

User's Manual

Chest Freezer

MODEL: WHS-129C1/WHS-185C1/WHS-258C1

Before using your product, please read this manual carefully and keep it for future reference.

INSTALLATION INSTRUCTIONS

Before Using Your Freezer

- Remove the exterior and interior packaging.
- Check to be sure you have all of the following parts:
 - 1 Storage Basket
 - 1 Instruction Manual
 - 1 Plastic Scraper (optional)
- Before connecting the freezer to the power source, let it stand upright for approximately 2 hours. This will reduce the possibility of a malfunction in the cooling system from handling during transportation.
- Clean the interior surface with warm water using a soft cloth.

Installing Your Freezer

- This appliance is designed to be free standing only, and should not be recessed or built-in.
- Place your freezer on a floor that is strong enough to support the freezer when it is fully loaded.
- Allow 15cm of space between the back and sides of the freezer, which allows the proper air circulation.
- Locate the freezer away from direct sunlight and sources of heat (stove, heater, radiator, etc.). Direct sunlight may affect the acrylic coating and heat sources may increase electrical consumption. Extreme cold ambient temperatures may also cause the freezer not to perform properly.
- Avoid locating the freezer in moist areas.
- Plug the freezer into its own individual, properly installed and grounded wall outlet. Do not under any circumstances cut or remove the third(ground) prong from the power cord. Any questions concerning power and/or grounding should be directed toward a certified electrician or an authorized service center.
- After plugging the appliance into a wall outlet, allow the unit to cool down for 2 to 3 hours before placing food in the freezer compartment.

For your safety please read the following information.

OPERATING YOUR FREEZER

- **Your freezer has one control for regulating the temperature.**
The temperature control is located on the lower right-hand corner.
- **The range of the temperature control is from position “MIN, MAX and OFF.”**
Adjust the temperature control to the setting that best suits your needs.
- **To turn the freezer off, turn the temperature control to “OFF.”**

NOTE:

- If the unit is unplugged, has lost power, or been turned off, you must wait 3 to 5 minutes before restarting the unit.
- If you attempt to restart before this time delay, the freezer will not start.
- Large amounts of food will lower the cooling efficiency of the appliance.
- If you choose to change the thermostat setting, adjust thermostat control by one numerical increment at a time. Allow several hours for temperature to stabilize between adjustments.

Defrosting Your Freezer

- When? For the most efficient operation and minimum energy consumption, defrost the freezer when the frost on the freezer walls is excessive or 5 to 10mm thick.
- Choose a time when the stock of frozen food is low.

CAUTION

Do not use boiling water because it may damage the plastic parts. In addition, never use a sharp or metallic instrument to remove frost as it may damage the cooling coils and will void the warranty. We recommend using the plastic scraper.

- Remove frozen food from the freezer and place it in a cooler to protect the food.
- Unplug the freezer.
- During defrosting, the ice melts into the cabinet.
- Remove the drain plug on the inside floor of the freezer by rotating it.
- Place a shallow pan under the drain outlet. The defrost water will drain out.
- Check the pan occasionally and empty, if necessary, so the water does not overflow.
- Clean the interior of the freezer.
- Replace the drain plug on the inside floor of the freezer.
- Plug the freezer into the wall outlet.
- Reset the thermostat to desired setting.
- Allow the freezer compartment to cool for one hour.
- Return food to the freezer.

HELPFUL HINT:

Defrosting usually takes a few hours. Leaving the door open will help speed the process. Also, pouring warm water (not boiling) on the ice/frost will help speed melting. If you must use a scraper, please use caution. It is very easy to damage the freezer compartment and void your warranty.

The Freezer Compartment

- This compartment is designed for the long-term storage of frozen food. Storage time is up to three months.
- The storage life of frozen foods varies and the recommended storage time should not be exceeded. The instructions regarding the care of frozen foods should be followed when defrosting the freezer.
- Pre-packed commercially frozen food should be stored in accordance with the frozen foods manufacturer's instructions for a three-star frozen food storage compartment or home freezer.
- Place frozen food into the freezer as quickly as possible after purchase. If there are instructions on the packet, carefully follow these instructions regarding storage times.
- The freezer door is susceptible to breaking due to excessive ice buildup. Be sure to defrost when the ice reaches 5 to 10mm thick.
- A storage basket is provided for the organization of odd-shaped items. To reach other packages in the freezer, just slide the basket to one side, or lift it out.

CARE AND MAINTENANCE

Cleaning Your Freezer

- Upon installation of your new appliance, it is recommended that it be cleaned thoroughly.
- Unplug the freezer; remove the food and storage basket.
- Wash the inside with a soft cloth and a water and baking soda solution. The solution should be about 2 tablespoons of baking soda to a quart of warm water.
- Wash the storage basket with a mild detergent solution.
- Be sure to keep the door gasket (seal) clean to keep the unit running efficiently.

- The outside of the freezer should be cleaned with mild detergent and warm water.
- Dry the interior and exterior with a soft cloth.
- The condenser coils should be vacuumed when they are dusty or dirty.
- It is recommended that the unit be cleaned each time it is defrosted to help keep the unit odor free and running efficiently.

Vacation Time

- Remove all the food.
- Unplug the freezer.
- Clean the freezer.
- Leave the door open slightly to avoid possible formation of condensation, mold, or odors.
- Secure the freezer or remove the door to prevent child entrapment.
- **Short vacations:** Leave the freezer operating during vacations of less than three weeks.
- **Long vacations:** If the appliance will not be used for several months, remove all food and unplug the power cord. Clean and dry the interior thoroughly. To prevent odor and mold growth, leave the door open slightly - blocking it open, if necessary, or have the door removed.

Moving Your Freezer

- Remove all the food.
- Securely tape down all loose items inside your freezer.
- Remove the rollers to prevent damage.
- Tape the doors shut.
- Be sure the freezer stays in the upright position during transportation.

Energy Saving Tips

- The freezer should be located in the coolest area of the room, away from heat-producing appliances or heating ducts, and out of the direct sunlight.
- Let hot foods cool to room temperature before placing in the freezer. Overloading the freezer forces the compressor to run longer. Foods that freeze too slowly may lose quality or spoil.
- Be sure to wrap foods properly, and wipe containers dry before placing them in the freezer. This cuts down on frost buildup inside the freezer.
- Freezer storage bin should not be lined with aluminum foil, wax paper, or paper towels. Liners interfere with cold air circulation, making the freezer less efficient.
- Organize and label food to reduce door openings and extended searches. Remove as many items as needed at one time, and close the door as soon as possible.

PROBLEMS WITH YOUR FREEZER

You can solve many common freezer problems easily. Try these suggestions first before scheduling a service call.

TROUBLESHOOTING GUIDE

PROBLEM	POSSIBLE CAUSE
Freezer does not operate.	Not plugged in. The circuit breaker tripped or a blown fuse.

Compressor turns on and off frequently.	<p>The room temperature is hotter than normal. A large amount of food has been added to the freezer.</p> <p>The door is open too often. The door is not closed completely. The temperature control is not set correctly. The door gasket does not seal properly. The freezer does not have the correct clearances. The freezer has recently been disconnected for a period of time. Four hours are required for the freezer to cool down completely.</p>
Temperature inside the freezer is too warm.	<p>Temperature control is set too warm. Turn the control to a cooler setting and allow several hours for the temperature to stabilize. Door is kept open too long or is opened too frequently. Warm air enters the freezer every time the door is opened. Open the door less often. The door is not closed completely. The door gasket does not seal properly. A large amount of warm or hot food might have been stored recently. Wait until the freezer has had a chance to reach its selected temperature. The freezer has recently been disconnected for a period of time. Four hours are required for the freezer to cool down completely.</p>
Temperature inside the freezer is too cold.	<p>Temperature control is set too cold. Turn the control to a warmer setting and allow several hours for the temperature to stabilize.</p>
Popping or cracking sound when compressor comes on.	<p>Metal parts undergo expansion and contraction, similar to a hot water pipe. This is normal. Sound will level off or disappear as freezer continues to run.</p>
Bubbling or gurgling sound, like water boiling.	<p>Refrigerant (used to cool freezer) is circulating throughout the system. This is normal.</p>
Vibrations.	<p>Check to make sure the freezer is level. Floor is uneven or weak. Freezer rocks on the floor when it is moved slightly. Be sure floor can adequately support freezer. Level the freezer by putting wood or metal shims under part of the freezer. The freezer is touching the wall. Re-level the freezer and move it away from the wall. See "Installation Instructions."</p>
Moisture forms on inside freezer walls.	<p>Weather is hot and humid, which increases internal rate of frost buildup. This is normal. Door is slightly open. Door is kept open too long, or is opened too frequently. Open the door less often. The door is not sealed properly.</p>
Moisture forms on outside of freezer.	<p>Door is slightly open, causing cold air from inside the freezer to meet warm moist air from outside.</p>
The door will not close properly.	<p>The freezer is not level. The gasket is dirty. The storage basket is out of position.</p>

DANGER or WARNING:

1. Risk of child entrapment. Before you throw away your old refrigerator or freezer:
 - Take off doors.
 - Leave the shelves in place so that children may not easily climb inside.
2. Do not use an adapter plug or extension cord to connect freezer to an electrical outlet.

Reminder:

When the air temperature and relative humidity is high, there may be frost or water condensation around the door opening and door bar of the freezer, wipe it with dry rag.

Note: Illustrations in the user manual are only for reference. The actual product may differ slightly.
