

ECHOMASTER

CAM-MV6 – Not Your Average Back-Up Camera

Back-Up Cameras Significantly Reduce the Risk of Backover Crashes

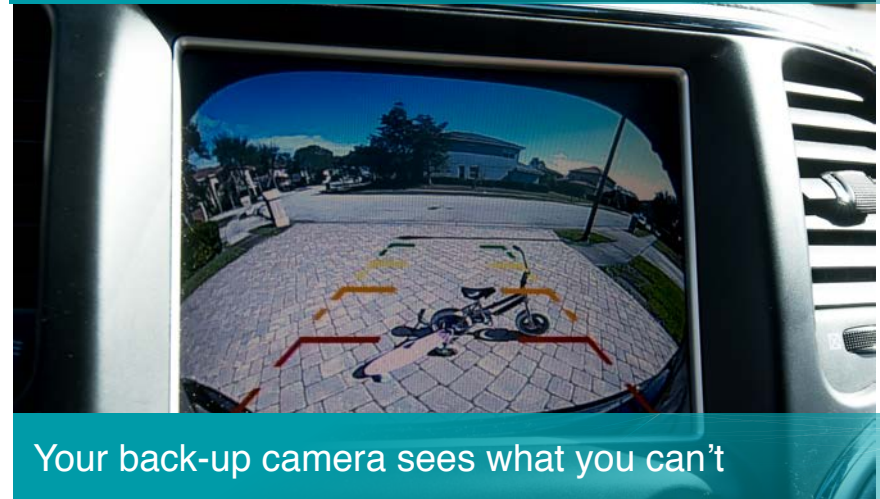

Each year **210 fatalities** and 15,000 injuries are caused by backover crashes¹.

Due to their size, children are at greater risk from being injured in a backover crash. As seen in the photos to the right, they can easily hide in the blind spot behind vehicles, not easily seen without the extra visibility a back-up camera offers.

Back-up cameras extend a driver's view and reduce the risk of a backover crash.

View from the driver's seat

Your back-up camera sees what you can't

But what if your back-up camera could do more?

CAM-MV6 Delivers All of the Benefits of a Back-Up Camera, and More.

CAM-MV6 by EchoMaster makes your back-up camera work even harder for you, extending the view and benefits of adding a safety camera to your vehicle.

A Standard Back-Up Camera

CAM-MV6's Extended View

CAM-MV6's super wide, 180° view offers more visibility to the driver.

The 180° Difference

View from the driver's seat

CAM-MV6 Sees Around the Object

The 180° viewing angle of CAM-MV6 allows drivers to see around obstacles.

- **Parking Lots:** When backing out of parking spaces, CAM-MV6 will see around the cars parked next you, so you can know if other cars or pedestrians are close, or even if they are down at the end of the parking aisle
- **Streets:** Backing out into busy streets can be difficult, especially if trees or signs are blocking your view, CAM-MV6 will see around those objects for you, simplifying this tricky situation

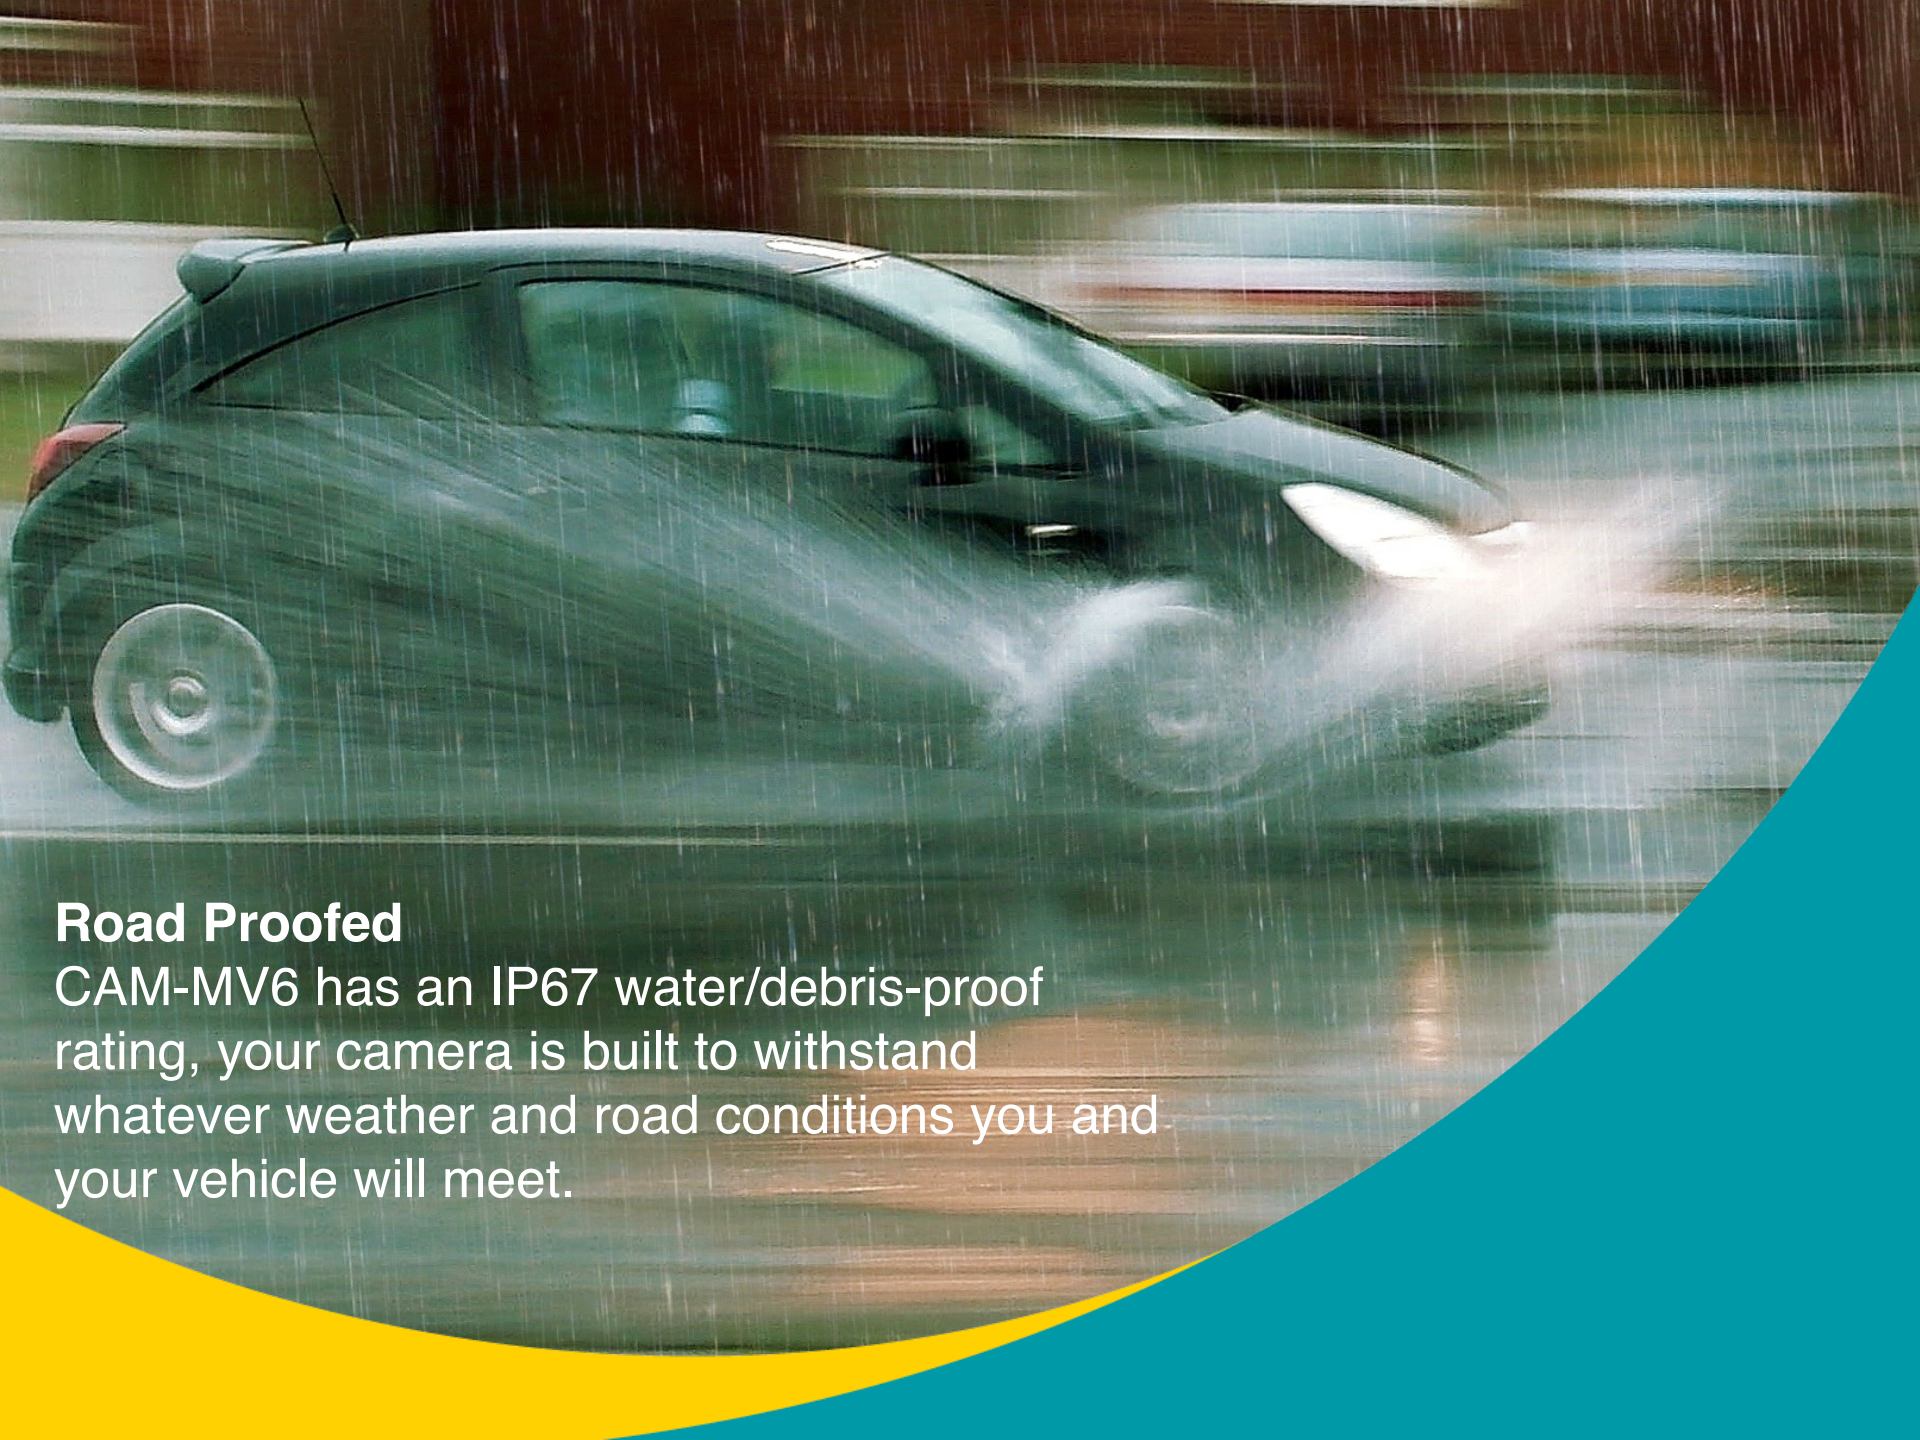

A view for every situation

CAM-MV6 offers additional views for drivers, a button mounted conveniently in reach of the driver, allows them to manually switch views when they are needed.

The lower view is great for drivers that tow, a click of a button gives them visibility into their hitch, simplifying reversing into their trailer or boat.

Road Proofed

CAM-MV6 has an IP67 water/debris-proof rating, your camera is built to withstand whatever weather and road conditions you and your vehicle will meet.

Clear, Crisp Image in Every Light

Auto-exposure: CAM-MV6 auto-senses the light and will adjust the exposure. Pulling out of the garage into a sunny day? No problem, your camera senses the light and will adjust the image so you don't notice the difference.

Low Light Ready: Night time driving has its own share of complications, with a 0.1 LUX rating, CAM-MV6 will make you safer, day or night.

Enhanced Front Vision

CAM-MV6 offers a selectable image, and can be installed as a front camera. As a front camera the same peek-a-view benefit of extended vision delivers an 180° view for drivers. Pulling out into traffic and seeing around objects reduces risk, no more inching out into the line of traffic in order to see if the coast is clear.

CAM-MV6

Available now world wide for EchoMaster Authorized dealers.
