CEO's Message

Distinguished stakeholders,
First of all, I would like to express
my gratitude to all the stakeholders
in our enterprise for your continued
interest and support.

President & CEO
Hyun Bum Cho

Over the past year, we have encountered a number of challenges stemming from the growing uncertainty in global financial markets and fierce competition in the auto industry. In addition, the steady expansion of EV-related industries and segmented and diversified customer needs mean we must proactively respond to a constantly changing market environment.

In response, we formulated strategies to face these challenges with agility and were able to enjoy concrete results, including the launch of our second generation of tires designed for the needs of EVs, the supply of tires for the Audi RS2, and the acquisition of both Model Solution, a Korea-based digital prototype solution company, and the German tire retailer Reifen-Muller. In addition, we ranked first in the annual tire test performed by Auto Bild, a leading German automobile magazine based in Hamburg, proving the well-deserved reputation of the Hankook brand.

We also concentrated efforts on creating social and environmental value. Since the establishment of a company-wide CSR management system, customized activities by region have been conducted within our overseas networks. As the role of companies in protecting the environment and managing supply chain magnifies, we declared an SNR (sustainable natural rubber) policy in response. As a recognition of our efforts at sustainability management, we have been listed on the Dow Jones Sustainability Indices (DJSI) World Class for the third consecutive year.

This year marks the 10th anniversary of our publishing this CSR report. This report will serve as an opportunity for us to look back on our efforts over the last decade and renew our commitment to ensuring sustainable management. Moreover, we would like to proactively communicate with our stakeholders by transparently disclosing last year's performance and this year's targets here in this report. We will not be complacent with our short-term gains, and will continue to pursue our long-term goals through the establishment of our CSR Vision 2030 Roadmap.

Hankook Tire & Technology has been supporting the UN Global Compact and the SDGs and will continue to faithfully implement them in pursuit of the sustainable development of human society. We will also proactively fulfill our corporate social responsibility while enhancing our global competitiveness. Drawing upon our unwavering commitment to sustainable management, we look forward to your interest and support. Thank you.

Hankook Tire & Technology's 10 Years of Milestones

This year marks the 10th anniversary of publishing our CSR report. We would like to share with you our efforts and achievements over the last decade.

Company Profile

Company Overview

Since its establishment in 1941, Hankook Tire & Technology has promoted its brand value and strengthened quality competitiveness to achieve technological leadership. As a result, we have grown into the 7th largest tire maker in the world, offering the best possible driving experience to customers in 180 countries.

Global Network

We are implementing customized strategies within our global network consisting of five regions to achieve balanced growth from advanced and emerging automotive markets. To meet different customer needs, our sales network encompasses Europe, the Americas, the Middle East, Africa and Asia-Pacific regions. In addition, 'tire communication channels' (OE tire offices) are being operated in Korea, China, Germany, the US, and Japan for the close cooperation with leading car makers.

CSR FOCUS AREAS

APPENDIX

SDG Performance

We are in support of the UN Sustainable Development Goals (SDGs) and committed to addressing environmental and human issues. In particular, we will concentrate on four targets: achieving gender equality and empowering women; promoting economic growth and employment; addressing inequality; and responding to climate change issues

5 GENDER EQUALITY

Achieve gender equality and empower all women and girls

- Provided training on the prevention of sexual harassment to 6,688 employees and conducted monitoring activities
- Established a human rights management system based on the UN Guiding Principles on Business and Human Rights to promote gender equality and empower women

8 DECENT WORK AND ECONOMIC GROWTH

Promote sustained, inclusive and sustainable economic growth, employment and decent work for all

- Made a total of KRW 339,553 million worth of investments in 2018 (unit: KRW million)
 - ① Korea: 187,136
 - ② China: 82,598 (global)
 - ③ Europe: 24,240
 - ④ America: 28,543
 - ⑤ Asia-Pacific: 15,839
 - ⑥ Other regions: 1,196
- Hired a total of 1,860 employees in 2018 (unit: employees)
 - ① Korea: 166
 - ② China: 688
 - ③ Europe: 186
 - ④ America: 745
 - ⑤ Asia-Pacific: 75

10 REDUCED INEQUALITIES

Reduce inequality within and among countries

- Conducted employee volunteer activities: 5,993 employees / 478 activities / 20,403 hours
- Three major Mobility projects for the vulnerable
 - ① Car donation: 50 cars
 - ② Tire donation: 6,253 tires (global)
 - ③ Tuieum Bus: 620 buses
- Operated the DreamWith project for strengthening the capacity of local communities in addressing childcare and youth issues: 14 organization from local communities / 224 participants

13 CLIMATE ACTION

Take urgent action to combat climate change and its impacts

- Reduced 17,408tCO₂-eq annually through activities, including adopting equipment with high energy efficiency, recovering waste heat and improving processes
- Optimized the transportation routes of finished products to reduce GHG emissions
- Launched the low-carbon tire Enfren Eco, with CO₂ emissions reduced by 12% compared to those of existing products (cutting 43 kgCO₂-eq per product)
- Reduced GHG emissions through the sales of key low-carbon products: 3.52tCO₂-eq/ton of finished product, cut GHG emissions through the sales of our low-carbon products: 3.32tCO₂-eq/ton of finished product

Integrated CSR Management System

Our declaration

Hankook Tire & Technology strives to enhance corporate value and pursue robust and sustainable growth together with its customers, business partners, local communities, and employees by fulfilling its corporate social responsibility. To this end, we aim to promote CSR as the business management foundation upon which our employees act at work. Through enterprise-wide integrated CSR management, we will offer our stakeholders the greatest possible value and lead sustainable development and growth not just in the tire sector, but across the entire mobility industry.

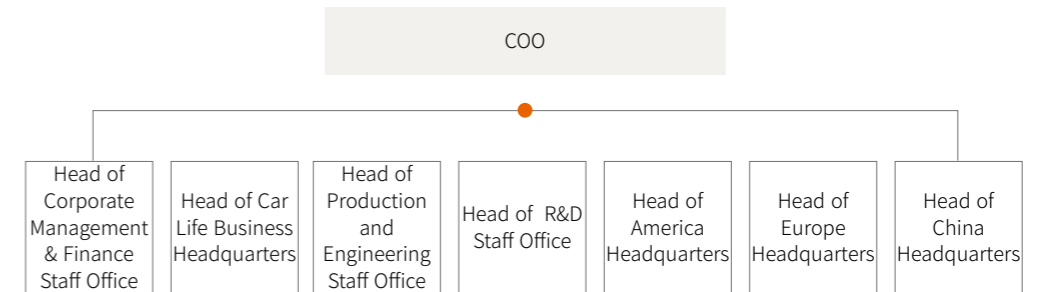

Responsible organizations

Our integrated CSR management system is operated by the CSR Team. This team formulates company-wide CSR policies and plans activities under the supervision of the head of the HR Division. These policies are reported to and approved by management on the CSR Strategy Committee. The team operates the CSR Steering Committee to provide guidance on policy direction to steering committees, monitors their quarterly activities, and discusses issues for their resolution. In order to support the seven sub-committees in their strategy formulation and operations, two working-level employees with related expertise from the CSR Team and the team responsible are assigned to each sub-committee. They present opinions from the perspective of experts at the quarterly committee meetings.

CSR committees

We have the CSR Strategy Committee, CSR Steering Committee, and CSR working-level council. The Steering Committee consists of seven committees in which enterprise-wide CSR activities are conducted. The results are reported to the CSR Strategy Committee to discuss future direction.

APPENDIX

CSR Committee Operation and Monitoring

To ensure integrated CSR management at the company level, the CSR Strategy Committee and the CSR Steering Committee consisting of seven steering committees are operated under the supervision of COO. Pertinent activities are reported and monitored to meet targets in accordance with plans.

We strive to systematically conduct CSR activities at worksites through the integrated CSR management system. The annual CSR Strategy Committee meeting chaired by COO is held in February or March to discuss key issues identified in the previous year, share domestic and international CSR trends, and make decisions on future direction. Based on the decisions, seven steering committees are requested to plan and implement pertinent activities.

Each CSR steering committee operates under the supervision of the heads of pertinent divisions or departments to ensure CSR activities are aligned with business works. With a commitment to realizing the CSR Vision 2020 Roadmap, sub-committees engage in activities according to implementation plans. Quarterly meetings are held at the steering committee level in which related teams discuss issues identified during the implementation of short-/mid-term tasks and set the direction and targets of the next year. The CSR Team monitors meetings and provides guidance on critical issues by analyzing the opinions of internal and external stakeholders and results of external evaluations, and benchmarking leading companies.

Operation and Monitoring of the CSR Committee

2019 CSR Strategy Committee

Date: March 20, 2019

Attendees: A chairperson and members of the CSR Strategy Committee, and the heads of seven steering committees

Agenda

- CSR management status at Hankook Tire & Technology**
 - Reviewing the 2018 DJSI¹⁾ assessment results: identifying items for improvement
- Latest CSR issues**
 - Announcing K-SDGs²⁾
 - Expanding the scope of the policy and initiatives on the use of renewable energy
 - Addressing the issue of an inflow of microplastics into the ocean
 - Strengthening CSR management in the supply chain
 - Conducting CSR activities utilizing IT technology
 - Establishing transparent corporate governance
- CSR 3.0**
 - Reflecting social value
 - Setting mid-/long-term goals for CSR management

1) DJSI: Dow Jones Sustainability Indices
2) K-SDGs: Korean Sustainable Development Goals

In the CSR Strategy Committee meeting in 2019, we reviewed the 2018 DJSI evaluation results in the areas of health and safety, social contribution and product responsibility, shared latest CSR issues, and discussed their potential impact on our business and measures. In the CSR 3.0 session, best practices in terms of business management strategy, qualitative value, and internalization by employees were presented. Participants discussed how to reflect them to the company's business operations. As all of the participants agreed on the necessity for setting targets in the long term, a decision was made to establish mid- to long-term CSR goals.

CSR Management in Our Overseas Network

We have expanded the scope of our CSR management and are maintaining related systems across all our overseas networks, including the China Headquarters' CSR committee launched in 2012 and a CSR management system for the America Headquarters established in 2018. CSR activities are planned, implemented, and monitored on an annual basis. Where necessary, the CSR Team provides guidance to support these activities at the company level.

Indonesia Plant, and the Asia-Pacific, Africa & Middle East Division

4) IP : Indonesia Plant

Best practices

1.5% decrease of accident KPI at the Hungary plant Our plant in Hungary launches an annual campaign of ten safety rules at worksites to thoroughly manage the work environment. Through the operation of the Work Safety Committee, potential risks factors are identified and addressed to ensure that a culture of safety is established. The plant provides workers from other countries, including Ukraine and Mongolia, with training and tests in their languages. In addition, an EHS Award is given to motivate employees. As a results of its multifaceted efforts, the accident KPI is recorded at 0.67, which is below the target of 0.68.

Customized social contribution activities at the Indonesia Our Indonesia plant is making a lot of efforts to protect the environment and meet the needs of local residents. A wide range of activities are conducted, including providing free food to low income families and free medical support to students in poor hygienic conditions, and launching clean campaigns. In addition, the plant has continued to operate one of our mobility projects, a tire donation program. In 2018, it donated a total of 369 tires.

Stakeholder communication and participation

We group our stakeholders in consideration of their impact on our business activities. Key issues and stakeholder opinions identified through a variety of communications channels are reflected in our business operations to ensure that sustainable value is created.

We categorize our stakeholders as the key group and general group. The key group directly affects and is affected by us, while the general group has a more indirect or potential impact. Our CSR issues are identified through communication with stakeholders and analyses of internal and external corporate environments. We share our CSR performance and targets with them and operate a variety of communication channels to listen to their opinions.

Cho Hyun Shick	799,241	0.65
Others	76,086,029	61.41
Total	123,875,069	100.00

BOD Composition

The BOD features two internal and three external directors. Directors are appointed at the general meeting of stockholders. Candidates are selected by the board and by a non-executive Director Recommendation Committee. Appointed directors are listed in the table below. All of our external directors hold no vested interest in the company, management, or shareholders.

Director	Name	Position	Relationship with the Largest Shareholder	Period of Tenure
Executive director	Cho Hyun Bum ¹⁾	President, CEO	Executive at an affiliate	2012.09.01~2021.03.25
Executive director	Lee Soo Il	President, COO	Executive at an affiliate	2018.03.26~2021.03.25
Non-executive director	Cho Choong Hwan	Audit Committee member	N/A	2012.09.01~2021.03.25
Non-executive director	Hong Sung Phil	Audit Committee member	N/A	2012.09.01~2021.03.25
Non-executive director	Jung Chang Hwa	Audit Committee member	N/A	2018.03.26~2021.03.25

1) Chairman of the BOD

Evaluation and remuneration

In regard to remuneration of the directors and auditor, incentives are provided according to the evaluation results of the company's performance using economic, social and environmental indicators. The remuneration limit approved in the general shareholders meeting is at KRW 10 billion.

Remuneration of the BOD Members and Auditors

(Unit: KRW in millions)

Director	No. of Persons	Total Remuneration	Average Remuneration per Person
Executive director	3	1,831	610
Non-executive director (Audit Committee member)	4	162	41
Total	7	1,993	285

* As shown in the table below, the composition of BOD was changed based on the decision at the regular general meeting of shareholders on March 26, 2018. Therefore, the figures above included both incumbent and retired directors as of Dec. 31 2018.

	Appointment	Retirement
Executive director	Director Cho Hyun Bum re-appointed	Director Seo Seung Hwa retired
	Director Lee Soo Il newly-appointed	
Non-executive director	Director Cho Choong Hwan re-appointed	Non-executive director Cho Kun Ho retired
	Director Hong Sung Phil re-appointed	
	Director Jung Chang Hwa newly-appointed	

BOD with expertise and a heightened sense of responsibility

Our external directors, a majority of the BOD, are selected based on their experience and expertise in industry, finance, academia, law, accounting, and the public sector. They undergo a transparent and fair recommendation process by the Non-executive Director Recommendation Committee. At the general meeting of shareholders, those who specialize in the areas of business management, legal affairs, or accounting and meet the qualifications under the pertinent laws are appointed as external directors to oversee management and offer them guidance in their decision-making process.

MONITORING AREAS

Responsible Corporate Governance
Integrated Risk Management

CSR FOCUS AREAS

APPENDIX

Top Management's Decision-Making Process

The BOD is at the core of our decision-making structure at Hankook Tire & Technology. We strive to fully gather stakeholder feedbacks and align them to actual outcomes by identifying necessary tasks at various meetings. We also continue to build a corporate culture where stakeholder feedbacks are reflected in the top management's decision-making through active communication.

BOD Meetings

In 2018, four regular and four ad-hoc BOD meetings were hosted.

BOD Meetings for the Past Five Years

Year	Regular Meetings	Ad-hoc Meetings	Attendance Rate of Non-executive Directors
2014	4	6	93.3%
2015	4	7	78.8%
2016	4	4	91.7%
2017	4	4	91.7%
2018	4	4	91.7%

Operation of Subcommittees under the BOD in 2018

We operate four subcommittees under the BOD: Audit Committee, Sustainability Committee, Non-executive Director Recommendation Committee and the Internal Transactions Committee. These subcommittees meet both on a regular and ad-hoc basis.

Committee	Composition	Responsibility	Operation
Audit Committee	Three non-executive directors	- Audit accounting and business operations - Investigate corporate financial assets - Handle matters stipulated in government regulations and the articles of incorporation as well as matters commissioned by the BOD - Request directors to report business operations - Request the appointment of external auditors	Four regular and four ad-hoc meetings
Sustainability Committee	Two executive directors	- Deliberate and decide on general management matters - Deliberate and decide on financial matters	As needed
Non-executive Director Recommendation Committee	Two executive directors and three non-executive directors	- Recommend non-executive director candidates	Two meetings
Internal Transactions Committee	Three non-executive directors	- Approve large-scale internal transactions	One meeting

Integrated Risk Management

To ensure corporate sustainability, it is imperative to identify a variety of potential financial and non-financial risks to business activities. In this regard, we are systematically monitoring risks, conducting activities for prevention, and strengthening our capacity for emergency response and recovery.

Financial risks

A variety of financial risks are monitored by the Finance and Accounting Department of the Corporate Management and Finance Staff Office. In the quarterly Financial Risk Management Committee, key issues are reviewed and response strategies are formulated.

Finance

In 2018, the global economy experienced turbulence stemming from the trade war between the US and China. Domestically, sluggish economic growth led to negative conditions. Amid a difficult situation, we successfully issued global investment bonds to enhance our credit standing while increasing the percentage of borrowing at fixed interest rates in preparation for a US interest rate hike.

Foreign exchanges

As our global sales activities expanded, a total of 31 foreign currencies are now being used. To minimize the related risks, current transactions, including export and import, and deposits and borrowing are all conducted in local currencies. Meanwhile, we strive to minimize our foreign currency position through the principle of using the same currency for bill collection and payment. Any foreign currency position that is over the predetermined limit is managed in accordance with pertinent corporate rules.

Liquidity

The debt, liquidity and cashflow of each subsidiary is managed from the perspective of global business operations. When the finance market is volatile, we focus on the stability of our financial structure through conservative liquidity management. In addition, we utilize cash pooling- which allows the concentration of cash to make it centrally available among overseas subsidiaries- in order to minimize liquidity risks, ease the burden of fund management, and reduce financial costs. Furthermore, we are operating a Global Cash Management System in which the funds of our overseas subsidiaries, including regional headquarters, are centrally managed.

Tax Management

Hankook Tire & Technology is making every effort to fulfill its responsibility by paying taxes in good faith in accordance with the following tax policies:

- We pay taxes in compliance with all pertinent laws and regulations in the countries of our presence.
- We do not use any kinds of tax structures or systems intended for tax avoidance and do not transfer profits to low-tax countries.
- We are applying a transfer pricing analysis methodology to all of our overseas manufacturing/sales subsidiaries:
 - We are applying the transactional net margin method from the OECD Guidelines. This pricing method is based on comparisons made at the net profit level between the taxpayer and independent parties in relation to a comparable uncontrolled transaction or dealing.
 - In determining transfer pricing, manufacturing subsidiaries are using the Full Cost Mark-up while the operating profit margin ratio or the Barry ratio is applied to sales subsidiaries.

Non-financial risks

Based on the characteristics of identified risks, they are monitored by responsible teams, regularly reviewed by a pertinent committee, addressed by a task force, or managed through emergency response measures at worksites

Business continuity

We have maintained ISO 22301 certification by operating a Business Continuity Management System at our plants in Daejeon and Geumsan, Korea and in Hungary. ISO 22301 is an international standard allowing companies to ensure business continuity by quickly recovering key business operations in the event of accidents or disasters. In accordance with this standard, we identified all of our production activities from raw material procurement to product manufacturing and supply, based upon which a business continuity plan was formulated to spotlight potential risks. In addition, an emergency response organization was set up to create a manual for emergency situations and conduct annual mock exercises.

Laws and regulations

To manage legal risks, we review contracts for domestic and international projects, provide legal advice for teams/divisions carrying out their tasks, and resolve disputes such as lawsuits and mediation. As part of the efforts to promote compliance management, diagnoses are conducted on compliance with the Privacy Protection Act regarding our collection and use of customer information, and with the Fair Trade Act as well. Improvement measures are taken based on the results. In addition, training on the prevention of sexual harassment is provided at domestic and overseas worksites.

Health and safety

Since the occurrence of a fatal accident at the Geumsan plant in 2017, we have placed top priority on health and safety risks and further strengthened our efforts for risk monitoring and management. In 2018, a dedicated EHS organization was established. A quarterly advisory committee on health and safety was held with the participation of labor, management, and external experts. A labor-management-government task force consisting of the Regional Employment and Labor Administration and organized labor is being operated on a monthly basis. In addition, the Stakeholder Committee was created to solicit advice and opinions from outside experts on priority EHS issues selected through the materiality analysis.

Other

If there are risks that could develop into new social or environmental issues or require consistent monitoring, the seven CSR steering committees (in the areas of product environment, EHS, climate change, employees, ethics management, corporate philanthropy, and suppliers) review and discuss them on a quarterly basis and formulate strategies based on the decision of the chairperson.

Customer Satisfaction and Quality Management (Car Maker)

Background

We engage in B2B transactions when providing OE¹⁾ tires to car makers. In order to keep our promises to our corporate customers, we are making every effort to faithfully meet their requirements. It is essential to strengthen our capacity for applying new technology as required by car makers if we wish to generate profit on a steady basis. If we focus only on short-term profit in our OE business, we may incur significant financial risks. Therefore, a variety of communication activities, including R&D investment, are required in order to sustain trust with customers over the long term.

1) OE: Original Equipment

Our direction

As a global business partner for car makers, Hankook Tire & Technology strives to bolster these strategic corporate partnerships based on the experience and expertise we have accumulated over the decades. To flexibly meet their needs under rapidly-changing market conditions, we make continuous efforts at developing state-of-the-art technology and enhancing quality. At the same time, greater focus is placed on strategic projects in cooperation with customers to lay groundwork for the development of market-leading technology. In addition, we are strengthening communication activities by responding to increasingly important CSR requirements.

Achievements

On-going communication with car makers

Conducted a variety of activities to communicate with car makers
- joint projects for concept tire-making, sponsorship of CSR-related events, and support for event shows

Strengthening product competitiveness

Developed technology and secured quality competitiveness
- Strengthened technological capacity through the advancement of a development process
- Provided training on quality awareness raising to 14,211 employees

Future plan and mid-/long-term targets

We will do our utmost to develop and supply products with high performance and quality that meet customer needs through multi-faceted activities, including exhibitions and exchange meetings. In particular, our focus will be on strengthening business relationships with our customers by improving product performance for future automobile technology, expanding the supply of our products, and proactively responding to CSR requirements.

- Win-win Supply Chain Partnership

On-going communication with car makers

We strive to strengthen customer-oriented marketing communication activities, including concept tire-making and PRM, to develop and promote mutually beneficial relationships with car makers.

Promoting mutual trust through communication with car makers

Trust-based communication To proactively respond to the requirements of car makers, we have promoted close relationships with them through business meetings and marketing communication activities. As a result, we received a Supplier of the Year award from General Motors in 2018.

Communication through partner relationship management activities and events

In 2018, we attended a Ford Motor Company fundraising event to combat juvenile diabetes and placed an ad in General Motors Magazine. Through two collaborative projects with Volkswagen, we presented future-oriented concept tires at the North American International Auto Show, Auto Shanghai, and IAA (International Automobile Ausstellung), which provided an opportunity to not only strengthen relationships with this company, but also to showcase our own technology. In addition, we invited European carmakers to DTM (Deutsche Tourenwagen Masters) as an official sponsor to further our business relations.

Communication through exhibitions and events

We have diversified a portfolio of our OE tires by supplying tires for 39 new cars, including Porsche Cayenne and Volkswagen T-Roc. At the same time, strategic promotion activities were conducted by placing ads on domestic and international newspapers and attending exhibitions, such as a trade show by Thomas Built Buses and the IAA Hannover

Meeting the requirements of car makers

Corporate CSR activities are becoming increasingly important indicators to external stakeholders as well. One case in point is in the supply chain management of car makers. In 2018, about 61% of our CSR-related requirements from external stakeholders originated with car makers. We proactively responded to demands from major car makers including BMW, Ford, Volkswagen, PSA, Scania, and Honda in the areas of the economy, society, and the environment in order to promote communication with them. As a result, we were selected as a Highest Supplier at Renault's Suppliers Awards for our efforts at sustainability management.

Customer Satisfaction and Quality Management (Car Maker/ General Customers and Dealers)
Employee Health and Safety Management
Climate Change and GHG Management
Employee Value Creation
Integrated Environmental Management
Community Involvement and Development
Transparency and Business Ethics
Win-win Supply Chain Partnership

Strengthening product competitiveness

We are making every effort at technological development and quality enhancement to provide optimal products. Considering the tougher emissions criteria and rising technological requirements that we must face, we are focusing on developing high-performance tires, strengthening cooperation with global car-makers as strategic partners, and contributing to the overall growth of the auto industry.

Developing high-performance products that meet the requirements of car makers

Expanding the scope of eco-friendly tires As a result of our efforts to meet GHG emissions reduction requirements, we signed a contract with Hyundai Motors to supply tires for its Ioniq (BEV/PHEV). In addition, we developed tires that can contribute to enhanced fuel efficiency in line with the Worldwide Harmonized Light Vehicle Test Procedure (WLTP), receiving a positive response from both car makers and consumers. We also pursued cooperation with EV manufacturers to expand our OE business. Going forward, we will continue our efforts to diversify a portfolio of OE tires by entering new EV markets through business partnerships with manufactures of future-oriented EVs, such as MicroSnap.

Establishing a zero-defect quality assurance system

We are conducting activities to improve the management of semi-finished and finished products, make pertinent investments, and strengthen criteria for ensuring zero-defect quality assurance. In particular, our focus is on the evaluation of organizations responsible for production, development, and management of quality issues and risks in order to identify potential risks across the entire process from development to production.

Employee awareness raising of quality

All employees on quality-related teams currently make a quality management pledge, but we are still continuing to expand the scope of annual awareness-raising training. In addition, a new on-the-job quality training program is being provided to strengthen employee capacities and quality assurance personnel are being assigned appropriately based on their job skills and performance.

APPENDIX

Background

As an increasing number of customers are developing an interest in tire and motor vehicle maintenance, tire manufacturers and repair service companies are expanding the scope of their services, and a variety of online-to-offline (O2O) services emphasizing convenience and speed are being launched. Nowadays, customers are searching about products online, making customized purchases based on their personal driving conditions and preferences, and sharing their experience through social networks. Rapidly-changing consumer trends and needs demand that the tire industry to innovate and adapt. Simply applying existing approaches is no longer sufficient to satisfy customers. The tire industry must serve as a service platform going beyond the traditional roles of manufacturers and distributors in order to provide new value and differentiated services in line with customer needs and trends.

Our direction

As a global business partner for car makers, Hankook Tire & Technology strives to bolster our strategic corporate partnerships with them based on the experience and expertise we have accumulated over the decades. To responsively meet their requirements under rapidly-changing market conditions, we make continuous efforts at developing state-of-the-art technology and enhancing quality. At the same time, greater focus is placed on strategic projects in cooperation with customers to prepare the development of market-leading technology. In addition, we are strengthening communication activities by responding to increasingly important CSR requirements.

- Mobile Marketing Service
For automobile customers, this provides vehicle and tire check-up service by visiting government offices, companies and venues for local events.
- Fleet Service
This provides vehicle and tire check-up service for intra-/inter-city and tourist buses and cargo trucks.

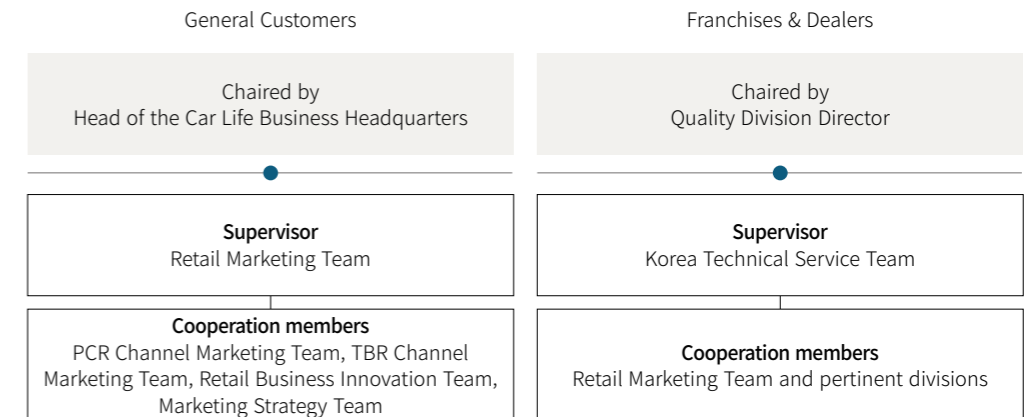

Achievements

	Included in the 2019 Korea Brand Power Index (K-BPI)	Ranked first for the eleventh consecutive year
	Automobiles that received our mobile marketing service	5,596
	Fleet Service	61 times

Future plan and mid-/long-term targets

In order to offer a seamless online-to-offline customer experience through our T'Station and service network, we are preparing new services, including professional consulting for customers, pick-up, and delivery. In addition, we will make quality our top priority in order to meet customer requirements and promote satisfaction while creating a virtuous cycle in our business operations. To achieve our ultimate goal of providing our customers with safe driving, a wide range of customer communication activities will be conducted. Our efforts at providing differentiated services for customer satisfaction will be sustained as we reflect rapidly-changing trends and needs.

Win-win management

We provide our shop owners with training programs to share a value of ‘driving for happiness’ and achieve shared growth with our customers and dealers.

Training programs on shop operation

We provided a variety of programs for our shop owners to help them effectively operate their businesses and increase customer satisfaction. Programs on shop operation and how to serve customers were offered and new shop owners were provided an introductory training course. In 2018, a total of 258 participants received training on product knowledge, the repair of imported cars, and

다양한 브랜드에 미쉐린까지

Multiple brands

wheel-alignment techniques in an effort to strengthen their professional capacities. We will step up our efforts to support shop owners and dealers to bolster their confidence in shop operation and ensure the provision of high-quality service to customers.

Customer satisfaction

To increase customer satisfaction, our T'Station brand is offering a positive purchase experience and new concepts in services to customers through the sales of global tire brands, the T'Station.com website, and Today service.

Increasing customer satisfaction

T'Station.com is a digital-based online and mobile platform that allows customers to purchase tires that meet their needs. By utilizing our network of 300 T'Stations across the country, customers can enjoy the same service and experience as they do offline. In particular, its Today service, a new concept of service devised for maximizing customer satisfaction, allows customers to have their tires installed on the day of purchase at T'Station.com.

Sales of global tire brands

To increase customer convenience and satisfaction by providing a wide range of choices, T'Station has expanded the scope of its products to include global tire brands such as Michelin, Pirelli, and Maxxis. This allows customers to select optimal products according to their preferences and driving style. They also can enjoy ‘total care’ service from experienced tire professionals using advanced equipment.

Customer communication

We offer services to reach and listen to customers as a means to increase their satisfaction by improving product and service quality.

On-highway vehicle safety check-up campaigns

We set up booths in six highway service areas in Korea to provide battery, tire pressure, and oil checks along with windshield washer fluid refill. While offering these services, we provided drivers with tips on tire maintenance and information about its importance for road safety. In addition, campaigns to enhance our corporate image were conducted during the summer vacation season.

Free mobile vehicle check-up services

To strengthen communication with customers and promote safe driving, we provided free mobile vehicle check-up services 174 times for a total of 7,619 cars in 2018. In 2019, we plan to offer free tire pressure and wear checks and maintenance tips in places with a heavy car presence, such as at local festivals.

Employee Health and Safety Management

Background

Industrial accidents are a potential risk factor that can seriously damage the reputation and business operations of companies. Since tire manufacturing is a process industry and requires the use of chemicals, ensuring a healthy and safe work environment is essential. Recently, corporate responsibility for employee health and safety has been expanded and the government is tightening regulations by pushing for the overhaul of the Occupational Safety and Health Act. In response, companies must conduct proactive and preventative activities to protect the safety and health of employees.

Our direction

Promoting employee safety and health is our fundamental management philosophy and serves as a driving force for our pursuit of sustainable growth. To achieve a zero-accident and zero-disaster record, the EHS committee is working regularly and leading a variety of related activities. The 2018 activities include expanding EHS-related investments, launching campaigns to create a culture of safety, and providing muscular skeletal disease prevention programs and psychological counseling for employees. We will continue our efforts to ensure that a culture of safety takes root at our worksites.

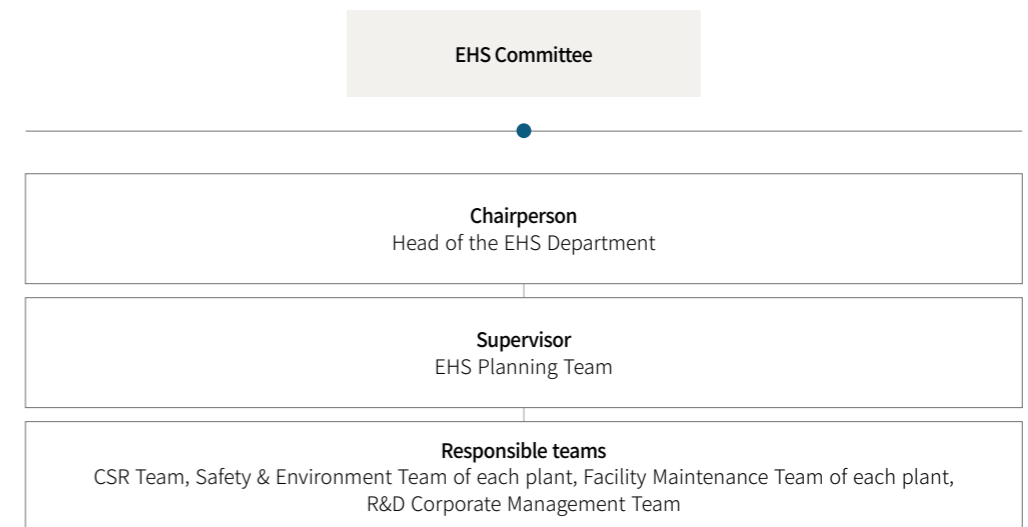

Achievements

Future plan and mid-/long-term targets

We are making multifaceted efforts to establish safe and healthy worksites by pursuing EHS activities. To ensure that a culture of safety takes root at our worksites, we will evaluate the safety awareness and activities of all our employees, identify any issues, and determine improvement measures. In addition, as part of the efforts underlying the proactive operation of our EHS system, we are planning for our transition to ISO45001 and establishment of a chemical management system.

Win-win Supply Chain Partnership

Strengthening safety management at worksites

We encourage employees at worksites to take the initiative in safety management in order to create a safe and healthy work environment.

Establishing a culture of safety

To heighten employee awareness and guarantee a culture of safety at domestic plants, diagnoses were conducted in cooperation with external experts. Surveys and interviews with employees in different positions were held and on-site inspections were carried out to identify issues with their safety management systems and operations. To address the issues uncovered, a roadmap and framework for establishing a culture of safety were formulated and pertinent activities were conducted. In addition, professional training programs were provided to prevent any unsafe employee behaviors stemming from job stress or psychological factors. A total of 154 employees (team leaders, team members responsible for safety management, and suppliers) took the programs on safety psychology and safety accident investigation techniques. We will operate a wide range of evaluation activities and programs to encourage our employees to practice safety with heightened awareness.

Reinforcing a safety and health system

We operate in-house security programs and designate safety and health personnel at domestic plants. To create a pleasant and safe work environment, risk factors are identified, including unsafe employee behaviors, and activities are conducted to address them. As part of the efforts at industrial disaster prevention, a labor-management-government task force is conducting joint safety-health inspections and checking the implementation progress of EHS plans on a monthly basis. The task force activities allow us to find common ground on safety management and strengthen EHS efforts at the plant level. We will continue our efforts and encourage employees to take the initiative in promoting safety and health at worksites.

Proactively managing safety risks

To ensure a timely response to EHS issues and risks and promote their fundamental reduction, monthly EHS meetings and quarterly safety and health advisory committee meetings are held. Based on advice from external experts, issues related to our safety and health systems and operational processes are identified and verified, and improvement measures are taken to proactively address EHS-related risks.

Bolstering efforts for employee health

Employee health is one of key elements for the sustainability of companies. We have established a disease prevention system to protect employees from harmful factors and continued our efforts at creating a safe and pleasant work environment.

Developing procedures for muscular skeletal disease prevention and response

For fundamental and effective prevention of musculoskeletal disorders at the Daejeon and Geumsan plants and R&D centers, we developed new programs by standardizing pertinent programs being operated individually at the worksite level. In addition, training on these programs was provided to employees responsible for EHS at each worksite to support effective implementation through employee participation and interest in the program. The programs apply scientific analysis techniques for the effective improvement of work processes that could negatively impact employee health. In addition, post-management of employees suffering health issues is included in order to monitor their adjustment to work after returning from treatment. In 2019, we will fully utilize the programs and work on expanding their scope to our overseas worksites.

Operating stress management programs

Since 2014, we have been operating counseling programs to help our employees and their family members relieve and prevent stress. If they wish to receive counseling outside of the company or at home, professional counselors can visit them in person. In 2018, programs for overcoming depression and suicidal thoughts were provided for 623 managers and supervisors, and a total of 730 employees used counseling services. In 2018, a depression diagnosis (Hamilton Depression Rating Scale) was conducted for all of our domestic employees. Employees with scores of 15 points or higher (mid-level depression) were provided psychological counseling and treatment. Going forward, we will continue to offer training to managers and supervisors to help them identify and support employees with high risks of depression and further promote counseling programs among our employees.

Ensuring a healthy work environment

To protect employee health and create a more pleasant work environment, work environment measurement is conducted twice a year. Based on the results of checks on air quality, noise, illumination, temperature, and humidity, we improve and upgrade the pertinent facilities. The efficiency of the local ventilation systems essential for work environment management is monitored from the design to installation and test operation phases. We conduct independent testing and take improvement measures for systems with compromised efficiency to ensure appropriate air flow rates. In 2018, as for chemical injection facilities during the mixing process, we increased the installation of local ventilation systems to prevent fugitive dust emissions and upgraded existing systems in the extruding, building, molding, trimming and inspection processes. Meanwhile, to enhance the efficiency of rubber fume control during the curing process, zeolite in the CFRTO (combustion equipment) was replaced and ventilators were installed.

Climate Change and GHG Management

Background

Increasing GHG emissions are triggering environmental issues, such as ecosystem changes and sea-level rise. Since the Paris Agreement took effect on November 4, 2016, many countries around the world have been taking part in efforts to respond to climate change. In this regard, the role of companies is becoming increasingly important in limiting the overall temperature increase to 1.5 degrees Celsius above pre-industrial levels. Governments are expected to tighten regulations on GHG emissions as the agreement goes into effect. Stricter regulations could lead to trade barriers and increased production costs, eroding market competitiveness. On the other hand, if we can maximize energy efficiency and transition to low-carbon fuels and electricity, it will bring benefits such as enhanced competitiveness and improved corporate brand value.

Our direction

Since climate change is impacting the environment, ecosystem, and people, the issue involves diverse regions and stakeholders. Considering GHG emissions from raw materials, tire production, and product use perspectives, we should respond to climate change issues across the entire supply chain from supplier to customers.

We will do our utmost to reach our targets for GHG emissions reduction. As part of the efforts to address global warming issues, we aim for energy transition to green energy curbing the use of fossil fuels. Our activities are monitored in the quarterly Climate Change Committee and we provide information on our annual GHG emissions and responses to climate change and through CDP¹⁾.

1) CDP (formerly the Carbon Disclosure Project) is an organization which supports companies and cities to disclose the environmental impact of major listed corporations. The environmental information publicly disclosed through CDP is used as a guide for the investment by financial institutions around the world.

Achievements

Awarded the 2018 CDP Korea Carbon Management Sector Honors

Leadership A- rating

GHG emissions reduction

17,408 tCO₂-eq

Energy and carbon cost savings

KRW 2.633 billion

Future plan and mid-/long-term targets

A detailed plan will be prepared to achieve our 2030 GHG emissions reduction targets. We will continue our efforts to identify alternative energy sources and lay a foundation for energy transition. Currently, we are working on a plan for establishing an integrated platform for energy management that will allow us to remotely oversee energy use at all of our domestic and overseas plants and share technology on GHG emissions reduction.

Win-win Supply Chain Partnership

Low-carbon management

We operate the Climate Change Committee to systematically devise response strategies for addressing climate change issues at the company level. In 2018, we were selected as an outstanding company by CDP in recognition of our efforts at low-carbon management. To optimize energy management at plants, our e-Saver system has been upgraded in phases.

Awarded the CDP Korea Carbon Management Sector Honors

As a result of our transparent disclosure of information on our climate change response and proactive GHG emissions reduction activities, we were given a Leadership A- in the CDP Climate Change Rating and awarded the 2018 CDP Korea Carbon Management Sector Honors at the 2018 CDP Korea Climate Change & Water Management Award. Since we received an A- in CDP Supplier Engagement Rating, we were unable to be included on the Leader Board. Still, we will continue with our efforts at carbon management within the supply chain.

Upgrading the e-Saver

We are phasing in upgrades of our e-Saver, an IT system for systematic energy management at plants. In 2018, we added new features including a power overload alarm and automatic settings for target intensity of energy use by process. These will be utilized in publishing weekly energy reports. The 2019 upgrade will feature centrally-controlled compressors using big data.

Reducing GHG emissions

A variety of activities for conserving energy, including the adoption of high-efficiency facilities and recycling energy, are being conducted to minimize production costs and GHG emissions over the mid- to long-term. In addition, we are constantly reviewing transition plans to shift to low-carbon energy.

Introducing high-efficiency facilities

To increase energy efficiency during the tire manufacturing process, we are focusing on improving operational efficiency of existing facilities and replacing with high-efficiency ones. We have been carrying out projects to replace fluorescent lights with LEDs and in 2018, a total of 15,000 lights were replaced. At the same time, old facilities have been replaced by new ones. As a result, we have been able to save KRW 1.07 billion per year and reduce 5,562tCO₂-eq of GHG emissions per year.

Recycling energy and preventing leakage

During the curing process, which is where 95% of the energy supplied to plants is applied. By stabilizing the system for recovering and re-using waste heat, the application of waste heat can be increased. In addition, steam traps are regularly inspected and replaced to prevent thermal leakage. The condensate water used in the curing process was forcefully discharged at specific regular times, meaning that some steam had to be discarded as well. In response, the Jiaxing plant adopted condensate water discharge control technology that utilizes automatic traps to prevent the leakage of steam. This technology is being phased in across all our plants. Our efforts at recycling energy and preventing leakage have resulted in cutting costs by KRW 410 million per year and reducing 3,628 tCO₂-eq of GHG emissions per year.

Promoting operational efficiency

We are conserving energy in a variety of ways by efficiently and effectively improving existing approaches to tire manufacturing and energy use. In 2018, turbo chillers were replaced with absorption chillers that do not require electric power. N₂ gas production efficiency has increased as well, reducing the use of power. In addition, temperature control for cooling & heating and tubes for recovering condensate water were improved to conserve thermal energy. As a result, we saved KRW 1.16 billion per year and reduce 8,218tCO₂-eq of GHG emissions per year.

Introducing new technology and utilizing renewable energy

Photovoltaic power generation units were installed on the roof and bicycle racks of the China Technical Center (CTC), a research center at the Jiaxing plant. Their operation started on December 27, 2018. It is expected to contribute to about 300tCO₂-eq reduction of GHG emissions per year by generating and supplying green electricity utilizing the photovoltaic power generation system. Meanwhile, facilities at the Daejeon plant were established to utilize externally-generated low-carbon steam that includes thermal energy from biomass, reducing GHG emissions by about 12,000tCO₂-eq per year.

Employee Value Creation

Background

As enterprises are becoming increasingly influential across wide swaths of society, the interest in and demand for corporate social responsibility is growing worldwide. To secure business sustainability, companies need to focus not only on product price competitiveness and quality, but also on policies for nurturing talent.

Our direction

Promoting human rights management is one of our strategic tasks for realizing the CSR vision of sustainable growth through fulfilling corporate social responsibility. We announced our human rights management plans in 2015 and conducted human rights assessment to identify potential issues across the supply network, including at our subsidiaries. We have continued in our efforts to root out vulnerabilities by considering the business characteristics of each subsidiary, upgrading training modules, and raising employee awareness. As part of these efforts, we are operating programs to support and communicate with employees and concentrating on change management with the introduction of HR3.0.

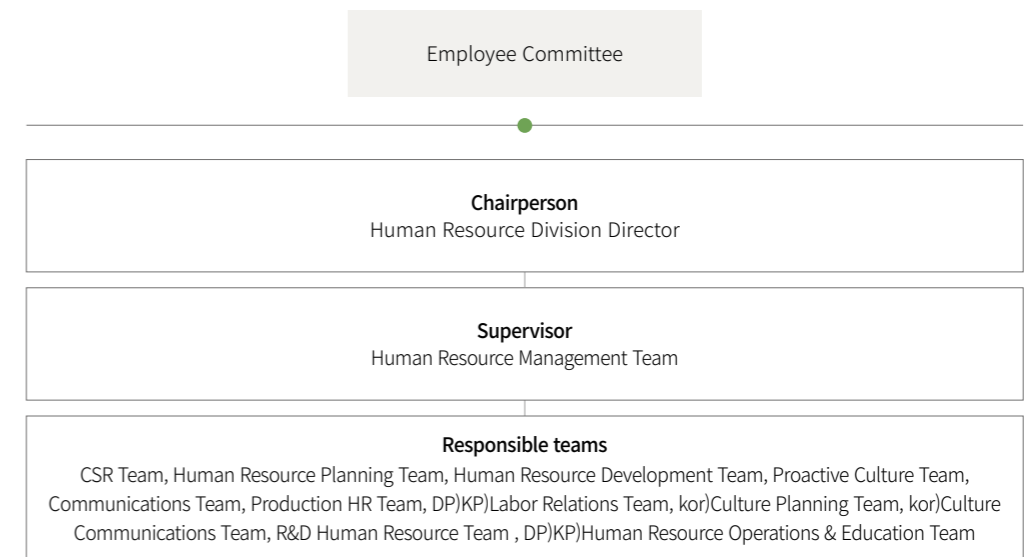

Achievements

	Published a guide book on human rights management	
	Conducted a survey on employee engagement	A total of 276 improvement tasks identified
	Developed microlearning content for employee:	18 programs

Future plan and mid-/long-term targets

We are doing our utmost to protect human rights of our employee by establishing a system for human rights management. Going forward, the scope will be expanded to the entire supply chain, including suppliers, and enterprise-wide diagnostic tests will be biennially conducted. For worksites with high risks, a due diligence will be conducted to reduce the risks and improve the working environment. In addition, we will steadily increase the employment of people with disabilities and the percentage of female managers, and lay a groundwork for diversity management.

Pursuing changes for a positive corporate culture

To create an environment in which employees concentrate on their work with creative ideas, we motivate our employees with a variety of campaigns and programs.

Improving organizational practices

A survey on employee engagement was conducted in 2018 to improve organizational practices at the company and department levels. To identify multiple aspects of issues, customized questions were provided by organization and region. The survey results were analyzed based on which plans for improvement had been established and monitored. A total of 276 tasks were identified from 62 departments, and the related progress was monitored. In 2019, we will provide a guide to revisit the previously-selected improvement tasks.

Internalizing core values

In 2018, we focused on activities to raise awareness and promote the understanding of our core values: passion, innovation, collaboration, and global. The activities included a cup sleeve event and making posters. In addition, workshops on best practices were held to help our employees more deeply understand the meaning of our core values.

* Our employee awareness of the core values rose from 70% in 1Q to 79% in 3Q 2018.

Innovating the ways we work

A wide range of activities were conducted to innovate the ways we work. To promote efficiency, a campaign on the theme of Less for Better was operated. Content materials on efficient time management were published as a series in 2018 to provide guidance to employees on utilizing a new working hours system. Over the past seven years, we have been operating a platform through which employees can freely present ideas, and maintaining nine Proactive LABs. These in-house project teams are led by an idea's presenters to pursue its implementation.

Improving organizational practices on meetings and reporting

We review the results of biannual employee satisfaction surveys on innovating corporate culture, in particular organizational practices regarding meetings and reporting. The Proactive Culture Team personally monitors meetings and provides guidance on enhancing meeting efficiency. In addition, our PPT-less initiative encourages employees to create clear and concise reports rather than PowerPoint documents with an excess of pages.

* Company-wide use of PowerPoint documents : 1 % (2018)

* Employee satisfaction survey on organizational practices on meetings and reporting: 67% (2017) → 70% (2018)

Adding "Mr. or Ms." as a suffix for every employee's name when addressing one another

To create a more horizontal corporate culture, we encourage our employees to add "Mr. or Ms." instead of a job title as the suffix for every employee's name when addressing one another. To this end, a variety of activities have been implemented, including campaigns and promotional materials. In addition, an annual survey is conducted to monitor progress. In the 2018 survey, 74% of employees responded that they used "Mr. or Ms.", which equaled the level in 2017.

Running the Proactive Friday and Strategic Sunday programs

The Proactive Friday program is operated once per month. On the designated day, all of our executives and team leaders take the day off while the remaining employees, either as individuals or in groups, plan and conduct creative activities promoting our core values. Executives and team leaders return to work on the Sunday of the week, which is called Strategic Sunday, and host Town Hall meetings to discuss issues and strategic directions.

Training support for capacity building

We created microlearning content for employee training and conducted activities for HRD innovation and change management.

Identifying and creating content for microlearning

To provide employees with materials for self-directed learning, we created short (5-7 minutes) videos as follows:

- Tire manufacturing processes from mixing to calendaring, cutting, building, curing, and inspection (13 videos)
- Hankook Tire & Technology's Proactive Workstyle (1)
- Understanding of a PLM¹⁾ system (2)
- Understanding of tire up-selling techniques (2)

1) PLM: Product Life Cycle Management

The content is utilized as pre-learning materials for: introductory training for new non-career/career office and technical employees; vocational and on-the-job training for production workers; and a professional course.

HRD innovation and change management

We develop activities to promote self-directed learning and ensure that employee capacity-building activities boost their results at work. Live-on Chat is a tool that allows our office and technical employees to set and manage their learning targets by communicating with their team leaders. In addition, programs were developed for employees on the track for promotion to a team leader, and the scope of on-the-job training has been expanded.

Promoting human rights and diversity

We are promoting human rights and diversity in order to contribute to building a sound and healthy society. As part of these efforts, we operate grievance channels, conduct a Human rights assessment and increase the number of employees with disabilities.

Strengthening due diligence on human rights management

Grievance Committee In 2015, we established a grievance process through which employees can raise personal grievances. It aims to address the personal issues of employees, prevent disputes, and promote a harmonious labor-management relationship. Employees can report any kind of grievance, including discrimination, workplace sexual harassment, unfair treatment related to parental leave, or other personal issues via an oral report, phone call, letter, or e-mail. The Grievance Committee or similar channels are operated at domestic worksites and key overseas manufacturing subsidiaries. A Human rights assessment was conducted to identify worksites lacking a grievance process. In 2018, a total of 29 reports were addressed. Going forward, we plan to expand the scope to include all of our overseas subsidiaries by establishing and promoting such channels at the subsidiary level.

Human rights assessment We conduct a human rights assessment biannually for all of our worksites, including the headquarters, domestic and overseas plants, R&D centers, and overseas subsidiaries and offices. For the diagnosis, we use a checklist, an upgraded version of the one developed by the National Human Rights Commission of Korea. The checklist consists of 66 items in 11 categories, including nondiscrimination in employment, freedom of association, the right to collective bargaining, prohibition of forced/child labor, and occupational health and safety. The 2017 assessment was conducted for 38 teams/departments focusing on privacy protection and workplace sexual harassment. For the 15 domestic and overseas worksites with results that require attention, improvement measures will be formulated and implemented to prevent potential risks.

※ Since 2018, the Human rights assessment has been conducted biennially for more efficient implementation of improvement measures.

A checklist for the Human rights assessment

Promoting diversity

Hankook Donggrami Partners, established in 2015 according to the ‘subsidiary-type standard business system’, aims to give the vulnerable job opportunities and contribute to the social and economic development of local communities. The number of employees with disabilities has steadily increased from 87 in 2015 to 204 in 2018, and they are working in our in-house employee welfare facilities in four areas, including laundry service, bakery, coffee and beverage, and office and administrative support. In April 2019, Hankook Donggrami Partners received the Prime Minister Citation for its efforts in increasing the employment of the disabled, promoting employment stability, improving labor conditions, running programs for their successful adjustment to their jobs, and raising awareness of people with disabilities. The company will expand its service areas to offer more job opportunities and continue its efforts to create a culture of promoting diversity.

Four-year trends of employment of people with disabilities (Unit: Persons)

Work & Life Balance

We are implementing flexible work hours and a working hour reduction system for childcare and operating in-house daycare centers to create an environment in which employee can concentrate on their work and promote work-life balance.

Promoting flexible work hours

Since July 2018, we have operated the "blocked flexible work hour system" so that employees at domestic plants can adjust their work hours while not exceeding 40 hours per week on a two-week basis. At R&D centers, employees have been utilizing a "flexible time system" since 2015, which allows them to choose their times for arriving at and leaving work to support a healthy work-life balance. In addition, a VPN system is in place to support employees working at home or on business trips.

All of our employees with children aged eight (second graders) or younger can take parental leave up to one year. In addition, our working hour reduction system for childcare allows employees subject to parental leave to reduce their working hours (20 hours per week) over one year rather than taking a leave of absence. Both male and female employees can take parental leave or use the working hour reduction system twice for a total of one year.

Operating in-house childcare centers

We maintain in-house childcare centers at the headquarters, R&D centers, and plants in Korea. To ensure quality education and the safety of children, we maintain the number of teachers required by law, utilize programs designed by professional educational institutions, and provide children with nutritious meals from dedicated cooking facilities. Their operating costs above the government subsidiary are fully covered by Hankook Tire & Technology to help employees minimize the burden of childcare and more concentrate on their work.

Furthermore, we provide KRW 200,000 worth of financial aid to support all employees who have children aged from four to six at childcare centers or kindergartens on a quarterly basis.

CSR FOCUS AREAS

Integrated Environmental Management

Community Involvement and Development

Transparency and Business Ethics

Win-win Supply Chain Partnership

Integrated Environmental Management

Background

Since protecting the environment is essential for the sustainability of all companies, we consider the environmental impact not only from our manufacturing processes, but also from the use of our products. In this regard, we will further strengthen our research efforts to reduce the related impact, starting from the product development stage. To prepare for the era of Green Survival in which eco-friendliness is not an option but a must, we will do our utmost to protect the environment.

Our direction

The EHS Committee and the Product Environment Committee are reviewing the progress of the CSR Vision 2020 Roadmap established in 2017. In 2019, we will set our mid-/long-term CSR targets considering SDGs and K-SDGs to start activities from 2020 to meet them.

Achievements

	Recycling rate of treated water	44.1%
	Ratio of eco-friendly products (based on quantities)	64.7%
	Discharged waste intensity	43.1 kg/ton of finished product

Future plan and mid-/long-term targets

To minimize our environmental impact on local communities, we will continue to reduce waste and water use while promoting treated water recycling at our plants. In addition, by gradually increasing the use of renewable material and recycled materials, we plan to develop tires made only from sustainable materials by 2045. We will proactively join the efforts to protect the earth through activities for improving fuel efficiency of vehicles, including making lightweight tires and enhancing rolling resistance.

1) The name of the goal changed from 'Identifying new materials and developing application technology'
2) Green carbon means recovered carbon black generated from pyrolyzed waste tires.

CSR FOCUS AREAS

Customer Satisfaction and Quality Management (Car Maker/ General Customers and Dealers)

Employee Health and Safety Management

Climate Change and GHG Management

Employee Value Creation

Focus 05

Integrated Environmental Management

Community Involvement and Development

Transparency and Business Ethics

Win-win Supply Chain Partnership

Tire design/raw materials

We conducted lifecycle assessment (LCA), which confirmed that the use phase in the product life cycle accounts for 95% of climate change impact and 85% of respiratory inorganics generation. It is essential to identify environmental impact from the development stage and conduct activities to reduce it.

Establishing a chemical management system through process improvement

As the Act on the Registration and Evaluation, etc. of Chemical Substances and the Chemical Control Act takes effect in Korea, greater importance is being placed on safe chemical management. As a response, in 2018 we produced a full list of the chemicals we use, based on which a chemical management process was established to allow teams responsible for procurement, raw material development, and other chemical-related areas to share the information and take appropriate measures. We have screening procedures to identify the harmfulness of newly-adopted chemicals, and in 2019 we plan to establish an IT system to comprehensively manage information on the chemicals managed in our worksites and on material safety.

Conducting LCA

We began conducting life-cycle assessment (LCA) on our products from the Geumsan plant in 2012 and have expanded it to plants in Hungary and China. In 2019, we will select two products from the Daejeon plant for LCA. In addition, the data accumulated over the past seven years will be utilized to quantify the results of activities to improve our products and environmental management. We will continue to devise new methods of using the data in our decision-making process.

Tire use/disposal

Developing energy-saving curing technology

Curing is the process of applying pressure to the green tire within a mold in order to establish its final form. We put considerable R&D effort into efficient use of thermal energy and enhanced product quality in the curing process. We have standardized data by identifying curing time, temperature, and pressure under high energy efficiency conditions, which allows each plant to optimize curing conditions for elevated productivity. In 2018, we studied optimum conditions for the inert gas that creates pressure for curing PCR and LTR tires in order to boost productivity and product quality.

Developing technology with the application of sustainable materials

Under our E-Circle program, in 2018 we grouped all of our studies on eco-friendliness into sustainable research categorized into one of four areas: use of green materials, re-use of tires, use of reclaimed materials, and minimization of environmental impact by tire products. This year, we focused on green carbon¹⁾ in an effort to increase its purity and explored reclaimed rubber with a goal of improving its processability and quality. The results were evaluated in on-site testing and production was eventually completed. Studies on the application of reclaimed materials were also performed and we were able to manufacture tires utilizing reinforced substances extracted from biomaterials as a compound. Its performance will continue to be tested and evaluated.

1) Green carbon means recycled carbon black generated from pyrolyzed end-of-life tires

Reducing rolling resistance of tires

Over the lifecycle of tires, their impact on the environment is the greatest during their use. In this sense, the rolling resistance and weight of tires are critical elements for reducing their environmental impact. In response, we have conducted studies on product structure, raw materials, additional substances, and manufacturing to decrease rolling resistance and consequently increase the fuel efficiency of vehicles. As a result, we improved the rolling resistance of our PCR tires supplied for the Mercedes-Benz S-Class by 24%²⁾ compared to existing products and 18%³⁾ for TBR tires. If we attempt to improve fuel efficiency purely by lowering resistance, it could hamper braking, handling, and wear performance. In response, we are working on the development of compounds by considering their eco-friendliness and the balance between ground contact pressure and performance.

2) PCR tires for passenger car: new products (255/50R18Y XL K117) were compared with existing product (245/55R17W K115).

3) TBR tires for trucks and buses: the comparison was made between TL10+ and TL20 (435/50R19.5).

Manufacturing lightweight tires

Lightweight tires contribute to reducing the use of raw materials and increasing fuel efficiency through lessened vehicle weight. To develop lighter products, we are continuing with our efforts at achieving optimal structures. For enhanced ground contact on icy roads, we have applied lightweight technology to studded tires with metal inserted in the treads. Over a total of 44 specifications, we achieved 7% weight reduction on average. This technology is being applied in regular production at our domestic and overseas plants.

CSR FOCUS AREAS

Customer Satisfaction and Quality Management (Car Maker/ General Customers and Dealers)

Employee Health and Safety Management

Climate Change and GHG Management

Employee Value Creation

Focus 05

Integrated Environmental Management

Community Involvement and Development

Transparency and Business Ethics

Win-win Supply Chain Partnership

Managing the work environment

According to our LCA, the product manufacturing process accounts for 5% of the impact on water resource depletion and acidification and 9% of respiratory inorganics. To minimize the environmental impact of our manufacturing activities, we are managing environmental indexes, standardizing the pertinent facilities, installing high-efficiency equipment, and conducting research on reducing factory odors in cooperation with academics and in accordance with our CSR Vision 2020 Roadmap.

Reducing waste and increasing recycling

For the reduction of waste generated at our plants, we are steadily conducting activities to decrease product defect rate in the manufacturing process. As our product defects occurred mostly in textiles and steel cords, we focused on improving processability in calendaring. As a result, in 2018 waste dropped 3% and 2.9% year on year for the Daejeon and Geumsan plants respectively. In 2019, we will strengthen our efforts by creating a task force for reducing scrap of semi-finished products.

The Geumsan plant used to bury the sludge generated during the treatment of wastewater. Starting in 2018, however, it is providing it as supplementary fuel to companies using thermal energy. In addition, 75% of treated wastewater is being used as toilet water and cleansing water for wet scrubber. The Daejeon plant has applied wastewater for cleansing and as cleaning water for wet scrubber since 2012. In 2018, instead of discharging wastewater, the plant re-used 100% of it.

Proactively responding to tightening environmental law

As part of the efforts to promote Daejeon as an area with high air quality, our Daejeon plant signed an agreement with Daejeon Metropolitan City on particulate matter reduction in June 2017. In order to improve local concentrations to 18 µg/m³ by 2020, the plant is operating pertinent facilities under only optimal conditions, regularly conducting water-cleaning, and implementing an odd-even traffic rationing policy.

The plant is making remarkable efforts to minimize its environmental impact on the surrounding area by installing high-efficiency environmental facilities. Still, local residents are calling for improvement measures. Under contracts with local universities, we are analyzing the characteristics of factory odors and the results of pertinent projects to effectively ease any smells.

To maintain the efficiency of combustion equipment at the plant, its key components were replaced. As a result, its efficiency has increased over 90%. The plant will measure odors and conduct BET¹⁾ and TGA²⁾ on a monthly basis to identify optimal timing for the part replacement and maintenance of it.

Outdated low-efficiency equipment is being replaced with upgrades. The Geumsan plant increased its efficiency at removing odors and dust by 50% by installing diffraction-type wet scrubber. Moreover, the replacement facility is 30% smaller, which will reduce waste at the time of its disposal. Going forward, we will improve the work environment by upgrading local ventilation systems with lower dust-collection performance, shielding conveyor lines, and enhancing curved portions of ducts while increasing efficiency in removing pollutants.

1) BET: Brunauer Emmett Teller
2) TGA: Thermogravimetric Analysis

Achieving shared growth with local communities

Since the establishment of the Donggrami consultation group in 2016, quarterly meetings have been held at the Daejeon plant with participants from local communities, universities, environmental organizations, and the city council. The plant describes the status of pollutant discharges and management and offers a factory tour. Opinions and advice from local residents and environmental experts at the meetings allow the plant to identify points for improvement. The group also serves as a communication channel to address any local misunderstandings about the company.

To prevent chemical accidents and ensure the safety and health of local residents, the Geumsan plant serves as a leader of the Chemical Safety Community consisting of six companies in Geumsan and Nonsan. At the Geumsan Environmental Management Committee, opinions from participants, including local residents, experts and government officers, are presented and collected based upon which the plant is working on key issues and formulating follow-up measures.

Case Study

Topic | Responding to emerging risks: the effect of tire and road wear particles on the occurrence of particulate matters in the air

1 Overview

Despite the fact that the Ministry of Environment issued a press release correcting the results of a study asserting that tire wear particles significantly contribute to airborne particulate matter, the study continues to be quoted in media reports. As the government and the public in Korea pay increased attention to issues of particulate matter, their interest in the impact of tire wear particles on the occurrence of particulate matter is growing. In this regard, inaccurate information could damage our corporate image and result in tightened regulations on tire products.

3 Results

The TIP study confirmed that TRWP do not pose serious risks to humans or the environment. According to the study, TRWP account for less than 3% of PM10 and 1% of PM2.5. As tires are made from rubber, tire wear mainly creates coarse particles.

4 Future plan

Wear is a physical result of the basic function of tires. If friction is not properly created between tires and roads, the safety of drivers and passengers is impacted. In response, the TIP is continuing its R&D efforts to enhance tire durability by minimizing wear while keeping other functions intact. Identifying the potential impact of TRWP on health and the environment remains a top priority.

2 Our response

Supported by eleven tire companies, the Tire Industry Project (TIP) has conducted scientific research from 2006 to collect and identify tire and road wear particles. The research confirms that particles are created through a combination of rubber from tires and road wear particles.

- The ratio of tire wear to road wear particles is 6:4.
- A new term, TRWP (tire and road wear particles) was coined.

Community Involvement and Development

Background

Companies should not only seek a profit, but also fulfill their roles as members of their neighboring communities. We are conducting a wide range of corporate philanthropic project by creating jobs, supporting the vulnerable, and protecting the environment. In 2019, we are working on programs that can contribute to addressing the issue of particulate matters. Through these activities, we will continue in our efforts for achieving share growth with local communities.

Our direction

Our CSR Team is in overall charge of corporate philanthropic project and key teams at the headquarters and domestic and overseas plants are formulating and implementing customized projects and activities. At the end of the year, responsible personnel at each worksite devise and implement plans in cooperation with the CSR Team and external NGOs or NPOs. In addition, quarterly social contribution committee meetings are held to monitor the progress of projects and activities and address pertinent issues.

Achievements

Conducted corporate philanthropic projects in our overseas network

KRW 1 billion spent to support a total of 72 projects

Joined the efforts to create space for traffic safety experience at the Daejeon training center for people with development disorder

Signed an MOU to launch a project for protecting endangered species in Daejeon

KRW 24. 5 million spent

Future plan and mid-/long-term targets

We will further promote our mobility projects and devise new projects to address issues in local communities. In the Taean area where our PG¹⁾ construction is underway, we will take a step beyond the one-time proposal we made in 2018 to plan and operate a corporate philanthropic project allowing Hankook Tire & Technology and Taean-gun to grow together. Based on these efforts, we will concentrate on our strategic directions for enterprise-wide implementation, employee participation, capacity building, and local community support in order to achieve our goal of promoting the growth of local communities and enhancing brand value.

Company-wide implementation

To achieve shared growth with local communities, customized activities by region have been conducted within our global network.

Undertaking philanthropic activities at our overseas worksites

Customized activities by region have been conducted at our overseas worksites. In 2018, KRW 1 billion was spent to support a total of 72 projects and activities including: supporting the underprivileged and offering scholarships in China; operating employee volunteer groups and donating tires in Europe; providing medical support for the vulnerable in Indonesia; and supporting the Disabled American Veterans (DAV) in the US. In 2019, our Tennessee plant will initiate activities to contribute to local communities and the Hungary plant will sponsor high-school and college competitions.

Philanthropic activities at home and abroad in 2018

Category	Major activities
Domestic	1. Three mobility projects [car donation, tire donation, and Tuieum bus]
	2. Programs for at-risk youth
	3. Social housing project
	4. Donation to the Community Chest Of Korea
	5. Operation of the employee volunteer teams
	6. A project for protecting endangered species in Daejeon
Overseas	1. China HQ: supporting the vulnerable and offering college scholarships
	2. Europe HQ: supporting injured veterans and donating tires (the Czech Republic), making a donation to the foundation of a hospital (Italy), and donating some of sales revenues (Germany).
	3. Hungary Plant: donating tires and operating employee volunteer teams
	4. America HQ: supporting the DAV and the Salvation Army
	5. Indonesia Plant: conducting employee volunteer activities, donating tires and improving the elementary school environment

Employee participation

Our employees are taking part in a variety of volunteer activities and promoting the value of sharing by providing support to the vulnerable in local communities.

Operating volunteer teams in Korea

We have put great effort in the past into increasing the number of employee volunteers and total volunteer hours contributed. From 2019, our focus will be more on improving volunteering qualitatively. We will be performing ‘voice donation’ activities for visually-handicapped people in which employees will create and donate audio recordings of books. While providing employees with optional volunteer programs, we will also encourage them to select independent activities if they prefer.

Conducting overseas volunteer activities

In 2018, we prepared for the launch of volunteer groups at our worksites in China. We communicated with the responsible teams there to identify the progress of the preparations and any issues that might be emerging. In 2019, volunteer groups will be launched in China and America.

Volunteering team activities in 2018

Category	Domestic	Indonesia Plant	Hungary Plant	Total
No. of participants in volunteer works (accumulative) (persons)	5,081	655	257	5,993

APPENDIX

1 Background

Since 2013, our Hungary plant has been operating an employee volunteer program designed to encourage employees to conduct beneficial activities and promote shared growth in local communities. As a result of the proactive participation of the employees at the plant, the plant was awarded in 2016 as the Corporate Volunteer Program of the Year by the Volunteer Centre Foundation, a nationwide Hungarian institution.

2 Project details

Employees submit their plans for volunteer activities, and 40 plans are selected through internal evaluation. The company supported the required expenses and materials to help them conduct pertinent activities according to these plans.

3 Project results

In 2018, HUF 14,044,178 (KRW 56 million) was spent to support a total of 37 employee volunteering activities, including renovation and remodeling of school and kindergarten facilities and playgrounds.

4 Plan in 2019

In 2019, we will proactively sustain our efforts and a total of 45 employee volunteer activities will be supported with HUF 17,683,964 (KRW 70 million).

Topic 2 | Endangered species protection project in Daejeon

1 Background

All of our worksites comply with environmental law and strive to protect the environment in local communities. To protect the ecosystem in Daejeon, an MOU was signed in 2018 with six organizations to launch a project to protect endangered species.

2 Project details

Hankook Tire & Technology signed an MOU with the Geum River Environmental Office, Daejeon Metropolitan City Government, Soon Chun Hyang University, Chollipo Arboretum, Daejeon Choongnam Civic Group for Ecosystem Protection, and Daejeon Office of the Korea Federation for Environmental Movements, under which a project is operated for three years from October 2018 to September 2021 to restore black shiner, a flagship species of fish in Daejeon, and white forsythia, beardless iris, and grassy-leaf yellow iris.

4 Plan in 2019

In 2019, 1,500 white forsythia will be planted to create habitat and 1,500 black shiner will be released in the Youdeungcheon stream.

3 Project's state of progress

On September 13, 2018, we signed an MOU with six organizations to protect endangered species in Daejeon. This project is being financed by Hankook Tire and Technology, with the company and the Geum River Environmental Office in overall charge of the project. The Daejeon Metropolitan City Government is providing support related to the habitats of the species. Soon Chun Hyang University is taking responsibility for restoring black shiner while the Chollipo Arboretum is working on white forsythia, beardless iris, and grassy-leaf yellow iris. The Daejeon Choongnam Civic Group for Ecosystem Protection and the Daejeon Office of the Korea Federation for Environmental Movements are conducting promotional activities and public educational programs.

- Employee Value Creation
- Integrated Environmental Management

Focus 06

- Community Involvement and Development
- Transparency and Business Ethics
- Win-win Supply Chain Partnership

Focusing on core competence

We have been conducting philanthropic projects utilizing our strength within the tire industry. A traffic safety campaign a map-making event with children and three major Mobility projects are currently being operated. In 2019, we will continue our efforts for corporate philanthropy by focusing on these projects.

Three major Mobility projects

Car donation This car donation program was launched in 2008. A total of 447 compact cars, including 50 in 2018, have so far been donated to social welfare centers. In addition, safe driving training was provided to drivers at the centers to promote road safety, and incentives were given to centers with good performance filling out their vehicle logs. In 2019, we plan to donate 50 vehicles through the proper channels.

Tire donation Since 2010, we have been donating tires for social welfare service vehicles. In 2018, a total of 2,824 tires for 705 service cars were given to social welfare centers nationwide. This project is also being carried out in other countries, including Hungary and Indonesia. In 2018, the number of tires donated domestically and internationally totaled 6,253.

Tire donation

	Korea	Indonesia Plant	Hungary Plant	Czech Republic	China HQ	Total
Number of tires	2,824	369	2,860	192	8	6,253

Tuieum Bus The Tuieum Bus project was launched in 2013 with the aim to provide cultural and educational opportunities and offer history and ecosystem experiences to people with mobility challenges by offering them free bus service to social welfare centers. This project includes three programs: monthly free bus service, quarterly programs on specific themes, and programs held in cooperation with organizations including the Korea Forest Service. In 2018, a total of 620 buses were used for the project, and a total of 600 will be supported in 2019.

Fostering local community's sustainability

We are proactively working with local communities to help resolve their most pressing issues. As part of these efforts, a social housing project is under way to support young people with housing issues, and programs for at-risk youth are being operated to help them gain their feet.

Programs for supporting the self-reliance of at-risk youth

In order to protect at-risk youth and help them grow into healthy members of our society, we have been offering programs since 2015. In 2018, four teenagers received barista training at Coffee Zoo, a youth self-reliance coffee shop, and two more worked at a second location. In the second location, a variety of promotions, including an exhibition and talk event, have been held since last July in an effort to increase sales. In 2019, we are planning internship programs that provide young people with opportunities to experience different jobs in their local communities.

Social housing project

Our social housing project was launched in 2016 to support young people to address housing issues. Since 2016, a total of sixteen social housing buildings, including eleven buildings for 145 households in 2018, were provided to 219 household. In 2019, we will increase support fund in cooperation with the Seoul Metropolitan Government to benefit a total of 250 households.

DreamWith project

DreamWith is a project aimed at strengthening the capacity of local communities by helping residents take the initiative in addressing childcare and youth issues. We supported 14 organizations and groups of local residents as they worked on issues including sharing childcare, transportation, and intergenerational communication. Just one year of operation has produced results in a range of areas, garnering a positive response from local communities.

Case Study

Topic 3 | Hankook Tire Welfare Foundation

Established in December 1990, the Hankook Tire Welfare Foundation has been operated to fulfill our responsibilities and obligations as a corporate citizen by returning to society some of the value created through business operations. Projects led by the foundation include three major Mobility projects (car donation, tire donation, and Tuieum bus) that draw upon the strengths of Hankook Tire & Technology; programs for at-risk youth and scholarships; and social housing projects, donation to welfare centers, and medical support for achieving shared growth with local communities. We will continue in our efforts at pursuing sustainable value, supporting the dreams of children and young people, and addressing economic and social inequalities, thereby contributing to society overall.

CSR FOCUS AREAS

- Customer Satisfaction and Quality Management (Car Maker/ General Customers and Dealers)
- Employee Health and Safety Management
- Climate Change and GHG Management
- Employee Value Creation
- Integrated Environmental Management
- Community Involvement and Development

Focus 07

- Transparency and Business Ethics
- Win-win Supply Chain Partnership

Transparency and Business Ethics

Background

As enterprises are becoming increasingly influential within both countries and local communities, public awareness of ethical corporate management is being heightened. In addition, our policies previously characterized by control and bureaucratic oversight have shifted to emphasize the delegation of decision-making to individual employees, meaning employee awareness of ethics is more important than ever. If our employees make continuous efforts at raising awareness and keeping vigilant, and if the company conducts activities to promote ethics management, it will lead to growth for the company. On the other hand, if corruption and irregularities are allowed to take place, it may result in a decline.

Our direction

We are monitoring potential ethical risks through a variety of programs. An on-line ethics education system is in place for awareness-raising, and reporting channels, including a cyber-audit room and the Sinmungo e-petition system, are being operated. In addition, diagnoses are being conducted to identify and share directions for improvement. In 2018, our E-Ethics Letter was published and delivered to employees on a monthly basis and the scope of employees subject to making an ethics management pledge was expanded from office and technical workers to the production field. All of our activities to promote ethics management, including education, diagnoses, and reporting, are being shared with our subsidiaries as well. Going forward, we will engage all of our stakeholders in these efforts through continuous communication.

Achievements

	Number of whistleblower reports received	27
	Regular ethics management education	97.0% of office and technical employees and employees dispatched to overseas subsidiaries
	Employees subject to a pledge for ethics management	2,837

Future plan and mid-/long-term targets

In our evolving corporate environment where decisions are being entrusted to individual employees, it is essential to provide them with guidance on ethics management. To this end, we will continue to sponsor annual education for all employees, publish our E-Ethics Letter, and strengthen the function of the help-desk for promoting internal communication. Moreover, we will create a risk-evaluation checklist and formulate procedures appropriate for each risk level to ensure effective prevention and management.

Ethics management education and awareness-raising

We have been providing our employees with regular education on ethics management, sharing best practices, and keeping channels in place to promote communication.

Providing regular education on ethics management

Regular annual education is provided to raise employee awareness of ethics management and support them in taking related actions. Domestic office and technical employees and employees dispatched to overseas subsidiaries underwent education using video-based educational materials on topics such as understanding ethics management, our pertinent activities, and best practices. Four thousand five hundred production employees received education with materials distributed at the morning assembly.

Employee awareness raising

We have published our E-ethics Letter since 2013 to share information and best practices on ethics management for employee awareness-raising. Since a renewal in May 2018, it has been emailed to employees to share best practices identified in previous diagnoses and at other companies, along with an ethics management guide. The information is also posted on the help desk page on our intranet. In addition, employees can ask questions and receive an immediate response in the Q&A menu. As part of our ethics management efforts, we launched a ‘No Giving/No Taking of Holiday Gifts’ campaign and encouraged employees to participate.

Expanding the whistleblowing system

We have established a process to implement the whistleblowing system across our global network. By expanding its scope, we will add a menu on whistleblowing channels to all of our global websites.

Three-year trends of whistleblower reports (unit: no. of reports)

The 2018 whistleblower reports by type (unit: no. of reports)

A pledge for ethics management

To prevent irregularities and create a sound corporate culture through employee awareness raising and pertinent activities, the scope of employees subject to a pledge for ethics management has expanded from office and technical to production workers. We will continue promotional activities and training to encourage more employees to join these efforts.

Partnership

Regular monitoring and Self Diagnoses

Self Diagnoses on ethics management are conducted in order to identify improvement points and emplace measures to address them.

Self Diagnoses on ethics management

We conduct annual Self Diagnoses to identify the strengths and weakness of our efforts in support of ethics management. In 2018, the participation rate was 95.8% (479 out of 500 employees subject to diagnosis) and the average score was 69.1 points, falling into the middle-range of an ‘institutionalization’ phase. Based on employee awareness and ideas on ethics management, improvement points were identified and reflected in the tasks of the ethics management committee. In addition, we shared pertinent cases with our employees, expanded the scope of the employees subject to training, and provided an ethics management guide to our suppliers.

Risk assessment and management

To manage and respond to pertinent risks, we have devised a tool to identify risks through the analysis of ethics management by level and to generate risk reduction activities by team.

Promoting ethics management to affiliates

To achieve both qualitative and quantitative shared growth, we are operating the same level of ethics management programs with our affiliates.

‘No Giving/No Taking of Holiday Gifts’ campaign and education and Self Diagnoses for affiliates

We launched a ‘No Giving/No Taking of Holiday Gifts’ campaign with four affiliates via our intranet. All employees of the affiliates attended ethics management education by using our online content or their own education materials. We are monitoring their ethics management status through annual education and diagnosis.

Win-win Supply Chain Partnership

Win-Win Partnership in the Supply Chain

Background

We encourage our suppliers to achieve sustainable growth by fulfilling their corporate social responsibility. To ensure stable raw material procurement and supply that can directly impact our production efficiency and competitiveness, it is essential to secure suppliers with good CSR performance. We are clearly aware that the sustainability of our suppliers is central to our long-term competitiveness, so we pursue win-win partnerships across the supply chain.

Our direction

We promote transparency, fairness and trust in relationships with our suppliers to achieve win-win partnerships and grow together. To help them enhance competitiveness in the long term, we formulate policies for supporting them and conduct a CSR assessment to identify and prevent potential risks in the supply chain.

Achievements

	Supplier selection	29 suppliers selected considering CSR elements
	Supplier capacity building	On-site CSR audits conducted for machinery suppliers

Future plan and mid-/long-term targets

To promote a culture of shared growth with our suppliers, CSR activities are considered in our supplier selection process. Greater importance is being placed on CSR assessment results and the scope of suppliers subject to CSR audit has been expanded. We will elaborate on the audit process by defining its targets and cycle. To ensure win-win partnerships, we will continue our efforts to systematically provide our suppliers with capacity-building training programs.

Win-win Supply Chain Partnership

Supplier selection

The business stability of our suppliers leads directly to our own, and their CSR management is a critical element for achieving shared growth. In response, we have been working on expanding the scope of supplier CSR management from our primary to our secondary suppliers.

Selecting suppliers considering CSR elements

Promoting win-win relationships with suppliers is essential to achieving sustainability in our businesses. In 2018, we completed CSR assessment for 151 primary suppliers. To promote our CSR policy, we prepared guidelines for distribution to suppliers when signing a contract. For critical primary suppliers, we developed a template that allows them to identify the CSR management status of their key secondary suppliers. For those who do not have criteria for secondary supplier management, guidance on minimum requirements was provided. In 2019, we will work on the refinement of this template and distribute it to suppliers for more transparent supply chain management.

The 2018 on-site CSR audit

Target	Domestic machinery suppliers	
Audit areas	CSR management system	· CSR policy; responsibility; system operation; and communication
	Human rights and labor	· Human rights policy and management; and training · Freedom of association and collective bargaining; working hours and minimum wage; and employment contracts · Prohibition of child/forced labor/discrimination/violence; and prevention of sexual harassment · Grievance channels
	Ethics management	· Ethics management system; responsibility; and policy · Code of ethics; code of conduct; and training · Monitoring; disciplinary actions; whistleblowing system; and disclosure · Information security policy, responsibility and training; and information security system monitoring
	Corporate philanthropy	· Corporate philanthropy policy; responsibility; and activities
	Health and safety	· Health and safety policy; working environment measurement and improvement; and chemical management · Safety responsibility, inspection and training; disclosure of industrial accidents; and the Safety and Health Committee · Safety gear · Firefighting management; and responsibility
	Environment and climate change	· Environmental management system; and conflict minerals · Environment/water/air pollution/waste management; and prevention of soil contamination · Low-carbon management; and energy/GHG emissions management
	Supplier CSR management	· Supplier CSR policy; and communication · Human rights management; ethics management; safety control; and environmental management
Corrective action plans	· Wearing safety gear (hard helmets, gas masks, and masks) and providing them to visitors · Setting up grievance/whistleblowing channels that anyone can report in anonymity · Establishing and promoting internal code of ethics	· Upgrading the equipment for preventing chemicals and oil leakage in the storage of toxic materials · Conducting fire drills on a regular basis

Supplier capacity building

We are offering a wide range of supplier capacity-building programs, including on-site audits, to support them to strengthen competitiveness.

Conducted on-site CSR audit

The scope of on-site CSR audit has been expanded from raw material to machinery suppliers. Our CSR Team supported suppliers in the review of audit results and planning of improvement measures. These activities have helped us to more fully understand the operations of our suppliers. In 2019, we plan to establish a process for conducting systematic on-site audits.

Focus 08

Win-win Supply Chain Partnership

Supplier ESG management

We do our utmost to minimize the environmental impact across the entire product lifecycle. In particular, the impact of the transportation process is a key element that needs to be considered.

Minimizing environmental impact during transportation

We contract with third-party logistics companies for shipping and transportation of finished products. This limits our ability to adjust the mode of transportation as needed. When we sampled and analyzed the results of a product lifecycle assessment, it turned out that the environmental impact of shipping and transportation accounted for a mere 0.3%. In response, we elected to focus our efforts on areas with a greater impact and to plan new targets and tasks. Meanwhile, we will continue our efforts at GHG emissions reductions by optimizing the transportation routes of finished products.

Suppliers assessed in CSR (unit: company)

Procurement by region (unit: %)

CSR assessment items¹⁾

Category	Details
Human rights, labor, and non-discrimination	Human rights · Freedom of association; and collective bargaining
	Labor · Prohibition of child/forced labor; compliance with legal working hours, minimum wage and employment contracts; and implementation of whistleblowing channels
	discrimination · Non-discrimination; no violence; and prevention of sexual harassment
Ethics	System and its implementation · Establishment of the code of ethics; training; anti-corruption; no bribery ; and social contribution activities
	Monitoring and disciplinary actions · Regular audit and monitoring; and disciplinary actions for violation
	Data protection · Information security of customers
Safety and health	Safety · Safety inspection; safety gears; Safety and Health Committee; and supplier safety management
	Firefighting · Fire prevention activities
	Health · Work environment measurement and improvement; and chemical management
Environment and GHG emissions	Environment · Environmental management; prevention of soil contamination; and waste management
	GHG emissions · Energy and GHG emissions management

1) In selecting new suppliers and renewing contracts, suppliers whose CSR grade is Y (60 points) or higher are given priority. In addition, we are working on improvement measures for suppliers with R grade (less than 60 points or not assessed)

Our critical suppliers

We group our key suppliers into two categories considering their business relevance and dependency and the significance of the items supplied. For raw material suppliers, our selection criteria are: technology-intensiveness; whether only a limited number or exclusive companies exist; and tire cord manufacturers. Regarding machinery, since maintenance issues require considerable time to address once they occur, we identify and manage suppliers who could affect our production continuity.

APPENDIX

1 Overview

About 70% of the natural rubber produced is used in tire manufacturing, and 85% of this rubber production comes from small holders. The sustainability of the natural rubber supply chain is critical for the development of the tire industry. The Global Platform for Sustainable Natural Rubber (GPSNR) was launched in 2018 with leading auto makers such as BMW, Ford, and GM participating as members. In 2016, GM publicly announced a commitment to purchasing tires made from 100% sustainable natural rubber (SNR). If we cannot ensure the sustainability of natural rubber, we may become unable to sell tires for new vehicles.

2 Our response

To ensure the economic, social, and environmental sustainability of our natural rubber supply chain, we formulated an SNR policy stipulating social responsibility along the supply chain. This policy will allow members of the supply chain, including growers, traders, processors, and manufacturers, to comply with the pertinent laws and regulations of the countries of our presence and fulfill all social responsibilities regarding human rights, the environment, and transparent business operations. In particular, through this policy we will work to support growers in improving quality of life while enhancing both productivity and the quality of natural rubber.

3 Results

The Tire Industry Project (TIP) with eleven tire companies participating as members formed a working group on SNR, and launched the GPSNR on October 23, 2018. The GPSNR is a global platform that involves different stakeholders, including growers, traders, processors, and manufacturers (tire and other rubber industries), car makers and NGOs.

4 Future plan

As a member of the GPSNR, we will establish and implement an action plan for an SNR supply chain.

About This Report

Overview

The 2018-2019 Hankook Tire & Technology Report is our tenth sustainability report prepared to transparently share with our stakeholders the last year's performance in our CSR activities and mid-/long-term strategies. We have published this annual report since 2010, with the latest released in July 2018. We will continue to publish the report on an annual basis.

Reporting guidelines

This report was prepared in accordance with the Comprehensive option in the GRI (Global Reporting Initiative) Guidelines. The reporting standard and definition of financial information is in line with the International Financial Reporting Standards (IFRS).

Reporting period

The reporting period is from January 1 to December 31, 2018. Some activities spanning the first half of 2019 are included. For quantitative performance, five-year data from 2014 is provided to show trends.

Reporting scope

Data on Hankook Tire & Technology is used to report on our performance and targets, but for some of the information, including on the number of employees, data on the holding company Hankook Technology Group is reflected. The reporting scope encompasses the headquarters in Seoul, Daejeon and Geumsan plants and R&D centers in Korea, and overseas worksites in Hungary, China, Indonesia, and the U.S.. We will continue to expand the scope so that a wide range of our CSR efforts and achievements are fully reflected in this report.

Third-party assurance

For the credibility of this report, third-party verification was conducted by the Korea Productivity Center. For the assurance standard and conclusion, please refer to pages 86-87.

Performance Summary

Environmental Performances

GHG Emissions¹⁾ (Unit: tCO₂-eq)

1) Regarding GHG emissions occurred by the use of purchased electricity, the 2007-2008 average electricity emission factor was applied in domestic plants. As for overseas plants, recalculation was conducted utilizing the electricity emission factors from 2014 to 2016, which led to the modification of the Scope 2 emissions figures. (From 2017 to 2018, the 2016 emission factor applied)

2) Our new Tennessee plant was included in the reporting scope in 2018. However, as it has not been in full operation yet, its performance impacted the increase of total intensity.

Energy Consumption (Unit: GJ)

1) Our new Tennessee plant was included in the reporting scope in 2018. However, as it has not been in full operation yet, its performance impacted the increase of total intensity.

Reduction of GHG Emissions¹⁾ (Unit: tCO₂-eq)

1) The figures between 2014 and 2016 refer to domestic plants, while those in 2017 include even overseas plants.

Energy and carbon cost savings¹⁾ (Unit: KRW 100 million)

1) The figures between 2014 and 2016 refer to domestic plants, while those in 2017 include even overseas plants.

Investment in energy saving projects¹⁾ (Unit: KRW 100 million)

1) The figures between 2014 and 2016 refer to domestic plants, while those in 2017 include even overseas plants.

CSR Principles

Corporate Social Responsibility Principle

Purpose and Intent

The CSR Principles serve as fundamental guidelines that define our corporate social responsibility and build CSR into the fabric of our corporate culture so that it forms the basis of our business conduct. We at Hankook Tire & Technology vow to act on these principles to deliver the best-possible value to our stakeholders and fulfill our roles and responsibilities as a corporate citizen in leading the sustainable development and growth of the entire mobility industry as well as the tire industry.

Regular Review and Improvement

Our CSR Strategy Committee performs annual reviews and makes modifications or improvements on detailed operational guidelines as deemed necessary through the materiality analysis, including stakeholder interviews.

Integrated CSR Management System

To advance CSR management systematically on a companywide level, we established an integrated CSR management system as follows: the CSR Strategy Committee serves as the top CSR decision-making body attended by BOD members and the top management; the CSR Steering Committee is operated under the integrated management system as a working-level implementation and consultation body attended primarily by executives and employees in charge of respective CSR issues; dedicated CSR Teams are responsible for defining CSR roles and responsibilities, including planning and operating our company-wide CSR initiatives and publishing CSR Reports.

CSR Policy Stipulation

We verify that CSR-related operational policies, systems, and issue-specific action plans are clearly stipulated and fully disseminated, both internally and externally to ensure their company-wide application and implementation.

Regular CSR Diagnosis and Monitoring

We develop and use our in-house CSR self-evaluation model that includes global standards and wide-ranging regulations, and perform annual diagnoses and evaluations. Meanwhile, CSR Teams continuously monitor the progress made and issues to be addressed through the CSR Steering Committee.

Company-Wide CSR Training and Consensus Building

We set and implement company-wide training plans to disseminate CSR and build employee consensus.

Stakeholder Dialogue and Information Disclosure

We define our key stakeholders as customers, employees, suppliers, local communities, nature · ecology · climate and shareholders & investors. We constantly develop communication channels with these key stakeholders, as well as annual communication plans, so as to create regular and official communication opportunities to implement in our future business conduct and CSR operations. Furthermore, we disclose our achievements and CSR and business management plans in a transparent and thorough manner through our annual CSR Reports, websites, and diverse communication channels optimized for respective stakeholder groups.

Integrated Risk Management

Not only do we constantly manage financial risks, but also we systematically manage and respond to non-financial risks. Notably, the entire CSR Focus Areas are included in the scope of our risk issue management, and are addressed on a company-wide level through the integrated management system of the CSR Steering Committee.

Safety, Health and Environment Policy

Hankook Tire & Technology Co.,Ltd. sets its utmost value on human safety, health and environment. With this in mind Hankook Tire & Technology Co.,Ltd. pursues safe and healthy living providing customers with value and pleasure, and implements pacesetting safety, health and environmental management throughout its business activities and product life cycle. For this, we resolve to act as follows:

1. Reduce risk by improving the operation and making investments in safety, health and environment through remove of Environmental Impacts and Hazard and prevent work-related injury and ill health to workers and to provide safe and healthy workplaces and minimize environmental effects of our business activities by promoting source reduction and recycling.
2. Train all employees so that they can understand and continuously improve the safety, health and environmental management system, and disclose the policies and performance to stakeholders.
3. Establish internal management standards that satisfy domestic and overseas laws and other requirements related to safety, health and environment, and faithfully fulfill them.
4. Pursue continual improvement by evaluating impacts on safety, health and the environment in advance of establishing safety, health and environment objectives/targets and fulfilling them.All employees actively participate in the safety, health and environment management by complying with this policy.

All employees comply with this internally and externally announced Safety, Health and Environmental Policy and actively consult and participate in the safety, health and environment management activities.

CSR Principles

Social Contribution Charter

Our Statements

1. We continuously propagate our social and environmental values through economic and business activities and contribute to local economies.
2. We promote superior product quality and client safety through customer-oriented management practices.
3. We do our utmost to minimize our environmental footprint throughout the entire business sector and in the communities we operate in.
4. We fully commit ourselves to supporting socially vulnerable and underprivileged populations by bestowing to society the values we generate.
5. We are pioneers in making our society healthier through promoting the welfare of our employees and providing local communities with medical support based on our human-focused management philosophy.

Characteristics and Directions

1. We ensure that our social charity activities stand congruent with our core business practices so that our corporate action may promote social benefit.
2. We focus our company-wide capacities on our main philanthropic programs to ensure that our social contribution activities are executed with clear purposes.
3. Our philanthropic activities are performed practically in ways that can resolve concerns and problems in local communities.

Human Rights Policy

Hankook Tire & Technology Human Rights Policy

Hankook Tire & Technology recognizes the significance of human rights as a universal value of humankind. Moreover, we acknowledge that value can be realized through business activities. With such acknowledgement, Hankook Tire & Technology will respect and protect the rights of its own employees and stakeholders associated with its operations, products and services.

In order to fulfill the responsibility to respect human rights, Hankook Tire & Technology shall support and endeavor to observe the principles of the Universal Declaration of Human Rights, the UN Global Compact and the International Labor Organization Declaration on Fundamental Principles and Rights at Work.

Hankook Tire & Technology shall also support the UN Guiding Principles on Business

and Human Rights and implement human rights management system which includes assessments, taking appropriate action and tracking responses, internal and external communications and operation of grievance mechanisms and remediation procedures.

Hankook Tire & Technology, as an enterprise that is dedicated to fulfilling its social responsibilities and pursuing the happiness of all employees and stakeholders, shall comply with the laws of each country where it operates under all circumstances and by protecting and respecting human rights, it will contribute to the healthy development of society.

Hankook Tire & Technology Human Rights Principles

Hankook Tire & Technology supports and respects the protection of internationally proclaimed human rights and makes sure that we are not complicit in Human Rights abuses.

Prohibition of Forced Labor Hankook Tire & Technology shall not use or get involved in any kind of forced labor through physical and mental suppression of freedom of any person, including bonded labor, slavery and human trafficking.

Prohibition of Child Labor Hankook Tire & Technology shall comply with the minimum employment age regulations of each country where it operates and not designate tasks with safety and health hazards to individuals under the age of 18.

Prohibition of Discrimination Hankook Tire & Technology shall not discriminate against its employees based on race, age, gender, nationality, religion, disability, pregnancy, unionization, or marital status in its employment procedures.

Guarantee of Freedom of Association Hankook Tire & Technology shall offer opportunities for communication between the company and its employees, guarantee the freedom of association, and retaliate for unionization activities of its employees.

Fair Wage Payment and Stabilization of Livelihood Hankook Tire & Technology shall contribute to the stabilization of the livelihood of its employees by complying with the minimum wage, overtime, health insurance and employee rest and leave regulations of each country where it operates.

Health and Safety Hankook Tire & Technology shall establish a safe, clean work environment for its employees and protect its employees against various harmful substances.

1) TIP refers to the Tier Industry Project, a subcommittee of the World Business Council for Sustainable Development. In 2005, we formed a consultative body along with 10 other global tire manufacturers to perform research and work together for the sustainable future of the tire industry. Research topics include the identification of the impact of tire particulate matters generated in tire use on the environment and human body as well as requirements for the eco-friendly recovery, recycling, and disposal of end-of-life tires and the environmental impact of tire materials. In so doing, we at Hankook Tire contribute to the sustainable development of the tire industry.

Independent Assurance Statement

To the Stakeholders of Hankook Tire

The Korea Productivity Center (hereinafter the "Assurer") was appointed by Hankook Tire & Technology (hereinafter the "Company") to provide independent assurance of its "Hankook Tire & Technology 10th Anniversary Report 2018/19" (hereinafter the "Report"), and hereby presents the following assurance statement.

Responsibility and Independence

The Company is fully responsible for the reliability and accuracy of all the information and opinions presented in the Report. The Assurer is responsible solely for the third party assurance of the content in the Report. As an independent assurance agency, the Assurer was neither involved in the process of preparing the Report, nor in any conflicts of interest that may undermine our independence.

Assurance Standard

This assurance was conducted in accordance with the ISAE 3000 / AA1000AS (2008) to provide Type 2 assurance and AA1000AP (2018) to confirm compliance with the principles of inclusivity, materiality, responsiveness and impact. It means that a comprehensive review was conducted on the effectiveness and reliability of the reporting standards. The level of assurance is based on the reduction of risk at a limited degree as defined in the ISAE 3000 which is the same as the Moderate Level defined in the AA1000AS (2008).

Limitations

The Assurer confirmed the reliability of the 2018 data specified in the report based on the aforementioned verification range & standards. The on-site verification was carried out at the headquarters in Seoul. The scope and boundaries of this verification follows the boundaries of the report's time frame, region and the boundaries of the value chain. Accordingly, the scope of verification satisfies 100% of the consolidated revenue, and data on the supply chain is not included in the scope of verification unless otherwise noted. The financial data in the Report was verified through the financial statements and disclosure information which was audited by an auditor, while the aggregated data at the corporate level is used for the verification of Environmental and Social performance. In case of greenhouse gas, Scope 1 and 2 were confirmed in 2018, and greenhouse gas emissions of domestic plants were verified based on ISO 14064-3, the organization of standardization on emissions. The results may vary if further

verification procedures are performed. The Assurer expressly disclaims any liability or co-responsibility for any decision a person or an entity may make based on this Assurance Statement.

Methodology

This assurance was conducted through the following methods:

- Verified if the requirements for Comprehensive options of GRI Standard were fulfilled.
- Verified the compliance with the principles of the Report contents and quality based on GRI Standard.
- Verified the selection of material issues covered and the appropriateness of the technical content through media research and benchmarking analysis.
- Verified the suitability of the contents and any errors in expression through comparison analysis with other sources.
- Verified the basis of Comprehensive data and information and the internal process and system through on-site inspection at the headquarters in Seoul.

Findings and Conclusion

It is the verifier's opinion that the Report reflects Hankook Tire & Technology's sustainability management activity & performance faithfully and fairly. Through this verification process, the Assurer judges that Hankook Tire & Technology's report meets the GRI Standards requirements for Comprehensive Options, and secured the rational level which can be presented by Type 2 assurance level. In addition, General Standard Disclosures were prepared in full compliance with the requirements for Comprehensive options while Specific Standard Disclosures were reviewed in line the MA (Management Approach) and indicators of the material issues identified through the process of determining report content as follows:

Material Issues	Material Topic (MA & Indicators)
Customer Satisfaction & Quality Management	Economic Performance (MA, 201-1 ~ 4) Customer Health and Safety (MA, 416-1 ~ 2)
Employee Health & Safety Management	Occupational Health and Safety (MA, 403-1 ~ 4)
Climate Change	Emissions (MA, 305-1~7)
Employee Value Creations	Freedom of Association and Collective Bargaining (MA, 407-1) Training and Education (MA, 404-1 ~ 3)
Comprehensive Environmental Management	Materials (MA, 301-1~3) Energy (MA, 302-1~5) Water and Effluents (MA, 303-1~3) Effluents and Waste (MA, 306-1~5) Environmental Compliance (MA, 307-1~2)

Independent Assurance Statement

Inclusivity: Stakeholder Engagement

Hankook Tire & Technology defines major interested parties by dividing them into a customer, a shareholder investor, executives & staff, a cooperative company, local community and environment according to the influence on the management activity. The Company is gathering expectations and requirements by constructing the regular/irregular communication process by the interested party, and reflecting various opinions deducted through the communication channel in our management activity. In addition, the Assurer confirmed that this company is reflecting them in the report by conducting a survey and interviews targeting the interested parties every year, and grasping their opinions as to key issues which have an influence on the interested parties.

Materiality: Identification and Reporting of Material Issues

Hankook Tire & Technology is constructing the materiality evaluation process which selects major issues by taking into account the interested parties' concern and business materiality. Particularly, the Assurer confirmed that the same company is grasping the major issues associated with industries and enterprises through the external environment analysis on an annual basis such as global standard analysis (GRI Standards, DJSI, RBA, SDGs), media research and advanced corporation benchmarking, etc., and internal environment analysis. The same company is describing the deducted key issues by dividing them into 8 major key areas connected with CSR Steering Wheel, through which the same company is presenting Hankook Tire & Technology's response direction by systematically selecting management items.

Responsiveness: Organization's Response to Issues

The Assurer confirmed that Hankook Tire & Technology is managing the 8 core management areas by selecting them with the aim of systematically managing the major issues which were gathered from the interested parties, and the relevant contents were faithfully reported to their business report. Notably, the Assurer confirmed that the same company is systematically describing the management items, policies, organizations, major performance, goal, and plan, etc. for the 8 major core management areas, through which Hankook Tire & Technology is faithfully disclosing its response activity and performance by its sustainability management issue.

Impact: Organization's Social Impact

Hankook Tire & Technology considers the societal impact of the organization by establishing the boundaries of the impact of major issues. Moving forward, the Assurer recommends that the Company create an impact measurement index in order to enhance the measurement of the influence on economic, social and environmental sectors.

Recommendation

The Assurer recognizes the diverse efforts and performance made by Hankook Tire & Technology and suggests the following for the Company's publication of the Report in the future and the improvement of its sustainability standards:

- CSR Vision 2020 Roadmap, which is presented annually by Hankook Tire & Technology, is an important tool for stakeholders to understand the Company's CSR strategies and performances. It is recommended that new issues and internal goals are established through the creation of a CSR Vision Road map beyond 2020 and be disclosed in the Report.
- As a component of the corporate assessment, it is becoming increasingly important to measure and manage the social and environmental impacts that companies have on sustainable growth and development. It is recommended that the resulting qualitative and quantitative data be utilized to create a system to assess the Company's mid- to long-term impacts and for key indicators to be selected based on assessment levels consisting of input, activities, outputs, and outcomes.

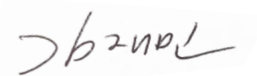

June 2019
