Revision Information

Foreword

Thank you for purchasing FieldMate. This document describes the following:

- How to install FieldMate
- The functions and operating procedures of FieldMate

To ensure correct use, read this document thoroughly before starting operation. After reading the document, keep it in a convenient location for quick reference. It is useful when a question arises during operation.

Target Readers

Δ

This mannual is intended for the following personnel;

- Engineers responsible for installation, wiring, and maintenance of the equipment.
- · Personnel responsible for normal daily operation of the equipment.

Safety Precautions

This manual is an essential part of the product; keep it in a safe place for future reference.

To use properly and safely, observe the safety precautions described in this user's manual.

Yokogawa Electric Corporation assumes no liability for the customer's failure to comply with these requirements.

Note

- The contents of this manual are subject to change without prior notice as a result of improvements in the software's performance and functions. Display contents illustrated in this manual may differ slightly from what actually appears on your screen.
- Every effort has been made in the preparation of this manual to ensure the accuracy of its contents. However, should you have any questions or find any errors, please contact your nearest Yokogawa representative.
- Copying or reproducing all or any part of the contents of this manual without the permission of Yokogawa Electric Corporation is strictly prohibited.
- Use of this product (software and this manual) on more than one computer at the same time is prohibited. Use by more than one user is also prohibited.
- Transfer or lending of this product to any third party is prohibited.
- Yokogawa Electric Corporation provides no guarantees other than for physical deficiencies found on the original disk or this manual upon opening the product package.
- Yokogawa Electric Corporation shall not be held responsible by any party for any losses or damage, direct or indirect, caused by the use of the product.
- Please read it carefully, and do not lose it as a new one cannot be issued.
- The content of this manual describes FieldMate R3.04 and Device Files R3.09.
- License numbers will not be reissued. Please keep your license numbers in a safe place.

Trademarks

- FieldMate, PRM, CENTUM, DPharpEJA, DPharpEJX, FLEXA, FLXA, SENCOM and YFGW are registered trademarks of YOKOGAWA.
- Microsoft, Windows, Windows Vista, and Excel are either registered trademarks or trademarks of Microsoft Corporation in the United States and/or other countries.
- Adobe and Acrobat are either registered trademarks or trademarks of Adobe Systems Incorporated in the United States and/or other countries.
- National Instruments, NI, and NI-FBUS are either registered trademarks or trademarks of National Instruments Corporation in the United States and/or other countries.
- Softing is a registered trademark of Softing Industrial Automation GmbH.
- Ethernet is a registered trademark of Xerox Corporation.
- FieldComm Group, FOUNDATION in FOUNDATION fieldbus and HART are registered trademarks or trademarks of FieldComm Group.
- PROFIBUS is a trademark of the PROFIBUS User Organization.
- Modbus is a registered trademark of AEG Schneider Automation, Inc.
- All other company and product names mentioned in the user's manuals are trademarks or registered trademarks of their respective companies.
- TM or [®] mark are not used to indicate trademarks or registered trademarks in the user's manuals.
- Logos and logo marks are not used in the user's manuals.

A-1 Product Registration

YOKOGAWA provides registered users with a variety of information and services. Users must complete the product registration form by going to the following Web page:

https://partner.yokogawa.com/global/fieldmate/index.htm

A-2 Terms and Conditions of the Software License

Yokogawa Electric Corporation

Field Device Management Software Package "FieldMate" License Agreement

IMPORTANT - PLEASE READ THIS AGREEMENT CAREFULLY:

BY INSTALLING, COPYING OR OTHERWISE USING THE ENCLOSED SOFTWARE PRODUCT, YOU AGREE TO BE BOUND BY THE TERMS AND CONDITIONS OF THIS SOFTWARE LICENSE AGREEMENT ("AGREEMENT").

Please be sure to sign up and register your software license number, your PC specific information and other necessary items on the User Registration Website designated by Yokogawa Electric Corporation. All obligations of Yokogawa Electric Corporation under this Agreement, support against your inquiries, provision of version up information, etc. will be executed or provided to you subject to your registration by User Registration Website. In case there is no registration, Yokogawa Electric Corporation might decline to provide such services to you.

IF YOU DO NOT AGREE TO THE TERMS AND CONDITIONS OF THIS AGREEMENT, DO NOT INSTALL, COPY OR USE THE SOFTWARE PRODUCT AND PROMPTLY RETURN IT TO THE PLACE OF PURCHASE.

1. Grant of License

- (1) Subject to the terms and conditions of this Agreement, Yokogawa Electric Corporation ("Licensor") hereby grants to you ("Licensee") a non-exclusive and non-transferable right to use the enclosed Field Device Management Software Package "FieldMate" and associated materials and documentation in printed or electronic format ("Licensed Software"), in consideration of full payment by Licensee to the Licensor of the license fee separately agreed upon by the parties hereto.
- (2) Licensee shall have the right to use the Licensed Software in the operating environment identified by the Licensor, either (a) to the extent specified in the contract specification agreed upon by both parties, or (b) if not specified, for a single user on a single computer.
- (3) Licensee may use the Licensed Software solely for its own internal data processing operations to set up field instruments having communication functions. Use of the Licensed Software for any purpose other than those as expressly specified in the documentation provided by Licensor shall be prohibited and any result or damage therefrom shall be at Licensee's own risk and responsibility
- (4) Licensee may make one identical copy of the Licensed Software (in this context, excluding any associated materials and documentation) for backup purpose, which shall be maintained by Licensee with strict care. Such copy shall bear Licensor's proprietary notice as the original does. No other copies shall be made without Licensor's prior written consent.
- (5) The Licensed Software may contain software which Licensor is licensed from third parties ("Third Party Software"). Licensee agrees to use the Third Party Software in accordance with the terms and conditions as set forth by licensors of such Third Party Software and agrees to be bound thereby.
- (6) In no event shall Licensee make any use of the Licensed Software in any other manner than stipulated hereunder.
- (7) Licensee agrees to use any Third Party Software solely as runtime use software which shall be used solely as part of and with the integrated Licensed Software, and shall not make any further use of Third Party Software for any other purposes or in any other manner.

2. Restriction

Licensee shall not: (a) remove any product identification, proprietary notices, or other notices or restrictions from the Licensed Software; (b) transfer, sell, assign, sublicense or otherwise convey the Licensed Software to another party without Licensor's written consent; or (c) cause, permit or attempt the reverse engineering, disassembly, decompilation, translation or adaptation of the Licensed Software. Any transfer of the Licensed Software is subject to Licensor's transfer policies and fees.

3. Copyright / Ownership

The Licensed Software, including but not limited to any technology, algorithm, know-how, process and others contained therein, is the proprietary property and trade secret of Licensor or a third party who grant to Licensor the right of sub-licensing and is protected by copyright and other intellectual property laws and treaties. Licensee acquires only the right to use the Licensed Software and does not acquire any rights, expressed or implied, in the Licensed Software or media containing the Licensed Software other than those specified in this Agreement. Licensor shall at all times retain all rights, titles, and interests, including intellectual property rights, in the Licensed Software and such media. The Licensee may not disclose or divulge the aforesaid proprietary property and trade secret to any other individual or entity than the Licensee's personnel who reasonably need to know and the Licensee shall impose strictly confidential obligations with respect to such proprietary property and trade secret on such Licensee's personnel.

4. Warranty / Liability

- (1) THE LICENSED SOFTWARE SHALL BE PROVIDED TO LICENSEE ON AN "AS IS" BASIS. UNLESS OTHERWISE EXPRESSLY PROVIDED BY LICENSOR, LICENSOR AND THE SUPPLIERS WHO PROVIDE OR LICENSE PART OF THE LICENSED SOFTWARE TO LICENSOR ("SUPPLIERS") HEREBY EXPRESSLY DISCLAIM ANY AND ALL IMPLIED WARRANTIES OF ANY KIND WHATSOEVER, INCLUDING WITHOUT LIMITATION WARRANTY OF UNINTERRUPTED OR ERROR-FREE OPERATION, SATISFACTORY QUALITY, NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE, AND SHALL NOT BE LIABLE TO LICENSEE FOR ANY DAMAGE OR LOSS CAUSED BY USE OR INABILITY TO USE OF THE LICENSED SOFTWARE. LICENSOR AND SUPPLIERS DISCLAIM ANY AND ALL LIABILITY AND WILL HAVE NO LIABILITY FOR VIOLATION, MISAPPROPRIATION OR INFRINGEMENT OF INTELLECTUAL PROPERTY RIGHTS OF ANY THIRD PARTY, UNLESS IT IS CAUSED BY LICENSOR OR SUPPLIERS' GROSS NEGLIGENCE OR WILLFUL MISCONDUCT.
- (2) IN NO EVENT SHALL LICENSOR AND SUPPLIERS BE LIABLE, WHETHER IN CONTRACT, TORT OR OTHERWISE AND WHETHER OR NOT LICENSOR AND SUPPLIERS HAVE BEEN ADVISED OF THE POSSIBILITY OF SUCH LOSS OR DAMAGE, FOR CONSEQUENTIAL, INCIDENTAL, INDIRECT OR EXEMPLARY DAMAGES, LOSS OF PROFITS, LOSS OF REVENUE, LOSS OF BUSINESS OR GOODWILL, LOSS OF DATA OR LOSS OF AVAILABILITY. IN NO EVENT SHALL LICENSOR AND SUPPLIERS' AGGREGATE LIABILITY EXCEED THE AMORTIZED BALANCE OF THE AMOUNT PAID BY LICENSEE FOR USE OF THE CONCERNED PART OF THE LICENSED SOFTWARE.
- (3) THIS PARAGRAPH 4 STATES THE ENTIRE WARRANTY AND LIABILITY OF LICENSOR AND SUPPLIERS IN CONNECTION WITH THE LICENSED SOFTWARE. THIS PARAGRAPH 4 ALLOCATES RISKS UNDER THIS AGREEMENT BETWEEN LICENSEE AND LICENSOR/SUPPLIERS AND COMPRISES FUNDAMENTAL ELEMENTS OF THIS LICENSE. LICENSOR'S PRICING OF THE LICENSED SOFTWARE REFLECTS THIS ALLOCATION OF RISKS AND LIMITATION OF LIABILITY.

(4) LICENSEE SHALL INDEMNIFY, DEFEND AND HOLD LICENSOR AND SUPPLIERS FROM ANY CLAIMS, DEMANDS, LIABILITIES, LOSSES, DAMAGES, JUDGMENTS OR SETTLEMENTS, INCLUDING ALL REASONABLE COSTS AND EXPENSES RELATED THERETO INCLUDING ATTORNEY'S FEES, DIRECTLY OR INDIRECTLY RESULTING FROM ANY CLAIM MADE OR POTENTIAL CLAIM BY A THIRD PARTY AGAINST LICENSOR OR SUPPLIERS ARISING OUT OF ANY ACT OR USE OF LICENSED SOFTWARE BY LICENSEE.

5. Term and Termination

- This Agreement shall become effective upon the Licensee installs, copies or otherwise commences to use the Licensed Software and remain in full force until and terminate when (a) Licensor terminates this Agreement according to paragraph 5 (2); or (b) the Licensee actually ceases to use the Licensed Software, whichever comes earlier.
- (2) Licensor shall have the right to immediately terminate this Agreement without any notice to Licensee, if Licensee breaches any of the terms and conditions hereof.
- (3) Upon termination of this Agreement, Licensee shall immediately, in accordance with instructions by Licensor, return all copies of the Licensed Software in its possession to Licensor or its designee and erase all copies of the Licensed Software installed in any computer hereunder.
- (4) The license fee paid by the Licensee to the Licensor in consideration of the use of the Licensed Software hereunder shall be non-refundable unless otherwise expressly provided herein.
- (5) The provisions of the paragraphs 3, 4, 5 and 6 shall survive any expiration or termination of this Agreement.

6. General Provisions

- (1) This Agreement shall be governed by and construed in accordance with the laws of Japan. All disputes, controversies or differences which may arise between the parties hereto, out of or in relation to or in connection with this Agreement shall be finally settled by arbitration in Tokyo, Japan in accordance with the Commercial Arbitration Rules of the Japan Commercial Arbitration Association. The award rendered by the arbitrator(s) shall be final and binding upon the parties hereto.
- (2) This Agreement shall supersede any prior representations, discussions, undertakings, communications or advertising with respect to the Licensed Software.
- (3) If any part of this Agreement is found void or unenforceable under any laws or regulations and Licensor deems it is not reasonable to license without such void or unenforceable part, Licensor is entitled to modify the terms of this Agreement or terminate this Agreement at its option without owing any liability to Licensee.
- (4) Licensee agrees that the Licensed Software shall not be shipped, transferred or exported to any country or used in any manner prohibited by any export administration laws, restrictions or regulations of Japan, the United States and other countries that may be applicable to the Licensed Software.
- (5) This English text shall be original and prevail translation versions in all respects.

7. Open Source Software License

- (1) This software uses or contains software licensed or distributed under any of the following licenses ("OSS"). Notwithstanding anything to the contrary stated in this Agreement, installation or use of OSS shall be subject to the following license terms, which shall prevail over this Agreement.
- (2) Each OSS shall be provided on an "AS IS" basis without warranty of any kind, and any express or implied warranties, including without limitation, any warranties of title, non-infringement, merchantability or fitness for a particular purpose are disclaimed.
- (3) IN ADDITION TO AND WITHOUT LIMITING THE GENERALITY OF THE LIMITATION OF LIABILITY PROVISIONS SET FORTH IN THIS AGREEMENT, UNLESS OTHERWISE REQUIRED BY APPLICABLE LAW, IN NO EVENT SHALL YOKOGAWA, ITS AFFILIATES AND SUPPLIERS BE LIABLE, IN RELATION TO OSS, FOR ANY CLAIM, LOSS OR DAMAGE BASED UPON OR RELATED TO, A THIRD PARTY CLAIM, ACTUAL OR ALLEGED INFRINGEMENT, MALFUNCTIONS OR LOSS OF DATA, OR ANY DIRECT, INDIRECT, INCIDENTAL, CONSEQUENTIAL, SPECIAL, EXEMPLARY OR PUNITIVE DAMAGES, WHETHER ARISING IN TORT, CONTRACT, OR OTHERWISE, EVEN IF YOKOGAWA, ITS AFFILIATES OR SUPPLIERS HAVE BEEN ADVISED OF THE POSSIBILITY OF SUCH CLAIMS OR DAMAGES.

SHA2 license terms and conditions

This implementation is released freely under an open-source BSD license which appears at the top of each source code file.

Terms and Conditions for use, reproduction, and distribution

1. Definitions

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License

Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License

Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution

You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

- (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and
- (b) You must cause any modified files to carry prominent notices stating that You changed the files; and
- (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and
- (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions

Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

A-9

6. Trademarks

This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty

Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability

In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability

While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/ or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

WpfToolKit

This source is subject to the Microsoft Public License (Ms-PL).

Microsoft Public License (Ms-PL)

This license governs use of the accompanying software. If you use the software, you accept this license. If you do not accept the license, do not use the software.

1. Definitions

The terms "reproduce," "reproduction," "derivative works," and "distribution" have the same meaning here as under U.S. copyright law.

A "contribution" is the original software, or any additions or changes to the software.

A "contributor" is any person that distributes its contribution under this license.

"Licensed patents" are a contributor's patent claims that read directly on its contribution.

2. Grant of Rights

- (A) Copyright Grant- Subject to the terms of this license, including the license conditions and limitations in section 3, each contributor grants you a non-exclusive, worldwide, royalty-free copyright license to reproduce its contribution, prepare derivative works of its contribution, and distribute its contribution or any derivative works that you create.
- (B) Patent Grant- Subject to the terms of this license, including the license conditions and limitations in section 3, each contributor grants you a non-exclusive, worldwide, royaltyfree license under its licensed patents to make, have made, use, sell, offer for sale, import, and/or otherwise dispose of its contribution in the software or derivative works of the contribution in the software.

3. Conditions and Limitations

- (A) No Trademark License- This license does not grant you rights to use any contributors' name, logo, or trademarks.
- (B) If you bring a patent claim against any contributor over patents that you claim are infringed by the software, your patent license from such contributor to the software ends automatically.
- (C) If you distribute any portion of the software, you must retain all copyright, patent, trademark, and attribution notices that are present in the software.
- (D) If you distribute any portion of the software in source code form, you may do so only under this license by including a complete copy of this license with your distribution. If you distribute any portion of the software in compiled or object code form, you may only do so under a license that complies with this license.
- (E) The software is licensed "as-is." You bear the risk of using it. The contributors give no express warranties, guarantees or conditions. You may have additional consumer rights under your local laws which this license cannot change. To the extent permitted under your local laws, the contributors exclude the implied warranties of merchantability, fitness for a particular purpose and non-infringement.

A-3 Package

• Checking the Contents of the Package

Open the package and check the following prior to use. If the delivered product is the wrong one, some items are missing, or there is a problem with the appearance, contact the place of purchase.

Contents of the package

A USB FieldMate Modem is only included in the package if the /B option (USB FieldMate Modem) was selected.

License Sheet:	1
Getting Started:	1
FieldMate CD-ROM:	
Part Number: F9197DS	
Device Files DVD-ROM:	1
Part Number: F9197DT	
USB FieldMate Modem (Optional)	
Part Number: F9197UF	

Media Handling

Please store your original Media carefully. Install the products on your hard disk, and run the products from your hard disk during actual use.

Media Handling Guidelines

Make sure to take the following precautions.

IMPORTANT

- Do not store the product near large amounts of refuse or dust.
- Do not touch the surface of the Media with no printed characters.

Dirt or sweat from fingertips can damage the Media. Do not write anything on the Media.

- Pencil lead or residue from erasers can damage the Media.
- Do not bend or scratch the Media.

Doing so can cause it to become unreadable.

• Never place anything on top of the Media.

Doing so can cause deformities that can render the Media useless.

- Do not drop the Media from high locations as doing so can cause damage or deformities.
- Do not place the Media in direct sunlight or near heat sources.
- Never allow solvents such as alcohol, benzene, or Freon to come into contact with the Media.
- Take care when placing the Media into the Media drive.
- While the Media is being accessed, do not remove the Media from the Media drive, cut the power to the PC, or reset the computer.
- Store the Media in its original jewel case.

Do not leave the Media in the Media drive after use. It can become deformed or damaged unless it is kept in its case.

Required Software to Read

Adobe Reader of Adobe Systems Incorporated is required to view the user's manual. If Adobe Reader is not installed on the PC to be used, please download from home page of Adobe Systems Incorporated.

A-4 Symbol Marks in the User's Manual

The symbol marks appearing in the user's manual have the following meanings.

Indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury.

Indicates a potentially hazardous situation which, if not avoided, may result in minor or moderate injury. It may also be used to alert against unsafe practices.

IMPORTANT

Indicates that operating the hardware or software in this manner may damage it or lead to system failure.

Draws attention to information essential for understanding the operation and features.

B Packaging and InstallationB-1 About FieldMate

B-1-1

Overview

FieldMate is provided on a set of media (FieldMate Software and Device Files) along with a license sheet and USB FieldMate modem (optional).

FieldMate can be installed on your PC using the installer stored in the media. However, to continue using it, you must register with us within 30 days after installation and then input an activation key.

You can register usage via our User Registration Web site. When registering, you need to provide the license number and hard disk drive serial number (Volume Serial Number) of the PC drive C, in which FieldMate is installed.

B-1-3 Installing FieldMate/Device Files

IMPORTANT

For Windows 10, Microsoft.NET Framework 3.5 function needs to be enabled. Please follow the procedure.

• Control Panel \rightarrow Programs \rightarrow under Programs and Features \rightarrow

Turn Windows features on or off \rightarrow ".NET Framework 3.5 (includes .NET 2.0 and 3.0)"

1. Before installing, Microsoft .NET Framework 3.5 is enabled.

Note: PC has already been connected to the Internet.

2. Microsoft .NET Framework 3.5 is enabled while installing.

Note: PC has already been connected to the Internet or Windows installation medium to be necessary.

* If Microsoft .NET Framework 3.5 is not enabled, "type A Yokogawa device DTM" cannot be used as restriction items.

Overview of Installation Procedure

- For details on installing the NI-FBUS driver, refer to the documentation of National Instruments.
- If the window below appears during installation, please follow the procedure and press "Cancel" in the next window.

Importa	nt warning. 🛛 🗙
1	There is a possibility that the anti-virus software installed on your PC may interfere with FieldMate installation. Therefore, it is advisable to close your anti-virus program before proceeding with FieldMate installation.

Objects to be Installed

Contents to be installed automatically

Out of the contents that are packaged in FieldMate R3.04.10/Device Files R3.09.10 media, FieldMate software, USB FieldMate modem driver, .NET Framework 4.7.2, and Yokogawa device files.

NOTE

The USB FieldMate modem driver is installed automatically.

Check that "Silicon Laboratories CP210x USB to UART Bridge (Driver Removal)" or "Windows Driver Package Silicon Laboratories Inc. (silabser) Ports (23/05/2018 10.1.3.2130)" is installed using Programs and Features in the Control Panel.

If the installation is not performed correctly, double-click the following file.

FieldMate Media\USB_Modem_Driver\FMModemInstaller.exe

Contents to be selectively installed

Yokogawa device DTM: All DTMs or DTM for each communication protocol can be selected. The object is all Yokogawa device related files for individual communication protocols stored in the Device Files media.

Device files (DD/DTM) of other manufacturers: The object is HART and FOUNDATION fieldbus DD/ DTMs. DD and DTM can be selected for each vendor, model, or revision.

SEE ALSO For the installation procedure of device file media, refer to Part R, "Adding/Deleting Device Files."

Precautions for Installation

- Installation is not possible in any of the following cases. A message will appear to notify you that installation is not possible and installation will not proceed.
- (1) When attempting to install the FieldMate on a PC on which Plant Resource Manager (PRM) is installed.
- (2) When attempting to install the FieldMate on a PC on which Mass Flow Configuration Software FSA210 is installed.
- (3) When FieldMate Lite is already installed, uninstall FieldMate Lite first before installation.

Uninstall FieldMate

Uninstall FieldMate from Apps in Settings of Windows.

*: When uninstalling FieldMate, device DTMs will not be uninstalled. Uninstall DTMs also from Apps in Settings of Windows.

B-1-4 User Registration

Overview of User Registration Procedure

After installing FieldMate, you are requested to register within 30 days, acquire an activation key, and then enter it in FieldMate. This allows you to continue to use it.

You can register usage via our User Registration Web site. When registering, you need to provide the license number and hard disk drive serial number (Volume Serial Number) of the PC, drive C, in which FieldMate is installed (8 digit without hyphen).

To obtain the hard disk drive serial number, select Start Windows System \rightarrow Command Prompt and input "dir" on the PC in which FieldMate is running.

If you have not yet registered, the dialog shown below appears after the FieldMate Login window.

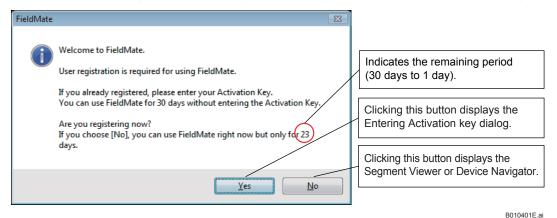

Figure B-1-15 User Registration Request Window – 1

If 30 days have passed without entering an activation key, the dialog shown below appears after the FieldMate Login window, then only the User Registration window appears.

B-2 PC Configuration

It is recommended that the following items be set and confirmed after installation of FieldMate.

Power Management

FieldMate may not function properly while the sleep, standby and hibernation settings are enabled. These settings can be disabled in Windows. The setting procedure is as follows.

Log on as a user with administrator privileges, click the Start menu, select Windows System, Control Panel, System & Security, click Power Options to display the Power Options Properties dialog box, and then make sure the following items are set as described below. Note that some of the items described below may not be displayed depending on the configuration of the PC.

If an item is not displayed, the function is disabled.

• Choose what the power button does.

When I press the power button: Do nothing

When I press the sleep button: Do nothing

When I close the lid: Do nothing

Choose when to turn off the display
Turn off the display: Never

Put the Computer to sleep: Never

B-3 Notes on FOUNDATION fieldbus H1 Device Interface

For a FOUNDATION fieldbus H1 device, you can use FBUS from National Instruments. For details, see G-4 "FOUNDATION fieldbus Interface Selection."

B-3-1 Notes on NI-FBUS

NI-FBUS is a driver of National Instruments for FOUNDATION fieldbus H1. For details on installing the NI-FBUS driver, refer to the corresponding manual of National Instruments. The following are notes on NI-FBUS.

Installing the NI-FBUS Driver

- 1. Start the PC, log on as a user with administrator privileges, and then install the driver.
- 2. Restart the PC.

Settings after Installation

- 1. After the PC restarts, click the Start menu, point to All Programs, National Instruments, and NI-FBUS, and then select Interface Configuration Utility, or after FieldMate starts, click Tools and then select FOUNDATION fieldbus Interface Configuration.
- 2. If a red mark indicating that use is not possible is displayed in the dialog box, select and right-click on Board0 to choose Enable. This allows the NI-FBUS driver to be enabled.
- 3. In the dialog box that appears, select Port0 and click the Edit button. Configure the settings as follows.

Device Address: Visitor Device Type: Link Master Device Usage: NI-FBUS

For use while connected to a segment under another host, set Device Type to Basic Device.

NOTE

Connecting the segment under another Host system with Link Master Device, it may cause communication error.

C-2 Software Environment

• Operating System

Windows 10 Pro/Home 32 bit/64 bit (version 1809, 1903, 1909, 2004)

Language (characters displayed in window)

English

User Privileges for Handling FOUNDATION fieldbus H1 Devices

When using FOUNDATION fieldbus H1 devices in FieldMate, Windows users who use FieldMate need to have administrator privileges (because NI-FBUS cannot be started by users who do not have administrator privileges).

Compatible Software

Some software cannot be installed in the same PC with FieldMate R3.04. The list of incompatible software for FieldMate is below.

Incompatible software:

- Plant Resource Manager (PRM)
- Mass Flow Configuration Software
- FSA120
- FieldMate Lite Edition

C-3 System Configuration/Connection Examples

The following shows some example hardware setups for operating FieldMate with the pressure transmitter connected. Please refer to the instructions of device for details about other protocols.

BRAIN

Required Components

- BRAIN Pressure Transmitter
- 24 V DC Power Supply
- Load Register (250 Ω)
- USB FieldMate Modem

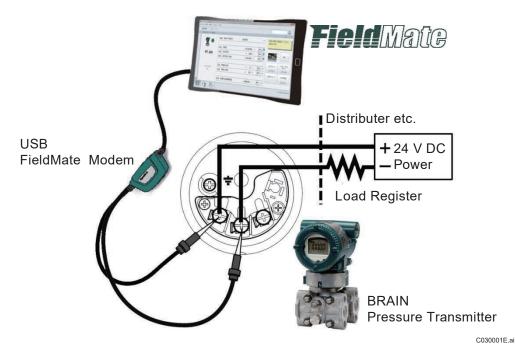

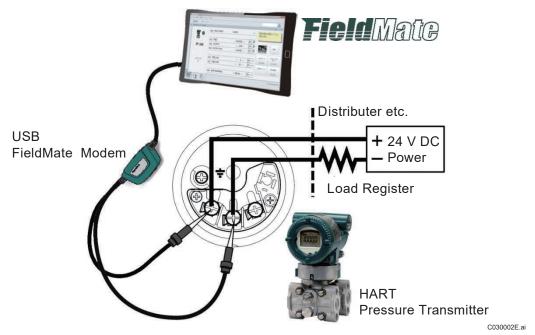

Figure C-3-1 BRAIN Hardware Setup Sample

HART

Required Components

- HART Pressure Transmitter
- 24 V DC Power Supply
- Load Register (250 Ω)
- USB FieldMate Modem

IMPORTANT

BRAIN/HART communication

- Analog output may change temporarily in connecting with USB FieldMate Modem due to an initial current flowed to it. To prevent communication signal affecting the upper system, it is recommended to install a low-pass filter (approximately 0.1s)
- Communication signal is superimposed on analog output signal. It is recommended to set a low-pass filter (approximately 0.1s) to the receiver in order to reduce the output effect from communication signal.
- The modem cable with red and black clips is non-polar. However, clipping and unclipping, it is recommended to connect the same polar.

Before online-communication, confirm that the connecting with the modem does not give effect on the upper system.

HART

Required Components

- HART Pressure Transmitter
- 24 V DC Power Supply
- Load Register (250 Ω)
- VIATOR Bluetooth Interface

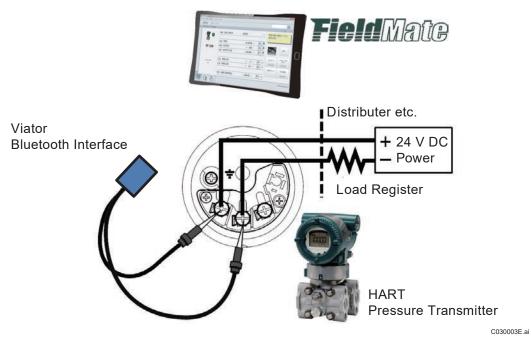

Figure C-3-3 HART Hardware Setup Sample

FOUNDATION fieldbus H1

Required Components

- FOUNDATION fieldbus H1 EJA Pressure Transmitter
- 24 V DC Power Supply
- FOUNDATION fieldbus Power Unit with Terminator
- Terminator
- NI USB-8486

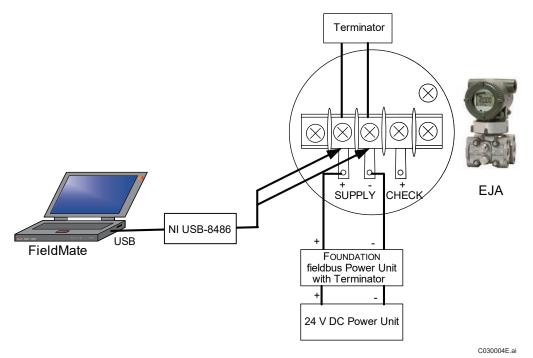

Figure C-3-4 FOUNDATION fieldbus H1 Hardware Setup Sample

PROFIBUS

Required Components

- PROFIBUS PA EJA Pressure Transmitter
- 24 V DC Power Supply •
- PROFIBUS DP/PA Coupler with Terminator •
- PROFIBUS Interface: PROFlusb •

D Overview

D-1 Features

- Communication Protocols and Communication Routes
 FieldMate supports BRAIN, FOUNDATION fieldbus H1, PROFIBUS, HART and Modbus
 communication protocols and direct connection NI USB-8486, USB FieldMate modem,
 USB HART modem, PROFIusb, IR224UN-LN96 and YFGW communication routes. It also
 handles devices with different communication protocols or communication routes at the
 same time.
 - USB FieldMate modem (BRAIN)
 - NI USB-8486 (FOUNDATION fieldbus H1)
 - USB HART modem/USB FieldMate modem (HART) PROFlusb (PROFIBUS)
 - Viator Bluetooth Modem (HART)
 - Infrared Adapter, ACT-IR224UN-LN96-LE 9600bps (ISA100) Field Wireless Gateway, YFGW (ISA100)
 - Isolated RS422/485 USB adaptor (Modbus)
- Adoption of Open FDT/DTM FieldMate has a function that serves as an FDT frame application that complies with FDT 1.2 and FDT 2.0 Specification. Thus, a third party device DTM can be incorporated and used as a device-specific application.
- Operation Logs

FieldMate automatically records all device operations as operation logs. These logs can be generated in a file from the History window as device information. This generated information can be used to create reports.

- Input Loop Check Support The test output function of HART and BRAIN devices is used for Input Loop Check. The test results are saved in the database and can be used to generate reports.
- Calibration Support FieldMate support Calibration works for pressure transmitter with CA700 Pressure Calibrator. This function provides settings, status confirmation, and saving result for calibrating.
- Parameter Comparison You can compare the parameters obtained among devices of the same type. You can also display only the parameters that are different in the comparison results.
- Zero-Adjustment You can perform zero point adjustment for the main devices of Yokogawa Electric by using a simple operation.
- Typical Parameter You can find useful parameters with just connecting device. You can also select displayed parameters for each device.
- Trend View of Typical Parameter Typical parameters displayed in the segment viewer are automatically saved in the database and can be checked visually as a trend graph.
- Device Interaction Functions FieldMate automatically recognizes field devices connected to a physical segment and displays the operation status of individual field devices in a simple presentation.

Furthermore, FieldMate can configure initial settings such as tag and address settings. It also runs DTM to check and set field device parameters, and runs DD Menu, DTM, and other functions to set and adjust devices.

- Device Parameter Management Function FieldMate enables the uploading and downloading of snapshots of device parameters, exporting and importing of files, and comparison of parameters.
- BT200 Tablet FieldMate has the device configuration tool like BT200 BRAIN TERMINAL provided from Yokogawa Electric Corporation. This function can be configured field devices like operation with BT200.

SEE For more information about FDT, refer to the FDT Group Web site at http://www.fdtgroup.org.

- Supporting commDTM-based Communication Routes Support of communication routes by commDTM enables the addition of communication drivers and communication protocols.
- Device Maintenance Information Management Function This function enables maintenance information (device information, document links, device parameters, memos, etc.) for devices to be kept and managed in databases. Up to 300 devices can be managed. During device maintenance, for example, you can efficiently perform tasks such as referring to documents related to the devices, managing device parameters, and creating memos
- PRM Synchronization Bi-directional file transfer operation is supported. Refer to PRM Synchronization Tool IM (IM01R01A20-01E) for details.

Device Maintenance Information Management Function

By managing the information regarding the maintenance of the device on a database, Advance supports the maintenance/management of the device. It manages device parameter values and maintenance memos for a number of devices (up to 500 devices are recommendable to manage). Advance also enables the user to refer to or change the device maintenance information of devices that are before delivery/actual placement.

User Management Function

with the required files attached.

This function defines the FieldMate user account (user ID, password).

Cases of Use

FieldMate Advance is supposed to be used in the following two ways, and provides an operation system and performs data management accordingly.

1. Setting and adjustment of a device on a workbench, etc. before on-site installation.

Or setting and adjustment of a device at installation site.

- \rightarrow This way of use is common for both Basic and Advance.
- 2. Setting and adjustment of a device remotely via network.
 - \rightarrow This way of use is only for Advance.

The uses described are selected by switching between Built-in Connection and User Defined Connection in Segment Viewer. The details are described in the chapter Segment Viewer.

D-2 Description

The following lists important terms before describing the features.

Device DTM

This is a DTM for devices. This is usually assigned on the terminal of a DTM network topology (For example, device DTM for a differential transmitter)

commDTM

This is a DTM for communication devices (For example, DTM for a PROFIBUS communication card)

gatewayDTM

This is a DTM for communication devices that perform protocol conversion (For example, DTM for a PROFIBUS-HART converter)

Actual Device

This indicates device that connects physically.

Database Device

This indicates logical device in database.

Registering to Database

This means registering device to database.

Registered Database

This means that actual device is registered to database as Database device.

Device Maintenance Info

This refers to device information stored in the database. In addition to information on the actual device, this includes maintenance memos, related documents, operation logs, or device parameters.

FDT Project

This is composed of network topology definitions by a comm/gateway/device DTM, and of data set for each DTM.

DTM Data

This is either data in active DTM (memory image) or that data saved to external file. DTM data consists of two types of data, device parameters and DTM specific parameters.

Ε FieldMate Startup

This part describes FieldMate startup.

E-1 FieldMate Startup Window

Start Window

FieldMate Startup Window is the first gate to commence FieldMate defined field work.

Work Selection button provides the whole list of predefined filed works, user can select the desired maintenance work.

Once any field work is selected, the same work menu becomes easily selectable from Work History pane.

Work History Erase the shortcut from Work History.	
Device Configuration Device Configuration Device Configuration

		E010002E.ai

Figure E-1-2 Work Selection Window

Device Configuration

Comprehensive configuration work menu for field instrument, transmitters, flow meters and valve positioners.

Press this button and proceed to Next button to commence the work menu.

BT200 Tablet

The same capability of BT200 BRAIN Hand Held Terminal is available by the emulator software.

Press this button and proceed to Start button to start the emulator software.

• Field Wireless Gateways

Configuration and management of Field Wireless Gateway for FN110 with inter module communication code "-R1" is available with ISA100 Wireless Gateway Assistant.

Press this button and proceed to Start button to start ISA100 Wireless Gateway Assistant.

Setting and calibration of analyzer

The dedicated screen is prepared for the 4-Wire Converter FLXA402 and the SENCOM[™] Smart adapter SA11, and supported the following functions.

- Local Display system for FLXA402
- Direct access system for SA11

Press this button and proceed to Start button to start Calibration Management for Liquid Analyzers function.

Communication Selection Window

Primary, in the beginning of Device Configuration menu, the desired communication type needs to be specified.

All of communication types supported in FieldMate are selectable in this window.

The precise information about the setting of communication port for FieldMate software are detailed in the communication setting pane.

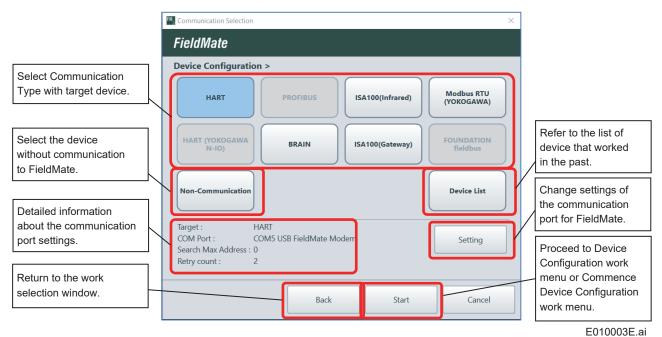

Figure E-1-3 Communication Selection Window

Login Window

This window is for the user certification.

Communication Settings

HART communication settings

Startup

- Start from Login window \rightarrow Communication Settings \rightarrow HART \rightarrow Setting.
- Start this function from HART Modem Configuration under the [Tool] menu of the main window of FieldMate.

FieldMate modem is automatically detected. The other alternatives of COM ports are selectable the pull-down list.	in
COM Port COM3 USB FieldMate/Hart Modem Search Max Address 3 Retry count 2 The selection range is 0 to 63. Default: 0 HART 5: 0-15 HART 6, 7: 0-63	
Specify the number of communication retries from 0 to 2. Default: 0	

Figure E-1-5 HART Communication Settings

* Check and specify a COM port number of the modem if it is not detected automatically.

Windows System \rightarrow Control Panel \rightarrow Device Manager (COM and LPT)

Check a COM number of Silicom Labs CP210x USB to UART Bridge and specify it on the COM Port as the COM Port number of the modem.

TIP COM number of modem may change depending on PC condition including connecting USB device. It is advisable to confirm the procedure above.

Note: Modem Configuration setting is required individually by protocol on BRAIN and HART.

FOUNDATION fieldbus settings

For a FOUNDATION fieldbus device interface, you can use NI-FBUS from National Instruments. The following indicates outlines of each device interface.

NI-FBUS

NI-FBUS is a driver of National Instruments for FOUNDATION fieldbus H1. For details on installing the NI-FBUS driver, refer to the documentation of National Instruments. The following are notes on NI-FBUS.

Installing NI-FBUS Driver

- 1. Start the PC, log on as a user with administrator privileges, and then install the driver.
- 2. Restart the PC.

Settings after Installation

- 1. After PC restart, select one of the operations below.
 - (1) Login window \rightarrow Communication settings \rightarrow FOUNDATION fieldbus \rightarrow Setting
 - (2) After FieldMate startup, Tool \rightarrow FOUNDATION fieldbus Interface Configuration
 - (3) Start of Windows \rightarrow National Instruments \rightarrow NI-FBUS \rightarrow Utilities
 - → Interface Configuration Utility
- 2. If a red mark indicating that use is not possible is displayed in the dialog box, select and right-click on Board0 to choose Enable. This allows the NI-FBUS driver to be enabled.
- 3. In the dialog box that appears, select Port0 and click the Edit button. Configure the settings as follows.

Device Address = Visitor

Device Type = Link Master Device

Usage = NI-FBUS

However, for use while connected to a segment under another host, set Device Type to Basic Device.

Connecting with a setting as Device Type = Link Master Device may cause an error on communication to the host.

Select FOUNDATION fieldbus H1 Communication

Select a device interface for FOUNDATION fieldbus H1 communication. Select from NI-FBUS from National Instruments.

Calling

Call FieldMate Setup Tool from Start of Windows -> YOKOGAWA FieldMate -> FieldMate Setup

TIP A window is displayed for confirmation purposes due to the user account control.

User Account Cont	rol am needs your permission to continue	×		
Fi Yo	s program, continue. eldMate Setup Tool okogawa Electric Corporation e an administrator password, and then click OK.			
	ADMIN Þassword			
	TESTUSER			
Details OK Cancel User Account Control helps stop unauthorized changes to your computer.				

Figure E-1-6 User Account Control

Click "OK."

When the user management of FieldMate is defined, the following login dialog is displayed. After logging in, the FieldMate Setup Tool window appears.

FieldMate Setup Tool does not start if FieldMate HMI is already running.

🚴 Login	X
Field Mate	User ID Password
	OK Cancel
	E010007E.

Figure E-1-8 Message appears when FieldMate is already running

Setting

Select a FOUNDATION fieldbus H1 communication interface after selecting "Built-in Connection" tab.

🖏 Device Tag Mode	Built-in Connection		
FOUNDATION field	bus Interface		
🖱 Softing FFu	sb		
NI-FBUS			
			1
	OK	Close	Apply

Figure E-1-9 Selecting a Communication Interface

Basically, FOUNDATION fieldbus H1 interface is automatically selected. The followings show the installation case.

- 1. When FFusb from Softing is newly installed, Softing FFusb is selected.
- 2. When FBUS from National Instruments is newly installed, NI-FBUS is selected.

Even after installing either interface software on the other one was already installed, former selection remains unchanged until user select communication interface manually, either Softing FFusb or NI-FBUS in the window.

Note : FFusb driver cannot be installed before FieldMate is installed.

BRAIN modem settings

This function enables you to set the USB FieldMate Modem.

Startup

Start from Login window \rightarrow Communication settings \rightarrow BRAIN \rightarrow Setting.

Start this function from BRAIN Modem Configuration of the Tool menu of the main window.

BRAIN Modern Configuration			FieldMate modem is automatically detected.
COM Port COM2 USB FieldMate/Hart Modem		·	The other COM ports are selectable in the pull- down list.
Retry count	2	·	
	OK	Close	Specify the number of communication retries from 1 to 10. Default: 2

E010010E.ai

Figure E-1-10 BRAIN Modem Configuration

* Check and specify a COM port number of the modem if it is not detected automatically.

Windows System → Control Panel → Device Manager (COM and LPT)

Check a COM number of Silicom Labs CP210x USB to UART Bridge and specify it on the COM Port as the COM Port number of the modem.

TIP

COM number of modem may change depending on PC condition including connecting USB device. It is advisable to confirm the procedure above.

Note: Modem Configuration setting is required individually by protocol on BRAIN and HART.

Refer to Part N for details.

ISA100 (Gateway)

Refer to Part N for details.

PROFIBUS Communication Settings

PROFIBUS Interface Configuration is required after FieldMate and communication driver installation. The following initial setup needs to be defined based on the PROFIBUS communication driver.

1. Start FieldMate and navigate through [Tool] - [PROFIBUS Interface Configuration...].

PROFIBUS Interface Configuration	
Board	Select the board recognized.
Board Name Node0	
Scan Range	
Start Address 0 Stop Address 126	Set a proper baud rate.
Setting Baud Rate 45.45KBit/s	Example: When a PA device is connected via a DP/PA
⊘ Advanced Setup OK	Close Vinen a PA device is connected via a DP/PA coupler (Siemens), the baud rate is 45.45 kbit/s. When a PA device is connected via a DP/PA coupler (P+F), the baud rate is 93.75 kbit/s.

F User Management Function

This function defines the user account (user ID, password) of FieldMate. With this function, operation logs for each user ID can be recorded.

The user account (User ID, Password) of FieldMate is valid only for FieldMate and FieldMate Setup Tool. It has no relevance to the Windows user account.

Define a User Account

Up to 100 user accounts can be defined.

User Accounts

Administrative user: User ID = Administrator, Password = FieldMate

Default user: User ID = DefaultUser, Password = FieldMate

*: Logging in as an administrative user or default user after creating a user requires a password.

User-created account: new user accounts, 98 users

User accounts can be created/changed/deleted.

Administrative user and default user cannot be deleted, and default users' passwords cannot be changed. The password of administrative user accounts and user-defined user accounts can be changed.

Startup

Start this function from User Manager of the Tool menu of the main window.

The user ID and password of administrative users and default users are as follows.

Administrator user: User ID is Administrator, initial password is FieldMate.

Default user: User ID is DefaultUser, password is FieldMate and cannot be changed.

User ID	Full Name	Description A list of registered users is

G Window Layout and Main Windows Menu

G-1 Overview of Window Layout

The windows in FieldMate are classified into the following categories:

- · Main windows, where devices and events are selected.
- Individual windows, where the detailed settings for individual features are available.

Each menu individually opens a window with an appropriate application/menu.

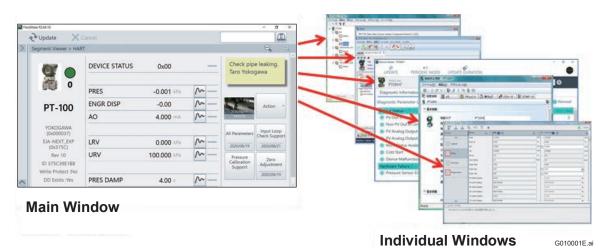

Figure G-1-1 Window Layout of FieldMate

Main Windows

The Main Window consists of the following three kind of views:

- Segment Viewer displays information about the currently connected device.
- Device Navigator displays a list of the devices that are registered in the database.
- History displays the operation logs of devices.

Search Area

Search Area is in the top right of Main Window.

You can search for the information from database of FieldMate by using the Search function. Enter the key string to the text box in Search Area, and click the search button (()). And then the Search dialog box appears and shows the search results that matched partially with the key string.

In the Search dialog box, you can jump to the related window of selected item from search result list. The category of the search result list shows the related window of the item.

Individual Windows

The following individual windows are available in FieldMate:

1. Device Viewer (*1)

This window is used for verifying the detailed operation and failure status of a HART/ FOUNDATION fieldbus H1/ISA100 device. It enables FieldMate to communicate with the device and displays information such as self- diagnostic results.

- DTM Works (*1)
 This window is used for configuring and adjusting a HART/FOUNDATION fieldbus H1/ PROFIBUS/BRAIN/ISA100 device.
- Parameter Manager (*1) This window is used for configuring and adjusting the parameters of HART/FOUNDATION fieldbus H1/ISA100 devices.
- 4. DD Menu (*1)

This window is used for configuring and adjusting a FOUNDATION fieldbus H1 device. It enables you to display or execute the menu or method that is defined for the FOUNDATION fieldbus H1 device DD.

5. Device Maintenance Info (*1)

This window shows the device maintenance information of the selected device tag.

(*1) This window can display up to five windows simultaneously.

Device Viewer checks the operation status of the device.

DTM Works is a device-dedicated MMI for setting/adjustment.

Parameter Manager enables device replacement and setting/adjustment of all HART, FOUNDATION fieldbus H1 and ISA100 devices using the MMI.

G-2 Main Window Menu

The following table describes the menu options in the menu bar. Note that the availability of the menu options may vary depending on the main window displayed and the communication protocol of the device.

NOTE

The switching time of the test signal on the screen during test execution is the time when the test signal output command is output to the device. Therefore, a delay of several seconds might occur before the test signal is output from the device.

When using FieldMate on a PC with a small screen, FieldMate hides the menu bar to secure the information to be displayed. In such a case, right-click (hold down on the touch panel) the title bar of the FieldMate window to display the menu bar display / non-display selection menu (MenuBar).

If you select the "MenuBar", the item is checked, and the menu bar is displayed.

G-3 Configuration Function

The following table describes which window to access so you can configure devices, depending on the communication protocol.

Table G-3-1 Coni	iguration function			
Device Communication Protocol	Use	Recommended Function		
HART	Checking Status	Check with Segment Viewer for general status, and then check with Device Viewer for details.		
	Setting/Adjustment *	DTM, Parameter Manager		
FOUNDATION fieldbus	Checking Status	Check with Segment Viewer for general status, and then check with Device Viewer for details.		
H1	Setting/Adjustment **	DTM, if DTM exists, Otherwise, Parameter Manager or DD Menu		
PROFIBUS	Checking Status	Check with Segment Viewer		
BRAIN ISA100 Modbus	Setting/Adjustment*	DTM		

 Table G-3-1
 Configuration function

* HART/BRAIN: For Input Loop Check Support and Zero Adjustment, the functions are available from the Segment Viewer. Applicable only to certain Yokogawa devices for Zero Adjustment.

**FF: For Zero Adjustment, the functions are available from the Segment Viewer.

H Segment Viewer

H-1 Overview

Segment Viewer can perform the following operations:

- · Detects devices and displays them automatically
- Display the Non-Communication devices registered manually The Non-Communication device means the device that does not have the protocol FieldMate supports.
- · Register device information with the database
- · Configure the device

FieldMate supports HART, FOUNDATION fieldbus H1, BRAIN, ISA100, PROFIBUS, and Modbus communication protocols.

- HART/BRAIN: Directly connects to and communicates with field devices through the USB FieldMate modem in the FieldMate options.
- FOUNDATION fieldbus H1: Connects to and communicates with field devices through NI USB-8486 from US National Instruments.
- ISA100.11a: Connects to and communicates with field devices through the ACT-IR224UN-LN96-LE infrared adapter from ACTiSYS and the YFGW field wireless gateway from Yokogawa.

Segment Viewer is used for adjustment or configuration of a device at a workbench or at similar locations before onsite installation, or for adjustment or configuration if a device is installed on the site.

Built-in Connection (BIC Mode)

Built-in Connection employs a built-in communication method of FieldMate.

The Segment Viewer is implemented in Built-in Connection.

User Defined Connection (UDC Mode)

This method is used to install third-party products and their comm/gateway DTM purchased, and connected to field devices through the defined network topology of the comm/gateway DTM.

The FDT Project is implemented in User Defined Connection.

SEE ·

ALSO See Part Q for details on the FDT Project.

H-2 Segment Viewer Window

For devices that can communicate with FieldMate, the actual device is automatically recognized and displayed, and the device information is automatically registered in the database as device maintenance information.

For devices that are not covered by FieldMate, those that are manually registered are displayed.

SEE

ALSO "J-3 Registration of Non-Communication device" about the procedure to register Non-Communication device.

The functions that used for Non-communicate device are as follows.

- · Sticky note
- Image
- Calibration support function

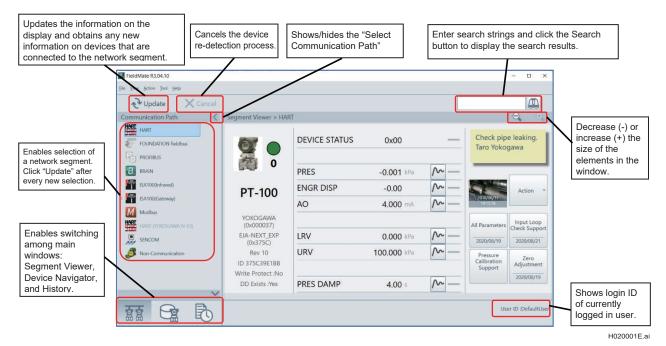

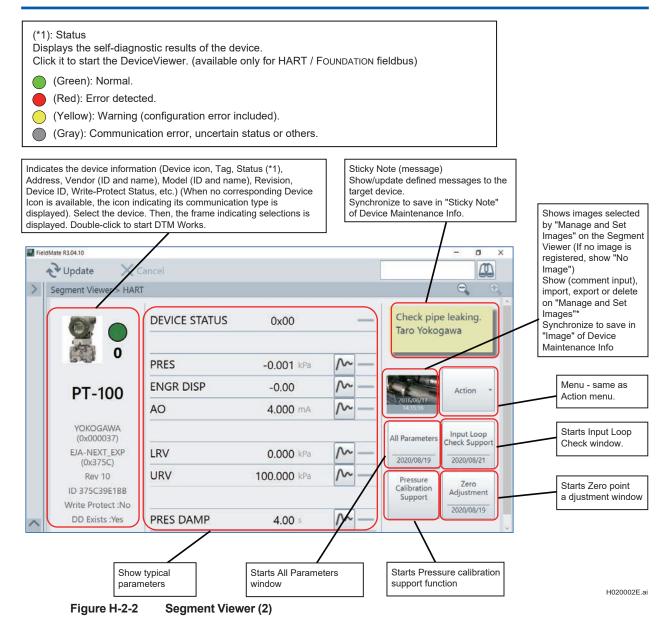

Figure H-2-1 Segment Viewer (1)

🔨 ΝΟΤΕ

In BRAIN, PROFIBUS, Modbus, and ISA100 (Infrared), while the related DTM is open, Segment Viewer update is not effective. Close DTM and update Segment Viewer.

Menu

The following table describes the menu options in the Segment Viewer window. Note that the availability of these options varies depending on the device communication protocol.

SEE -

ALSO See Table G-2-2 for information on the menu options that are available for each communication protocol.

		Menu	Explanation

Table H-2-1 Segment Viewer Menu (2/2)

• Right-click Menu (when a device is selected)

This menu shows the same options as the Action menu after device selection.

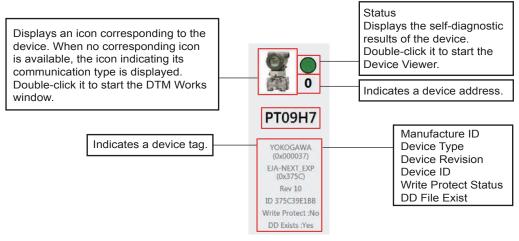

• Display if a device tag is not defined or when there are duplicate device tags

If a HART device tag is not defined	Only blank space is displayed in Segment Viewer and History
If there are duplicated HART device tags	Duplicated device tags are displayed in Segment Viewer and History
If a FOUNDATION fieldbus H1 device tag is not defined	"(Device Tag Undefined)" is displayed in Segment Viewer. In this case, menu items other than Tag/Address Assignments are disabled.
If there are duplicated FOUNDATION fieldbus H1 device tags	"(Device Tag Duplicated)" is displayed in Segment Viewer. In this case, menu items other than Tag/Address Assignments are disabled.

H-2-1 Device Information

Explanation about the device information of each protocol.

HART device

H020101E.ai

Figure H-2-3 HART device information on the Segment Viewer

• FOUNDATION fieldbus H1 device

Display the FOUNDATION fieldbus H1 segment device list (*).

*: Up to 64 devices (depending on the FOUNDATION fieldbus H1 specification).

PROFIBUS device

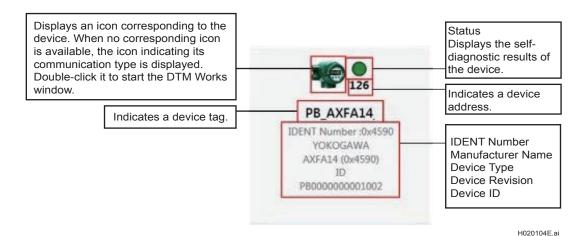

Figure H-2-6 PROFIBUS device information on the Segment Viewer

Modbus device

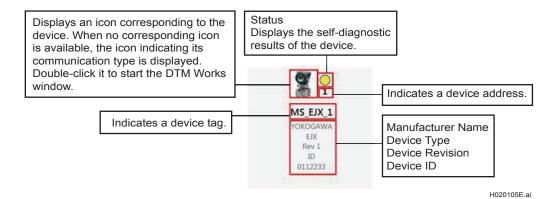

Figure H-2-7 Modbus Device Information on Segment Viewer

H-2-2 Typical Parameters

Typical Parameters are the representative parameters mostly used in device configuration generally.

A pre-defined parameter list is ready, user can freely modify the list.

This function is applicable to HART, FOUNDATION fieldbus and BRAIN communication type only.

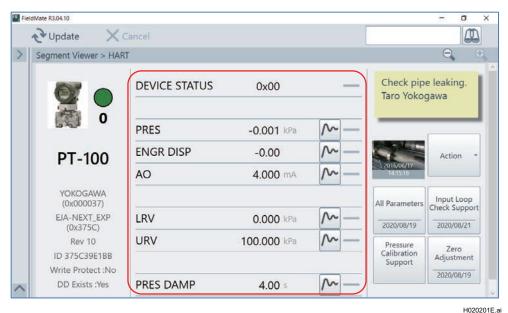

Figure H-2-8 Typical Parameters

Figure H-2-9 Displayed Parameters

The variable retrieved on this window is automatically saved into the internal database in each time of "Update" of Segment Viewer.

By pressing the button, the values are historically visualized on a Trend Graph.

The icon of arrow beside of Trend Graph indicates the difference from the previous value.

Trend Graph View

Trend Graph View intuitively visualizes the all of saved data for a particular typical parameter.

Additionally, any other typical parameters can be displayed together in order to compare the related parameters.

Add Display Parameters

Any other typical parameters can be added to the trend graph by Load button. Up to 10 parameters can be loaded into one trend graph.

Delete Display Parameters

The parameter can be unloaded from the trend graph by Delete Mode button.

Typical Parameters Customization

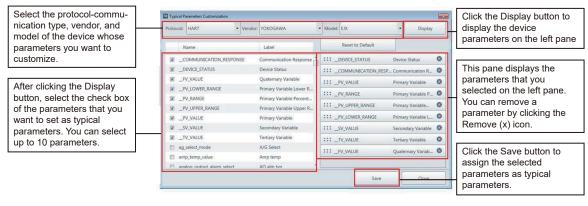

Typical Parameter list can be customized in this menu.

Startup

Start Typical Parameters Customization by selecting Tool \rightarrow Option \rightarrow Typical Parameters Customization in Segment Viewer.

Selection Method

Typical Parameter list can be selected by specifying appropriate communication type, vendor and model of field instrument.

H020204E.ai

H020206E.ai

Figure H-2-13 Typical Parameters Customization dialog box (FOUDATION Fieldbus H1)

If the target device has a lot of parameters, this operation may take a long time to complete.

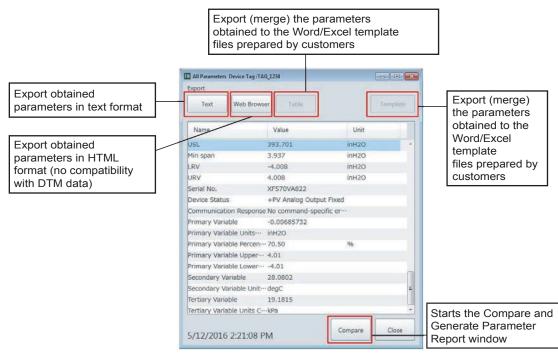

H-2-3 All Parameters/Adjustment Parameters

Obtain and display all parameters and adjustment parameters of the device. The parameters obtained are saved in "Device Maintenance Info - Parameter". Also the parameters obtained can be exported to an external file.

Startup

Click the "All parameters" button on the segment viewer screen to acquire all the parameters of the device.

Click the [Operation] button and select [Zero Adj. Parameter] from the displayed menu to acquire the zero point adjustment parameter of the device.

H020301E.ai

Figure H-2-14 Export or Show All Parameters/Adjustment Parameters

Search device function

FieldMate can search the devices with the parameter value as a condition from the database. Double-click the parameter name in the All parameter dialog and then Device search dialog appears.

2017/06/2	22 15:22	:17	compare	ciose

Figure H-2-15 Device searching dialog

The conditions for searching devices are as follows.

*The condition can be set by selecting from menu or entering manually.

Search by string

In the case that the value of the selected parameter is string, search devices with the parameter value as the key.

Case A: The parameter value (string) is matched.

(Parameter value) is Exact

Case B: The parameter value (string) is included.

(Parameter value) is Partial Match

Search by numeric

In the case that the value of the selected parameter is numeric, search devices with the parameter value as the key.

Case A: The parameter values are matched.

(Parameter name) = key value

Case B: The parameter values are not matched.

(Parameter name) ≠ key value

Case C: The parameter value is the key value or larger.

(Parameter name) ≥ key value

Case D: The parameter value is the key value or smaller.

(Parameter name) ≤ key value

Enter the condition and click the search button and then the search result dialog appear.

Templates for inserting data into Microsoft Word/Excel files

Indicate how to create templates of data insertion.

Enter the substitution string where you want to insert parameter values in Microsoft Word or Excel files.

The substitution string is shown in ID row of data that is displayed by pressing the "Text" or "Table" button in Figure H-2-8.

The substitution string is replaced to the value with unit.

• Example (Microsoft Word)

Template file

Process variables

Pressure value [Pres]	:(pressure_value)
Pressure value in % [Pres %]	:(pressure_percent_range)
Loop current value [AO]	:(analog_output_value)
User scaled value [Engr Disp]	:(engr_disp_value) (engr_disp_unit)
Static pressure value [SP]	:(static_pressure_value)
Static pressure value in % [SP %]	:(static_pres_percent)

Process variables

Report

Pressure value [Pres]	:-0.003 kPa
Pressure value in % [Pres %]	:-0.01%
Loop current value [AO]	:3.997 mA
User scaled value [Engr Disp]	:-0.00 kPa
Static pressure value [SP]	:0.0000 MPa
Static pressure value in % [SP %]	:0.0%

• Example (Microsoft Excel)

Template file

Process variables

Pressure value [Pres]	(pressure_value)	
Pressure value in % [Pres %]	(pressure_percent_range)	
Loop current value [AO]	(analog_output_value)	_
User scaled value [Engr Disp]	(engr_disp_value) (engr_disp_unit)	
Static pressure value [SP]	(static_pressure_value)	
Static pressure value in % [SP %]	(static_pres_percent)	

Report

Process variables

Pressure value [Pres]	-0.003 kPa
Pressure value in % [Pres %]	-0.01%
Loop current value [AO]	3.997 mA
User scaled value [Engr Disp]	(engr_disp_value) (engr_disp_unit)
Static pressure value [SP]	0.0000 MPa
Static pressure value in % [SP %]	0.0%

In the case of the template file with Microsoft Excel, the substitution strings are replaced by the cell. If any characters other than the substitution string or some substitution strings are in the cell, the replacement does not performed.

H-2-4 Input Loop Check Support

Input Loop Check is a sophisticated built-in menu of FieldMate. The entire process are automatically recorded and a comprehensive reporting function is available in History View. This menu is applicable to HART and BRAIN devices excluding valve positioners.

Write Lock mode of device needs to be disabled before starting this menu. See the user's manual of the device for more information about the Write Lock release time of the device.

Startup

Figure H-2-17

Click "Input Loop Check Support" button on Segment Viewer.

In case of HART device, the node address needs to be 0(zero). Please make sure of the node address first.

Target Devices

The supported devices are listed in Table H-2-2.

Table H-2-2 Supported Devices for Zero Adjustment

Product Series	Device Type								
Product Series	HART	FOUNDATION fieldbus	BRAIN						
EJA	0x0004	0x0003 0x0008 (*2)	(*3)						
EJA-E	0x005c 0x375c (*1)	0x0011	(*3)						
EJA-E (Low power)	0x375d (*1)	not supported	not supported						
EJX	0x0051 0x3751 (*1)	0x000c	(*3)						
EJX (EJX910A,EJX930A)	0x0054 0x3754 (*1)	0x000e	not supported						
EJX-DRS	0x3755 (*1)	not supported	not supported						

(*1) HART7

(*2) Comes with the Software download function (*3) BRAIN devices do not have Device Type IDs

NOTE

For FOUNDATION fieldbus devices, when the Zero Adjustment function is used, the transducer block temporarily becomes the OS and is unable to generate the measured value. Ensure that you safely stop the controls that are currently executed by the target devices, or perform other necessary safety operation before you start performing zero adjustment.

H-2-6 Parameter Comparison

Parameter Comparison menu is the way to intuitively visualize the difference of the past conditions.

Comparison can be made between the parameter lists of the same type devices (same protocol, same vendor, and same model type) obtained with All Parameters function.

Comparison result can be exported as a text file, Web page, or Excel sheet.

SEE ·

ALSO For All Parameters function, refer to H-2-3 "All Parameters/Adjustment Parameters".

Startup

Start the Compare and Generate Parameter Report dialog box in the following way.

- From the main menu in Segment Viewer, select Action Compare and Generate Parameter Report.
- Start All Parameters dialog box from Segment Viewer and then click the Compare button on this dialog box.

SEE

ALSO For All Parameters dialog box, refer to H-2-3 "All Parameters/Adjustment Parameters" and J-2-5 "Device Maintenance Information (Parameter)".

Performing Parameter Comparison

After selecting the devices to compare, click the Compare button to execute the parameter comparison. The value of the parameter with the difference is displayed in red.

About Segment Viewer display

If a tag and address are modified in this Tag/Address Assignment window, the Segment Viewer window will automatically be updated, displaying updated tags/addresses.

Tag/Address Assignment for FOUNDATION fieldbus H1 devices

Specify tags/addresses of FOUNDATION fieldbus H1 devices.

Startup

Start from Segment Viewer - Communication Path "Select HART/FOUNDATION fieldbus" - Action - Tag/Address Assignment.

Enter the tag to be modified.	Tag/Address Assignment	EJX110_001	Select the address to be modified. FOUNDATION fieldbus : 16 to 247
If Tag Clear is selected, Address Clear is also	Address	-	Addresses other than the local address that have already been displayed in Segment Viewer are excluded from the objects to be selected.
automatically selected.		OK Cancel	

Figure H-3-2 FOUNDATION fieldbus H1 Tag/Address Assignment

About Segment Viewer display

If a tag and address are modified in this Tag/Address Assignment window, the Segment Viewer window will automatically be updated, displaying updated tags/addresses.

Notes on Modifying Tags for FOUNDATION fieldbus Devices

- 1. Specification
 - When a tag is modified, the communication connection information (VCR and Link Object) is automatically cleared. This information is defined in the FOUNDATION fieldbus specification.
 - When a tag is modified, the schedule information of the function block (FB_START_ ENTRY) is automatically cleared. This information is defined in the function specification for communication cards of National Instruments.

To conclude: When a tag is set, the schedule information and communication connection information are automatically cleared.

2. Yokogawa Device Operation

When the schedule information of the function block is cleared, the operation of AI Block stops and the LCD display values (for example, a pressure value in the case of EJA) cannot indicate the current state.

You need to be careful, because there is a possibility that the displayed PV value (usually, OUT of AI Block) is different from the actual value. You can confirm the actual value in Device Viewer.

In this case, function block re-scheduling is necessary.

H-3-2 Device Class Assignment

This function changes the device class of a FOUNDATION fieldbus H1 device to Link Master or Basic.

• Startup

Start from Segment Viewer - Communication Path "Select FOUNDATION fieldbus" - Select Device - Operation - FOUNDATION fieldbus Class Assignment.

Select either Basic or Link Master.	Device Class Setting Device Class Basic		
	Restart Device	In order to reflect the device class setting in the device, check whethe restart the device.	r to

H030201E.ai

H-4 Setting Operations of Function Blocks for FOUNDATION fieldbus H1 Device

After replacing a FOUNDATION fieldbus H1 device, you must check setting of the operations of built-in function blocks. In some cases, you must internally connect these blocks.

On this window, you can set and connect function blocks built in the FOUNDATION fieldbus H1 device. Operation time and schedule will be automatically set.

These settings are saved in the FOUNDATION fieldbus H1 devices after this operation.

Startup

Right-click the device on Segment Viewer or click Action menu and select <Function Block Execution Setting...>.

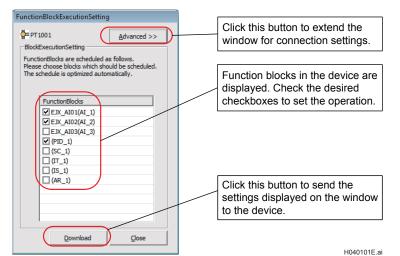

Figure H-4-1

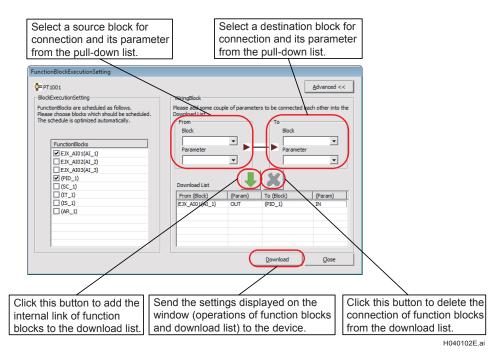

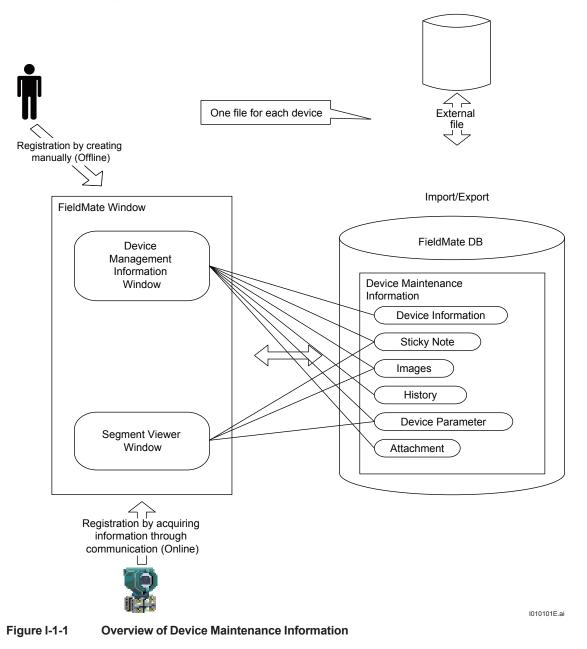

Figure H-4-2

Device Maintenance Information Management Function

This function enables you to manage the maintenance information of devices. It can access the maintenance information from a device at a time and stores this information in the FieldMate database. You can manage up to 500 devices by using this function.

I-1 Device Maintenance Information

Device maintenance information contains data regarding the maintenance operations that are performed on each device. You can access device maintenance information from the following main windows: Segment Viewer, Device Navigator, and History.

I-2 Components of the Device Maintenance Information Window

Figure I-2-1 Overview of Device Maintenance Information

The Device Maintenance Information window includes the following tabs:

1. Device Information

This window consists of the following sections:

- Basic Information Contains specific information that is related to the device including Device Tag and ID, serial number, and communication protocol.
- (2) Maintenance Information Contains information that is entered by users to maintain the device, including the delivery and operation start date.
- (3) Block information Indicates block tags and types in the FOUNDATION fieldbus H1 devices. This information is available only for FOUNDATION fieldbus H1 devices.
- (4) DTM information Shows the Device DTMs that are related to the device.
- (5) DD file Indicates the installation status of the DD file on the device.

2. Sticky Note

Opens the existing note for the device and enables you to add or modify the note.

3. Images

Displays images that are uploaded for the device. You can import new images, export available images, and delete existing images for the device.

4. History

Contains the operation log of the device. You can filter the display by user, date, or category, and export the operation history.

5. Parameter

Contains a list of settings of the device parameters and Zero-Adjustment parameters that are taken at different dates.

From this window, you can click any settings that are listed in the window. A new window appears where you can view more details about the settings and export them as text, webpage, or CSV file format.

6. Attachment

- PM data: List the attribute and values of device parameters that are saved by Parameter Manager.
- Memo: Enables you to attach files to a device during device maintenance or other operations.
- Document link: Enables you to add a link for a location or URL of the device manual and other documents that are related to the device.
- DTM data: Maintains setting information of device parameters and DTM at the previous startup of the device DTM. The DTM data saved by DTM Works are listed.

7. Calibration

Contains the results of Pressure calibration support function.

8. Input Loop Check

Contains the results of Input loop check function.

SEE

ALSO For device maintenance information in the case that the communication protocol is "SENCOM", refer to the instruction manual for "Calibration Management for Liquid Analyzers" (IM 01R01A07-01EN).

• Device Maintenance Information – Device Information (Basic Information)

The following table describes the elements of the Basic Information section.

Table I-2-1

Element	Description
Device Tag	Device tag
Device ID	Device ID
Device Tag Comment	Device tag comments
Protocol	Read-only. Displays either HART, FOUNDATION fieldbus, PROFIBUS, BRAIN, ISA100 or Other.
Vendor	Read-only. Character string that indicates the device vendor (For example, YOKOGAWA)
Vendor ID	Read-only. ID that indicates the device vendor (For example, 0x594543)
Category	Character string that indicates the type of the device (For example, Flow Meter)
Model	Read-only. Character string that indicates the device model (For example, EJA100A)
Device Type	Read-only. ID that indicates the device model (For example, 0x0003)
Revision	Character string that indicates the device revision (For example, 02) *1
Device Revision	Read-only. ID that indicates the device revision number (For example, 2)
Address	Device address
IDENT Number	Read-only. Displays the IDENT numbers. This element is applicable only for PROFIBUS devices.
Communication Path	Read-only. Displays a list of communication paths.

*1: Indicates parameter name for FOUNDATION fieldbus and Device Revision for HART.

The following table shows the elements of the Basic Information section that you can configure.

Table I-2-2

Element	Cannot be changed once set	Mandatory setting in manual registration	Items that are set at new registration in the Segment Viewer	Item that are set at overwrite registration in the Segment Viewer
Device Tag			App.	App.
Device ID	App.		App.	App. (*2)
Device Tag Comment				
Communication Type	App.	App.	App.	
Vendor	App.	App.	App.	
Manufacturer ID	App.	App. (*1)	App.	
Category				
Model	App.	App.	App.	
Device Type	Арр.	App. (*1)	App.	
Revision			App.	App.
Device Revision	App.	App.	App.	
IDENT Number	App.		App.	
Address			App.	App.
Communication Path			App.	App.

*1: Select or input in HART/FOUNDATION fieldbus H1. Fixed to 0 for others.

*2: Able to be set only when the value is not set.

Device Maintenance Information - Device Information (Maintenance Information)

The following table describes the elements of the Maintenance Information section.

Table I-2-3

Element	Description
PRM Plant Hierarchy	Read-only. Displays the plant hierarchies defined in PRM.
Status	Displays any of Uncertain, Normal, Communication Error, Warning, Abnormal, or N/A. The selection can be changed. *1
Status Update Date	Read-only. Displays the date and time when the status was changed. *1
Loop Name	Loop name
Delivery Date	Delivery date of the device
Operation Start Date	Operation start date of the device
Priority	Priority of the device
Serial Number	Serial number
AUX1	The user can set a desired item. The label name (AUX1) can be changed as the set item of the Tool option. Refer to Part G.
AUX2	Same as above
AUX3	Same as above
Update Date	Read-only. Updated whenever the Device Information is changed either through communication or manually.
Update User	Read-only. Same as above
Register Date	Read-only. The date when the Device Information was created for the first time
Register User	Read-only. The name of the user who created the Device Information for the first time

*1: In the case of HART and FOUNDATION fieldbus, Status and Status Update Date are updated whenever an update is performed in Segment Viewer. In the case of HART, FOUNDATION fieldbus, and BRAIN, Status and Status Update Date are updated whenever a Database device is registered.

Device Maintenance Information - Device Information (Block Information)

This information is displayed only for FOUNDATION fieldbus H1 devices. It indicates the block tag and the type within the FOUNDATION fieldbus H1 devices.

The information is obtained from the device. It cannot be changed in the window.

Device Maintenance Information - Device Information (DTM Information)

This information indicates the device DTM assigned to the device.

In HART/FOUNDATION fieldbus H1/PROFIBUS devices, only Assigned by DTM Setup is displayed. This is because in the DTM Setup, the device DTM is assigned to the model rather than to each device.

In BRAIN devices, DTM Name: BRAIN Universal, DTM Vendor: YOKOGAWA, and DTM Revision are displayed, and the assignment cannot be changed.

In other cases the information of the device DTM assigned in the DTM Setup (DTM Name, DTM Vendor, DTM Version) is displayed, and the assignment can be changed.

Device Maintenance Information - Device Information (DD file)

This indicates the installation status of the DD file on the device.

Table I-2-4 (1/3)

			HART	FOUNDATION fieldbus H1	PROFIBUS	BRAIN	ISA100	Modbus	Other

*14:

*15:

*16: Only devices supported by Device Serial Number Obtaining Function.

*17:

Ident Number is indicated for PROFIBUS. Displayed in accordance with Windows display format. *18:

It is a parameter value of "Revision" for FOUNDATION fieldbus. Same as Device Revision for HART. *19:

*20: Numeric characters can be entered.

Legend of Symbols:

R.: Read.

w٠ Write.

Indicates in decimal notation. Number of digits in brackets. Hex(N):

Indicates "(Built-in Connection)". B:

Device Maintenance Info - Sticky Note

Displays the latest memo (sticky note).

Device Maintenance Info - Image

Displays photos saved in the device maintenance information.

Device Maintenance Info - History

This is the operation log related to the device after registration.

Device Maintenance Info - Parameter

It contains all the device parameters and zero-adjustment parameters.

Device Maintenance Info - Attachment

It maintains the configuration information of device parameters and device DTMs. Displays the list of DTM data saved in DTM Works.

Memo

This can be freely attached to a device by users during device maintenance or other operations. Multiple memos can be attached to each device.

Document link

The information of the link to files in the PC or URL can be defined. Device manuals or related URLs can be called from the defined link information. Up to 100 document links can be defined for each device.

PM data

This is the attribute and value information of device parameters. Values of device parameters saved by the Parameter Manager are listed.

DTM data

This maintains setting information of device parameters and DTM at the previous startup of the device DTM. The DTM data saved by DTM Works are listed.

Device Maintenance Information Identifier

The identifier that specifies device maintenance information is the Device ID (an item of the device information (Basic Information) of the device maintenance information). A Device ID is an ID that specifies each device. For PROFIBUS and BRAIN devices, set a unique ID to Device ID to manage the device information.

Device Maintenance Information Flags

The following flag can be set for device maintenance information. This flag has two values, ON/ OFF, and the state of the flag can be recognized graphically by Device Navigator.

1. Device Flag

A flag that can set ON/OFF for a device.

Searching Device Maintenance Information

This function searches the device maintenance information registered in the database and narrows down the device.

A Simple Function to Assist Creating Daily Reports

Daily reports can be assisted by selecting and exporting any part of the History to an external file.

I-3 Registering Device Maintenance Information

You can register device maintenance information through one of the following ways:

1. Offline registration

There are two ways to register offline: manual registration and import registration. Offline registration means registering device maintenance information while FieldMate is not connected to the device.

Manual registration

Registration is done in the Device Navigator. (Action - New Device Maintenance Info) Enter the device maintenance information to register the device.

• Import registration (*)

Registration is done in the Device Navigator. (File - Import Device Maintenance Info) Import and register the device information file to FieldMate.

2. Online registration

Online registration (or online auto-registration) means FieldMate automatically registers the device maintenance information of a device that is connected to FieldMate. When you connect a device to FieldMate, it is detected and shown in Segment Viewer.

Details of Manual Registration

- 1. In Communication Type, select either HART, FOUNDATION fieldbus, PROFIBUS, BRAIN, ISA100, or OTHER.
- Select or enter a vendor name. When BRAIN is selected, Yokogawa Electric Corporation is entered as the vendor by default.

The vendor name cannot be added for BRAIN, ISA100, and Modbus.

- Select or enter a model. (The device type will be set automatically according to the selection of the model.) For PROFIBUS, enter an IDENT number as an ID for adding a model name. For BRAIN, the model cannot be added.
- Select a device revision. Device revision is not applicable to BRAIN devices.
- 5. Enter a device tag. You can keep the device tag blank.
- 6. Perform device DTM assignment.
 - For HART, FOUNDATION fieldbus, PROFIBUS, or ISA100, select whether to use the DTM Setup tool for model assignment or perform an assignment for each Database device.
 - For BRAIN, DTM assignment cannot be performed.
- 7. Enter a Device ID. You can keep the device ID blank. It is not necessary to input Device ID for BRAIN.
- TIP For OTHER, Device Maintenance Info that is registered using "Other" can be associated with devices that are under the UDC projects.

• Startup

Device Navigator \rightarrow Action \rightarrow New Device Maintenance Info

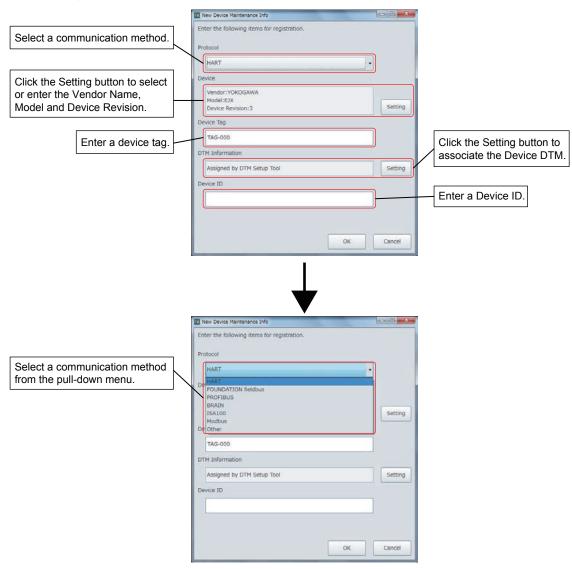

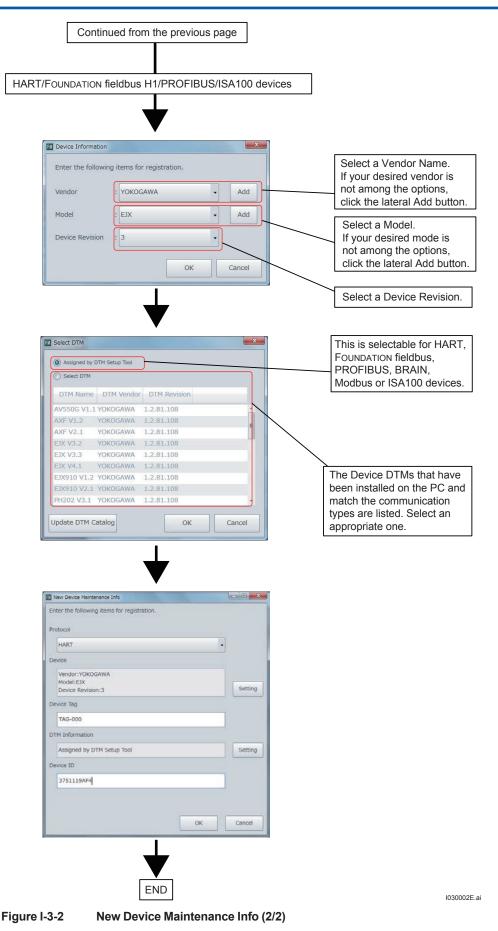

Figure I-3-1 New Device Maintenance Info (1/2)

I030001E.ai

I-4 Importing and Exporting Device Maintenance Information

Overview

Device maintenance information can be imported from and exported to an external file (one file for one device).

Details of Import Registration

Device files:

- 1. Execute Import Device Maintenance Info.
- 2. Select the device file.
- Check whether there is an overlap of information between existing device maintenance information and Device IDs.
 If there is an overlap, select whether to stop the import or delete the existing device maintenance information.
- 4. Device maintenance information is imported and created.

Import Device Maintenance Info

Startup

Device Navigator→ File→ Import Device Maintenance Info...

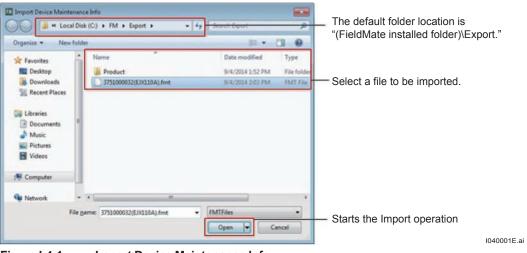

Figure I-4-1 Import Device Maintenance Info

IMPORTANT

- FieldMate revision3 can import device maintenance information from files that are exported from FieldMate revision2.
- FieldMate revision2 cannot import device maintenance information from files that are exported from FieldMate revision3.

Export Device Maintenance Info

Startup

Device Navigator \rightarrow File \rightarrow Export Device Maintenance Info.

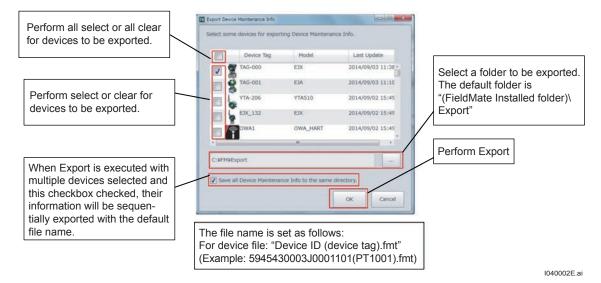

Figure I-4-2 Export Device Maintenance Info

J Device Navigator

You can display a list of devices stored in the device navigator's database.

The devices displayed are those that were automatically registered when connecting to FieldMate and those that were manually registered.

Device Navigator allows you to search for device events in the database. It also enables you to view device maintenance information.

J-1 Device Navigator Window

DTM Assignment Function

<Specification>

- This function allows for assigning a device DTM to "Model" in the DTM Setup tool for HART/ FOUNDATION fieldbus/PROFIBUS/ISA100 devices.
- This function also allows for assigning a device DTM to individual database devices. This function can be applied to devices whose "Model" is identical but applicable device DTM is different.

<Application Range>

- Device DTM assigned to "Model" or individual database device is used only when the communication path is Built-in Connection.
- When the communication path is User Defined Connection, device DTM defined in FDT Project is used regardless of DTM assignment. (Refer to Part G)

J-2-6 Device Maintenance Information (Attachment)

Displays and specifies Memo, Document Link, PM Data and DTM Data on the Device Maintenance Information (Attachment).

J-2-6-1 Device Maintenance Information (Attachment - Memo)

This window allows you to write a free memo to device upon device inspection and so on. Multiple memos can be attached to each device. You can input the memo directly or attach any file. Individual memos consist of the following items:

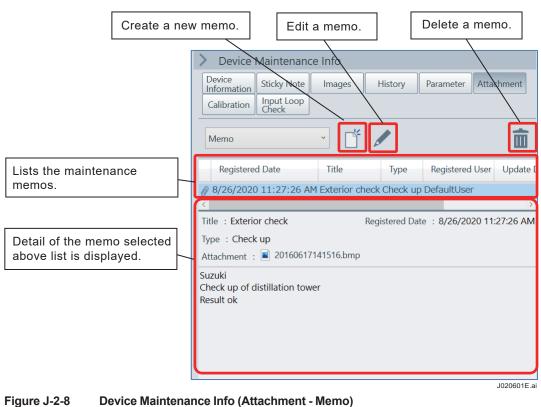

1. Title

This is a memo's title. The user can freely enter it (up to 54 single-byte characters). You can also select the value from values input in the past (up to 20).

- Type This is a memo's type. The user can freely enter it (up to 54 single-byte characters). You can also select the value from values input in the past (up to 20).
- Attached files These files are attached to a memo. Up to 10 files can be attached to a file. Any Windows' file or folder can be attached by drag & drop.
- 4. Text

This is a memo's text. The user can freely enter it (up to 8192 single-byte characters).

TIP The title and type data cannot be modified once they have been confirmed, but all other items can be modified. Up to 1000 memos can be defined for one device.

Window

J-3 Registration of Non-Communication device

Register the device that can communicate with FieldMate as "Non-Communication device".

Devices registered as Non-Communication devices can use the following functions with the segment viewer.

- Sticky Note
- Images
- Pressure calibration support

Non-Communication device list

To register Non-Communication device, import the list file created in advance. The list file consists of CSV (comma separated values) file. An example of a list file is as followings.

No,DeviceTag,VendorName,ModelName,URV,LRV,Unit 1,PT-101,VendorA,PressA,0.0,100.0,kPa 2,PT-102,VendorA,PressA,0,100,MPa 3,PT-103,VendorA,PressA,0.00,50.00,kPa

The detail of format is below.

Line 1: Title (Cannot be omitted)

Line 2 -: device information

No.	: Number (Can be omitted)
DeviceTag	: Tag name (Up to 32 single-byte characters)
VendorName	: Vendor name (Up to 32 single-byte characters: Can be omitted)
ModelName	: Model name (Up to 32 single-byte characters: Can be omitted)
URV	: Upper range value (Numeric)
LRV	: Lower range value (Numeric)
Unit	: Unit (Up to 15 single-byte characters)

Import the Non-Communication device list

Import the list file to register Non-Communication device.

1. Select [Import Non-Communication Devices] from [File] menu on Device Navigator. And then the list file selection dialog appears.

^{FM} ₃ Open			×

Non-Communication device in Segment Viewer

Non-Communication devices are displayed in the segment viewer as shown below.

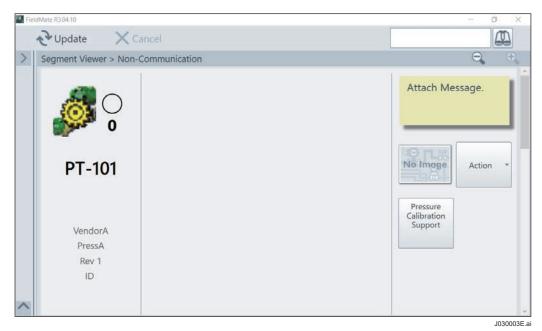

Figure J-3-3 Non-Communication device in Segment Viewer

Κ **Device Adjustment/Setting Functions**

FieldMate can adjust and configure the target device by operating the parameters.

The following functions are available for operating the device parameters.

- BT200 Tablet (For BRAIN device)
- HART DTM (For HART device) •
- DTM (General purpose)
- Parameter Manager •
- DD Menu

K-1 BT200 Tablet

This is a function to adjust and configure the BRAIN device.

It can be used in the same way as the BT200.

ALSO Refer to Chapter T "BT200 Tablet" about BT200 Tablet.

K-2 HART DTM

Generally, the DTM described later is used to configure and adjust the HART device.

If there is a DTM provided by the device vendor, use it.

FieldMate has a function to generate a DTM from a DD file, so if you do not have a device vendor's DTM, you can use this function. This chapter describes this feature.

HART Built-in DTM K-2-1

This is a function to configure and adjust the HART function using the HART DD file.

Before using this function, confirm that the DD file of the connected device is installed in FieldMate by checking that "DD Exists" is "Yes" in the device information at the bottom left of the segment viewer screen.

This function can be used not only on Yokogawa's devices but also on HART devices from other companies.

SEE Refer to H-2-1 Device Information about device information.

Startup

- Connect a HART device and press the [Operation] button on the segment viewer to select 1. [Select DTM] from the menu that appears.
- 2. The DTM selection dialog appears. Select "HART Built-in DTM" from the "DTM Name" and click the [OK] button. The message "Do you really want to start the select DTM?" appears. Click the [Yes] button.
- 3. The "Load options for DTM data" dialog box appears Select [Load default data] and click the [OK] button.
- Start HART Built-in DTM M. 4.

The HART Built-in DTM displays the HART device parameters in a menu structure.

For the parameters of the target device, refer to the device instruction manual.

K-2-2 Simple DTM

A user interface that can be simply operated is provided for the Yokogawa HART devices listed below.

Produc	ct series	Device type	Device revision
EJA-E	HART	0x005c	1
	HART7	0x375c	10,12
	Low power	0x375d	1

Figure K-2-2 Simple DTM

Display parameters

HART device manages parameters in a tree structure called the HART menu.

With Simple DTM, the target parameter can be found by button operation for searching from HART menu.

The figure below shows an example of displaying the parameters under [Basic setup] from [Configure/Setup].

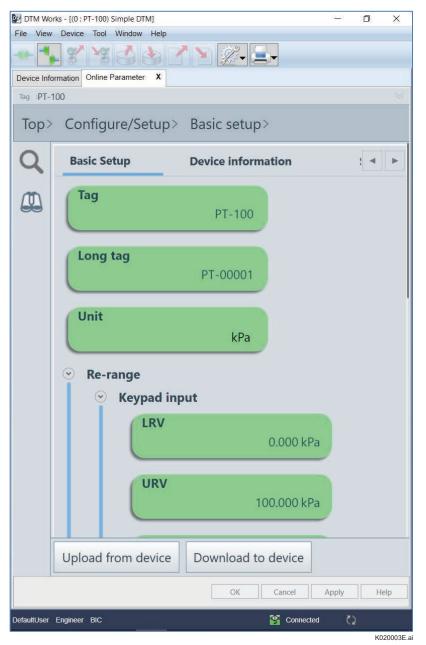

Figure K-2-3 Parameter display in Simple DTM

TIP

The structure of the HART menu (tree) differs depending on the device model. For the HART menu of the target device, refer to the device instruction manual.

To return to the menu, press the character string following "Top >" at the top of the screen to return to that location.

• Change Parameter value

Press the displayed parameter to move to the parameter setting screen. Enter the value and click the [OK] button.

Press the close button (X) at the top right of the window to exit.

K-3 DTM

DTM (Device Type Manager) is an application with a graphical user interface that is provided by each device vendor. Some DTMs have special functions such like diagnosis for target device.

DTM runs on an application called DTM Frame.

FieldMate has DTM Frame called DTM Works, which allows to use DTM to set parameters for devices of any vendor.

TIP

The following describes the Yokogawa device DTM. When you use the device DTM of other manufacturers, operation and display are subject to change depending on the device manufacturers. Refer to the instruction manual for the device DTM of the respective manufacturers.

DTM for BRAIN device

FieldMate has the DTM for BRAIN devices.

Startup

Connect a BRAIN device and press the [Operation] button on the segment viewer to select [Assigned DTM] from the menu that appears.

On the BRAIN device DTM, the device parameters are displayed in a tree structure.

IM 01R01A01-01F

Built-in Connection (BIC Mode)

This connection mode called Built-in Connection employs a built-in communication method of FieldMate, which is available for different communication protocols such as HART, FOUNDATION fieldbus H1, PROFIBUS, BRAIN, and ISA100.

For HART and BRAIN communication, you can use an optional USB FieldMate modem by directly connecting it to the field device.

Also, for FOUNDATION fieldbus and PROFIBUS communication, you need to separately purchase an NI PCMCIA-FBUS or NI USB-8486 from National Instruments or FFusb from Softing (for FOUNDATION fieldbus H1), a PROFIUSb from Softing (for PROFIBUS), Infrared Adapter, IR224UN- LN96 9600bps (for ISA100) and YFGW Gateway (for ISA100), and connect them to the bus to which the field device is connected.

DTM Works (BIC Mode)

Figure K-3-3 DTM Works (BIC Mode)

Relation Between Segment Viewer Update and DTM Works

In BRAIN, PROFIBUS and ISA100 (Infrared), while the related DTM is open, Segment Viewer update is not effective. Close DTM and update Segment Viewer.

The Definition of Device DTM

Connected status: Status in which communication with a device is connected (or established) Disconnected status: Status in which communication with a device is disconnected (or is not established)

DTM has the following two device parameter setup windows:

Device DTM Window

Online Parameter Window:

Used to directly display, set, or modify device internal parameters in the connected status.

The Online Parameter window is available only in the connected status.

In addition, the Online Parameter window enables the display of dynamic data such as process data, in addition to setting parameters.

Online Parameter Function:

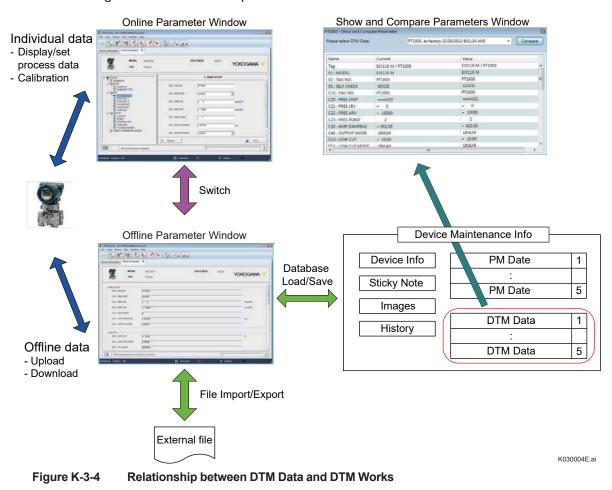

Communicating with the connected device directly, parameters are displayed and adjusted. Parameters are categorized in the tree view on a function basis. It displays the respective DTM window on the tree view selection.

Offline Parameter Window:

This window is used to set device parameters in the device DTM regardless of the connection status of communication with a device. Thus, in the Offline Parameter window, device internal parameters cannot be directly displayed, set, or modified.

Offline Parameter Function:

Parameters are managed without communication with the device. Device parameters sets are loaded and saved from/to database offline.

The following shows the relationship between the DTM data and DTM Works.

Device DTM Types

Available Device DTM types include:

- Type A DTM designed by YOKOGAWA
- Type B DTM designed by YOKOGAWA
- Type C DTM designed by YOKOGAWA
- Built-in DTM
- DTM supplied by other vendors

• Type A DTM designed by YOKOGAWA

- When changing the value of parameters, press "Download to device" button.
- You can switch operations between Online and Offline parameters.
- From the menu bar, select <Device>, and then select <Online Parameter> or <Offline Parameter>.

• Change of device parameters

Changing the value of parameters requires Block Mode of Function Block of the accessed device to be O/S mode (Off Service mode) in most situations.

DTM provides automatic Block Mode change functions as follows.

Function Block to be O/S mode when changing the value of parameters.

Function Block to be recovered when completing the value changes.

Function Block to be O/S mode during download.

The function above is not effective as default. Press "Option button" in the DTM, open Option window, select it in "Change to "O/S mode, while download" and press "OK".

Built-in DTM

Built-in DTMs are available for FOUNDATION fieldbus, HART, and ISA100.

FOUNDATION fieldbus Built-in DTM

This is launched when neither DTM of the connected device nor DD are installed in the FieldMate -specific location.

HART Built-in DTM

This is launched when neither DTM of the connected device nor DD are installed in the FieldMate-specific location.

When DD of the connected device is not installed, it is launched with Generic status with commonly used DD.

I.e. Device Tag, Descriptor, Message, Polling Address, Burst mode, PV sensor unit, URV, LRV etc. parameters and menu described in Generic DD can be accessed.

ISA100 Built-in DTM

This is launched when neither the DTM of the connected device nor DD are installed in the FieldMate-specific location.

Parameter Access with Device

Table A shows the combination of Device DTM and parameter access button and icon.

Table K-3-2

	Type A DTM designed by YOKOGAWA DTM supplied by other vendors	Type B/C DTM designed by YOKOGAWA	Built-in DTM
Online Parameter Window	0	0	0
Offline Parameter Window	0	0	0
Upload from device Icon	0	×	×
Download to device Icon	0	×	×
Upload from device Button	×	0	0
Download to device Button	×	0	0
Refresh relation Button	×	O (Type B only)	×
Import/Export Button	×	0	0
Save to File Icon	0	0	0
Load from File Icon	0	0	0
Save to Database Icon	0	0	0
Load from Database Icon	0	0	0

O: Yes

×: Not Available

<Enter> Key:

It is effective to write the value to the connected device in Online Parameter window of Type A DTM designed by YOKOGAWA.

Data changed in the Offline Parameter window are only stored in DTM and are not to be written to the connected device.

Upload from device Button:

Upload the parameters in Type B/C DTM designed by YOKOGAWA and Built-in DTM.

Download to device Button:

Downloads to device from top to bottom the changed parameters (pencil icon and magenta) in the Online parameter window / Offline parameter window on the Type B/C DTM designed by YOKOGAWA.

Upload from Device Icon:

It is applicable for Type A DTM designed by YOKOGAWA.

Uploads device internal parameters to the device parameters in the device DTM. Executing "Upload from Device" causes parameters displayed in the Offline Parameter window to be replaced by device internal parameters.

Download to Device Icon:

It is applicable for Type A DTM designed by YOKOGAWA.

Downloads the device parameters in the Device DTM that have been edited in the Offline Parameter window to device internal parameters.

Note: In an environment in which operation is performed regardless of connection to a device, a device can be added before it is delivered, for example, to edit the device parameters on the Offline Parameter window in advance. These parameters can then be written to the device using "Download to Device" after the device has been delivered and installed.

In order to reflect the parameters to Offline Window after editing the ones in Online Window, either "Upload from Device icon" or "Upload from Device button" is required.

Load from File Icon:

It retrieves DTM data where Offline parameters are included from file.

Save to File Icon:

It stores DTM data where Offline parameters are included to file.

```
* Area where Offline parameters are included
```

It indicates Offline parameters embedded in DTM even when Offline window is not displayed.

Load from Database Icon:

It retrieves DTM data where Offline parameters are included from database.

Save to Database Icon:

It stores DTM data where Offline parameters are included to database.

Save to file icon, Load from file icon, Save to database icon and Load from database icon will be applied to all the setting parameters excluding dynamic parameters.

Refresh relation Button (Type B Only):

Interrelation among URV, LRV and Unit will be refreshed for example when unit is changed. This button redisplays the parameters on the screen only. It never writes parameters to the device. Download to device button is applied to write parameters.

TIP

Import/Export Button:

Export

Save all the setting parameters to .CSV file as specified to the location in PC.

Import

Export parameters are imported in the following manner.

Table K-3-3

Protocol	Import	Export	
HART	All the setting parameters		
FOUNDATION fieldbus H1	Developmentary by furnation block	All the setting parameters	
ISA100	Parameters by function block		

"Upload from Device", "Download to Device", "Load from File", "Save to File", "Load from Database", "Save to Database" is effective only when Offline parameter window is open and active.

Details of the combinations are shown in the following table.

Figure K-3-26

K-4 Parameter Manager

The Parameter Manager only supports HART/FOUNDATION fieldbus H1/ISA100 devices.

There are two ways Parameter Manager is used: communicating with the connected device, and not communicating with the connected device.

Online Mode

An actual device is selected on the Segment Viewer to start the Parameter Manager.

Offline Mode

A device in a database is selected on the Device Navigator.

Online Mode

- 1. Upload actual device parameters.
- Export and import parameters uploaded to/from TSV files*.
 *TSV: Tab-separated, a file extension is txt (Text File Tab Separated)
- 3. Compare the parameters of the connected device with those imported from a file and check differences.
- 4. Select the parameters for download and then downloads them to the device.

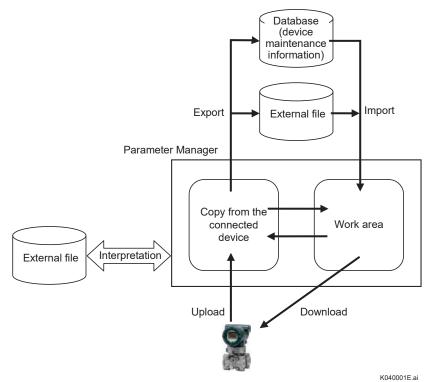

Offline Mode

- 1. Save or load the parameters uploaded in/to the database (Device Maintenance Info Attachment PM Data) associated with the device (up to five sets per device).
- 2. Compare the parameters of the connected device with those loaded from the database and checks differences.
- 3. Compare the parameters saved in the database by displaying them on the right and left hand side screens.

A DD (Device Description) file corresponding to the device is required in order to use the Parameter Manager functions.

DD files are provided by device vendors. The Device Files Media includes redistributable DD files for HART/FOUNDATION fieldbus devices obtained from FieldComm Group.

The following is a concept diagram of Parameter Manager.

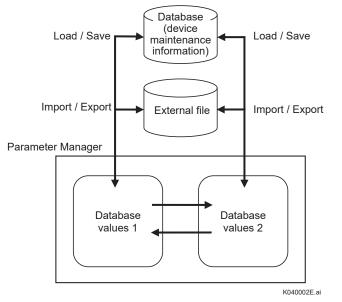

Figure K-4-2 Parameter Manager Overview (Offline Mode)

FOUNDATION fieldbus H1 and ISA100 Devices Blocks

In Parameter Manager, the displayed / set settings is defined for FOUNDATION fieldbus H1 and ISA100 devices.

-FOUNDATION fieldbus H1: TBs (transducer blocks) and resource block

-ISA100: UAPMO

Other blocks can be added in the option settings. These settings become common definitions for same device type (model).

More specifically, the read / write permission can be set for all blocks in a device.

MIB Parameters and Block Tag Headers of FOUNDATION fieldbus H1 Devices

Parameter Manager does not support the MIB parameters (NMIB and SMIB parameters) and block headers (function block tags, etc.) of FOUNDATION fieldbus H1 devices.

FOUNDATION fieldbus H1 and ISA100 Device Mode

When downloading to a FOUNDATION fieldbus H1 and ISA100 device, the default process is to automatically enter O/S (Out of Service) mode and then switch back to the previous mode after writing completes. This process can be enabled or disabled with the "Change O/S Mode during download" setting in the Option settings.

Categorize Parameters by Class Attribute

This function allows the user to categorize and display device parameters by class attribute. This function is applied to all currently displayed blocks and allows the user to display parameters that have a class attribute in the order of the blocks.

- The following 5 menus are displayed for FOUNDATION fieldbus H1 devices. Alarm, Tune, Operate, Services, and Diagnostics
- The following 4 menus are displayed for HART devices. Upload, Menu, Services, and Diagnostics
- The following 5 menus are displayed for ISA100 devices. Alarm, Tune, Operate, Services, and Diagnostics

TIP

The displayed menus depend on the device specification (DD file).

Favorite Menu

The Favorite menu allows the user to freely assign the list of parameters that needs to be set / monitored on a device type basis.

To add parameters to the Favorite menu, select the desired parameters in menus other than the Favorite menu in the Favorite mode. To remove parameter from the Favorite menu, select a parameter and click Delete button on the Favorite menu.

Export/Import

Parameters uploaded from the connected device can be exported as text file. The file format is tab-separated text (TSV) and the file extension is .txt.

The following shows the default folder and default file names, so that exported parameters can be easily managed and imported for downloading to another device of the same type.

The Select File dialog for exporting or importing parameters by default: \$(FieldMate installed folder)\FM\DeviceParameter\(vendor ID number in six hexadecimal numbers)\ (device type number in four hexadecimal numbers)\(device revision number in two hexadecimal numbers)

Example 1: For FOUNDATION fieldbus H1 device, Yokogawa Electric, EJA, DevRev:2

\$(FieldMate Install folder):\FM\DeviceParameter\594543\0003\02

Example 2: For HART device, Yokogawa Electric DYF, DevRev:1

\$(FieldMate Install folder):\FM\DeviceParameter\000037\000B\01

The default file name is "Device tag-(date)-(time of day).txt"

Example:

If device tag is FT1001 and parameters are exported at 09:53:04 on May 30, 2017, the default file name is:

FT1001-(05_30_2017)-(09_53_04).txt

Editing Exported Files

Exported files are in TSV format. You can use spreadsheet software such as Microsoft Excel to modify parameters and change the line order and then import the file again.

Perform this operation when you download a parameter modification for which there is meaning to the write order.

Parameter Manager can be used for the following purposes:

- 1. Checking, setting, and adjusting device parameters.
- 2. Uploading and then exporting a snapshot of all the parameters of a field device after setting and adjustment of the device is completed and then downloading them to a device that was installed in the place of the existing device.
- 3. Engineering the device parameters before delivery or actual installation and downloading them after the device delivery.
- 4. Copying the settings of one device to another of the same type.

IMPORTANT

YOKOGAWA can not guarantee at all when there is a malfunction of import operation to Parameter Manager due to editing file, and when abnormality occurs in the operation of the device after downloading edited parameters.

Figure K-4-5 Parameter Manager Screen (Custom Favorite menu)

Switching Parameter Value Displays during Mode Transitioning

- During transition from the online mode to the offline mode, the latest parameter values stored in the database are loaded to and shown in the left of the screen. If there is no parameter value stored in the database, the field is empty. There are no changes to the right of the screen.
- During transition from the offline mode to the online mode, the parameters are loaded from the device and shown in the left side of the screen. There are no changes to the right of the screen. If communication with the device fails, the mode transition is interrupted and goes back to the offline mode. The left of the screen goes back to the state prior to mode transition.

Start Parameter Manager

Parameter Manager can be started from Segment Viewer, Device Navigator, and Device Maintenance Info. The following describes how Parameter Manager starts from each of the above.

Select a device in Segment Viewer and start Parameter Manager.

In Segment Viewer, click "Action" button and then menu appears. Select "Parameter Manager form menu". In this case, Parameter Manager starts in the online mode.

Select a Database device in Device Navigator and start Parameter Manager.

In Device Navigator, click "▼" button of the target device and then menu appears. Select "Parameter Manager form menu". In this case, Parameter Manager starts in the offline mode.

The latest parameters data stored in Database are loaded and shown in the left and right of the screen. (The same data is shown on the left and right.)

If there is no parameter data stored in the database, no parameter value is shown after startup.

Select stored PM data in Device Maintenance Info and start Parameter Manager at Attachment → view.

This is enable if parameter data has already saved in Parameter Manager.

Display Device Maintenance Information of the target device in Device Navigator. Click "Attachment" button and select "PM data" for displaying the list of the stored parameter. Select the stored parameter and click Start button () for starting Parameter Manager. In this case, Parameter Manager starts in the offline mode.

The specified stored parameter is loaded to the left and right of the screen during startup. (The same parameter is shown on the left and right.)

Select 2 stored PM data in Device Maintenance Info and start Parameter Manager at Attachment → Compare.

This is enable if some parameter data have already saved in Parameter Manager.

Display Device Maintenance Information of the target device in Device Navigator. Click "Attachment" button and select 2 (two) "PM data"s for displaying the list of the stored parameter. Select the stored parameters and click Compare button () for starting Parameter Manager. In this case, Parameter Manager starts in the offline mode.

The specified stored parameters are loaded to the left and right of the screen during startup.

Entering Reason

When you modify a device parameter and select Download Checked Parameters, you can select or enter the reason, which then appears in History.

You can enter up to 50 single-byte characters in the Reason entry field.

Figure K-4-6 Reason Entry Dialog

Find Parameters

Selecting Find Parameters (() from the tool bar opens the following screen. This screen enables you to search for parameters in the window.

Advanced Filter

Selecting the Advanced filter () from the tool bar opens the following screen. This screen enables you to filter for parameters in the window.

Figure K-4-8 Advanced filter

Parameter Description

Click Parameter description icon (()) of the parameter and then the following dialog appears.

rameter Description History	Show the name identifying a parameter as a unique one in the case of the FOUNDATION fieldbus H1 device. The Parameter Manager uses the name for display if the device is FOUNDATION fieldbus H1.
Name pressure_value	Show the parameter name to be displayed for the user. The Parameter Manager window uses this name for display if the device is HART.
Unit kPa Data Type Floating Point	Show the parameter's engineering unit (%, kPa, etc.). It becomes blank for parameters having no engineering units.
Field Device Variable Value- Digital value that changes magnitude with respect to time with no user intervention. Pressure-	Parameter data type
Pressure of the process measured with respect to a reference pressure.	Parameter help information
	K040009E

Save/Export Operation

Online Mode

When you select Save/Export Device Values in the Action menu, or press the corresponding button (
), the window below appears. This window enables you to export the parameter values of the connected device on the left half of the window to a file or save them to the database.

Offline Mode

When you select Save/Export Device Values 1 or Save/Export Device Values 2 from the Action menu, or press the corresponding button (), the window below appears. This window enables you to export the parameter values of the connected device on the left half of the window or the parameter values on the right half of the window to a file or save them to the database.

Reason PT-008H7,375C3	9E1BC		Default is as follows.
			Device tag name, Device ID
Save to Database	Export to File	Cancel	
	(**) 1		K04001

Figure K-4-11 Save/Export Parameters (1/2)

The dialog below is displayed to select overwrite saved data if parameter lists have been saved up to the maximum limit (5 sets/device),

Figure K-4-12 Save/Export Parameters (2/2)

Selecting Save to Database:

<Online mode>

Search available area and save in the database, however, if five sets of parameters of the relevant device have already been saved, a dialog requiring a selection of parameters to be overwritten, displays subsequently. Numbers (1-5), Date & Time, and Reason are displayed in the dialog for you to select from.

<Offline mode>

Ask whether it should be overwritten. If Yes is clicked, overwrite Parameter Value File n. If No is clicked, Parameter Value File n is saved in the other area. If five (5) sets of the relevant parameters have already been saved, the required procedures will be the same as Operation of the connected device.

• Selecting Export to File:

Export to the specified text file with TSV format.

Window Specification Details

- The display/edit format is applied, which means that when values are displayed, they are displayed in accordance with the display format defined in the DD. Also, when values are edited, they are displayed in accordance with the edit format defined in the DD.
- The scaling factor is applied, which means that parameters for which a scaling factor is defined by the DD are displayed by the scaling factor being multiplied to a value read from the connected device.
- In the search dialog, searches for parameter names including input characters are performed in order. Searching for values is not supported.

Color of Parameter Values

Color	Explanation
No color	Indicate that the parameter values in the left area and the right area are the same.
Magenta	Indicate that for writable parameters there is a difference between the values in the left area and the right area. If even one of the parameters in the tab is in magenta, the magenta symbol is displayed beside the menu.
Yellow	Indicate that for read-only parameters there is a difference between the values in the left area and the right area. If even one of the parameters in the tab is in yellow, the yellow symbol is displayed beside the menu.
Orange	Indicate that for writable parameters there is a difference between the values on the left and right area. I.e. It indicates the difference between the connected device and imported files, difference between files in the database, between imported files and files in the database. If even one of the parameters in the tab is in orange, the orange symbol is displayed beside the menu.
Red	Indicate that for writable parameters there is error found on the right screen, including not only key in by user but data of imported files. If even one of the parameters in the tab is in red, the red symbol is displayed beside the menu.
Green	Indicate the parameter properties difference between the values in the left area and the right area. Due to DD structure, parameter properties i.e. (Edit Format, Display Format, EnumList, Validity, Read-only/Writable/ReadWrite etc.) are changed. If even one of the parameters in the tab is in green, the green symbol is displayed beside the menu.

Checkboxes Beside Parameter

Checkboxes are only displayed for writable parameters. If checkmarks are added to the checkboxes, the corresponding parameters are downloaded to the device in the order that they are displayed in the window when the Download Checked Parameters command is executed.

If a parameter-value in the Work area changes from its original color to magenta, a checkmark is also added to the checkbox.

In other words, immediately after the parameters are loaded into the Work area when File or Database is selected, checkmarks are added to the checkboxes of all writable parameters for which there is a difference between values in the Work area and Device Values area. That is, all parameters indicated in magenta.

Furthermore, when a value is edited in the window and the parameter-value display area changes from its original color to magenta, a checkmark is also added to the checkbox.

peration when exiting Parameter Manager

- Communicate with the connected device and check whether the device parameter has been changed when exiting Parameter Manager in Online mode. If there has been a change, prompt query message and exit after confirmation.
- When exiting Parameter Manager without communications with the device, change database value in display on the screen and make sure to check it has not been saved. If it has not been saved, inquire with "You have changed parameters. Save changes to database?" if "yes" is selected, overwrite the database and exit.

K-5 DD Menu

The DD menu is applicable only to FOUNDATION fieldbus H1 devices.

A DD is a file that contains the parameter properties defined by the device vendor and devicespecific control procedures such as calibration and diagnoses. In addition to device control, the procedures include those for interactive display to users and key input from the user. The contents of supported DD menus vary depending on the vendor and model of the device.

The following shows an example of a DD menu.

• Diagnosis

Display the self-diagnostic results.

Calibration

Automatically performs zero point adjustment of a transmitter and calibration in combination with the control valve with a valve positioner.

A request to confirm and operate message is displayed to the user during execution of the DD menu.

• Display Items of the Menu Tree

The menu tree displays the DD of the device in a tree structure. The following shows the menu hierarchy of elements displayed in the tree structure from the highest level.

- Device tag
- · Block tag
- Menu name
- Submenu name
 Submenu depends on devices.

The menu names or submenu names at the lowest level become the DD menus that can be executed.

Display Items of the DD Menu Operation Display Area

The DD menu operation display area displays various types of messages related to DD menu execution. The following messages are displayed.

- Interactive messages specific to DD Menus Messages built into the DD Menu being executed are displayed.
- Message if exceptions are detected If an exception occurs while the DD Menu is being executed, a message corresponding to the exception is displayed for some devices when exiting the DD Menu. If such a message is displayed, close the DD Menu execution window.
- DD Menu exit message A message that indicates the DD Menu has ended is displayed when exiting the DD Menu.

Updating of Parameter Values

If you click the button on the tool bar, the parameter values of the device are imported and the display values are updated.

Startup

Window

There are two startup procedures.

Start DD Menu from Parameter Manager.

(Note): When you perform this procedure, Parameter Manager is minimized and becomes unavailable.

Select the device of FOUNDATION fieldbus in Segment Viewer and start DD Menu.

This area displays elements defined in a selected hierarchy. The following elements appear here. (1) Parameters: Parameter names and values are indicated. Writable parameters can be modified. Indicate a device tag (2) Menus: Selecting a parameter allows you to move to a lower-level menu. (3) Methods: Setting/adjustment processing can be performed using wizards. L DeviceViewer

DeviceViewer displays the hardware and configuration statuses of the self-diagnosis results obtained by the device. It also displays the pre-defined device parameter values as a trend graph. This function supports HART, FOUNDATION fieldbus H1, and ISA100 device.

The display items of DeviceViewer differ depending on the device. DeviceViewer is capable of displaying up to five windows simultaneously.

DeviceViewer will be opened by selecting function from the main menu and the operation menu in Segment Viewer. Also it will be opened with double-click device status icon of Segment Viewer.

Device Status Display

DeviceViewer has two tabs: Diagnostic Information and Trend Information.

L-1 Diagnostic Information

The Diagnostic Information tab is divided into the device information display area, alarm display area, diagnostic parameter list, and parameter list.

The following colors are used to indicate the device status.

Table L-1-1

lcon	Function		
0	Normal

Figure L-1-2 Diagnostic Information Display Example(2)

Device Information Display Area

This area displays device tag and overall status of the device.

This area displays the multiple diagnostic information alarms displayed in the diagnostic information area and the result of the communication status of the device.

If even one error is found, the error occurs.

Alarm Display Area

The alarm display area enables you to remotely view alarms generated on devices. If there is an error with even one of the diagnostic items, the color in the Hardware Error column changes to the error display color.

When there is an error, the alarm is also displayed.

When there are multiple alarms, the corresponding error items for the alarms are displayed alternately.

Push Information icon (0) and then the alarm message is displayed.

Diagnostic Parameter List

This area displays parameters including self-diagnostic data. Alarm icons are used to indicate the status of individual device parameters. Push alarm message and then the detail information is displayed.

Filtering

This check box is the filtering the alarms displayed in Diagnostic Parameter List.

Overall

A text tool tip appears when you move the mouse cursor over each of the items in the diagnostic item status display area.

Trend Information L-2

The parameter values displayed in the trend parameter list are acquired and displayed as a trend graph. Sixty acquisition points are displayed for each parameter.

By selecting the Trend Information tab, the screen changes and switches to the Periodic mode automatically.

The trend graph display is updated from right to left. The most recent trend parameter data values are displayed on the right side of the graph, and the oldest ones are displayed on the left side.

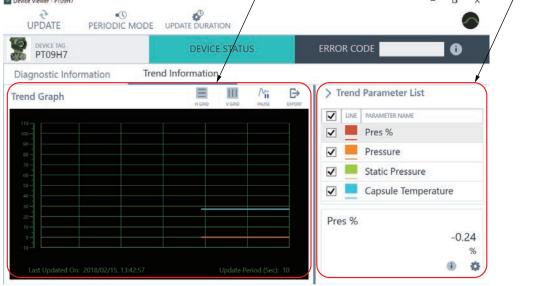

Trend data is acquired while DeviceViewer is activated. Trend data continues to be acquired even if you switch to the Diagnostic Information tab. Up to 8640 points can be saved for each parameter in DeviceViewer. When the number of data points acquired reaches 8640, data points are overwritten in order from the oldest.

Update Duration	×
Update Period(sec):	30✓
Ok Ca	ncel
	L020003E ai

Figure L-2-3

When periodic is selected, set the update duration.

You can set the update duration in one second increments from 5 to 99 seconds. The default is 30 seconds for HART device, 10 seconds for FOUNDATION fieldbus H1 device, and 60 seconds for ISA100 device.

If you exit DeviceViewer, the update duration will return to the default value the next time you display DeviceViewer. The duration for updating the trend graph is the same as that for updating the parameters in the self-diagnostic information display area.

Trend Graph Display/Operation when Clicking the Start Trend Button, Change Update Duration Button, and Resume Trend Button are Performed

Switching between Periodic and Non Periodic Mode

- Selecting Periodic from the Mode menu toggles between the modes. The mode can be switched from both the Diagnostic Information tab and the Trend Information tab.
- The following shows the trend graph, data acquisition and internal buffer when the scan mode is switched from periodic to Non Periodic while the Trend Information tab is displayed.

Trend graph: Stopped

Data acquisition: Stopped

Internal buffer storage: Stopped

• The following shows the trend graph, data acquisition, and internal buffer when the scan mode is switched from Non Periodic to periodic.

Trend graph: Displayed

Data acquisition: Resumed

Internal buffer storage: Cleared

• Stopping/resuming Trend Operation

• The following shows the trend graph, data acquisition and internal buffer when Trend Pause is selected from the Mode menu to stop trend operation.

Trend graph: Frozen

Data acquisition: Continues

Internal buffer storage: Frozen

In other words, the graph is not updated while operation is stopped.

• The following shows the trend graph, data acquisition and internal buffer when Trend Pause is selected from the Mode menu to resume trend operation.

Trend graph: Displayed from time resumed

Data acquisition: Continues

Internal buffer storage: Stored from time resumed

Setting Update Duration

→ Select Update Duration from the Setting menu when the menu item is enabled. The menu item is only enabled when periodic mode is set.

Trend Graph Display and Trend Data

- Changing Update Duration
 Trend graph: Display is refreshed
 Internal buffer storage: Cleared
- (2) Stopping trend operationTrend graph: Stopped

Internal buffer storage: Stopped

(3) Resuming trend operation

Trend graph: Continues

Internal buffer storage: Continues

(4) Switching from Trend Information tab → Diagnostic Information tab → Trend Information tab Trend graph: Continues

Internal buffer storage: Continues

■ Exporting Trend Data: File → Export

DeviceViewer's menus and tool buttons allow trend data to be exported.

The following shows the default settings.

Save location folder (FieldMate installation folder): \FM\Temp\

Folder name: TrendData_DeviceTagName_YYYYMMDD (where DeviceTagName is the device tag of the measuring device that was started, YYYY is the year, MM is the month, and DD is the day)

File type: CSV format, TSV format

Each line of the file content is exported in the following order.

Time stamp, trend point name, and acquisition data value

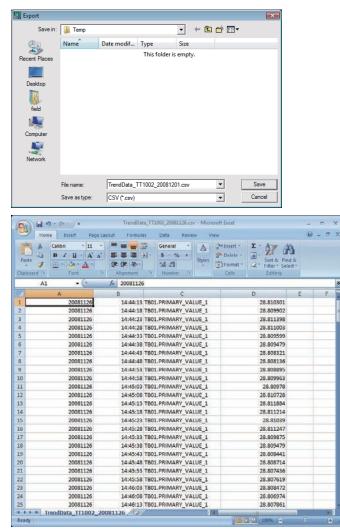

Figure L-2-4 Trend Data Export Example

L020004E.a

M History

M-1 Overview

The History window displays the Operation Logs of devices that are currently connected or were previously connected to FieldMate. These logs are recorded automatically, and they contain information about all the operations that were performed on a device while it was connected to FieldMate.

Operation Log Categories

The following table describes the different types of Operation Logs.

Table M-1-1	Operation Log Types
-------------	---------------------

Туре	Description
Configuration	Logs that were recorded during configuration or adjustment, including writing of parameters to devices
Checkup	Logs that were recorded when images and memos were attached to devices
Maintenance management	Logs that were recorded during device registration and device maintenance activities such as deleting, importing, and exporting of device data
System	Logs that were recorded which do not fall under the other operation log types. This may include logging in, logging out, or starting a tool.
PRM	Logs that were recorded in PRM and were transferred to FieldMate during the Backup/Restore/Synchronization process.

Operation

History window is switched by clicking "History" icon (\mathbb{R}) on the Select bar at the lower left of Main window.

M010001E.ai

Display Period and Filter Items

You can filter which Operation Logs to display in the History window by specific periods and categories.

Device List View

In this view, the operation logs for devices are displayed according to their device tags.

You can generate device information and use the generated device information to create reports.

Operation

Select Device List button to display Device List View.

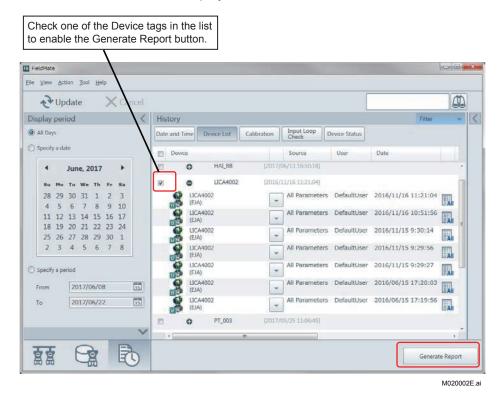

Figure M-2-2 Device List view

Generating a Report in Device List view

Follow these steps to generate a report in the Device List view.

- 1. Check the device in the Device List window.
- 2. Click the Generate Report button, and then the Report Setting dialog box appears.

Include in Report	rt		
Sticky Note	Zero Adjustment Para	meters	
🗹 Image	Memo		
I History	Input Loop Check Res	ult	
All Paramete	rs		
Report Location:	C:\FM\Export		
			1

Figure M-2-3 Generating a Report in Device List view

- 3. In the dialog box, select the data that you want to include in the report by selecting the corresponding checkboxes.
- 4. In the folder selection dialog box, select the destination folder for the report data and click OK.
- 5. Click the Save button.
- 6. If you want to cancel the operation, click the Cancel button while the Progress bar is showing that the report is being generated.

160420162846\TAG_EJX1_\History\20160420.txt	
Open Folder Cancel	

7. After the files have been generated completely, the Cancel button changes to the Close button. Click Open Folder to view the files in the location folder or Close to close the dialog box.

N ISA100 Device Configuration

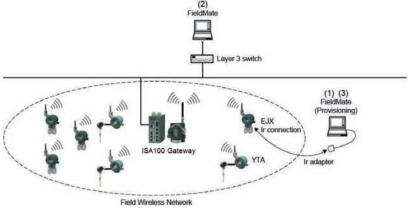

N-1 Introduction

This part and Appendix-F describe device configuration and related procedures of field wireless networks conforming to ISA100.11a, the wireless communication standard for industrial automation prescribed by the International Society of Automation (ISA).

ISA100 device can be accessed via Gateway and infrared with FieldMate. Setting and adjustment can be performed on device DTM. Plus Provisioning also can be implemented by Provisioning Function in FieldMate in order for ISA100 device to join the wireless network.

- Gateway
- Infrared Communication
- * Communication via a gateway or infrared can be achieved using one FieldMate.

The following shows the system configuration example.

N010001E.ai

Figure N-1-1 System Configuration Sample of Field Wireless Network

Hardware

ISA100 Gateway: The core device of a wireless network

Wireless field devices (wireless EJX, wireless YTA): Field instruments that measure a process value to transmit it in wireless form

Operation

- (1) FieldMate: Software for setting parameters called "Provisioning" to the field wireless devices by infrared communication to join the devices in the wireless network before wireless field devices are installed.
- (2) FieldMate: This acquires/sets information on ISA100 wireless devices via ISA100 Gateway.
- (3) FieldMate: This acquires/sets information on ISA100 wireless devices in infrared communication.

N-2 Field Wireless Gateway

N-2-1 Connection Example

The following products are required to perform communication with ISA100 devices via a field wireless network.

- Yokogawa ISA100 Gateway
- 100BASE-TX or 100BASE-FX compatible Ethernet hub

FieldMate displays ISA100 devices connected to the gateway.

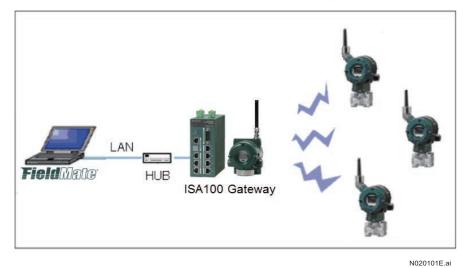

Figure N-2-1 ISA100 Gateway Setup Sample

N-2-2 Operation Procedure

Overall flow to configure ISA100 device and setup is shown as follows.

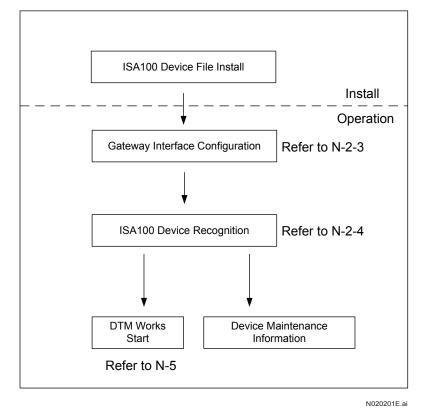

Figure N-2-2 ISA100 Gateway Setup Sample

* Please refer to Part J Adding/Deleting Device Files

Display sequence

Devices are displayed in Device Tag order in the Segment Viewer window.

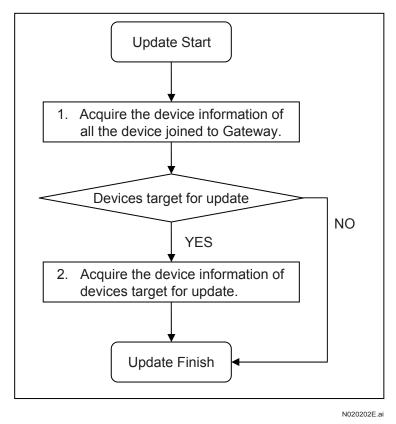

Figure N-2-3 Flow of Updating Device Information

FieldMate attempts to acquire detailed information of devices that have been selected as targets for update in Segment Viewer and displays them on Segment Viewer in order of acquisition. (It attempts to acquire detailed information of multiple devices at once.)

N-2-3 Gateway Setting

Open the window from Tool, and select ISA100 (Gateway) Interface Configuration.

Figure N-2-4 ISA100 Gateway Communication Settings

[Description of functions]

1. Target Host (Host Name or IP Address) pull-down menu

Enter the host name or IP address of the gateway.

Pressing "OK", up to five entered host names (IP addresses) remain as history.

2. "Connection Test" button

Tests whether it is possible to connect to the gateway according to an entered Host name or IP address.

"OK" button will save the entered information, actual connection will not be performed Connection Test is prepared to check whether the Gateway with the entered IP address or Host name exists.

Result of Connection test will be shown as below.

3. Advanced Setting

Setting of ISA100 Gateway.

4. "OK" button

Save the entered setting information

5. "Cancel" button

Discards the entered information and closes the dialog.

Communication time out

Sets the maximum time to wait for communication response

When the set time elapses without any response, communication with devices is terminated.

Setting value: 30 sec, 60 sec (default), 120 sec, 240 sec

• Cache function

When this function is checked and the gateway to be communicated with has any values in cache, FieldMate does not start to communicate with devices and displays the cached values on Segment Viewer.

The cache function is provided in the YFGW410 gateway but not in the YFGW710.

Therefore, even if this function is checked, it is not enabled during communication with the YFGW710.

Table N-2-1 shows the parameters corresponding to each cache and the timing of caching.

	Model information	Device status
Corresponding parameter	Vendor Model Device Revision	Status Display
Timing of caching	When an ISA100 device is joined to the gateway and the configuration is completed	At every time set in Read Parameters for each device

Table N-2-1Cache Function

Setting value default: OFF

• Default values

Returns the setting values in "Advanced Setting" to the defaults.

Default value:

Number of communication devices	: 10
Communication time out	: 60 sec
Cache (model information)	: OFF
Cache (device status)	: OFF

Table N-2-2 Messages

Message	Situation	Countermeasure
Connection Succeed.	Communication is normal.	-
Incertitude communication with Gateway.	LAN cable is disconnected during connection test	Confirm the LAN cable connection
Host Name or IP Address is empty.	Connection Test button is pressed when it is blank	Entering Host Name or IP Address correctly, proceed.
	Case1: The entered Host name or IP address does not correspond to the wireless gateway.	Case1: Confirm the entered Host name or IP Address is correct with Gateway's.
Invalid Host Name or IP Address.	Case2: The entered IP address format is not appropriate(0.0.0.255.255.255.255) I.e.:000.000.000, 01.02.03.04, 001.002.003.004, 256.256.256.256 is not acceptable	Case2: Ditto. Check the format shown in situation.
	Case3: Network setting of PC is not correctly specified.	Case3: Confirm that DNS setting of PC is correct.
	Case4: Other than that above, OS or hardware is abnormal. I.e., LAN cable is disconnected.	
	Case1: Gateway does not respond within the certain period.	Case1: Confirm LAN cable connection
Failed to establish connection.	Case2: Try to connect the Gateway which does not exist on the network.	Case2: Confirm that the entered Host really exists on the network.
	Case3: Other than that above, OS or hardware is abnormal. I.e.LAN cable is disconnected.	Case3: Confirm LAN cable connection
Failed to communicate with Gateway.	Case1: Gateway does not respond during communication within the certain period.	Case1: Try again after a while because gateway may be busy.
A problem occurred with a communication path.	A network error occurred while communicating with a device	Confirm LAN cable connection
	Case1: Network does not have any device that can communicate with FieldMate.	Case1: Confirm the device joins the network.
Failed to acquire a list of devices	Case2: Gateway does not respond within a predefined time period while acquiring a list of devices	Case2: Confirm communication is successfully established.
Connection failed!	Connection fails due to the problems other than that above.	It is unlikely since most of the case is covered above, but total system needs to be checked again.

N-2-4 ISA100 Device Recognition

The following shows the items displayed in Segment Viewer.

	Display items in o	- 3	
	Item	Contents	Default
	Update Target	Checked items are targets for update or automatic update	
	Update Status Icon	"Updating", "Updated", or "Failed to update"	-
	Device Tag	Device icon or device tag	
	Device ID (EUI-64)	Device specific ID	
	Address	Device IP address	
Basic	Communication Status	Indicates whether communication with a device is possible: "Active": Communication with the device is possible. "Inactive": Preparing to communicate with the device.	Арр.
Information	Device Role	Represents a device's role (on the network). "IO", "Router", "IO + Router"	
	Network ID	Network ID for backbone router	
	Remaining Battery	Power supply feed status "100-75%", "75-25%", "25-0%", "Lined" (power is fed from the line)	
	Status Display∗1	Device status	
Detail	Vendor*1	Vendor and its ID	Cond.
Information	Information Model*1 Model and its ID		
	Device Revision*1	Device revision	

Table N-2-3 Display Items in Segment Viewer

*1: Information defined in gateway YFGW410 are displayed.

Basic Information which Default is App. are Gateway incorporated information. Without accessing ISA100 device, these can be acquired.

Detail information which Default is Cond. requires to access ISA100 devices individually. Turn on the check box of Update Target.

The display immediately after the basic information of devices has been acquired is shown below.

An ISA100 device is recognized as follows.

- 1. On the tree menu of Segment Viewer, select "ISA100 (Gateway)". ("1" in Figure)
- 2. Press Update ("2" in Figure). The device to be updated needs to be selected. Updating can also be performed by pressing the F5 key or "Update" in the menu.

Selection of Updated Device

Devices can be selected as targets for update by marking checkboxes in the column on the left of Segment Viewer.

If a check mark is placed in the checkboxes as shown below, device information for device tags TAG005, TAG006, and TAG009 becomes the target for update.

Figure N-2-7 Selecting Targets for Update

When updating starts, the update status appears in the second column of Segment Viewer.

Update failed

Display Style and Clearing the Display

This function is applicable to Segment Viewer of ISA100 (gateway) and HART (adapter).

Initializing the display style

Initializes the order of parameters and the width of columns in Segment Viewer.

 $View \rightarrow "Init Current View Format"$

The order and width are maintained even after restarting FieldMate.

Clearing the display

Clears the contents in Segment Viewer.

 $\text{View} \rightarrow \text{``Clear Current View''}$

Clearing the display of ISA100 (gateway) is applicable to adapter devices.

Therefore, the contents regarding HART (adapter) are also cleared simultaneously.

It shows the default order of parameters.

Figure N-2-12 Filter Function

N020408E.ai

Functions

- All button

Initializes any pull-down menu items that are selected.

- Network ID

Allows the user to select a network ID that has been obtained from the pull-down menu.

- Remaining Battery

Allows the user to select the power supply status that has been obtained from the pull-down menu.

Models

Allows the user to select the model that has been obtained from the pull-down menu.*1

- Device Status

Allows the user to select the device status that has been obtained from the pull-down menu.*1

- Apply

Filters the currently displayed list according to the condition selected from the pull-down menu. All filtering conditions are ANDed before the results of filtering are displayed.

- Cancel

Undoes the selected conditions and closes the dialog. If a filter has been applied, the previous state is maintained.

*1 The information obtained by scanning the current state is what will be displayed in each pull-down menu. Options will be added to Model and Device Status when detailed information of devices has been acquired.

If a filter has been applied, the color of the Filter pull-down button changes.

To remove the filter, open the Filter pull-down menu again, press the All button and then press the Apply button.

Figure N-3-2 Detailed View of ISA100 (Gateway) Including HART Adapter Devices (All Devices)

An ISA100 device is recognized as follows.

- 1. On the tree menu of Segment Viewer, select "ISA100 (Gateway)". ("1" in Figure)
- 2. Press Update. ("2" in Figure). The device to be updated needs to be selected. Updating can also be performed by pressing the F5 key or "Update" in the menu.

N030103E.ai

Selecting Devices to be Updated

See N-2-4.

Check the box of HART adapters of the target HART devices and update them, and then display the Model information.

It shows that HART devices are targeted under the HART adapters with the Device Tag of HART_AD_1, HART_AD_2, HART_AD_3 and HART_AD_4.

N-4 Infrared Communication

N-4-1 System Requirements

Infrared Adapter

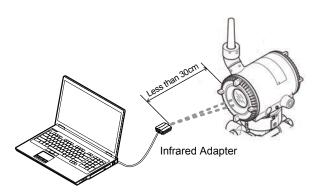

The following infrared adapter is required for this software. It must be purchased separately.

Table N-4-1	Required infrared serial adapter
Vendor Name	ACTISYS
Model name	IR224UN
Model no.	ACT-IR224UN-LN96-LE
Baud rate	9600bps

N-4-2 Connection Example

When communicating with the device, there is a need to connect the infrared adapter to an USB port on the PC, and to move the infrared adapter and infrared receiving part of the wireless device close together, facing each other. In the case of Yokogawa's wireless device, face the infrared adapter to the LCD display window of the device.

The communication range between the infrared adapter and wireless device should be within the distance indicated in the following table.

N040201E.ai

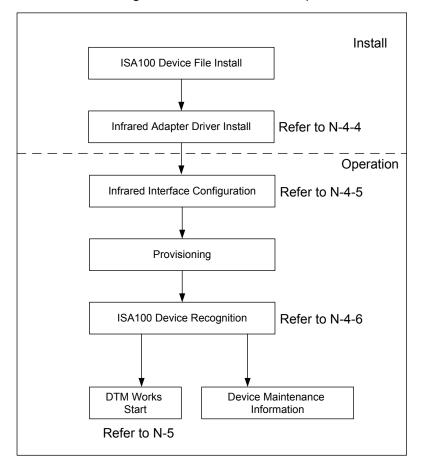

Figure N-4-1

 Table N-4-2
 Recommended communication distance

Item	Communication Distance
Recommended distance	20 cm or less
Maximum distance	30 cm

N-4-3 Operation Procedure

Overall flow to configure ISA100 device and setup is shown as follows.

N040301E.ai

Figure N-4-2

Please refer to Part J Adding/Deleting Device Files

N-4-4 Infrared Adapter (ACTiSYS IR224UN)

N-4-4-1 Driver Installation

Install the infrared adapter driver, referring to the instruction manual provided by ACTiSYS.

N-4-4-2 Device Checks

Connect the infrared adapter to a USB port on the PC. If the infrared adapter is recognized by the PC's Device Manager, the adapter has been installed.

To display Device Manager, click Control Panel of Windows, then Management Tools, Computer Management, and Device Manager.

Note down the number of the COM port assigned to the infrared adapter. In the example shown below, COM 5 is assigned.

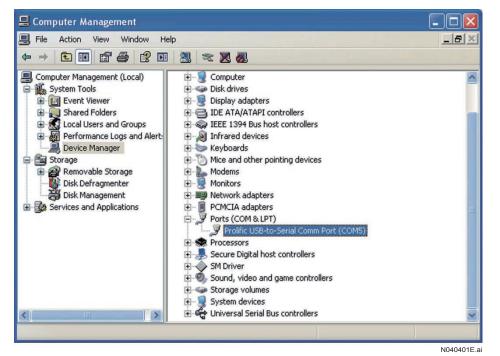

Figure N-4-3

N-4-5 Infrared Adapter Setting

FieldMate acquires ISA100 device information via infrared communication with USB port.

Open the window from Login, Communication Setting \rightarrow ISA100 (Infrared) or the window from top menu of Segment Viewer. Select Tool \rightarrow ISA100 (Infrared) Interface Configuration, and set the COM port in the following window.

FM ISA100(Infrared)	Interface Configuration	- • ×
COM Port	COM4 Prolific USB-to-Serial Comm Port	-
	OK	Close
		N040501E.a

Figure N-4-4

"Prolific USB-to Serial Comm Port" is to be selected and press "OK".

When Infrared adapter is connected and open the window above, "Prolific USB-to Serial Comm Port" is automatically selected.

N-4-6 ISA100 Device Recognition

ISA100 device and related information are displayed on Segment Viewer. A single device to be displayed is the communicated device only via infrared.

Figure N-4-5 Segment Viewer Showing Recognized Device

ISA100 device is recognized in the following procedure:

- 1. On Segment Viewer at tree menu, select "ISA100 (Infrared)".
- 2. Hold the infrared adapter close to the device.
- 3. Press "Update".

During communication, do not remove the infrared adapter from the communicating device.

Remarks

1. Segment Viewer

In case of ISA100 device in Deep Sleep mode, communication error may be encountered when the device is accessed for the first time. Please update in Segment Viewer again and initiate communication.

- Infrared communication Hold the Infrared adapter to the accessed ISA100 device only. It is advisable to keep other wireless devices not too close to the currently accessed device.
- Device Status Display Function blocks may be O/S mode for ISA100 device of Yokogawa as default. Even though device is healthy, gray color icon may be displayed in Segment Viewer. Please refer to the individual device IM for details

When communication with the device is successful, the following information is shown.

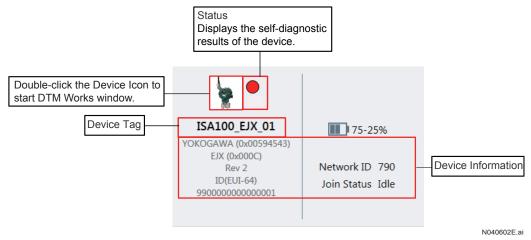

Figure N-4-6 Example of Device Information Displayed

Information on the display is shown in the following table.

Table N-4-3

	Item	Meaning
Device Icon		Device represented Icon
Device Tag		Device Tag
Device Status		Device operation status
	Manufacture ID	Device manufacture and ID
	Device Type	Device Type Name
	Device Revision	Device revision
Device info	Device ID (EUI-64)	64 bit address to identify the device
	Network ID	ID to identify network
	Battery Life	Battery remaining capacity
	Join Status	Connection Status of Device and Gateway

The color of Device status is shown in the following table.

Table N-4-4

Color	Device operation status
Green	Normal.
Yellow	Warning. Operation can continue. (Configuration error)
Red	Abnormal. Inspection required.
Gray	Others, communication error.
White	Icon setting is off.

Battery Life has the following four statuses and remaining battery capacity indicators. In case the battery power is off, infrared communication cannot be established and device information cannot be accessed, either.

Table N-4-5

Display	Meaning
75% or more	More than 75% of the battery remaining
25% to 75%	25% to 75% of the battery remaining
25% or less	Less than 25% of the battery remaining
Lined	Powered Power supplied by external power source

When remaining battery capacity is lower than 75%, Device Status display turns to Warning.

Join Status

There are three types of Join statuses.

Display	Join Status
Idle	Device is not connected to a gateway
Joined	Device is connected to a gateway
-	Failed to acquire a Join status

TIP

Only a Yokogawa device can acquire the Join status. No devices of other manufacturers can acquire it. Thus, it is always displayed as "-".

Provisioning Function

Provisioning Settings

The following provisioning methods are available.

Table N-4-7	Provisioning Settings
-------------	-----------------------

Type of Provisioning	Description		
Use a provisioning information file.	Use provisioning information to allow a device to join a gateway.		
Do not use a provisioning information file.	Allow a device to join a gateway without using provisioning Information.		
	* This function is valid only for YFGW410 that is capable of joining a device without using a provisioning information file.		

Select Tool -> Option -> ISA100 Provisioning Settings from the menu. The following dialog box appears.

Provisioning method can be changed using the Provisioning Settings dialog.

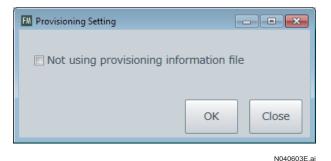

Figure N-4-7 Provisioning Settings Dialog

"Do not use a provisioning information file" checkbox

Do not select this checkbox -> Use provisioning information to allow a device to join a gateway.

Select this checkbox -> Allow a device to join a gateway without using provisioning information.

Provisioning

Setting Provisioning Information

When you select Provisioning in the operation panel, the following dialog box appears.

Enter the appropriate device tag and network ID and press OK to perform provisioning.

M Provisioning	
Device Tag

Not using provisioning information file	ОК	Close

N040605E.ai

N040604E.ai

Figure N-4-9 Provisioning Settings Dialog Box (YPIFFile not used)

• Setting Rules of Device Tag

The following rules are prescribed for device tags which can be set in field wireless devices.

- Up to 16 characters
- Uppercase alphabets, numerals, hyphens, and underbars (all in single-byte)

• Setting Rules of Network ID

The network ID is an ID for identifying wireless networks. Decimals ranging from 2 to 65535 can be used. The field wireless device with the same network ID as YFGW will be connected to the corresponding YFGW. How to assign network IDs depends on the user's system design.

> Display after OK is pressed

The display changes as shown below when the provisioning is in progress. The provisioning is completed when the progress bar reaches 100%.

	N040606E a			

Figure N-4-10 Provisioning is in Progress

	-	_
-		
		~
		E .

Provisioning requires communication with a device. When performing provisioning, place the infrared port and receiving port close together on the infrared adapter.

Provisioning cannot be performed if the Join status of the device is "Join". If this is the case, perform [Initialize provisioning] before performing provisioning.

> Display when provisioning is completed

When provisioning is completed, the following message dialog appears, indicating that provisioning information has been set successfully.

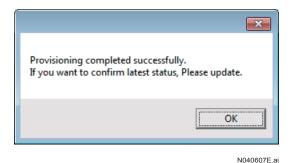

Figure N-4-11 Provisioning Completed

If you want to check the latest device status after provisioning is completed, update the Segment Viewer.

TIP

• Exporting Provisioning Information

Select [File] menu of the main window and then [Export Provisioning Information] to export the provisioning data.

Export the provisioning data for Field Wireless Configurator.

Selecting [Export Provisioning Data] displays a window shown in Figure App.-H-13. Select the location where you want the provisioning data saved and enter a file name.

Saving the provisioning data under the same file name adds the provisioning data to the existing file, so the provisioning data saved the last time remains without being overwritten.

- A. Provisioning information of the same device will be overwritten.
- B. Provisioning information of the newly added device will be inserted additionally.
- C. Provisioning information of other than A and B remains unchanged.

N-5 DTM Start

Start device DTM

On Segment Viewer, right click and select the following:

- Assigned DTM
- Select DTM

TIP

Refer to E-3-2 regarding DTM Works function and operation.

N-5-1 Online Start

To start up DTM, select a relevant device in Segment Viewer, and start up its DTM from the Operation menu or right-click the menu.

The communication path will be the one selected in the left pane: ISA100 (Infrared), ISA100 (gateway), or HART (adapter), or Modbus (adapter).

N-5-2 Offline Start

To start up DTM, select a relevant device in Segment Viewer, and start up its DTM from the Action menu or right-click the menu.

Selecting the Communication Path

When DTM is started from Device Navigator, DTM offline window is displayed. Then connect and change to DTM online window, then communication route will be selected.

Startup

DTM/ParameterManager startup path from Tool \rightarrow Option \rightarrow Device Maintenance Info.

	I DTM startup path from Device Maintenance Info.	×
1	ISA100	
	Infrared Gateway	J
2	HART(Via ISA100 HART adapter)	
	HART Modem Gateway	J
	ОК	Cancel

N050201E.ai

Figure N-5-1 Setting the Communication Path Check in the Option Dialog

1. Select the communication route through which DTM is connected after an ISA100 device is selected in Device Navigator and its DTM is started up.

The default is infrared.

2. Select the communication route through which DTM is connected after a HART device is selected in Device Navigator and its DTM is started up.

Only device maintenance information registered via HART adapter can be effective.

The default is "Gateway".

If this setting differs from the communication route in the device maintenance information, an error will occur on connection.

Assigned DTM

In DTM Works, start the DTM that is assigned in the DTM catalog.

[Assigned DTM] can be accessed in any of the following ways.

- Right-click the desired ISA100 device in Segment Viewer or Device Navigator and select [Assigned DTM].
- Open the [Operation] menu and select [Assigned DTM] while the desired ISA100 device is selected in Segment Viewer or Device Navigator.
- Double-click the device icon for the desired ISA100 device in Segment Viewer (only when [Assigned DTM] is assigned in the [Option] settings).

Select DTM

Select the DTM and start DTM Works.

[Select DTM] can be accessed in any of the following ways.

- Right-click the desired ISA100 device in Segment Viewer or Device Navigator and select [Select DTM].
- Open the [Operation] menu and select [Select DTM] while the desired ISA100 device is selected in Segment Viewer or Device Navigator.
- Double-click the device icon for the desired ISA100 device in Segment Viewer (only when [Select DTM] is assigned in the [Option] settings).

Change of ISA100 Device Parameters

Changing the value of parameters requires Block Mode of Function Block of the accessed ISA100 device to be O/S mode (Out of Service mode) in the most situations.

DTM provides automatic Block Mode change functions as follows.

Function Block to be O/S mode when changing the value of parameters.

Function Block to be recovered when completing the value changes.

Function Block to be O/S mode during download.

The function above is not effective as default. Press "Option button" in the DTM, open Option window, select "ISA100" in "Change to O/S mode, while download" and press "OK".

Option					×
Various	; setting

Table N-5-1

Item	Object	Description	Default
Change to O/S mode. while	FOUNDATION fieldbus	Block Mode of Function Block changes to O/S while downloading to FOUNDATION fieldbus device automatically. This is not applicable to ISA100, HART device DTM.	ON
download	ISA100	Block Mode of Function Block changes to O/S while downloading to ISA100 device automatically. This is not applicable to FOUNDATION fieldbus, HART device DTM.	OFF
	Dynamic variable	Specify update cycle of Dynamic variable in the DTM. 5 to 120 sec selectable.	30 sec
Update cycle	Static variable	Specify update cycle of Static variable in the DTM. 60 to 120 sec selectable.	60 sec
	Image	Specify update cycle of Image in the DTM. I.e. Bitmap. 60 to 120 sec selectable.	60 sec

Redirect the Access to Another ISA100 Device.

Close the current DTM Works once. And update in the Segment Viewer and start DTM again.

O Acquiring Device Serial Numbers

The device serial number of Yokogawa's field devices is acquired and saved in the device maintenance information. The device serial number and other information can be exported to an external file.

The device serial number is acquired upon refreshing Segment Viewer.

O-1 Devices

Communication protocol: HART

Applicable devices: Differential Pressure sensor EJX Series

EJX-A HART5, EJX-A HART7, EJX9 HART5,

EJX9DHART7

Differential Pressure sensor EJA Series

EJA-A/EJA HART5, EJA-E HART5, EJA-E HART7

TIP

The device must be connected to a USB FieldMate modem to acquire the device serial number. The device must have been registered in the database.

O-2 Device Maintenance Information

The device serial number is saved in the basic information of the device maintenance information.

Table O-3-1 Example of the File Displayed by Microsoft Excel

P Device Tag Display Mode

P-1 Overview

In FieldMate, consideration is given to cases where the same device tag name is used for each device in the plant, and it is possible to expand and display the device tags of BRAIN and HART device.

It is called extended device tag name. Also, the type of the device tag to be displayed in FieldMate is called the device tag mode.

The extended tags are different from actual devices, but are logical tags supported in FieldMate.

Field devices have the limitation of available for the device tag, which may be insufficient for intuitively representing the many devices in a plant. The extended device tag will enable users to manage devices more easily.

P-2 HART Device

This function is used for the HART device tag.

Among the device parameters of the HART device, Tag, Descriptor, Message and Long Tag (HART6 or 7 device) are combined and then used as an extended device tag in FieldMate.

The followings shows the definition of Device Tag Display Mode in FieldMate.

Table P-2-1

	MODE	Definition in FieldMate
HART Device Tag	Тад	Device Tag
	Tag + Descriptor	
	Descriptor	Extended Device Ter
	Message	Extended Device Tag
	Long Tag	

P-2-1 Specification of HART Device Tag

The device tag is based on device parameter information of an actual device and is decided as follows. These device tags are used in FieldMate for accessing actual devices and managing the device maintenance information.

Device Tag Extension Mode

In this mode, the extended device tag is used for managing the devices through FieldMate.

- Tag (New Physical Device Tag)
- Tag (New Physical Device Tag) + Descriptor (New HART Descriptor)
- Descriptor (New HART Descriptor)
- Message (New HART Message)
- Long Tag (New HART Long Tag) : HART 6 or 7 only

Number of Characters in Extended Device Tag

- Tag
 8 characters of Tag
- Tag + Descriptor mode
 8 characters of Tag + 16 characters of Descriptor
- Descriptor mode
 16 characters of Descriptor
- Message mode
 32 characters of Message
- Long Tag (HART 6 or 7 only)
 32 characters of Tag
- *: Delimiters such as tabs, commas, and spaces cannot be inserted between Tag and Descriptor.

P-3 BRAIN Device

This function is used for the BRAIN device tag.

The device parameter for memorize of the BRAIN device is combined and then used as an extended device tag in FieldMate.

Parameters to be used for combinations are memo parameters in the device and target parameters vary depending on the device model. The relationship between the model of the device and the memo parameter to be used is as shown in the table below. BRAIN devices that do not have memo parameters are not supported this function.

Table P-3-1

Device model	Memo parameter
EJ	M10:MEMO 1
EJA	M10:MEMO 1
EJB	M10:MEMO 1
EJX	M17:MEMO1
EJA-NEXT	M17:MEMO1

Q FDT Project

Segment Viewer (Built-in Connection) supports the communication paths for HART, FOUNDATION fieldbus H1, BRAIN and ISA100 direct connections.

If you want to build a communication path other than HART, FOUNDATION fieldbus, BRAIN and ISA100 direct connections that are supported in Segment Viewer (Built-in Connection), you can use an FDT Project (User Defined Connection).

If you want to use a communication protocol that is not supported in Segment Viewer (Built-in Connection), you can also use an FDT Project (User Defined Connection).

If you want to create a communication path and register a device using an FDT Project (User Defined Connection), you need to separately obtain and install the commDTM, gatewayDTM, Device DTM, and a communication interface card if needed.

An FDT Project is composed of a network topology of commDTM, gatewayDTM, and Device DTM defined in DTM Works, and DTM data set for each DTM.

The following describes the outline of the procedure on how to use FDT Project.

- 1. Install the commDTM, gatewayDTM, Device DTM, and a communication interface card on a PC installed with FieldMate.
- 2. Update the DTM catalog in DTM Setup. *
- 3. Select Tool FDT Project. Start DTM Works by selecting New FDT Project.
- 4. Select and assign the commDTM and gatewayDTM from the list of installed commDTMs, gatewayDTMs, and Device DTMs.
- 5. Configure the commDTM and gatewayDTM to create a communication path.
- 6. Select the Device DTM and assign the device.

(The communication path that was created above when assigning the device is a FDT Project name).

- 7. Select the device, startup DTM Works, and set and adjust the device.
- 8. Save the FDT project and set the FDT project name.
- *: When you add or delete a CommDTM, GatewayDTM, or Device DTM, you need to update the DTM catalog in order to refresh it.

Q-1 FDT Project Specifications

An FDT Project is composed of a network topology of commDTM, gatewayDTM, and Device DTM defined in DTM Works, and DTM data set for each DTM. The following shows the overview of the FDT Project.

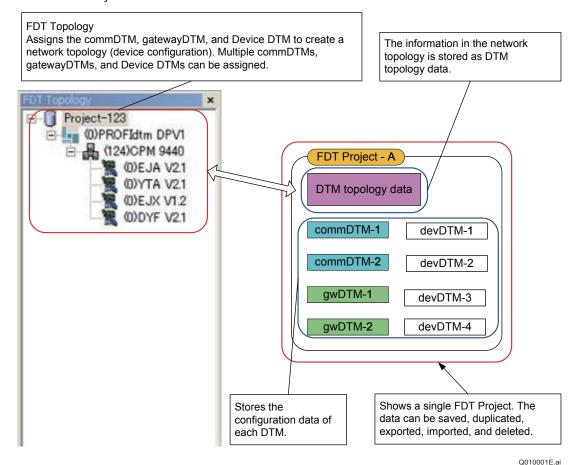

Figure Q-1-1 Overview of FDT Project

Maximum Specification

Maximum number of FDT Projects: 30

Maximum number of DTM definitions in a single FDT Project (*): 100

*: A total number of Device, Comm, and Gateway DTMs

Maximum number of startups of DTM Works: 5

Figure Q-1-2 FDT Project

• Creating New FDT Project

You can create a new FDT Project using New FDT Project.

Deleting FDT Project

You can select and delete the FDT Project using Delete FDT Project. The confirmation dialog "Do you want to delete FDT project?" appears.

Duplicating FDT Project

You can select and copy the FDT Project using Duplicate FDT Project. You must specify a new name for the FDT project.

Exporting and Importing FDT Project

You can select and export the FDT Project to an external file using Export FDT Project.

The default folder and file name/location for Import/Export FDT Project is "\$(FieldMate install folder)\Export."

The default file name after using Export FDT Project is "FDT Project name.fmpjt."

Also, you can also import that file using Import FDT Project. If another file with the same name exists in FieldMate, the import is aborted and an error message appears.

TIP The FDT Project cannot be created, deleted, duplicated, exported, and imported while DTM Works is running.

You can open the FDT Project and rename it by right-clicking the name of the FDT Project or topology \rightarrow change Name.

DTM Works enables you to open only one FDT Project at a time.

Update and Scan Devices

In UDC mode, you can update and scan for live devices that are connected to FieldMate. When you update and scan for live devices, the status and progress of the operation are displayed in the status bar of FieldMate.

Saving Data

- All the defined data including the network topology of commDTMs and gatewayDTMs can be saved and loaded as a FDT Project.
- The configuration data of the selected Device DTM can be exported and imported to and from an external file.

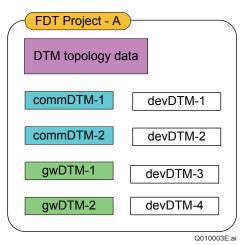

Figure Q-1-3

Scan and Build Feature

The Scan and Build function can be used to scan a communication, gateway, or field device. This function is enabled only when the commDTM or gatewayDTM is connected.

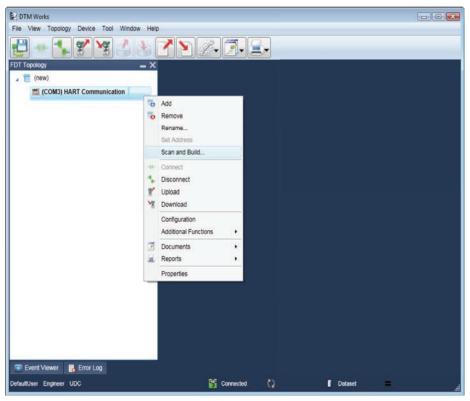

When you run the scan function on a communication device or gateway device, it scans the selected channel and displays a list of gateway devices and field devices that are directly connected to it. You can choose to add newly detected gateway devices and field devices to the FDT project. For gateway devices and field devices that already exist in the FDT project, you can choose to update their information.

The maximum number of devices that you can add to a single FDT project is 100.

Scanning Communication or Gateway Devices

Follow these steps to scan a communication or gateway device:

- 1. On the FDT Topology, from the FDT Project, select the communication or gateway device that you want to scan.
- 2. Connect the communication or gateway device.
- 3. Right-click the selected DTM and select [Scan and Build].

Q020007E.ai

Adding/Deleting Device Files

The DD and selected device DTM of Yokogawa devices are installed with FieldMate. The selected DD/DTM of other manufacturers are also installed.

In the following cases, it is necessary to start Device Files Setup or use the Device Files Media and install additional DD and DTM separately.

Table R-1

R

Expected Case	Media to Use	Requirement for DTM Setup*
The installation of the Yokogawa device DTM or the DD/DTM of other manufacturers' is required after you install FieldMate.	Device Files Media	Not required
Adding DD/DTM of Yokogawa or other manufacturers' after the Device Files Media was issued.	Media for the device files.	Required

* DTM Setup means assigning the device DTM to the model.

R-1 Installation of DD File and Setting Device Icon

The following case describes the installation of the additional DD for a HART/FOUNDATION fieldbus/PROFIBUS/ISA100 device that is directly connected to FieldMate on the Segment Viewer or Device Navigator. The HART/FOUNDATION fieldbus/PROFIBUS /BRAIN/ISA100 device icon can also be changed.

For new Yokogawa products that have been delivered or DD/DTM that has been updated after FieldMate revision R3.04, DD and DTM need to be separately installed. It needs to be performed for the devices of other manufacturers.

R-1-1 Installation of DD File

To check the device settings and status, you need to access the device parameters. For HART, Foundation fieldbus H1, and ISA100 devices, the detailed information of the target device is required to access their parameters. The detailed information of the device is defined on a file.

- HART : DD file
- Foundation fieldbus H1 : Capability file / DD file
- ISA100 : Capability file / DD file

The above files are provided by the device vendor and can be obtained from the device vendor's website. You can also download HART and Foundation fieldbus H1 from the FieldComm Group home page.

FieldComm Group: <https://fieldcommgroup.org>

For Yokogawa devices, the DD files can be downloaded as "Device Files" from the FieldMate user site.

If you connect a device to FieldMate without DD file for the device, "DD Exists: No" is displayed in the lower left of the segment viewer. In this case, you need to install the DD file.

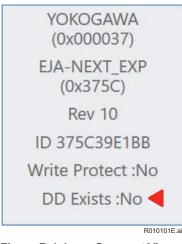

Figure R-1-1 Segment Viewer

This section describes how to install the detailed device information (hereafter called the DD file) in FieldMate.

DD File Utility

With DD File Utility, you can install DD files in FieldMate and confirm the DD files already installed in FieldMate.

• Startup

1. Select [Device Files Setup] - [DD File Utilities] from the [Tools] menu of the segment viewer or device navigator.

Figure R-1-10 The list of the devices that installed DD file

Install DD Files for the Device After Installation in Field

The DD file differs depending on the revision of the device. Since it is difficult to identify the device revision from the appearance of the device, it may not be possible to install the DD file in advance for the installed devices in field.

In such a case, you can connect FieldMate to the device to acquire the revision information of the device for preparing the DD file, and then install the DD file to FieldMate at office. You can also prepare the DD file in advance and install the DD file when connecting to the device at field.

• Startup

1. Select a device from Segment Viewer or Device Navigator, and then start it from [Operation] menu - [Install DD File].

5. Click [OK] button to install the DD file in FieldMate.

R-1-2 Device Icon

Startup

Select a device in Segment Viewer or Device Navigator and start the setup by selecting "Device Icon Setup" from the Operations menu. The following dialog box appears.

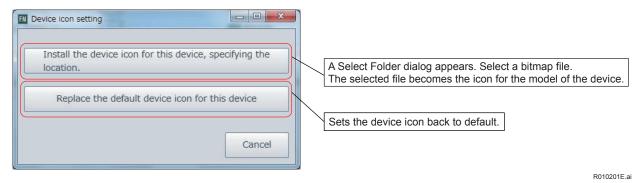

Figure R-1-15 Device Icon

• File size of device icon should be less than 100k byte.

R-2 Device Files Media

This installer is for installing device files (DD, device DTM, device icon, Device Viewer definition file, and device and DTM assignment file). There is no need for FieldMate and the device to be connected.

Startup

The Device Files Media cannot be used for installation on a PC that is not installed with FieldMate.

Insert the Device Files Media in the media drive. Autorun starts and a device files installation window appears.

NOTE

If Autorun does not start after you insert the Media, double-click the following file. Device files Media\PRMFMDeviceFiles.exe

TIP

Due to user account control, the following windows may be displayed and confirmation operation is required. (1) Auto Play

R-3 DTM Setup

It is used to assign the DTM of other manufacturers' HART/FOUNDATION fieldbus/ PROFIBUS/ ISA100 devices with a device of a specific model after installing the DTM.

Assignment is allowed that single DTM supports more than single device model in DTM Setup.

Startup

Start DTM Setup by clicking the Start button, pointing to All Programs \rightarrow YOKOGAWA FieldMate \rightarrow Tools \rightarrow DTM Setup.

Window

The DTM Setup Tool has two windows, the Main window and the Edit window.

Main window

This area displays a list of all HART/FOUNDATION fieldbus/PROFIBUS/ISA100 device DTMs that are installed in the PC. Any device DTM with a communication protocol that is other than HART/ FOUNDATION fieldbus/PROFIBUS/ISA100 is not displayed.

DTM setup is displayed for each communication protocol.

When no device model is assigned to Device DTM (device model is not defined), the Vendor, Model, and Revisions fields are empty.

S Calibration Support

S-1 Overview

FieldMate can support Calibration works for pressure transmitter with CA700 Pressure Calibrator provided from Yokogawa Meters & Instruments Corporation.

This support function provides settings, status confirmation, and saving result for calibrating a pressure transmitter without the operation on CA700.

For devices that can communicate with FieldMate, such as BRAIN devices and HART devices, the device information such as tag and ranges can be acquired from the device and used for calibration settings.

For Non-Communication device, this function can be used by registering them with FieldMate in advance.

SEE ALSO Refer to "J-3 Registration of Non-Communication device" about Non-Communication device.

Functions

Calibration Support function has the following functions.

- · The procedure of calibration works is displayed
- The settings for calibration are configured on FieldMate. Also the settings can be saved and loaded.
- User can perform calibration work for a pressure transmitter without operating the calibrator.
- User can input the pressure by pressure pump with checking the trend graph of pressure value.
- The data of test points can be recorded automatically in automatic mode.
- The calibration results can be saved to database and output for calibration reports.
- · Calibration works can be interrupted and resumed.

Auto Recording of Calibration Data

Calibration Support function can record the data of test points automatically. In automatic mode, if the pressure to be inputted to the pressure transmitter is maintained within a preset range for a certain period of time against the pressure specified at the test point, the pressure value and current value at the test point is recorded as the calibration values automatically. With this function, user can perform calibration work only by operating the pressure pump.

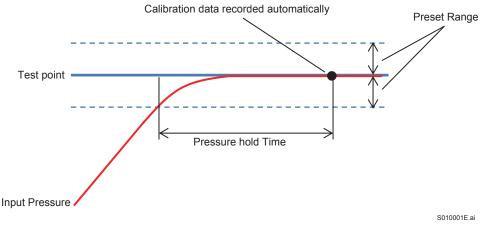

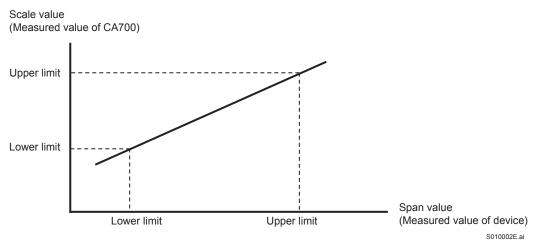

Figure S-1-1 Auto recording of calibration data

Scaling

If CA700 does not support the physical quantity of the target device, the calibration Support function can deal with it with the scaling settings.

By assigning scale values to the pressure at the lower span limit and the pressure at the upper span limit, you can view and record measured values converted in any physical quantity.

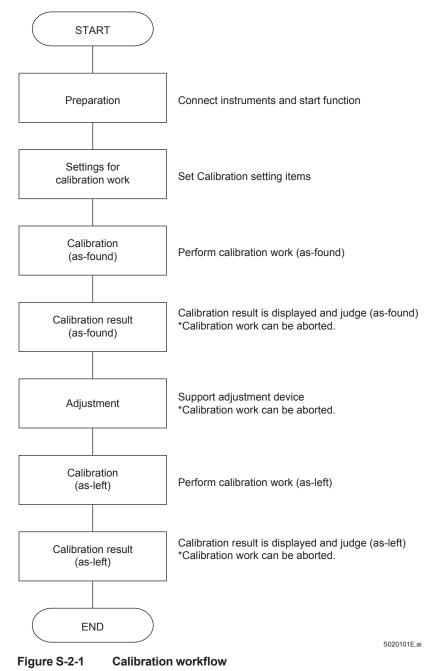

S-2 Using Calibration Support Function

S-2-1 Calibration Workflow

The calibration workflow with Calibration Support function is as flows.

S-2-2 Connecting Instruments

The following describes the connecting instruments for using Calibration Support function.

BRAIN/HART Device

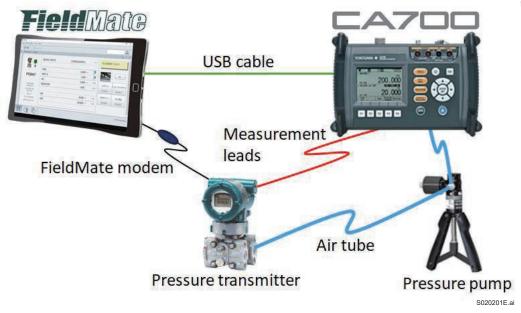

Figure S-2-2 Connecting instruments (BRAIN/HART device)

Non-Communication Device

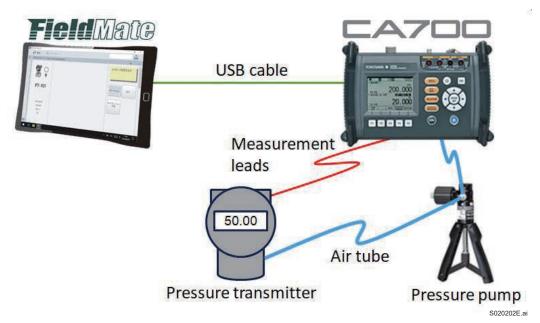

Figure S-2-3 Connecting instruments (Non-Communication device)

Instruments for Calibration Support Function

To use the calibration support function, the following equipment is required in addition to the pressure transmitter to be calibrated.

- FieldMate
- CA700 pressure calibrator •
- USB cable for connecting FieldMate and CA700
- · FieldMate modem
- Pressure pump
- Air tube

NOTE

FieldMate modem is not required for Non-Communication device.

CA Series USB Driver needs to be installed to the PC installed FieldMate for using Calibration Support function.

NOTE

PM100 External pressure sensor for CA700 is supported from FieldMate R3.03.02.

The USB feature at Device Setting of CA700 has to be set the following for using Calibration Support function. Refer to CA700 Pressure Calibrator User's Manual (IM CA700-01EN) about the detail information of USB feature of CA700.

- **USB** Connection: Function •
- USB Function: Communication

S-5

The following settings need to be set manually on CA700 if the firmware version of CA700 is not 1.10 or later.

- Averaging
- Scaling

The power supply function from the CA 700 to the device is turned off after the CA700 manual setting, so turn on the power supply function (Loop ON) manually.

The firmware version of CA700 can be confirmed on the starting window of CA700 and the start dialog of Calibration Support function. The firmware of CA700 can be downloaded from the web site of CA700.

If Calibration work is finished with clicking [Finish] button, all calibration data are deleted. Click [Abort] button for finishing Calibration Support function if the Calibration data want to be remained for resuming calibration work.

Start Calibration Support Function S-2-3

The calibration support function can be started by pressing the [Pressure Calibration Support] button on the segment viewer.

NOTE

FieldMate starts Calibration Support function automatically in the case of finding to connect to CA700. In the case of not using Calibration Support function, FieldMate disconnect to CA700 or CA700 is powered off.

CA700 has to be no operated during using Calibration Support function if the firmware of CA700 is 1.10 or later.

S-2-4 Operation

The procedure of operating Calibration Support function is as follows.

Preparation

- 1. Power on CA700.
- 2. Connect instruments according to Figure S-2-2 or Figure S-2-3.

Start FieldMate

- 1. Start FieldMate
- 2. Press the [Pressure Calibration Support] button on the segment viewer.

Start Calibration Support Function

1. FieldMate starts Calibration Support function automatically when finding to connect to CA700. Then Start dialog appears.

Serial Number:	91R123456
Firmware Version:	1 20
External Sensor:	Connected
Power Status :	CA700 is supplying power to device
Setting:	Enable power from CA700
3	
	O Disable power from CA700
Vould you like to start l	O Disable power from CA700

Figure S-2-4 Start dialog

2. CA700 can apply the loop voltage for the target device. Check "Enable power from CA700" if this function is used.

3. Click "Yes" for starting Calibration Support function.

Scale:	0.00-			kPa
Calibration range:	0.00-	100.00		kPa
		Apply	Cancel	

Figure S-2-8 **Detail setting dialog**

The setting items are following tables.

Item	Attribute	Remarks
Device Tag	Display only	Device Tag name of the target device
Loop Name		Loop name of the target device
Model		Model name of the target device. The device information is displayed as initial value if the target device is Yokogawa pressure transmitter.
Press. range	Display only	Input value range of the target device
Current range	Display only	Output value range of the target device
Display Range		Display range of the target device
Serial No.		Serial Number of the target device
Product Date		Product date of the target device
Tolerance		Tolerance for pass/fail judgment
Record Point	Manual Auto	Set the record mode for calibration data
Target Range for Automatic mode	0.01 to 5.00%	The range for the test point This item is enabled if Automatic mode.
Target Time for Automatic mode	1 to 1000 sec.	The remain time for the test point This item is enabled if Automatic mode.
Calibrator	Display only	The serial number of CA700
Calibration point	1 to 10	Set the number of calibration points. Set the number of measurement points 0% to 100%. The range is 1 to 10. If you specify 1, the calibration is performed at 0% if the calibration direction (Direction) is set to Up or Up/Down and 100% if set to Down. If you specify a number between 2 and 10, the calibration is performed for the number of specified points. This includes calibration at 0% and 100%. The calibration points are at equally divided points between 0% and 100%. For example, if the number of calibration points is set to 5, the calibration points are 0%, 25%, 50%, 75%, and 100%.
Direction	Up Down Up/Down	Set whether to start calibrating from 0% (Up), from 100% (Down), or from 0% to 100% back down to 0% (Up/Down). Up: 0% to 100% Down: 100% to 0% Up/Down: 0% to 100% to 0% If the calibration direction is Up/Down, the number of calibration points is given by Number of calibration points = (Number Of Points setting) x 2 – 1. For example, if the number of calibration points is set to 5, the calibration points are 0%, 25%, 50%, 75%, 100%, 75%, 50%, 25% and 0% (total of 9 points).
Square Root	Linear Square Root	Set the device configuration of square root setting.
Averaging	ON OFF	CA700 displays moving average results.
Scaling	ON OFF	CA700 displays linearly scaled results. You can assign a unit appropriate for the values after scaling.
Scaling - Span		The base value of liner scaling function This item is enabled if scaling is ON.
Scaling - Scale		The transferred value of liner scaling function This item is enabled if scaling is ON.
Calibration range		Set the 0% and 100% of the calibration range in terms of the calibration target input and output (which corresponds to the input).

About the tolerance:

Tolerance = $\pm((100\% \text{ value of the measurement function} - 0\% \text{ value of the measurement function}) \times \text{tolerance setting / 100})$

For example, when the calibration target output is 4 mA to 20 mA and this range is assigned to 0 to 100%, if the tolerance range is set to 0.02%, the tolerance is given by

```
\pm (20 \text{ mA} - 4 \text{ mA}) \times 0.02/100 = \pm 0.0032 \text{ mA}.
```

About the tolerance in the case of "Square Root" setting:	
Current output is 50% or over: "Toleramce setting"	
Current output is 0% or over and less than 50%: "Toleramce setting" * 50 / Current output (%)	
Current output is 0%:	
"Toleramce setting"	

3. Click [Next] button and then Calibration As Found dialog appears.

Calibration As Found

Zero calibration of CA700 is performed before device calibration work.

Zero calibration of CA700 can be performed with pressing [CA700 ZERO] button in Calibration dialog.

NOTE

Refer to CA700 Pressure Calibrator User's Manual (IM CA700-01EN) about the detail information of Zero Calibration of CA700. Zero calibration of CA700 can be performed in Adjustment phase and Calibration As Left phase.

Calibration As Found has two modes of Manual and Automatic.

In Manual mode, the calibration data is recorded by user.

In Automatic mode, the calibration data is recorded automatically according to the configured condition.

Manual mode

1. Calibration As Found dialog appears.

Preparation	Calibration A	s Found	(3points	/UpDown/	Linear)	Start	Stop	
Setting	Current	12.00	1 mA	Previou	s Point	Set	Next p	oint

Finish	-0.01	Up Down	100.00% 50.00%					
						Back	Next	

Figure S-2-9 Calibration As Found dialog (Manual mode)

- 2. Click [Start] button and then Calibration Support function start to plot pressure value on a trend graph.
- 3. The current value and pressure value are displayed in the Current and Pressure text box. The calibration point (pressure) is displayed in the Target text box. The pressure value (red line) and the target value (blue line) are displayed as trend graph in graph area. Pressure line and Current line graph are displayed if each check box below the graph area is checked.
- 4. User inputs the pressure to the pressure transmitter with pressure pump to refer to the trend graph.
- 5. Click [Set] button when the output signal from the target device is stabilized and then the current value and pressure value are recorded as the calibration data. The calibration data is displayed in the result area.
- Click [Next point] button to proceed to the next calibration point. User repeats step 3 to 5. User can re-record the calibration data of previous point with pressing [Previous point] button.
- 7. Click [Next] button after recording the calibration data of every calibration point and then Calibration As found Result dialog appears.

Automatic mode

1. Calibration As Found dialog appears.

Preparation	Calibration A	s Found (3poin	ts/UpDown/	Linear)		Start	Stop
Setting	Current	12.000 mA		ue is within the pressure value			
Calibration As Found	Pressure	50.000 kPa	100				
Calibration As Found Result	-	~51.000)	96 <u>60</u> 40			_	
Adjustment	(Up 50.00%)	50.000 kPa	20 0	•			
Calibration As Left	Tolerance	Calibration State				🗹 🛑 Pressure	Curre
Calibration As Left Result	0.20 Error	Up 0.00% Up 50.00%		Current(mA) 4.000	Error 0.00%	Result Pass	
Finish	0.00	Up 100.00% Down 50.00%					
					Back	Next	

Figure S-2-10 Calibration As Found dialog (Automatic mode)

- Click [Start] button and then Calibration Support function start to gather current value and pressure value from CA700.
- 3. The current value and pressure value are displayed in the Current and Pressure text box. The calibration point (pressure) is displayed in the Target text box. The pressure value (red line) and the target value (blue line) are displayed as trend graph in graph area. Pressure line box and Current line box graph are displayed if each check box below the graph area is checked.
- 4. User inputs the pressure to the pressure transmitter with pressure pump to refer to the trend graph.
- 5. The message for keeping input pressure is displayed when the input pressure is in the target range. Keep the input pressure for the target time.
- 6. After target time, the current value and pressure value are recorded as the calibration data automatically. The calibration data is displayed in the result area.
- The calibration support function proceeds to the next calibration point automatically. User repeats step 4 to 6.
 User can re-record the calibration data of previous point with pressing [Previous point] button. [Previous point] button is not enabled during the input pressure is in the target range.
- 8. Click [Next] button after recording the calibration data of every calibration point and then Calibration As Found Result dialog appears.

In the case that the target device uses the Signal Characterizer function, the result at each calibration point is not judged correctly because the relationship between the input and output is judged as linear.

Calibration As Found Result

User can confirm the calibration result (as-found).

User selects "Pass", "Fail" or "Other" as the calibration result. Also user can output report.

In the case that the target device is BRAIN/HART device, all parameter value can be saved before the next step.

P n Support Device Tag 9T-101 re Calib Calibration As Found Result (3points/UpDown) Up Up Down 0.00% 50.00% 100.00% 50.00% 0.00% 0.000 49.623 99.091 49.150 0.000 4.000 11.938 19.854 11.863 4.000 Pass Pass Pass Pass 0.00% -0.02% -0.01% -0.01% 0.00% Fail Other Pass Comment ion As Left ration As Left Generate Report Finist Save all parameter Back Next Abor Finist S020408E.ai

Figure S-2-11 Calibration As Found Result dialog

- 2. Select "Pass", "Fail", or "Other" as the calibration. If "Other" is selected, the comment has to be entered.
- 3. Click [Generate Report] button and then Report dialog appears. In this dialog the calibration result can be exported to an external file. The calibration result can be exported in History window.

Figure S-2-12 Report dialog

"Template" button is enabled if Microsoft excel or Word are installed in PC.

4. Click [Next] button and then Adjustment dialog appears. Also, the all parameter function of FieldMate is started if "Save all parameter" is checked. After obtain parameters, Adjustment Support dialog appears.

In the case that the target device is Non-Communication device, All parameter acquisition function is invalid.

Adjustment Support

Calibration Support function can support the device adjustment work.

In this dialog, the calibration point (pressure), input pressure value, and output current value are displayed. User can perform device adjustment work with reference to these information.

After adjustment, click [Next] button and then Calibration As Left dialog appears.

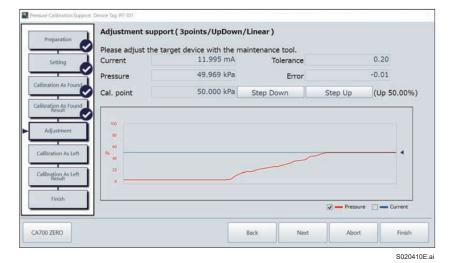

Figure S-2-13 Adjustment Support dialog

Calibration As Left

Calibration As Left has two modes of Manual and Automatic as same as Calibration As Found. The operation of this dialog is same as Calibration As Found.

Click [Next] button after recording the calibration data of every calibration point and then Calibration As Left Result dialog appears.

So See Calibration As Found about operation of Calibration As Left dialog.

Calibration As Left Result

User can confirm the calibration result (as-left).

User selects "Pass", "Fail" or "Other" as the calibration result. Also user can output report.

In the case that the target device is BRAIN/HART device, all parameter value can be saved before the next step.

S-2-5 Abort and Resume the Calibration Work

The Calibration support function can be aborted in the middle of work and restarted from the abort point.

The abort-capable work dialogs are the calibration (As Found / As Left) result dialog and adjustment dialog. User can abort the work with clicking [Abort] button on these dialogs.

When the Calibration support function is activated, if the calibration work is suspended for the connected target device, the message as to whether to proceed with the calibration working is displayed.

The following operations can be selected in this message dialog.

- [Yes]: Restarts processing that was interrupted.
- [No]: Perform calibration of the instrument from the beginning.
- [Cancel]: Ends the linkage function (does not restart) The procedure of operating Calibration Support function is as follows.

S-4 Reporting with Template File

S-4-1 **Template File**

The template file is made with Microsoft® Word/Excel®.

Report file is made as the Microsoft[®] Word/Excel[®] file for inserting data into the file.

SEE ALSO See "Templates for inserting data into Microsoft® Word/Excel® files" in H-2-2 All Parameters/ Adjustment Parameters about Template file for reporting.

IM 01R01A01-01E

T BT200 Tablet

T-1 Overview

FieldMate has the device configuration tool like BT200 BRAIN TERMINAL provided from Yokogawa Electric Corporation. This tool, BT200 Tablet, can be configured field devices like a operation with BT200.

Also, by using "Dedicated adapter" included in "Model VJ77 PC-based Parameters Setting Tool", Signal Conditioner Card / Nest of CENTUM can be configured and adjusted.

The information on the device connected with the BT200 Tablet function is automatically stored in FieldMate database (Device Maintenance Information).

Also, the parameter information of the device acquired with the "All Parameter Read" function is stored in "Parameters" of FieldMate Device Maintenance Information, and output in arbitrary format and comparison as same as "All Parameter" function of FieldMate.

\land ΝΟΤΕ

Please contact Yokogawa Electric Sales Representative about "Dedicated adapter" for VJ77.

NOTE

The information on Signal Conditioner Card is NOT stored in FieldMate database (Device Maintenance Information).

SEE ALSO "T-3-2 Read All parameters" about "All Parameter Read" function.

"H-2-3 All Parameters/Adjustment Parameters" about "All Parameter" function.

NOTE

BT200 Tablet Supports only field devices and Signal Conditional Card / Nest. Use JHT200 for the configuration of Yokogawa panel instruments (JUXTA, YS series).

T-2 Basic Operations

The operation of BT200 Tablet is as almost same as BT200. So the deferential operation from BT200 is explained in this chapter.

SEE ALSO See BT200 BRAIN TRMINAL (IM 01C00A11-01E) about basic operation of BT200.

T-2-1 Using BT200 Tablet

BT200 Tablet is started from the Start Window of FieldMate.

k Selection	
History	<u>ه</u> ا
BT200 Tablet	

Figure T-2-1 **Start Window**

If "BT200 Tablet" button appears in Start dialog, click "Work Selection" button and then Work Selection Window appears. Select "BT200 Tablet" and then click [Start] button for starting BT200 Tablet.

Figure T-2-2 **Work Selection Window**

SEE ALSO See "E FieldMate Startup" about Work Selection window.

T-2-2 Close BT200 Tablet

Click button In the upper right corner for closing BT200 Tablet.

T-2-3 Operation

The basic operation of BT200 Tablet is as follows.

Connection to Device or Signal Conditioner Card / Nest

Connect FieldMate to device or Signal Conditioner Card for CENTUM.

Connect to device

Refer to "C-3 System Configuration/Connection Examples".

Connect to Signal Conditioner Card / Nest

To connect to Signal Conditioner Card, use a dedicated connector for BT200 BRAIN TERMINAL connection that is provided on ESC Card of Signal Conditioner Nest or Extension Card (Model: EXT) with "Dedicated Adapter (5-pin connector)" included in "Model VJ77 PC-based Parameters Setting Tool".

See BT200 BRAIN TERMINAL (IM 01C00A11-01E) for connection with of Signal Conditioner Nest ESC (Signal Conditioner communication card) and Extension Card (Model: EXT).

Select the COM Port Number for Modem and Connect Device

BT200 Tablet is started and then the Start panel appears.

Select "USB FieldMate Modem" for connecting BRAIN device. Also, select "VJ77 Modem" for connecting Signal Conditioner Card / Nest.

Figure T-2-3 Start panel

After selecting the COM port number connected the modem, click "Communication" button and then BT200 tablet tries to connect to device. If connecting to device, Initial Data panel appears.

T-3-1 Setting Up Data in Batch

Where a number of devices are used, many units might have virtually identical settings. In this situation, the setup procedure can be simplified by copying the settings for one device into another in a batch, then making necessary modifications to that data. This setup technique helps standardize the operating state of each individual instrument and reduces the chances of improper settings.

Upload

Click "Upload" for starting to upload parameter values from device. The uploaded parameters are defined each device.

After uploading, click "SAVE" button to call Save panel. In this panel, the uploaded parameters can be saved to database.

Click "PRNT" button to enter Print panel. In this panel, the saved parameters are transferred to pdf file. After transformation, click "Show" button to open the pdf file.

Click "ESC" button to return to Command panel.

Saved parameters can be displayed in Print data list panel.

SEE ALSO

See "T-4-2 Show Print data" about Print datalist panel.

U Calibration Management for Liquid Analyzers

U-1 Overview

The dedicated screen is prepared for the new 4-Wire Converter FLXA402 and the SENCOM™ Smart adapter SA11 are supported the following functions.

Local Display System for FLXA402

It can be connected to the FLXA402 via the dedicated interface, and the measured value / set value / history display of FLXA402 can be displayed with graphical display and comfortable operability.

The target FLXA402 must support Bluetooth, Modbus TCP/IP, or Modbus RTU (RS-485) for using Local Display system.

Direct Access System for SA11

FieldMate connects directly to SA11 and can perform calibration work for the sensor (SA11) and setting parameter management in work space other than the site.

The Bluetooth interface box IB100 is required for using Direct access system.

U-2 Operations

The procedure of starting Calibration Management for Liquid Analyzers function is as follows.

SEE ALSO See Calibration Management for Liquid Analyzers (IM 01R01A07-01EN) about this function.

U-2-1 Using Calibration Management for Liquid Analyzers

Calibration Management for Liquid Analyzers function is started from the Start Window of FieldMate.

Appendix B Device Replacement Tool

Appendix B-1 HART Device

1. Overview

The device replacement tool simplifies the replacement of Rosemount's field devices with Yokogawa's. This tool converts the parameters of the original device and downloads them to the replacing device.

This tool can also be used for replacement between Yokogawa's field devices.

2. Devices

The tool supports the following combinations of Rosemount's and Yokogawa's field devices.

Table AppB-1	Combinations of Field Devices Supported by the Device Replacement Tool
--------------	--

				Yokogawa		
	Replacing device Original device		EJA-E	EJA-E	EJX	EJX
Original de			HART5	HART7	HART5	HART7
	1151	\checkmark	\checkmark	\checkmark	\checkmark	\checkmark
Decement	2051	\checkmark	\checkmark	\checkmark	\checkmark	\checkmark
Rosemount	3051C	\checkmark	\checkmark	\checkmark	\checkmark	\checkmark
	3051S	\checkmark		\checkmark	\checkmark	\checkmark
	EJA-A/EJA HART5	-	\checkmark	\checkmark	\checkmark	\checkmark
	EJA-E HART5	_	_	\checkmark	\checkmark	\checkmark
Yokogawa	EJA-E HART7	_	_	_	_	\checkmark
	EJX HART5	_	\checkmark	\checkmark	_	\checkmark
	EJX HART7	-	_	\checkmark	_	_

This tool supports HART devices.

The number 1151, 2051, 3051C, and 3051S are model names of Rosemount's pressure transmitters.

3. Parameters to be converted

The following parameters can be converted:

Tag, Long Tag, LRV, URV, Unit, Pres Damp, Descriptor, Message, Xfer fnctn

4. Operation Procedure

The parameters are converted in two steps as described below.

Step 1

Upload the parameters of the original device to FieldMate and save them in a file.

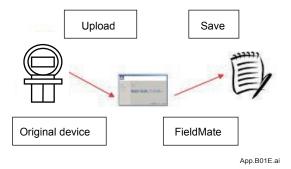

Figure App.-B-1

Step 2

Retrieve the parameters from the file and download them to the replacing device.

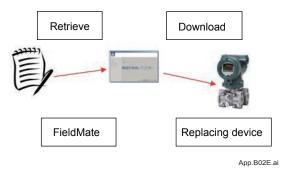

Figure App.-B-2

- At the end of Step 1, the parameters are automatically saved in a file (cannot be canceled).
- Step 1 and 2 can be consecutively performed. Or, after Step 1 is finished, Step 2 can be done later.

(Note) This tool works only for the combinations of devices listed in Table C-1.

5. Operation

• 5-1 Startup

Start \rightarrow YOKOGAWA FieldMate \rightarrow Device Replacement Tool.

This tool does not start if FieldMate is already running. If the following message appears, exit FieldMate and then start this tool.

FMDevice	RepTool	×
	FieldMate is runnin Please exit FieldMa	-
	0	к
		Ann B03E ai

Figure App.-B-3 Error Message when FieldMate is Already Running

(Note) This tool allows only one device to be connected at one time. The original and replacing devices cannot be connected simultaneously.

5-2 Step 1

Upload the parameters of the original device and saving them in a file.

Step 1-1 Select a mode

Select "Device -> File"

Figure App.-B-4 Mode Selection Display

App.B04E.ai

Step 1-2 Setting COM port and polling address (Upload – Connect)

Select a COM port of the FieldMate modem and the polling address of the original device.

Connect the device to the modern. Select the desired COM port and device address, and then click the "Next" button.

When the USB FieldMate modem is connected, this tool automatically selects the COM port to which the modem is connected. Polling address is not recognized automatically. Please confirm the polling address in advance.

The operation logs are categorized in the Configuration. Open History to check the operation logs. App.B17E.ai

Appendix B-2 Modbus Device

Overview

- A) Obtain some parameters from the source device and save them in a file.
- B) Obtain parameters from the file and write them to the target device.

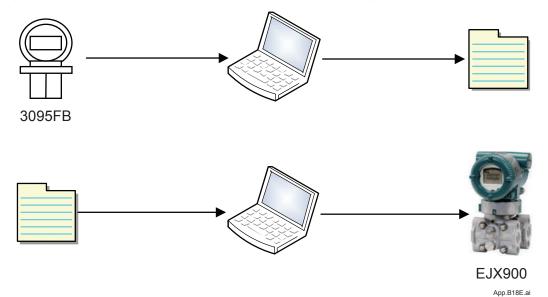

Figure App.-B-18

- Step A and B can be separately performed. Step B can be directly performed after performing Step A.
- Step A and B can be performed repeatedly.

Note : The tool only works for the combinations of devices listed below.

Devices

Source device: Rosemount 3095FB MultiVariable™ Transmitter Target device: Yokogawa EJX910 Multivariable Transmitter

Operation

Startup

Start - YOKOGAWA FieldMate - Device Replacement Tool Select Modbus Communication. This tool does not start if FieldMate is already running.

If the following message appears, exit FieldMate and then start this tool.

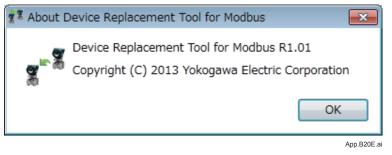

2 Device Replacement Tool for N	Indbus 1 Image: Second state

vigilantplant:	3 Back Next Finish Cance

Figure App.-B-21

- (1) COM port related settings
 - A) COM Port: Specify the serial port of RS485 USB Adapter installed on your PC.
 - B) Slave Address: Specify the address of the device used for uploading in a range of 1–247.
 - C) Baudrate: Select one of 1200, 2400, 4800, 9600, and 19200. The default value is 9600.
 - D) Parity: Select Odd, Even or None. The default value is None.
 - E) Stop Bits: Select 1, 1.5, or 2 (bits). The default value is 1 (bit).
- (2) COM port update button

COM Port selection items can be updated by pressing this button if a USB cable is connected or disconnected while this screen is open.

③ Wizard buttons

Pressing [Back] returns you to the initial startup window.

Pressing [Next] connects the appropriate device and starts uploading.

[Finish] is disabled. [Cancel] is enabled.

(4) Allow the user to scan the Modbus device with the appropriate COM port settings.

(2) Step 2: Scan

🕫 Scan Modbus Device 📃 🗖 💌
Please set slave address range, and click [Scan]. Address Range: 1 0 0 0 1 3 5 Address Device Details 0 3 5 10 4 (1) (1) (1) (1) (1) (1) (1) (1)
5 OK Cancel

- (1) Specify the range of slave addresses. Options are 1, 3, 5, 10, 30, 50, 100, and 247.
- (2) Show the progress of scanning.
- (3) Display a list of device information.
- "Address" lists slave addresses in a range of 1–247.
- "Device" lists device models that can be identified from Input Register addresses (1, 2, and 3).
- "Unknown" appears for a device model that cannot be identified.
- "Details" lists addresses and values of parameters for device models that were identified.
- (4) Pressing [Scan] starts scanning. Pressing [Stop] stops scanning.
- (5) Pressing [OK] returns you to the source device settings window with the address of the device specified in the Scan window selected in [Slave Address]. Pressing [Cancel] returns you to the source device settings window.

(3) Step 3: Upload

A: Uploading

Display the progress of uploading of parameters. Once uploading is complete, the progress bar reaches 100% and a window showing the results of uploading appears.

History

All operation logs of Device Replacement Tool can be checked by using History of FieldMate.

The operation logs are categorized as "Configuration".

Open History to check the operation logs.

Appendix C User Definition of Vendor Name and Model Name

When you manually create a database device using the New Device Maintenance Info menu item, you can add an arbitrary vendor name and model name.

Table App.-C-1

Communication Protocol	Description
HART/FOUNDATION fieldbus	Vendor name: Defines Vendor and Manufacturer ID. Model name: Defines Model and Device Type.
PROFIBUS	Vendor name: Defines "Other Vendors". Model name: Defines Model and IDENT number.
BRAIN	Vendor name is YOKOGAWA only. No model name can be added.
ISA100	Vendor name is YOKOGAWA or Honeywell. Model name: Defines Model and Device Type.

App.-45

Appendix D Software Download Function for FOUNDATION fieldbus

This function enables you to download software to field devices via a FOUNDATION fieldbus to update their software.

Typical usage is to add new features such as function blocks and diagnostics to the existing devices. Software download file supplied by device vendor is required when operation above is performed by FieldMate to update field device function enhancement.

IMPORTANT

Do not hook up the software download tool to a fieldbus segment while the plant is in operation as it may temporarily disturb the communication. Always connect the tool before starting operation.

IMPORTANT

Carrying out a software download leaves the PD tag, node address, and transducer block calibration parameters that are retained in the nonvolatile memory inside the target device, but may reset other parameters to the defaults (except a minor update that does not change the number of parameters). Hence, where necessary, save the parameters using an engineering tool, parameter setting utility, or the like before carrying out a software download, and then reconfigure the field device(s) after the download.

Calling

Start \rightarrow YOKOGAWA FieldMate \rightarrow Software Download for FOUNDATION fieldbus.

Software Download for FOUNDATION fieldbus is displayed.

Software Download for FOUNDATION fieldbus does not start if FieldMate is already running.

The following is the location of files of EJX manufactured by Yokogawa Electric Corporation. When C drive is FieldMate installed drive:

Yokogawa Electric Corporation MANUFC_ID: 0x59543

EJX DEV_TYPE: 0x000C

The location is C:\FM\DD\59543\000C\ file neme.ffd

Advanced Setting

Regardless of the selectio	n, ACTIVATE is executed in each device.
Option	
Download even ACTIVATE i	if the software is the same revision. If the software is the lower revision. Is executed in each device. Is executed in each segment.

App.D07E.ai

Figure App.-D-7 Option Dialog Box

It is necessary to confirm the options before downloading. If required, the options should be changed accordingly.

Software Revisions

When downloading software to the physical devices, if the downloaded software has the same revision with the software in the physical device; with the option [Download even if the software is same revision] checked, the downloaded software would overwrite the existing software in the physical device. Otherwise, if the option [Download even if the software is same revision] is not checked, the same revision software will not overwrite the existing software in the physical device. By default, this option is not checked.

If the downloaded software has the older revision comparing with the revision in the physical device; with the option [Download even if the software is lower revision] checked, the old software would overwrite the existing software in the physical device. Otherwise, if the option [Download even if the software is lower revision] is not checked, the old software will not overwrite the existing software in the physical device. By default, this option is checked.

ACTIVATE processing

ACTIVATE processing is to perform switching of the existing software to the downloaded software. The software download and ACTIVATE processing will be performed successively for each target device.

Downloading Software

The procedure to download the software is as follows:

1. Select a device from the downloading target devices on the Device Setting dialog box. And then check the checkbox at the left end of the device list.

Download Setting								
Result	Device Tag	Node address	MANUFAC_ID	DEV_TYPE	DEV_REV	Software file name		
	PT1001	0x17	0x594543	0x000c	3	594543000C_000C_EJX-SD_ORIGINAL

When a communication error occurs, retry software download again. In that case, if procedure of software download fails due to internal status of FOUNDATION fieldbus device, retry software download once again.

- Clicking [Stop] button on the Communication Executing dialog box can stop the downloading. After clicking this button, a confirmation dialog box displays, clicking [OK] will stop the downloading. However, if the following message occurs during the downloading communication, the downloading process cannot be stopped.
 - The software downloading to the device <Device Tag Name> starts.

Appendix E Troubleshooting Information

If FieldMate appears to be operating incorrectly, follow the procedure below and send the created file to a Yokogawa sales office or your nearest sales representative.

Select Start \rightarrow YOKOGAWA FieldMate \rightarrow Tools \rightarrow Export FieldMate Info.

This causes a list of the device information files that have been installed and detailed logs such as installation logs and communication logs to be compressed into one file. The export and creation destination directory and file name are as follows:

FieldMate installation drive\FM\ExportFieldMateinfo.fmi

1	ExportFieldMateInfo	x
	Export File Path	
	C:\FM\ExportFieldMateInfo.fmi Browse	
	Additional Files to Export	
	Add File	
	Delete File	
	☑ Open Export File Path after Completion.	
	Export Exit	
	Ą	pp.E01E.a

Figure App.-E-1

The export destination directory and file name are as follows: FieldMate installation drive\FM\ExportFieldMateinfo.fmi

Appendix F Troubleshooting for USB Modem

Please confirm the following points first if the modem does not seem to function properly.

If the problem (s) persists, please contact our service representative in your region.

(Note): Figures in brackets () indicate document number.

Table App.-F-1

#	Problem	Symptoms and Counter measures				
1	USB Modem cannot be recognized. Check Device Manager on your PC. If not found, see solution (s) at right. - Relating to install procedure	 Driver software for USB Modem is not installed properly. If in Device Manager "CP210xUSB to UART Bridge Controller," is indicated as an unknown device, disconnect the modem from the USB port and Double-click the following file. FieldMate CD-ROM\USB_Modem_Drive\Common \ CP210xVCPInstaller.exe. 				
	Ditto - Relating to your PC environment	 An "unknown device" may have hampered the driver software for the USB Modem. Delete the "unknown device" in Device Manager, disconnect the modem from the USB port and then connect the modem again. 				
	Ditto - Relating to your PC environment	 COM Port is being occupied by other devices. Disconnect the other devices using COM port, disconnect the modem and then connect it again. 				
	Ditto - Relating to current operation	 COM Port is being occupied by another communication application. Terminate another communication application first, Disconnect the modem from the USB port, wait for more than 30 seconds, and then connect the modem again. If the problem persists, restart the PC and check whether the modem can be recognized. 				
	Ditto - Relating to current operation	 COM Port is being occupied by FieldMate (i.e., in cases where the modem has been disconnected then reconnected unexpectedly) Disconnect the modem from the USB port, wait for more than 30 seconds, and then connect the modem again. If the problem persists, restart the PC and check whether the modem can be recognized. 				
2	Communication with field device cannot be established.	PC does not recognize the modem, or driver software cannot be installed properly. \rightarrow Refer to Problem #1.				
	Ditto	USB Modem is not connected to the PC. \rightarrow Confirm that the modem is connected to the USB port of the PC.				
	Ditto	USB Modem is not connected to the 4-20mA line with communication. → Confirm that the current setup follows the description in Part C-3 of this document.				
	Ditto	Field device is not connected. → Confirm that the current setup follows the description in Part C-3 of this document.				
	Ditto	 Power line for the field device is OFF. → Confirm that the current setup follows the description and power-on procedure in Part C-3 of this document. Also confirm that the required power is supplied to the four wired device. On a field device with an external indicator, check that power is supplied. On a field device with no external indicator, check the voltage on both sides of the load register according to Part C-3 of this document. 				
	Ditto	 Load resistor's resistance is too low. More than 250 OHM is required for stable communication. Check the load resistor currently being used, change or replace it accordingly. 				
3	When connecting the USB Modem, the PC hangs up or reboots.	 Modem consumes current in excess of that which the USB can accommodate. Using a USB hub, disconnect the other USB devices. If the problem persists, contact our service representative in your region. 				

Appendix G How to clear VCR (NI-FBUS only)

Outline

Although FieldMate has adopted NI-FBUS communication card of National Instrument for FOUNDATION fieldbus H1, the communication card itself contains the following glitches.

If the specific operation continues, VCR, FOUNDATION fieldbus H1 communication resources, may reach the maximum limit (100) eventually communication with FOUNDATION fieldbus H1 device cannot be established thereafter.

Note : the specific operation

After starting NI-FBUS Communications Manager, PC is off or stand-by (not shutdown) and start again. Then change the FOUNDATION fieldbus H1 segment connection.

If the problem above is encountered, clear VCR of NI-FBUS card by this tool incorporated in FieldMate.

VCR (Virtual Communication Relationship)

A Fieldbus device has many VCRs so that it can communicate with various devices or applications at the same time. It is possible because the VCR guarantees the message goes to the correct partner without risks of losing information. A VCR is identified by an application with device-local identifier called "index" specified in Application Layer. It is also identified from other devices with DL-address specified in Data Link Layer. A VCR has a queue (fast-in, fast-out memory) or a buffer (memory to store data) to save messages.

It is the responsibility of network configuration to give the correct information of the index and DLaddress as well as other operating information to VCRs through Network Management.

Screen

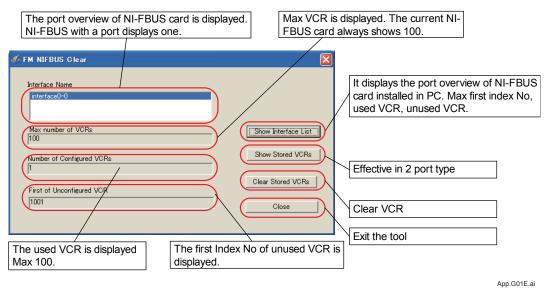

Figure App.-G-1 FM NIFBUS Clear

Operation Procedure

In case that FOUNDATION fieldbus H1 communication suddenly stops, which functioned properly on FieldMate before, execute the following operation procedure.

- 1. Exit FieldMate.
- 2. Activate /FM/Tool/FMNIFBUSClear.exe
- 3. A window above is displayed. Check "Number of Configured VCRs". If the values are close to 100, VCR needs to be cleared. Proceed 3. If the valued are small, the other cause of trouble such as communication card disorder is expected.
- 4. Select "Clear Stored VCRs" and exit.
- 5. Restart FieldMate and check whether FOUNDATION fieldbus H1 communication functions properly.

Appendix H Assignment Change of FDT 1.2 and FDT 2.0 DTM

Outline

From Segment Viewer or Device Navigator, when you right-click a device and select Assigned DTM, the DTM that is previously assigned to the device is started up in DTM Works. The DTM that starts up is dependent on the model and the device revision that is previously assigned.

Assignment Change from FDT 1.2 DTM to FDT 2.0 DTM

A device revision must be assigned to a device DTM only once. If device revision 3 of EJX is assigned to EJX V3.1 DTM, this device revision can no longer be assigned. Each device revision must be unique for a device DTM.

Follow these steps to change the device DTM assignment from FDT 1.2 DTM to FDT 2.0 DTM:

1. From your desktop, select [Start] > [YOKOGAWA FieldMate] > [DTM Setup].

The DTM Setup Tool window appears.

- Delete the device revision information assigned to the FDT 1.2 DTM by performing these steps:
 - a. Double-click the FDT 1.2 DTM.

Alternatively, select the FDT 1.2 DTM and click the [Edit] button.

The Edit window of the DTM Setup Tool appears.

- b. In the Associations section, select the device revision information.
- c. Click the [Delete] button.
- d. Click [OK].
- 3. Assign new device revision information to the FDT 2.0 DTM by performing these steps:
 - a. Double-click the FDT 2.0 DTM.

Alternatively, select the FDT 2.0 DTM and click the [Edit] button.

The Edit window of the DTM Setup Tool appears.

- b. In the Device Types section, from the Vendor drop-down list, select a vendor.
- c. From the Model drop-down list, select a device model.
- d. In the Revisions box, type the device revision. For multiple device revisions, separate the device revisions with a comma.
- e. Click the [Add] button.

The Edit window of the DTM Setup Tool closes.

- 4. In the DTM Setup Tool window, click [Apply].
- 5. Click [OK].

The device revision information is assigned to the FDT 2.0 DTM.
