are made from code-gauge galvanized steel.

Blank ends are supplied as standard, knockouts are available upon request.

## EZTrim

Trims are made from code-gauge steel and painted ANSI 61 gray.

All panelboards have door-in-door as standard with multi-point catch and lock, and concealed mounting hardware.

Modifications
Table 22.1-16. Sub-Feed Lugs (Main Lugs Only)

| Amperes | Panel Height <br> Addition |
| :--- | :--- |
| 100 | 0 Inches (0 mm) <br> 025 |

| 400 | PDG3xP* | 200 | 100 |

## Shunt Trips

Shunt trips are available on breakers. GHB breakers with shunt trips require three-pole frame.

## Ground Bar

Standard bolted in box. Aluminum is standard. Copper is available as an option.

## Enclosures

Types 1, 12, 3R, 4/4X.

## Surge Protective Device (SPD)

Integrated onto panelboard chassis. For complete product description and available ratings, refer to Surge Protection (SPD) \& Power Conditioning Products Design Guide.

## Box Sizing and Selection

Box size for alltype 1 panelboards are available from Table 22.1-19.

## Instructions

1. Using description on the required panelboard, select the rating and type of mains required.
2. Count total number of branch circuit poles (including spaces) required in the panelboard. Do not count main breaker poles. Convert two- or three-pole branch breakers to single-poles. i.e., three-pole breaker, count as three poles.
Note: For horizontal mounted mains (GHBType), use main lug table, include space in branch section for mains.
3. Using correct table, type of mains and ampere rating per Step 1 , find total number of poles.

Note: Where total number of poles (Step 2) fall between number in table, use the next higher number.
4. Read box size across columns to the right.

## Top and Bottom Gutters (minimum)

5.50 inches ( 139.7 mm ).

## Side Gutters

20.00 -inch ( 508.0 mm ) wide box: 5.50 inches ( 139.7 mm ).

Table 22.1-19. Type 1 Panelboards-Dimensions in Inches (mm)

| Panelboard Types | Types and Mounting Position (H) = Horizontal / (V) = Vertical |  |  | Maximum Number of Branch Circuits Including Provisions | Box Dimensions in Inches (mm) (1)2 |  |  | Catalog Number |  |  |  |

(1) Smaller panelboard box sizes are available if required. Contact Eaton for application information.
(2) Add 8.00 inches $(203.2 \mathrm{~mm})$ for SPD and metering.
(3) 28.00 inches ( 711.2 mm ) optional width is available for panelboards with high circuit counts.
(4) JD, JDC is same space requirement as 400 A PDD $3 x G y$, PDG3xM*, PDG3xP*.

(1) Smaller panelboard box sizes are available if required. Contact Eaton for application information.
(2) Add 8.00 inches ( 203.2 mm ) for SPD and metering.
(3) 28.00 inches ( 711.2 m ) optional width is available for panelboards with high circuit counts.
(4) JD, JDC is same space requirement as 400 A PDD $3 x G y$, PDG $3 \times \mathrm{M}^{*}$, PDG3xP*.

(1) Smaller panelboard box sizes are available if required. Contact Eaton for application information.
(2) Add 8.00 inches ( 203.2 mm ) for SPD and metering.
(3) 28.00 inches ( 711.2 mm ) optional width is available for panelboards with high circuit counts.

## PRL3X Layout Guide

Pow-R-Line 3X

## Technical Data and Specifications

## Bussing

100-400 A: Tin-plated aluminum is standard, copper is available as an option. Density rated bus is also available as an option.
600 A: Only copper density is available for these applications. Density rated bus is also available as an option.

800 A (main lug only): Only copper density is available for these applications.

## Boxes

Boxes are made from code-gauge galvanized steel.

Blank ends are supplied as standard, knockouts are available upon request.

## EZTrim

Trims are made from code-gauge steel and painted ANSI 61 gray.

All panelboards have door-in-door as standard with multi-point catch and lock, and concealed mounting hardware.

Modifications
Table 22.1-20. Sub-Feed Lugs (Main Lugs Only)

| Ampere Rating | Added Panel Height |
| :--- | :--- |
| 100 | $0 X$ |
| 250 | 1X |

Table 22.1-21. Through-Feed Lugs

| Ampere Rating | Added Panel Height |
| :--- | :--- |
| 100 | 2 X |
| 250 | 5 X |
| 400 | 8 X |
| 600 |  |

Note: Sub-feed breakers and through-feed lugs cannot be supplied in the same panel.

Table 22.1-22. Sub-Feed Breakers (One Per Panel)

| Ampere <br> Rating Breaker <br> Type Interrupting <br> Rating <br> (kA Symmetrical) Added <br> Panel <br> Height <br>   $\mathbf{2 4 0 V}$ 480V |
| :--- |
| 400 PDG3xG 65 35 <br> 400 PDG3xM $^{*}$ 100 65 <br> 400 PDG3xP* 200 100 |

Note: Sub-feed breakers and through-feed lugs cannot be supplied in the same panel.

Note: Twin mounted J-Frame sub-feed breakers are available. Requires 20X panel height addition.

## Shunt Trips

Shunt trips are available on breakers. BAB and QBHW require one additional pole space for shunt trip, i.e., single-pole is two-pole size, two-pole is three-pole size and three-pole is four-pole size. GHB breakers with shunt trip require threepole frame.

## Remote Control Switches

ASCO 920 can be bus connected and mounted in panel for main or sub-main (split-bus) applications.

## Time Clocks

Time clocks are mounted at the top or bottom of the panel, either in extended end gutters or in a separate enclosure under a separate door.

## Ground Bar

Standard bolted in box. Aluminum is standard. Copper is available as an option.

## Enclosures

Types 12, 3R, 4/4X.
Note: Type 12, 3R, 4/4X enclosures are not available for 800 A applications.

Top and Bottom Gutters (Minimum)
All mains: 5.50 inches ( 139.7 mm ).
Side Gutters (Minimum)
4.00 inches ( 101.6 mm ).

Table 22.1-23. Type 1 Box Sizes-Dimensions in Inches (mm)

| Maximum Panel Height X Units | Box Dimensions |  |  |
| :---: | :---: | :---: | :---: |
|  | Height | Width | Depth |
| 100-400 A |  |  |  |
| 14X | 36.00 (914.4) | 20.00 (508.0) | 5.75 (146.1) |
| 23X | 48.00 (1219.2) | 20.00 (508.0) | 5.75 (146.1) |
| 31X | 60.00 (1524.0) | 20.00 (508.0) | 5.75 (146.1) |
| 40X | 72.00 (1828.8) | 20.00 (508.0) | 5.75 (146.1) |
| 53X | 90.00 (2286.0) | 20.00 (508.0) | 5.75 (146.1) |
| 600-800 A |  |  |  |
| 23X | 48.00 (1219.2) | 28.00 (711.2) | 5.75 (146.1) |
| 31X | 60.00 (1524.0) | 28.00 (711.2) | 5.75 (146.1) |
| 40X | 72.00 (1828.8) | 28.00 (711.2) | 5.75 (146.1) |
| 53X | 90.00 (2286.0) | 28.00 (711.2) | 5.75 (146.1) |

## Panel Layout Instructions

1. Select:
a. Required mains (lugs or breaker), refer to Table 22.1-5 for main breaker information.
b. Neutral where required, refer to Table 22.1-7.
c. Branch circuits as required.
2. Layout panel as shown in Table 22.1-24, using appropriate " X " dimensions.
3. Using total $X$ units (panel height) find box height in inches from Table 22.1-23. (When total $X$ units come out to an uneven number, use next highest number, i.e., if total X comes out 25 X , use 31X.)

Surge Protective Device (SPD) Integrated onto panelboard chassis. For complete product description and available ratings, refer to Surge Protection (SPD) \& Power Conditioning Products Design Guides.

Table 22.1-24. Layout Example

(1) GHB, GHO and HGHB breakers cannot be mixed on same connector as BAB, QBHW.
(2) Sizing shown is for $100 \%$ rated neutral with mechanical lugs. For $200 \%$ rated neutral with mechanical lugs, add 3X. For special lug arrangements, contact Eaton.
(3) Maximum of six breakers per panel.
(4) Add 5 X for 200 kA maximum SPD.
(5) Horizontally mounted 15-225 A main breakers PDG2xF, PDG2xG, PDG2xM, PDG2xP, may be furnished as branch breaker construction. Branch breakers single-, two- or three-pole as required, may be located opposite these main breakers (150 A maximum).
(6) FB-P and LA-P top mounting only.
(7) LCL, LA-P main breaker requires 6.50 inch ( 165.1 mm ) deep box.

## Series Rated Combinations

UL permits panelboards to be labeled with a short-circuit rating of up to 200,000 A symmetrical where UL listed combinations of main and branch circuits are used.

These combinations consist of main breakers or fusible devices connected ahead of, and in series with approved conventional devices.

Two arrangements are acceptable and comply with UL standards for panelboards. The main circuit breaker may be installed in the panel as a main device (Figure 22.1-4), or it may be mounted remote (Figure 22.1-5) from the panel. In either case, the approved main and branch combinations must be followed. These arrangements are acceptable and are UL listed having been tested in accordance with UL standards.

From the tables on Page 22.1-34 through Page 22.1-42, specific combinations of main devices (upstream) and branch devices (downstream), series connected and electrically adjacent in the system, may be selected to qualify the assembled panelboard for the short-circuit ratings shown. Series ratings apply only to those Eaton breakers listed and published. Do not use "Classified" breakers.

Figure 22.1-4. Main Device

Figure 22.1-5. Mounted Remote

Industry standards and the NEC require protection of the entire electrical distribution system from damage due to short-circuit faults. Article 230.205 of the NEC states that service entrance equipment shall be suitable for the short-circuit current available at its supply terminals. The entire distribution system is required to meet this standard. Series rated systems have become an effective method of meeting these requirements.

There are three protection systems used to protect low voltage power distribution equipment.They are:

- Fully rated protection
- Fully rated, selectively coordinated protection
- Series rated protection

Fully Rated Protection-Where all overcurrent devices are rated for the full prospective short-circuit current at their line side terminals throughout the system.

## Selectively Coordinated Protection-

A fully rated system where the overcurrent device closest to the fault will open first, thus isolating the faulty circuit.

Series Rated Protection-A shortcircuit interrupting rating assigned to a combination of two or more over-current protective devices that are connected in series and in which the rating of the downstream device(s) in the combination is less than the series rating.

Series ratings are also known in the industry as integrated ratings, series combination ratings and series connected ratings.

## UL Issues

In a series rated system, all of the overcurrent devices in series in the protective scheme must have been tested and listed by Underwriters Laboratories for series combination use in the system.

All Eaton's series ratings are in full compliance with all applicable requirements of the latest editions of UL 489, 891 and 67.

The UL Recognized Component Directory (theYellow Book) contains breaker manufacturers' series connected listings. These are intended ONLY as a guideline for use by others who are responsible for their own testing, labeling and listing. Therefore, the UL Recognized Component Directory cannot be used to interpret series connected ratings in assembled equipment. The assembled equipment must also be UL tested for series ratings.

## Code Issues

The fault current contribution of motors connected between series rated breakers must be considered. Article 240.86 in the NEC states that for series ratings, the sum of the motor full-load currents cannot exceed $1 \%$ of the interrupting rating of the lower rated circuit breaker. The actual fault current contribution from induction motors is about four times their full-load current (impedance value of $25 \%$ ). For example, if the downstream branch circuit breakers used in a series rated combination have an interrupting rating of $14,000 \mathrm{~A}$ rms symmetrical for a 480 V system, the maximum allowable motor contribution to that panel from the branch circuit breakers is $140 \mathrm{~A}(1 \%)$. For typical induction motors, this is equivalent to a total horsepower at 480 V of approximately 115 horsepower.

Requirements of the NEC (NFPA-70) for series ratings may be met by equipment marked with ratings adequate for the available fault current at the point of application in the electrical system. Eaton panelboards and switchboards are marked consistent with NEC Article 240.83.

Additionally, Article 110.22 requires field marking on equipment where series ratings are used.This label is supplied standard with all Eaton panelboards and switchboards.

NEC Required Caution Label
Note: The NEC requires the installer to properly apply and complete this label. Label(s) must be placed on all equipment where series ratings are used.

## Fuse Application Considerations

Fuses can be used instead of circuit breakers in fully rated, selectively coordinated and series connected protection systems. See the tables on Page 22.1-42 through
Page 22.1-42 for fuse breaker data applied to series connected designs.

Don't apply fuses using the up-over-down method, which has been recommended by some fuse manufacturers for sizing a current-limiting fuse that protects a downstream molded case circuit breaker with a specified rms symmetrical interrupting rating. The method can lead to erroneous and unsafe conclusions, and should not be used.
Example: Assume a specific type of current-limiting fuse rated 2000 A. Then using the figure below:

1. Draw a vertical line from the prospective short-circuit current of 200 kA to intersect the typical peak let-through curve at "A."
2. Draw a horizontal line left from Point " A " to intersect the
"prospective peak" curve at " B ."
3. Drop a vertical line from " $B$ " to intersect the horizontal axis and read the recommended rating, 65 kA rms, concluding that a circuit breaker with a 65 kA interrupting capacity will be protected by a specified 2000 A current-limiting fuse.

This conclusion is wrong when the downstream service has a blow-open contact assembly, as does a molded case circuit breaker or similar device.

The reason:The up-over-down method ignores dynamic impedance (the inherent current-limiting of the downstream molded case circuit breaker). Such impedance is developed directly by the forces of the let-through current created when the contacts are blown open.
For proper application of current-limiting fuses, always refer to recommendations by the manufacturer of the circuit breaker, which are based on actual test data.

Figure 22.1-6. Old Up-Over-Down Chart

## Applying Series Ratings

The following is provided to use the series rating tables on the following pages.
Step 1. Determine the available system voltage and fault current.

Step 2. Select the appropriate table using the system voltage.

Step 3. Use the appropriate "Series Equipment Rating" column equal to, or greater than, the available fault current, to determine the allowable combinations of main (upstream) and branch (downstream) overcurrent devices. Main devices are shown in bold/ shaded areas. Respective branch breakers are shown directly below their associated main device. If a rating is not initially found in a column, first look to the columns to the right for higher "Series Equipment Ratings" within the same table. If still not found, use ratings from table of a higher system voltage (higher numbered tables).

## Example 1:

240 V, three-phase, three-wire, AC system with available fault current of $37,438 \mathrm{~A}$. Main (upstream) device is a three-pole, 150 A, PDG2xG breaker. The branch (downstream) breakers are two- and three-pole, 20,30 and $60 \mathrm{~A}, 240 \mathrm{~V}, \mathrm{BAB}$ breakers.

1. Go to the 240 V table (Table 22.1-26).
2. Look down under the 42 kA column. This rating is not shown.
3. Look to the columns to the right. This rating is shown under the 65 kA column, and therefore is valid.

## Example 2:

$480 \mathrm{Y} / 277 \mathrm{~V}$, three-phase, four-wire, AC system with available fault current of 62,097 A. Main (upstream) device is a three-pole, 250 A breaker. The branch (downstream) breakers are two- and three-pole, 60, 70 and 100 A FDB breakers.

1. Go to the $480 \mathrm{Y} / 277 \mathrm{~V}$ table (Table 22.1-29).
2. Look down under the 65 kA column. This rating is not shown.
3. Look to the columns to the right. This rating is still not shown.
4. Look at the table with the next higher system voltage ( 480 V , Table 22.1-30).
5. This rating is shown under the 65 kA column, and therefore is valid.

## Example 3

$208 \mathrm{Y} / 120 \mathrm{~V}$, three-phase, four-wire, AC system with available fault current of $56,438 \mathrm{~A}$. Main (upstream) device is a three-pole, 225 A, PDD2xG breaker. The branch (downstream) breakers are single-pole, 20 A BAB (120/240 V), and two- and three-pole, 70 A BAB ( 240 V ).

1. Go to the 240 V table (Table 22.1-26).
2. Look under the 65 kA column. This rating is shown under the 65 kA column, and therefore is valid for the two- and three-pole ( 240 V ) breakers.
3. Look at the $120 / 240 \mathrm{~V}$ table (Table 22.1-25) for the single-pole (120/240 V) rating.
4. Look under the 65 kA column. This rating is shown under the 65 kA column, and therefore is valid for the single-pole ( $120 / 240 \mathrm{~V}$ ) breakers.

## Other Applications of Series Ratings

Series ratings can also be applied under the following guidelines:
Any FULLY RATED breaker can be applied upstream, downstream, or in the middle of, any of the series ratings stated in the tables.

Any series rating stated in the tables may have additional branch breakers of the EXACT SAMETYPE further downstream in that rating.

COMBINING SERIES RATINGS is allowed under certain conditions. Main and branch series ratings may be combined if:

Breakers A, B and C are in series respectively from main to branch. Breakers $A$ and $B$ series rate together, breakers $A$ and $C$ series rate at the same interrupting rating level (or higher), it is allowable to use $A, B$ and $C$ together at the $A-B$ series rating.
It is improper to combine series ratings under the following condition:

Breakers $A, B$ and $C$ are in series respectively from main to branch. Breakers $A$ and $B$ series rate together, breakers $B$ and $C$ series rate at the same interrupting rating level (or higher), it is NOT allowable to use $A, B$ and $C$ together at the A-B or B-C series rating. However, combining multiple overcurrent devices as in this example, can be accomplished if all devices in the series combination have been tested together and listed in triple rating Table 22.1-38.
Main devices shown centered at top in shaded area, respective branch devices shown directly below.

| Pow-R-Line 4DX | Breaker | $\begin{aligned} & 240 \\ & 480 \end{aligned}$ | $-$ | $\begin{aligned} & \hline 1200 \\ & 1200 \end{aligned}$ | $\begin{array}{\|l\|} \hline 1200 \\ 1200 \end{array}$ | 20-600 Drawout <br> 15-1200 Fixed | $\begin{array}{\|c\|} \hline 100 \\ 65 \end{array}$ | - |
| Pow-R-Line 1XF | Fusible switch | 240 | - | 400 | 400 | 15-30 | 200 | 200 |
| Pow-R-Line 2XF | Fusible switch | 480Y/277 | - | 400 | 400 | 15-30 | 200 | 200 |
| Pow-R-Line 1X-LX | Breaker | 240 | - | 225 | 225 | 15-30 | 10-22 | 18-200 |
| Pow-R-Line 2X-LX | Breaker | 480Y/277 | 125/250 | 225 | 225 | 15-30 | 14 | 25-150 |
| Pow-R-Line 1RX | Breaker | 240 | - | 225 | 225 | 15-100 | 10-22 | 22-100 |
| Pow-R-Line 2RX | Breaker | 480Y/277 | - | 225 | 225 | 15-100 | 14 | 22-150 |
| Elevator control panelboard (1) | Fusible | 480 | - | 800 | 800 | 15-200 | 10-200 | 14-100 |

(1) Available with surge protective device (SPD) and metering.
(2) Amperage rating for DC voltage.

## Types PRL1X, 2X and 3X Modifications

Types PRL1X, 2X and 3X

Modifications Selection Guide
Table 22.1-41. Modifications-Alphabetical Index

| Modification | Available on Panelboard Types |  |  |
| :---: | :---: | :---: | :---: |
|  | PRL1X | PRL2X | PRL3X |
| Ambient compensating breakers | No | No | Yes |
| Branch circuit monitoring | Yes | Yes | Yes |
| Bus density | Yes | Yes | Yes |
| Cabinets-special:Types 2, 3R, 4, 4X, 12 | Yes | Yes | Yes |
| Complete assembly | Yes | Yes | Yes |
| Compression type lugs, mains only | Yes | Yes | Yes |
| Concealed trim clamps (LT trim) | Yes | Yes | Yes |
| Conduit covers | Yes | Yes | Yes |
| Copper lugs | Yes | Yes | Yes |
| Copper main bus | Yes | Yes | Yes |
| Directory frame-metal | Yes | Yes | Yes |
| Doors, special | Yes | Yes | Yes |
| Electronic trip units | Yes | Yes | Yes |
| Fungus-proof | Yes | Yes | Yes |
| Ground bar | Yes | Yes | Yes |
| Ground fault protection (zero sequence) | No | No | No |
| Handle lockoff device | Yes | Yes | Yes |
| Hinges, special (LT trim) | Yes | Yes | Yes |
| Increased dimensions | Yes | Yes | Yes |
| Increased panel bus rating | Yes | Yes | Yes |
| Interiors to fit existing boxes | Yes | Yes | Yes |
| Locks, special (LT trim) | Yes | Yes | Yes |
| Metering devices | Yes | Yes | Yes |
| Molded case switches | Yes | Yes | Yes |
| Nameplates engraved | Yes | Yes | Yes |
| Neutral rated 200\% | Yes | Yes | Yes |
| Painting and special coating | Yes | Yes | Yes |
| Permanent circuit numbers | Yes | Yes | Yes |
| Remote control switches (ASCO 920) | No | No | Yes |
| Service entrance | Yes | Yes | Yes |
| Shunt trips | Yes | Yes | Yes |
| Split bus or meter loop | No | No | Yes |
| Sub-feed breakers | Yes | Yes | Yes |
| Sub-feed lugs | Yes | Yes | Yes |
| Surge protective device (SPD) | Yes | Yes | Yes |
| Tamperproof screws (LT trim) | Yes | Yes | Yes |
| Terminals, copper only for breakers | Yes | Yes | Yes |
| Through-feed lugs | Yes | Yes | Yes |
| Time clock space only | Yes | Yes | Yes |
| Touchup paint | Yes | Yes | Yes |

## Eaton

1000 Eaton Boulevard
Cleveland, OH 44122
United States
Eaton.com

[^0]:    (2) For use on $480 \mathrm{Y} / 277 \mathrm{Vac}$ systems only.
    (3) Solenoid operated breaker.

[^1]:    (1) Smaller panelboard box sizes are available if required. Contact Eaton for application information.
    (2) Add 8.00 inches $(203.2 \mathrm{~mm})$ for SPD.
    (3) 28.00 inches ( 711.2 mm ) optional width is available for panelboards with high circuit counts.
    (4) JD, JDC is same space requirement as 400 A PDD3xGy, PDG3xM*, PDG3xP*.

[^2]:    (1) Smaller panelboard box sizes are available if required. Contact Eaton for application information.
    (2) Add 8.00 inches ( 203.2 mm ) for SPD.
    (3) 28.00 inch ( 711.2 mm ) optional width is available for panelboards with high circuit counts.

[^3]:    (1) Smaller panelboard box sizes are available if required. Contact Eaton for application information.

[^4]:    © Not valid with PDG3xG*.
    (8) Not valid with HFDE.

[^5]:    (1) Valid on two- and three-pole breakers only. Not valid for single-pole.
