

INTRODUCING HONEYWELL SALISBURY™ RFID AND SAFETY SUITE EQUIPMENT MANAGEMENT BUNDLE

Real-time visibility on your
equipment and equipment
compliance

Honeywell
SALISBURY

ARE YOUR WORKERS READY — IN TERMS OF EQUIPMENT — TO SAFELY PERFORM THE JOB AT HAND?

If you're like many safety managers or operations leaders, you may struggle to answer that question with confidence. It's often because key information about equipment and inspections is buried in spreadsheets, databases and paper-based systems.

MINIMIZE YOUR EQUIPMENT COMPLIANCE INCIDENTS AND YOUR PAPERWORK

That's why Honeywell created Safety Suite, a cloud-based tool that gives you real-time visibility — in one centralized interface — on your equipment and a workers' readiness to do safe work with that equipment.

AN ACCURATE PICTURE OF COMPLIANCE AT YOUR FINGERTIPS

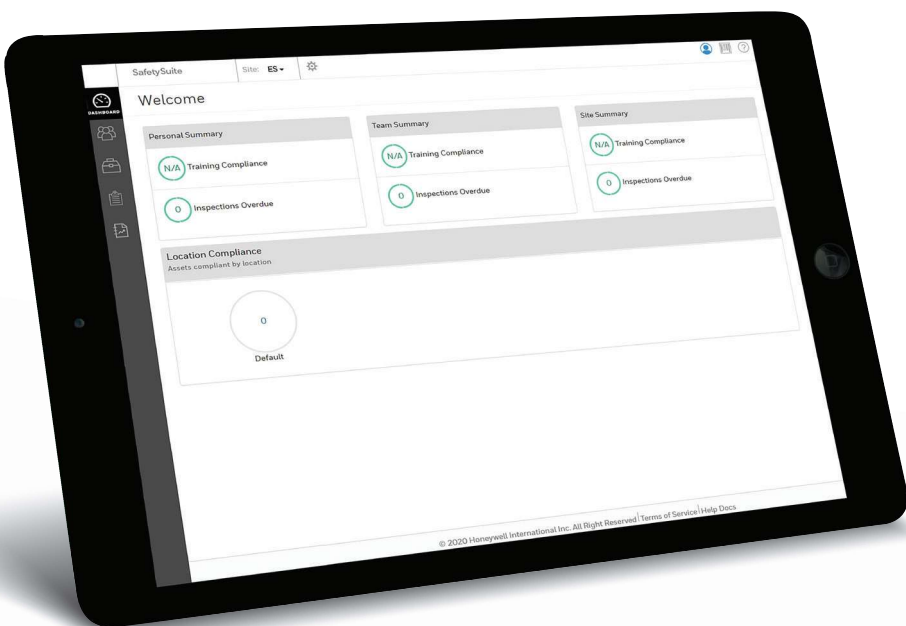

With in-the-moment visibility available from a web browser, you can help prevent equipment compliance issues that could cause costly downtime, all while managing enterprise risk and building worker confidence in their equipment.

With this software you can quickly and easily see:

- The compliance status of each piece of equipment
- It's last known location
- The worker assigned to it*

In addition to creating value for the enterprise, Safety Suite creates value for you as a safety manager, freeing you up from burdensome administration. So you can spend more time making workers safe — instead of making spreadsheets.

Safety Suite is a software-as-a-service platform for safety equipment information management.

* Optional

BRING NEW VALUE TO YOUR ELECTRICAL SAFETY EQUIPMENT – WITH REAL-TIME VISIBILITY ON YOUR EQUIPMENT’S READINESS FOR SAFE WORK

With Honeywell Salisbury™ Electrical Safety products, you’re not just investing in safety. You’re also investing in better visibility on that safety – with the help of our Safety Suite software – so you can help ensure equipment compliance, prevent incidents, and reduce downtime.

A LOT OF INTELLIGENCE IN A LITTLE TAG

Several Honeywell PPE products come with an integrated radio frequency identification (RFID) tag or barcode that is packed with information from the Honeywell product database.

When you scan this tag or barcode, the data is imported seamlessly into the Safety Suite software so you can see critical information like:

- Item description
- Manufacture date
- Past and upcoming inspection dates

You also have the option to subscribe to worker assignment in which you can use the software to assign equipment to different workers and sites. And if our recommended inspection protocol is different from your policy, you can easily edit the information to meet your requirement.

ONE LOG-IN. ONE SOURCE OF TRUTH

With a centralized online repository of your PPE, you have one source of truth for all equipment inspections.

HAVE EQUIPMENT FROM OTHER MANUFACTURERS?

Safety Suite guides you in manually adding those items. So you have a consolidated, centralized view.

NEED TO INSPECT A SLEEVE OR GLOVE?

Simply scan the RFID tag to view the inspection history for that asset.

NOTICE ANY IRREGULARITIES ON YOUR SLEEVES OR GLOVES?

Input your observations directly into the software and upload a photo. So at the next inspection, whoever is doing the check can see the notes and take appropriate action.

RFID BUNDLE PRODUCTS

RFID GLOVES AND SLEEVES

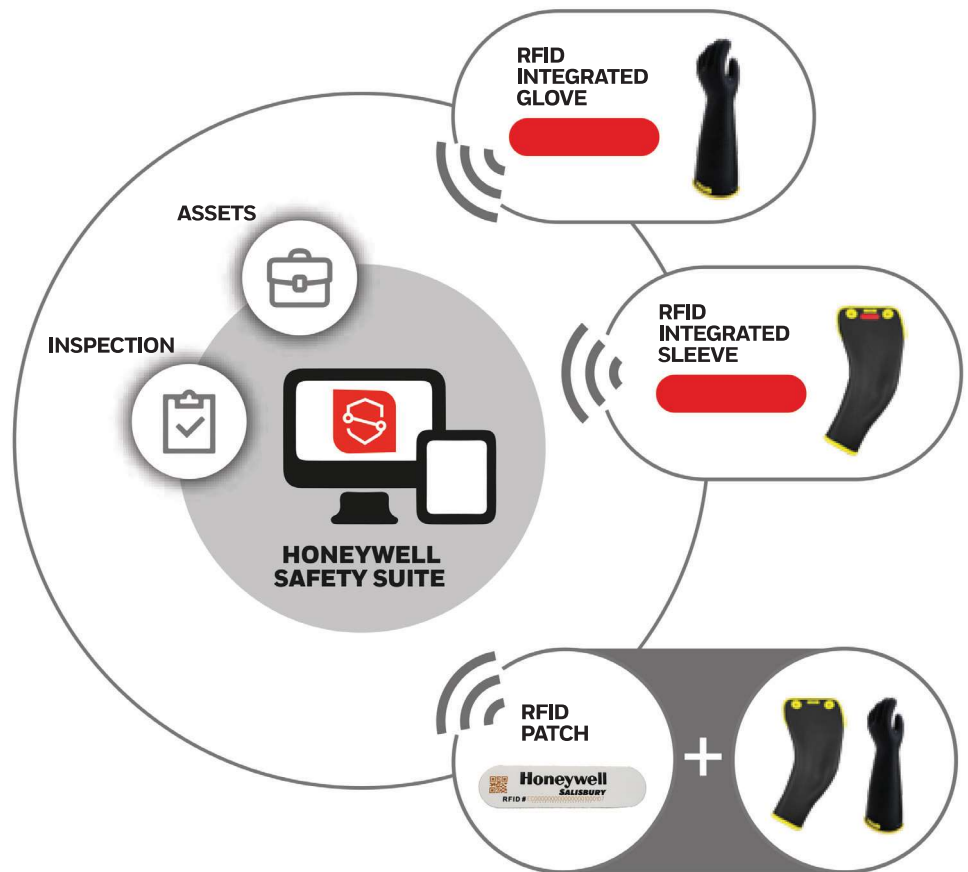

feature our flagship Honeywell Salisbury™ Dipped Rubber Sleeves and Gloves. The durable, red RFID tag is vulcanized onto the glove at the plant to ensure the most secure and durable adhesion available.

NEW RFID PATCHES

allow you to bring the power of wireless asset management to your existing natural rubber gloves and sleeves.

Once applied via a simple heat press process, these new RFID Patches can be scanned into Honeywell Safety Suite or any asset management tracking software for real-time asset compliance tracking.

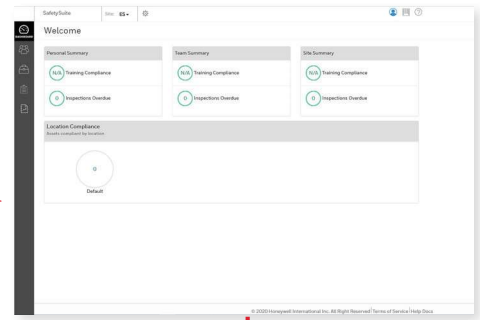

Additionally, our New RFID Patches feature a QR code and a printed numerical code, giving you multiple ways to read each patch.

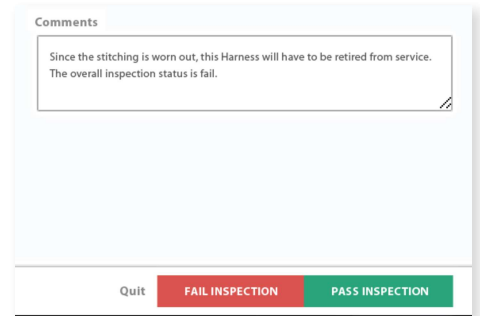

HONEYWELL SAFETY SUITE

- Safety Suite is a real-time, cloud-based platform for safety equipment information management.
- When manufactured RFID gloves and sleeves (RED TAG) are scanned into Safety Suite, data is imported seamlessly into the Safety Suite software.
- RFID Patch and product data are added manually however, Safety Suite allows for the same functionality.

RFID TECHNOLOGY MAKES IT EASY TO CREATE A CENTRALIZED EQUIPMENT INVENTORY IN THE SOFTWARE

Inspection History

Inspection Action/Result

KEY FEATURES	APPLICATIONS
Optimized User Interface	Intuitive, easy to use, and accessible on mobile devices
Visual Data Management	Actionable data in a format that is easy to digest – quickly enables faster, more accurate decision making
Email Alerts and Notifications	Proactive approach to action upcoming / current non-compliance indicators
RFID / Barcode Scanning	Scan any equipment / PPE with either RFID tags or barcodes. Ability to scan multiple assets in a single operation
Automatic Imports of Asset Data for Honeywell RFID tagged PPE	Seamlessly imports the serial number, item description, recommended steps for inspection, recommended inspection schedule, and other key information from the Honeywell product database
Offline Inspections on Mobile Device	Mobile application on Android to manage equipment / PPE inspections (sequential, non-sequential) at locations with no internet connectivity
Bulk Data Management	Microsoft Excel templates to facilitate efficient import of information associated with multiple workers, multiple assets and multiple trainings
Document Management	Associate certifications with workers, specification sheets with assets / equipment and roster sheets with trainings
Multiple Sites / Locations Management	Manage compliance across multiple sites in the organization using a single subscription
Reports and Excel Compatible	On demand reports in Microsoft Excel and scheduled email reports
Self-Service Administration	Manage job functions, sites, product families and inspection templates to align with the current operational processes
Secure Cloud Environment	Reliable data storage with 24/7 access from any internet connection – nothing installed and no consumption of local IT resources
Product Support	Professional support by Honeywell via email

FLEXIBLE, SCALABLE AND AFFORDABLE

In addition to tracking the compliance of your PPE, you can use the Safety Suite software to track the compliance of other assets — from fire extinguishers and jackhammers to certain areas of your plant.

Safety Suite makes it easy to add this kind of asset to the software, define the inspection procedures and attach photos or other documentation — so it becomes part of your compliance tracking. All in one centralized online location.

An easy decision

Safety Suite is remarkably affordable — at a low price based on the number of equipment you would like to track per year. Additionally, you can add the ability to assign equipment to any number of workers. And unlike on-premises software, there's no installation or maintenance. Instead, just access Worker Compliance online, and expand it across the organization as your needs evolve.*

- Fire extinguishers
- Ladders
- Jackhammers
- Smoke detectors
- Certain areas of your plant
 - Control room
 - Tool crib
 - Shipping
 - and more

PREVENT COMPLIANCE PITFALLS

According to the National Safety Council, falls are one of the leading causes of worker injury and death — and they're often due to breakdowns in equipment compliance tracking. For example, fall protection equipment may not be properly inspected for wear and damage. <https://www.nsc.org/work-safety/safety-topics/slips-trips-falls>

SafetySuite enables you to prevent these pitfalls — with real-time visibility on equipment inspections, training status, and workers' readiness for safe work.

Equipment Inspections

Equipment Assignment

*Subject to additional fees.

Another way Honeywell is connecting and protecting your workers — wherever they're at risk.

As a global leader in safety technology, Honeywell is developing connected solutions that give you real-time safety awareness, so you have the right information at the right time to make better decisions. And Worker Compliance is part of that focus.

With real-time visibility on safety compliance, you can ensure that every worker is ready for the job at hand.

This visibility on worker readiness is a great way to unlock new value from your Honeywell equipment, so you can help further reduce safety incidents, streamline compliance administration and improve productivity. And it's all backed by the long history of Honeywell developing software and other technology for companies' toughest challenges in aerospace, defense and process optimization. Now we're bringing our software expertise to industrial safety.

SAMPLE RFID SKUS

PRODUCT	SKU	UOM	QTY	DESCRIPTION	CLASS
RFID Patch	RX/RFID	Single	1	RFID Patch	-
RFID Sleeve	DORY-ST/RF	PR	1	SLV DIPPED COT1 R YEL-ST with RFID	0
