Chapter 1 Getting Started

Introduction

The NLS-HR20-RF wireless barcode scanner (hereinafter referred to as “**HR20 scanner**” or “**the scanner**”), armed with the world-leading Newland patented **UIMG**[®], a computerized image recognition system-on-chip, bring about a new era of 2D barcode scanner.

The HR20's 2D barcode decoder chip ingeniously blends **UIMG**[®] technology and advanced chip design & manufacturing, which significantly simplifies application design and delivers superior performance and solid reliability with low power consumption.

The HR20 supports all mainstream 1D and standard 2D barcode symbologies (e.g., PDF417, QR Code, Data Matrix and Chinese Sensible Code) as well as GS1-DataBar[™](RSS) (Limited/Stacked/Expanded versions). It can read barcodes on virtually any medium - paper, plastic card, mobile phones and LCD displays.

About This Guide

This guide provides programming instructions for the HR20. Users can configure the HR20 by scanning the programming barcodes included in this manual.

The HR20 has been properly configured for most applications and can be put into use without further configuration. Users may check the “Factory Defaults Table” in Appendix for reference. Throughout the manual, asterisks (**) indicate factory default values.

Unpacking

Open the package and take out HR20 scanner and its accessories. Check to make sure everything on the packing list is present and intact. If any contents are damaged or missing, please keep the original package and contact your dealer immediately for after-sales service.

HR20 Scanner

Good Read/Network LED:

Red LED On – Charging in progress.

Red LED Off – Fully charged.

Blue LED On - Connection established.

Blue LED flashes - Data transmission in progress.

Green LED flashes once - Good read in Real-time mode.

Blue LED flashes once - Good read in Inventory mode.

Charging the Scanner Battery

To charge the scanner battery, connect the scanner to your computer with the supplied cable. You can check the charge status with the Good Read/Network LED (red) on the scanner.

Plug and Play

The scanner that comes with a USB dongle is already paired with it and can work out of the box through plug and play. Only one scanner can be paired to one dongle at a time. If you want to pair your scanner to another dongle, follow the instructions described in the “Pairing the Scanner to a Dongle” section in Chapter 3.

Power On, Sleep

Power on the scanner

Plug the supplied dongle into the USB port of a host device, and pull the trigger on the scanner. Then the scanner will be turned on and the connection will be automatically established.

Enter the sleep mode

If no operation is performed on the scanner for 5 seconds, it will automatically enter the sleep state.

Maintenance

- ✧ The scan window should be kept clean.
- ✧ Do not scratch the scan window.
- ✧ Use soft brush to remove the stain from the scan window.
- ✧ Use the soft cloth to clean the window, such as eyeglass cleaning cloth.
- ✧ Do not spray any liquid on the scan window.
- ✧ Do not use any detergent to clean other parts of the device except for water.

Note: The warranty **DOES NOT** cover damages caused by inappropriate care and maintenance.

Dimensions (unit: mm)

Scanning Instructions

When the scanner is in the default scan mode, you can follow the steps below to scan a barcode:

1. Press and hold the trigger. Then the scanner will project a red aiming pattern.
2. Center the aiming pattern on the barcode, as shown in the figure below.
3. Release the trigger when the aiming beam goes off. If the barcode is decoded successfully, the scanner will emit a good decode beep and the decoded data will be sent to the host device.

Wireless Communications

The scanner can communicate with a remote host by pairing with a USB dongle that supports HID Keyboard and COM Port Emulation. For wireless communication parameters and dongle pairing instructions, see Chapter 3.

Chapter 2 System Settings

Factory Defaults

Scanning the following barcode can restore the scanner to the factory defaults.

You may need to reset all parameters to the factory defaults when:

1. Scanner is not properly configured so that it fails to decode barcodes;
2. you forget previous configuration and want to avoid its impact;
3. functions that are rarely used have been enabled for the time being.

Restore All Factory Defaults

Illumination

A couple of illumination options are provided to improve the lighting conditions during every image capture:

Normal (default): Illumination LED is turned on during image capture.

Always On: Illumination LED keeps on after the scanner is powered on.

Off: Illumination LED is off all the time.

Aiming

When scanning/capturing image, the scanner projects an aiming pattern which allows positioning the target barcode within its field of view and thus makes decoding easier.

Normal: The scanner projects an aiming pattern during barcode scanning/capture.

Always On: Aiming pattern is constantly on after the scanner is powered on.

Off: Aiming pattern is off all the time.

AM1FN01
** Normal

AM1FN03
Off

AM1FN02

120ms

Scan Mode

Manual Mode

Manual Mode (default): A trigger pull activates a decode session. The decode session continues until the barcode is decoded or the trigger is released.

Continuous Mode

Continuous Mode: The scanner automatically starts one decode session after another at specific intervals (i.e. timeout between decodes). The decode session continues until the barcode is decoded or the decode session timeout expires.

In the Continuous mode, a trigger pull can enable the scanner to work temporarily in the Manual mode and back to the Continuous mode in 30 seconds.

Decode Session Timeout sets the maximum time decode session continues during a scan attempt. It is programmable in 0.1s increments from 0.1s to 25.5s. The default timeout is 5.0s. To set the timeout, scan the **Decode Session Timeout** barcode, then the two numeric barcodes corresponding to the desired timeout in hexadecimal.

Decode Session Timeout

Example: Set the decode session timeout to 5.0s (50 in hex is 32)

1. Scan the **Decode Session Timeout** barcode.
2. Scan the numeric barcodes “3” and “2” from the “Digit Barcodes” section in Appendix.

Timeout between Decodes sets the timeout between decode sessions. When a decode session ends, next session will not happen until the timeout between decodes expires. It is programmable in 0.1s increments from 0s to 25.5s. The default timeout is 1.0s. To set the timeout, scan the **Timeout between Decodes** barcode, then the two numeric barcodes corresponding to the desired timeout in hexadecimal.

Timeout between Decodes

Example: Set the timeout between decodes to 5.0s (50 in hex is 32)

1. Scan the **Timeout between Decodes** barcode.
2. Scan the numeric barcodes “3” and “2” from the “Digit Barcodes” section in Appendix.

Query Product Serial Number

After scanning the barcode below, the serial number of the scanner will be sent to the host device.

Query Product Serial Number

Chapter 3 Wireless Communications

Pairing the Scanner to a Dongle

The scanner that comes with a USB dongle is already paired with it and can work out of the box through plug and play. You simply plug the dongle into the USB port of your computer, pull the trigger on the scanner, and the connection will be automatically established with a beep from the scanner. If the scanner within service range fails to connect to the dongle, you may re-establish pairing by following the steps below: unplug the dongle, scan the **Enter Pairing Mode** barcode and the **Pair** barcode with the scanner, and then plug the dongle into your computer.

Enter Pairing Mode

Pair

Communication Modes

Real-time Mode: The scanner attempts to transmit every barcode you scan. When you are out of service range, the scanned data will be lost.

Inventory Mode: Scanned data will be stored in the flash memory no matter whether you are in service range or not. You may send the stored data to the host by scanning the **Transmit Stored Data** barcode. **Do not change the interface before starting data transmission operation, otherwise all data previously stored in the flash memory will be lost.**

** Real-time Mode

Inventory Mode

Transmit Stored Data

You may scan the barcode below to send the stored data in the flash memory to the host.

Transmit Stored Data

Clear Stored Data in Flash

To clear stored data in flash, you need to scan the **Clear Stored Data** then the **Confirm Clear Operation** barcodes.

Clear Stored Data

Confirm Clear Operation

Interface Selection

The scanner can communicate with a remote host via a USB dongle that supports HID Keyboard and COM Port Emulation. You may select the desired interface by scanning the appropriate barcode below.

**** HID Keyboard**

COM Port Emulation

HID Keyboard Parameters

Characters can be represented by key values of a keyboard or by numeric representations in a code page. The former method should only be used when scanning barcodes containing single-byte characters.

Keyboard Types

If you want barcode data to be represented by key values of a keyboard, you may select the keyboard type by scanning the appropriate barcode below. This feature should not be used when barcodes contain multi-byte characters. The default setting is U.S. keyboard.

Standard Keyboard

When **Standard Keyboard** is enabled, characters are sent as corresponding keys on the selected keyboard. This feature is only effective when a keyboard type is enabled.

**** Standard Keyboard**

Function Key Mapping

When **Function Key Mapping** is enabled, function characters (0x00 - 0x1F) are sent as ASCII sequences. This feature is only effective when a keyboard type is enabled.

1. CTRL Make
2. Press function key (Refer to the **ASCII Function Key Mapping Table** below)
3. CTRL Break

Function Key Mapping

ASCII Function Key Mapping Table

ASCII Value (HEX)	Function Key	ASCII Value (HEX)	Function Key
00	@	10	P
01	A	11	Q
02	B	12	R
03	C	13	S
04	D	14	T
05	E	15	U
06	F	16	V
07	G	17	W
08	H	18	X
09	I	19	Y
0A	J	1A	Z
0B	K	1B	[
0C	L	1C	\
0D	M	1D]
0E	N	1E	6
0F	O	1F	.

Emulate ALT+Keypad

When **Emulate ALT+Keypad** is enabled, any ASCII character (0x00 - 0xFF) is sent over the numeric keypad. This feature is only effective when a keyboard type is enabled.

1. ALT Make
2. Enter the number corresponding to the ASCII character on the keypad.
3. ALT Break

Emulate ALT+Keypad

Convert Case

You may scan the appropriate barcode below to convert all barcode data to your desired case. This feature is only effective when a keyboard type is enabled.

**** No Case Conversion**

Convert All to Upper Case

Convert All to Lower Case

Invert Upper and Lower Case Characters

Example: When **Invert Upper and Lower Case Characters** is enabled, barcode data "AbC" is transmitted as "aBc".

Code Page

If you want barcode data to be represented by numeric representations in a code page, you may select the code page by scanning the appropriate barcode below.

Code Page 1252 (West European Latin)

Code Page 1251 (Cyrillic)

Code Page 1250 (Central and East European Latin)

Code Page 1253 (Greek)

Code Page 1254 (Turkish)

Code Page 1255 (Hebrew)

Code Page 1256 (Arabic)

Code Page 1257 (Baltic)

Code Page 1258 (Vietnamese)

Code Page 936 (Simplified Chinese, GB2312, GBK)

Code Page 950 (Traditional Chinese, Big5)

Code Page 874 (Thai)

Code Page 932 (Japanese, Shift-JIS)

Character Encoding

You should select the character encoding with which the barcodes were created.

Direct Character Transfer

When a code page is enabled, any character is sent over the numeric keypad.

1. ALT Make
2. Enter the number corresponding to the code point in selected code page on the keypad.
3. ALT Break

Different host program may use different character encodings for handling incoming barcode data. For instance, Microsoft Office Word uses Unicode encoding and therefore you should enable **Unicode Encoding**, whereas Microsoft Office Excel or Notepad uses ANSI encoding and therefore you should enable **ANSI Encoding**.

Emulate Keypad with Leading Zero

You may turn this feature on to send character sequences sent over the numeric keypad as ISO characters which have a leading zero. For example, ASCII A transmits as “ALT MAKE” 0065 “ALT BREAK”. This feature is only applicable to Direct Character Transfer.

Inter-Keystroke Delay

This parameter specifies the delay between emulated keystrokes.

Chapter 4 Prefix & Suffix

A 1D barcode could contain digits, letters, symbols, etc. A 2D barcode could contain more data, such as Chinese characters and other multi-byte characters. However, in real applications, they do not and should not have all information we need, such as barcode type, data acquisition time and delimiter, in order to keep the barcodes short and flexible.

Prefix and suffix are how to fulfill the needs mentioned above. They can be added, removed and modified while the original barcode data remains intact.

Prefix Sequence

** Code ID+ Custom +AIM ID

Custom + Code ID + AIM ID

Custom Prefix

Enable/Disable Custom Prefix

If custom prefix is enabled, you are allowed to append to the data a user-defined prefix that cannot exceed 5 characters. For example, if the custom prefix is "AB" and the barcode data is "123", the Host will receive "AB123".

** Disable Custom Prefix

Enable Custom Prefix

Set Custom Prefix

To set a custom prefix, scan the **Set Custom Prefix** barcode then the numeric barcodes corresponding to the hexadecimal value of a desired prefix.

Note: A custom prefix cannot exceed 5 characters.

Set Custom Prefix

Example: Set the custom prefix to “CODE” (HEX: 0x43/0x4F/0x44/0x45):

1. Scan the **Set Custom Prefix** barcode.
2. Scan the numeric barcodes “4”, “3”, “4”, “F”, “4”, “4”, “4” and “5” from the “Digit Barcodes” section in Appendix.
3. Scan the **Enable Custom Prefix** barcode.

AIM ID Prefix

AIM (Automatic Identification Manufacturers) IDs define symbology identifiers and data carrier identifiers. For the details, see the “AIM ID Table” in Appendix. If AIM ID prefix is enabled, the scanner will add the symbology identifier before the scanned data after decoding.

Enable AIM ID Prefix

**** Disable AIM ID Prefix**

Code ID Prefix

Code ID can also be used to identify barcode type. For more information, refer to the “Code ID Table” in Appendix.

Enable Code ID Prefix

**** Disable Code ID Prefix**

You can choose to transmit original Code ID or visible Code ID by scanning the appropriate barcode below.

**** Original Code ID**

Visible Code ID

Custom Suffix

Enable/Disable Custom Suffix

If custom suffix is enabled, you are allowed to append to the data a user-defined suffix that cannot exceed 5 characters. For example, if the custom suffix is “AB” and the barcode data is “123”, the Host will receive “123AB”.

**** Disable Custom Suffix**

Enable Custom Suffix

Set Custom Suffix

To set a custom suffix, scan the **Set Custom Suffix** barcode then the numeric barcodes corresponding to the hexadecimal value of a desired suffix.

Note: A custom suffix cannot exceed 5 characters.

Set Custom Suffix

Example: Set the custom suffix to “CODE” (HEX: 0x43/0x4F/0x44/0x45):

1. Scan the **Set Custom Suffix** barcode.
2. Scan the numeric barcodes “4”, “3”, “4”, “F”, “4”, “4”, “4” and “5” from the “Digit Barcodes” section in Appendix.
3. Scan the **Enable Custom Suffix** barcode.

Terminating Character Suffix

A terminating character such as carriage return (CR) or carriage return/line feed pair (CRLF) or horizontal tab (TAB) can be used to mark the end of data.

**** Disable Terminating Character Suffix**

Chapter 5 Symbologies

Global Settings

Video Reverse

The **Video Reverse** feature only applies to 2D barcodes.

Regular barcode: Dark image on a bright background.

Inverse barcode: Bright image on a dark background.

The examples of regular barcode and inverse barcode are shown below.

Regular Barcode

Inverse Barcode

Video Reverse is used to allow the scanner to read barcodes that are inverted.

Video Reverse ON: Read both regular barcodes and inverse barcodes.

Video Reverse OFF (default): Read regular barcodes only.

The scanner shows a slight decrease in scanning speed when Video Reverse is ON.

Video Reverse ON

** Video Reverse OFF

ECI Output

00401100

**** Disable ECI Output**

00401140

Enable ECI Output

Code 128

Enable/Disable Code 128

** Enable Code 128

Disable Code 128

Set Length Range for Code 128

The scanner can be configured to only decode Code 128 barcodes with lengths that fall between (inclusive) the minimum and maximum lengths. To accomplish it, you need to set the minimum and maximum lengths.

Set the Minimum Length (Default: 1)

Set the Maximum Length (Default: 80)

Example: Set the scanner to decode Code 128 barcodes containing between 8 and 12 characters:

1. Scan the **Set the Minimum Length** barcode.
 2. Scan the numeric barcodes "0" and "8" from the "Digit Barcodes" section in Appendix.
 3. Scan the **Set the Maximum Length** barcode.
 4. Scan the numeric barcodes "0" and "C" from the "Digit Barcodes" section in Appendix.
-

UCC/EAN-128 (GS1-128)

Enable/Disable UCC/EAN-128

When disabled, UCC/EAN-128 is identified as Code 128.

**** Enable UCC/EAN-128**

Disable UCC/EAN-128

Set Length Range for UCC/EAN-128

The scanner can be configured to only decode UCC/EAN-128 barcodes with lengths that fall between (inclusive) the minimum and maximum lengths. To accomplish it, you need to set the minimum and maximum lengths.

Set the Minimum Length (Default: 1)

Set the Maximum Length (Default: 80)

Example: Set the scanner to decode UCC/EAN-128 barcodes containing between 8 and 12 characters:

1. Scan the **Set the Minimum Length** barcode.
2. Scan the numeric barcodes "0" and "8" from the "Digit Barcodes" section in Appendix.
3. Scan the **Set the Maximum Length** barcode.
4. Scan the numeric barcodes "0" and "C" from the "Digit Barcodes" section in Appendix.

AIM 128

Enable/Disable AIM 128

When disabled, AIM 128 is identified as Code 128.

**** Enable AIM 128**

Disable AIM 128

Set Length Range for AIM 128

The scanner can be configured to only decode AIM 128 barcodes with lengths that fall between (inclusive) the minimum and maximum lengths. To accomplish it, you need to set the minimum and maximum lengths.

Set the Minimum Length (Default: 1)

Set the Maximum Length (Default: 80)

Example: Set the scanner to decode AIM 128 barcodes containing between 8 and 12 characters:

1. Scan the **Set the Minimum Length** barcode.
2. Scan the numeric barcodes "0" and "8" from the "Digit Barcodes" section in Appendix.
3. Scan the **Set the Maximum Length** barcode.
4. Scan the numeric barcodes "0" and "C" from the "Digit Barcodes" section in Appendix.

EAN-8

Enable/Disable EAN-8

** Enable EAN-8

Disable EAN-8

Transmit Check Character

EAN-8 is 8 digits in length with the last one as its check character used to verify the integrity of the data.

** Transmit EAN-8 Check Character

Do Not Transmit EAN-8 Check Character

Add-On Code

An EAN-8 barcode can be augmented with a two-digit or five-digit add-on code to form a new one. In the examples below, the part surrounded by blue dotted line is an EAN-8 barcode while the part circled by red dotted line is add-on code.

Enable 2-Digit Add-On Code

** Disable 2-Digit Add-On Code

Enable 5-Digit Add-On Code

** Disable 5-Digit Add-On Code

Enable 2-Digit Add-On Code/ Enable 5-Digit Add-On Code: The scanner decodes a mix of EAN-8 barcodes with and without 2-digit/5-digit add-on codes.

Disable 2-Digit Add-On Code/ Disable 5-Digit Add-On Code: The scanner decodes EAN-8 and ignores the add-on code when presented with an EAN-8 plus add-on barcode. It can also decode EAN-8 barcodes without add-on codes.

EAN-8 Extension

Disable EAN-8 Zero Extend: Transmit EAN-8 barcodes as is.

Enable EAN-8 Zero Extend: Add five leading zeros to decoded EAN-8 barcodes to extend to 13 digits.

EAN-13

Enable/Disable EAN-13

Transmit Check Character

EAN-13 is 13 digits in length with the last one as its check character used to verify the integrity of the data.

Add-On Code

An EAN-13 barcode can be augmented with a two-digit or five-digit add-on code to form a new one. In the examples below, the part surrounded by blue dotted line is an EAN-13 barcode while the part circled by red dotted line is add-on code.

Enable 2-Digit Add-On Code

** Disable 2-Digit Add-On Code

Enable 5-Digit Add-On Code

** Disable 5-Digit Add-On Code

Enable 2-Digit Add-On Code/ Enable 5-Digit Add-On Code: The scanner decodes a mix of EAN-13 barcodes with and without 2-digit/5-digit add-on codes.

Disable 2-Digit Add-On Code/ Disable 5-Digit Add-On Code: The scanner decodes EAN-13 and ignores the add-on code when presented with an EAN-13 plus add-on barcode. It can also decode EAN-13 barcodes without add-on codes.

Transmit Check Character

UPC-E is 8 digits in length with the last one as its check character used to verify the integrity of the data.

0041504
** Transmit UPC-E Check Character

0041500
Do Not Transmit UPC-E Check Character

Add-On Code

A UPC-E barcode can be augmented with a two-digit or five-digit add-on code to form a new one. In the examples below, the part surrounded by blue dotted line is a UPC-E barcode while the part circled by red dotted line is add-on code.

Enable 2-Digit Add-On Code

** Disable 2-Digit Add-On Code

Enable 5-Digit Add-On Code

** Disable 5-Digit Add-On Code

Enable 2-Digit Add-On Code/ Enable 5-Digit Add-On Code: The scanner decodes a mix of UPC-E barcodes with and without 2-digit/5-digit add-on codes.

Disable 2-Digit Add-On Code/ Disable 5-Digit Add-On Code: The scanner decodes UPC-E and ignores the add-on code when presented with a UPC-E plus add-on barcode. It can also decode UPC-E barcodes without add-on codes.

Transmit System Character

The first character of UPC-E barcode is the system character "0".

Transmit System Character "0"

** Do Not Transmit System Character "0"

UPC-E Extension

Disable UPC-E Extend: Transmit UPC-E barcodes as is.

Enable UPC-E Extend: Extend UPC-E barcodes to make them compatible in length to UPC-A.

Enable UPC-E Extend

** Disable UPC-E Extend

UPC-A

Enable/Disable UPC-A

When disabled, UPC-A is identified as EAN-13.

0011401
** Enable UPC-A

0011400
Disable UPC-A

Transmit Check Character

UPC-A is 13 digits in length with the last one as its check character used to verify the integrity of the data.

0041404
** Transmit UPC-A Check Character

0041400
Do Not Transmit UPC-A Check Character

Add-On Code

A UPC-A barcode can be augmented with a two-digit or five-digit add-on code to form a new one. In the examples below, the part surrounded by blue dotted line is a UPC-A barcode while the part circled by red dotted line is add-on code.

Enable 2-Digit Add-On Code

** Disable 2-Digit Add-On Code

Enable 5-Digit Add-On Code

** Disable 5-Digit Add-On Code

Enable 2-Digit Add-On Code/ Enable 5-Digit Add-On Code: The scanner decodes a mix of UPC-A barcodes with and without 2-digit/5-digit add-on codes.

Disable 2-Digit Add-On Code/ Disable 5-Digit Add-On Code: The scanner decodes UPC-A and ignores the add-on code when presented with a UPC-A plus add-on barcode. It can also decode UPC-A barcodes without add-on codes.

Interleaved 2 of 5

Enable/Disable Interleaved 2 of 5

Check Character Verification

A check character is optional for Interleaved 2 of 5 and can be added as the last character. It is a calculated value used to verify the integrity of the data.

Disable: The scanner transmits Interleaved 2 of 5 barcodes as is.

Do Not Transmit Check Character After Verification: The scanner checks the integrity of all Interleaved 2 of 5 barcodes to verify that the data complies with the check character algorithm. Barcodes passing the check will be transmitted except the last digit, whereas those failing it will not be transmitted.

Transmit Check Character After Verification: The scanner checks the integrity of all Interleaved 2 of 5 barcodes to verify that the data complies with the check character algorithm. Barcodes passing the check will be transmitted, whereas those failing it will not be transmitted.

Set Length Range for Interleaved 2 of 5

The scanner can be configured to only decode Interleaved 2 of 5 barcodes with lengths that fall between (inclusive) the minimum and maximum lengths. To accomplish it, you need to set the minimum and maximum lengths.

Set the Minimum Length (Default: 6)

Set the Maximum Length (Default: 100)

Example: Set the scanner to decode Interleaved 2 of 5 barcodes containing between 8 and 12 characters:

1. Scan the **Set the Minimum Length** barcode.
2. Scan the numeric barcodes "0" and "8" from the "Digit Barcodes" section in Appendix.
3. Scan the **Set the Maximum Length** barcode.
4. Scan the numeric barcodes "0" and "C" from the "Digit Barcodes" section in Appendix.

Febraban

Disable/Enable Febraban

** Disable Febraban

Enable Febraban

** Do Not Expand Febraban

Expand Febraban

Transmit Delay per Character

Transmit Delay per Character applies to both expanded and unexpanded Febraban. This feature is available only when USB HID Keyboard is enabled. The transmit delay per character is 75ms and is NOT user programmable.

** Disable Transmit Delay per Character

Enable Transmit Delay per Character

Transmit Delay per 12 Characters

Transmit Delay per 12 Characters applies to expanded Febraban only. This feature is available only when USB HID Keyboard is enabled.

**** Disable Transmit Delay per 12 Characters**

Enable Transmit Delay per 12 Characters

To set this parameter, scan the **Set Transmit Delay per 12 Characters** barcode below and then a numeric barcode (0-7, which represent 0ms, 300ms, 400ms, 500ms, 600ms, 700ms, 800ms and 900ms, respectively). The default value is 500ms.

Set Transmit Delay per 12 Characters

Example: Set the transmit delay per 12 characters to 600ms:

1. Scan the **Set Transmit Delay per 12 Characters** barcode.
2. Scan the numeric barcodes "0" and "4" from the "Digit Barcodes" section in Appendix.
