

## Detailed Application Instructions – Technical Bulletin

---

### Materials Needed:

- Spray & Forget Cleaner
- Garden Pump Sprayer or our custom Hose Attached Chemical Sprayer
- Hose and Triggered Spray Nozzle
- Ladder
- Respiratory Mask, Gloves, and Goggles depending on your sensitivity level

---

**Directions For Use:** Keep spray off flowers. Hire professional help if you are inexperienced with the necessary application methods. Use caution when applying as treated surface may become slippery. We recommend using eye protection when mixing or applying Spray & Forget cleaner. Gloves and a respiratory mask may also be needed as each person has a different sensitivity level when using chemicals. See product label for precautionary statement, treatment, storage and disposal information. Do not mix Spray & Forget with detergents or other chemicals. Avoid application on windy days.

**For No-Rinse application**, mix 5 parts water and 1 part Spray & Forget concentrate in any garden pump sprayer. When using the garden pump sprayer, add water first and then mix chemical in water. Thoroughly wet all perimeter landscaping with water immediately before and after the application. Apply a thorough coat of diluted product to all affected areas at least 24 hours prior to any rainfall or snow. For roof applications, you should hire a roof cleaning specialist and request that they use Spray & Forget cleaner if you are not experienced with walking on roofs. Do NOT rinse. The streaks and stains will continue to disappear with subsequent rainfall over the next 3-9 months for roof surfaces and within 1-8 weeks for all other exterior surfaces. Stains may appear darker, for a few days, immediately after application which is a positive sign that the product is working correctly.

**For rapid results (Will not work for roof moss applications)**, We recommend that you use the “No Rinse” application method above as it is the safest and easiest application method! However, if you must have rapid results then mix 5 parts water and 1 part Spray & Forget concentrate in any garden pump sprayer (Spray & Forget will not work with hose end sprayers sold by other manufacturers). When using the garden pump sprayer, add water first and then mix chemical in water. Thoroughly wet all perimeter landscaping with water immediately before and after the application. Apply a thorough coat of diluted product to all affected areas at least 24 hours prior to any rainfall or snow. For roof applications, you should hire a roof cleaning specialist and request that they use Spray & Forget cleaner if you are not experienced with walking on roofs. For rinsing, wait 12-24 hours and rinse thoroughly using a pressure washer with the wand backed away from the roof shingles as to reduce the pressure. **DO NOT USE HIGH PRESSURE ON ROOF SHINGLES!** You must rinse within 3-4 feet of the stain to be removed. After rinsing, Spray & Forget will continue to clean and prevent stains with subsequent rainfall.

**For preventive maintenance**, After cleaning the surface with Spray & Forget (as described above), apply a mixture of 9 parts water with 1 part Spray & Forget concentrate every 18-24 months for all non-roof surfaces and every 3-5 years for roof surfaces to permanently prevent the stains from re-appearing. Do not rinse.

**Use On:** All types of roof shingles, brick, decking, fencing, siding, stucco, brick, stone, outdoor furniture, patios, walk ways, pavers, flower pots, driveways, sidewalks, pool decks and cages, awnings, umbrellas, playground equipment, tennis courts, RV’s, and more.
