CARLINK
Vehicle Paging Satellite Command System

❖ A great add-on to a Code-Alarm vehicle security or remote start system

❖ You can command your system via any touch-tone phone from anywhere in the world

- Arm/Disarm your system*
- Lock/Unlock your doors*
- Remote start your vehicle*
- Carjack-theft vehicle mode*
- Parked car finder

* The vehicle must be capable of performing these functions

❖ Toll-free telephone access number included (800-495-7677)

❖ No additional subscription, activation, or monthly use fees for the lifetime of the product

CARLINK
Vehicle Paging Satellite Command System

❖ The CL-100 is a simple plug-in module to any Code-Alarm Security System with a Telematics port

❖ For those customers that did not purchase a security system with a Telematics port, they will need the CAUGM interface module
  ➢ This allows the CL-100 to interface with any of our Code-Alarm security systems without a Telematics port or with OEM keyless entry systems
  ➢ The CAUGM has outputs for door locks, flashing lights, remote start, and trunk release

❖ For those customers that have power locks, but no keyless entry, they will need the CAUGM Plus the CCTRX
  ➢ The CCTRX contains (2) carbon fiber transmitters plus a receiver unit with antenna

Installation and Activation Procedure

❖ The control module is designed to be mounted under the dashboard, keeping in mind that the antenna is a PC board/mount antenna

❖ The unit should be mounted high in the dashboard as possible with only plastic above to allow the unit to properly receive the page signal from the satellite

❖ The unit should be mounted within 36" of the host alarm module to ensure that the 4-pin cable reaches from the CL-100

❖ The CL-100 should not be mounted near any antenna/radiator/blower motor that may interfere with the reception or mounted to metal braces, or any other control module which may adversely effect the signal

❖ Be sure to record the unit's serial number found on back of the module before installation

❖ After the host module has been installed and thoroughly tested, connect the four-pin harness from the CL-100 to the host module

Frequently Asked Questions

Q.   As the owner of the vehicle, can I change my PIN code at anytime after activation?

A.   Yes, we suggest that you do that when you get home and keep a record of it with the included wallet card

Q.   The installer has misplaced the service contract that contains the unique registration number, can they still activate the unit?

A.   No, if for some reason the form is misplaced, Satronics can send them another form. The installer must write the serial number from the installed device on the registration form and the information is entered into the system. It is at that time that the subscriber number is tied to a particular device

Q.   On occasion, I try to start my car or unlock my doors and the command did not happen, why?

A.   Just like pagers, sometimes the vehicle might be situated in a poor signal coverage area. It also might be due to the location of the module placed within the dashboard. Changing the placement of the module could help solve the problem
