iGX Series Engines

Honda takes intelligence to a whole new level.

Honda's innovative iGX Series engines are a new generation of intelligent computer-controlled general purpose engines. Honda iGX engines feature an integrated ECU (electronic control unit) with a self-tuning regulator (STR) governor system that allows the engine to communicate with the machine it is powering to achieve optimal performance. The ECU enables drive-by-wire remote control operation of the engine's regulating functions such as starting, throttle, ignition timing and diagnostics. Therefore, engine speed can be programmed and varied based on the equipment application's load and speed requirement.

With their multi-function design, iGX engines are the ultimate choice for complex commercial and residential power equipment applications.

* The power rating of the engines indicated in this document measures the net power output at 3600 rpm and net torque at 2500 rpm, as tested on a production engine. Mass production engines may vary from this value. Actual power output for the engine installed in the final machine will vary depending on numerous factors, including the operating speed of the engine in application, environmental conditions, maintenance and other variables.
