This page is intentionally left blank

This page is intentionally left blank

This page is intentionally left blank

1.1 GENERAL DESCRIPTION

- **KRISTAL 90/90 TILTING**
- **KRISTAL 90/20 TILTING**

A compact and versatile Unit, tilting table remote controlled for fluoroscopy, Angio-seriographic and fluoroscopic examinations.

Due to its versatility and easy operation it is suitable for any type of routine or special examination without clinical limitations.

Thanks to its lightweight small overall dimensions and its electronic anti-collision system, it can be installed in the smallest diagnostic rooms

The wide longitudinal travel of the column allows a complete X-ray examination without need to reposition the patient.

All movements are silent, which contributes o give to the patient a great safety during the examinations.

The tilting movement facilitates to stop in any position in addition to automatic stop in horizontal, vertical and Trendelemburg positions.

The Spot film device allows automatic tomographies, universal tomographies from 0° to 40°, and additionally serio angiographies in any position. When the table is tilted it is also possible to perform oblique projections with 30° incidences.

The table tilting allows you to make examinations on external accessories only on one side (for KRISTAL 90°/20°) or on both sides (for KRISTAL 90°/90°).

All movements are controlled via a watchful microprocessor, which incorporates a self-diagnostics program. End of runs have double safety action for additional safety.

The control console has an ergonomic design with touch screen panel. This intuitive control panel allows a simple user interface to operational parameters and control commands supported by a large selection on display graphics.

Parameters such as focus film distance, tilting angles, incidence, tomo layer height with self-increase, execution time, cassette size with its programs, are also shown on the graphic display.

The main functions of the system are also selectable on the push button panel, which is located on the spot film device.

The auto-centring cassette system of S.F.D. can select all cassette sizes from 18x24 cm to 35x43 cm with longitudinal division of the format with mixed divisions.

Preset for digital system, spot film device and image intensifier from 9” to 16”.

- **General Technical Features**

Type:

- ❑ KRISTAL 90/90
- ❑ KRISTAL 90/20

Power supply:	3x230V~ (400V~) 7kVA
Power output of auxiliary mains socket-outlets	230V~ 1.4kVA 50Hz

- **Technical Data:**

Tilting table with progressive starting	+ 90°/-90°, +90°/-20°
Tilting speed	4 °/sec
Tabletop	73 x 240 cm
Absorption coefficient	≤ 0,8 mm Al.
Max patient weight	140Kg
Lateral movement	±11,5 cm (Max speed 3 cm/sec)
Plane-film distance	7,5 cm
Film – I.I. distance	7.5 cm
Movement column	1400 mms (Max speed 13 cm/sec)
X-ray tube assembly rotation	+ 90° manually
Focus-film distance	from 107 to 153 cm (Max speed 3 cm/sec)
Tube angulation	± 30°
Compression	Motorized
Angiography	Step by step
Prepared to receive Image Intensifier	9", 12", 14", 16"

- **Tomographic Function**

Linear tomography plain plain	
Tomographic angles	8°, 15°, 30°, 40°
Tomographic speeds	4 speeds
Layer height adjustment	1 → 300mm
Fixed SID	110cm

- **SFD**

S.F.D. electronic automatic
Film divisions only in vertical sense; Division for 2/3/4/5/6
Prepared for3 fields ionisation camera (5 mm. max thick.)
S.F.D. allows rapid series exposures
Cassettes from 18x24 to 35x43 cm in both directions
Transition time between fluoro and radiography about 1 sec.
Motorized scattering grid
Possibility to have radio and tomo exposures on the same film

- **Tube Features**

Max. Weight of X-ray tube	24Kg

- **Weight** 950 kg

- **Optional**

Compression band
Lateral cassette holder

- **Electric Classification**

Class:	I with applied part of B type

- **Required environmental features**

Temperature:	Operative +10°C to +35°C Storage –10°C to +40°C
Maximum Humidity	80% without dew
Maximum Altitude for using	3500 meters

Note: Do not use the equipment in flammable or explosive environments.
Equipment not protected against water.

- **Use Conditions:**

Continuous functioning with intermittent charge.

Manufactured for
APELEM-DMS Group
Parc Scientifique Georges Besse
175, allée Von Neumann

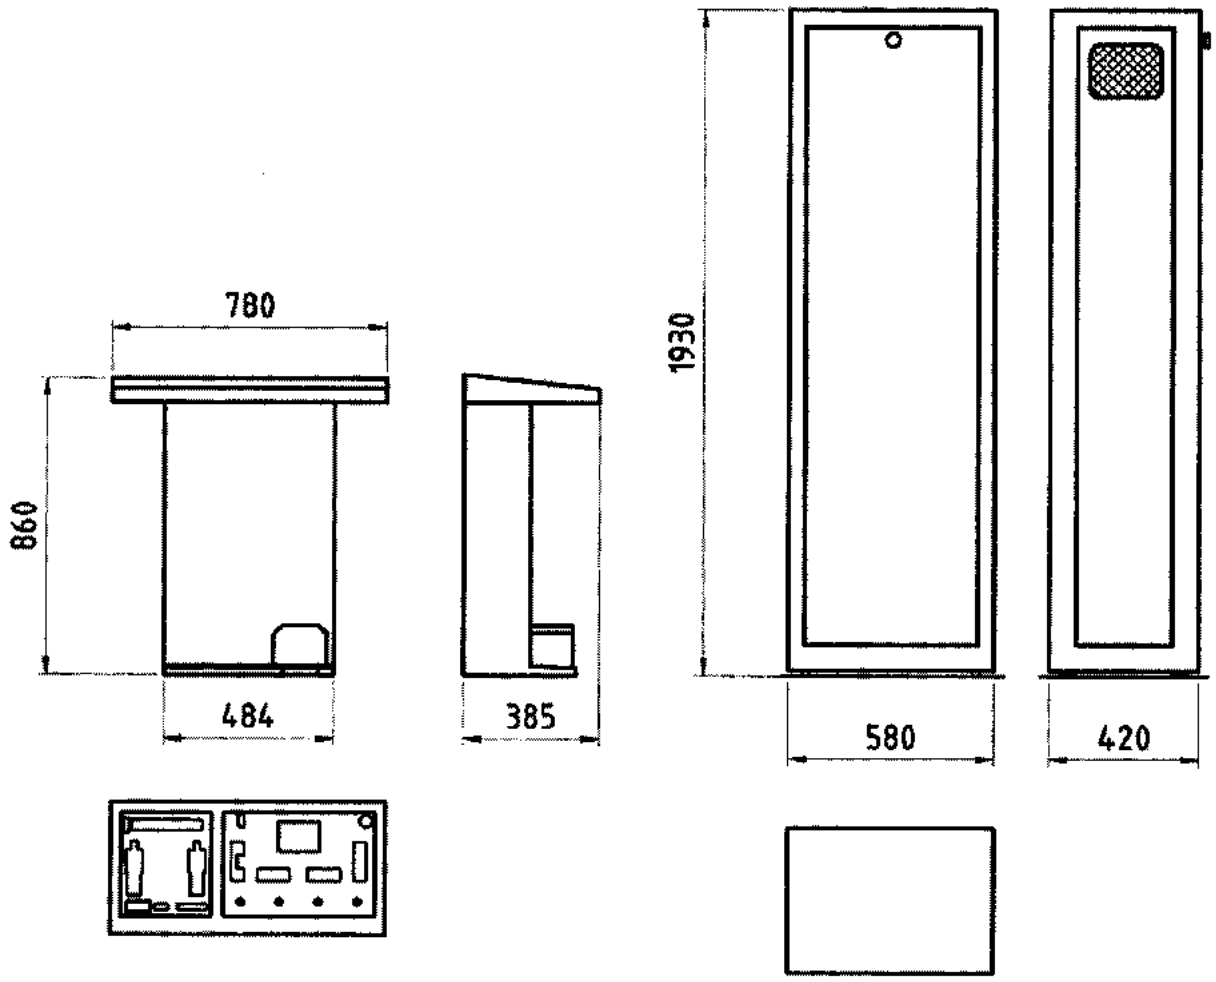
- **Console – Rack**



Page intentionally left blank

2.1 PACKING LIST

The standard packing includes N° 5 wooden boxes with tarred paper inside.
On request (option) you can have protection insulating bags.
All boxes are type "ON PALLETTE".

- **Box 1**

Contents:
Complete plinth of anterior beam, S.F.D. support and technical documentation
Size (cm): 258x98x112
Net weight 465 Kg. (gross 622)

- **Box 2**

Contents:
Rear beam support, covers and table top assembly
Size (cm): 258x58x147
Net weight 257 Kg. (gross 386)

- **Box 3**

Contents:
Electronic rack and operator console
Size (cm): 98x78x192
Net weight 187 Kg. (gross 291)

- **Box 4**

Contents:
Column, Image intensifier Support, cables support, collimator, mylard and accessories
Size (cm): 128x88x137
Net weight 131 Kg. (gross 236)

- **Box 5**

Contents:
S.F.D. device, tomographic rod assembly and compressor arm
Size (cm): 148x90x62
Net weight 114 Kg. (gross 184)

Page intentionally left blank

2.2 PRE-INSTALLATION

Perform the necessary building works before the installation of the unit (canalization for the cables LT and HT and respective grits).

Check the resistance of the floor that must be at least 1200 Kg/mq.
If the resistance is not enough sufficient, it will be necessary to put a plate for weight distribution.

Check that the dimensions of the access doors allow the entrance of respective unit parts (min. 80cm)

Before starting the installation check the minimum dimensions of the room.

On request, the manufacturer can furnish a plate for the division of the weights to place on the floor

Minimum dimensions of the room (for a correct utilization of the table)

- **KRISTAL 90/90 Tilting**

Measures not including the rack and the generator in the room
- Length.....4.5 m.
- Width.....3 m.
- Height.....2.7 m.

- **KRISTAL 90/20 Tilting**

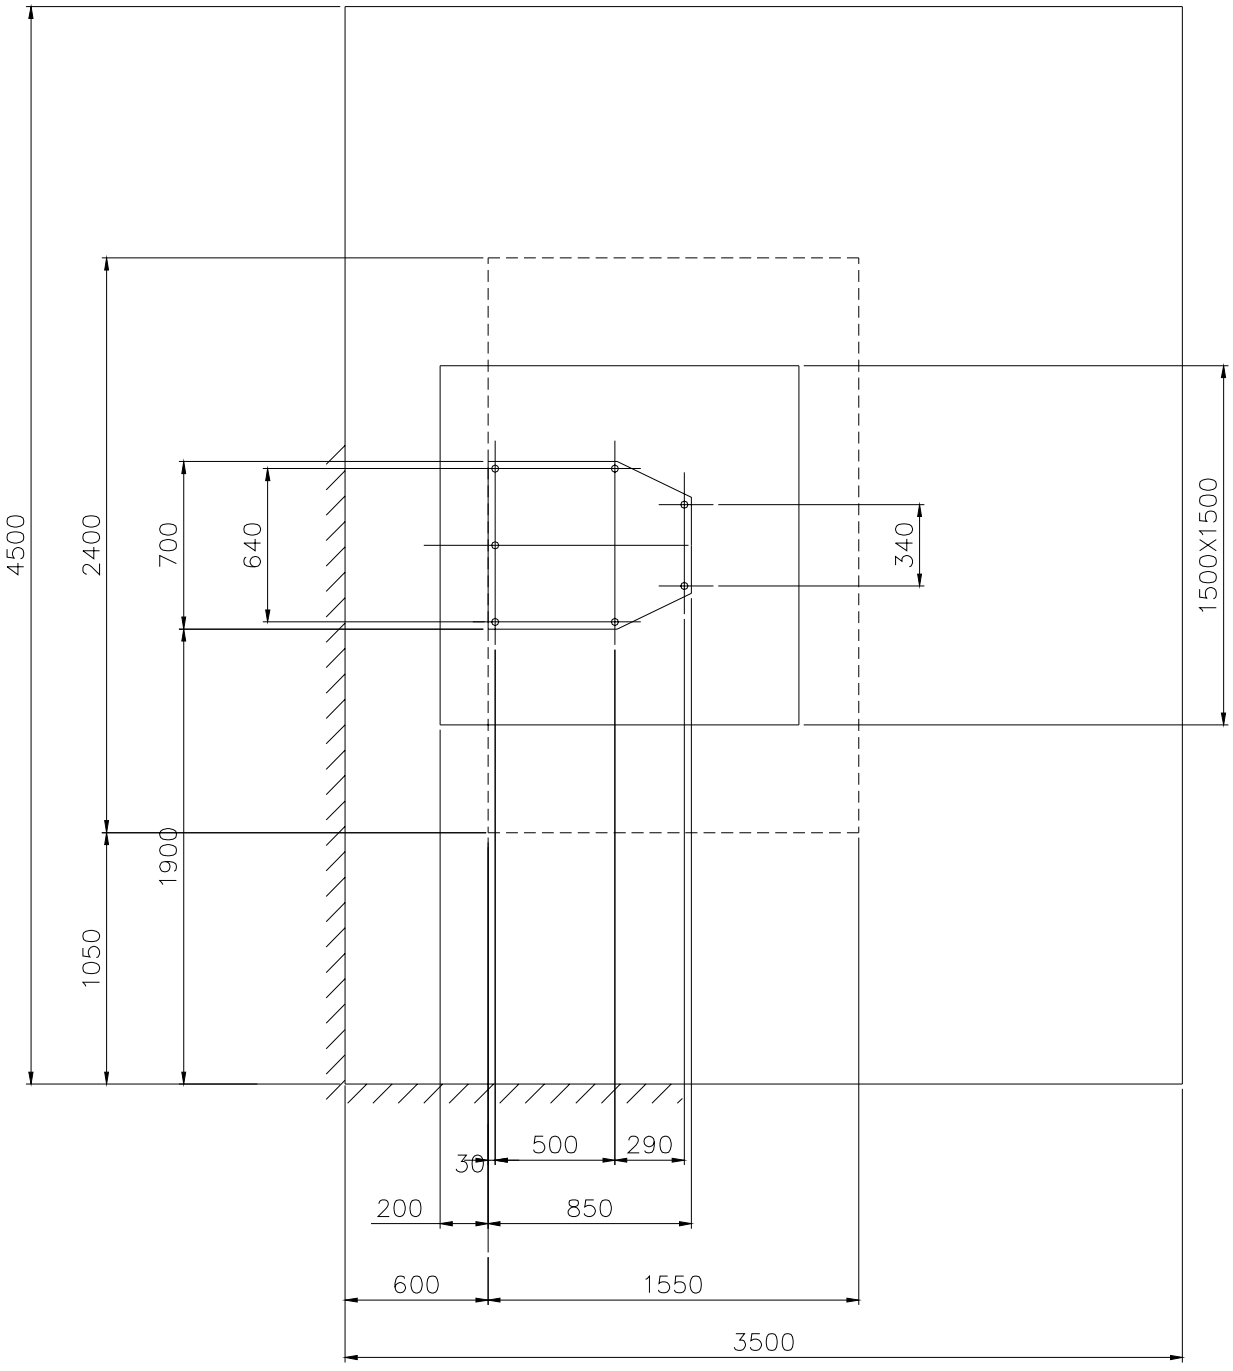
Measures not including the rack and the generator in the room
- Length .....4 m.
- Width.....3 m.
- Height.....2.7 m.

If case the ceiling height is not suitable, a security option can be required.
If you must put an electronic rack and the generator in the room, the minimum width will be 3.5m.

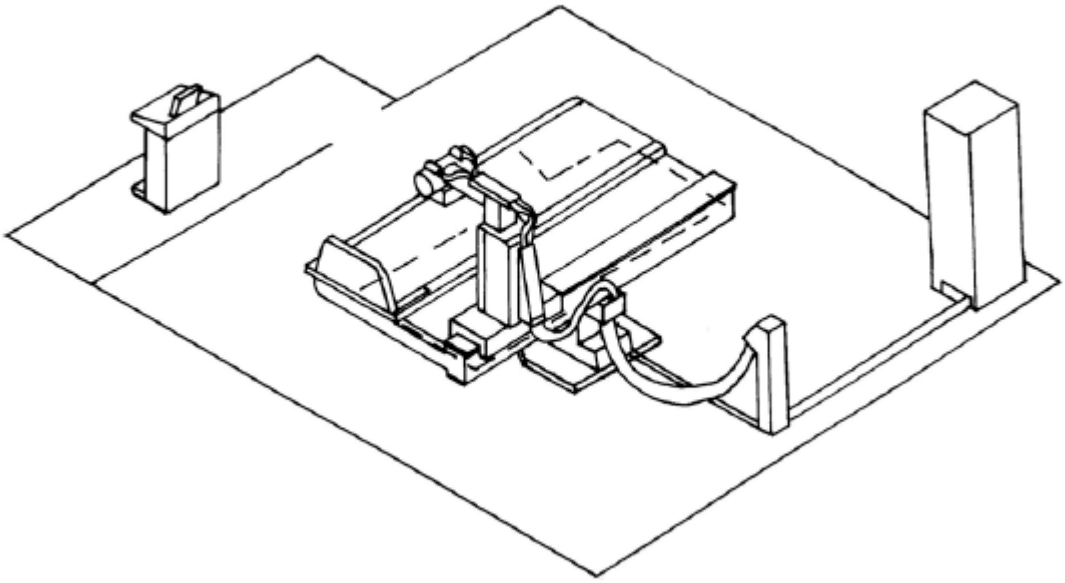
Control the necessary space for the positioning of the console.
According to the norm. EN 60601-1-1 CANNOT BE positioned in the same area of tilting table.
It must be fixed to the floor with two screws.

The equipment installation must be performed by APELEM-DMS Group company, or by qualified personnel.

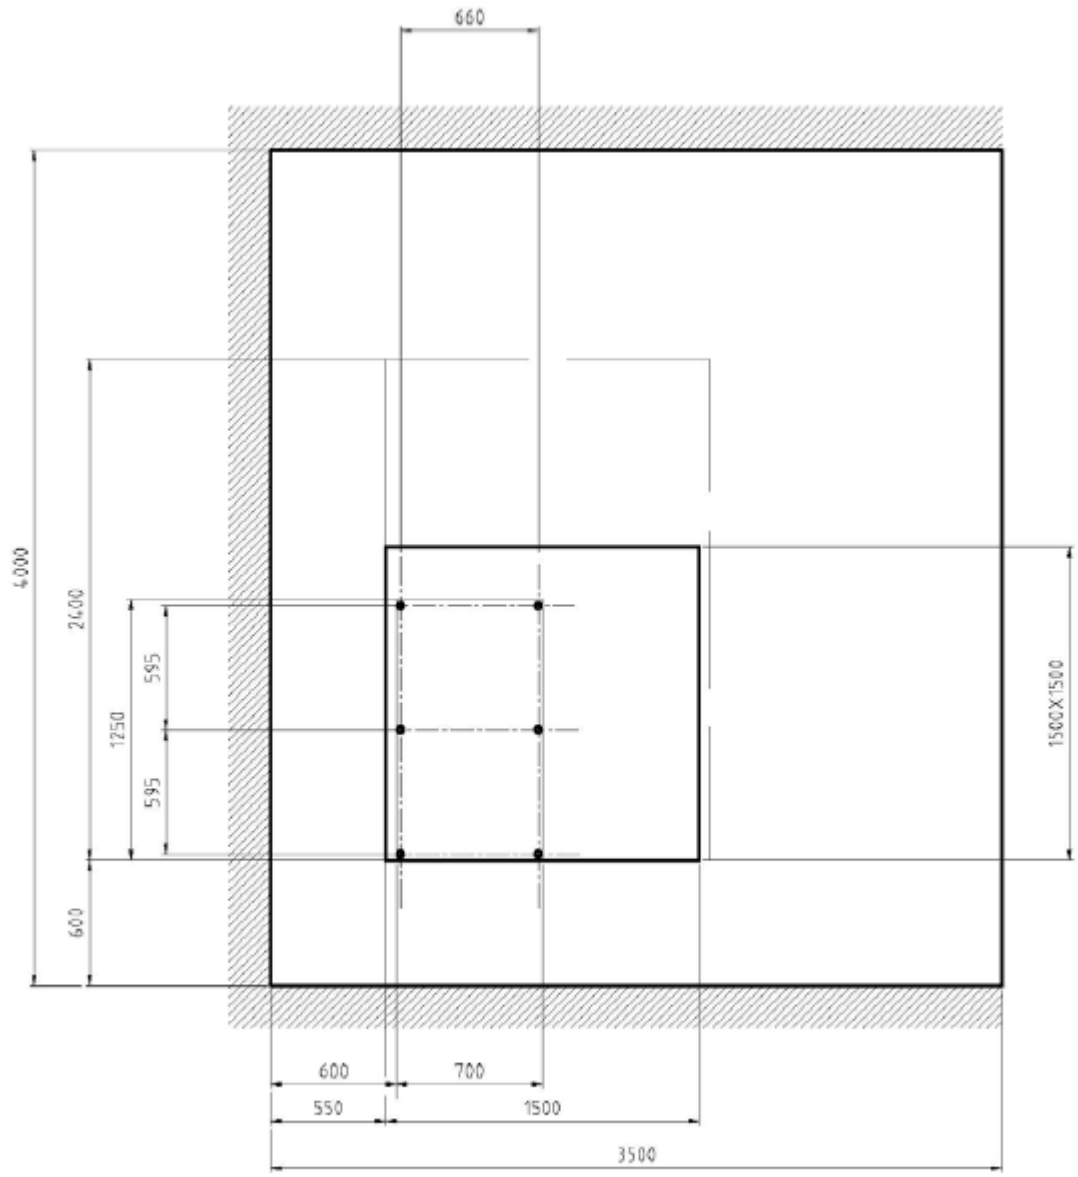
- **Fixing plan of a KRISTAL 90/90 Tilting table**



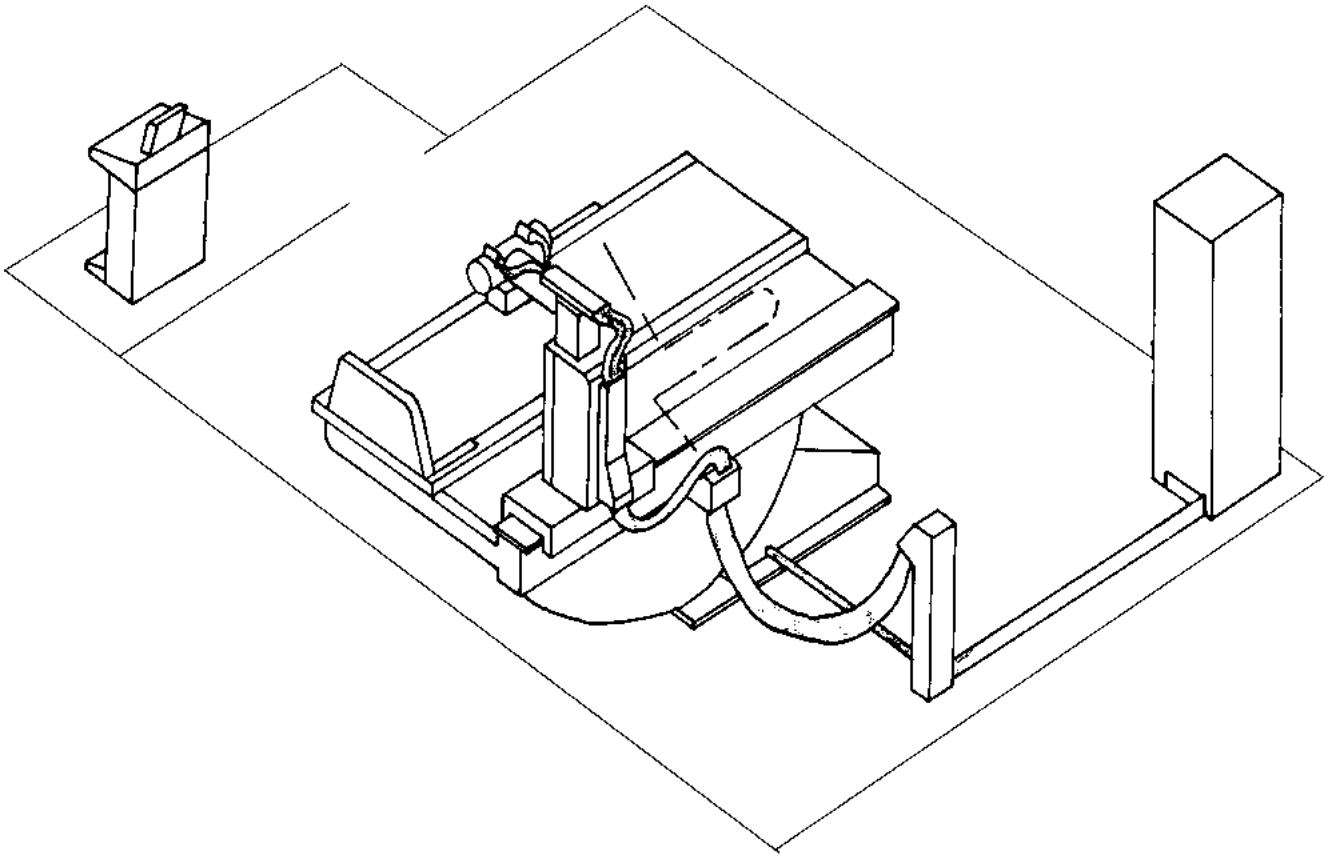
- **Example of positioning of a KRISTAL 90/90 Tilting table**



- **Fixing plan of a KRISTAL 90/20 Tilting table**



- **Example of KRISTAL 90/20 Tilting table positioning**



Page intentionally left blank

2.3 ASSEMBLING

2.3.1 90/90 TILTING TABLE

Inspect the contents of the wooden cases and carefully check the integrity of every single part.

The equipment is delivered pre-assembled, so you just have to assemble its various groups.

NOTE: The tensions of the chains and the bearings adjustment have been done before the delivery. So, these parts do not need any necessary intervention, which might cause a bad functioning of the equipment.

- **BASE FIXING**

Position the base with its main support beam respecting the minimum distance from the wall (see fig.1) that is necessary to keep a correct movement of the cables and a safety area.

Pay attention not to crawl the group on the floor.

Carry on fixing by means expansion steel wedges without blocking them (n. 7 = 12x120 mm suitable solution for high consistence floors).

For higher story floors fix the base by means of n.7 steel wedges ∅ 10 mm and chemical solution.

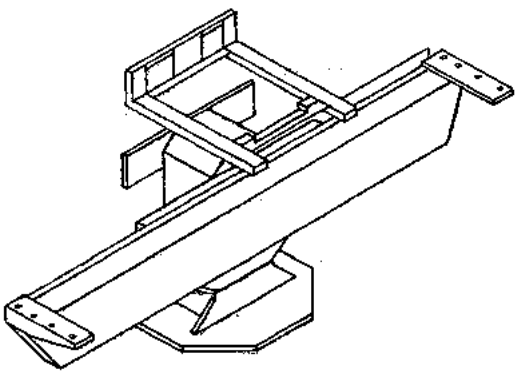


Fig.1

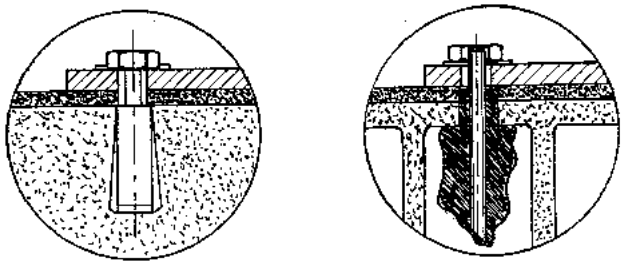

Check flatness of the base, put some thickness if necessary, and finally block the wedges of fixing.

- **BACK CROSS MEMBER ASSEMBLING**

In order to install the cross member, you have to use eight inclusive TBCI M8 screws.

Take off the screws from the back cross member and place it on the base, minding to insert the bearings of the Spot Film Device chariot in their guide as shown in the fig. 2.

Fix the back cross member with the screws that previously taken off.

Hook the chain of the back cross-member fixing it in both sides and paying attention not to pull it too much

Finally put the four closing caps of the frame and remove the n.2 protection bars from the rear.

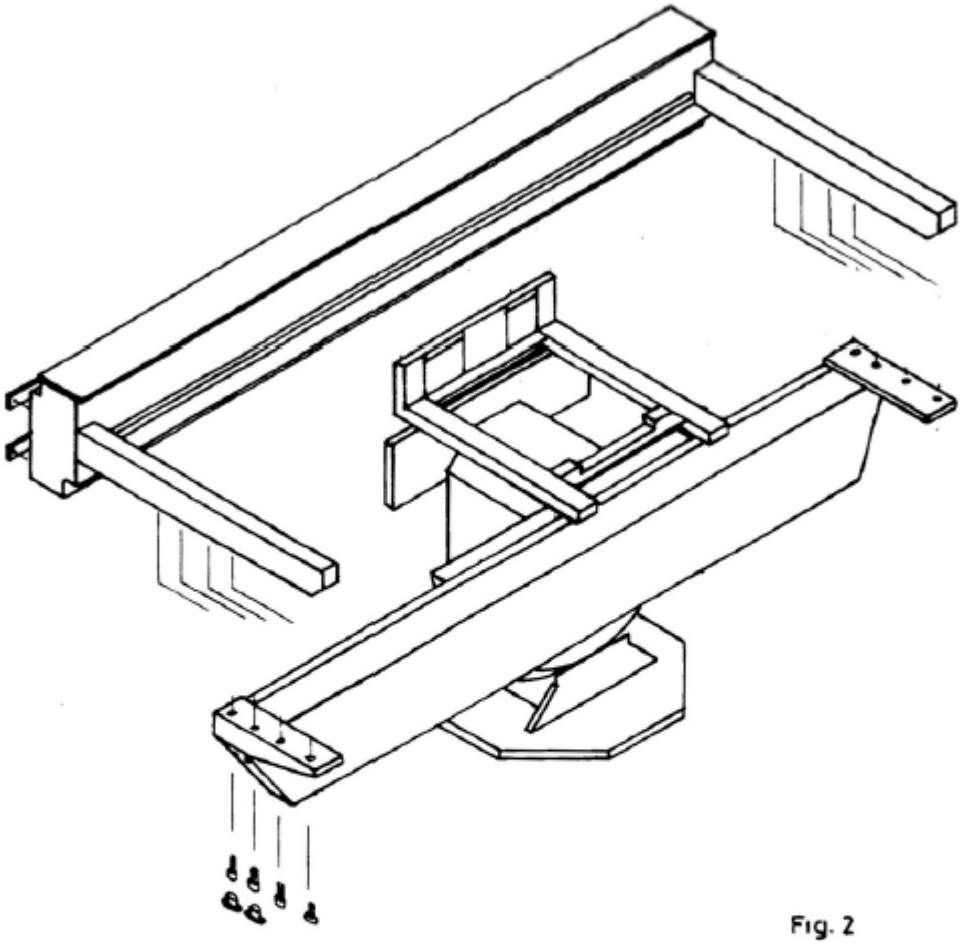

Fig. 2

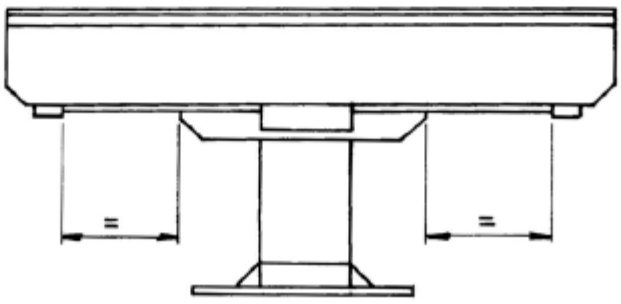
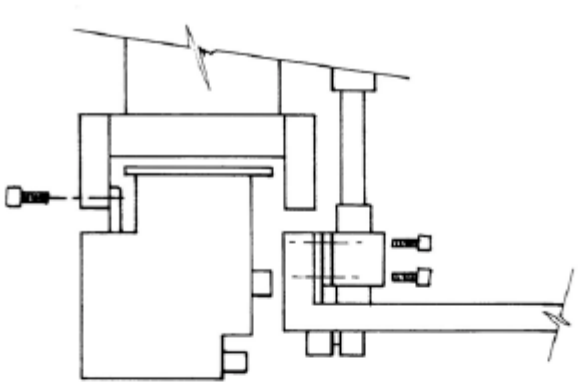


- **COLUMN ASSEMBLY & TOMOGRAPHIC ROD ASSEMBLY**

Take off covers and insert the column as shown in fig.3.
Connect it to the transmission chain using two TCEI M8 screws that provided with the equipment. Block them and reassemble the covers.
Place the tomographic rod in position, connect its plug to the socket mounted on the tube support and fix the two TCEI M8 screws.
Connect the lower part of the tomographic rod to S.F.D. chariot and fasten it by means of TE M8 screws.
Fix the cables support on the upper part of the stand.
Finally the rear cover will be mounted.



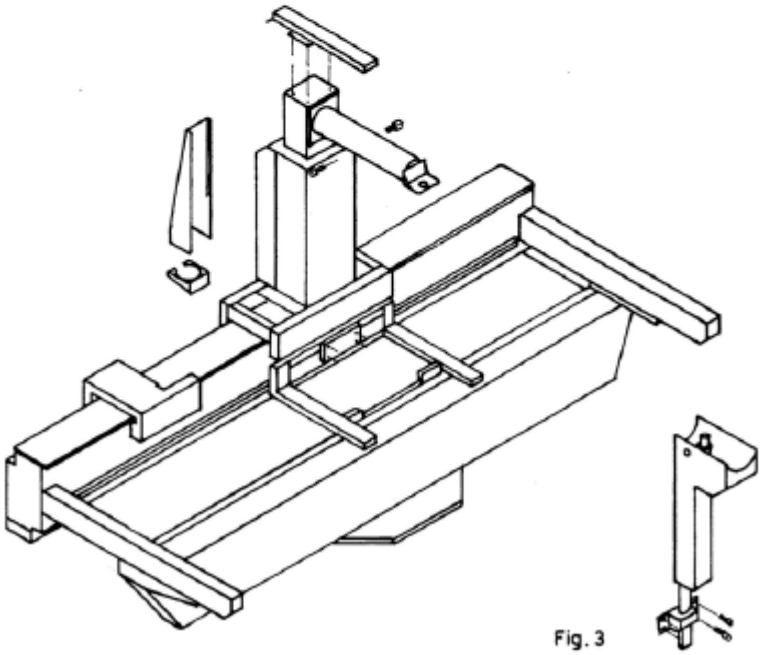


Fig. 3

- **IMAGE INTENSIFIER CHARIOT ASSEMBLY**

Remove the bearing Pos.1 fig.4 and position the image intensifier chariot on its guide, minding to insert the Pos.2 bearing of fig. 4 into the slot.

Reassemble and adjust the two bearings.

As far as I.I. assembling is concerned, you should remove the adaptation plate and fix it on the upper part. Hold the TV camera towards the front of unit. Load I.I. on the chariot and use the n.6 CH 10 nuts keeping it in the central position.

Finally insert cables and fix cables support.

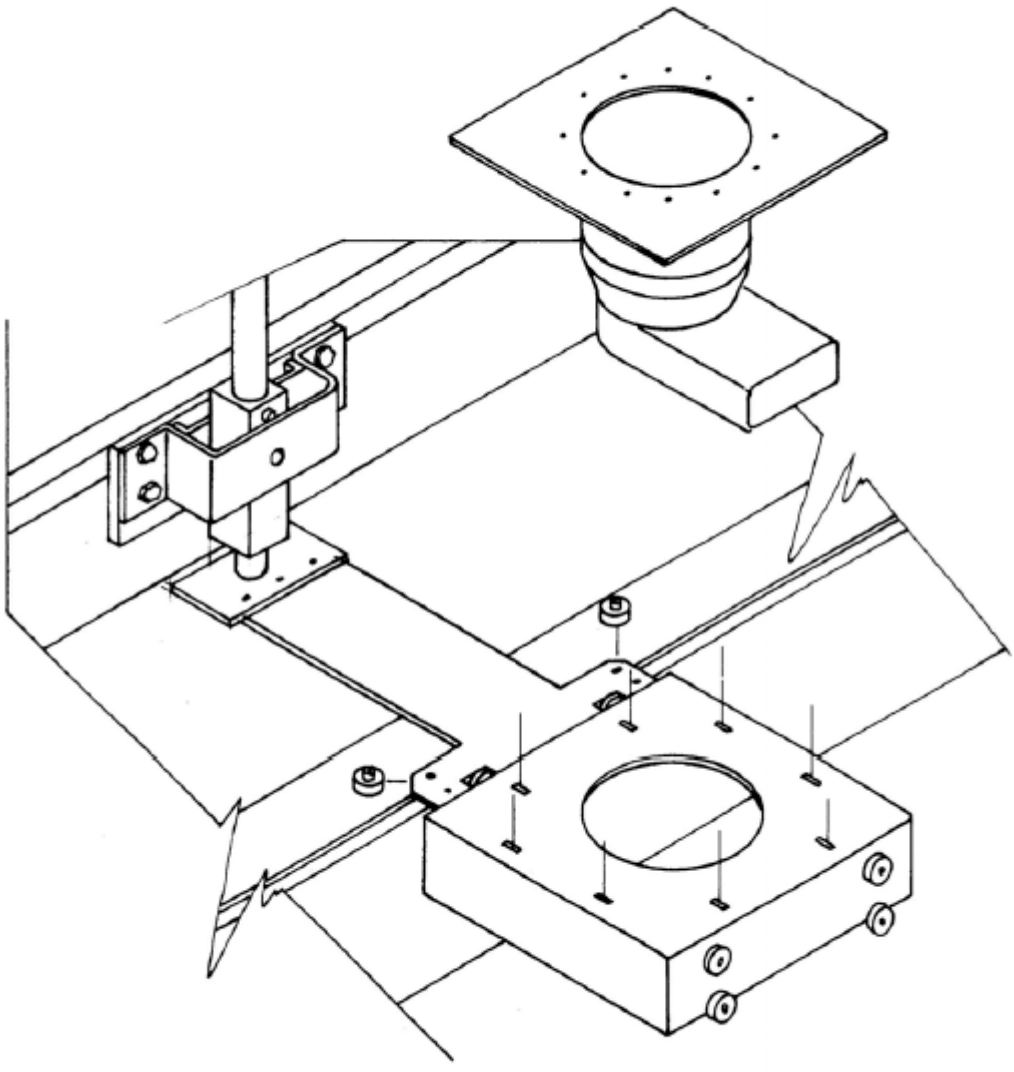

Fig.4

- **S.F.D. & AEC ASSEMBLING**

Remove the front cover of spot film device. Remove flat cable and emergency push button wire.

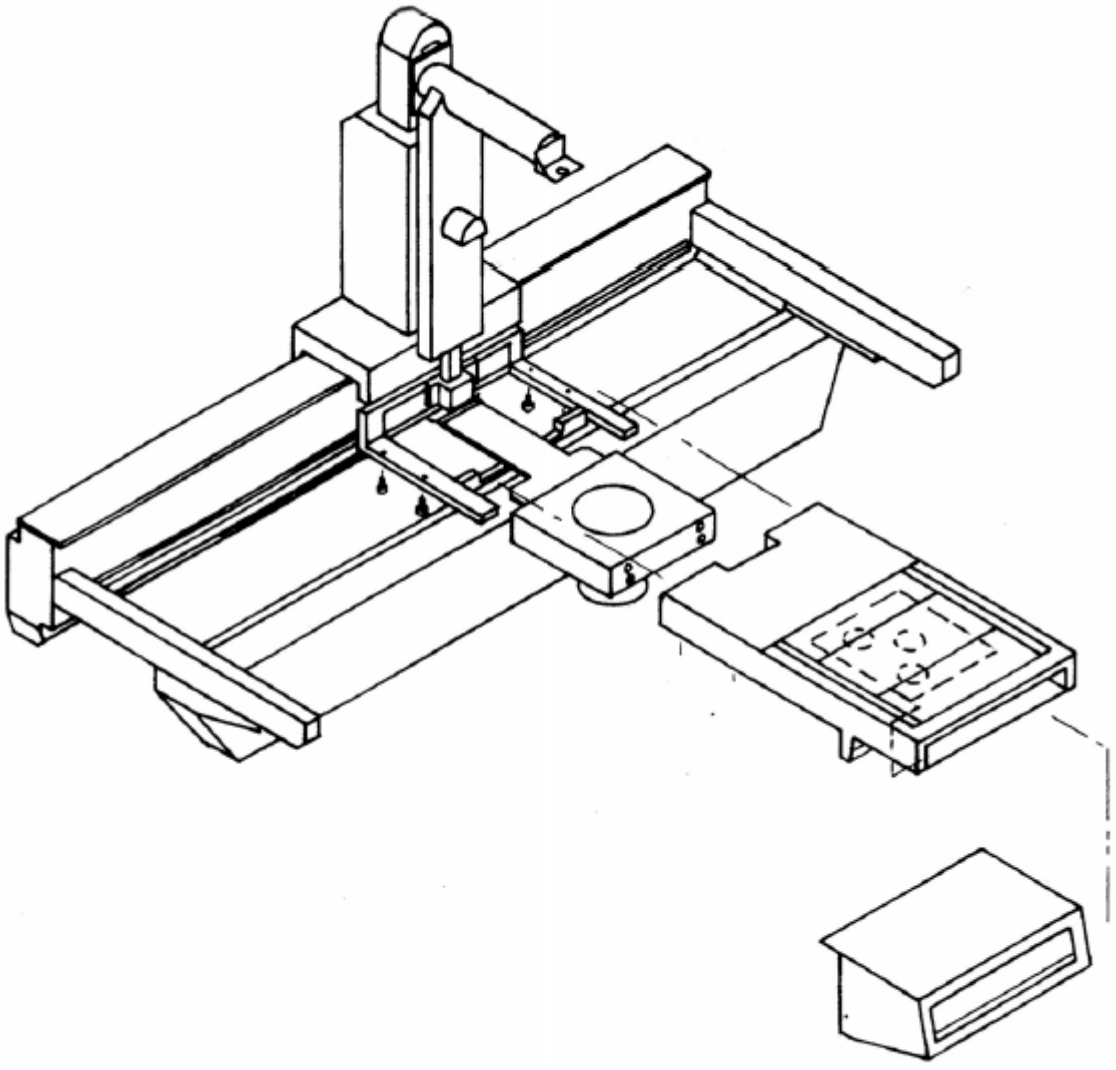
Place the S.F.D. on its trolley (see fig. 5) and fix it by means of four TE screws.

Connect the power supply cable to its socket and fix the housing to the entry window.

In case you have to assemble an AEC device: place it on its holder between the grid and the diaphragm shutters. The wire should follow the trajectory as indicated on the drawing.

Check that the cable doesn't interfere any movement.

Reassemble the front cover replacing the flat cable and the emergency push button wire



2.3.2 90/20 Tilting Table

Inspect the contents of the wooden cases and carefully check the integrity of every single part.

The equipment is delivered pre-assembled, so you just have to assemble its various groups.

NOTE: The tension of chains and the bearings adjustment have been done before the delivery. So, these parts do not need any necessary intervention, which might cause a bad functioning of the equipment.

- **BASE FIXING**

Position the base with its main support beam respecting a minimum distance from the wall (see fig.1A) that is necessary to keep a correct movement of the cables and a safety area.

Pay attention not to crawl the group on the floor.

Carry on fixing by means of the expansion steel wedges <u>without blocking</u> them (n. 7 = 12x120 mm suitable solution for high consistence floors).

For higher story floors, fix the base by means of n.7 steel wedges ∅ 10 mm and chemical solution.

Check flatness of the base, put some thickness if necessary, and finally block the wedges of fixing.

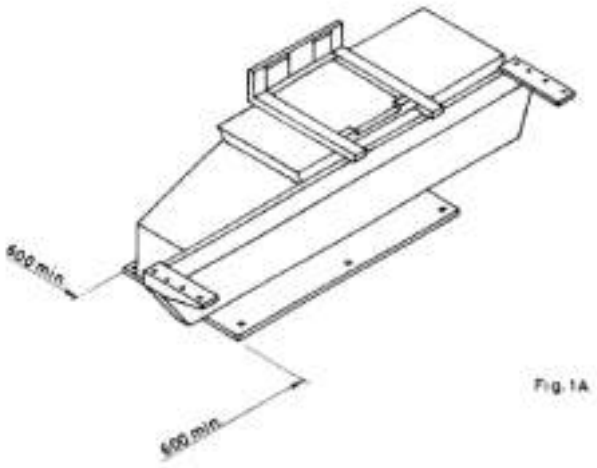


Fig. 1A

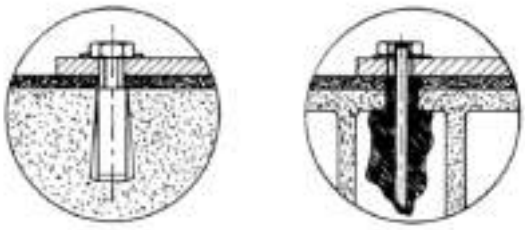

- **BACK CROSS MEMBER ASSEMBLING**

Use ten inclusive TBCI M8 screws in order to install the cross member.

Take off the screws from the back cross member and place them on the base, minding to insert in their guide the bearings of the Spot Film Device chariot as fig. 2A.

Fix the back cross member with the screws that you have previously taken off.

Finally put the four closing caps of the frame and remove the n.2 protection bars from the rear.

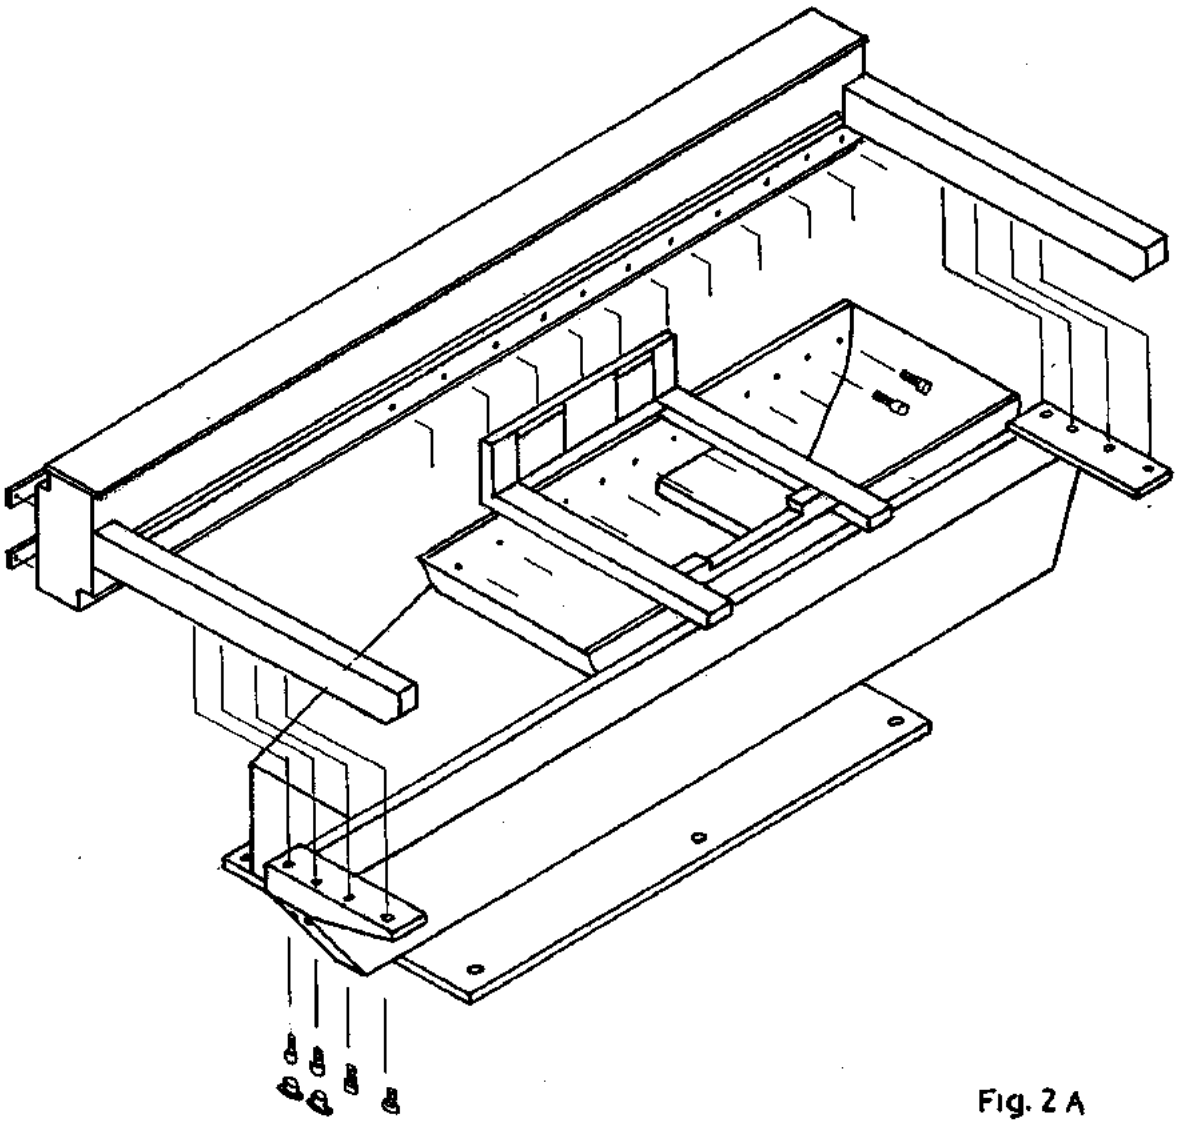

Fig. 2 A

- **COLUMN ASSEMBLY & TOMOGRAPHIC ROD ASSEMBLY**

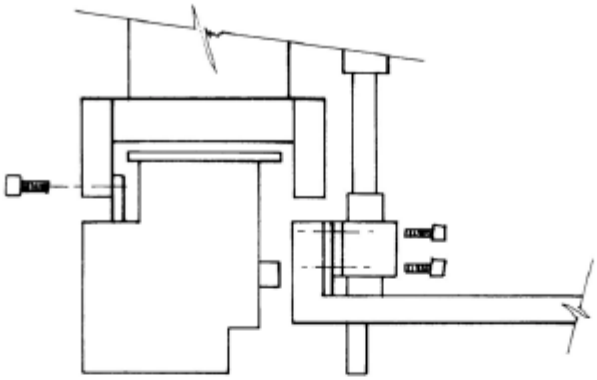
Remove the covers and insert the column as per fig.3A.

Connect it to the transmission chain using two TCEI M8 screws that are provided with the equipment. Block them and reassemble the covers.

Position the tomographic rod, connect its electric plug to the socket mounted on the tube support and fix the two TCEI M8 screws.

Connect the lower part of Tomographic rod to S.F.D. chariot and fasten it by means of TE M8 screws. Fix on the upper part of stand the support of cables.

Finally the rear cover will be mounted.



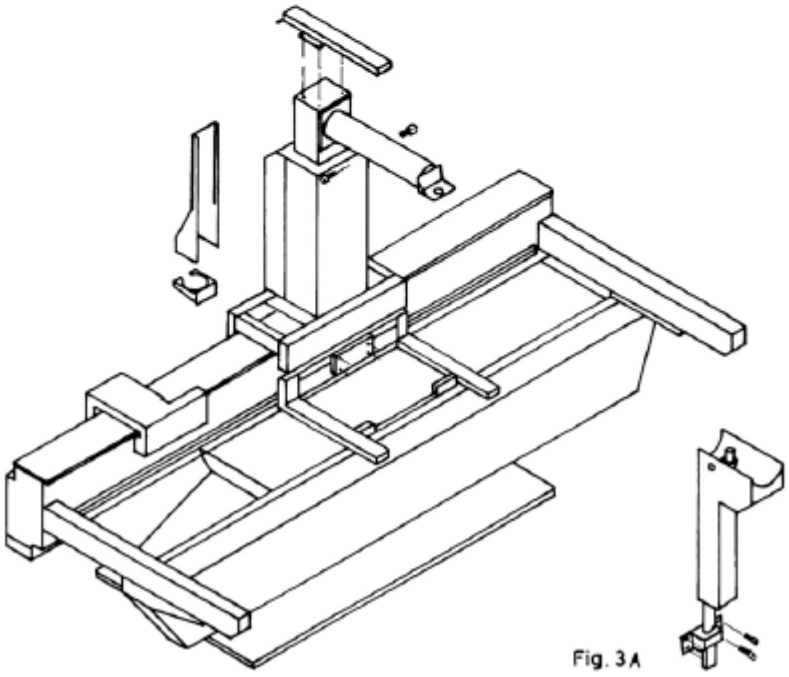


Fig. 3A

- **IMAGE INTENSIFIER TROLLEY ASSEMBLY**

Remove the bearing Pos.1 fig.4A and position the image intensifier chariot on its guide, minding to insert the Pos.2 bearing of fig.4A into the slot.

Reassemble and adjust the two bearings.

As far as I.I. assembling is concerned, you should remove the adaptation plate and fix it on the upper part.

Hold the TV camera towards the front of unit. Load the I.I. on the chariot and use the n.6 CH 10 nuts keeping it in the central position.

Finally insert cables and fix the cables support.

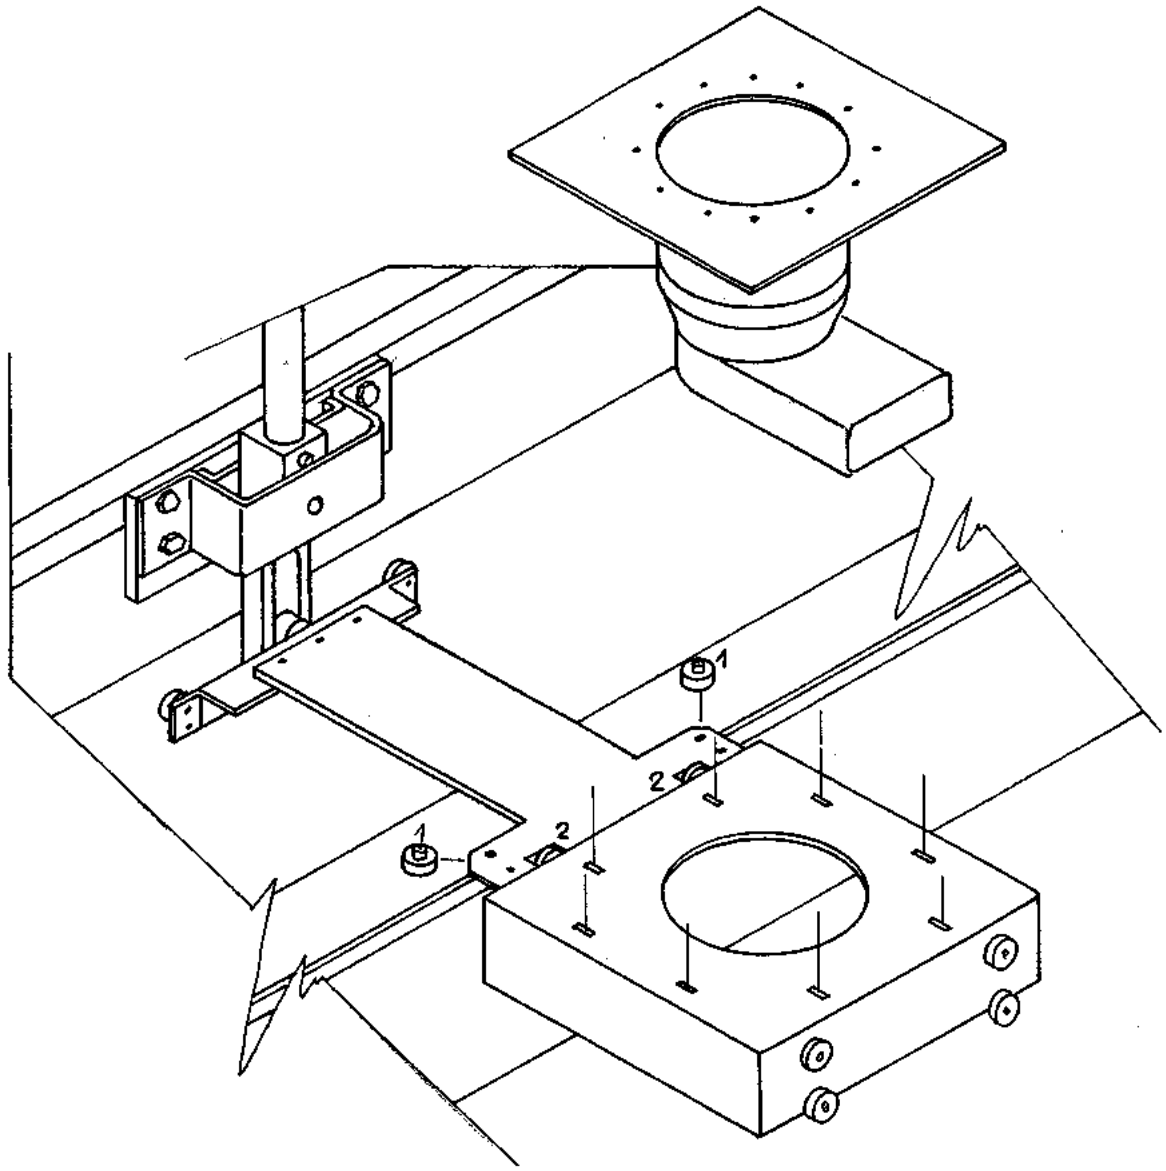

Fig.4A

- **S.F.D. & AEC ASSEMBLING**

Remove the front cover of the spot film device. Remove the flat cable and the emergency push button wire.

Place the S.F.D. on its chariot (see fig.5A) and fix it by means of four TE screws.

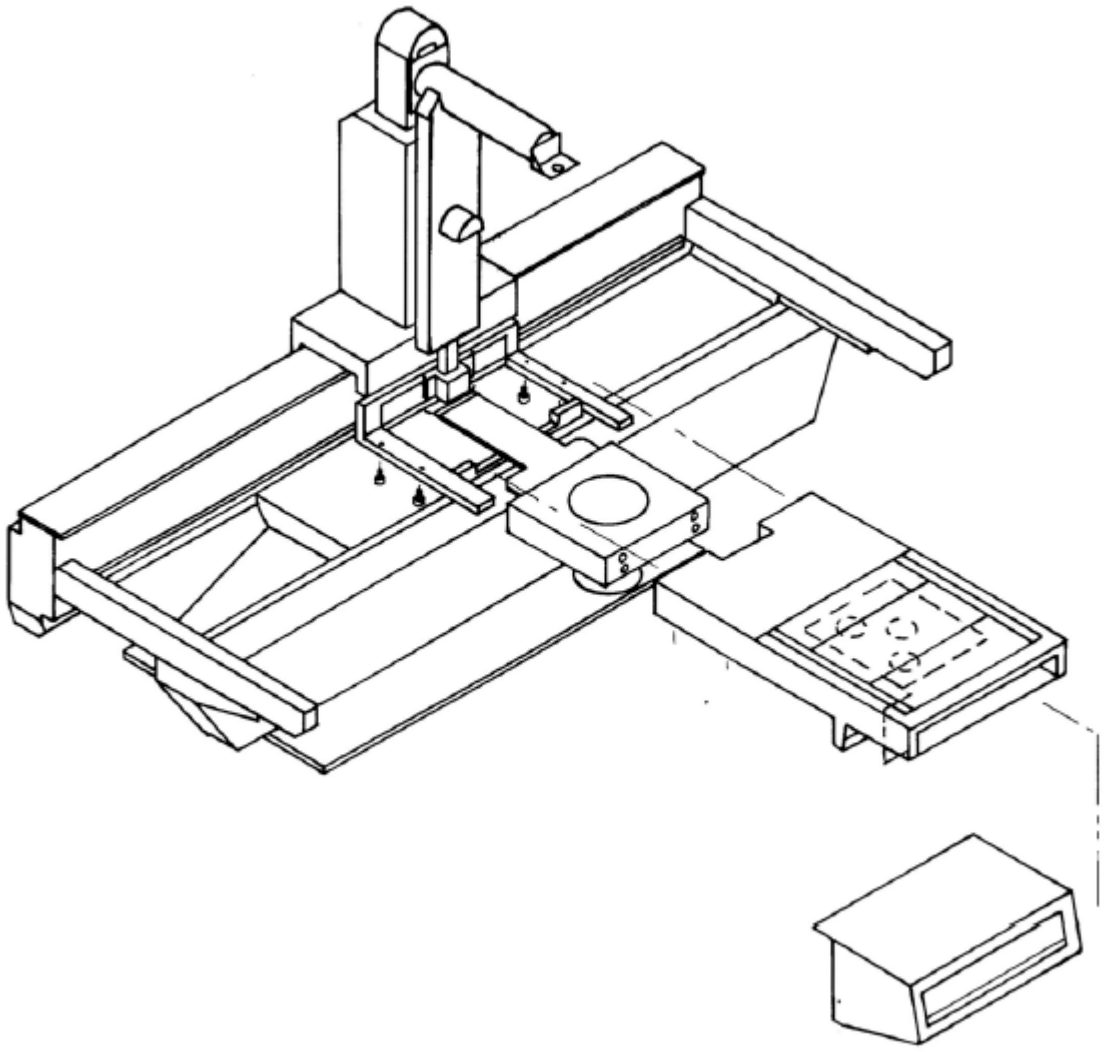
Connect the power supply cable to its socket and fix the scabbard on the entry window.

If you have to assemble an AEC device: place it on its holder between the grid and the diaphragm shutter

The wire should follow the trajectory indicated on the drawing.

Check that the cable doesn't interfere any movement.

Reassemble the front cover replacing the flat cable and the emergency push button wire



- **X-RAY TUBE AND COLLIMATOR ASSEMBLING**

FOR TILTING 90/90 & TILTING 90/20 TABLES

Position the X-Ray tube on its holder as per fig.6A and screw it by means of four TCEI M6-screws together with the collimator attachment.

Fix the cover of X-Ray tube.

Mount the collimator on its attachment and fix it with the respective screws (pos. **A**).

In order to adjust the X-Ray tube transversally, loosen the six TSBI screws (pos. **B**).

In order to adjust the inclination angle of the X-Ray tube, loosen two TBI dowels (pos. **C**) situated behind the X-Ray tube holder.

Fix the cover of the X-Ray collimator

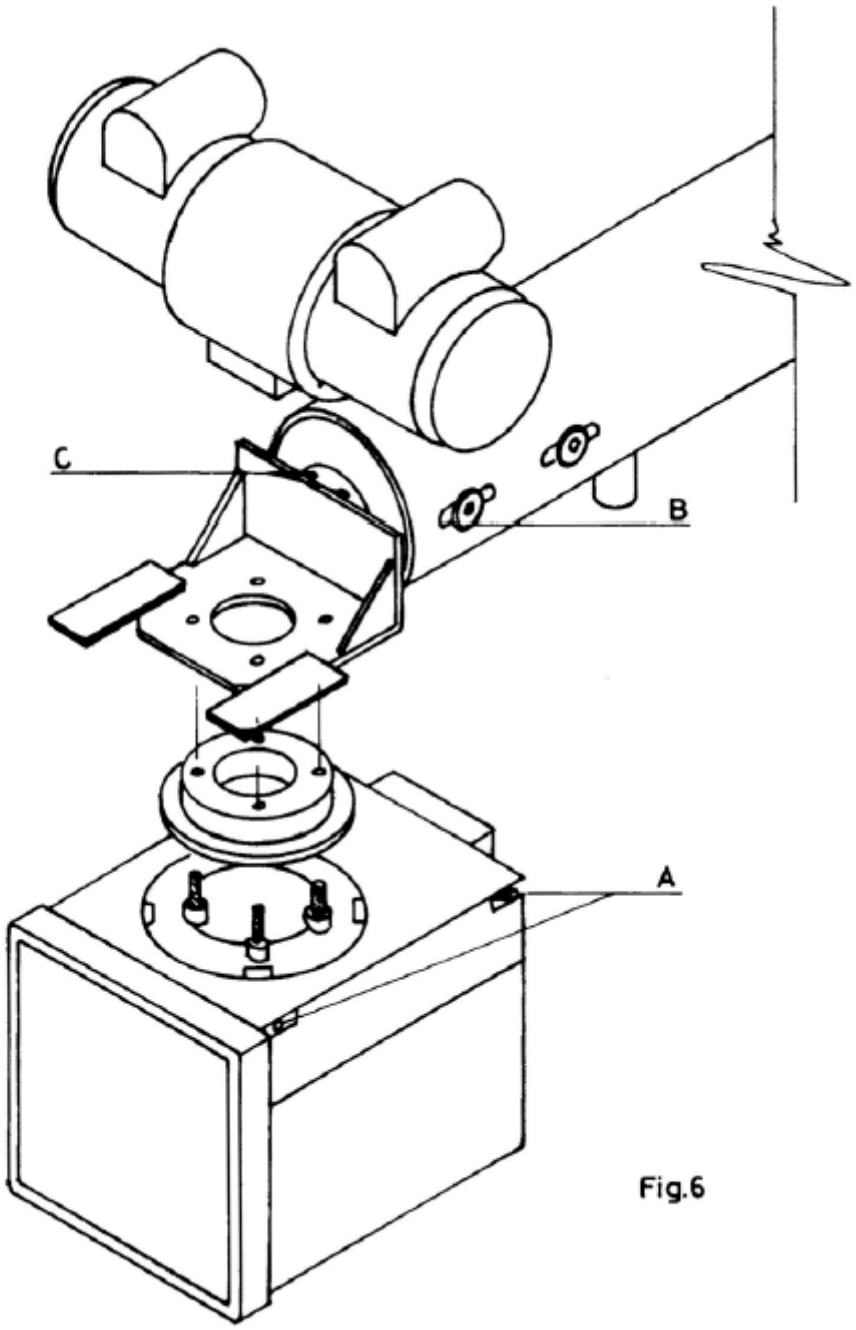


Fig.6

- **TABLE TOP ASSEMBLING**

FOR TILTING 90/90 & TILTING 90/20 TABLES

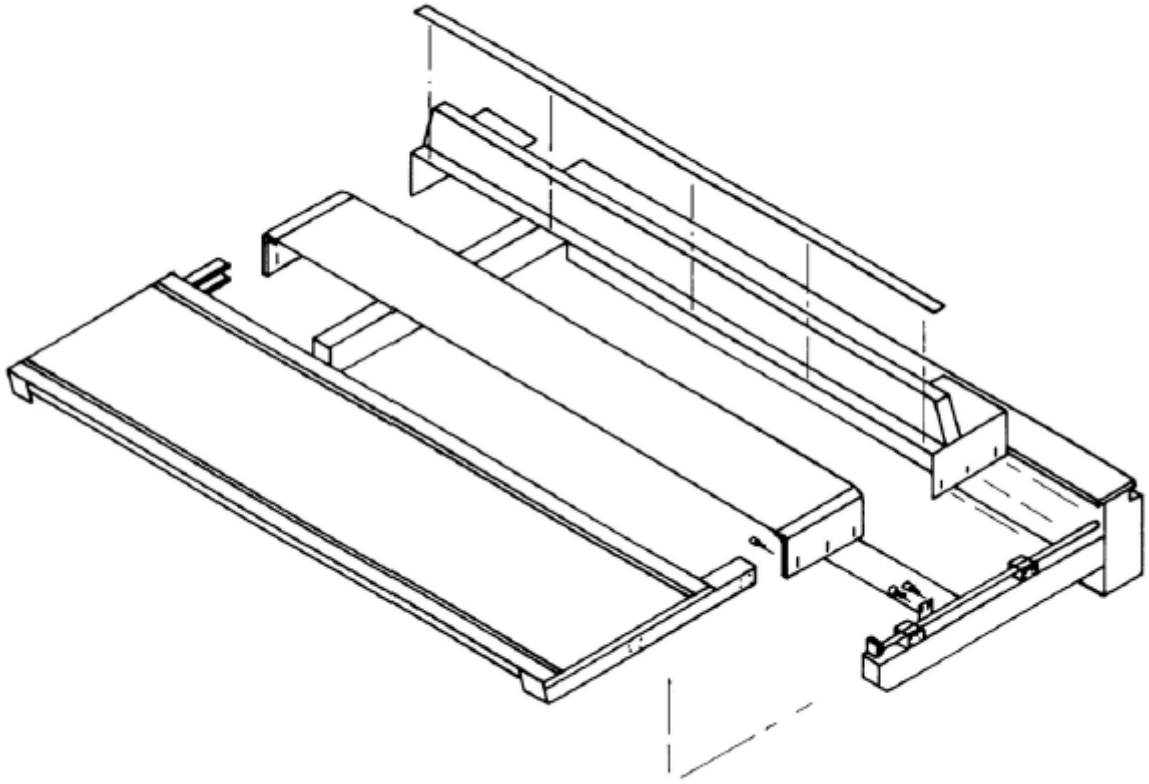
Position the back cover and fix it with six screws and washers.

Install the Mylard fixing the attachments from head side and feet side and inserting between the back cover and the blocking plate.

If the mylard is loosened, disconnect from one side to move the attachment.

Insert the tabletop panel and fix screws.

Test the good sliding then hook chains. Attachments are under the table top from head side and feet side.



- **FOOT BOARD ASSEMBLING**

FOR 90/90 AND 90/20 TILTING TABLES

After having finished all connections, turn on the equipment and set it in vertical position.
Position the footboard under the table in the centre of the main base.
Check that the S.F.D. and the table top, DO NOT INTERFERE during the movements
Fix the footboard to the floor using two expansion wedges (∅ 10 mm).

Note

Note

Page intentionally left blank

2.4 CABLES & WIRING

Once you have carried out the mechanical assembly, it's time to start the electric wiring according to the following indications:

Mind to position the cables as per fig. 8.

After having fixed the cable holder by means of dowels or floor fixings, place the rack and the console in the most suitable place in the room.

Now only connect the cables and wires of the table with the grounding wires minding to fix them in the correct points. Avoid to insert in the rack accessories that might interfere with the functioning of the unit.

2.4.1 Column

1) D.F.F. motor /compressor motor	→	K901509 PCB → M4
2) D.F.F. signals	→	K901509 PCB → J4
3) Tube rotation and compressor signal	→	K901509 PCB → J3

2.4.2 Frame

1) Tube-stand motor	→	CVS 22 MASTER X 13
2) S.F.D. motor	→	CVS 22 SLAVE X 13
3) Column signals/ S.F.D.	→	K901509 PCB → J1
4) Table-top motor	→	K901509 PCB → M7
5) Table-top signals	→	K901509 PCB → J5
6) Tube-stand resolver	→	CVS 22 MASTER X3
7) S.F.D. resolver	→	CVS 22 SLAVE X3
1) Power supply cable	→	K901509 PCB → M9
2) Serial bus CAN	→	K901509 PCB → J6
3) X-Ray Collimator cable	→	X-RAY COLLIMATOR

2.4.3 Base

1) Tilting signals	→	K901509 → J2
2) Tilting motor	→	CS 12

2.4.5 S.F.D.

1) S.F.D. power supply	→	K901510 PCB → M2
2) Serial bus CAN	→	K901506 PCB → J12
3) X-Ray collimator	→	K901510 PCB → M5

2.4.6 Console

1) Console power supply	→	K901509 PCB → M10
2) Serial bus CAN	→	K901509 PCB→ J7
3) Serial RS485	→	K901509 PCB → M13
4) Signals cable	→	K901509 PCB → FL4

2.4.7 Power –Line

1) Power supply cable 3 poles + N + grounding wire,
   minimum advisable section 2.5 mm² 400V 10A → 230 Vac.

2.4.8 X-Ray tube & collimator

1) Rotating anode → (to generator)
2) High voltage cables with three pins Federal cable heads, complying to the corresponding regulations and having a maximum length of 24m → to generator
   For each cable, build up a thick layer of silicon grease on the terminal extremity, and coat the lateral surface completely. Insert the cable termination into the socket, find the locating key, insert the cable nut into the fist threads and tighten slowly. The purpose is to draw the grease from the terminal extremity up to the outside, pushing out all the air remaining between the cable termination and the socket. Complete tightening at intervals during calibration, to compensate for grease setting with heating.

2.5 ACCESSORIES ASSEMBLING

In order to assemble any optional accessory with this unit, check their documentation to control the compatibility.

In case adaptors or modifications to the table are requested, please absolutely consult the manufacturer. Any unauthorized modification will cause the invalidation of the warranty period.

Page intentionally left blank

2.6 GENERATOR CONNECTIONS

In order to connect the generator, please follow the instructions as described in the diagram

To perform the interface, use a cable with a minimum advisable section of 0.22mm², with a length not exceeding 25meters.

Page intentionally left blank

2.7 ENVIRONMENTAL CONDITIONS

- Functioning temperature of the unit: from + 10°C to + 35°C
- Maximum humidity 80% without condensation
- Maximum Altitude for using the unit 3500 meters

Do not use the unit in inflammable or explosive areas.

SYMBOLS ON PACKING

Page intentionally left blank

3.1 FUNCTIONAL CONTROLS

TO PERFORM ONLY AFTER HAVING INSERTED THE FOLLOWING FUNCTIONS IN SET UP:
- **I.I. DIMENSIONS**
- **CEILING HEIGHT**

- Switch on the system:
- Check the correct tilting direction, by keeping the column and S.F.D. group in central position.
- It must be the same as the symbol indicated on the on the console.
- The tilting speed is already preset.
- Check all anti-collision safeties compared with the floor, the ceiling and the walls of the room.
- In order to enter the limit-setting program of the unit, look at Set-up. It has been already preset and the values are reported on the final control report form.
- Check the perfect X-Ray beam alignment.
- Control the alignment of the X-Ray tube, with the Collimator, the S.F.D, I.I., the TV camera and the monitor.
- Check the correspondence between the light beam and the irradiated field. In case of error, check the fixing of the collimator or the position of the mirror.
- Check the movement of column-S.F.D. These movements already have a preset speed and acceleration ramp.
- The limits of the unit movements are preset by software.
- Control the S.F.D functions.
- Check the controls of the S.F.D. and all its functions.

***TOMO* function Control:**

- Load a cassette in S.F.D and enter the *TOMO* function on the console. Check the functions of: Tomo angle, time/speed and layer height.

NOTE: The operator **must** set the an exposure time on the generator desk equal or longer then the time of the tomo displayed on the console. The unit is delivered yet preset, if you have to change the preset values, please contact the manufacturer. The sharpness of the values reported on the display is of +/- 1 mm.

Page intentionally left blank

3.2 COMPRESSOR SETTING

To check the functioning, first insert the compressor support.

A friction located on the motor transmission gives the compression force setting

And has an approximate value of 6-10-14 Kg.

In case you want to increase the set compression force, you can do it by entering in the Set up program.

The maximum limit is 17 kg.

If you change the value of the compression stroke, you must also change the position of the maximum stroke end-stop in order to enable it to act when the system reaches the maximum limit you have set.

In order to change the regulation you need a dynamometer to measure the stroke.

Page intentionally left blank

4.1 SPOT FILM DEVICE

- **Functions on the push button pannel**

1) Collimator control
2) Table top
3) Movement of: the column and the S.F.D. (head / feet)
4) Tilting
5) IN / OUT cassette
6) Emergency push button (STOP)

- **Instructions of use**

The S.F.D. has a self-centring device.

To load the cassette:
Introduce the cassette inside the S.F.D. and hook it with the front jaw of the cassette holder.

To pull out the cassette:
Push inside and pull up, then extract out carefully.
By means of key **5** (on the panel) you can insert or extract it.

Pay attention to not keep your hands on the Spot Film Device trolley while you are activating the IN/OUT push button.
Do not place objects outside the cassette as they might compromise the functioning of the Spot Film Device.

Once you have inserted the cassette, you can read its format on the display.
After each exposure the display indicates the number of exposures that you still have to make
Do not insert the cassette if you did not hook it properly.

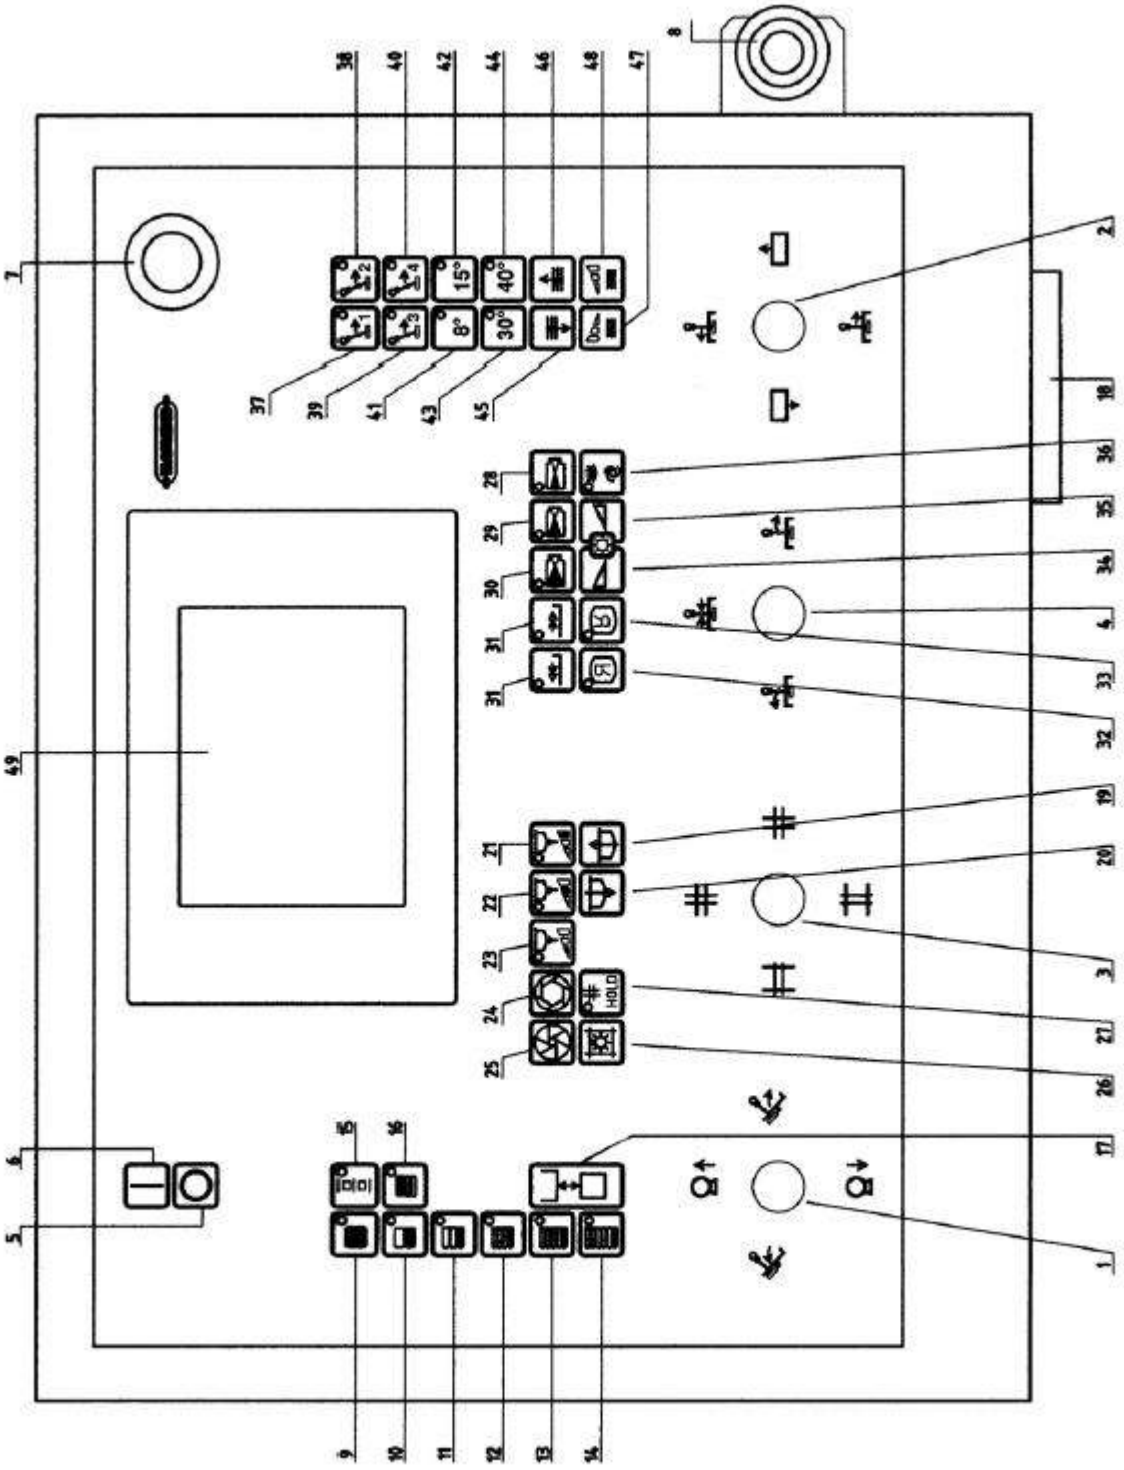
Fig.2



4.2.2 User's Instructions

The console controls the unit (fig. 2), but you can also operate by using the spot film device panel.

TURNING ON THE UNIT

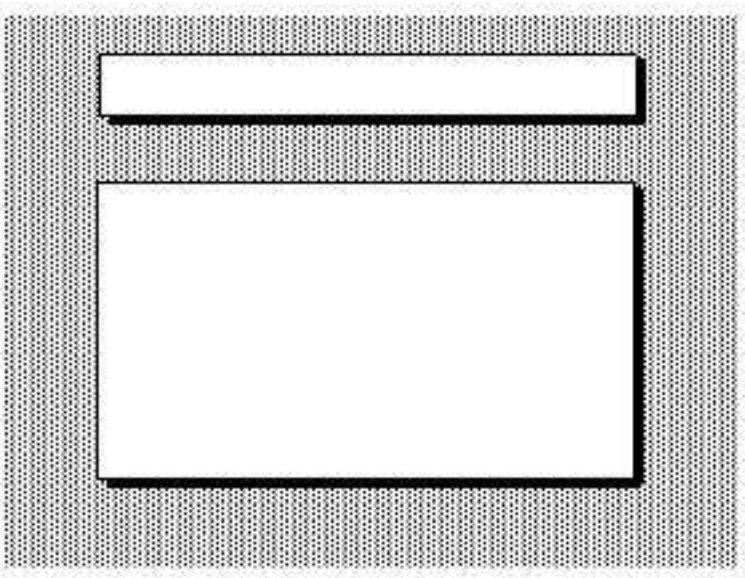
You can turn on the unit by means of the push button "6" which activates all movements after 20 seconds.

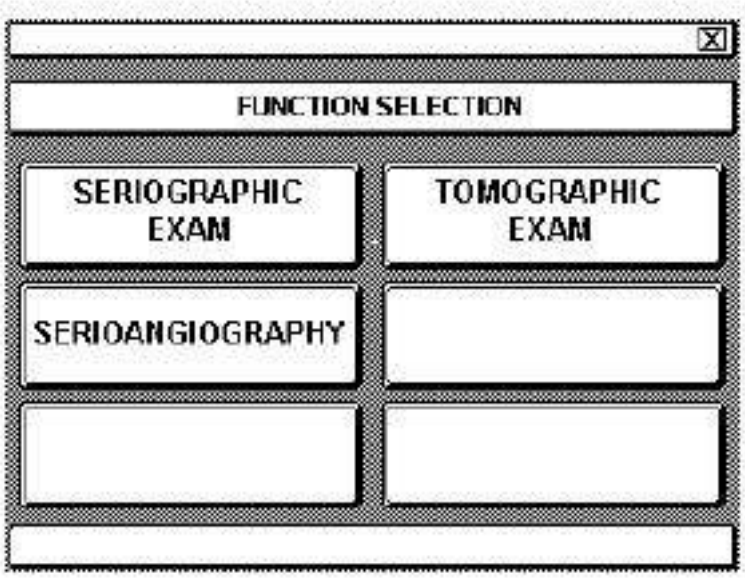
To turn OFF the unit use the push button "5"

You also have an emergency push button "7" located both on the console and laterally on the S.F.D. (= spot film device).

This push button deactivates all functions of the unit; in order to reactivate it you must turn OFF the unit and turn the emergency push button "7" in the sense of the arrows.

At this point you can perform all movements.





MOVEMENTS

- You can activate the controls by following the symbols on the console:
- Tilting (with horizontal stop position) and focal distance by means of joystick “1”
- Table top movement, S.F.D. and X-ray tube longitudinal movement by means of joystick “2”
- Inclination movement by means of joystick “4”
- Manual X-ray tube rotation by means of an-hooking lever located on the back of collimator.
- Compression movement by means of the push buttons: “19-20”.

To move the compressor you must first insert the compression cone.

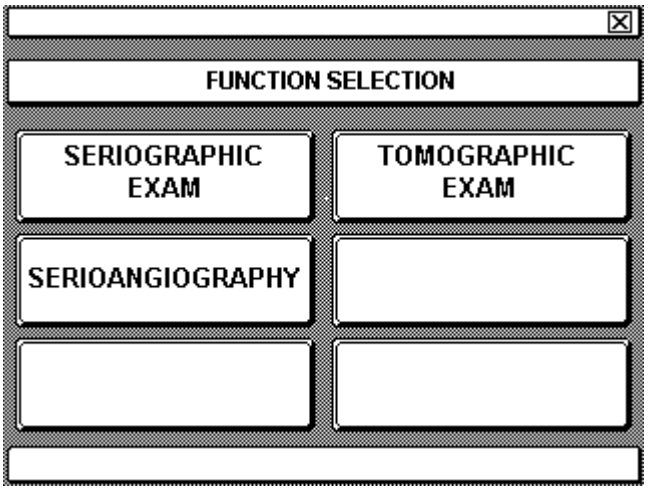
If the compressor is in the working area, it might prevent the movements of X-Ray tube (longitudinal movement, inclination) and of the tabletop.

If, during movements, the system finds itself in a probable collision situation, the unit will disenable the relevant movement, and the disturbing element should be removed from the probable collision situation.

RADIOGRAPHY WITHOUT SPOT FILM DEVICE

- Adjust the X-ray beam according to the cassette size by turning on centring light beam.

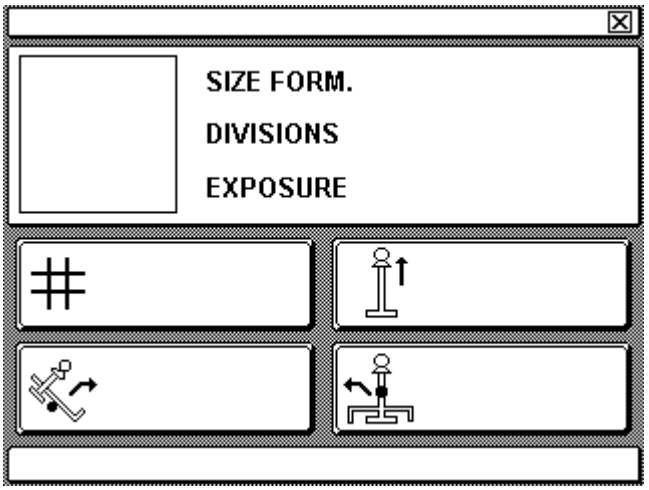
On the main screen menu you will find all system's functions divided into function groups.



The screen is divided into 3 parts concerning a single function:
- SPOT FILM DEVICE EXAMINATION
- TOMOGRAPHIC EXAMINATION
- SERIO ANGIOGRAPHY

You can enter various functions by means of "TOUCH SCREEN" panel.

SELECTION SPOT FILM DEVICE EXAMINATIONS



On the screen you will find the following parameters:

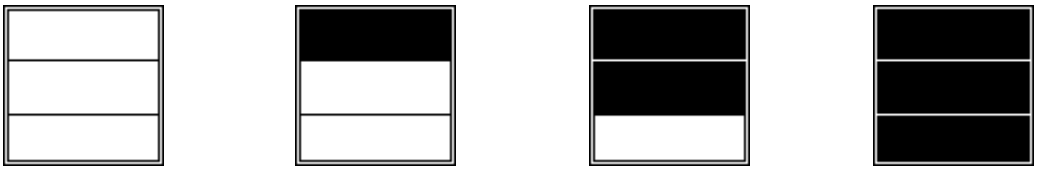
- **SIZE:**

Lateral x Longitudinal dimension in cm of inserted cassette.
In case you see some symbols, it means no cassette or format is inserted.

- **DIVISIONS:**

Normal/Fast.
(After having inserted cassette)
Selection is done by "15 Rapid Seriography " push button.
By pushing it once, you will read "Rapid" on the dial and the relevant led will turn ON.
To go to normal function, you must push once again "15 Rapid Seriography" push button.
If you push it once, on the dial you will read "Normal" and the push button led will turn OFF.

In order to select division (after having inserted a cassette), the leds of possible division push buttons will light up.
By pushing one push button, only the led concerning the possible division will stay lighted up and all the others will turn OFF.
In order to change the selected division, you must push again the push button, which has the led turned ON.
At this point all the possible divisions will be activated.
When you make radiographies, the graphic parts concerning the exposures you made, will become black.



- **EXPOSURES:**

Standard/Digital.
The selection is operated from the generator.

- **COLLIMATOR dial:**

Auto Collim./Hold Collim.
Pushing the dial on the touch screen panel operates the selection.

- **FFD dial:**

It displays the focal film distance in mm, from the absolute position of the focus of X-Ray tube to the X-Ray film.
You will then always have a positive value expressed in mm.
During inclination variations, the focal distance is kept unchanged, unlike tomography, which works with variable focal distances and variable speeds.

- **TILTING dial:**

Tilting angle in degrees, from the angular position of tabletop in comparison to floor level.
You will then have a positive value expressed in angular degrees (°) which, will be positive towards head-side and negative towards feet-side.
During inclination variations, the software activates some security blocks in order to avoid a collision with other components (such as image intensifier) and floor.

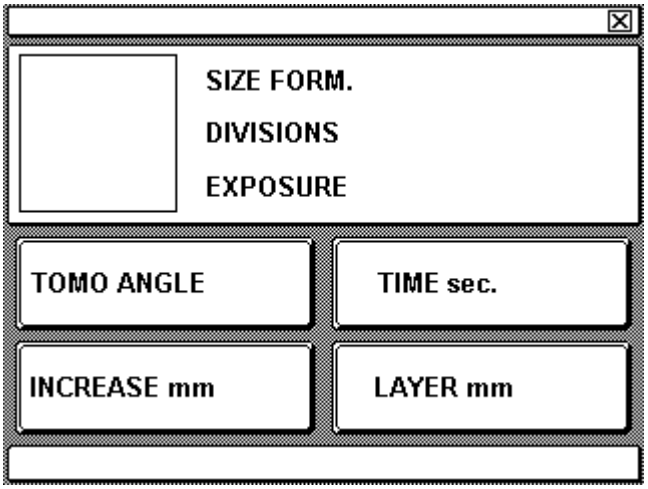
- **INCIDENCE dial:**

It shows the incidence angle in degrees from S.F.D. alignment angular position to X-ray tube column.
You will then have a value expressed in angular degrees (°) in comparison to the centre, which will be positive towards head-side and negative towards feet-side.
The maximum inclination is +/- 30°, except the case in which you have some limits due to the position of column or S.F.D. chariots.

- **SERIOGRAPHIC PROGRAM:**

Film	P	2	2D	3	3D	4	4D	5	5D	6
18-24	*	*		*						
18-43	*	*		*						
20-40	*	*		*		*				
24-18	*	*		*		*				
24-30	*	*		*		*				
30-24	*	*		*		*		*		
30-30	*	*		*		*		*		
30-40	*	*		*		*		*		
35-35	*	*		*		*		*		*
35-43	*	*		*		*		*		*
40-30	*	*		*		*		*		*
40-20	*	*		*		*		*		*
43-18	*	*		*		*		*		*
43-35	*	*		*		*		*		*

SELECTION TOMOGRAPHIC EXAMINATIONS



The following parameters appear on the display:

- **FORMAT:**

Lateral x Longitudinal dimension in cm of the inserted cassette.
In case you see some symbols, it means that any cassette or format is inserted.

- **DIVISIONS:**

Normal / Fast.
(After having inserted the cassette)
The selection is operated by the "15 Rapid Seriography " push button.
By pushing it once, you will read "Fast" on the dial and the relevant led will turn ON.
To return to the normal function, push once again "15 Fast Seriography " push button.
If you push it once, on the dial you will read "Normal" and the push button led will turn OFF.

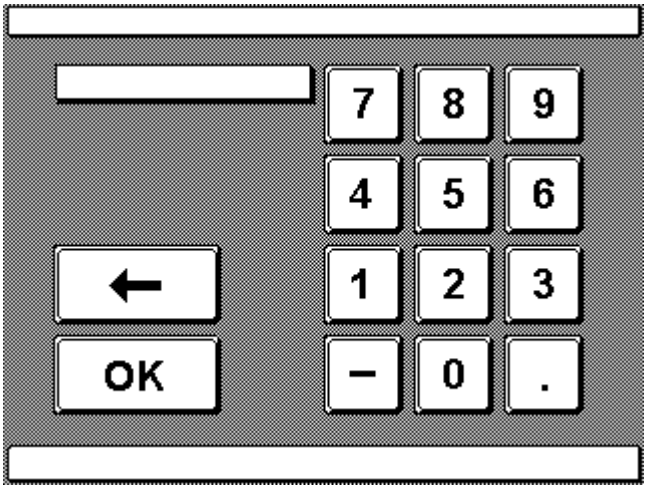
In order to select division (after having inserted a cassette), the leds of possible division push buttons will light up.
By pushing one push button, only the led concerning the possible division will stay lighted up and all the others will turn OFF.
In order to change the selected division, you must push again the push-button, which has the led turned ON.
At this point all the possible divisions will be activated.
When you make radiographies, the graphic parts concerning the exposures you made, will become black.

- **EXPOSURES:**

Standard / Digital.
Selection is made from the generator.

- **TOMO ANGLE dial:**

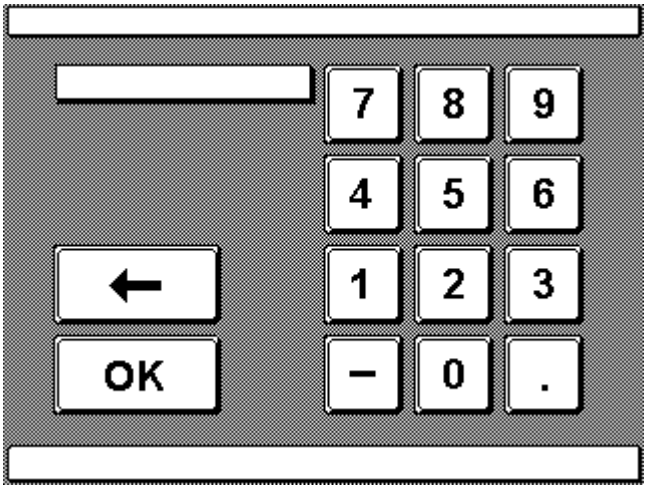
The Selection is made from the touch screen panel by pushing on the relevant dial, or by selecting the push buttons “41-42-43-44” (8°,15°,30°,40°) from the console.
By pushing on the touch screen panel you will see:



You can select all values included between 8 and 40°
After the selection you must press OK to confirm or ✍ to cancel the value.

- **mm. INCREASE dial:**

You can make it only from the bottom to the top.
The selection is made by pushing the relevant dial on the touch screen panel, or by choosing push buttons “47-48” on the console.
By using the touch screen panel you will see:



You can select a value between 0 and 25 mm
After the selection you must press OK to confirm or ✍ to cancel the value.

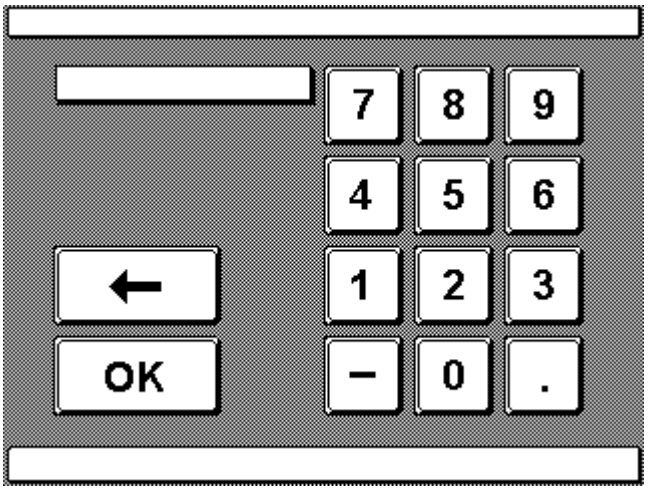
- **TIME sec. dial:**

The combination between tomography angle and speed determines exposure time
See the table below:

Angle	Speed 1	Speed 2	Speed 3	Speed 4
8°	0.8 sec.	0.6 sec.	0.5 sec.	0.4 sec.
15°	1.4 sec.	1.1 sec.	0.9 sec.	0.7 sec.
30°	2.9 sec.	2.2 sec.	1.7 sec.	1.5 sec.
40°	3.9 sec.	3.0 sec.	2.4 sec.	2.0 sec.

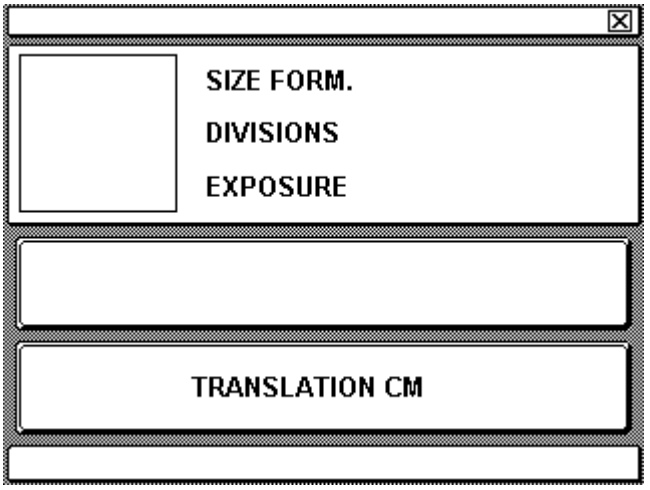
NOTE:
During a tomography the focus film distance changes.

The selection is made from the touch screen panel by pushing on the relevant dial, or by selecting push buttons “45-46” from the console.
By pushing on touch screen panel you will see:



You can select a value included between 001 and 300 mm
After the selection you must press OK to confirm or ✍ to cancel the value.

SELECTION SERIO ANGIOGRAPHY



The display shows the following parameters:

- **FORMAT:**

Lateral x Longitudinal dimension in cm of inserted cassette.
In case you see some symbols, it means that any cassette or format is inserted.

- **DIVISIONS:**

Normal / Fast.
(After having inserted cassette)
Selection is done by "15 Fast Seriography " push button.
By pushing it once, you will read "Rapid" on the dial and the relevant led will turn ON.
To return to normal function, you must push once again "15 Rapid Seriography " push button.
If you push it once, on the dial you will read "Normal" and the push button led will turn OFF.

In order to select division (after having inserted a cassette), the led of possible division push buttons will light up.
By pushing one push button, only the led concerning the possible division will stay lighted up and all the others will turn OFF.
In order to change the selected division, you must push again the pushbutton, which has the led turned ON.
At this point all the possible divisions will be activated.
When you make radiographies, the graphic parts concerning the exposures you made, will become black.

- **EXPOSURES:**

Standard / Digital.
Selection is made from the generator.

- **VENOUS ANGIOGRAPHY / ARTERIAL ANGIOGRAPHY dial:**

VEIN ANGIOGRAPHY

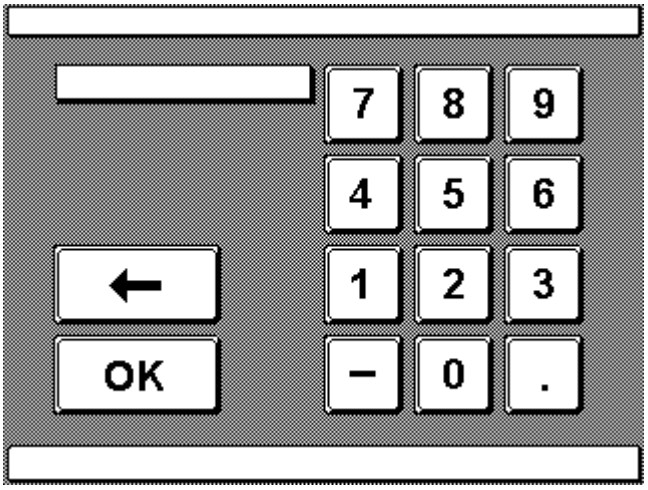
ARTERY ANGIOGRAPHY

The unit makes exposures by moving from feet-side to head-side.

The unit makes exposures by moving from the body towards feet.

- **TRANSLATION in cm dial:**

The selection is made from the touch screen panel by pushing on the relevant dial.
By acting on the touch screen panel you will see:



You can select a value included between 5 and 30 cm
After the selection you must press OK to confirm or ✍ to cancel the value.

- **IMAGE INTENSIFIER:**

You can have 1/2/3/4 zooms according to the Image Intensifier you have assembled.
If any I.I. zoom type is selected, the unit will be on the I.I. nominal field and the led of push buttons "28,29,30" will be turned OFF.
By pushing the "30" push button you activate the 1st zoom.
By pushing the "29" push button you activate the 2nd zoom.
By pushing the "28" push button you activate the 3rd zoom.

- **IMAGE INVERSION:**

By selecting the"32" push button you activate a horizontal image inversion on the monitor.
By selecting the "33" push button you activate a vertical image inversion on the monitor.

- **MONITOR BRIGHTNESS:**

You can adjust the monitor brightness by means of the "34,35"push buttons.

- **AUTOMATIC FLUOROSCOPY:**

Only for preset generators
Fluoroscopy automatic kV insertion

- **COMPRESSOR:**

By inserting a compression cone you can make compression by means of push buttons "19,20"
You can select the compression force by means of push buttons "21,22,23".
The Push button "21" is for maximum stroke
The Push button "22" is for medium stroke
The Push button "23" is for minimum stroke
If the compressor is in working position, the software will prevent some movements of the machine such as for instance: tilting, column, S.F.D., table top, etc.... in order to avoid risks to the patient. Removing the compression cone can reactivate all these movements.

- **COLLIMATOR LIGHT:**

By pushing the push button "26", the collimator light is activated for about 20 sec.
By pressing again on this push button "26", you turn it OFF.

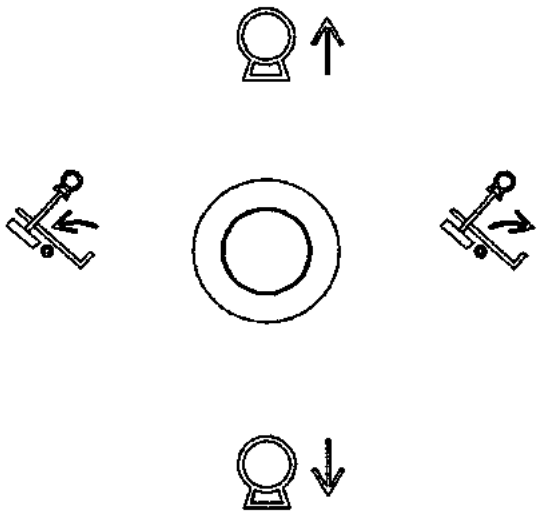
- **HOLD:**

By pushing the push button "27" you activate the Hold function.
The collimator's opening is automatic and depends on the Image Intensifier you have selected and on the cassette you have inserted in the S.F.D.
You can change the collimator's opening by means of joystick "3" (only size format reduction) during fluoroscopy.
When you make a graphy, the collimator automatically positions itself according to the cassette size; you can block this function by means of Hold pushbutton which, blocks collimator to fluoroscopy format.

- **IRIS:**

Optional
Round field collimator: you can change it by means of push buttons "24,25

- **JOYSTICK 1:**



1. TILTING control:

You can tilt the table from vertical to trendelemburg by means of joystick “1” with automatic stop in horizontal position.
The value given on the display shows the angular position of tabletop in comparison to the floor.
The value is expressed in angular degrees with positive sign (feet side inclination) or negative value (head side inclination). The maximum inclination is + 90°, -20° (KRISTAL 90/20) or +90°, -90° (KRISTAL 90/90).
Tilting is prevented in case I.I. position is critical in comparison to floor and in any case if focal distance exceeds cm 110.

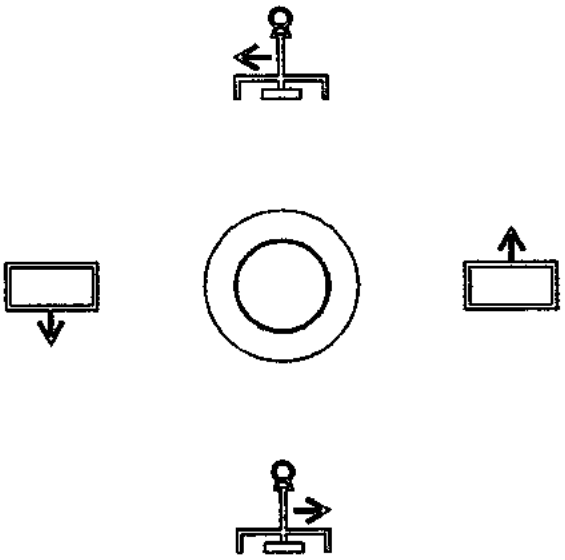
F.F.D. control:

This movement is controlled with the joystick “1”
This movement gives the distance in mm from the focus of X-ray tube position to X-ray film.

NOTE:

This movement is prevented in case its position is critical in comparison to ceiling.

- **JOYSTICK 2:**



2. X-RAY TUBE / SPOT FILM DEVICE control:

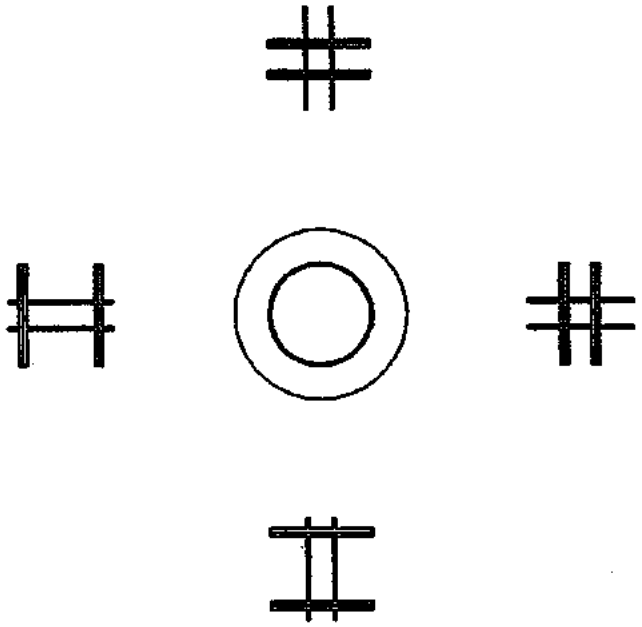
This movement is made from joystick "2".
Moving in patient's longitudinal direction.

NOTE:
This movement is prevented in case I.I. position is critical in comparison to floor.

TABLE TOP control:
This movement is made from joystick "2".
Moving in patient's transversal direction.

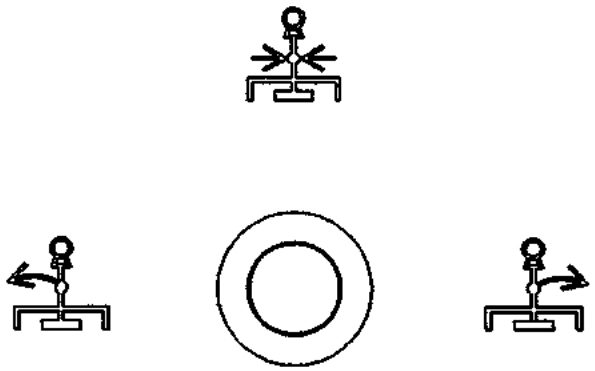
- **JOYSTICK 3:**

COLLIMATOR control:



Collimator opening is automatic and depends on I.I. selected type and the cassette inside the SFD.
You can vary collimator's opening by means of joystick "3" (only size format reduction) during fluoroscopy.
When you make graphy collimator automatically positions itself to cassette size.

- **JOYSTICK 4:**



TUBE ANGULATION control:
This movement is controlled by constantly holding joystick "4"(without releasing it)
The maximum travel is +/- 30° except limitations due to column or SFD trolleys position.
The value is expressed in angular degrees with positive sign if the inclination is towards head-side, or negative sign if the inclination is towards feet-side. The inclination is +/- 30°.

By moving the joystick towards the upper part, you reach the X-ray centre position.
The display will show a value of 0°.

During inclination variations the focus film distance changes.

- **X-RAY CONTROL:**

Pressing the double release push button “8” allows to take X-rays.
- 1st stepping: Preparation
- 2nd stepping: Graphy

RAPID SERIOGRAPHY:
If you make a rapid seriography exposure, the two stepping must be kept pushed until the whole exposure is completed.
When graphy is finished, the cassette is automatically ejected.

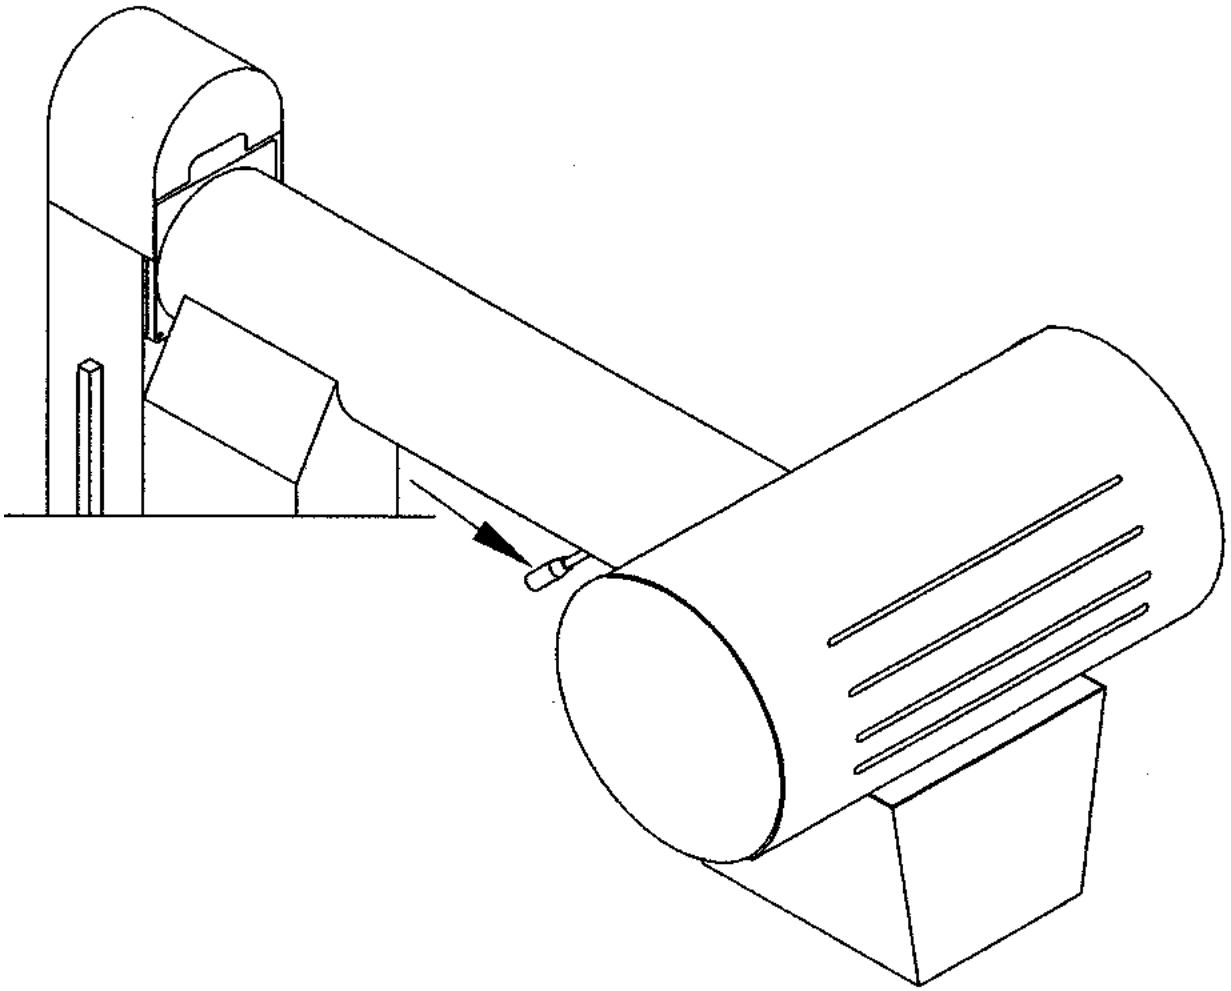
TOMOGRAPHY:
After having set: the ANGLE, SPEED, LAYER and INCREASE parameters, you can perform a tomography exposure by pressing the double release push button “8“.

NOTE:
You must release double release push button “8“ only when the exposure is finished in order to let the column replace itself.
In case you make rapid tomography, both stepping must be kept pushed until the whole program series are completed.

SERIOANGIOGRAPHY:
After having set: ARTERY, VENOUS and TRANSLATION parameters, you can take exposure by pressing the double release push button “8“.
The two stepping must be kept pressed until the beginning of translation movement.
In case you make rapid sequence, both stepping must be kept pushed until the whole program is completed.

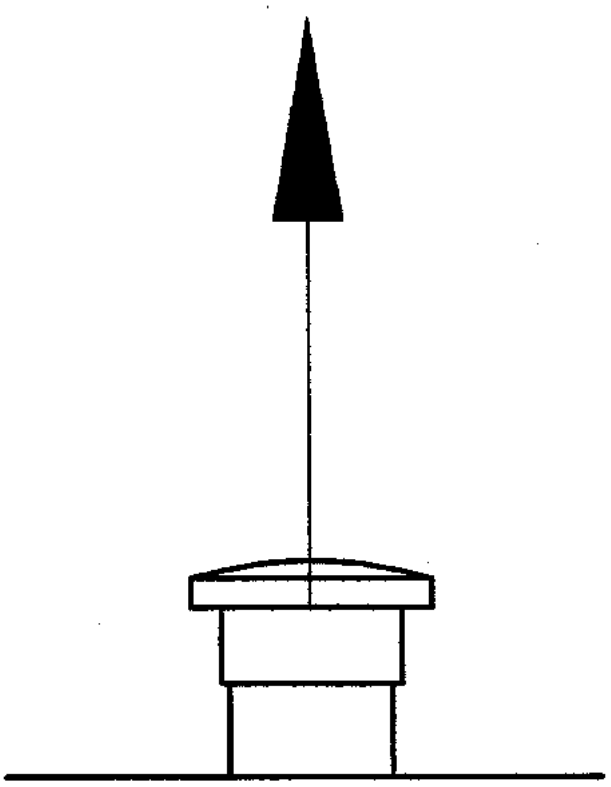
- **EXPOSURE WITHOUT SPOT FILM DEVICE:**

If you rotate the X-ray tube without blocking it with its lever, you cannot use the graphy “8” and the Fluoroscopy “18” keys from the console.
Display lower dial will indicate TUBE ROTATION ERROR.
Direct radiography can be made anyway from the generator.



- **EMERGENCY PUSH BUTTONS**

By pushing an emergency push button, you deactivate the system movements and the X-ray control.
The console is still active, you will see an alarm message and an acoustic sign will indicate emergency.
Display lower dial will show:
EMERGENCY PUSH BUTTON PRESSED
To unblock it you must pull it upwards.



4.2.2 Error messages

✍✍Errors of the functioning parameters loading

- COLUMN and / or SPOT FILM DEVICE SETTING ERROR
- TILTING SETTING ERROR
- FOCUS FILM DISTANCE SETTING ERROR
- TABLE TOP SETTING ERROR
- COMPRESSOR SETTING ERROR
- IMAGE INTENSIFIER SETTING ERROR
- FRICTION SETTING ERROR
- COLLIMATOR SETTING ERROR
- PARAMETRS LOADING ERROR

✍✍Anomalies of movement implying to restart the unit

- EMERGENCY PUSH BUTTON PRESSED
- COLUMN END-STOP ANOMALY
- SPOT FILM DEVICE END-STOP ANOMALY
- TILTING END-STOP ANOMALY
- MOTORS END-STOP ANOMALY

✍✍Movement Errors

- MAX FFD END-STOP ANOMALY
- MIN FFD END-STOP ANOMALY
- INT. TABLE TOP END-STOP ANOMALY
- EXT. TABLE TOP END-STOP ANOMALY

✍✍Performance Errors

- TOMOGRAPHY OUT OF SET POINT
- ANGIOGRAPHY OUT OF SET POINT
- ROTATION TUBE ERROR

✍✍Communication Errors

- CVS22 COMMUNICATION ERROR
- CAN COMMUNICATION ERROR
- SPOT FILM DEVICE ERROR

NOTES

NOTES

NOTES

NOTES

NOTES

4.3 PATIENT POSITIONING

It must be determined each time.
First of all verify the physical condition of the patient.
Use of a shoulder rest is available depending on the type of examination.
You can fasten him by means of the compression band.
The patient may have access to the tabletop in both positions: vertical and horizontal.
The patient must hold the handles mounted on the tabletop.
Carefully position the patient in the middle of tabletop.
Now you can position all the system according to the type of examination.
At the end release the patient following the above-mentioned instruction in the opposite way.

4.5 GUARANTEE

The validity of DMS-APELEM guarantee is 12 months from certificate receipt date and it covers mending or free replacement of spare parts as well as handwork (except for the unload tubes which have a warranty in proportion to 12 months).

DMS-APELEM warranty is not valid for operations and mending caused by externals factors:

- Fire, explosion, floods, subsidence of buildings,
- Default of the device relative to the environmental conditions,
- Non respect or non observance of the prescriptions given by the manufacturer in the User manual,
- Operations or mending carried out by a staff non qualified and non-agreed by DMS-APELEM.

5.1 MAINTENANCE

The Program of maintenance must ONLY be carried out by technically prepared and authorized personal.

- First maintenance: 90 days from installation
- Second maintenance: One year from installation
- Following: Every year

The use and environmental conditions can modify this default maintenance program.

During maintenance you must check:

- The closing of the screws of the base
- All the sliding parts including the chromed rails
- All moving parts (belts and chains)

IN CASE ONE OF THESE PARTS IS WEARED OR HAS ANY FAULT, YOU MUST REPLACE OR ADJUST IT.

Check the correct centring of the X-ray beam and adjust it as it is indicated in paragraph 7 (X-Ray Collimator)

Our Service Department is at your complete disposition for programmed interventions or direct calls.

Malfunctions:

If malfunctions are detected the operator must inform immediately the service department.

A detailed description of the malfunctions and anomalies is recommended.

Avoid to use the system in case dangerous conditions are detected.

Contact as soon as possible the technical service, which is at your whole disposition for intervention or suggestions.

Telephone number for Service & maintenance: **00 33 (0)4 66 29 09 07**
Fax number for Service & maintenance: **00 33 (0)4 66 29 71 23**

WARNING: Before performing any intervention, always switch the unit off. Moreover, pay special attention to the sliding bearings of the transversal movement of table top.

Page intentionally left blank

5.2 CLEANING

Before reading these instructions, check par.2.7 concerning required environmental conditions.

The cleaning must always be performed at regular intervals, keeping the unit in horizontal position.

Every day clean all parts that are in a close contact with the patient, using a cleaning product approved in your country by the Health Ministry.

Every week clean the painted metallic parts, the chromed sliding profiles using non aggressive cleansers.

Do not position near the unit items that might damage it, or interfere with its functioning.

Use cleaning products properly avoiding to let them penetrate inside the unit.

In case you note any leakage, please inform your technical assistance.

Page intentionally left blank

5.3 DISPOSAL

This unit contains parts, which can be recycled or re-used.

At the end of the operating life of the unit, contact specialized companies, which will exploit all the materials and will reduce to the minimum, parts to be eliminated.

The unit does not contain polluting materials, except the lead of the diaphragm.

In case you meet problems, call our technical assistance, which will give you information to know the procedures for disposal.

In any case, follow carefully the regulations of your country.

6.8. INTERFACE 1 SIGNAL DESCRIPTION

Outputs:

PREPERATION: Active when first step of the X-ray pushbutton is pressed

XRAY REQ: Active when second step of the X-ray pushbutton is pressed, collimator and SFD shutters are in good position and GEN READY input is on.

AUTOMATIC FLUORO: Active when Automatic fluoro console key is on.

ZOOM 1: Active when second magnification field is selected on the console

ZOOM 2: Active when third magnification field is selected on the console

ZOOM 3: Active when fourth magnification field is selected on the console

PREPERATION: Active when first step of the X-ray pushbutton is pressed

X-RAY REQ: Active when second step of the X-ray pushbutton is pressed, collimator and SFD shutters are in good position and GEN READY input is on

FLUORO: Active when fluoro pedal is pressed and collimator and SFD shutters are in good position

RX P.B. OUTPUT: Active each time the second step of the X-ray pushbutton is pressed without any control of collimator and SFD shutters position

DIGITAL ON: Active when DIGITAL REQ is on and SFD Carriage is in park position

TOMO ON: Active when Tomo function is selected on the remote control table

K13-K14-K15-K16 RESISTOR LADDER: These four relays are activated with a four bits binary sequence, K13 is the LSB and K16 is the MSB controlled by the brightness key on the console.
Is possible to create a digital potentiometer to adjust monitor brightness by choosing the right value of resistor R22-R19-R21-R24-R26.

Inputs:

GEN READY: When this input is off (Opto isolator led off) the remote control table cannot activate the XRAY REQ relay output.

X-RAY ON: The remote control table to know if exposure is done uses this input. If this input detect a lo to high transition (opto isolator led turn on),table know that the film is impressed. When detect a high to low transition (opto isolator led turn off), allow the SFD carriage to come back in park position, in normal seriograph mode, and to go to the next division in quick mode.

DIGITAL REQ: When this input is on (Opto isolator led on) SFD is disabled, the carriage goes automatically in park position and DIGITAL ON output relay is activated.

EXTERNAL LOCK: When this input is on (Opto isolator led on) all movement are disabled.

TUBE OUT OF POS: When this input is off (Opto isolator led off) XRAY REQ relay output is disabled

DFF CEILING SWITCH: When this input is on (Opto isolator led on) all movement are disabled but is possible to move down the tube stand.

INTERFACE 2 SIGNAL DESCRIPTION

Outputs:

HORIZZONTAL INV: Active when horizontal inversion is selected on the console

VERTICAL INV: Active when vertical inversion is selected on the console

FLUORO: Active when fluoro pedal is pressed and collimator and SFD shutters are in good position

TOMO ON: Active when tomo function is selected on the remote control Table

RX P.B. OUTPUT: Active each time the second step of the X-ray pushbutton is pressed without any control of collimator and SFD shutters position

ANGIO ON: Active when angio function is selected on the remote control table

ANGIO STEP: Active during automatic column and SFD movement in angio mode.

TOMO TIME1: Active in tomo mode if tomo time is less than 1 sec.

TOMO TIME2: Active in tomo mode if tomo time is between 1sec. and 2 sec.

TOMO TIME3: Active in tomo mode if tomo time is between 2sec. and 3 sec.

TOMO TIME4: Active in tomo mode if tomo time is greater than 3 sec.

BRIGHTNESS INC: Active for about 100mS each time brightness increment key is pressed on the console

BRIGHTNESS DEC: Active for about 100mS each time brightness decrement key is pressed on the console

6.9 FUSE LIST

HIGH VOLTAGE PANNEL:

- F1 fuse 5 x 20 5A F TR1 Supply
- F2 fuse 5 x 20 6,3A F 230B Auxiliary output
- F3 fuse 5 x 20 6,3A F 230A Auxiliary output
- F4 fuse 10 x 38 10A G Inverter 3G3JV Supply
- F16 fuse 10 x 38 10A G Main_Line Line 3
- F17 fuse 10x 38 10A G Main_Line Line 2
- F18 fuse 10x 38 10A G Main_Line Line 1
- F19 fuse 10x 38 10A G Main Neutral

LOW VOLTAGE PANNEL:

- F5 fuse 5 x 20 6,3A F 18Vac power supply for Safety board
- F6 fuse 5 x 20 3,15A F 18Vac Boards power supply for Micro switch, opto in/out and Console display
- F7 fuse 5 x 20 3,15A F 11Vac Boards power supply for Microprocessors, CAN bus and interface relay
- F8 fuse 5 x 20 3,15A F 24Vac Contactor coil
- F9 fuse 5 x 20 10A F 24Vac Collimator lamp
- F10 fuse 5 x 20 10A F FFD, Table, Cassette and Shutter motors power supply (pre rectifier)
- F11 fuse 5 x 20 10A F Compressor motor and clutch, Grid motor and Collimator motor power supply (pre rectifier)
- F12 fuse 5 x 20 3,15A F Column and S.F.D Brushless motor Break power supply (pre rectifier)
- F13 fuse 5 x 20 10A F FFD, Table, Cassette and Shutter motors power supply (post rectifier)
- F14 fuse 5 x 20 10A F Compressor motor and clutch, Grid motor and Collimator motor power supply (post rectifier)

- F15 fuse 5 x 20 3.15A F Column and S.F.D Brushless motor Break power supply (post rectifier)

SAFETY BOARD K901504:

- F1 fuse 5 x 20 3,15A T 18Vac power supply for opto in/out Switch-on and emergency
- F2 fuse 5 x 20 3,15A T 11Vac power supply for microprocessor and CAN bus power supply

MOT DRV1 K901505(FFD and TABLE motor control):

- F1 fuse 5 x 20 3,15A T 11Vac power supply for microprocessor
- F2 fuse 5 x 20 6.3A T 60Vdc power supply for bridge drivers

MOT DRV2 K901505(Compressor motor and Clutch control):

- F1 fuse 5 x 20 3,15A T 11Vac power supply for microprocessor
- F2 fuse 5 x 20 6.3A T 30Vdc power supply for bridge drivers

MOT DRV3 K901505(Cassette motor control):

- F1 fuse 5 x 20 3,15A T 11Vac power supply for microprocessor
- F2 fuse 5 x 20 6.3A T 60Vdc power supply for bridge drivers

MOT DRV4 K901505(Shutter motor control):

- F1 fuse 5 x 20 3,15A T 11Vac power supply for microprocessor
- F2 fuse 5 x 20 6.3A T 60Vdc power supply for bridge drivers

INTERFACE1 K901503:

- F1 fuse 5 x 20 3,15A T 18Vac power supply for opto in/out
- F2 fuse 5 x 20 3,15A T 11Vac power supply for microprocessor and relay coils

INTERFACE1 K901503:

- F1 fuse 5 x 20 3,15A T 18Vac power supply for opto in/out
- F2 fuse 5 x 20 3,15A T 11Vac power supply for microprocessor and relay coils

S.F.D. CONTROL K901506(grid and collimator motor control):

- F1 fuse 5 x 20 3,15A T 18Vac power supply for opto in/out
- F2 fuse 5 x 20 3,15A T 11Vac power supply for microprocessor
- F3 fuse 5 x 20 3.15A T 30Vdc power supply for bridge drivers

CONTROL PANEL K901501:

- F1 fuse 5 x 20 3,15A T 18Vac power supply

Per regolare luminosità:
- collegare ingresso del video su terminali 7-8
- tenere liberi tutti gli altri terminali
- chiudere i 4 jumper nella pos. 2-3

6.8. INTERFACE 1 SIGNAL DESCRIPTION

Outputs:

PREPERATION:	Active when first step of the X-ray pushbutton is pressed
XRAY REQ:	Active when second step of the X-ray pushbutton is pressed, collimator and SFD shutters are in good position and GEN READY input is on.
AUTOMATIC FLUORO:	Active when Automatic fluoro console key is on.
ZOOM 1:	Active when second magnification field is selected on the console
ZOOM 2:	Active when third magnification field is selected on the console
ZOOM 3:	Active when fourth magnification field is selected on the console
PREPERATION:	Active when first step of the X-ray pushbutton is pressed
X-RAY REQ:	Active when second step of the X-ray pushbutton is pressed, collimator and SFD shutters are in good position and GEN READY input is on
FLUORO:	Active when fluoro pedal is pressed and collimator and SFD shutters are in good position
RX P.B. OUTPUT:	Active each time the second step of the X-ray pushbutton is pressed without any control of collimator and SFD shutters position
DIGITAL ON:	Active when DIGITAL REQ is on and SFD Carriage is in park position
TOMO ON:	Active when Tomo function is selected on the remote control table
K13-K14-K15-K16 RESISTOR LADDER:	These four relays are activated with a four bits binary sequence, K13 is the LSB and K16 is the MSB controlled by the brightness key on the console. Is possible to create a digital potentiometer to adjust monitor brightness by choosing the right value of resistor R22-R19-R21-R24-R26.

Inputs:

GEN READY:	When this input is off (Opto isolator led off) the remote control table cannot activate the XRAY REQ relay output.
X-RAY ON:	The remote control table to know if exposure is done uses this input. If this input detect a lo to high transition (opto isolator led turn on),table know that the film is impressed. When detect a high to low transition (opto isolator led turn off), allow the SFD carriage to come back in park position, in normal seriograph mode, and to go to the next division in quick mode.
DIGITAL REQ:	When this input is on (Opto isolator led on) SFD is disabled, the carriage goes automatically in park position and DIGITAL ON output relay is activated.

EXTERNAL LOCK: When this input is on (Opto isolator led on) all movement are disabled.

TUBE OUT OF POS: When this input is off (Opto isolator led off) XRAY REQ relay output is disabled

DFF CEILING SWITCH: When this input is on (Opto isolator led on) all movement are disabled but is possible to move down the tube stand.

INTERFACE 2 SIGNAL DESCRIPTION

Outputs:

HORIZZONTAL INV: Active when horizontal inversion is selected on the console

VERTICAL INV: Active when vertical inversion is selected on the console

FLUORO: Active when fluoro pedal is pressed and collimator and SFD shutters are in good position

TOMO ON: Active when tomo function is selected on the remote control Table

RX P.B. OUTPUT: Active each time the second step of the X-ray pushbutton is pressed without any control of collimator and SFD shutters position

ANGIO ON: Active when angio function is selected on the remote control table

ANGIO STEP: Active during automatic column and SFD movement in angio mode.

TOMO TIME1: Active in tomo mode if tomo time is less than 1 sec.

TOMO TIME2: Active in tomo mode if tomo time is between 1sec. and 2 sec.

TOMO TIME3: Active in tomo mode if tomo time is between 2sec. and 3 sec.

TOMO TIME4: Active in tomo mode if tomo time is greater than 3 sec.

BRIGHTNESS INC: Active for about 100mS each time brightness increment key is pressed on the console

BRIGHTNESS DEC: Active for about 100mS each time brightness decrement key is pressed on the console

6.9 FUSE LIST

HIGH VOLTAGE PANNEL:

- F1 fuse 5 x 20 5A F TR1 Supply
- F2 fuse 5 x 20 6,3A F 230B Auxiliary output
- F3 fuse 5 x 20 6,3A F 230A Auxiliary output
- F4 fuse 10 x 38 10A G Inverter 3G3JV Supply
- F16 fuse 10 x 38 10A G Main_Line Line 3
- F17 fuse 10x 38 10A G Main_Line Line 2
- F18 fuse 10x 38 10A G Main_Line Line 1
- F19 fuse 10x 38 10A G Main Neutral

LOW VOLTAGE PANNEL:

- F5 fuse 5 x 20 6,3A F 18Vac power supply for Safety board
- F6 fuse 5 x 20 3,15A F 18Vac Boards power supply for Micro switch, opto in/out and Console display
- F7 fuse 5 x 20 3,15A F 11Vac Boards power supply for Microprocessors, CAN bus and interface relay
- F8 fuse 5 x 20 3,15A F 24Vac Contactor coil
- F9 fuse 5 x 20 10A F 24Vac Collimator lamp
- F10 fuse 5 x 20 10A F FFD, Table, Cassette and Shutter motors power supply (pre rectifier)
- F11 fuse 5 x 20 10A F Compressor motor and clutch, Grid motor and Collimator motor power supply (pre rectifier)
- F12 fuse 5 x 20 3,15A F Column and S.F.D Brushless motor Break power supply (pre rectifier)
- F13 fuse 5 x 20 10A F FFD, Table, Cassette and Shutter motors power supply (post rectifier)
- F14 fuse 5 x 20 10A F Compressor motor and clutch, Grid motor and Collimator motor power supply (post rectifier)
- F15 fuse 5 x 20 3.15A F Column and S.F.D Brushless motor Break power supply (post rectifier)

SAFETY BOARD K901504:

- F1 fuse 5 x 20 3,15A T 18Vac power supply for opto in/out Switch-on and emergency
- F2 fuse 5 x 20 3,15A T 11Vac power supply for microprocessor and CAN bus power supply

MOT DRV1 K901505 (FFD and TABLE motor control):

- F1 fuse 5 x 20 3,15A T 11Vac power supply for microprocessor
- F2 fuse 5 x 20 6.3A T 60Vdc power supply for bridge drivers

MOT DRV2 K901505 (Compressor motor and Clutch control):

- F1 fuse 5 x 20 3,15A T 11Vac power supply for microprocessor
- F2 fuse 5 x 20 6.3A T 30Vdc power supply for bridge drivers

MOT DRV3 K901505 (Cassette motor control):

- F1 fuse 5 x 20 3,15A T 11Vac power supply for microprocessor
- F2 fuse 5 x 20 6.3A T 60Vdc power supply for bridge drivers

MOT DRV4 K901505 (Shutter motor control):

- F1 fuse 5 x 20 3,15A T 11Vac power supply for microprocessor
- F2 fuse 5 x 20 6.3A T 60Vdc power supply for bridge drivers

INTERFACE1 K901503:

- F1 fuse 5 x 20 3,15A T 18Vac power supply for opto in/out
- F2 fuse 5 x 20 3,15A T 11Vac power supply for microprocessor and relay coils

INTERFACE1 K901503:

- F1 fuse 5 x 20 3,15A T 18Vac power supply for opto in/out
- F2 fuse 5 x 20 3,15A T 11Vac power supply for microprocessor and relay coils

S.F.D. CONTROL K901506 (grid and collimator motor control):

- F1 fuse 5 x 20 3,15A T 18Vac power supply for opto in/out
- F2 fuse 5 x 20 3,15A T 11Vac power supply for microprocessor
- F3 fuse 5 x 20 3.15A T 30Vdc power supply for bridge drivers

CONTROL PANEL K901501:

- F1 fuse 5 x 20 3,15A T 18Vac power supply

8.4 COLLIMATOR SET-UP

The set up has been already made in the factory, for this reason it must be done only and exclusively if you must move or replace a component inside the collimator.

```
******* COLLIMATOR SETUP MENU ******

STEP 01 - Has the Focal Distance
      (FFD) been set

01 - YES
02 - NO
03 - VIEW OF SAMPLED PARAMETERS
10 - EXIT FROM COLLIMATOR SETUP
```

NOTE: AFTER HAVING CONFIRMED THE FIRST STEP OF SAMPLING, IT IS BETTER TO COMPLETE THE WHOLE PROCESS.
- SAMPLING IS CORRECTLY MADE ONLY IF THE SETTING OF FFD POTENTIOMETER HAS ALREADY BEEN MADE.

By key "1", you enter next page
By key "2" you exit from the whole SET UP program and you restart the unit.
By key "3" you can visualize the sampled data without modifying them.
By key "10" you EXIT

```
******* COLLIMATOR SETUP MENU ******

STEP 02 - Select the type of
      calibration

01 - AUTOMATIC CALIBRATION
02 - OFFSET COLLIMATOR
10 - EXIT FROM COLLIMATOR SETUP
```

In this phase you can choose to continue normal set up procedure or enter directly the offset collimator page
By key "1", you enter automatic calibration
By key "2" you enter directly in the offset collimator page
By key "10" you EXIT

```
******* COLLIMATOR SETUP MENU
******

STEP 03 - Automatic Calibration of
          completely closed
          Collimator

10 - EXIT FROM COLLIMATOR SETUP

Wait Time    : ######mS
Long ADC Val : ####
Latr ADC Val : ####
```

In this phase of sampling the collimator will automatically close the shutters till the minimum dimension.

```
******* COLLIMATOR SETUP MENU ******

STEP 04 - Automatic Calibration of
        all open Collimator

10 - EXIT FROM COLLIMATOR SETUP

Wait Time    : ######mS
Long ADC Val :
Latr ADC Val :
```

In this phase of sampling the collimator will automatically open the shutters to the maximum dimension.

```
******* COLLIMATOR SETUP MENU ******

STEP 05 - Shift of the focal
        distance to 1500mm
STEP 06 - By JOYSTICK 2, place the
        Collimator with
        300mm X 300mm focus

01 - SAVE MINIMUM PARAMETER
10 - EXIT FROM COLLIMATOR SETUP

 Long ADC Val : ####
 Latr ADC Val : ####
```

In this phase of sampling the FFD will automatically place itself to 1500mm, once this position has been reached, by means of joystick you can place the collimator shutters so that at film height, the square illuminated field has a dimension of 300mm x 300mm.
By key "1" you enter next page.

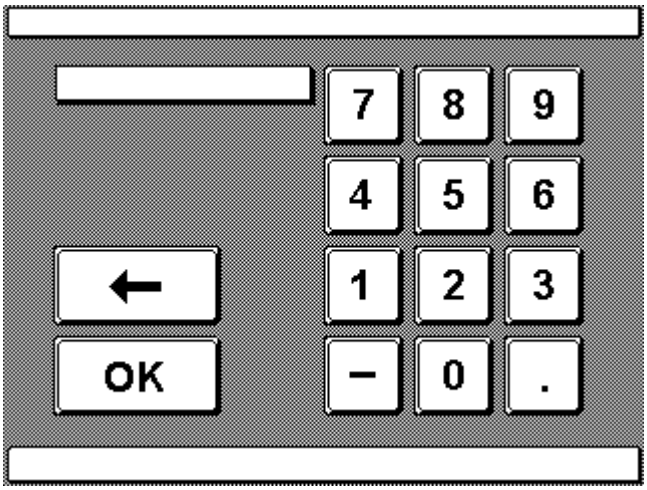
```
******* COLLIMATOR SETUP MENU ******

STEP 07 - Shift of the focal
        distance to 1050mm
STEP 08 - By JOYSTICK 2, place the
        Collimator with
        300mm X 300mm focus

01 - SAVE MAXIMUM PARAMETER
10 - EXIT FROM COLLIMATOR SETUP

Long ADC Val : ####
Latr ADC Val : ####
```

In this phase of sampling the FFD will automatically place itself to 1050mm, once this position has been reached, by means of joystick you can place the collimator shutters so that at film height, the square illuminated field has a dimension of 300mm x 300mm.
By key "1" you enter next page.



Press ok

```
**********************************
******* COLLIMATOR SETUP MENU ******

8.5 S.F.D. (=SPOT FILM DEVICE) SET-UP

The set up has been already made in the factory, for this reason it must be done only and exclusively if you must move or replace a component inside the Spot Film Device.

```
************************************
******** S.F.D. SETUP MENU *********
************************************

01 - SHUTTER SETUP
02 - CASSETTE SETUP
03 - CASSETTE EJECT
04 - VIEW OF SAMPLED PARAMETER
10 - EXIT FROM SETUP
```

NOTE: ONCE YOU'VE ENTERED THE SHUTTER AND CASSETTE SET UP, IT IS BETTER TO COMPLETE THE WHOLE SAMPLING PROCESS.
By key "3" you visualize the sampled data without modifying them.
By key "10" you EXIT.

01 – SHUTTER SETUP

```
**** S.F.D. SETUP MENU - SHUTTER ***

STEP 01 - SHUTTER Calibration.
        Wait the end of search
        of ZERO point

10 - EXIT FROM SHUTTER SETUP
```

Wait that the Shutters activate FC16 “Zero Shutter” end stop micro.
By pressing key “1”you enter next page.

```
**** S.F.D. SETUP MENU - SHUTTER ***

STEP 02 – Wait the end of SHUTTER
        Positioning to 3000 feet
STEP 03 – Measure the distance
        Covered by SHUTTERS

01 - RUN INSERTION");
10 - EXIT FROM SHUTTER SETUP
```

By pressing key “1” you insert the real measure between the two, obtained by the difference of the initial distance (Zero Shutter FC16 PRESSED) to the final one (SHUTTER positioning to 3000 feet).

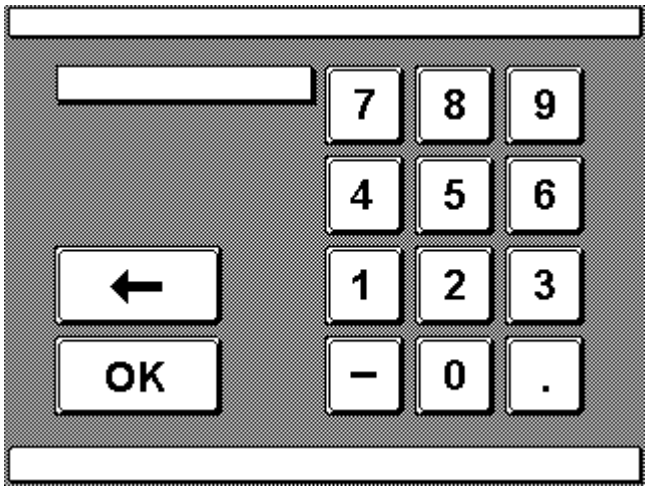
Press OK

```
**** S.F.D. SETUP MENU - SHUTTER ***

STEP 04 - Wait SHUTTERS positioning
        to 40mm
STEP 05 - Measure the difference
        with the real 40mm

01 - OFFSET INSERTION
10 - EXIT FROM SHUTTER SETUP
```

Wait that the Shutters place at a distance of 40mm between themselves.
If the distance does not correspond to 40 mm, by pressing key “1” you insert the difference between the real quote and the 40 mm.



Press OK

```
************************************
******** S.F.D. SETUP MENU *********
************************************

SHUTTER  - S.F.D. SAMPLED DATA :
OFFSET mm : ###
RUN    mm : ###

CASSETTE - S.F.D. SAMPLED DATA :
OFFSET mm : ###
RUN    mm : ###
```

02 – CASSETTE SETUP

```
*** S.F.D. SETUP MENU - CASSETTE ***

STEP 01 - CASSETTE calibration.
        Wait the end of search
        of ZERO point

10 - EXIT FROM CASSETTE SETUP
```

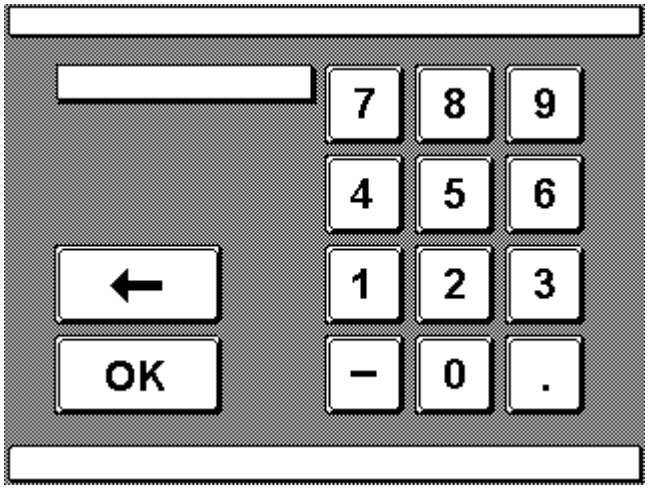
Wait that the cassette activates FC14 “Parked Cassette” end stop micro.
By pressing key “1”you enter next page.

```
*** S.F.D. SETUP MENU - CASSETTE ***

STEP 02 - Wait the end of CASSETTE
          positioning to 8000 steps
STEP 03 - Measure the distance
          Covered by the CASSETTE

01 - RUN INSERTION
10 - EXIT FROM CASSETTE SETUP
```

By pressing key “1” you insert the real measure, obtained by the difference from the initial position (FC14 Cassette Park) to the final one (CASSETTE Positioning to 8000 steps).



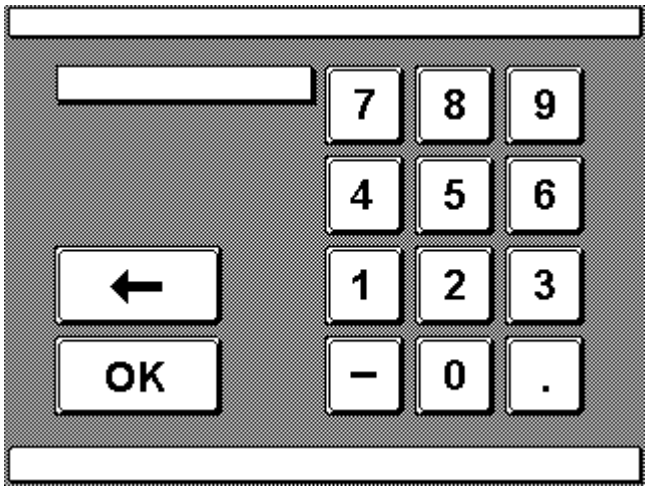
Press OK

```
*** S.F.D. SETUP MENU - CASSETTE ***

STEP 04 - Wait the CASSETTE
          Positioning to ZERO FILM
          Quote.(Edge of film)
STEP 05 - Measure the difference
          with ZERO film edge

01 - OFFSET INSERTION
10 - EXIT FROM CASSETTE SETUP
```

Wait that the Cassette places itself at ZERO FILM quote.
If the position does not correspond, by pressing key “1” you insert the difference between the real position and the ZERO FILM. (Zero film means film edge)



Press OK

```
************************************
******** S.F.D. SETUP MENU *********

8.6 ANTICOLLISION AND LANGUAGE SET UP

The set up has been already made in the factory, for this reason it must be done only and exclusively if you must move or replace any component (image intensifier, X-ray tube).

```
************************************
** ANTICOLLISION & LANGUAGE SETUP **
************************************

01 - CEILING HEIGHT
02 - I.I. OFFSET
03 - LANGUAGE
10 - EXIT MENU ANTICOLL. & LANGUAGE
```

01 – HEIGHT OF THE CEILING

```
***** ANTICOLLISION SETUP MENU *****

01 - CEILING H. SUPERIOR to 3mt
02 - CEILING.H. INFERIOR to 3mt

TYPE OF CEILING: ###. 3mt.
```

By pressing key “1” you select a limitation of a ceiling superior to mt.3
NOT LIMITED MACHINE
By pressing key “2” you select a limitation for a ceiling inferior to mt.3

02 – I.I. OFFSET

```
***** ANTICOLLISION SETUP MENU *****

01 - OFFSET I.I. 0 degrees
02 - OFFSET I.I. 1 degrees
03 - OFFSET I.I. 2 degrees
04 - OFFSET I.I. 3 degrees
05 - OFFSET I.I. 4 degrees
06 - OFFSET I.I. 5 degrees
07 - OFFSET I.I. POS/NEG

SET I.I. OFFSET: +#

10 - EXIT FROM ANTICOLLISION SETUP
```

By pressing keys “1/2/3/4/5/6” you select the limitation value.
By pressing keys “7” you select limitation offset is positive or negative.

01 – HEIGHT OF THE CEILING

```
************************************
********** SETUP LANGUAGE **********
************************************

01 - ITALIAN
02 - ENGLISH
03 - FRENCH

TYPE LANGUAGE: #########
```

By pressing keys “1” you select Italian language.
By pressing keys “2” you select English language.
By pressing keys “3” you select French language.

NOTE: the language selection is available for operator graphic interface; set up menu is always in English language.

NOTES

8.8 MECHANICAL ADJUSTING AND CENTRING

01 - Tube arm adjustment

02 - Tube rotation on column vertical axis adjustment.

03 - X-ray tube incidence adjustment.

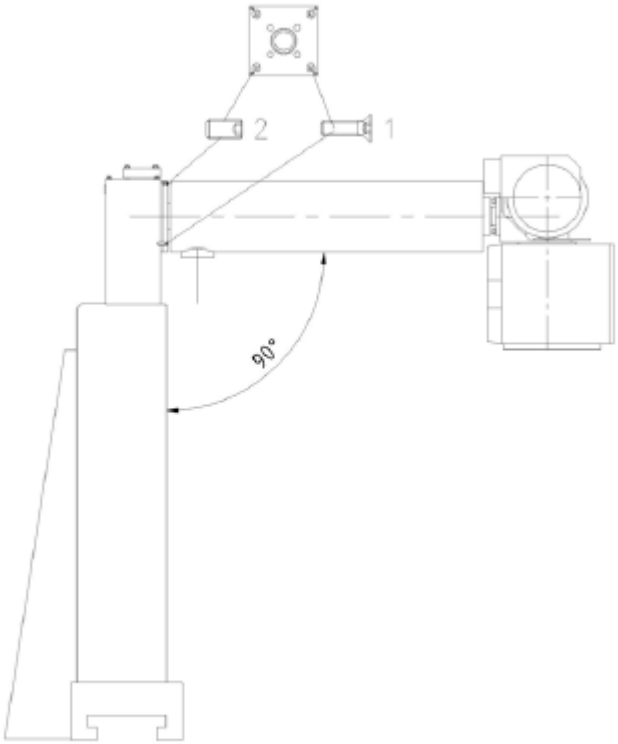
04 - X-ray tube transversal positioning

05 - SFD – Column centring alignment

06 - I.I. – SFD Centring

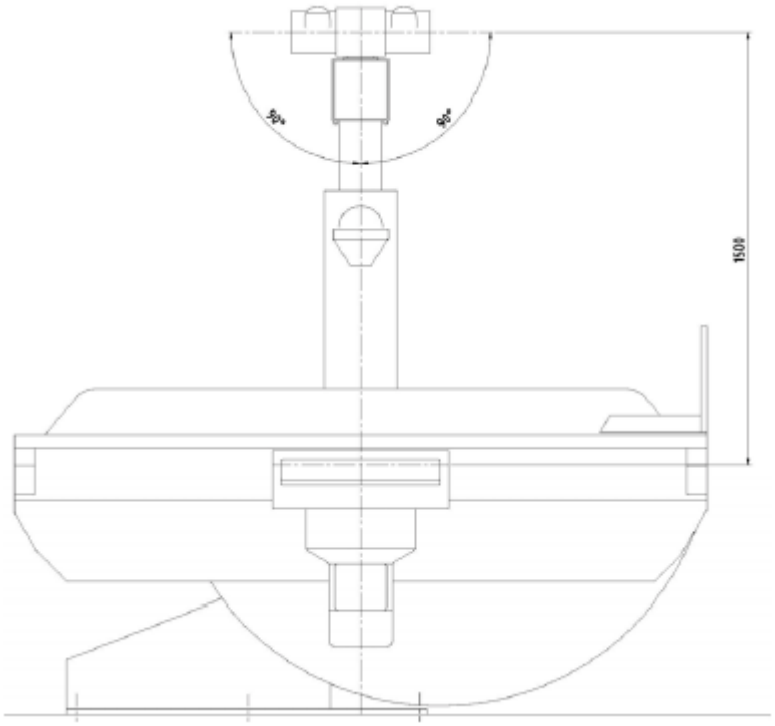
01 - X-ray tube arm Adjustment:

Adjust screws (1) and grains (2) to position tube arm at 90° in comparison to the column stand.

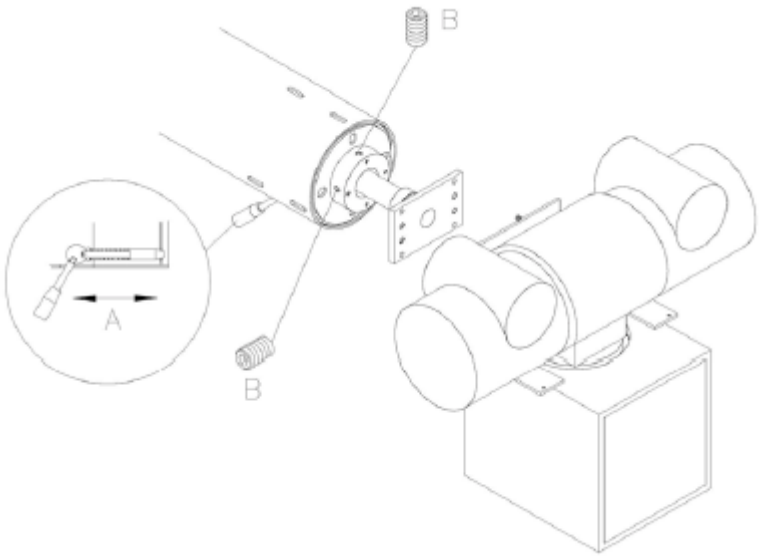


02 - X-ray tube rotation on column vertical axis adjustment:

Place the table in horizontal position. Check the perfect verticality of the column (centring at zero).

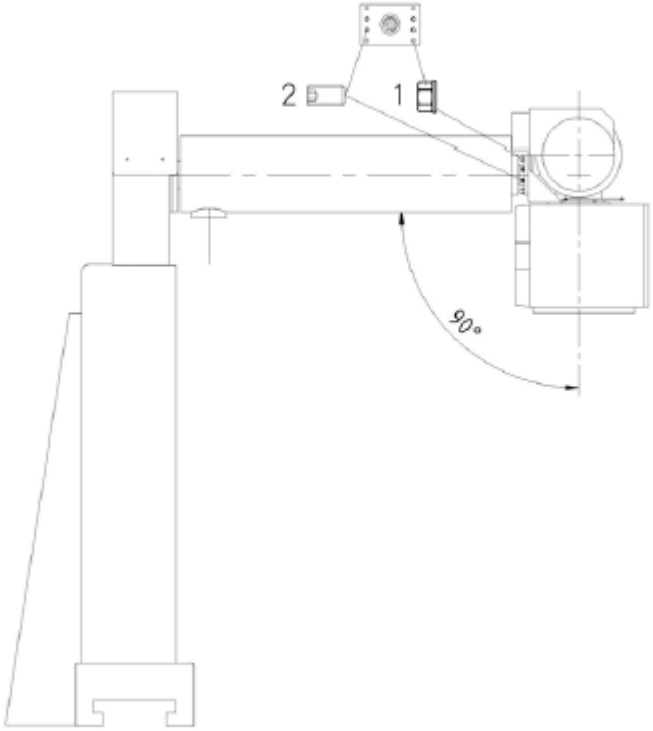


Make sure that handle (A) is inserted in working position and security micro is activated. Rotate X-ray tube till vertical position and block by grains (B).



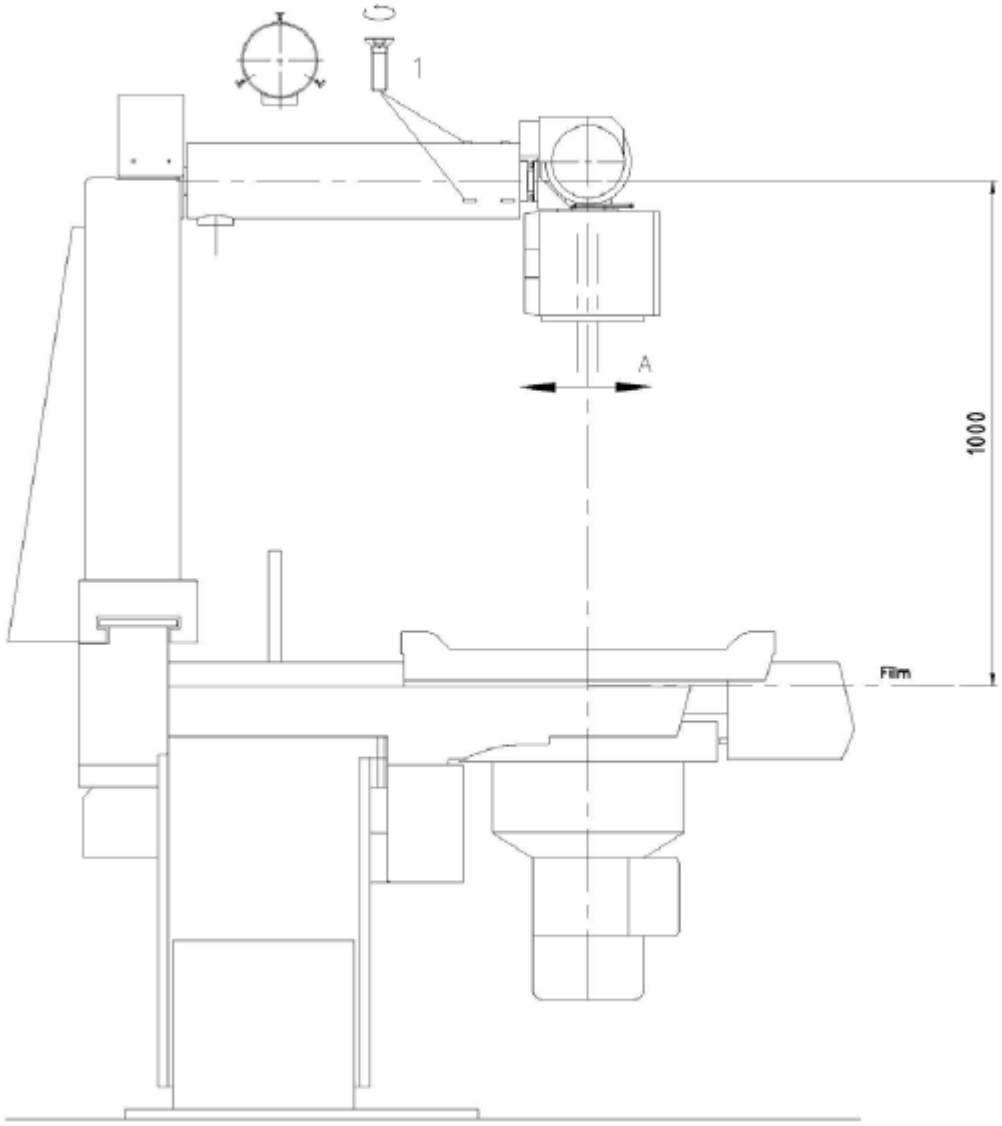
03 - X-ray tube incidence adjustment:

Adjust screws (1) and grains (2) to position X-ray tube at 90° in comparison to the tube arm.



04 - X-ray tube transversal positioning:

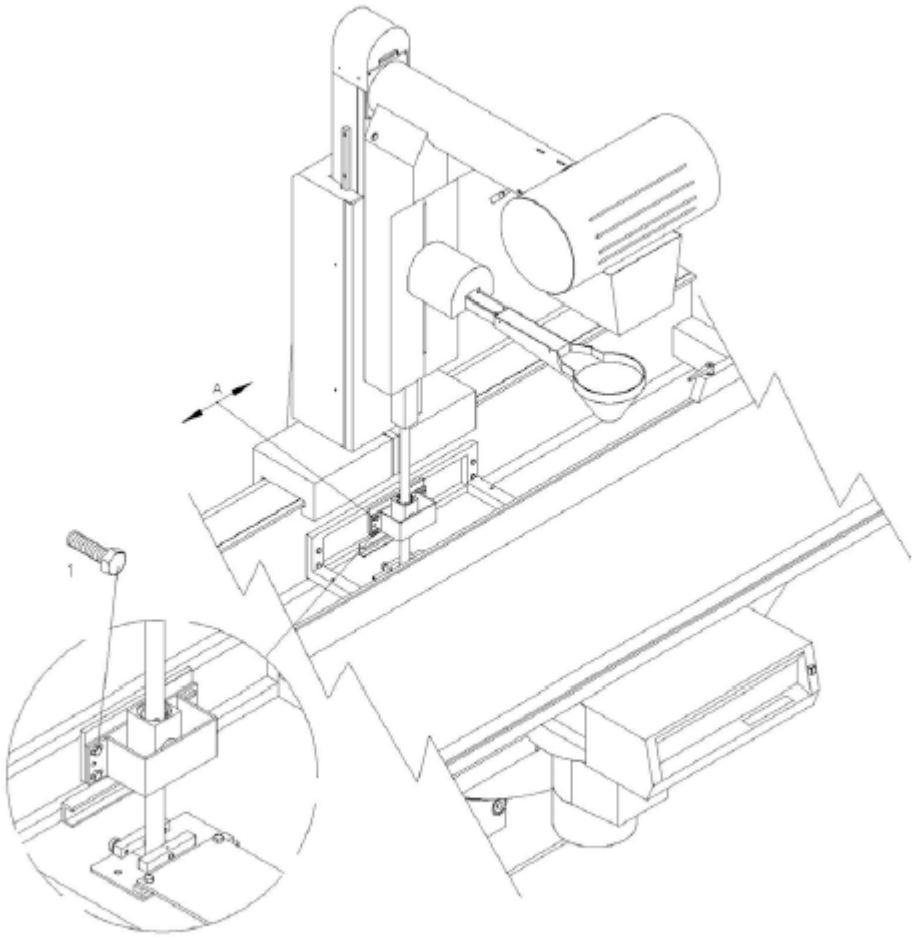
You need to place X-ray tube at the centre of SFD.
To make this adjustment, loosen screws (1), move X-ray tube as per figure and close.
Please recheck also X-ray tube incidence because these two adjustments have an influence on each other.



05 - Centring SFD on column:

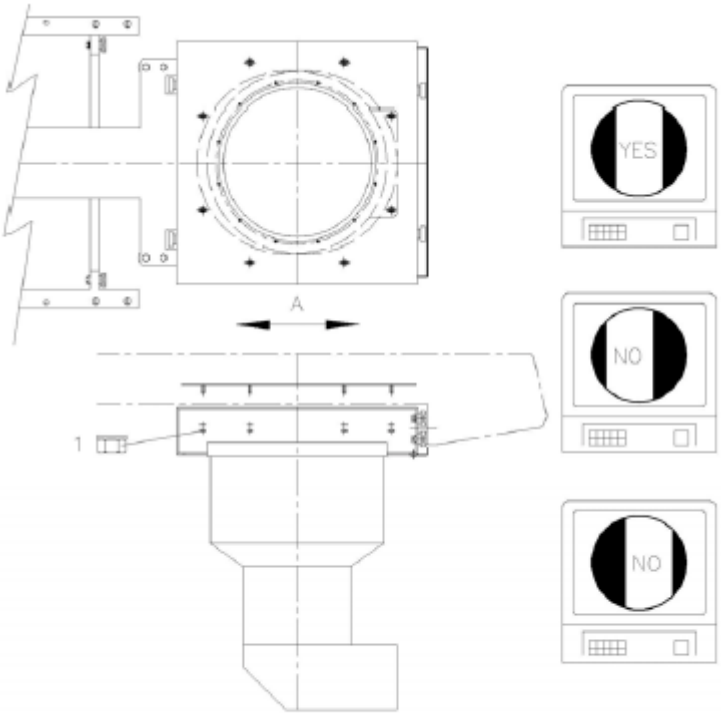
After having adjusted points: 01 – 02 – 03 – 04.

In order to align X-ray centre and SFD, you need to regulate SFD longitudinal adjustment by means of screws (1).



06 - I.I. – SFD centring:

In order to align fluoroscopy and graphy you need to centre I.I. on SFD.
Please follow this procedure:
Insert horizontally a cm 24x30 cassette in the SFD and set a program divided by 2. The SFD shutter will set itself at an opening of mm 14,3. If you make a scopy, you see a vertical band on the TV monitor. This band must be symmetrically at the centre of the monitor. If it's not, you must adjust as per figure (A) until you reach an optimal result.



P.S.

After completing all mechanical adjusting procedure (01-06), we suggest you to check that electronic collimator X-ray beam is well centred and aligned (see fluoroscopy and graphy and the light of X-ray field)

To optimize this centring and compensate any mechanical flexion of the equipment, we advise you to work at a tilting of 45°.
