

SINGLE PACKAGE VERTICAL UNIT WALL CURBS FOR REPLACING OLDER UNITS WITH DIFFERENT WALL OPENINGS

The WWC Series wall curbs have been specially designed for use in telecommunication and other electronic equipment shelters and buildings needing larger or smaller capacity air conditioners and heat pumps. These can be adapted to the facilities easily and without modification to the original supply and return air openings built into the wall structure for the units initially installed. They can also be used for other applications unless excluded as noted below.

NOTE: If electric heaters are installed in the air conditioner or heat pump the curbs must only be used on structures made of non-combustible materials for the installation wall. There must be no combustible materials on the supply air side and marked clearances must be observed.

WWC Series wall curb uses:

WWC3 - used with units 70" or 74" tall to replace an existing unit. Wall framing may be necessary, and supply duct clearances need to be followed per Installation Instructions.

WWC5 - used with units 85" or 93" tall to replace an existing unit. Wall framing may be necessary, and supply duct clearances need to be followed per Installation Instructions.

WWC6 - used with units 95" tall to replace an existing unit. Wall framing may be necessary, and supply duct clearances need to be followed per Installation Instructions.

The building electrical wiring and circuit breaker must be reviewed to see if any changes will be required for the replacement units. Reference the equipment serial plates and Installation Instructions for this determination.
