## Find Address and Use Spatial Search To Get Parcel Information:

1. First, search for an address using the text search or identify features.

2. Once the records are in the results table, click the item's row to select the feature.
3. Click the "**Spatial**" tab in the search widget.

4. Choose "**Parcels**" from the "**Select Features In**" dropdown.
5. Click "**Intersect By**"
6. The new results will display the parcel information where that address point is located.
