

# General Electric Company

## 2019 Conflict Minerals Report

### Introduction

General Electric Company ("GE" or the "Company") has prepared this Conflict Minerals Report ("Report") for the year ended December 31, 2019, as provided for in Rule 13p-1 of the Securities Exchange Act of 1934, as amended, and Form SD (collectively, the "Conflict Minerals Rule"). GE manufactures a wide range of products that contain tin, tantalum, tungsten or gold ("3TG") but GE does not purchase ore or unrefined 3TG from mines and generally is many steps removed in the supply chain from the mining of these minerals. We purchase materials from a wide network of suppliers and rely on them to assist with our reasonable country of origin inquiry regarding the 3TG that are necessary to the functionality or production of products we manufacture. After performing our reasonable country of origin inquiry and due diligence for 2019, we have reason to believe that a portion of the 3TG used in our products may have originated in the Democratic Republic of the Congo or an adjoining country (collectively, the "Covered Countries") and may not be solely from recycled or scrap sources and we are therefore submitting this Report, which describes the due diligence we have performed pursuant to the Conflict Minerals Rule and our related processes and procedures.

This Report describes:

- the due diligence we performed for 2019, including the steps we took to mitigate the risk that 3TG in our products benefit armed groups;
- the products that we have reason to believe might contain 3TG originating from the Covered Countries; and
- information about the processing facilities and countries of origin of 3TG used in those products.

### Reasonable Country of Origin Inquiry and Due Diligence Process

#### Design of GE's due diligence measures

GE has adopted Conflict Minerals Guidelines (the "Guidelines") outlining the design of our 3TG due diligence process, based on our broader ethical supply chain program. The Guidelines describe procedures that each GE business is expected to use to perform due diligence on the origin and sourcing of 3TG contained in products we manufacture. The Guidelines conform in material respects to the OECD Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas including, the Supplement on Tin, Tantalum, and Tungsten and the Supplement on Gold (Third Edition) (the "OECD Guidance"), and the Guidelines are periodically reviewed and updated with enhancements to the due diligence program.

This description of due diligence measures refers to measures performed by GE Corporate and by the GE businesses. In July 2017, our legacy Oil & Gas business merged with Baker Hughes Incorporated, forming a new entity, currently known as Baker Hughes Company ("BKR") and in September 2019, we deconsolidated our BKR segment. In June 2018, we completed the sale of our Industrial Solutions business to ABB Ltd ("ABB") and

in February 2019, we completed the spin-off and subsequent merger of our Transportation segment with Wabtec Corporation (“Wabtec”). For due diligence measures information regarding our legacy BKR segment, the Industrial Solutions business and our legacy Transportation segment, please refer to the Form SD filings by each of BKR, ABB and Wabtec respectively. In April 2019, we completed the sale of GE Current to American Industrial Partners, and this Report includes due diligence measures related to the legacy GE Current business.

This description is presented pursuant to the organizational structure of the Five-Step Framework for Risk-Based Due Diligence in the Mineral Supply Chain contained in the OECD Guidance.

## **Step 1: Establish strong company management systems**

### **A. Adopt and commit to a supply chain policy for minerals originating from conflict-affected and high-risk areas**

The Guidelines contain the operative provisions of GE’s Statement on Conflict Minerals, which can be found on GE’s website, as well as the process for ensuring that risks are adequately managed. The Guidelines were created and disseminated by the Company’s 3TG Working Group (described below) and provide details for the execution of GE’s 3TG due diligence process, including guidance for situational decision making and escalation processes regarding supplier behavior. Additional GE policies that relate to the due diligence measures contained in the OECD Guidance are incorporated into GE’s code of conduct, *The Spirit & The Letter*, which can be found on GE’s website (for each of these materials, see “Where You Can Find Additional Information” below).

### **B. Structure internal management systems to support supply chain due diligence**

**3TG Working Group.** The Company has established a 3TG Working Group, which includes representatives from Corporate and each of the GE businesses, with representation from functions such as supply chain and legal. The 3TG Working Group meets regularly throughout the year, to discuss design and modification of the 3TG due diligence process (including potential enhancements to the due diligence program), share best practices among the businesses, and monitor progress of the 3TG due diligence process. The 3TG Working Group is also responsible for reviewing and implementing the Guidelines annually. In 2019, the 3TG Working Group took initial steps to expand our supply chain due diligence to include cobalt.

**GE Corporate.** GE’s Global Law & Policy organization has oversight responsibility for GE’s Statement on Conflict Minerals, including the establishment of processes and procedures to carry out this statement.

**GE businesses.** Each GE business has:

- established a system to support 3TG due diligence of its supply chain;
- documented that system in a written business program; and
- assigned responsibility for the execution of the business program to specific personnel.

**Internal reporting.** For 2019, GE Corporate used the following 3TG due diligence reporting mechanisms:

- **Reporting within GE businesses to sourcing leaders:** Each GE business conducted one or more reviews of its 3TG due diligence program with senior management within its sourcing organization, covering supply chain risks and efforts to achieve supply chain transparency; and
- **Communicating across GE businesses:** The Company’s 3TG Working Group held regularly scheduled meetings throughout the year, with representation from functions such as supply chain management, legal, and corporate responsibility.

### C. Establish a system of controls and transparency over the 3TG supply chain

**Identifying suppliers.** Each GE business identified:

- **Relevant Suppliers:** suppliers that provide inputs to GE products that are known or are likely to contain 3TG through a process that is based on an examination of internal records such as bills of material or other product specifications, a qualitative review of sourcing records, or information provided by the supplier; and
- **Significant Suppliers:** those suppliers within the universe of Relevant Suppliers that are most significant to GE's 3TG due diligence program, using criteria developed by each business, such as the amount of sourcing spend with the supplier.

**Identifying smelters and refiners in the supply chain.** Each GE business identified all smelters and refiners of 3TG that are first-tier suppliers to GE and used its best efforts to identify additional smelters and refiners by surveying Significant Suppliers, either directly or indirectly through an independent third-party supply chain expert, using the Responsible Minerals Initiative's ("RMI") Conflict Minerals Reporting Template ("CMRT"). The survey tools are designed to collect, manage and archive supplier information relevant for 3TG due diligence including, among other things, the identity of smelters or refiners ("SORs") of 3TG in each supplier's supply chain, as well as information concerning their related compliance efforts. Each GE business reviews supplier responses for completeness, accuracy and plausibility and follows up with Significant Suppliers whose survey responses are identified as having potentially incomplete or inaccurate information, in order to seek more complete information.

**Conducting a reasonable country of origin inquiry ("RCOI").** In connection with our due diligence, we utilize and rely on information made available through the Responsible Minerals Assurance Process ("RMAP") administered by RMI, concerning independent third-party audits of smelters and refiners to assess smelter and refiner due diligence and to identify countries of origin. Where the data showed that ores utilized by one or more of these smelters or refiners were potentially sourced from a Covered Country, GE concluded that there is reason to believe that 3TG from the Covered Countries may be present in the products for which such smelters or refiners were reported as potentially in the supply chain. Due to business confidentiality and other competitive concerns, as recognized by the OECD Guidance, the RMI does not publish detailed information on specific mines and location of origin of ores that supply the SORs subject to verification reviews. Consequently, no such information is provided in this Report. RMI's efforts to determine such information is described on the RMI website (see "Where You Can Find Additional Information" below). In addition, certain Significant Suppliers provided CMRTs with mine or location of origin information, and that information was also included in our RCOI.

**Records retention.** We have a records retention policy providing for the maintenance on a computerized database of business records relating to 3TG due diligence, including records of due diligence processes, findings and resulting decisions, for at least five years.

### D. Strengthen company engagement with suppliers

**Regular communications.** GE regularly communicates its expectations on responsible supply chains of 3TG by transmitting surveys and other communications from the sourcing organizations of the GE businesses to Significant Suppliers and other Relevant Suppliers. In addition, we encourage our suppliers to participate in training on GE's 3TG due diligence program and other appropriate third-party training to enhance the accuracy and quality of the information that suppliers provide to us.

**Contractual obligations.** Each GE business has standard vendor terms and conditions that contractually obligate all suppliers to (1) adopt policies and establish systems to procure 3TG from sources that have been verified as conflict free; and (2) provide supporting data on their 3TG supply chains to GE when requested, on a platform to be designated by GE. These obligations are reflected in GE's *Integrity Guide for Suppliers, Contractors and Consultants* ("Integrity Guide"), which can be found on GE's website (see "Where You

Can Find Additional Information" below). Purchase order and contract terms and conditions in use by GE businesses require suppliers to conform their behavior to the Integrity Guide, and generally provide GE with audit rights and the right to terminate the contract in the event of material non-compliance.

#### **E. Establish a company-level grievance mechanism**

**Integrity Guide.** The Integrity Guide provides multiple methods for suppliers and supplier personnel to raise concerns about matters that are subject to the Integrity Guide, including GE's expectations of suppliers regarding 3TG due diligence.

**Open reporting system.** Each GE business also has an open reporting system through which employees and third parties may report concerns about policy violations, including concerns related to our 3TG policies. Concerns can be reported anonymously or for attribution through several channels, including any compliance resource (e.g. GE legal counsel or auditor), by calling the GE Corporate Ombuds line at (800) 227-5003, or by emailing the GE Ombudsperson at [ombudsperson@corporate.ge.com](mailto:ombudsperson@corporate.ge.com).

**No retaliation.** Both the Integrity Guide and the open reporting system forbid retaliation against any person reporting an integrity concern.

### **Step 2: Identify and assess risks in the supply chain**

#### **A. Use best efforts to identify the smelters and refiners in the supply chain**

During 2019, using the processes described above under "Establish a system of controls and transparency over the 3TG supply chain," GE businesses identified 6,935 Relevant Suppliers (down from 8,453 in 2018), including 2,518 Significant Suppliers (down from 4,615 in 2018). These year-over-year changes are primarily the result of business dispositions described above under "Design of GE's due diligence measures". The businesses followed up with the Significant Suppliers that did not respond to the request within the specified time frame. The information was requested from each Significant Supplier multiple times by email and phone, to the extent the supplier continued to be non-responsive. Our Significant Suppliers, mostly reporting at a company level, identified 307 SORs that were potentially in their supply chains (versus 322 in 2018). See Table A below for a list of these SORs and a summary of their validation status under the RMAP.

#### **B. Identify the scope of the risk assessment of the 3TG supply chain**

**Engaging with suppliers.** GE's 3TG supplier survey asks suppliers to identify smelters and refiners of 3TG in their supply chains. For Significant Suppliers that are identified as either not having a responsible 3TG sourcing policy or not implementing due diligence measures for conflict-free sourcing, we encourage those suppliers to implement such measures. We seek to engage all Significant Suppliers to encourage the smelters and refiners in their supply chains to become validated as Conformant (as defined below) by the RMAP or a similar program.

GE seeks to continuously improve 3TG due diligence efforts to reduce 3TG supply chain risk by encouraging suppliers to source from Conformant smelters and refiners. As a result, 77% of the smelters and refiners identified by our Significant Suppliers have been verified as Conformant (up from 35% in 2013, when we started our 3TG due diligence program). In addition, the sourcing organizations of GE's businesses provided specialized training to suppliers on GE's 3TG due diligence program.

**Engaging with smelters and refiners.** In addition to engaging with smelters and refiners through the RMAP, GE's Healthcare business buys tungsten and tantalum products directly from smelters (the "first-tier smelters"). The Healthcare business periodically reviews the audit status of the first-tier smelters and encourages them to maintain RMI Conformant status. See "Devise and adopt a risk management plan" below for additional information on our engagement efforts.

**C. Assess whether the smelters/refiners have carried out all elements of due diligence for responsible supply chains of 3TG from conflict-affected and high-risk areas**

We review the smelter and refiner information provided by the Significant Suppliers against the Smelter Look-up tab list of the CMRT and to the extent that a SOR identified by a Significant Supplier is not on that list, we take additional steps to verify whether the listed entity is a SOR. Identified SORs were reviewed against the RMI's list of Conformant and Active (as defined below) smelters and refiners. If a SOR identified by a Significant Supplier is not listed as Conformant, or equivalent by another RMI cross-recognized, independent third-party audit program, we consult publicly available information or through industry associations, we attempt to contact the SOR to attempt to determine whether that SOR has a responsible 3TG sourcing process.

**D. Where necessary, carry out joint spot checks at the mineral smelter or refiner's own facilities (including through participation in industry-driven programs)**

**First-tier suppliers.** Each GE business is responsible for confirming that each of its first-tier suppliers that are smelters and refiners (if any):

- has a policy and procedures to eliminate sourcing of conflict-supporting 3TG;
- has been subject to an audit of the origin of their 3TG supplies conducted in accordance with OECD Guidance or has made a firm commitment to undergo such an audit as soon as it can be scheduled; and
- passes the audit as being conflict-free or, having failed the audit, has established and put into place a plan to correct process deficiencies.

**Lower-tier (upstream) suppliers.** In accordance with OECD Guidance, including its audit recommendations for downstream companies, GE implements upstream audits by participating in and cooperating with industry organizations. GE is a member of RMI (member code GECO) and has, periodically, supported RMI through membership on various committees and working groups. As such, GE relies on RMI to conduct risk assessment at the upstream level. For each smelter identified in its supply chain at the first or lower tiers, each GE business assesses the information available from RMI and an independent third-party supply chain expert to determine whether there are any high-risk (as defined below) smelters or refiners and, if needed, develops a corrective action plan. We encourage removing any high-risk smelters from our supply chain.

### **Step 3: Design and implement a strategy to respond to identified risks**

**A. Report findings to designated senior management**

See "Structure internal management systems to support supply chain due diligence" above for a description of GE's 3TG due diligence internal reporting processes.

**B. Devise and adopt a risk management plan**

Each GE business compiles a report of 3TG risks identified in its supply chain for review by the GE business executive-level program owner to determine appropriate steps to mitigate risks identified during the 3TG due diligence process. In 2019, these steps focused on encouraging Significant Suppliers who identified high-risk SORs to remove them from their supply chains. A high-risk SOR is one for which there are credible reports that such SOR sources materials in a manner that directly or indirectly finances armed conflict. For Significant Suppliers who identified high-risk SORs, the relevant GE business sent such supplier a letter requesting: (1) that that supplier confirm whether these SORs are in fact in their supply chain, and if so, whether such materials are used in GE products, (2) that the supplier encourage these SORs to participate in the RMAP and (3) that if a SOR refuses to participate in the RMAP, such supplier should develop a plan to remove the SOR from its supply chain.

To the extent that identified SORs are not Conformant, we seek to exercise leverage over these SORs to become Conformant through our participation in and support of the RMI. We also utilize information provided by the RMI to its members to monitor smelter and refiner improvement. In addition, in 2019, the Aerospace Industries Association, of which GE is a member, sent a letter to a number of SORs in the aerospace industry supply chain urging them to conduct due diligence on the origin of 3TG in their supply chains, and to become validated as Conformant with the RMAP or validated as conflict-free under a similar program.

#### **Step 4: Carry out independent 3<sup>rd</sup> party audit of smelter/refiner's due diligence practices**

See "Where necessary, carry out joint spot checks at the mineral smelter or refiner's own facilities (including through participation in industry-driven programs)" above for a discussion of how GE conducted risk assessment at the upstream level.

#### **Step 5: Report annually on supply chain due diligence**

We file this Report annually, and a copy of it is available at <https://www.ge.com/sustainability/reports-hub>.

#### **RCOI and Due Diligence Results**

GE manufactures a wide range of products that contain 3TG. For a description of the products manufactured by GE in 2019, see the products description for each of our industrial businesses on pages 9-20 of our 2019 Annual Report on Form 10-K, which you can find at <https://www.ge.com/investor-relations/annual-report>.

GE purchases materials from a wide network of suppliers so we necessarily rely on them to assist with our due diligence process. After performing an RCOI and due diligence for 2019, we have reason to believe that tungsten sourced from first-tier smelters may be sourced from a Covered Country however those smelters were verified as conformant by the RMI. Based on information RMI makes available to its members, we have reason to believe that some of the necessary 3TG in our products were sourced from Covered Countries. We are unaware and have no knowledge that any of the necessary 3TG contained in our in-scope products directly or indirectly financed or benefitted armed groups in a Covered Country but make no assertion that any of our products are "DRC conflict free."

#### **SORs Used to Process 3TG in GE Products**

GE obtained information about the SORs used to process 3TG in our products through the due diligence measures described in this Report. Based on our due diligence for 2019, 77% of the smelters and refiners identified by our Significant Suppliers have been verified as Conformant (up from 35% in 2013, when we started our 3TG due diligence program). This is a slight decrease from the percentage of SORs verified as Conformant in 2018. This decrease was driven by the fact that several of the previously Conformant tin smelters located in Indonesia and identified as potentially in our supply chain ceased operations during the past year due to regulatory changes, and thus are no longer included in this Report. Of our first-tier smelters for 2019, 100% have been verified as Conformant. Table A provides a list of the first-tier smelters as well as the SORs that GE's Significant Suppliers identified as being present in their supply chains and that may have processed 3TG contained in in-scope GE products.

#### **Countries of Origin of 3TG in GE Products**

GE relies on information RMI makes available to its members to obtain information about the country of origin and mine or location of origin of 3TG. Table B below contains a list of known countries of origin of 3TG used by SORs that GE suppliers identified as potentially being present in their supply chains.

In addition, certain Significant Suppliers provided CMRTs with additional mine or location of origin information, and that information is marked with an asterisk in Table B, because it has not been verified by the RMI or an equivalent third-party). For 2019, most Significant Suppliers provided company level responses, which may include country of origin information for parts not sold to GE. Therefore, we are unable to determine whether any 3TG in GE products was actually sourced from the countries listed in Table B. For 2019, we were not able to determine the country of origin for the 3TG processed by any of the smelters or refiners listed as “Active” or “On Smelter Look-up Tab List Only.”

## Future Risk Mitigation Efforts

**2020 actions to improve due diligence and supplier engagement.** GE intends to take the following steps in 2020 to improve 3TG due diligence and thereby mitigate the risk that 3TG contained in in-scope GE products may benefit armed groups:

- continue communication with suppliers and spread best practices learned during execution of the 3TG due diligence process in 2019 across the GE businesses to continue to work to improve the percentage of Significant Suppliers responding to GE's supply chain surveys and the quality of their responses;
- continue to request that certain Significant Suppliers that provided company level information for 2019 provide product level information for 2020, through ongoing outreach with these Significant Suppliers;
- continue the identification of and communication with smelters and refiners in GE's supply chain, both directly and indirectly through GE's Significant Suppliers, in order to continue to increase the number of smelters and refiners that participate in the RMAP;
- continue to participate in industry initiatives encouraging responsible supply chains, including initiatives to add cobalt and other minerals to the scope; and
- as new Significant Suppliers are added, work with these suppliers to help ensure that they understand our compliance requirements, the requirements of the Conflict Minerals Rule and the OECD Guidance.

## Annex A

Capitalized terms used and not otherwise defined in this Annex have the meanings set forth in the Conflict Minerals Report of which this Annex is a part.

**Table A**  
(as of May 06, 2020)

### Summary of Smelters and Refiners

	<b>A. RMI Conformant Smelters &amp; Refiners</b>		<b>B. RMI Active Smelters &amp; Refiners</b>		<b>C. On Smelter Look-up Tab List Only Smelters &amp; Refiners</b>		<b>Total</b>	
	<u>2018</u>	<u>2019</u>	<u>2018</u>	<u>2019</u>	<u>2018</u>	<u>2019</u>	<u>2018</u>	<u>2019</u>
Tantalum	40	38	0	0	0	0	40	38
Tin	75	47	2	1	9	10	86	58
Tungsten	40	43	1	5	2	4	43	52
Gold	101	107	4	1	48	51	153	159
<b>Total</b>	<b>256</b>	<b>235</b>	<b>7</b>	<b>7</b>	<b>59</b>	<b>65</b>	<b>322</b>	<b>307</b>

We note the following in connection with the information contained in the foregoing table:

- (1) The smelters and refiners reflected in the table were first-tier smelters or were identified by our Significant Suppliers as potentially being part of our 2019 supply chain. However, not all of the included SORs may have processed the necessary 3TG contained in the in-scope products that we manufactured, since many Significant Suppliers reported to us at a "company level" the 3TG contained in all of their products, not just those in the products that they sold to us. Some Significant Suppliers also may have reported to us SORs that were not in our supply chain due to over-inclusiveness in the information received from their suppliers or for other reasons. In addition, the SORs reflected above may not be all of the SORs in our supply chain, since many Significant Suppliers were unable to identify all of the SORs used to process the necessary 3TG content contained in the in-scope products that we manufactured and not all of the Significant Suppliers responded to our inquiries.
- (2) "Conformant" means that a smelter or refiner was audited by the RMI and has been found to be conformant with the RMAP.
- (3) "Active" means participants in the RMAP that have committed to undergo an assessment and have scheduled the assessment date or are participating in one of the cross-recognized certification programs.
- (4) A smelter or refiner is listed as "On Smelter Look-up Tab List Only" if it was not Conformant or Active but appears on the Smelter Look-up tab of the CMRT.
- (5) The compliance status information reflected in the table is based solely on information made available by the RMI to its members, without independent verification by us.

## Status of Identified Smelters and Refiners for 2019

Metal	Smelter/Refiner Name	Smelter/Refiner Location	Status

## Helpful Resources

### Acronyms Used in This Report

3TG	Tin, Tantalum, Tungsten or Gold
CMRT	Conflict Minerals Reporting Template
DRC	Democratic Republic of the Congo
OECD	Organization for Economic Cooperation and Development
RMAP	Responsible Minerals Assurance Process
RMI	Responsible Minerals Initiative
SORs	Smelters or Refiners

### Forward-Looking Statements

This Report contains "forward-looking statements" – that is, statements related to future events that by their nature address matters that are, to different degrees, uncertain. For details on the uncertainties that may cause our actual future results to be materially different than those expressed in our forward-looking statements, see <http://www.ge.com/investor-relations/disclaimer-caution-concerning-forward-looking-statements> as well as

our annual reports on Form 10-K and quarterly reports on Form 10-Q. We do not undertake to update our forward-looking statements.
