A TEREX BRAND

Service and Repair Manual

	Serial Number Range
S®-40 XC™	from S40XCH-104
S®-40 HF	
S®-40 TraX™	
S®-45 XC™	from S45XCH-101
S®-45 HF	
S®-45 TraX™	

This manual includes:
Repair procedures
Fault Codes
Electrical and
Hydraulic Schematics

For detailed maintenance procedures, refer to the appropriate Maintenance Manual for your machine.

Part No. 1286829GT
Rev B
October 2019

Introduction

Important

Read, understand and obey the safety rules and operating instructions in the appropriate Operator's Manual on your machine before attempting any procedure.

This manual provides troubleshooting and repair procedures for qualified service professionals.

Basic mechanical, hydraulic and electrical skills are required to perform most procedures. However, several procedures require specialized skills, tools, lifting equipment and a suitable workshop. In these instances, we strongly recommend that maintenance and repair be performed at an authorized Genie dealer service center.

Compliance

Machine Classification

Group B/Type 3 as defined by ISO 16368

Machine Design Life

Unrestricted with proper operation, inspection and scheduled maintenance.

Technical Publications

Genie has endeavored to deliver the highest degree of accuracy possible. However, continuous improvement of our products is a Genie policy. Therefore, product specifications are subject to change without notice.

Readers are encouraged to notify Genie of errors and send in suggestions for improvement. All communications will be carefully considered for future printings of this and all other manuals.

Safety Rules

Danger

Failure to obey the instructions and safety rules in this manual and the appropriate Operator's Manual on your machine will result in death or serious injury.

Many of the hazards identified in the operator's manual are also safety hazards when maintenance and repair procedures are performed.

Do Not Perform Maintenance Unless:

☑ You are trained and qualified to perform maintenance on this machine.

☑ You read, understand and obey:

- manufacturer's instructions and safety rules
- employer's safety rules and worksite regulations
- applicable governmental regulations

☑ You have the appropriate tools, lifting equipment and a suitable workshop.

Safety Rules

Personal Safety

Any person working on or around a machine must be aware of all known safety hazards. Personal safety and the continued safe operation of the machine should be your top priority.

Read each procedure thoroughly. This manual and the decals on the machine, use signal words to identify the following:

Safety alert symbol—used to alert personnel to potential personal injury hazards. Obey all safety messages that follow this symbol to avoid possible injury or death.

⚠ DANGER Indicates a imminently hazardous situation which, if not avoided, will result in death or serious injury.

⚠ WARNING Indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury.

⚠ CAUTION Indicates a potentially hazardous situation which, if not avoided, may cause minor or moderate injury.

NOTICE Indicates a potentially hazardous situation which, if not avoided, may result in property damage.

Be sure to wear protective eye wear and other protective clothing if the situation warrants it.

Be aware of potential crushing hazards such as moving parts, free swinging or unsecured components when lifting or placing loads. Always wear approved steel-toed shoes.

Workplace Safety

Any person working on or around a machine must be aware of all known safety hazards. Personal safety and the continued safe operation of the machine should be your top priority.

Be sure to keep sparks, flames and lighted tobacco away from flammable and combustible materials like battery gases and engine fuels. Always have an approved fire extinguisher within easy reach.

Be sure that all tools and working areas are properly maintained and ready for use. Keep work surfaces clean and free of debris that could get into machine components and cause damage.

Be sure any forklift, overhead crane or other lifting or supporting device is fully capable of supporting and stabilizing the weight to be lifted. Use only chains or straps that are in good condition and of ample capacity.

Be sure that fasteners intended for one time use (i.e., cotter pins and self-locking nuts) are not reused. These components may fail if they are used a second time.

Be sure to properly dispose of old oil or other fluids. Use an approved container. Please be environmentally safe.

Be sure that your workshop or work area is properly ventilated and well lit.

Specifications

Machine Specifications

Tires and wheels	
Tire size, rough terrain (Foam filled)	315/55D20 12 ply 20 in x 11 in wheel 50.8 cm x 27.9 cm wheel
Tire weight, rough terrain (minimum)	290 lbs 312 kg
Tire size, high flotation	33/16LL 500 10 ply 19.5 in x 14 in wheel 49.5 cm x 35.6 cm wheel
Tire pressure	38 psi / 2.6 bar
Tire weight, high flotation (minimum)	145 lbs 66 kg
Wheel lugs	9 @ 5/8 - 18
Lug nut torque, dry	240 ft-lbs 325 Nm
Lug nut torque, lubricated	180 ft-lbs 244 Nm

Track Components, TraX option	
Track material	Rubber
Weight (each)	480 lbs 218 kg

Fluid capacities	
LPG tank	33.5 pounds 15.2 kg
Fuel tank (standard)	20 gallons 75.7 liters
Fuel tank (optional)	30 gallons 113.6 liters
Hydraulic tank	45 gallons 170 liters
Hydraulic system (including tank)	55 gallons 208 liters
Drive hubs	20 fl oz 592 cc
Turntable rotation drive hub	8 fl oz 237 cc

Drive hub oil type: SAE 90 multipurpose hypoid gear oil API service classification GL5

For operational specifications, refer to the Operator's Manual.

Specifications

Performance Specifications

Drive speeds, 2WD and 4WD	
Stowed	40 ft / 6.8 - 7.4 sec 12.2 m / 6.8 - 7.4 sec
Raised or extended	40 ft / 40 - 45 sec 12.2 m / 40 - 45 sec
Drive speeds, TraX option	
Stowed	40 ft / 9 - 11 sec 12.2 m / 9 - 11 sec
Raised or extended	40 ft / 40 - 45 sec 12.2 m / 40 - 45 sec
Gradeability	See Operator's Manual
Braking distance, maximum	
High range on paved surface	3 - 4 ft 0.9 - 1.2 m
Boom function speeds, maximum from platform controls	
Jib boom up, S-45 models	48 - 53 seconds
Jib boom down, S-45 models	28 - 33 seconds
Platform level (10° range of motion)	3 - 5 seconds
Boom up	50 - 60 seconds
Boom down	50 - 60 seconds
Boom extend	30 - 60 seconds
Boom retract	15 - 35 seconds
Turntable rotate, 360° Stowed	70 - 100 seconds
Turntable rotate, 360° Not stowed	120 - 140 seconds

For operational specifications, refer to the Operator's Manual.

Hydraulic Oil Specifications

Hydraulic Fluid Specifications

Genie specifications require hydraulic oils which are designed to give maximum protection to hydraulic systems, have the ability to perform over a wide temperature range, and the viscosity index should exceed 140. They should provide excellent antiwear, oxidation prevention, corrosion inhibition, seal conditioning, and foam and aeration suppression properties.

Cleanliness level, minimum	ISO 15/13
Water content, maximum	250 ppm
Recommended Hydraulic Fluid	
Hydraulic oil type	Chevron Rando HD Premium
Viscosity grade	32
Viscosity index	200
Optional Hydraulic Fluids	
Mineral based	Shell Tellus S2 V 32 Shell Tellus S2 V 46 Shell Tellus S4 VX 32 Shell Shell Donax TG (Dexron III) Chevron 5606A
Biodegradable	Petro Canada Environ MV 46
Fire resistant	UCON Hydrolube HP-5046

Note: Genie specifications require additional equipment and special installation instructions for the approved optional fluids. Consult Genie Product Support before use.

NOTICE Optional fluids may not have the same hydraulic lifespan and may result in component damage.

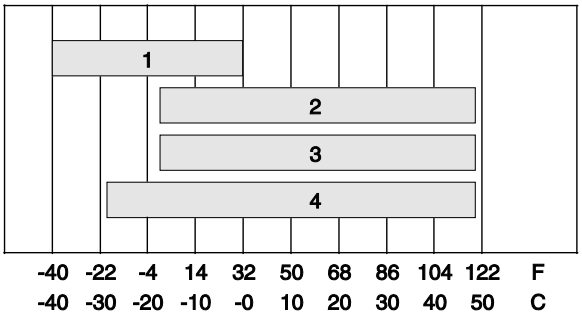
Note: Extended machine operation can cause the hydraulic fluid temperature to increase beyond it's maximum allowable range. If the hydraulic fluid temperature consistently exceeds 200°F / 90°C an optional oil cooler may be required.

NOTICE

Do not top off with incompatible hydraulic fluids. Hydraulic fluids may be incompatible due to the differences in base additive chemistry. When incompatible fluids are mixed, insoluble materials may form and deposit in the hydraulic system, plugging hydraulic lines, filters, control valves and may result in component damage.

Note: Do not operate the machine when the ambient air temperature is consistently above 120°F / 49°C.

Hydraulic Fluid Temperature Range



Ambient air temperature

1 Chevron hydraulic oil 5606A
2 Petro-Canada Environ MV 46
3 UCON Hydrolube HP-5046D
4 Chevron Rando HD premium oil MV

Chevron Rando HD Premium Oil MV Fluid Properties

ISO Grade	32
Viscosity index	200
Kinematic Viscosity cSt @ 200°F / 100°C cSt @ 104°F / 40°C	 7.5 33.5
Brookfield Viscosity cP @ -4°F / -20°C cP @ -22°F / -30°C	 1040 3310
Flash point	375°F / 190°C
Pour point	-58°F / -50°C
Maximum continuous operating temperature	171°F / 77°C

Note: A hydraulic oil heating system is recommended when the ambient temperature is consistently below 0°F / -18°C.

Note: Do not operate the machine when the ambient temperature is below -20°F / -29°C with Rando HD Premium MV.

Specifications

Chevron 5606A Hydraulic Oil Fluid Properties

ISO Grade	15
Viscosity index	300
Kinematic Viscosity	
cSt @ 200°F / 100°C	5.5
cSt @ 104°F / 40°C	15.0

Hydraulic Component Specifications

Drive Pump	
Type: bi-directional variable displacement piston pump	
Flow rate @ 2500 rpm	0 - 28 gpm 0 - 122.6 L/min
Drive pressure, maximum	3625 psi 250 bar

Charge Pump	
Type	gerotor
Displacement per revolution	0.85 cu in 13.9 cc
Flow rate @ 2500 rpm	9 gpm 34 L/min
Charge pressure @ 2500 rpm	310 psi 21.4 bar

Function Pump	
Type	gear, pressure balanced
Displacement	1.04 cu in 17 cc
Flow rate @ 2500 rpm	10.69 gpm 40.5 L/min

Auxiliary Pump	
Type: fixed displacement gear pump	
Displacement per revolution	1.75 gpm 6.62 L/min
Auxiliary pump relief pressure	3200 psi 220.6 bar

Function manifold	
Function relief valve pressure	3200 psi / 220.6 bar
Boom extend relief valve pressure	1950 psi 134 bar
Steer regulator all models	2 gpm / 7.6 lpm
Oscillate relief valve pressure (@2500 rpm)	650 psi 49 bar

Traction Manifold	
Hot oil relief pressure	280 psi 19.3 bar

Two-speed drive motors, 2WD and 4WD models	
Displacement per revolution low speed	0.99 cu in / 16.3 cc
Displacement per revolution high speed	1.83 cu in / 30 cc

Hydraulic Filters	
Medium pressure filter	Beta 3 ˆ 200
Medium pressure filter bypass pressure	51 psi 3.5 bar
Hydraulic tank return filter	10 micron with 25 psi / 1.7 bar bypass

Specifications

Manifold Component Specifications

Plug torque	
SAE No. 4	13 ft-lbs / 18 Nm
SAE No. 6	18 ft-lbs / 24 Nm
SAE No. 8	50 ft-lbs / 68 Nm
SAE No.10	55 ft-lbs / 75 Nm
SAE No. 12	56 ft-lbs / 75.9 Nm

Specifications

Ford MSG-425 EFI Engine

Displacement	153 cu in 2.5 liters
Number of cylinders	4
Bore & stroke	3.5 x 3.9 inches 89 x 100 mm
Horsepower	60 @ 2500 rpm 45 kW @ 2500 rpm
Firing order	1 - 3 - 4 - 2
Low engine idle (computer controlled)	1000 rpm 33.3 Hz
Low function idle (computer controlled)	1600 rpm 53.3 Hz
High function idle (computer controlled)	2500 rpm 83.3 Hz
Compression ratio	9.7:1
Compression pressure (approx.)	
Pressure (psi or bar) of lowest cylinder must be at least 75% of highest cylinder	
Lubrication system	
Oil pressure (operating temperature @ 2000 rpm)	29 to 39 psi 2.75 to 4.1 bar
Oil capacity (including filter)	6.7 quarts 6.4 liters
Oil pressure switch	
Oil pressure switch point	7.5 psi 0.51 bar
Oil viscosity requirements	
Extreme operating temperatures may require the use of alternative engine oils. For oil requirements, refer to the Engine Operator Handbook on your machine.	
Electronic fuel pump	
Fuel pressure, static	60 psi 4.1 bar
Fuel flow rate	0.58 gpm 2.2 L/min
Fuel requirement	
For fuel requirements, refer to the engine Operator's Manual on your machine.	
Ignition system	
Spark plug type	Motorcraft AYFS-32Y-R
Spark plug gap	0.049 to 0.053 inches 1.25 to 1.35 mm
Engine coolant	
Capacity	11.5 quarts 10.9 liters
Coolant temperature switch	
Temperature switch point	230°F 110°C
Starter motor	
Normal engine cranking speed	200 to 250 rpm
Current draw, normal load	140-200A
Current draw, maximum load	800A
Alternator	
Output	95A, 13.8V DC
Battery	
Type	12V DC, Group 34/78
Quantity	1
Cold cranking ampere @ 0°F	900A
Reserve capacity @ 25A rate	200 minutes

Specifications

Deutz D2011 L03i Engine

Displacement	142 cu in 2.33 liters
Number of cylinders	3
Bore and stroke	3.7 x 4.4 inches 94 x 112 mm
Horsepower	48 @ 2800 rpm 36 kW @ 2800 rpm
Firing order	1 - 2 - 3
Low idle	1500 rpm 313 Hz
High idle	2500 rpm 521.7 Hz
Compression ratio	19:01
Compression pressure	362 to 435 psi 25 to 30 bar
Governor	centrifugal mechanical
Valve clearance, cold	
Intake	0.012 in 0.3 mm
Exhaust	0.020 in 0.5 mm
Lubrication system	
Oil pressure	20 to 44 psi 1.4 to 3 bar
Oil capacity (including filter)	9.5 quarts 9 liters
Oil viscosity requirements	
-22° F to 86° F/ -30° C to 30° C	5W-30 (synthetic)
-4° F to 90° F / -20° C to 32° C	10W-40
Above 23° F / -5° C	20W-50

Units ship with 15W-40.
Extreme operating temperatures may require the use of alternative engine oils. For oil requirements, refer to the Engine Operator Handbook on your machine.

Oil temperature switch	
Temperature switch point	300°F 149°C
Oil pressure switch	
Oil pressure switch point	22 psi 1.5 bar
Fuel injection system	
Injection pump make	Bosch
Injection pump pressure, maximum	15000 psi 1034 bar
Injector opening pressure	3046 psi 210 bar
Fuel requirement	
For fuel requirements, refer to the engine Operator's Manual on your machine.	
Starter motor	
Current draw, no load	90A
Brush length, new	0.72 in 18.5 mm
Brush length, minimum	0.27 in 7 mm
Battery	
Type	12V DC, Group 34/78
Quantity	1
Cold cranking ampere	900A
Reserve capacity @ 25A rate	200 minutes
Alternator output	60A @ 14V DC
Fan belt deflection	3/8 to 1/2 inch 9 to 12 mm

Specifications

Deutz D 2.9 L4 Engine

Displacement	177 cu in 2.9 liters
Number of cylinders	4
Bore and stroke	3.6 x 4.3 inches 92 x 110 mm
Horsepower	48.8 @ 2600 rpm 37 kW @ 2600 rpm
Firing order	1 - 3 - 4 - 2
Low idle	1500 rpm 313 Hz
High idle	2500 rpm 521.7 Hz
Compression ratio	18.4:1
Compression pressure	362 to 435 psi 25 to 30 bar
Governor	electronic
Lubrication system	
Oil pressure (@ 2000 rpm)	40 to 60 psi 1.4 to 3 bar
Oil capacity (including filter)	9.4 quarts 9 liters
Oil viscosity requirements	
-22° F to 86° F/ -30° C to 30° C	5W-30 (synthetic)
-4° F to 90° F / -20° C to 32° C	10W-40
Above 23° F / -5° C	20W-50
Units ship with 15W-40. Extreme operating temperatures may require the use of alternative engine oils. For oil requirements, refer to the Engine Operator Handbook on your machine.	
Oil temperature switch	
Temperature switch point	257°F 125°C
Oil pressure switch	
Oil pressure switch point	20 psi 1.4 bar
Engine coolant	
Capacity	10 quarts 9.4 liters
Fuel injection system	
Injection pump make	Bosch
Injection pump pressure, maximum	15000 psi 1034 bar
Injector opening pressure	3046 psi 210 bar
Fuel requirement	
For fuel requirements, refer to the engine Operator's Manual on your machine.	
Starter motor	
Cranking speed	150-250 RPM
Current draw, normal load	250A to 400A
Output	3.2kW
Battery	
Type	12V DC
Quantity	1
Cold cranking ampere	1000A
Reserve capacity @ 25A rate	200 minutes
Alternator output	95A @ 14V DC
Fan belt deflection	3/8 to 1/2 inch 9 to 12 mm

Specifications

Perkins 404F-E22T Engine

Displacement	134 cu in 2.2 liters
Number of cylinders	4
Bore and Stroke	3.31 x 3.94 inches 84 x 100 mm
Horsepower	48 @ 2800 rpm 38 kW @ 2500 rpm
Firing order	1 - 3 - 4 - 2
Low idle	1500 rpm 313 Hz
High idle	2500 rpm 441.7 Hz
Compression ratio	18:1
Compression pressure	426 psi 29.4 bar
Pressure (psi) of lowest cylinder must be within 50 psi / 3.45 bar of highest cylinder	
Governor	electronic
Valve Clearance, cold	
Intake	0.008 in 0.2 mm
Exhaust	0.008 in 0.2 mm
Lubrication system	
Oil pressure (@ 2000 rpm)	40 to 60 psi 1.4 to 3 bar
Oil capacity (including filter)	9.4 - 11.2 quarts 8.9 - 10.6 liters
Oil viscosity requirements	
Below 86°F / 30°C	5W-20
-4°F to 104°F / -20°C to 40°C	10W-30
Above 14°F / -10°C	15W-40
Unit ships with 15W-40. Extreme operating temperatures may require the use of alternative engine oils. For oil requirements, refer to the Engine Operator Manual for your engine.	
Oil pressure sending unit	
Oil pressure switch point	14.2 psi 1 bar
Fuel injection system	
Injection pump make	Zexel
Injection pressure	2133 psi 147 bar
Fuel requirement	
For fuel requirements, refer to the engine Operator Manual for your engine.	
Alternator output	85A @ 12V DC
Fan belt deflection	3/8 in 10 mm
Starter motor	
Current draw, no load	140A - 200A
Brush length, new	0.7480 in 19 mm
Brush length, minimum	0.5 in 12.7 mm
Battery	
Type	12V DC
Quantity	1
Cold cranking ampere	1000A
Reserve capacity @ 25A rate	200 minutes
Engine coolant	
Capacity	7.7 quarts 7.3 liters
Coolant temperature switch	
Temperature switch point	221° F 105° C

Specifications

Machine Torque Specifications

Platform rotator	
1-8 center bolt, GR 5	
Dry	615 ft-lbs 834 Nm
3/8 -16 bolts, GR 8	
Dry *(use blue thread locking compound)	35 ft-lbs* 47.5 Nm*
Turntable rotate assembly	
Rotate bearing mounting bolts, lubricated	160 ft-lbs 217 Nm
Drive motor/brake mounting bolts, dry *(use blue thread locking compound)	49 ft-lbs* 66.4 Nm*
Drive motor/brake mounting bolts, lubricated	37 ft-lbs 50 Nm
Drive motor and hubs	
Drive hub mounting bolts, dry	210 ft-lbs 284 Nm
Drive hub mounting bolts, lubricated	160 ft-lbs 217 Nm

TraX™ Torque Specifications

Hub adapter to drive hub fasteners	
Lug nut torque, dry	230 ft-lbs 312 Nm
Lug nut torque, lubricated	170 ft-lbs 230 Nm
Idler and bogey wheel fasteners	
3/4-10 bolts, GR 8, dry	375 ft-lbs 508 Nm
3/4-10 bolts, GR 8, lubricated	281 ft-lbs 381 Nm

Specifications

Hydraulic Hose and Fitting Torque Specifications

Your machine is equipped with Parker Seal-Lok™ ORFS or 37° JIC fittings and hose ends. Genie specifications require that fittings and hose ends be torqued to specification when they are removed and installed or when new hoses or fittings are installed.

Seal-Lok™ Fittings

(hose end - ORFS)

SAE Dash Size	Torque
-4	18 ft-lbs / 25 Nm
-6	30 ft-lbs / 41 Nm
-8	40 ft-lbs / 55 Nm
-10	60 ft-lbs / 81 Nm
-12	85 ft-lbs / 115 Nm
-16	110 ft-lbs / 150 Nm
-20	150 ft-lbs / 205 Nm
-24	230 ft-lbs / 315 Nm

JIC 37° Fittings

(swivel nut or hose connection)

SAE Dash Size	Thread Size	Flats

-16	(All types)	200 ft-lbs / 271,2 Nm
-20	(All types)	250 ft-lbs / 339 Nm
-24	(All types)	305 ft-lbs / 413,5 Nm

Torque Procedure

Seal-Lok™ fittings

1 Replace the O-ring. The O-ring must be replaced anytime the seal has been broken. The O-ring cannot be re-used if the fitting or hose end has been tightened beyond finger tight.

Note: The O-ring in Parker Seal Lok™ fittings and hose end are custom-size O-rings. They are not standard size O-rings. They are available in the O-ring field service kit (Genie part number 49612).

2 Lubricate the O-ring before installation.

3 Be sure the O-ring face seal is seated and retained properly.

4 Position the tube and nut squarely on the face seal end of the fitting, and tighten the nut finger tight.

5 Tighten the nut or fitting to the appropriate torque. Refer to the appropriate torque chart in this section.

6 Operate all machine functions and inspect the hose, fittings and related components to confirm there are no leaks.

JIC 37° fittings

1 Align the tube flare (hex nut) against the nose of the fitting body (body hex fitting) and tighten the hex nut to the body hex fitting to hand tight, approximately 30 in-lbs / 3.4 Nm.

2 Using a permanent ink marker, make a reference mark on one the flats of the hex nut and continue the mark onto the body of the hex fitting. Refer to Illustration 1.

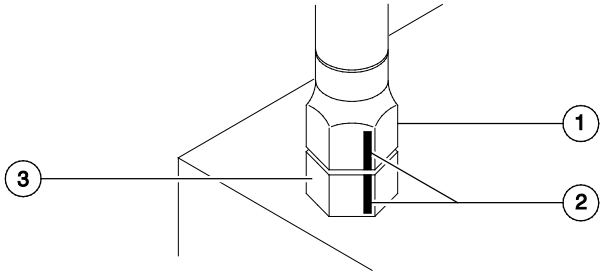

Illustration 1

1 hex nut
2 reference mark
3 body hex fitting

Specifications

3 Working clockwise on the body hex fitting, make a second mark with a permanent ink marker to indicate the proper tightening position. Refer to Illustration 2.

Note: Use the JIC 37° Fitting table in this section to determine the correct number of flats, for the proper tightening position.

Note: The marks indicate the correct tightening positions have been determined. Use the second mark on the body hex fitting to properly tighten the joint after it has been loosened.

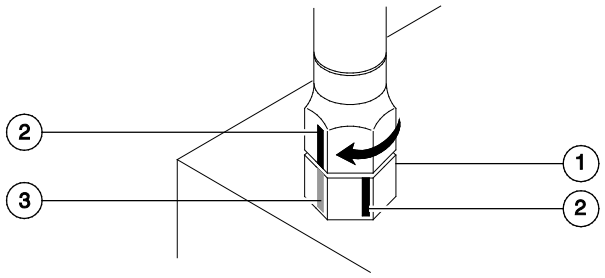

Illustration 2

1 body hex fitting
2 reference mark
3 second mark

4 Tighten the hex nut until the mark on the hex nut is aligned with the second mark on the body hex fitting.

5 Operate all machine functions and inspect the hose, fittings and related components to confirm there are no leaks.

Repair Procedures

Observe and Obey:

☑ Repair procedures shall be completed by a person trained and qualified on the repair of this machine.

☑ Immediately tag and remove from service a damaged or malfunctioning machine.

☑ Repair any machine damage or malfunction before operating the machine.

Before Repairs Start:

☑ Read, understand and obey the safety rules and operating instructions in the appropriate operator's manual on your machine.

☑ Be sure that all necessary tools and parts are available and ready for use.

☑ Use only Genie approved replacement parts.

☑ Read each procedure completely and adhere to the instructions. Attempting shortcuts may produce hazardous conditions.

Machine Configuration:

☑ Unless otherwise specified, perform each repair procedure with the machine in the following configuration:

- Machine parked on a firm, level surface
- Key switch in the off position with the key removed
- The red Emergency Stop button in the off position at both the ground and platform controls
- Wheels chocked
- All external AC power supply disconnected from the machine
- Boom in the stowed position
- Turntable secured with the turntable rotation lock

Repair Procedures

About This Section

Most of the procedures in this section should only be performed by trained service professional in a suitably equipped workshop. Select the appropriate repair procedure after troubleshooting the problem.

Perform disassembly procedures to the point where repairs can be completed. Then to re-assemble, perform the disassembly steps in reverse order.

Symbols Legend

Safety alert symbol—used to alert personnel to potential personal injury hazards. Obey all safety messages that follow this symbol to avoid possible injury or death.

⚠DANGER Indicates a imminently hazardous situation which, if not avoided, will result in death or serious injury.

⚠WARNING Indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury.

⚠CAUTION Indicates a potentially hazardous situation which, if not avoided, may cause minor or moderate injury.

NOTICE Indicates a potentially hazardous situation which, if not avoided, may result in property damage.

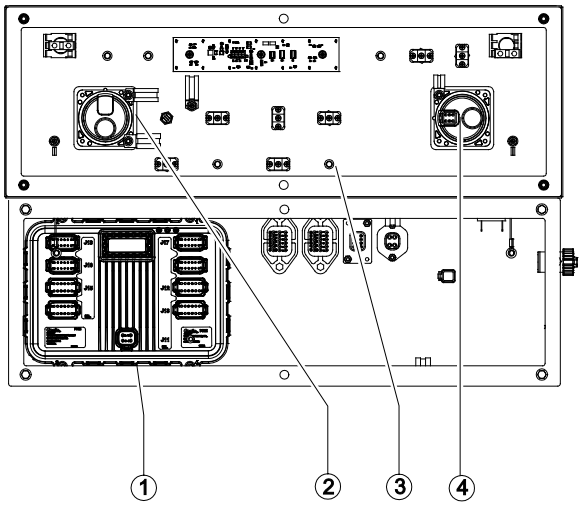
⊙ Indicates that a specific result is expected after performing a series of steps.

☒ Indicates that an incorrect result has occurred after performing a series of steps.

1-1
ALC-600 Control Module

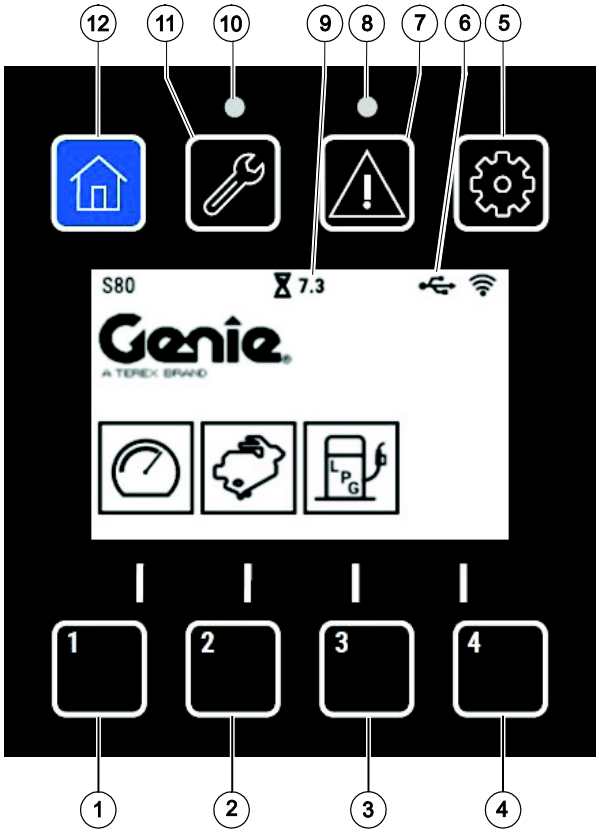
Platform Controls

The platform control box contains the ALC-600 platform Control Module. The platform Control Module receives all signals from the platform switches, joysticks and foot switch, and provides operator feedback through an Indicator Module. The joystick controllers at the platform controls utilize Hall Effect technology and require no calibration. Automatic calibration of center voltage occurs on power up if the signal value is in the valid range. Each joystick controller should operate smoothly and provide proportional speed control over its entire range of motion. The remaining boom functions operate by on/off toggle switches.



1 ALC-600 platform control module
2 primary boom up/down and turntable rotate left/right joystick controller
3 LED indicator module
4 drive/steer joystick controller

1-2
How to Enter ALC-600 Service Mode



ALC-600 Control System Display

1 Number 1 or Escape
2 Number 2 or UP arrow
3 Number 3 or DOWN arrow
4 Number 4 or OK
5 Settings menu
6 (not implemented)
7 Faults menu
8 Fault LED Indicator
9 Engine hours
10 Maintenance LED indicator
11 Maintenance menu
12 Home menu

Control System

The Control System on this machine allows access to calibrations through the Service Mode. The procedures that follow may require the operator to already be in the Service Mode. The Service Mode can only be entered at machine start up and requires a special code.

1 At the ground controls, select the ground control mode using the key switch.

2 Push and hold buttons numbered **2** and **3** underneath the display screen.

3 Pull out the red Emergency Stop button.

4 You will be prompted for a password. Enter **3 - 3 - 2 - 4**.

5 Press the Gear button to access the settings menu.

Note: There will be a delay while the menu is being loaded on the display screen.

6 The machine will now operate normally and allow the viewing and modification of calibrations and parameters.

Note: When a parameter is changed in Service Mode, the change is effective immediately when button 4 (OK) is pushed. Machine restart is not required. A confirmation beep accompanies every save (button 4).

Note: Pushing in the red Emergency Stop button will exit the Service Mode.

Note: If there has been no input for 10 minutes while in Service Mode, the ALC-600 will power down and the Service Mode will be exited, unless the engine is running.

1-3 Full Machine Calibration

Full machine calibration must be completed in the proper sequence when the ALC-600 controller (TCON) in the ground control box has been replaced.

How to Fully Calibrate the Machine

Calibration procedures shall only be completed by qualified technicians that have Genie factory service training.

⚠WARNING Tip-over hazard. Failure to calibrate the machine in the proper sequence could cause the machine to tip over resulting in death or serious injury.

Note: A digital level will be required to perform this procedure.

Note: Start this procedure with the boom in the stowed position.

Full machine calibration must be completed in the following sequence:

- Select model, engine, tires, and region, then cycle power. Refer to Repair Section Display Module.
- Turntable level sensor. Refer to Repair Procedure, *How to Calibrate the Turntable Level Sensor*.
- Load cell sensor. Refer to Repair Procedure, *How to Calibrate the Load Cell Sensor.*
- Primary boom angle sensor. Refer to Repair Procedure, *How to Calibrate the Primary Boom Angle Sensor*.
- Primary boom length sensor. Refer to Repair Procedure, *How to Calibrate the Primary Boom Length Sensor*.
- Select option configuration. Refer to Repair Section, Display Module, *Options.*

1-4
Machine Functions

How to Adjust the Joystick Maximum Speed Setting

The maximum speed of a joystick controlled machine function can be modified from the ground controls display. Whenever a hydraulic cylinder, drive motor or hydraulic pump is replaced, the maximum speed setting should be adjusted to maintain optimum performance. The maximum speed settings on the joystick can be changed to compensate for hydraulic pump wear to maintain peak performance from the machine.

Note: Perform this procedure with the boom in the stowed position.

1 Enter the Service Mode. See Repair Procedure, *How to Enter the Service Mode*.

2 Press the **SETTINGS** button above the display screen.

3 Select **SPEEDS** from the display screen.

4 Navigate to the desired function's Maximum Speed setting.

5 Select the desired setting to change and press **OK**.

6 In the parameter adjustment screen, use the display buttons to change the parameter. Note that the factory default speed is considered 100% for maximum speeds.

7 Scroll and press **OK**. The change is effective immediately.

8 Start the engine from the ground controls.

9 Start a timer and activate the machine function that needs to be adjusted. Using the ground control functions is the same as asking for full joystick deflection at the platform.

10 Record the time it takes for that function to complete a full cycle (ie; boom up).

11 Compare the machine function time with the function times listed in Refer to Specifications, *Performance Specifications*. Determine whether the function time needs to increase or decrease.

12 Adjust the parameter in the ground display to achieve the proper function cycle time.

Control System

How to Adjust the Joystick Ramp Rate Setting

The ramp rate setting is an adjustment that controls the way boom functions start and stop. There are two types of ramp rates to adjust on separate menus:

Ramp Up Time -- the amount of time it takes to accelerate to speed.

Ramp Down Time -- the amount of time it takes to decelerate to a stop

The ramp rate settings of a joystick can be changed to compensate for hydraulic pump wear to maintain peak performance from the machine.

Note: Perform this procedure with the boom in the stowed position.

1 Enter the Service Mode. See Repair Procedure, *How to Enter the Service Mode*.

2 Press the **SETTINGS** button above the display screen.

3 Select **SPEEDS** from the display screen.

4 Navigate to the desired function's Ramp setting.

5 Select the desired setting to change and press **OK**.

6 In the parameter adjustment screen, use the display buttons to change the parameter. Note that the ramp rate is expressed in seconds to complete the ramp.

7 Scroll and press **OK**. The change is effective immediately.

8 Start the engine from the ground controls.

9 Start a timer and activate the machine function that needs to be adjusted. Using the ground control functions is the same as asking for full joystick deflection at the platform.

10 Record the time it takes for that function to complete the ramp.

11 Compare the machine function time with the function times listed in Specifications, *Performance Specifications*. Determine whether the ramp time needs to increase or decrease.

12 Adjust the parameter in the ground display to achieve the proper ramp time.

Note: Refer to *Repair Procedure, Display Module Menus* for ramp rates.

How to Adjust the Joystick Threshold Setting

The threshold setting of a joystick is the minimum output at which a function proportional valve can open and allow the function to operate.

The boom function threshold current should be operating at near zero speed, smoothly with no vibrations.

Note: Perform this procedure with the boom in the stowed position.

1 Enter the Service Mode.

2 Press the **SETTINGS** button above the display screen.

3 Select **SPEEDS** from the display screen.

4 Navigate to the desired function's Threshold setting.

5 Select the desired setting to change and press **OK**.

6 In the parameter adjustment screen, use the display buttons to change the parameter. Note that the factory default speed is considered 100% for threshold values.

7 Scroll and press **OK**. The change is effective immediately.

8 Switch the machine control to platform control and start the engine from the platform controls..

9 Using the joystick, verify that the function engages smoothly and without sudden movement or excessive joystick dead spots.

10 Adjust the parameter in the ground display to achieve a smooth function threshold.

1-5 How to Enter ALC600 Software Update Mode

1 Go to the Genie website http://firmware.genielift.com, select your machine and ALC600 controller type. Enter the machine serial number and part number for the software.

2 Download the software to a USB flash drive. If zipped, extract the files to the USB flash drive.

3 With the machine off, open the GBOX (ground box) lid and then remove the four Torx head screws securing the Display Controller (DISCON) door and remove the door to expose the USB port.

4 Insert the flash drive into the USB port.

5 Set key switch to ground and pull out the red ground ESTOP while holding buttons 1 and 4.

6 The Display Controller will go into the bootloader mode.

7 Browse and select the desired software. Follow the on-screen guidance to start the update procedure.

8 When complete, turn off machine.

9 Remove USB flash drive, re-install the Display Controller door and close the GBOX (ground box).

10 Power up normally.

11 As the display controller starts, operator shall verify on the start-up screen that the proper software and revision are displayed.

12 Perform a function check.

How to Replace the Display Controller (DISCON) Module

1 Push in the red Emergency Stop button to the off position at both the ground and platform controls.

2 Disconnect the negative terminal from the start battery and auxiliary battery, if equipped.

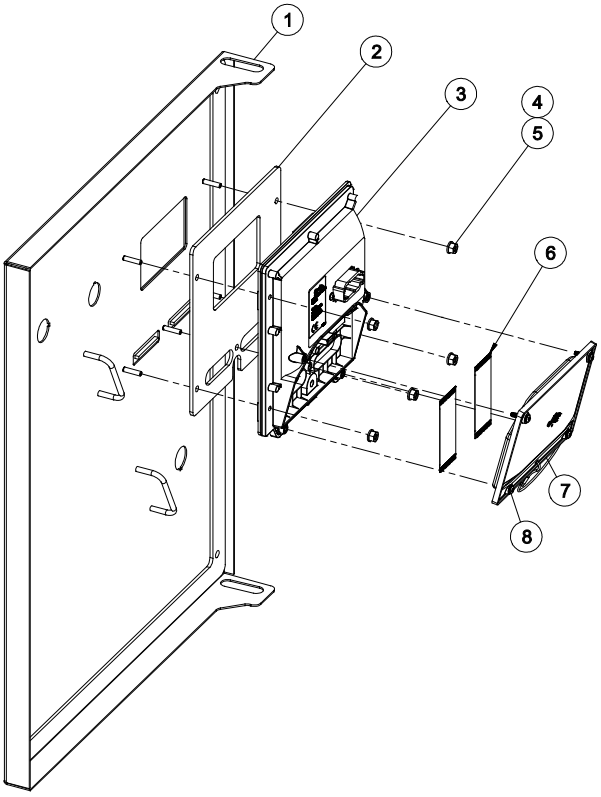

Illustration 1

1 ground box lid
2 DISCON gasket
3 DISCON
4 8/32 nylock nuts
5 #8 flat washers
6 ribbon cable
7 DISCON door
8 Torx head screws

3 Open the ground box lid (1) and disconnect the wire harness going to the display controller (DISCON).

4 Remove the DISCON door from the back by loosening the four Torx head screws (8) and remove the two ribbon cables (6) connecting the ground box overlay to the DISCON.

Note the orientation of the cables for reassembly.

5 Remove the DISCON from the ground control box lid by removing the five hex nuts and washers (4, 5). Discard the nuts and washers.

Note the lanyard attachment point for reassembly.

6 Remove the old DISCON gasket (2) from the ground box lid and clean the lid surface from any dirt, oil or old adhesive residue. Use a 99% solution of isopropyl alcohol to clean the surface. Allow the surface to completely dry.

Note: Both the ground box lid and new gasket must be 70° F / 21° C or higher at the time of application. Application of the new gasket at lower temperatures is not recommended.

7 Peel the adhesive protective film from the back of the new gasket. Carefully line up the new gasket over the ground box lid, making sure the cutouts for the LCD screen, ribbon cables and mounting studs are centered and lining up with the gasket. Apply the new gasket to the ground box lid and work from the center out to eliminate air bubbles and make sure all the gasket edges are securely fixed.

Note: Once applied it is not recommended to lift the gasket and attempt to reposition it.

Control System

8 Install the new DISCON onto the ground box lid and fasten it using the new hex nuts and washers. All five fastening points must be used. Attach the DISCON door's lanyard to the DISCON's mounting stud.

9 Evenly tighten the nuts, beginning with the lower center nut, working out and then up.

10 Install the new ribbon cables, connecting the ground box overlay to the DISCON and reinstall the DISCON door, using the Torx head screws removed in step 4. Be sure to fully lock the tabs after the ribbon calbes have been fully inserted.

11 Reconnect the wire harness going to the DISCON, then close and fasten the ground box lid.

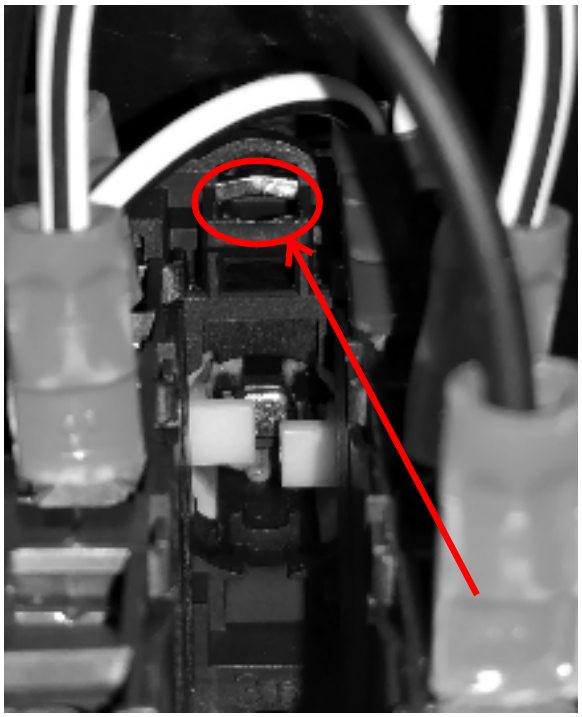
12 Reconnect the negative terminal to the start battery and auxiliary batteries, if equipped.

1-8 How to Replace the Ground Box Control Overlay

1 Push in the red Emergency Stop button to the off position at both the ground and platform controls.

2 Disconnect the negative terminal from the start battery and auxiliary battery, if equipped.

3 Open the ground control box and remove the switch contacts from the function enable switch, key switch and the red emergency stop button. Do not disconnect the wires. Insert a small screwdriver into the loop at the base of the contacts and engage the release mechanism.

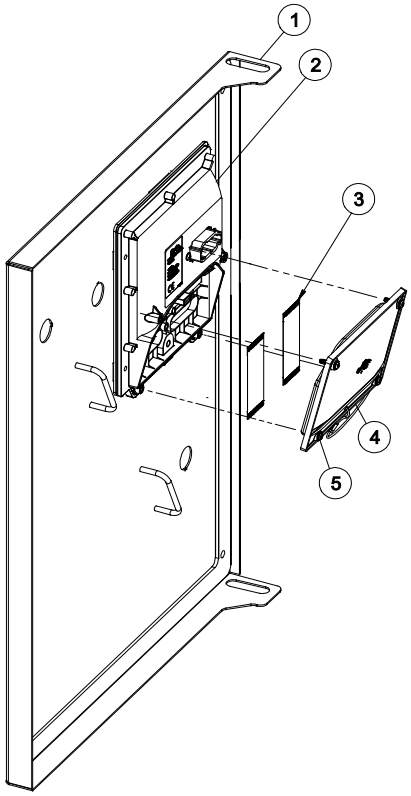


4 Unscrew the nut holding the buttons and key switch and remove the key switch and buttons.

Note the orientation of the key switch so it can be reassembled in the same position.

5 Disconnect the wire harness connected to the DISCON and cut the zip ties securing the harness to the ground box lid. Do not remove the wire harness from the ground box.

6 Remove the DISCON door (4) and disconnect the ribbon cables (3) from the Display Controller (DISCON) (2). Note the orientation of the cables for reassembling.



1 ground box lid
2 DISCON
3 ribbon cables
4 DISCON door
5 Torx head screws

7 Remove the ground box lid (1) from the ground box.

8 Remove the old overlay and clean the ground box lid surface from any dirt, oils or old adhesive residue. Clean the lid with 99% isopropyl alcohol. Allow the surface to completely dry.

9 Before placing the new overlay, make sure the temperature of the lid and overlay is between 80-100° F / 26-38° C. Application below 80° F / 26° C is not recommended.

10 Peel the adhesive protective film from the back of the overlay. Carefully align the overlay, making sure the LCD screen cutout, push buttons and key switch are centered. Apply the overlay to the ground box, applying pressure evenly to eliminate any air bubbles.

Note: Pay particular attention to the outside edges, the LCD cutout edges and the area around the ribbon cables, making sure there is complete contact between the overlay and the ground box.

Note: It is not recommended peeling and reapplying the overlay, so take time to align the overlay before making contact with the ground box.

11 Maintain the temperature of 80-100° F / 26-38° C for a minimum of 20 minutes to allow the adhesive to cure.

12 Install the provided ribbon cables, first to the overlay and then the DISCON. Be sure the connectors are applied evenly in the sockets and the tabs are fully locked.

13 Reinstall the DISCON door using the Torx head screws (5). Tighten, but do not overtighten.

14 Reinstall the ground box door to the ground box, using the fasteners removed in step 7. Tighten the fasteners securely.

Control System

15 Reinstall the E-Stop button, function enable button and key switch and the contact assemblies.

16 Reinstall the wire harness from the ground box to the DISCON. Secure the harness to the ground box lid using zip ties.

17 Close and fasten the ground box lid.

18 Reconnect the negative terminal to the start battery and auxiliary batteries, if equipped.

2-1
Platform Leveling Cylinder

The slave cylinder and the rotator pivot are the two primary supports for the platform. The slave cylinder keeps the platform level through the entire range of boom motion. It operates in a closed-circuit hydraulic loop with the master cylinder. The slave cylinder is equipped with counterbalance valves to prevent movement in the event of a hydraulic line failure.

How to Remove the Platform Leveling Cylinder

Note: Before cylinder removal is considered, bleed the slave cylinder to be sure there is no air in the closed loop.

Note: When removing a hose assembly or fitting, the O-ring (if equipped) on the fitting and/or hose end must be replaced. All connections must be torqued to specification during installation. Refer to Specifications, *Hydraulic Hose and Fitting Torque Specifications.*

1 Extend the primary boom until the slave cylinder barrel-end pivot pin is accessible.

2 Raise the jib boom slightly and place blocks under the platform for support.

3 Lower the jib boom until the platform is resting on the blocks just enough to support the platform.

Note: Do not rest the entire weight of the jib boom on the blocks.

4 Tag, disconnect and cap the hydraulic hoses from the slave cylinder. Plug the union hoses from the master cylinder together using a connector.

⚠WARNING Bodily injury hazard. Spraying hydraulic oil can penetrate and burn skin. Loosen hydraulic connections very slowly to allow the oil pressure to dissipate gradually. Do not allow oil to squirt or spray.

5 Remove the pin retaining fastener from the slave cylinder rod-end pivot pin. Do not remove the pin.

6 Remove the external snap rings from the slave cylinder barrel-end pivot pin. Do not remove the pin.

7 Place a block under the slave cylinder for support. Protect the cylinder rod from damage.

8 Use a soft metal drift to drive the rod-end pivot pin out.

⚠WARNING Crushing hazard. The platform could fall when the slave cylinder rod-end pivot pin is removed if not properly supported.

NOTICE Component damage hazard. The slave cylinder rod may become damaged if it is allowed to fall if not properly supported by the lifting device.

9 Use a soft metal drift and drive the barrel-end pin out.

10 Carefully pull the cylinder out of the primary boom.

Platform Components

How to Bleed the Slave Cylinder

1 Simultaneously activate the primary boom up function and the platform level up function until the boom is fully raised.

2 Simultaneously activate the primary boom down function and the platform level down function until the boom is fully lowered.

2-2 Platform Rotator

The platform rotator is a hydraulically activated helical gear assembly used to rotate the platform 160 degrees.

How to Remove the Platform Rotator

NOTICE

Component damage hazard. Mark the platform mounting weldment and the rotator flange before removing the platform mounting weldment. The platform mounting weldment must be replaced in the exact same position on the rotator flange as it was before removal. If a new rotator is installed or the rotator is disassembled, proper alignment can be achieved by rotating the rotator all the way to the left and then installing the platform mounting weldment all the way in the left position.

Note: When removing a hose assembly or fitting, the O-ring (if equipped) on the fitting and/or hose end must be replaced. All connections must be torqued to specification during installation. Refer to Specifications, *Hydraulic Hose and Fitting Torque Specifications.*

1 Remove the platform and platform support.

Note: If the load sense components are disassembled and/or removed from the platform support, the platform load sense system will need to be calibrated. Refer to Repair Procedure, *Platform Load Sense System.*

2 Tag, disconnect and plug the hydraulic hoses from the platform rotator manifold. Cap the fittings on the rotator.

3 Tag, disconnect and plug the hydraulic hoses from the platform rotator manifold. Cap the fittings on the rotator.

⚠WARNING Bodily injury hazard. Spraying hydraulic oil can penetrate and burn skin. Loosen hydraulic connections very slowly to allow the oil pressure to dissipate gradually. Do not allow oil to squirt or spray.

S-65 XC:

4 Support the jib boom leveling arms and the platform mounting weldment with an appropriate lifting device. Do not apply any lifting pressure.

5 Remove the mounting bolts from the platform mounting weldment. Remove the center bolt and slide the platform mounting weldment off of the platform rotator.

⚠WARNING Crushing hazard. The platform mounting weldment may become unbalanced and fall if it is not properly supported.

6 Support the platform rotator with an appropriate lifting device. Do not apply any lifting pressure.

S-60 XC:

7 Support the rod end of the platform leveling slave cylinder. Protect the cylinder rod from damage.

8 Remove the pivot pin retaining fasteners from both the slave cylinder rod-end pivot pin and the rotator pivot pin.

9 Use a soft metal drift to remove both pivot pins. Remove the platform rotator from the machine.

⚠WARNING Crushing hazard. The platform rotator may become unbalanced and fall if not properly supported.

Note: When installing the platform rotator fasteners, torque the fasteners to specifications.

10 Lower the jib boom leveling arms.

⚠WARNING Crushing hazard. The platform rotator may become unbalanced and fall if not properly supported.

Note: When installing the platform rotator fasteners, torque the fasteners to specifications.

Platform Components

S-65 XC:

11 Remove the pin retaining fasteners from the jib boom and jib boom leveling arms to platform rotator pivot pins. Do not remove the pins.

12 Support the jib boom leveling arms.

13 Use a soft metal drift to drive both pins out, then remove the platform rotator from the machine.

⚠CAUTION Bodily injury hazard. The jib boom leveling arms may fall if not properly supported.

14 Lower the jib boom leveling arms.

⚠WARNING Crushing hazard. The platform rotator could fall when removed from the machine if not properly supported.

Note: When installing the platform rotator fasteners, torque the fasteners to specifications.

How to Bleed the Platform Rotator

Note: This procedure will require two people. Do not start the engine. Use auxiliary power for this procedure.

1 Move the function enable toggle switch to either side and activate the platform rotate toggle switch to the right then the left through two platform rotation cycles, then hold the switch to the right position until the platform is fully rotated to the right.

2 Place a suitable container underneath the platform rotator.

3 Open the top bleed screw on the rotator, but do not remove it.

⚠WARNING Bodily injury hazard. Spraying hydraulic oil can penetrate and burn skin. Loosen hydraulic connections very slowly to allow the oil pressure to dissipate gradually. Do not allow oil to squirt or spray.

4 Move the function enable toggle switch to either side and hold the platform rotate toggle switch to the left position until the platform is fully rotated to the left. Continue holding the toggle switch until air stops coming out of the bleed screw. Close the bleed screw.

⚠WARNING Crushing hazard. Keep clear of the platform during rotation.

5 Open the bottom bleed screw on the rotator, but do not remove it.

⚠WARNING Bodily injury hazard. Spraying hydraulic oil can penetrate and burn skin. Loosen hydraulic connections very slowly to allow the oil pressure to dissipate gradually. Do not allow oil to squirt or spray.

6 Move the function enable toggle switch to either side and hold the platform rotate toggle switch to the right position until the platform is fully rotated to the right. Continue holding the toggle switch until air stops coming out of the bleed screw. Close the bleed screw.

⚠WARNING Crushing hazard. Keep clear of the platform during rotation.

7 Clean up any hydraulic oil that may have spilled.

8 Rotate the platform fully in both directions and inspect the bleed screws for leaks.

2-3 Platform Overload System

Proper calibration of the platform overload system is essential to safe machine operation. Continued use of an improperly calibrated platform overload system could result in the system failing to sense an overloaded platform.

How to Calibrate the Platform Overload System

Note: Perform this procedure with the machine on a firm, level surface.

Note: The turntable level sensor must be calibrated before performing this procedure.

1 Fully retract the boom. Level the platform.

2 Remove all material, tools and equipment from the platform. Remove the welder (if equipped).

⚠DANGER Tip-over hazard. Failure to remove all factory and non-factory accessories could result in the machine tipping over, causing death or serious injury.

3 Enter Service Mode. Refer to Repair Procedure, *How to Enter the Service Mode*.

4 Press the settings button above the display and select the Calibrations menu.

5 Navigate to the Sensor calibration screen.

6 Navigate to the Load Sense calibration screen.

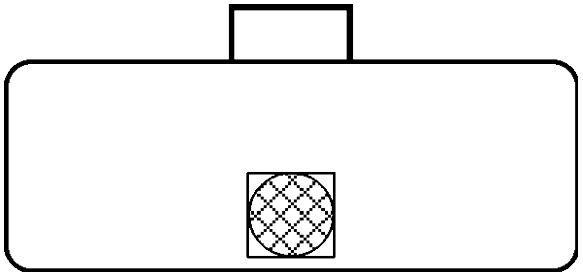
7 Select and start the calibration procedure.

8 Follow the on-screen instructions to set the zero load.

9 Continue with the on screen prompts to set the maximum load.

Platform Components

10 Place a 1,000 lb / 454 kg test weight on the platform floor using a suitable lifting device. Place the weight near the center entry point of the platform, as far away from the operator controls as possible.



11 Now continue to follow the prompts to accept the weight.

12 The calibration is now complete.

13 Exit the Service Mode

Confirm the setting:

14 Lift the test weight off the platform floor using a suitable lifting device.

15 Start the engine from the ground control.

16 Place a 1,000 lb / 454 kg test weight and an additional 50 lbs / 23 kg on the platform floor.

⊙ Result: The alarm sounds. The platform overload indicator light flashes at the platform controls and *platform overload* is displayed on the LCD screen at the ground controls. The engine shuts down.

Note: There may be a 2 second delay before the overload indicator lights flash and the alarm sounds.

17 Test all machine functions from the ground controls.

⊙ Result: Engine does not start or run. Limited APU functionality. Primary boom up and extend does not operate.

⊙ Remove the weight from the platform.

How to Calibrate the Platform Overload System - HF Models

Note: Perform this procedure with the machine on a firm, level surface.

Note: The turntable level sensor must be calibrated before performing this procedure.

1 Fully retract the boom. Level the platform.

2 Remove all material, tools and equipment from the platform. Remove the welder (if equipped).

⚠DANGER Tip-over hazard. Failure to remove all factory and non-factory accessories could result in the machine tipping over, causing death or serious injury.

3 Enter Service Mode. Refer to Repair Procedure, *How to Enter the Service Mode*.

4 Press the settings button above the display and select the Calibrations menu.

5 Navigate to the Sensor calibration screen.

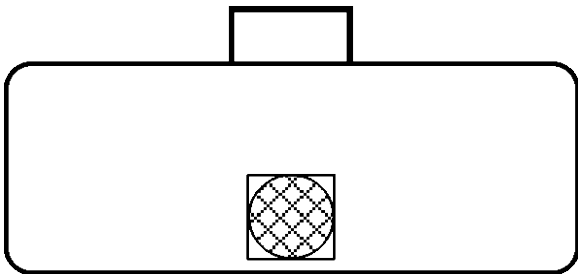
6 Navigate to the Load Sense calibration screen.

7 Select and start the calibration procedure.

8 Follow the on-screen instructions to set the zero load.

9 Continue with the on screen prompts to set the maximum load.

10 Place a 600 lb / 272 kg test weight on the platform floor using a suitable lifting device. Place the weight near the center entry point of the platform, as far away from the operator controls as possible.



11 Now continue to follow the prompts to accept the weight.

12 The calibration is now complete.

13 Exit the Service Mode

Confirm the setting:

14 Lift the test weight off the platform floor using a suitable lifting device.

15 Start the engine from the ground control.

16 Place a 600 lb / 272 kg test weight and an additional 30 lbs / 14 kg on the platform floor.

⊙ Result: The alarm sounds. The platform overload indicator light flashes at the platform controls and *platform overload* is displayed on the LCD screen at the ground controls. The engine shuts down.

Note: There may be a 2 second delay before the overload indicator lights flash and the alarm sounds.

17 Test all machine functions from the ground controls.

⊙ Result: Engine does not start or run. Limited APU functionality. Primary boom up and extend does not operate.

18 Remove the weight from the platform.

How to Perform a Zero Load Platform Calibration

Perform this procedure when the required weight for full load calibration is not available. This procedure will re-calibrate the zero load point without affecting a previous full load calibration. The platform load capacity will be reduced until a full load calibration has been performed. A full load calibration is required for rated load performance.

Note: Perform this procedure with the machine on a firm, level surface.

Note: The turntable level sensor must be calibrated before performing this procedure.

1 Fully retract the boom. Level the platform.

2 Remove all material, tools and equipment from the platform. Remove the welder, if equipped.

⚠ DANGER Tip-over hazard. Failure to remove all factory and non-factory accessories could result in the machine tipping over, causing death or serious injury.

3 Enter Service Mode. Refer to Repair Procedure, *How to Enter the Service Mode*.

4 Press the settings button above the display and navigate to the Sensor Calibrations menu.

5 Navigate to the Load Sense calibration screen.

6 Select and start the calibration procedure.

7 Follow the on-screen instructions to set the zero load.

8 Continue to follow the prompts to accept the weight.

9 The calibration is now complete.

⊙ Exit the Service Mode

Platform Components

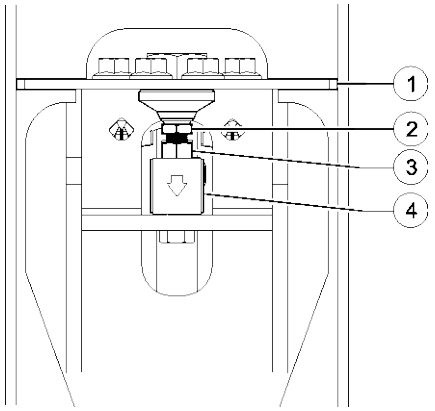
How to Replace the Load Cell Sensor

Note: The preload adjustment should only be performed after the load cell sensor has been replaced.

1 Remove all equipment or tools from the platform. Remove the welder if equipped.

2 At the platform, remove the plastic instruction holder from the document mount plate.

3 Tag and disconnect the load cell sensor harness.



1 flex plate
2 load cell sensor foot
3 jam nut
4 load cell sensor

4 Loosen the jam nut securing the load cell sensor foot and rotate the foot screw clockwise to remove the preload.

5 Remove the fasteners securing the load cell sensor and remove the sensor.

Install the new Load Cell Sensor

6 Screw the foot with jam nut into the top of the load cell sensor until the foot bolt extends out of the bottom of the sensor.The foot should not contact the flex plate when assembling onto the platform support.

7 Assemble the load cell and foot assembly to the platform and securely tighten the two mounting screws. Torque the bolts to 101 ft-lbs / 137 Nm.

Set the Load Cell Sensor Preload

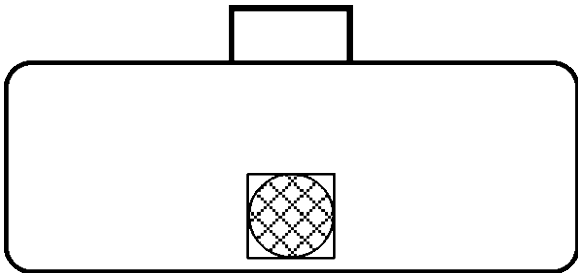
8 Rotate the foot screw counter clockwise until the foot just contacts the flex plate (finger tight).

9 Using an open end wrench, continue to rotate the foot counter clockwise an additional 1/2 turn (180°). Then, while holding the foot bolt, securely tighten the jam nut. Torque the jam nut to 55 ft-lbs / 75 Nm.

10 Attach the load cell sensor harness.

11 Install the plastic instruction holder.

12 Place a 1,000 lb / 454 kg test weight on the platform floor using a suitable lifting device. Place the weight near the center entry point of the platform, farthest away from the operator controls as possible, as shown in Illustration 2



13 Lift the weight off the platform and place it back on in the same position two more times to settle the platform overload assembly.

14 Perform a full platform overload system calibration. Refer to Repair Procedure, *How to Calibrate the Platform Overload System*.

2-4 Platform

How to Remove the Platform

1 Remove the cable clamp from the top of the platform mounting weldment.

2 Remove the mounting fasteners from the power to platform outlet box bracket. Lay the outlet box and bracket assembly off to the side. Do not disconnect the wiring.

3 Remove the foot switch mounting fasteners.

4 Remove the cover plate from the bottom of the foot switch to access the foot switch wire terminals.

5 Tag and disconnect the foot switch wiring from the foot switch. Remove the cable from the back of the platform.

⚠WARNING Electrocution/burn hazard. Contact with electrically charged circuits could result in death or serious injury. Remove all rings, watches and other jewelry.

6 Remove the platform control box mounting fasteners. Lower the control box and set it aside.

NOTICE Component damage hazard. Cables can be damaged if they are kinked or pinched.

Note: If your machine is equipped with an airline to platform option, the airline must be disconnected from the platform before removal.

7 Support and secure the platform to an appropriate lifting device.

8 Remove the platform mounting fasteners and remove the platform from the machine.

⚠WARNING Crushing hazard. The platform could become unstable and fall when it is removed from the machine if not properly supported.

Jib Boom Components

3-1
Jib Boom

How to Remove the Jib Boom

Note: Perform this procedure with the boom in the stowed position.

Note: When removing a hose assembly or fitting, the O-ring (if equipped) on the fitting and/or hose end must be replaced. All connections must be torqued to specification during installation. Refer to Specifications, *Hydraulic Hose and Fitting Torque Specifications.*

1 Remove the platform and platform support.

2 Disconnect the electrical connector from the jib boom/platform rotate select valve manifold mounted to the platform support.

3 Tag, disconnect and plug all of the hydraulic hoses from the jib boom/platform rotate select valve manifold. Cap the fittings on the manifold.

⚠WARNING Bodily injury hazard. Spraying hydraulic oil can penetrate and burn skin. Loosen hydraulic connections very slowly to allow the oil pressure to dissipate gradually. Do not allow oil to squirt or spray.

4 Remove the platform rotator. Refer to Repair Procedure, *How to Remove the Platform rotator*.

5 Remove the pin retaining fastener from the jib boom lift cylinder rod-end pivot pin. Do not remove the pin.

6 Slide both of the jib boom leveling arms off of the jib boom cylinder rod-end pivot pin.

7 Remove the hose and cable cover from the side of the jib boom. Remove the hose and cable separators.

8 Attach a lifting strap from an overhead crane to the jib boom.

9 Support the barrel end of the jib boom lift cylinder with a suitable lifting device.

10 Tag, disconnect and plug the jib boom lift cylinder hydraulic hoses. Cap the fittings on the cylinder.

⚠WARNING Bodily injury hazard. Spraying hydraulic oil can penetrate and burn skin. Loosen hydraulic connections very slowly to allow the oil pressure to dissipate gradually. Do not allow oil to squirt or spray.

11 Remove the pin retaining fastener from the jib boom lift cylinder barrel-end pivot pin.

12 Use a soft metal drift to remove the pin and let the cylinder hang down.

⚠WARNING Crushing hazard. The jib boom could fall when the barrel-end pivot pin is removed if not properly supported by the overhead crane.

13 Remove the pin retaining fastener from the jib boom pivot pin. Use a soft metal drift to remove the pin, then remove the jib boom.

⚠WARNING Crushing hazard. The jib boom may become unbalanced and fall when it is removed from the machine if it is not properly supported by the overhead crane.

3-2
Jib Boom Lift Cylinder

How to Remove the Jib Boom Lift Cylinder

Note: Perform this procedure with the boom in the stowed position.

Note: When removing a hose assembly or fitting, the O-ring (if equipped) on the fitting and/or hose end must be replaced. All connections must be torqued to specification during installation. Refer to Specifications, *Hydraulic Hose and Fitting Torque Specifications.*

1 Raise the jib boom slightly and place blocks under the platform support. Lower the jib boom until the platform is resting on the blocks just enough to support the platform.

Note: Do not rest the entire weight of the boom on the blocks.

2 Tag, disconnect and plug the jib boom lift cylinder hydraulic hoses. Cap the fittings on the cylinder.

⚠WARNING Bodily injury hazard. Spraying hydraulic oil can penetrate and burn skin. Loosen hydraulic connections very slowly to allow the oil pressure to dissipate gradually. Do not allow oil to squirt or spray.

3 Remove the pin retaining fasteners from the jib boom lift cylinder rod-end pivot pin. Do not remove the pin.

4 Use a soft metal drift to tap the jib boom lift cylinder rod-end pivot pin out enough to lower one of the leveling arms to the ground. Tap the pin the other direction and lower the opposite leveling arm. Do not remove the pin.

5 Support the jib boom lift cylinder with a suitable lifting device.

6 Remove the pin retaining fastener from the jib boom lift cylinder barrel-end pivot pin. Use a soft metal drift to remove the barrel-end pin and let the cylinder hang down.

⚠WARNING Crushing hazard. The jib boom may become unbalanced and fall when it is removed from the machine if it is not properly supported by the overhead crane.

7 Attach a lifting strap from an overhead crane to the lug on the rod end of the jib boom lift cylinder.

8 Use a soft metal drift to remove the jib boom lift cylinder rod-end pin. Remove the jib boom lift cylinder from the machine.

⚠WARNING Crushing hazard. The jib boom lift cylinder may become unbalanced and fall when it is removed from the machine if it is not properly supported by the overhead crane.

Primary Boom Components

4-1
Cable Track

The primary boom cable track guides the cables and hoses running up the boom. It can be repaired link by link without removing the cables and hoses that run through it. Removing the entire primary boom cable track is only necessary when performing major repairs that involve removing the primary boom.

How to Remove the Cable Track

Note: When removing a hose assembly or fitting, the O-ring (if equipped) on the fitting and/or hose end must be replaced. All connections must be torqued to specification during installation. Refer to Specifications, *Hydraulic Hose and Fitting Torque Specifications.*

1 Disconnect the wire connectors from the bottom of the platform control box.

Note: When installing the wire connectors to the bottom of the platform control box, match the color of the connectors to those on the control box to be sure they are installed in the correct location.

2 Disconnect the power to plat cable from the AC outlet box.

3 Remove the hose and cable clamps from the platform support.

4 Tag, disconnect and plug the platform leveling slave cylinder hydraulic hoses from the bulkhead fittings on the top of the primary boom. Cap the bulkhead fittings.

⚠WARNING Bodily injury hazard. Spraying hydraulic oil can penetrate and burn skin. Loosen hydraulic connections very slowly to allow the oil pressure to dissipate gradually. Do not allow oil to squirt or spray.

5 Tag, disconnect and plug ports V1 and V2 on the platform rotate/jib manifold. Cap the fittings.

⚠WARNING Bodily injury hazard. Spraying hydraulic oil can penetrate and burn skin. Loosen hydraulic connections very slowly to allow the oil pressure to dissipate gradually. Do not allow oil to squirt or spray.

6 Remove the hose and cable cover from the side of the jib boom.

7 Remove the retaining fasteners securing the cable track to the upper tube.

8 Pull the cable track back from the upper tube.

9 Remove the hose and cable clamps from inside the cable track at both ends.

10 Pull the hoses and cables out of the upper tube.

11 Pull the hoses and cables out of the cable track.

12 Remove the retaining fasteners that attach the cable track to the lower tube.

13 Remove the cable track from the machine.

Primary Boom Components

How to Repair the Cable Track

NOTICE Component damage hazard. The boom cable track can be damaged if it is twisted.

Note: A cable track repair kit is available through the Genie Service Parts Department.

1 Visually inspect the cable track and determine which 4-link section needs to be replaced.

2 Carefully remove the snap rings and pins from each end of the damaged section of cable track.

3 Remove the retaining fasteners from the upper black rollers from the 4-link section of cable track to be replaced. Remove the rollers.

4 Lift up the hoses and cables and carefully remove the damaged 4-link section of cable track.

NOTICE Component damage hazard. Hoses and cables can be damaged if they are kinked or pinched.

5 Remove the upper rollers from the replacement section of cable track.

6 Lift up the hoses and cables and carefully insert the new 4-link section of cable track.

NOTICE Component damage hazard. Hoses and cables can be damaged if they are kinked or pinched.

7 Connect the ends of the replacement cable track section to the existing cable track using the pins and snap rings.

8 Install the rollers onto the new section of cable track.

9 Operate the boom extend/retract function through a full cycle to ensure smooth operation of the new section of cable track.

4-2 Primary Boom

How to Remove the Primary Boom

⚠WARNING Bodily injury hazard. This procedure requires specific repair skills, lifting equipment and a suitable workshop. Attempting this procedure without these skills and tools could result in death or serious injury and significant component damage. Dealer service is strongly recommended.

Note: When removing a hose assembly or fitting, the O-ring (if equipped) on the fitting and/or hose end must be replaced. All connections must be torqued to specification during installation. Refer to Specifications, *Hydraulic Hose and Fitting Torque Specifications.*

1 Remove the jib boom, if equipped. Refer to Repair Procedure, *How to Remove the Jib Boom*.

2 Remove the cable track. Refer to Repair Procedure, *How to Remove the Cable Track*.

3 Raise the primary boom to the horizontal position.

4 Attach lifting straps from a 5 ton / 5000 kg overhead crane to the center point of the boom. Support the boom. Do not apply lifting pressure.

5 Remove the turntable end cover.

Primary Boom Components

6 Remove the retaining fasteners from the master cylinder rod-end pivot pin. Use a soft metal drift to remove the pin. Lower the master cylinder against the primary lift cylinder.

NOTICE Component damage hazard. When lowering the master cylinder down, be sure not to damage the master cylinder hoses or fittings.

7 Remove the fasteners from the limit switch mounted to the turntable riser at the pivot end of the boom. Do not disconnect the wiring.

8 Tag, disconnect and plug the primary boom extension cylinder hydraulic hoses. Cap the fittings on the cylinder.

⚠WARNING Bodily injury hazard. Spraying hydraulic oil can penetrate and burn skin. Loosen hydraulic connections very slowly to allow the oil pressure to dissipate gradually. Do not allow oil to squirt or spray.

9 Using an overhead supporting device, attach a strap to the rod-end of the primary boom lift cylinder.

10 Remove the retaining fasteners from the primary boom lift cylinder rod-end pivot pin. Use a soft metal drift to remove the pin.

⚠WARNING Crushing hazard. The boom lift cylinder and primary boom will fall if not properly supported.

11 Place a support block across the turntable and lower the lift cylinder on it.

12 Remove the retaining fasteners from the primary boom pivot pin.

13 Remove the primary boom pivot pin with a soft metal drift, then carefully remove the primary boom from the machine and place it on a structure capable of supporting it.

⚠WARNING Crushing hazard. The primary boom could become unbalanced and fall when removed from the machine if not properly attached to the overhead crane.

Primary Boom Components

How to Disassemble the Primary Boom

Complete disassembly of the boom is only necessary if the outer or inner boom tube must be replaced. The extension cylinder can be removed without completely disassembling the boom. Refer to Repair Procedure, *How to Remove the Primary Boom Extension Cylinder*.

1 Remove the primary boom. Refer to Repair Procedure, *How to Remove the Primary Boom*.

2 Place blocks under the extension cylinder for support.

3 Remove the external snap rings from the extension cylinder barrel-end pivot pin at the pivot end of the primary end of the primary boom tube. Use a soft metal drift to remove the pin.

4 Remove and label the wear pads from the top side of the primary boom tube at the platform end of the boom.

Note: Pay careful attention to the location and amount of shims used with each wear pad.

5 Attach a lifting strap from an overhead crane to the secondary boom tube at the platform end of the boom for support.

6 Support and slide the secondary boom tube out of the primary boom tube. Place the secondary boom tube on blocks for support.

⚠WARNING Crushing hazard. The secondary boom tube may become unbalanced and fall when removed if it is not properly supported when it is removed from the machine.

Note: During removal, the overhead crane strap will need to be carefully adjusted for proper balancing.

7 Remove and label the wear pads from the top side of the secondary boom tube at the platform end of the boom.

8 Remove the trunnion pin retaining fasteners at the base end of the secondary boom tube. Use a slide hammer to remove the trunnion pins.

9 Carefully rotate the base end of the extension cylinder until the pin mounting bore is in a vertical position.

10 Remove the external snap rings from the extension cylinder rod-end pivot pin at the platform end of the secondary boom tube. Use a soft metal drift to remove the pin.

11 Support and slide the extension cylinder out of the base end of the secondary boom tube. Place the extension cylinder on blocks for support.

⚠WARNING Crushing hazard. The extension cylinder could become unbalanced and fall when removed from primary boom extension tube if not properly supported.

Note: During removal, the overhead crane strap will need to be carefully adjusted for proper balancing.

12 Remove and label the wear pads from each extension cylinder.

Note: Pay careful attention to the location of each wear pad.

Primary Boom Components

4-3
Primary Boom Lift Cylinder

The primary boom lift cylinder raises and lowers the primary boom. The primary boom lift cylinder is equipped with a counterbalance valve to prevent movement in the event of a hydraulic line failure.

How to Remove the Primary Boom Lift Cylinder

⚠WARNING Bodily injury hazard. This procedure requires specific repair skills, lifting equipment and a suitable workshop. Attempting this procedure without these skills and tools could result in death or serious injury and significant component damage. Dealer service is strongly recommended.

1 Raise the primary boom to a horizontal position.

2 Place support blocks across the turntable under the boom lift cylinder

3 Attach a 5 ton / 5000 kg overhead crane to the primary boom for support.

4 Raise the primary boom with the overhead crane slightly to take the pressure off the primary boom lift cylinder pivot pins.

5 Support the rod end and the barrel end of the primary boom lift cylinder with a second overhead crane or similar lifting device.

6 Tag, disconnect and plug the primary boom lift cylinder hydraulic hoses. Cap the fittings on the cylinder.

⚠WARNING Bodily injury hazard. Spraying hydraulic oil can penetrate and burn skin. Loosen hydraulic connections very slowly to allow the oil pressure to dissipate gradually. Do not allow oil to squirt or spray.

7 Remove the retaining fasteners from the primary boom lift cylinder rod-end pivot pin. Use a soft metal drift to remove the pin. Lower the lift cylinder onto the blocks. Protect the cylinder rod from damage.

⚠WARNING Crushing hazard. The primary boom will fall if not properly supported when the primary boom rod-end pivot pin is removed.

8 Remove the four mounting fasteners from the lift cylinder barrel-end pivot pin mounting plate.

⚠WARNING Crushing hazard. The primary boom lift cylinder could become unbalanced and fall if not properly supported by the lifting device.

9 With the lift cylinder being supported by the overhead crane, carefully pull the lift cylinder toward the platform to remove it from the machine.

⚠WARNING Crushing hazard. The lift cylinder could become unbalanced and fall if not properly supported and secured to the lifting device.

Primary Boom Components

4-4
Primary Boom Extension Cylinder

The primary boom extension cylinder extends and retracts the primary boom extension tube.The primary boom extension cylinder is equipped with counterbalance valves to prevent movement in the event of a hydraulic line failure.

How to Remove the Primary Boom Extension Cylinder

⚠WARNING Bodily injury hazard. This procedure requires specific repair skills, lifting equipment and a suitable workshop. Attempting this procedure without these skills and tools could result in death or serious injury and significant component damage. Dealer service is strongly recommended.

Note: When removing a hose assembly or fitting, the O-ring (if equipped) on the fitting and/or hose end must be replaced. All connections must be torqued to specification during installation. Refer to Specifications, *Hydraulic Hose and Fitting Torque Specifications.*

1 Extend the boom until the extension cylinder rod-end pivot pins are accessible in the extension tube.

2 Remove the master cylinder. See the repair procedure, *How to Remove the Master Cylinder*.

3 Raise the primary boom to a horizontal position.

4 At the pivot end of the boom, remove the cover from the end of the #1 boom tube.

5 At the pivot end of the boom, remove the retaining fasteners and blocks securing the extend cylinder to the #2 boom tube through the access holes in the #1 boom tube.

6 Tag, disconnect and plug the primary boom extension cylinder hydraulic hoses. Cap the fittings on the cylinder.

⚠WARNING Bodily injury hazard. Spraying hydraulic oil can penetrate and burn skin. Loosen hydraulic connections very slowly to allow the oil pressure to dissipate gradually. Do not allow oil to squirt or spray.

7 At the platform end of the boom, remove the external snap rings from the extension cylinder rod-end pivot pin. Use a soft metal drift to remove the pin.

8 At the pivot end of the boom, remove the retaining fasteners and blocks securing the extend cylinder to the #1 boom tube'

9 Support and slide the extension cylinder out of the primary boom.

⚠WARNING Crushing hazard. The extension cylinder could fall when removed from the extension boom if not properly supported.

NOTICE Component damage hazard. Be careful not to damage the counterbalance valves on the primary boom extension cylinder when removing the cylinder from the primary boom.

NOTICE Component damage hazard. Hoses and cables can be damaged if the primary boom extension cylinder is dragged across them.

Note: Note the length of the cylinder after removal. The cylinder must be at the same length for installation.

Primary Boom Components

4-5 Platform Leveling Master Cylinder

The master cylinder acts as a pump for the slave cylinder. It's part of the closed circuit hydraulic loop that keeps the platform level through the entire range of boom motion. The master cylinder is located at the base of the primary boom.

How to Remove the Platform Leveling Master Cylinder

Note: When removing a hose assembly or fitting, the O-ring (if equipped) on the fitting and/or hose end must be replaced. All connections must be torqued to specification during installation. Refer to Specifications, *Hydraulic Hose and Fitting Torque Specifications.*

1 Raise the secondary boom until both the rod-end and barrel-end pivot pins on the master cylinder are accessible.

2 Use an overhead supporting device to support the platform. Do not apply lifting pressure.

3 Tag, disconnect and plug the master cylinder hydraulic hoses. Cap the fittings on the cylinder.

⚠WARNING Bodily injury hazard. Spraying hydraulic oil can penetrate and burn skin. Loosen hydraulic connections very slowly to allow the oil pressure to dissipate gradually. Do not allow oil to squirt or spray.

4 Attach overhead crane or similar lifting device to the master cylinder.

5 Remove the retaining fasteners from the master cylinder barrel-end pivot pin.

6 Use a soft metal drift to remove the pin.

7 Remove the retaining fastener from the rod-end pivot pin.

8 Use a soft metal drift to remove the pin.

9 Remove the master cylinder from the machine.

⚠WARNING Crushing hazard. The master cylinder could become unbalanced and fall if not properly attached to the overhead crane.

4-6
Primary Boom Angle Sensor

The primary boom angle sensor is used to limit the angle of the primary boom relative to the angle of the turntable and gravity.

How to Calibrate the Primary Boom Angle Sensor

Note: Perform this procedure with the machine on a firm, level surface with the boom in the stowed position.

Note: The turntable level sensor and platform load sensor must be calibrated prior to calibrating the primary boom angle sensor.

Note: This procedure will establish the cross-check angle with the boom limit switch LST3S. If LST3S does not switch its state properly during the calibration, the calibration will be invalidated.

1 Fully retract and lower the boom. Ensure the boom is in contact with the boom rest pad.

2 Enter Service Mode. Refer to Repair Procedure, *How to Enter the Service Mode*.

3 Press the settings button above the display and navigate to the Sensor Calibrations menu.

4 Navigate to the Boom Angle Sensor calibration screen.

5 Select and start the calibration procedure.

6 Start the engine.

7 When the display prompts the operator to lower the boom, press and hold the function enable button and the boom down buttons until the display indicates that the lower calibration point has been obtained. This may require holding the buttons for several seconds after the boom has touched the rest pad.

8 Press **OK** on the display to continue with the procedure to capture the maximum angle point.

9 Operate the boom up function until the boom reaches its maximum angle. Continue holding the function enable and boom up buttons for several seconds until the display indicates that the upper calibration point has been obtained. This may require holding the buttons for several seconds after the boom reaches its maximum angle.

10 Follow the on-screen prompts to lower the boom until the display indicates the calibration is complete. If this step isn't done, the boom will be in the safety envelope when the calibration procedure ends

11 The calibration is now complete.

12 Exit the Service Mode.

Primary Boom Components

4-7
Boom Length Sensor

How to Calibrate the Primary Boom Length Sensor

Note: The turntable level sensor and platform load sensor must be calibrated prior to calibrating the primary boom angle sensor.

Note: The turntable level sensor, platform load sensor and primary boom angle sensor must be calibrated before calibrating the boom length sensor.

Note: This procedure will establish the cross-check angle with the boom limit switch LSB1RS. If LSB1RS does not switch its state properly during calibration, the calibration will be invalidated.

1 Fully retract the boom. Ensure the boom angle is above 65°.

2 Enter Service Mode. See Repair Procedure, *How to Enter Service Mode*.

3 Press the settings button above the display and navigate to Sensor Calibrations.

4 Navigate to the Boom Length Sensor calibration screen.

5 Select and start the calibration procedure.

6 Start the engine.

7 When the display prompts the operator to retract the boom, press and hold the function enable and boom retract buttons until the display indicates the retracted calibration point has been obtained. This may require holding the buttons for several seconds after the boom has fully retracted.

8 Press the **OK** button to continue to capture the maximum extension point.

9 Press the function enable and boom extend buttons until the boom reaches its maximum extension. Continue holding the buttons for several seconds after the boom reaches its maximum extension until the display indicates the calibration point has been captured.

10 The calibration is complete.

11 Exit the Service Mode.

5-1
RPM Adjustment - Deutz Models

Refer to Maintenance Procedure in the appropriate Service or Maintenance Manual for your machine, *Check and Adjust the Engine RPM*.

5-2
RPM Adjustment - Perkins Models

Refer to Maintenance Procedure in the appropriate Service or Maintenance Manual for your machine, *Check and Adjust the Engine RPM*.

5-3
Flex Plate

The flex plate acts as a coupler between the engine and the pump. It is bolted to the engine flywheel and has a splined center to drive the pump.

How to Remove the Flex Plate

Deutz models:

1 Remove the tailpipe bracket mounting fasteners from the engine bell housing.

2 Support the drive pump assembly with an appropriate lifting device.

3 Remove all of the engine bell housing fasteners.

4 Carefully pull the pump and bell housing assembly away from the engine and secure it from moving.

NOTICE Component damage hazard. Hoses can be damaged if they are kinked or pinched.

5 Remove the flex plate mounting fasteners. Remove the flex plate from the flywheel.

Ford models:

1 Disconnect the electrical connectors from both oxygen sensors at the tailpipe and exhaust manifold. Do not remove the oxygen sensors.

2 Remove the exhaust pipe fasteners at the muffler.

3 Support the muffler and bracket assembly with a suitable lifting device.

4 Remove the muffler bracket mounting fasteners from the bell housing. Carefully remove the muffler and bracket assembly from the engine.

Engines

5 Support the engine with an overhead crane or other suitable lifting device. Do not lift it.

6 Remove the engine mounting plate to bell housing fasteners.

7 Raise the engine slightly using the overhead crane and place a block of wood under the oil pan for support.

8 Support the drive pump assembly with an overhead crane or other suitable lifting device. Do not apply any lifting pressure.

9 Remove all of the engine bell housing retaining fasteners.

10 Carefully pull the pump and bell housing assembly away from the engine and secure it from moving.

Perkins models:

1 Remove the fuel filter/water separator mounting fasteners.

2 Remove the fuel filter/water separator and lay it to the side. Do not disconnect the hoses.

3 Support the drive pump assembly with an appropriate lifting device.

4 Remove all of the engine bell housing fasteners.

5 Carefully pull the pump and bell housing assembly away from the engine and secure it from moving.

NOTICE Component damage hazard. Hoses can be damaged if they are kinked or pinched.

6 Remove the flex plate mounting fasteners.

7 Remove the flex plate from the flywheel.

How to Install the Flex Plate

1 Install the flex plate onto the engine flywheel with the rubber vibration isolators towards the pump.

2 Apply Loctite® removable thread sealant to the flex plate fasteners and loosely install the fasteners.

3 **Deutz models:** Torque the flex plate mounting bolts in sequence to 28 ft-lbs / 38 Nm. Then torque the flex plate mounting bolts in sequence to 40 ft-lbs / 54 Nm.

Ford and Perkins models: Torque the flex plate mounting bolts in sequence to 14 ft-lbs / 19 Nm. Then torque the flex plate mounting bolts in sequence to 20 ft-lbs / 27 Nm.

4 Apply a high viscosity coupling grease (Genie part number 128025) to the splines of the pump shaft and flex plate.

Grease Specification
Shell Alvania® Grease CG, NLGI 0/1 or equivalent.

How to Install the Pump and Bell Housing Assembly

1 Install the pump and bell housing assembly.

Deutz models: Torque the bell housing mounting bolts labeled "C" in sequence to 28 ft-lbs / 38 Nm. Then torque the bell housing mounting bolts labeled "C" in sequence to 40 ft-lbs / 54 Nm.

Ford models: Torque the bell housing mounting bolts labeled "A" and "B" in sequence to 28 ft-lbs / 38 Nm and the mounting bolts labeled "C" to 49 ft-lbs / 66 Nm. Then torque the bell housing mounting bolts labeled "A" and "B" in sequence to 40 ft-lbs / 54 Nm and the mounting bolts labeled "C" to 70 ft-lbs / 95 Nm**.**

Perkins models: Torque the bell housing mounting bolts labeled "B" in sequence to 28 ft-lbs / 38 Nm and the mounting bolts labeled "A" to 49 ft-lbs / 66 Nm. Then torque the bell housing mounting bolts labeled "B" in sequence to 40 ft-lbs / 54 Nm and the mounting bolts labeled "A" to 70 ft-lbs / 95 Nm.

NOTICE

Component damage hazard. When installing the pump, do not force the pump coupler into the flexplate or damage to the pump shaft seal may occur.

NOTICE

Component damage hazard. Do not force the drive pump during installation or the flex plate teeth may become damaged.

5-4
Engine Fault Codes - Ford MSG-425 Models

How to Retrieve Engine Fault Codes

The ECM constantly monitors the engine by the use of sensors on the engine. The ECM also uses signals from the sensors to initiate sequential fuel injection and make constant and instantaneous changes to ignition timing, fuel delivery and throttle position to maintain the engine's running condition at its highest efficiency while at the same time keeping exhaust emissions to a minimum. When a sensor fails or returns signals that are outside of set parameters, the ECM will store a fault code in memory that relates to the appropriate sensor and will turn on the Check Engine Light.

Refer to Fault Code Section, *How to Retrieve Ford Engine Fault Codes*. Use the Fault Code Chart to aid in identifying the fault.

Engines

5-5
Engine Fault Codes - Deutz D 2.9 L4 and Perkins 404F-22 Models

How to Retrieve Engine Fault Codes

The ECM constantly monitors the engine by the use of sensors on the engine. The ECM also uses signals from the sensors to initiate sequential fuel injection and make constant and instantaneous changes to ignition timing, fuel delivery and throttle position to maintain the engine's running condition at its highest efficiency while at the same time keeping exhaust emissions to a minimum. When a sensor fails or returns signals that are outside of set parameters, the ECM will store a fault code in memory that relates to the appropriate sensor. One or more fault LED's will illuminate on the display located at the ground control box. The active fault code will also be displayed on the LCD screen.

If a fault occurs that does not result in an engine shutdown, the engine rpm will go into limp home mode resulting in the loss of high rpm.

Refer to Fault Code Section, *How to Retrieve Active Engine Fault Codes* for your specific engine model. Use the Fault Code Chart to aid in identifying the fault.

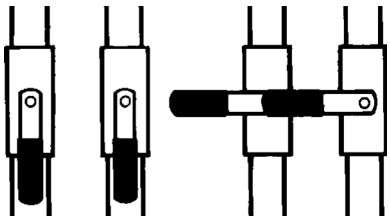
6-1 Function Pump

How to Remove the Function Pump

Note: When removing a hose assembly or fitting, the O-ring (if equipped) on the fitting and/or hose end must be replaced. All connections must be torqued to specification during installation. Refer to Specifications, *Hydraulic Hose and Fitting Torque Specifications.*

1 Locate the two hydraulic tank valves at the hydraulic tank. Close the valves.

NOTICE Component damage hazard. The engine must not be started with the hydraulic tank shut-off valves in the closed position or component damage will occur. If the tank valves are closed, remove the key from the key switch and tag the machine to inform personnel of the condition.



open closed

2 Tag, disconnect and plug the function pump hydraulic hoses. Cap the fittings on the pump.

⚠WARNING Bodily injury hazard. Spraying hydraulic oil can penetrate and burn skin. Loosen hydraulic connections very slowly to allow the oil pressure to dissipate gradually. Do not allow oil to squirt or spray.

3 Support the pump with a suitable lifting device.

4 Remove the pump mounting bolts. Carefully remove the pump.

NOTICE Component damage hazard. Be sure to open the two hydraulic tank valves and prime the pump after installing the pump.

Hydraulic Pump

6-2 Drive Pump

The drive pump is a bi-directional variable displacement piston pump. The pump output is controlled by the electro-proportional controller, located on the pump. The only adjustment that can be made to the pump is the neutral or null adjustment. Any internal service to the pump should only be performed at an authorized Eaton Hydraulics center. Call Genie Product Support to locate your local authorized service center.

How to Remove the Drive Pump

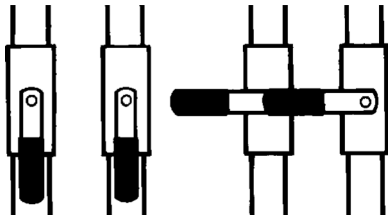
NOTICE Component damage hazard. The work area and surfaces where this procedure will be performed must be clean and free of debris that could get into the hydraulic system and cause severe component damage. Dealer service is recommended.

Note: When removing a hose assembly or fitting, the O-ring (if equipped) on the fitting and/or hose end must be replaced. All connections must be torqued to specification during installation. Refer to Specifications, *Hydraulic Hose and Fitting Torque Specifications.*

1 Disconnect the electrical connectors at the electrical proportional controller located on the drive pump.

2 Locate the two hydraulic tank valves at the hydraulic tank. Close the valves.

NOTICE Component damage hazard. The engine must not be started with the hydraulic tank shut-off valves in the closed position or component damage will occur. If the tank valves are closed, remove the key from the key switch and tag the machine to inform personnel of the condition.



open closed

3 Tag and disconnect and plug the hydraulic hoses from the drive and function pumps. Cap the fittings on the pumps.

⚠WARNING Bodily injury hazard. Spraying hydraulic oil can penetrate and burn skin. Loosen hydraulic connections very slowly to allow the oil pressure to dissipate gradually. Do not allow oil to squirt or spray.

4 Support the pump with a lifting device and remove the pump mounting fasteners.

Hydraulic Pump

5 Carefully pull the drive pump out until the pump coupler separates from the flex plate.

6 Remove the drive pump from the machine.

NOTICE Component damage hazard. The pump(s) may become unbalanced and fall if not properly supported.

NOTICE Component damage hazard. When installing the pump, do not force the pump coupler into the flexplate or damage to the pump shaft seal may occur.

NOTICE Component damage hazard. Be sure to open the two hydraulic tank valves and prime the pump after installing the pump.

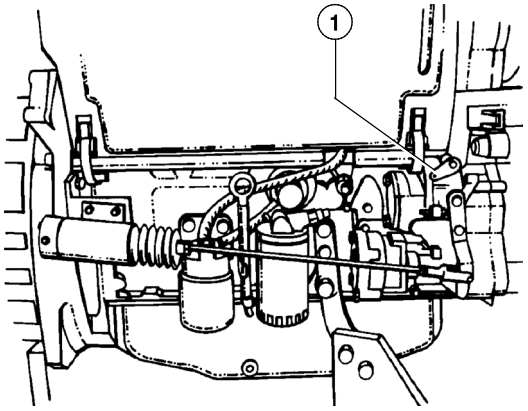
How to Prime the Drive Pump

1 Connect a 0 to 600 psi / 0 to 41 bar pressure gauge to the test port on the drive pump.

2 **Ford models:** Close the valve on the LPG tank then disconnect the hose from the tank. Then move the fuel select switch to the LPG position.

Perkins 404D-22 models: Disconnect the engine wiring harness from the fuel solenoid at the injector pump.

Deutz D2011 L03i models: Hold the manual fuel shutoff valve clockwise to the closed position.



1 manual fuel shutoff valve

3 Have another person crank the engine with the starter motor for 15 seconds, wait 15 seconds, then crank the engine an additional 15 seconds or until the pressure reaches 310 psi / 21 bar.

4 **Ford models:** Connect the LPG hose to the LPG tank and open the valve on the tank.

Perkins 404D-22 models: Connect the engine wiring harness to the fuel solenoid.

Deutz D2011 L03i models: Release the manual fuel shutoff valve.

5 Start the engine from the ground controls and check for hydraulic leaks.

Manifolds

7-1
Function Manifold Components

The function manifold is located underneath the ground controls side turntable cover.

Index No.	Description	Schematic Item	Function	Torque
1	Solenoid Valve, 2 position 3 way	J	Release brake when on	26-30 ft-lbs / 35-40 Nm
2	Pressure reducing valve	R	Oscillate circuit pressure control	33-37 ft-lbs / 45-50 Nm
3	Flow control valve	L	Steer actuator fixed speed control	30-35 ft-lbs / 41-47 Nm
4	Solenoid valve, 2 position 2 way	A	Enable full pressure to functions when on	26-30 ft-lbs / 35-40 Nm
5	Proportional solenoid valve	T	Turntable rotate variable speed control	20-25 ft-lbs / 27-34 Nm
6	Flow control valve	M	Boom extension variable speed control	30-35 ft-lbs / 41-47 Nm
7	Solenoid Valve, NO, poppet	O	Boom retract selector	33-37 ft-lbs / 45-50 Nm
8	Proportional solenoid valve	W	Boom variable speed control	20-25 ft-lbs / 27-34 Nm
9	Pressure compensator valve	X	Compensate for pressure variation	30-35 ft-lbs / 41-47 Nm
10	Check valve, 65 psi / 4.5 bar	AA	Isolate Platform level circuit	20-25 ft-lbs / 27-34 Nm
11	Proportional solenoid valve, 3 position 4 way	AE	Select flow direction and speed for jib and rotate	26-30 ft-lbs / 35-40 Nm
12	Proportional solenoid valve, 3 position 4 way	AD	Select flow direction and speed for level adjust	26-30 ft-lbs / 35-40 Nm

7-2 Valve Adjustments - Function Manifold

How to Adjust the System Relief Valve

Note: Perform this procedure with the machine in the stowed position.

Note: Refer to Function Manifold Component list to locate the system relief valve.

1 Connect a 0 to 5000 psi / 0 to 350 bar pressure gauge to the test port on the function manifold.

2 Start the engine from the ground controls.

3 Press and hold the function enable button. Activate and hold the primary boom retract switch with the boom fully retracted.

4 Observe the pressure reading on the pressure gauge. Refer to Specifications, *Hydraulic Component Specifications*.

5 Turn the engine off. Use a wrench to hold the relief valve and remove the cap.

6 Adjust the internal hex socket. Turn it clockwise to increase the pressure or counterclockwise to decrease the pressure. Install the relief valve cap.

⚠WARNING Tip-over hazard. Do not adjust the relief valve higher than specified.

7 Repeat this procedure beginning with step 2 to confirm the relief valve pressure.

8 Remove the pressure gauge.

How to Adjust the Boom Down Relief Valve

Note: Perform this procedure with the machine in the stowed position.

Note: Refer to the Function Manifold Component list to locate the Boom Down relief valve.

1 Connect a 0 to 5000 psi / 0 to 350 bar pressure gauge to the LS test port of the function manifold.

2 Start the engine from the ground controls.

3 Press and hold the function enable button. Activate and hold the primary boom down switch with the boom in a fully stowed position.

4 Observe the pressure reading on the pressure gauge. Refer to Specifications, *Hydraulic Component Specifications*.

5 Turn the engine off. Use a wrench to hold the relief valve and remove the cap. Refer to Repair Procedures, *Function Manifold Components,* item BD.

6 Adjust the internal hex socket. Turn it clockwise to increase the pressure or counterclockwise to decrease the pressure. Install the relief valve cap.

⚠WARNING Tip-over hazard. Do not adjust the relief valve higher than specified.

Repeat this procedure beginning with step 2 to confirm the relief valve pressure.

7 Remove the pressure gauge.

How to Adjust the Boom Extend Relief Valve

Note: Perform this procedure with the machine in the stowed position.

Note: Refer to the Function Manifold Component list to locate the Boom Extend Relief valve.

1 Connect a 0 to 5000 psi / 0 to 350 bar pressure gauge to the ptest port on the function manifold.

2 Start the engine from the ground controls.

3 Press and hold the function enable button. Activate and hold the primary boom extend switch with the boom fully extended.

4 Observe the pressure reading on the pressure gauge. Refer to Specifications, *Hydraulic Component Specifications*.

5 Turn the engine off. Use a wrench to hold the relief valve and remove the cap. Refer to Repair Procedures, *Function Manifold Components,* item BG.

6 Adjust the internal hex socket. Turn it clockwise to increase the pressure or counterclockwise to decrease the pressure. Install the relief valve cap.

⚠WARNING Tip-over hazard. Do not adjust the relief valve higher than specified.

7 Repeat this procedure beginning with step 2 to confirm the relief valve pressure.

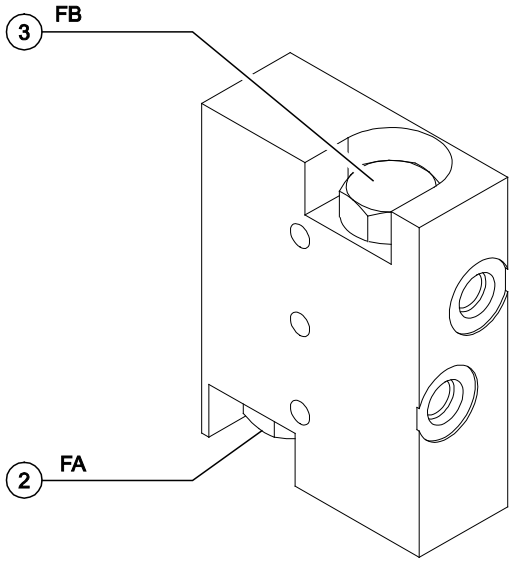
8 Remove the pressure gauge.

Manifolds

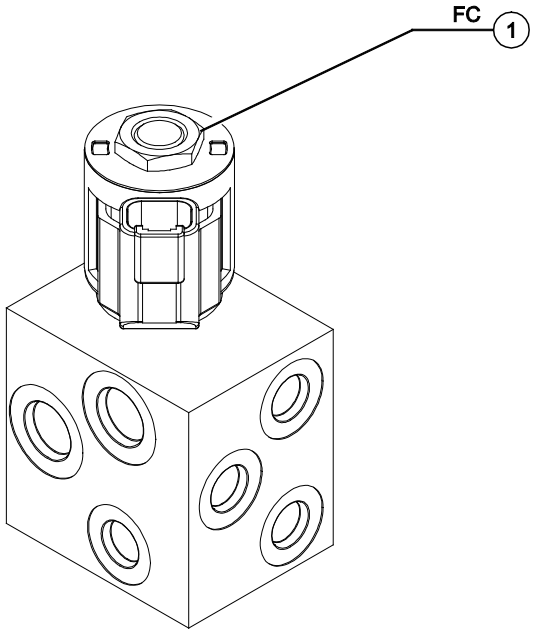
7-3
Jib Boom / Platform Rotate and Generator Manifold Components

The jib boom / platform rotate manifold is mounted to the platform support.

Index No.	Description	Schematic Item	Function	Torque
1	Solenoid Valve, 2 position 3 way	FC	Platform rotate/jib boom select	18-20 ft-lbs / 25-27 Nm
2	Counterbalance valve	FA	Platform rotate right	30-35 ft-lbs / 41-47 Nm
3	Counterbalance valve	FB	Platform rotate left	30-35 ft-lbs / 41-47 Nm



Platform Rotate Manifold



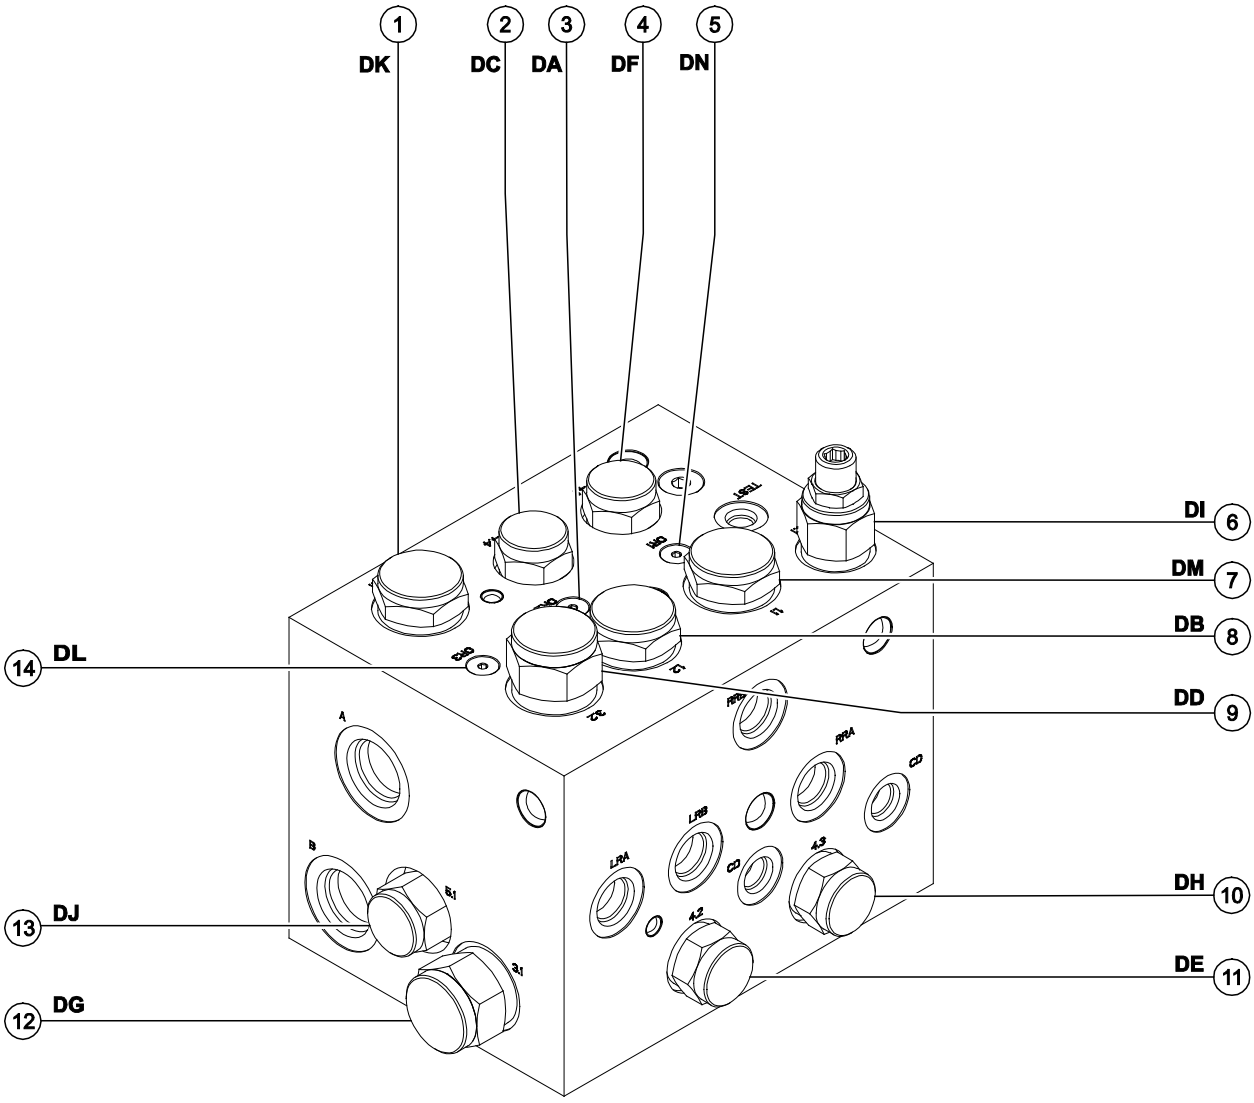
Jib Select Manifold

7-4
Traction Manifold Components, 4WD

The traction manifold is mounted inside the drive chassis at the non-steer end of the machine.

Index No.	Description	Schematic Item	Function	Torque
1	Flow divider/combiner valve	DK	Divides flow between diagonal pairs of motors: LF+RR=50%, LR+RF=50%	80-90 ft-lbs / 108-122 Nm
2	Check valve, 5 psi / 0.34 bar	DC	Prevents cavitation in LF motor	35-40 ft-lbs / 14-16 Nm
3	Orifice, 0.040 inch / 1 mm	DA	Prevents scrub at high steer angles by allowing some bypass flow around the left flow divider	
4	Check valve, 5 psi / 0.34 bar	DF	Prevents cavitation in RF motor	35-40 ft-lbs / 14-16 Nm
5	Orifice, 0.040 inch / 1 mm	DN	Prevents scrub at high steer angles by allowing some bypass flow around the left flow divider	
6	Relief valve, 280 psi / 19.3 bar	DI	Hot oil shuttle relief	35-40 ft-lbs / 14-16 Nm
7	Flow divider/combiner valve, 24 gpm / 91 lpm	DM	Combines return flow from RF and RR motors	80-90 ft-lbs / 108-122 Nm
8	Flow divider/combiner valve, 24 gpm / 91 lpm	DB	Combines return flow from LF and LR motors	80-90 ft-lbs / 108-122 Nm
9	Check valve	DD	Prevents cavitation in LF and RR motors	60-70 ft-lbs / 81-95 Nm
10	Check valve, 5 psi / 0.34 bar	DH	Prevents cavitation in RR motor	35-40 ft-lbs / 14-16 Nm
11	Check valve, 5 psi / 0.34 bar	DE	Prevents cavitation in LR motor	35-40 ft-lbs / 14-16 Nm
12	Check valve	DG	Prevents cavitation in RF and LR motors	60-70 ft-lbs / 81-95 Nm
13	Shuttle valve, fixed	DJ	Directs oil from low pressure side to hot oil relief valve	80-90 ft-lbs / 108-122 Nm
14	Orifice, 0.40 inch / 1 mm	DL	Prevents scrub at high steer angles by allowing some bypass flow around the left flow divider	

Manifolds



7-5
Valve Adjustments - Traction Manifold

How to Adjust the Charge Pressure Relief Valve

1 Connect a 0 to 600 psi / 0 to 50 bar pressure gauge to the test port on the drive pump.

2 **2WD models:** Hold the charge pressure relief valve located on the traction manifold and remove the cap (item GA).
4WD models: Hold the charge pressure relief valve located on the traction manifold and loosen the jam nut (item KA).

3 **2WD models:** Turn the internal hex socket clockwise fully until it stops. Install the cap.
4WD models: Turn the external stem clockwise fully until it stops. Tighten the jam nut.

4 Start the engine and move and hold the function enable/rpm select toggle switch to the high rpm (rabbit symbol) position. Note the reading on the pressure gauge.

5 Turn the engine off.

6 Remove the pressure gauge from the drive pump. Connect the gauge to the test port located on the traction manifold.

7 **2WD models:** Hold the charge pressure relief valve and remove the cap (item GA).
4WD models: Hold the charge pressure relief valve and loosen the jam nut. (item KA).

8 Start the engine and move and hold the function enable/rpm select toggle switch to the high rpm (rabbit symbol) position.

9 Adjust the relief valve until the pressure reading on the gauge is 30 psi / 2 bar less than the pressure reading on the pump. Turn it clockwise to increase the pressure or counterclockwise to decrease the pressure. Install the valve cap or tighten the jam nut.

10 Turn the engine off and remove the pressure gauge.

Manifolds

7-6 Valve Adjustments - Oscillate Relief Valve

How to Adjust the Oscillate Relief Valve

1 Connect a 0 to 1500 psi / 0 to 100 bar pressure gauge to the diagnostic nipple located on the OSC-TEST port on the function manifold.

2 Start the engine from the Ground Control box and press the enable button.

3 Continue pressing the enable button and observe the pressure reading on the pressure gauge. Refer to Specifications, *Hydraulic Specifications*.

4 Loosen the nut of the pressure reducing valve on the function manifold.

5 Adjust the hex screw. Turn it clockwise to increase the pressure or counterclockwise to decrease the pressure. Tighten the jamb nut.

⚠WARNING Tip-over hazard. Do not adjust the pressure reducing valve higher than specified.

6 Repeat step 3 to confirm the valve pressure.

7 Turn the engine off, remove the pressure gauge.

How to Set Up the Directional Valve Linkage

Note: Adjustment of the oscillate directional valve linkage is only necessary when the linkage or valve has been replaced.

Note: Perform this procedure with the machine on a firm, level surface with the boom in the stowed position.

1 Use a "bubble type" level to verify the working surface is completely level.

⚠WARNING Tip-over hazard. Failure to perform this procedure on a level floor could compromise the stability of the machine resulting in the machine tipping over.

2 Check the tire pressure in all four tires and add air if needed to specification.

Note: The tires on some machines are foam-filled and do not need air added to them.

3 Remove the non-steer end drive chassis cover and axle covers.

4 Disconnect the directional valve linkage from the axle.

5 To level the drive chassis, start the engine and use a floor jack to raise the right or left side of the steer axle until the drive chassis is level.

Example: Standing at the non-steer end of the machine, if the drive chassis is leaning to the left, jack up the right side of the steer axle.

6 Verify the drive chassis is level to the working surface.

7 Measure the gap between the drive chassis and the non-steer axle on both sides (from the inside of the drive chassis).

⊙ Result: The gap is between 0.15 to 0.17 inches / 3,8 to 4,3 mm.

⊠ Result: The gap is not within specification. Add or remove shims from the axle stop bars.

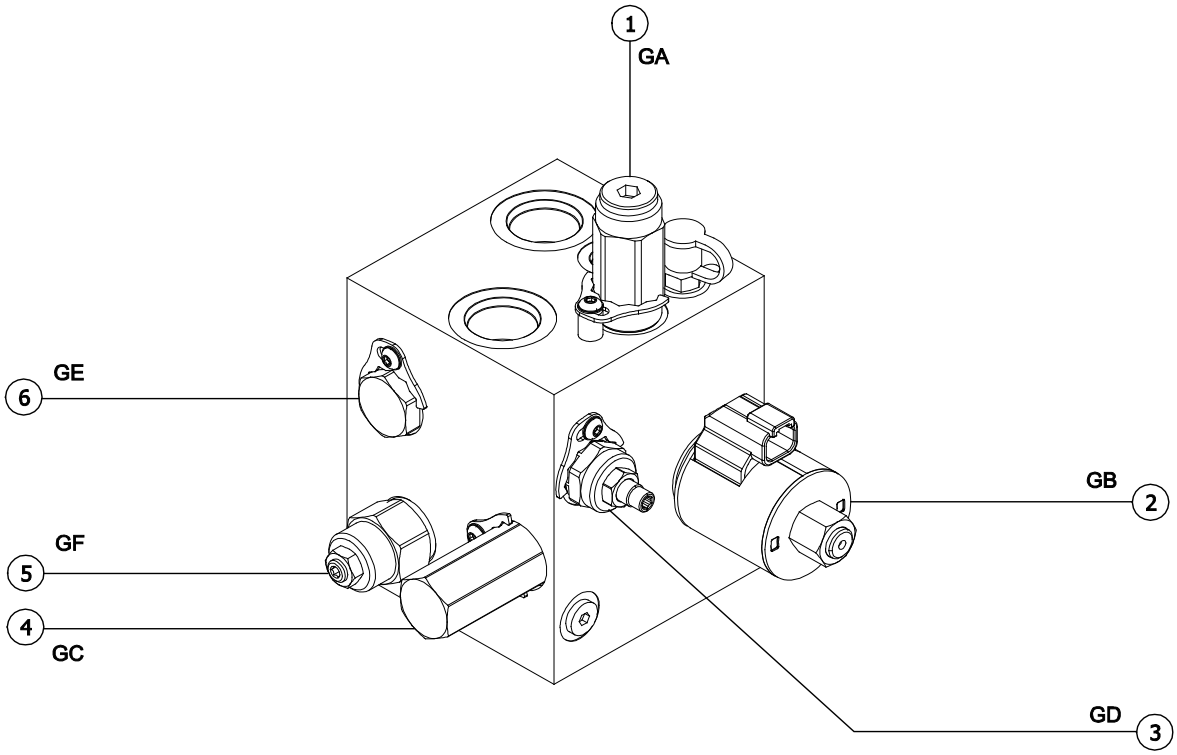
8 Adjust the ball joint and secure the linkage to the axle. Tighten the jam nut.

Manifolds

7-7
Generator Manifold

The generator manifold is mounted on the turntable tray by the fuel tank.

Index No.	Description	Schematic Item	Function	Torque
1	Relief valve	GA	Generator relief valve	50 ft-lbs / 67 Nm
2	Solenoid Valve	GB	Charge pressure circuit	60-65 ft lbs / 81-88 Nm
3	Needle valve	GD	Charge pressure circuit	50 ft-lbs / 67 Nm
4	Differential sensing valve	GC	Pilot valve to diverter valve	50 ft-lbs / 67 Nm
5	Counterbalance valve	CF	Adds backpressure to generator circuit	
6	Check valve	GE	Prevents oil to generator	24-26 ft-lbs / 32.5-35.3 Nm



7-8 Valve Coils

How to Test a Coil

A properly functioning coil provides an electromotive force which operates the solenoid valve. Critical to normal operation is continuity within the coil that provides this force field.

Since coil resistance is sensitive to temperature, resistance values outside specification can produce erratic operation. When coil resistance decreases below specification, amperage increases. As resistance rises above specification, voltage increases.

While valves may operate when coil resistance is outside specification, maintaining coils within specification will help ensure proper valve function over a wide range of operating temperatures.

⚠WARNING Electrocution/burn hazard. Contact with electrically charged circuits could result in death or serious injury. Remove all rings, watches and other jewelry.

1 Tag and disconnect the wiring from the coil to be tested.

2 Test the coil resistance.

⊙ Result: The resistance should be within specification, plus or minus 30%.

⊙ Result: If the resistance is not within specification, plus or minus 30%, replace the coil.

Valve Coil Resistance Specification

Note: The following coil resistance specifications are at an ambient temperature of 68°F / 20°C. As valve coil resistance is sensitive to changes in air temperature, the coil resistance will typically increase or decrease by 4% for each 18°F / 10°C that your air temperature increases or decreases from 68°F / 20°C.

Valve Coil Resistance Specification	
Solenoid valve, 3 position 4 way, 10V DC schematic item (BT)	4Ω
Solenoid Valve, 2 position 3 way, 10V DC schematic items (BU, BV, BX, and BZ)	4Ω
Solenoid valve, 3 position 4 way, 10V DC schematic items (CD and CF)	5Ω
Proportional solenoid valve, 12V DC schematic items(BI and CH)	5Ω
Solenoid Valve, 2 position 3 way, 10V DC schematic item (CC)	6.8Ω
Solenoid Valve, 2 position 3 way, 12V DC (schematic item CE)	4.8Ω

Manifolds

How to Test a Coil Diode

Properly functioning coil diodes protect the electrical circuit by suppressing voltage spikes. Voltage spikes naturally occur within a function circuit following the interruption of electrical current to a coil. Faulty diodes can fail to protect the electrical system, resulting in a tripped circuit breaker or component damage.

⚠WARNING Electrocution/burn hazard. Contact with electrically charged circuits could result in death or serious injury. Remove all rings, watches and other jewelry.

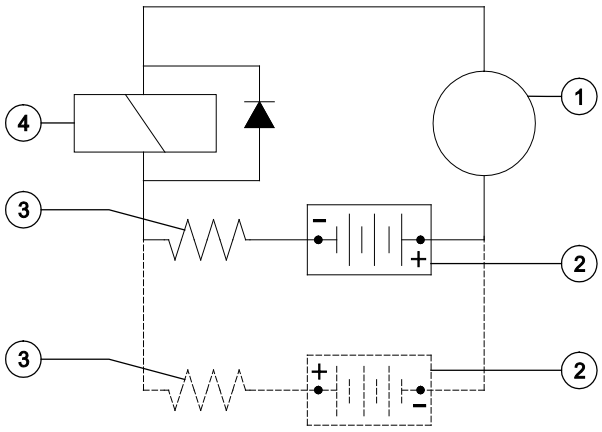
1 Test the coil for resistance. Refer to Repair Procedure, *How to Test a Coil*.

2 Connect a 10W resistor to the negative terminal of a known good 9V DC battery. Connect the other end of the resistor to a terminal on the coil.

Resistor 10Ω

Genie part number 27287

Note: The battery should read 9V DC or more when measured across the terminals.



1 multimeter
2 9v DC battery
3 10Ω resistor
4 coil

Note: Dotted lines in illustration indicate a reversed connection as specified in step 6.

3 Set a multimeter to read DC current.

Note: The multimeter, when set to read DC current, should be capable of reading up to 800 mA.

4 Connect the negative lead to the other terminal on the coil.

5 Momentarily connect the positive lead from the multimeter to the positive terminal on the 9V DC battery. Note and record the current reading.

6 At the battery or coil terminals, reverse the connections. Note and record the current reading.

⊙ Result: Both current readings are greater than 0 mA and are different by a minimum of 20%. The coil is good.

7 Result: If one or both of the current readings are 0 mA, or if the two current readings do not differ by a minimum of 20%, the coil and/or its internal diode are faulty and the coil should be replaced.

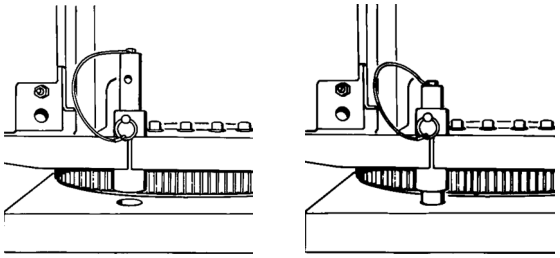
Turntable Rotation Components

8-1
Turntable Rotation Assembly

How to Remove the Turntable Rotation Drive Hub Assembly

Note: When removing a hose assembly or fitting, the O-ring (if equipped) on the fitting and/or hose end must be replaced. All connections must be torqued to specification during installation. Refer to Specifications, *Hydraulic Hose and Fitting Torque Specifications.*

1 Secure the turntable from rotating with the turntable rotation lock pin.

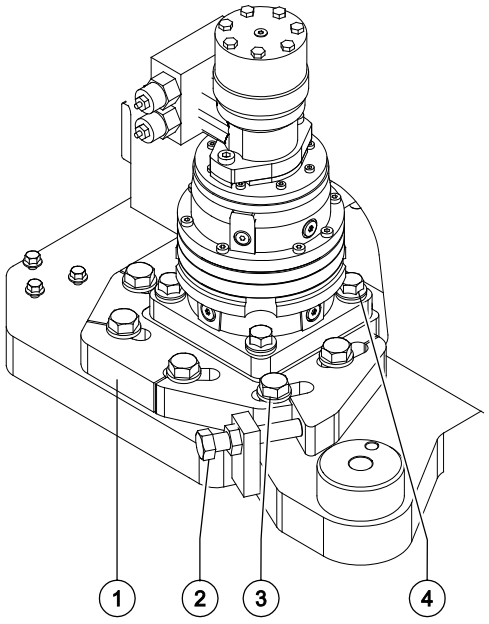


unlocked locked

2 Tag, disconnect and plug the hydraulic hoses from the drive motor. Cap the fittings on the motor.

⚠WARNING Bodily injury hazard. Spraying hydraulic oil can penetrate and burn skin. Loosen hydraulic connections very slowly to allow the oil pressure to dissipate gradually. Do not allow oil to squirt or spray.

3 Attach a suitable lifting device to the turntable rotator assembly.



1 backlash pivot plate
2 adjustment bolt with locknut
3 backlash pivot plate mounting bolts
4 drive hub mounting bolts

4 Back off the locknut and loosen the adjustment bolt.

5 Loosen the backlash pivot plate mounting fasteners and slide the assembly away from the turntable rotate gear.

6 Remove the turntable drive hub mounting fasteners.

Turntable Rotation Components

7 Carefully remove the drive hub assembly from the machine.

⚠WARNING Crushing hazard. The turntable rotate drive hub assembly could become unbalanced and fall when removed from the machine if not properly supported by the lifting device.

When installing the drive hub assembly:

8 Install the turntable rotator assembly. Apply removable thread locking compound to fastener threads.Torque the backlash pivot plate mounting fasteners to 160 ft-lbs / 217 Nm.

How to Adjust the Turntable Rotation Gear Backlash

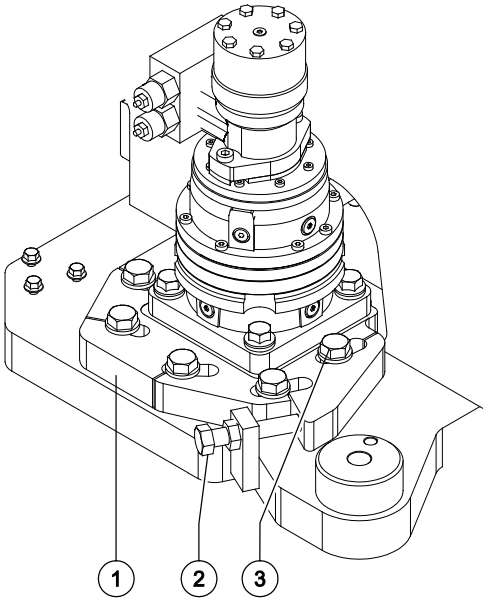
The turntable rotation drive hub is mounted on an adjustable plate that controls the gap between the rotation motor pinion gear and the turntable bearing ring gear.

Note: Perform this procedure with the boom between the non-steer end tires and with the machine on a firm and level surface.

1 Secure the turntable from rotating with the turntable rotation lock pin.

Note: The turntable rotation lock pin is located next to the boom rest pad.

2 Loosen the backlash pivot plate mounting fasteners.



1 backlash pivot plate
2 adjustment bolt with lock nut
3 backlash pivot plate mounting bolts

3 Push the backlash pivot plate towards the turntable as far as possible (this will push the rotation gear into the turntable bearing ring gear).

4 Loosen the lock nut on the adjustment bolt.

5 Turn the adjustment bolt clockwise until it contacts the backlash pivot plate.

6 Turn the adjustment bolt 1/2 turn counterclockwise. Tighten the lock nut on the adjustment bolt.

7 Rotate the backlash pivot plate away from the turntable until it contacts the adjustment bolt. Then torque the mounting fasteners on the backlash pivot plate to specification. Refer to Specifications, *Machine Torque Specifications*.

8 Rotate the turntable through an entire rotation. Check for tight spots that could cause binding. Readjust if necessary.

How to Calibrate the Turntable Tilt Sensor

Note: Perform this procedure on a firm, level surface with the machine in the stowed position.

Note: A digital level will be required to perform this procedure.

1 Enter Service Mode. Refer to Repair Procedure, *How to Enter the Service Mode*.

2 Press the settings button above the display and navigate to the Sensor Calibrations menu.

3 Navigate to the Chassis Tilt Sensor calibration screen.

4 Select and start the calibration procedure.

5 If the machine is not sufficiently level, the procedure will fail with the message that the chassis no not sufficiently level. Move the machine to a more level location if this occurs.

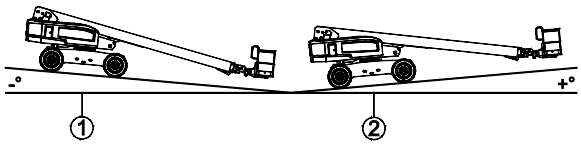
6 The first calibration is machine pitch. This is the pitch of the machine from the platform end to the counterweight end of the machine.

7 Place the digital level onto the swing chassis bearing plate, which is located to the left of the fuel tank. Orient the level along the pitch axis of the machine.

8 Enter the value as seen on the digital level into the ground control display. If the digital level is showing a negative value, enter it as a positive number. Press **OK** when the value on the ground control display matches the value of the digital level (excluding the plus/minus sign).

Turntable Rotation Components

9 A graphic of the machine pitch will now be shown on the display. By pressing the **UP** or **DOWN** buttons, the graphic will change to show the counterweight being uphill or downhill. Select the image that corresponds to the current pitch of the machine and press **OK**.



Turntable Pitch

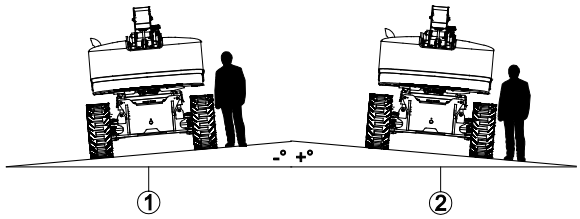
1 uphill
2 downhill

10 The next calibration of the machine is the machine roll. This is the angle of the machine from side to side.

11 Place the digital level onto the swing chassis bearing plate, which is located to the left of the fuel tank. Orient the level along the roll axis of the machine.

12 Enter the value as seen on the digital level onto the ground control display. If the level is showing a negative value, enter it as a positive number. Press **OK** when the value on the ground control display matches the value of the digital level sensor (excluding the plus/minus sign).

13 A graphic of the machine roll will now be shown on the display. By pressing the **UP** and **DOWN** buttons, the graphic will change to show whether the operator is on the uphill or downhill side of the machine.. Select the image that corresponds to the current roll of the machine and press **OK.**



Turntable Roll

1 uphill
2 downhill

14 The calibration is now complete.

15 Exit the Service Mode.

9-1
Oscillating Axle Cylinders

The oscillating axle cylinders extend and retract between the drive chassis and the oscillating axle. The cylinders are equipped with counterbalance valves to prevent movement in the event of a hydraulic line failure. The valves are not adjustable.

How to Remove an Oscillating Axle Cylinder

Note: Perform this procedure with the machine on a firm, level surface with the boom in the stowed position.

Note: When removing a hose assembly or fitting, the O-ring (if equipped) on the fitting and/or hose end must be replaced. All connections must be torqued to specification during installation. Refer to Specifications, *Hydraulic Hose and Fitting Torque Specifications.*

1 Rotate the turntable until the boom is between the steer tires or tracks.

2 Tag, disconnect and plug the oscillating axle cylinder hydraulic hoses. Cap the fittings on the oscillate cylinder.

⚠WARNING Bodily injury hazard. Spraying hydraulic oil can penetrate and burn skin. Loosen hydraulic connections very slowly to allow the oil pressure to dissipate gradually. Do not allow oil to squirt or spray.

3 Remove the pin retaining fasteners from the rod-end pivot pin. Use a soft metal drift to remove the pin.

4 Attach a lifting strap from an overhead crane to the barrel end of the oscillating cylinder.

5 Remove the pin retaining fasteners from the barrel-end pivot pin. Use a soft metal drift to remove the pin.

6 Remove the oscillate cylinder from the machine.

⚠CAUTION Crushing hazard. The oscillate cylinder may become unbalanced and fall when removed from the machine if not properly attached to the overhead crane.

Track Components

10-1 Track Assembly

How to Remove a Track Assembly

Note: Perform this procedure with the machine on a firm, level surface with the boom in the stowed position.

1 Chock the tracks at the opposite end of the machine to prevent the machine from rolling.

2 Center a lifting jack of ample capacity (20,000 lbs / 10,000 kg) under the drive chassis between the tracks.

3 Lift the machine until the tracks are off the ground and then place jack stands under the drive chassis for support.

4 Remove the lug nut bolts holding each half sprocket on the drive hub. Rotate the sprockets until only one sprocket is contacting the track. Remove the lower half sprocket from the track assembly.

5 Rotate the remaining half sprocket 180° so that it is free of the track.

6 Attach a lifting strap from an overhead crane to the center-point of the track assembly, above the sprocket.

7 Remove the fasteners holding the TRAX mounting pin located underneath the axle. Remove the pin supporting the TRAX assembly.

8 Carefully remove the track assembly from the drive hub and set aside.

⚠ CAUTION Crushing hazard. The track assembly could become unbalanced and fall when removed from the machine if not properly supported by the overhead crane.

How to Replace the Track

1 Remove the track assembly from the machine. See How to Remove a Track Assembly.

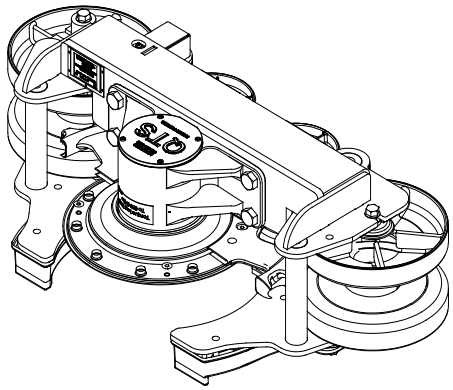
Note: The sprocket is comprised of two halves. Before removing the track assembly from the machine and to ease the removal of the sprocket, drive the machine until one complete half of the sprocket is located above the undercarriage of the track assembly.

2 Loosen the grease plug on the track tension cylinder to relieve the track tension. Clean up any grease that has spilled.

3 Remove the 2 sprocket retaining fasteners. Remove the sprocket half from the track assembly.

4 Carefully remove the track from the undercarriage.

5 Use an overhead crane to lay the undercarriage on its side with the drive sprocket bearing assembly facing upward and the track tension cylinder towards the ground.

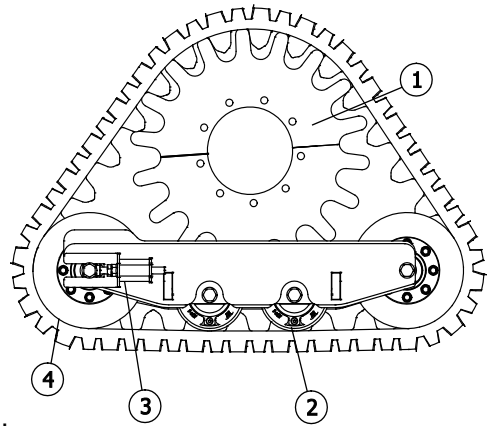


6 Install the new track onto the undercarriage.

7 Attach a lifting strap from an overhead crane to the center-point of the track, above the sprocket.

8 Use the overhead crane to raise the track assembly to an upright position. Rest the assembly on the floor or ground to remove any slack in the lower portion of the track.

Note: Be sure the idler and bogey wheels are aligned with the inside surface of the track



.

1 half sprocket
2 bogey wheel
3 tensioner assembly
4 idler wheel

9 Rotate the sprocket half until the split tooth of the sprocket is lower than the other side.

10 Using an overhead crane or other suitable lifting device, lift up on the rubber track to create enough room to install the other sprocket half.

11 Install the sprocket half, removed in step 3, while engaging the sprocket teeth with the rubber track.

Note: Be sure to align the split tooth in both of the sprocket halves.

12 Insert a pin or rod through the wheel stud hole closest to the split tooth to hold the sprocket in place.

13 Insert a pointed pry bar into the wheel stud hole near the top of the sprocket. Insert another pointed pry bar into the wheel stud hole at the opposite side of the split tooth.

14 Using the pry bars, lift the sprocket half into position. Install the 2 sprocket retaining fasteners and torque to specification. Refer to Section 2, Specifications.

15 Attach a lifting strap from an overhead crane to the center-point of the track assembly, above the sprocket.

16 Install the track assembly onto the drive hub. Install the lug nuts and torque to specification. Refer to Specifications.

⚠ CAUTION Crushing hazard. The track assembly could become unbalanced and fall when installed onto the machine if not properly supported by the overhead crane.

17 Adjust the track tension. Tighten the tensioner nut on both sides of the idler wheel until there is about 0.75-1.0 inch / 19-25 mm of droop between the inside of the rubber track and the bottom surface of the bogey wheels.

Fault Codes

Observe and Obey:

- ☑ Troubleshooting and repair procedures shall be completed by a person trained and qualified on the repair of this machine
- ☑ Immediately tag and remove from service a damaged or malfunctioning machine.
- ☑ Repair any machine damage or malfunction before operating the machine.
- ☑ Unless otherwise specified, perform each procedure with the machine in the following configuration:
  - Machine parked on a firm, level surface
  - Key switch in the off position with the key removed
  - The red Emergency Stop button in the off position at both the ground and platform controls
  - Wheels chocked
  - All external AC power supply disconnected from the machine
  - Boom in the stowed position
  - Turntable secured with the turntable rotation lock
  - Welder disconnected from the machine (if equipped with the weld cable to platform option)

Before Troubleshooting:

- ☑ Read, understand and obey the safety rules and operating instructions in the appropriate operator's manual on your machine.
- ☑ Be sure that all necessary tools and test equipment are available and ready for use.
- ☑ Read each appropriate fault code thoroughly. Attempting short cuts may produce hazardous conditions.
- ☑ Be aware of the following hazards and follow generally accepted safe workshop practices.

⚠WARNING Electrocution/burn hazard. Contact with electrically charged circuits could result in death or serious injury. Remove all rings, watches and other jewelry.

Note: Two persons will be required to safely perform some troubleshooting procedures.

Control System Fault Codes

Control System

How to Retrieve Control System Fault Codes

The machine control system contains two different types of fault codes

Active Faults: These faults have been detected in the current operating session. The presence of an active fault will be reflected by the System Fault Indicator lights and the alarm.

Logged Faults: The faults contained in the fault log have occurred in the past and may or may not still be in effect.

Both faults may be viewed by pressing the Fault Button above the ground display and navigating to either the Active Machine Faults screen or the Machine Fault Log screen. The list of faults will by shown by fault code and the hour meter of when it occurred.

The fault lists can be browsed. To learn more about a fault entry, select it and press OK. A screen will be shown that describes the fault in more detail.

Control System Fault Codes

Models with Revision H software or higher

ID	Component	ID	Name	Cause	Effect	Solution
1	Engine Can Bus	13	Not detected	Engine CANBUS CAN+ or CAN- shorted to supply.	Disable engine start for tier 4F engines	*Verify with a voltmeter that CAN+ and CAN- lines are not shorted.* Measure the resistance between D228CAN+ (YL, TCON J9-3) and D228CAN- (GR, TCON J9-4); should be between 55 and 65 ohms. * D228CAN+ (YL, TCON J9-3) should be between 1V and 5V. * D228CAN- (GR, TCON J9-4) should be between 1V and 5V. Remove short(s) and cycle power.
7	Engine Warning	21	Fault	The engine has triggered the Engine Warning Lamp condition.	Machine will function as normal.	* Check the engine fault codes with an engine diagnostic tool.
8	Engine Stop	21	Fault	The engine has triggered the Engine Stop Lamp condition.	Control system will not allow engine restart until power cycle. Engine may stop itself, depending on the engine option.	* Check the engine fault codes with an engine diagnostic tool. Note: The control system shuts off the engine immediately upon receiving this fault from the engine.
10	Ground Controls Engine Start Switch	27	Active at startup	Engine start button held at startup.	Engine start is disabled	Release engine start button, check DISCON overlay and ribbon cable if issue persists.
11	Platform Controls Engine Start Switch	27	Active at startup	Platform controls engine start switch active at startup.	Engine start switch will not operate.	*Verify with a voltmeter that the Engine Start Toggle Switch (TS2) is operating properly. * C33STR (BK, PCON J16-3) should be 0 V with the switch OFF and 12 V with the switch ON. *Cycle power to allow the machine to re-test the fault.
12	Machine CAN Bus	13	Not detected	Machine CANBUS CAN+ or CAN- shorted to supply	Machine will not be functional.	*Verify with a voltmeter that CAN+ and CAN- lines are not shorted. *Measure the resistance between D82CAN+ (YL, TCON J5-3) and D81CAN- (GR, TCON J5-4); should be between 55 and 65 ohms. *D81CAN+ (YL, TCON J5-3) should be between 1V and 5V. *D81CAN- (GR, TCON J5-4) should be between 1V and 5V. *Remove short(s) and cycle power.

Control System Fault Codes

ID	Component	ID	Name	Cause	Effect	Solution
13	Jib Up/Down Switch	27	Active at startup	Toggle switch input was detected as HIGH at start-up.	The Jib Up or Down functions will not operate.	*Verify with a voltmeter that the Jib Up/Down Toggle Switch (TS8) is operating properly. * C43JU (BL, PCON J17-6) should be 0 V with the switch OFF and 12 V with the switch held in the UP position. * C44JD (BL/BK, PCON J17-8) should be 0 V with the switch OFF and 12 V with the switch held in the DOWN position. *Cycle power to allow the machine to re-test the fault.
15	Foot Switch	27	Active at startup	Foot switch input was detected as HIGH at start-up, or the footswitch was held for too long and caused the footswitch timer to elapse.	Machine will not be functional.	* Release foot switch and cycle power. * If problem persists, with a voltmeter verify that C24FS (WH, PCON J12-2) is LOW when foot switch is released and 12 V when held down.
		28	Timeout	Foot switch depressed too long without action	Machine will not be functional.	
17	Aux Pump Coil	11	Shorted to supply voltage	TCON detected that C27AUX circuit is shorted to 12V.	Machine will not be functional.	*Check C27AUX (RD, TCON J3-3) wiring. *With a voltmeter verify that C27AUX (RD, TCON J3-3) is 0 V when the Auxiliary Power toggle switch is OFF and 12 V when switch is ON. *Verify the terminals of the APU solenoid have a resistance greater than 5 ohms. If not, replace the solenoid.
19	Aux Enable Switch	27	Active at startup	Aux button held at startup.	Machine will not be functional.	Release Aux button, check DISCON overlay and ribbon cable if issue persists.
20	Pri Boom Ext / Ret Joystick	11	Shorted to supply voltage	Circuit C163PER is above 4.5 V.	Boom Extend and Retract functions will not operate.	* Leave joystick in neutral position and cycle power. * If fault persists, with a voltmeter check that C163PER (BL/WH, PCON J18-4) is at 2. 5V +/- 0.2 V at startup and does not go above 4.5 V or below 0.5 V when fully stroked in each direction. * Replace joystick if voltage check fails.
		27	Active at startup	Circuit C163PER voltage was not within the startup voltage range of 2.5 V +/- 0.2 V.		

Control System Fault Codes

ID	Component	ID	Name	Cause	Effect	Solution
21	Pri Boom Up / Down Joystick	11	Shorted to supply voltage	Circuit C164PUD is above 4.5 V.	Boom Up and Down functions will not operate.	* Leave joystick in neutral position and cycle power. * If fault persists, with a voltmeter check that C164PUD (RD/WH, PCON J18-3) is at 2. 5V +/- 0.2 V at startup and does not go above 4.5 V or below 0.5 V when fully stroked in each direction. * Replace joystick if voltage check fails.
		28	Active at startup	Circuit C164PUD voltage was not within the startup voltage range of 2.5 V +/- 0.2 V.		
22	Pri Boom Up coil	11	Shorted to supply voltage	TCON detected that C1PBU circuit is shorted to 12 V.	Boom Up function will not operate. Boom Down will also not operate if short is to 12 V.	* With a voltmeter, measure Y22. Proper resistance should be between 5 - 60 ohms. Replace Y22 if resistance is outside of those values. * Verify wiring for C1PBU (RD, TCON J4-10) and check for open or short circuits.
23	Pri Boom Down Coil	11	Shorted to supply voltage	TCON detected that C2PBD circuit is shorted to 12 V or GND.	Boom Up and Down functions will not operate.	* With a voltmeter, measure Y21. Proper resistance should be between 5 - 60 ohms. Replace Y21 if resistance is outside of those values. * Verify wiring for C2PBD (RD/BK, TCON J4-9) and check for open or short circuits. * Verify resistance between Recovery Module pins J37-2 and J37-11 is zero ohms.

Control System Fault Codes

ID	Component	ID	Name	Cause	Effect	Solution
24	Pri Boom Angle	13	Not detected	No CAN messages have been received by the TCON from the Angle Sensor.	Machine limited to recovery functions	* Verify sensor power P85PWR (GR, TCON J6-7) is at 12 V while the system is running. * Verify the sensor is receiving power. Unplug the sensor and verify 12 V across pins 2 (+) and 1 (-) on the harness connector. * Verify the CAN bus wiring. With the sensor still unplugged, measure resistance across harness connector pins 3 and 4. If resistance is not between 55 and 65 ohms, check CAN wire harnesses. * Replace sensor if necessary.
		14	Cross check failed	Boom stowed crosscheck switch value not as expected		*Verify that with the boom stowed C68LS (BL, TCON J7-3) is 12V and that the boom is making contact with the LST3S limit switch arm. *Verify that with the boom above 12 degrees C68LS (BL, TCON J7-3) is 0V and that the boom is not making contact with the LST3S limit switch arm. *Check LST3S limit switch for physical damage.
		17	Not calibrated	Sensor has been replaced and requires calibration, or calibration in memory has been erased.		Run the boom angle calibration process and verify fault is no longer active.
		19	Value out of expected range	Min or max boom angle out of expected range.	Machine limited to recovery functions	* Calibrate boom angle snesor. * Check boom angle sensor mount, ensure all fasteners are tightened to spec. * Replace sensor if issue persists.
25	Cable tension	21	Fault	Boom cable tension limit switch LSB2S indicates that the tension is loose on the boom cables.	Boom Up and Extend functions will not operate.	* Return boom to stowed position as quickly as possible. * Verify both boom cables are properly tensioned and that LST3S is properly centered in the bracket. * Verify LSB2S (C59CNK, BL/WH, TCON J7-5) operates properly. Signal should normally by 12 V. If cable tension is loose, signal should be 0 V.

Control System Fault Codes

ID	Component	ID	Name	Cause	Effect	Solution
26	Pri Boom Ext Coil	11	Shorted to supply voltage	TCON detected that C7PBE circuit is shorted to 12 V or GND.	Boom Extend and Retract functions will not operate.	* With a voltmeter, measure Y26. Proper resistance should be between 5 - 60 ohms. Replace Y26 if resistance is outside of those values. * Verify wiring for C7PBE (BK, TCON J4-7) and check for open or short circuits.
27	Pri Boom Ret Coil	11	Shorted to supply voltage	TCON detected that C8PBR circuit is shorted to 12 V or GND.	Boom Extend and Retract functions will not operate.	* With a voltmeter, measure Y25. Proper resistance should be between 5 - 60 ohms. Replace Y25 if resistance is outside of those values. * Verify wiring for C8PBR (BK/WH, TCON J4-8) and check for open or short circuits. * Verify resistance between Recovery Module pins J37-5 and J37-8 is zero ohms.
35	Ground Control Button	27	Active at startup	Buttons were held at system start, or are shorted on the ground control panel.	The function associated with the stuck button will not operate.	*Release the ground control buttons and cycle power. *If problem persists, open ground control box and open the Display Controller access door, being careful to keep water out. Verify the ribbon cables are properly seated and dry. *Re-seat and/or replace ribbon cables if necessary. *Replace ground control overlay.
36	Jib Up Coil	11	Shorted to supply voltage	PCON detected that V43JU circuit is shorted to 12 V or GND.	Jip Up function will not operate.	* With a voltmeter, measure Y68. Proper resistance should be between 5 - 60 ohms. Replace Y68 if resistance is outside of those values. * Verify wiring for V43JU (BL, PCON J12-8) and check for open or short circuits.
37	Jib Down Coil	11	Shorted to supply voltage	PCON detected that V44JD circuit is shorted to 12 V or GND.	Jib Down function will not operate.	* With a voltmeter, measure Y69. Proper resistance should be between 5 - 60 ohms. Replace Y69 if resistance is outside of those values. * Verify wiring for V44JD (BL/BK, PCON J12-9) and check for open or short circuits.

Control System Fault Codes

ID	Component	ID	Name	Cause	Effect	Solution
40	Jib Select Coil	11	Shorted to supply voltage	PCON detected V18PRR is short to supply	Jib and platform functions will not operate	*With a voltmeter, measure Y18. Proper resistance should be between 5 - 60 ohms. Replace Y18 if resistance is outside of those values. *Verify wiring for V18PRR (GR/BK, PCON J12-4) and check for short circuits.
41	Turntable Rotate Joystick	11	Shorted to supply voltage	Circuit C165TTR is above 4.5 V.	Turntable Rotate functions will not operate.	* Leave joystick in neutral position and cycle power. * If fault persists, with a voltmeter check that C165TTR (WH/RD, PCON J18-2) is at 2. 5V +/- 0.2 V at startup and does not go above 4.5 V or below 0.5 V when fully stroked in each direction. * Replace joystick if voltage check fails.
		27	Active at startup	Circuit C165TTR voltage was not within the startup voltage range of 2.5 V +/- 0.2 V.		
42	Turntable Rotate CW Coil	11	Shorted to supply voltage	TCON detected that C4TRL circuit is shorted to 12 V or GND.	Turntable Rotate functions will not operate.	* With a voltmeter, measure Y24. Proper resistance should be between 5 - 60 ohms. Replace Y24 if resistance is outside of those values. * Verify wiring for C4TRL (WH, TCON J3-12) and check for open or short circuits.
43	Turntable Rotate CCW Coil	11	Shorted to supply voltage	TCON detected that C5TRR circuit is shorted to 12 V or GND.	Turntable Rotate functions will not operate.	* With a voltmeter, measure Y23. Proper resistance should be between 5 - 60 ohms. Replace Y23 if resistance is outside of those values. * Verify wiring for C5TRR (WH/BK, TCON J3-1) and check for open or short circuits.
44	Drive Enable Toggle Switch	27	Active at startup	Toggle switch input was detected as HIGH at start-up.	Drive Enable switch will not operate, possibly preventing drive while the turntable is rotated.	*Verify with a voltmeter that the Drive Enable Toggle Switch (TS15) is operating properly. * C143DEL (BL/RD, PCON J16-7) should be 0 V with the switch OFF and 12 V with the switch held in the ON position. *Cycle power to allow the machine to re-test the fault.

Control System Fault Codes

ID	Component	ID	Name	Cause	Effect	Solution
45	Platform Level Toggle Switch	27	Active at startup	Toggle switch input was detected as HIGH at start-up.	Platform Level Up or Down functions may not operate, depending on which direction the switch fault occurred.	*Verify with a voltmeter that the Platform Level Up/Down Toggle Switch (TS9) is operating properly. * C14PLU (OR, PCON J17-2) should be 0 V with the switch OFF and 12 V with the switch held in the UP position. * C15PLD (OR/BK, PCON J17-3) should be 0 V with the switch OFF and 12 V with the switch held in the DOWN position. *Cycle power to allow the machine to re-test the fault.
46	Platform Rotate CW Coil	11	Shorted to supply voltage	PCON detected that V17PRL circuit is shorted to 12 V or GND.	Platform Rotate CW function will not operate.	* With a voltmeter, measure Y70. Proper resistance should be between 5 - 60 ohms. Replace Y70 if resistance is outside of those values. * Verify wiring for V17PRL (GR, PCON J12-5) and check for open or short circuits.
47	Platform Rotate CCW Coil	11	Shorted to supply voltage	PCON detected that V18PRR circuit is shorted to 12 V or GND.	Platform Rotate CCW function will not operate.	* With a voltmeter, measure Y71. Proper resistance should be between 5 - 60 ohms. Replace Y71 if resistance is outside of those values. * Verify wiring for V18PRR (GR/BK, PCON J12-4) and check for open or short circuits.
51	Drive Joystick	11	Shorted to supply voltage	Circuit C160DRV is above 4.5 V.	Drive Forward and Reverse functions will not operate.	* Leave joystick in neutral position and cycle power. * If fault persists, with a voltmeter check that C160DRV (WH/RD, PCON J18-10) is at 2. 5V +/- 0.2 V at startup and does not go above 4.5 V or below 0.5 V when fully stroked in each direction. * Replace joystick if voltage check fails.
		27	Active at startup	Circuit C160DRV voltage was not within the startup voltage range of 2.5 V +/- 0.2 V.		

Control System Fault Codes

ID	Component	ID	Name	Cause	Effect	Solution
52	Drive Forward Pump Coil	11	Shorted to supply voltage	TCON detected that C30FWD circuit is shorted to 12 V or GND.	Drive Forward, Brake Release and possibly Engine will not operate.	* With a voltmeter, measure Y6. Proper resistance should be between 5 - 60 ohms. Replace Y6 if resistance is outside of those values. * Verify wiring for C30FWD (WH, TCON J2-6) and check for open or short circuits.
53	Drive Reverse Pump Coil	11	Shorted to supply voltage	TCON detected that C31REV circuit is shorted to 12 V or GND.	Drive Reverse, Brake Release and possibly Engine will not operate.	* With a voltmeter, measure Y5. Proper resistance should be between 5 - 60 ohms. Replace Y5 if resistance is outside of those values. * Verify wiring for C31REV (WH/BK, TCON J2-7) and check for open or short circuits.
54	Brake Release Coil	11	Shorted to supply voltage	TCON detected that C32BRK circuit is shorted to 12 V or GND.	Machine will not be functional.	* With a voltmeter, measure Y2. Proper resistance should be between 5 - 60 ohms. Replace Y2 if resistance is outside of those values. * Verify wiring for C32BRK (WH/RD, TCON J2-9) and check for open or short circuits.
55	High Drive Speed Coil	11	Shorted to supply voltage	TCON detected that C29MS circuit is shorted to 12 V or GND.	Drive functions will not operate.	* With a voltmeter, measure Y27. Proper resistance should be between 5 - 60 ohms. Replace Y27 if resistance is outside of those values. * Verify wiring for C29MS (RD/WH, TCON J2-8) and check for open or short circuits.
56	Telematics Device	13	Not detected	M7 telematics device not detected.	Information only	Cycle power. If fault persists, check telematics ready connector wiring. If there are no wiring issues replace M7.

Control System Fault Codes

ID	Component	ID	Name	Cause	Effect	Solution
61	Steer Joystick	11	Shorted to supply voltage	Circuit C159STD or C159STA is above 4.5 V.	Drive and steer functions will not operate.	* Leave joystick in neutral position and cycle power. * If fault persists, identify which circuit is the steer circuit. Check C159STA (BL/WH, PCON J18-11) for a joystick steer option. Check C159STD (BL/RD, PCON J18-9) for the rocker joystick steer option. With a voltmeter check that the circuit is at 2. 5V +/- 0.2 V at startup and does not go above 4.5 V or below 0.5 V when fully stroked in each direction. * Replace joystick if voltage check fails.
		27	Active at startup	Circuit C159STD or C159STA voltage was not within the startup voltage range of 2.5 V +/- 0.2 V.		
62	Prox Override Togggle Switch	27	Active at startup	Toggle switch input was detected as HIGH at start-up.	The Jib Up or Down functions will not operate.	*Verify with a voltmeter that the Jib Up/Down Toggle Switch (TS8) is operating properly. * C43JU (BL, PCON J17-6) should be 0 V with the switch OFF and 12 V with the switch held in the UP position. * C44JD (BL/BK, PCON J17-8) should be 0 V with the switch OFF and 12 V with the switch held in the DOWN position. Cycle power to allow the machine to re-test the fault.
68	Ground Function Enable Button	27	Active at startup	Button was held at system start, or is shorted on the ground control panel.	The function associated with the stuck button will not operate.	* Release the ground control buttons and cycle power. * If problem persists, open ground control box and open the Display Controller access door, being careful to keep water out. Verify the ribbon cables are properly seated and dry. * Re-seat and/or replace ribbon cables if necessary. * Replace ground control overlay.

Control System Fault Codes

ID	Component	ID	Name	Cause	Effect	Solution
69	AC Generator Output	11	Shorted to supply voltage	TCON detected that C45GEN circuit is shorted to 12 V.	Generator function will not operate.	* With a voltmeter, measure Y29. Proper resistance should be between 5 - 60 ohms. Replace Y29 if resistance is outside of those values. * Verify wiring for C45GEN (GR/WH, TCON J3-2) and check for open or short circuits.
72	Lift Guard Contact Alarm Switch	14	Cross check failed	PCON detected that inputs from SW30 (contact alarm proximity sensor) are the same voltage.	Boom Up and Extend functions will not operate.	* Using a voltmeter, verify that the voltage on C248CA (OR/BK, PCON J12-1) is always the opposite of C247CA (OR, PCON J12-11). * Check wiring for open or short circuits. * Verify SW30 is receiving power and ground by verifying 12 V across C31 pins 1 and 3. * Replace SW30 if necessary.
		21	Fault			
73	Engine Oil Pressure	12	Sensor value too high	Engine oil pressure sender is shorted to 12V.	Engine will not operate.	* With a voltmeter, check that C25PSR (WH/BK, TCON J6P9) is not shorted to 12V and voltage is between 0.1-11.5V * Replace sender if necessary
		24	Too low	The engine oil pressure is measured as too low, potentially damaging the engine.	Engine may not attempt to start until system power cycle. Engine may be turned off by control system immediately.	* Stop engine as soon as possible. * Verify the engine oil level. * Verify the engine oil pump. * Power on the machine and start the engine. At the ground controls display, view the engine oil pressure gauge for proper operation. * If engine uses an analog oil pressure sensor, verify it is sending an analog voltage on C25PSR (WH/BK, TCON J6-9).

Control System Fault Codes

ID	Component	ID	Name	Cause	Effect	Solution
74	Engine Temperature	15	Sensor value too low	Engine temperature sensor is shorted to ground	Engine will not operate	* With a voltmeter, check that C26TSR (WH/RD, TCON J6P8) is not shorted to ground and voltage is between 0.1-11.5V * Replace sensor if necessary
		23	Too high	The engine coolant temperature is measured as too high, potentially damaging the engine.	Engine will not restart until machine power is cycled. Engine may stop itself, depending on the engine option.	* Stop engine as soon as possible. * Verify the engine coolant level. * Verify the engine coolant/water pump. * Power on the machine and start the engine. At the ground controls display, view the engine temperature gauge for proper operation. * If engine uses an analog temperature sensor, verify it is sending an analog voltage on C26TSR (WH/RD, TCON J6-10).
76	Platform Load Sensor	13	Not detected	TCON has not detected the DISCON on the communications bus.	Boom Up, Extend and Turntable Rotate functions will not operate.	* Verify sensor power P26PWR (BK, PCON J13-9) is at 12 V while the system is running. * Verify 12 V across pins on C27-2 (+) and C27-3 (-) on the harness connector. * Measure resistance across C27 pins 4 and 5 on the harness connector. If resistance is not between 55 and 65 ohms, check CAN wire harnesses. * Replace sensor if necessary.
		14	Cross check failed	TCON has not detected the DISCON on the communications bus.	Boom Up, Extend and Turntable Rotate functions will not operate.	* Check that the load sensor is mounted correctly and all fasteners are tightened to spec. * Calibrate load sensor. * Replace sensor if issue persists.
		15	Value to low	Platform load sensor out of calibration	Machine limited to recovery functions	* Make sure the platform is not touching the ground or an overhead obstruction. Cycle power and check that fault is no longer reported. * Perform the platform overload calibration procedure. * Replace sensor if necessary.
		17	Not calibrated	Platform load sensor out of calibration		* Calibrate load sensor. * Replace sensor if issue persists.
		21	Fault	Platform load sensor out of calibration		* Check that the load sensor is mounted correctly and all fasteners are tightened to spec. * Calibrate load sensor. * Replace sensor if issue persists.

Control System Fault Codes

ID	Component	ID	Name	Cause	Effect	Solution
78	Platform Controller (PCON)	13	Not detected	TCON has not detected the PCON primary processor on the communications bus.	Controls from the platform will not operate.	* Verify PCON is receiving power. Check for 12 V on J15-2 (+) and J15-1 (-). * Verify PCON is receiving ESTOP signals. With ground ESTOP pulled out and keyswitch set to Platform, verify 12 V is reaching PCON J15-10. * Verify CAN bus is functional. Pull out connector J15 from the PCON and with a voltmeter set to resistance verify that pins 3 and 4 on the harness connector measure between 110 and 130 Ohms. Check wiring and boom cable for open or short circuits if resistance check fails. * Replace PCON if necessary.
		29	Software version mismatch	PCON software is out of date.	Machine limited to recovery functions	Download latest software from firmware site and update machine.
79	Display Controller (DISCON)	13	Not detected	TCON has not detected the DISCON on the communications bus.	Controls from the ground will not operate.	* Verify DISCON is operating by checking that the display on the front is operating properly. * If there is no display, try to power up the DISCON by setting the keyswitch to Ground, pull out the ground ESTOP and press the Ground Function Enable button. The display should start. * If there is still no display, check DISCON power on J10 pins 2 (+) and 1 (-). * If DISCON operates but fault persists, check the CAN bus wiring. Disconnect J10 and with a voltmeter set to resistance verify that the resistance between pins 3 and 4 on the harness connector are between 55 and 65 ohms. Check CAN wiring if resistance check fails. * Replace DISCON if required.
		29	Software version mismatch	DISCON software is out of date.	Machine limited to recovery functions	Download latest software from firmware site and update machine.

Control System Fault Codes

ID	Component	ID	Name	Cause	Effect	Solution
80	Turntable Controller (TCON)	13	Not detected	The DISCON has not detected the TCON on the CAN bus.	Machine limited to recovery functions	* Verify TCON is receiving power. Check for 12 V on J5-2 (+) and J5-1 (-). * Verify TCON is receiving ESTOP signals. With ground ESTOP pulled out and keyswitch set to Ground, verify 12 V is reaching TCON J5-9 and J5-12. * Verify CAN bus is functional. Pull out connector J5 from the TCON and with a voltmeter set to resistance verify that pins 3 and 4 on the harness connector measure between 55 and 65 Ohms. Check wiring and boom cable for open or short circuits if resistance check fails. * Replace TCON if necessary.
		29	Software version mismatch	TCON software is out of date		Download latest software from firmware site and update machine.
82	Overload	21	Recovery	This is a flag that indicates that the platform was overloaded and that auxiliary function enable was used while overloaded.	Advisory condition. Machine is fully functional.	Power up the machine in service mode and clear the flag in the service menu on the ground control display.
83	Disabled	21	By owner	The telematics module has locked out machine operation.	Machine will not be functional, or have limited functionality, depending on the telematics option.	Call machine owner to re-enable machine functions.
84	Chassis Angle	13	Not detected	The tilt sensor S80 has not been detected on the CAN bus.	Boom Up, Extend and Drive functions will not operate.	* Verify S8O is receiving power. Disconnect sensor connector and verify harness connector pins 1 and 2 measure 12 V. * Verify CAN bus wiring. With a voltmeter set to resistance, check the resistance between pins 3 and 4 on the harness connector (not the sensor's integrated connector). Resistance should be between 55 and 65 ohms. Check CAN wiring if resistance check fails. * Replace sensor if required.
		17	Not calibrated	Tilt sensor not calibrated	Machine limited to recovery functions	Calibrate tilt sensor.

Control System Fault Codes

ID	Component	ID	Name	Cause	Effect	Solution
85	Chassis Angle Safety	13	Not detected	Tilt sensor not calibrated	Machine limited to recovery functions	Calibrate tilt sensor.
88	Function Enable Coil	11	Shorted to supply voltage	TCON detected that C155PCE circuit is shorted to 12 V or GND.	Only Auxiliary Power is available.	* With a voltmeter, measure Y74. Proper resistance should be between 5 - 60 ohms. Replace Y74 if resistance is outside of those values. * Verify wiring for C155PCE (OR/RD, TCON J2-5) and check for open or short circuits.
89	Fuel Level Sensor	12	Value to high	Fuel sensor shorted to B+	Information only	With a voltmeter, check voltage on C65FLI (BL/WH, TCON J7-11). The voltage should be between 1V and 5V. Check for shorts to B+.
		15	Value to low	Fuel sensor shorted to GND		With a voltmeter, check voltage on C65FLI (BL/WH, TCON J7-11). The voltage should be between 1V and 5V. Check for shorts to ground.
92	Turntable Rotate Flow Coil	11	Shorted to supply voltage	TCON detected that C6TRF circuit is shorted to 12 V or GND.	Turntable Rotate functions will not operate.	* With a voltmeter, measure Y13. Proper resistance should be between 5 - 60 ohms. Replace Y13 if resistance is outside of those values. * Verify wiring for C6TRF (WH/RD, TCON J4-1) and check for open or short circuits.

Control System Fault Codes

ID	Component	ID	Name	Cause	Effect	Solution
94	Primary Boom Length	13	Not detected	No CAN messages have been received by the TCON from the Length Sensor.	Boom Up, Extend and Turntable Rotate functions will not operate.	* Verify sensor power P85PWR (GR, TCON J6-7) is at 12 V while the system is running. * Verify the sensor is receiving power. Unplug the sensor and verify 12 V across pins 1 (+) and 2 (-) on the harness connector. * Verify the CAN bus wiring. With the sensor still unplugged, measure resistance across harness connector pins 3 and 4. If resistance is not between 55 and 65 ohms, check CAN wire harnesses. * Replace sensor if necessary.
		14	Cross check failed	The two internal sensing channels inside the Length Sensor have registered a significant difference.	Machine limited to recovery functions	* Ensure that the boom angle sensor cord is hooked up to the bracket on the boom and that the cord extends and retracts smoothly. * Calibrate boom length sensor. * Replace sensor if necessary.
		17	Not calibrated	Boom length sensor not calibrated.		Calibrate boom length sensor.
		19	Value out of expected range	Min or max length out of expected range.		* Verify that with the boom retracted C24LS (OR/RD TCON J7-4) is 12V and that the boom is making contact with the LSB1RS limit switch arm. * Verify that when the boom is extended at least 10" C24LS (OR/RD, TCON J7-4) is OV and that the boom is not making contact with the LSB1RS limit switch arm. * Check LSB1RS limit switch for physical damage.
99	Primary Boom Extend / Retract Flow Coil	11	Shorted to supply voltage	TCON detected that C9PEF circuit is shorted to 12 V or GND.	Boom Extend and Retract functions will not operate.	* With a voltmeter, measure Y15. Proper resistance should be between 5 - 60 ohms. Replace Y15 if resistance is outside of those values. * Verify wiring for C9PEF (BK/RD, TCON J4-5) and check for open or short circuits. * Verify resistance between Recovery Module pins J37-6 and J37-7 is zero ohms.

Control System Fault Codes

ID	Component	ID	Name	Cause	Effect	Solution
100	Platform Level Up Coil	11	Shorted to supply voltage	PCON detected that V14PLU circuit is shorted to 12 V or GND.	Platform Level Up and possibly Level Down functions will not operate.	* With a voltmeter, measure Y20. Proper resistance should be between 5 - 60 ohms. Replace Y20 if resistance is outside of those values. * Verify wiring for V14PLU (OR, PCON J12-6) and check for open or short circuits.
101	Platform Level Down Coil	11	Shorted to supply voltage	PCON detected that V15PLD circuit is shorted to 12 V or GND.	Platform Level Down and possibly Level Up functions will not operate.	* With a voltmeter, measure Y19. Proper resistance should be between 5 - 60 ohms. Replace Y19 if resistance is outside of those values. * Verify wiring for V15PLD (OR/BK, PCON J12-7) and check for open or short circuits.
110	Platform Rotate Toggle Switch @PC	27	Active at startup	Toggle switch input was detected as HIGH at start-up.	Platform Rotate Left or Right will not operate, depending on which side of the switch was faulted.	*Verify with a voltmeter that the Platform Rotate Toggle Switch (TS7) is operating properly. * C17PRL (GR, PCON J16-4) and C18PRR (GR/BK, PCON J17-5) should be 12 V when the switch is pressed in their respective directions. *Cycle power to allow the machine to re-test the fault.
116	Model Configuration	31	Setup invalid.	Machine is not fully configured or set to wrong model.	Machine will not operate.	Navigate to Settings -> Model Configuration and ensure model, engine, tires, and region are set and correct.
141	Boom	10	Safety Envelope Exceeded	The system has determined that the platform position has exceeded the safety envelope boundary.	All functions will not operate except for the recovery procedure.	Use Auxiliary Power and the boom retract and/or down functions to bring the platform back within the operational envelope.
150	Sensor Power P26PWR	11	Shorted to supply voltage	PCON detected that P26PWR circuit is shorted to 12 V or GND.	Boom Up and Extend functions will not operate.	* Turn on machine and verify sensor power P26PWR (BK, PCON J13-9) is at 12 V. * Inspect wiring for open or shorts circuits.
152	Primary Boom Up/Down Flow Coil	11	Shorted to supply voltage	TCON detected that C3PBF circuit is shorted to 12 V or GND.	Boom Up and Down functions will not operate.	* With a voltmeter, measure Y12. Proper resistance should be between 5 - 60 ohms. Replace Y12 if resistance is outside of those values. * Verify wiring for C3PBF (RD/WH, TCON J4-4) and check for open or short circuits. * Verify resistance between Recovery Module pins J37-3 and J37-10 is zero ohms.

Control System Fault Codes

ID	Component	ID	Name	Cause	Effect	Solution
160	LF Steer (L or R) Coil	11	Shorted to supply voltage	TCON detected that C37STL circuit is shorted to 12 V or GND.	Steer Left function will not operate.	* With a voltmeter, measure Y3. Proper resistance should be between 5 - 60 ohms. Replace Y3 if resistance is outside of those values. * Verify wiring for C37STL (BL/BK, TCON J4-11) and check for open or short circuits.
161	RF Steer (L or R) Coil	11	Shorted to supply voltage	TCON detected that C36STR circuit is shorted to 12 V or GND.	Steer Right function will not operate.	* With a voltmeter, measure Y4. Proper resistance should be between 5 - 60 ohms. Replace Y4 if resistance is outside of those values. * Verify wiring for C36STR (BL, TCON J4-12) and check for open or short circuits.
185	ESTOP Source	11	Shorted to supply voltage	TCON detected that ESTOP 1 is at 12 V but ESTOP 3 is at 0 V.	ESTOP circuit cannot complete, preventing machine functions.	* Using a voltmeter and with the system turned OFF, check the resistance between TCON J5 pins 9 and 10. Replace TCON if resistance is more than 5 ohms. * Check P79PWR (BK, TCON J5-9) and P23PWR (RD, TCON J5-10) for open or short circuits.
186	ESTOP Return	11	Shorted to supply voltage	Mistmatched signals detected on ESTOP Return circuits. Either: * PCON ESTOP 2 and ESTOP 4 do not match, or * TCON ESTOP 2 and ESTOP 4 do not match.	ESTOP circuit cannot complete, preventing machine functions.	* Inspect PCON J15 pins 11 and 12 for open or short circuits. Using a voltmeter, set to diode test mode and make sure the diode tests ok with the anode at pin 12 and cathode at pin 11. If test fails, replace the PCON. * Inspect TCON J5 pins 11 and 12 for open or short circuits. Using a voltmeter, set to diode test mode and make sure the diode tests ok with the anode at pin 12 and cathode at pin 11. If test fails, replace the PCON. * Check P23RET (BK) for shorts to ground or power.

Engine Fault Codes

Some engine options have their own Electronic Control Module that contains more detailed fault information that is specific to the engine. This system can be accessed by using the engine's dedicated service tool. This service tool may be connected to the Engine Service Connector, located to the right of the battery tray.

The ground controls display and fault menu will show basic engine faults, such as low oil pressure and high coolant temperature. It will also show faults for engine warning and engine stop, which correspond to the engine warning lamp and engine stop lamp indicators that the engine may require.

More advanced faults specific to the engine will require the use of a corresponding engine service tool.

1188	2	1414	Wastegate; status message from ECU missing

Deutz D 2.9 L4 Engine Fault Codes

SPN = Suspect Parameter Number
FMI = Failure Mode Identifier
KWP = Keyword Protocol

SPN	FMI	KWP	Description
1188	7	1415	Wastegate actuator; blocked
1188	11	1411	Wastegate actuator; internal error
1188	11	1412	Wastegate actuator; EOL calibration not performed correctly
1188	11	1416	Wastegate actuator; over temperature (> 145øC)
1188	11	1417	Wastegate actuator; over temperature (> 135øC)
1188	11	1418	Wastegate actuator; operating voltage error
1188	13	1413	Wastegate actuator calibration deviation too large, recalibration required
1231	14	85	CAN-Bus 1 "BusOff-Status"
1235	14	86	CAN-Bus 2 "BusOff-Status"
1237	2	747	Override switch; plausibility error
1322	12	610	Too many recognized misfires in more than one cylinder
1323	12	604	Too many recognized misfires in cylinder 1 (in firing order)
1324	12	605	Too many recognized misfires in cylinder 2 (in firing order)
1325	12	606	Too many recognized misfires in cylinder 3 (in firing order)
1326	12	607	Too many recognized misfires in cylinder 4 (in firing order)
2659	0	1524	Physical range check high for EGR exhaust gas mass flow
2659	1	1525	Physical range check low for EGR exhaust gas mass flow
2659	2	1523	Exhaust gas recirculation AGS sensor; plausibility error
2659	2	1527	AGS sensor temperature exhaust gas mass flow; plausibility error
2659	12	1526	Exhaust gas recirculation; AGS sensor has "burn off" not performed
2797	4	1337	Injector diagnostics; timeout error of short circuit to ground measurement cyl. Bank 0
2798	4	1338	Injector diagnostics; timeout error of short circuit to ground measurement cyl. Bank 1
2798	4	1339	Injector diagnostics; short circuit to ground monitoring Test in Cyl. Bank 0
2798	4	1340	Injector diagnostics; short circuit to ground monitoring Test in Cyl. Bank 1
3224	2	127	DLC Error of CAN-Receive-Frame AT1IG1 NOX Sensor (SCR-system upstream cat; DPF-system downstream cat); length of frame incorrect
3224	9	128	Timeout Error of CAN-Receive-Frame AT1IG1; NOX sensor upstream
3248	4	1047	Sensor error particle filter downstream temperature; signal range check low
3699	2	1616	DPF differential pressure sensor and a further sensor or actuator CRT system defective
3699	2	1617	Temperature sensor us. and ds. DOC simultaneously defect
3699	14	1615	Maximum stand-still-duration reached; oil exchange required
4765	0	1039	Physical range check high for exhaust gas temperature upstream (DOC)
4765	1	1042	Physical range check low for exhaust gas temperature upstream (DOC)

Deutz D 2.9 L4 Engine Fault Codes

SPN = Suspect Parameter Number
FMI = Failure Mode Identifier
KWP = Keyword Protocol

SPN	FMI	KWP	Description
4766	0	1029	Physical range check high for exhaust gas temperature downstream (DOC)
4766	1	1032	Physical range check low for exhaust gas temperature downstream (DOC)
4768	2	1036	Sensor exhaust gas temperature upstream (DOC); plausibility error
4768	3	1044	Sensor error exhaust gas temperature upstream (DOC); signal range check high
4768	4	1045	Sensor error exhaust gas temperature upstream (DOC) signal range check low
4769	2	1026	Sensor exhaust gas temperature downstream (DOC); plausibility error
4769	3	1034	Sensor error exhaust gas temperature downstream (DOC); signal range check high
4769	4	1035	Sensor error exhaust gas temperature downstream (DOC); signal range check low
523006	3	34	Controller mode switch; short circuit to battery
523006	4	35	Controller mode switch; short circuit to ground
523008	1	648	Manipulation control was triggered
523008	2	649	Timeout error in Manipulation control
523009	9	825	Pressure Relief Valve (PRV) reached maximun allowed opening count
523009	10	833	Pressure relief valve (PRV) reached maximun allowed open time
523212	9	171	Timeout Error of CAN-Receive-Frame ComEngPrt; Engine Protection
523216	9	198	Timeout Error of CAN-Receive-Frame PrHtEnCmd; pre-heat command, engine command
523240	9	179	Timeout CAN-message FunModCtl; Function Mode Control
523350	4	565	Injector cylinder-bank 1; short circuit
523352	4	566	Injector cylinder-bank 2; short circuit
523354	12	567	Injector powerstage output defect
523470	2	826	Pressure Relief Valve (PRV) forced to open; performed by pressure increase
523470	2	827	Pressure Relief Valve (PRV) forced to open; performed by pressure shock
523470	7	876	Maximum rail pressure in limp home mode exceeded (PRV)
523470	11	831	The PRV can not be opened at this operating point with a pressure shock
523470	11	832	Rail pressure out of tolerance range
523470	12	828	Open Pressure Relief Valve (PRV); shut off condition
523470	12	829	Open Pressure Relief Valve (PRV); warning condition
523470	14	830	Pressure Relief Valve (PRV) is open
523550	12	980	T50 start switch active for too long
523601	13	948	Sensor supply voltage monitor 3 error (ECU)
523603	9	126	Timeout Error of CAN-Receive-Frame AMB; Ambient Temperature Sensor

Schematics

Observe and Obey:

- ☑ Troubleshooting and repair procedures shall be completed by a person trained and qualified on the repair of this machine
- ☑ Immediately tag and remove from service a damaged or malfunctioning machine.
- ☑ Repair any machine damage or malfunction before operating the machine.

Before Troubleshooting:

- ☑ Read, understand and obey the safety rules and operating instructions in the appropriate operator's manual on your machine.
- ☑ Be sure that all necessary tools and test equipment are available and ready for use.

About This Section

There are two groups of schematics in this section.

Electrical Schematics

⚠WARNING Electrocution/burn hazard. Contact with electrically charged circuits could result in death or serious injury. Remove all rings, watches and other jewelry.

Hydraulic Schematics

⚠WARNING Bodily injury hazard. Spraying hydraulic oil can penetrate and burn skin. Loosen hydraulic connections very slowly to allow the oil pressure to dissipate gradually. Do not allow oil to squirt or spray.

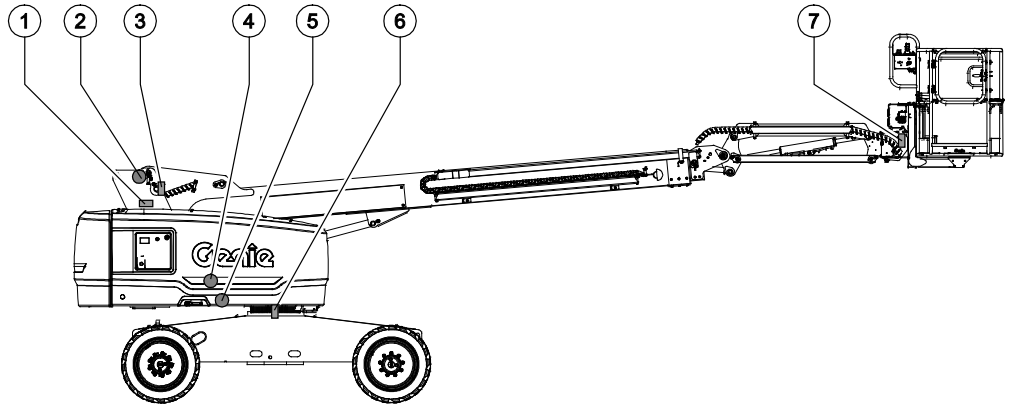
Electrical Symbol Legend

 Battery	 Coil, solenoid or relay	 Horn or alarm	 Flashing beacon	 Gauge
Diode	 Hour meter	 LED	 Fuse with amperage	 Foot switch
 T-circuits connect	 Limit Switch	 Power relay	 Coil with suppression	 Fuel or RPM solenoid
 Connection - no terminal	 T-circuits connect at terminal	 Circuits crossing no connection	 Quick disconnect terminal	 Circuit breaker with amperage
 Key switch	 Toggle Switch DPDT	 Toggle Switch SPDT	 Pump or Motor	 Tilt sensor
 Horn button - normally open	 Emergency Stop button - normally closed	 Resistor with ohm value	 Battery separator	 Gauge sending unit
 Oil temperature switch normally open	 Coolant temperature switch - normally open	 Oil pressure switch normally closed	 Control relay contact normally open	 Diode starting aid, glow plug or flame ignitor

Hydraulic Symbols Legend

 Orifice with size	 Check valve	 Shut off valve	 Brake
 Pump, fixed displacement	 Pump, bi-directional variable displacement	 Motor, bi-directional	 Motor, 2 speed bi-directional
 Cylinder, double acting	 Pump, prime mover (engine or motor)	 Shuttle valve. 2 position, 3 way	 Differential sensing valve
 Filter with bypass relief valve	 Relief valve with pressure setting	 Priority flow regulator valve	 Solenoid operated proportional valve
 Directional valve (mechanically activated)	 Flow divider/combiner valve	 Pilot operated 3 position, 3 way shuttle valve	 Solenoid operated 2 position, 3 way directional valve
 Counterbalance valve with pressure and pilot ratio	 Solenoid operated 3 position 4 way directional valve	 Solenoid operated 3 position, 4 way proportional directional valve	 Solenoid valve, 2 position 2 way

Limit Switch Location Legend

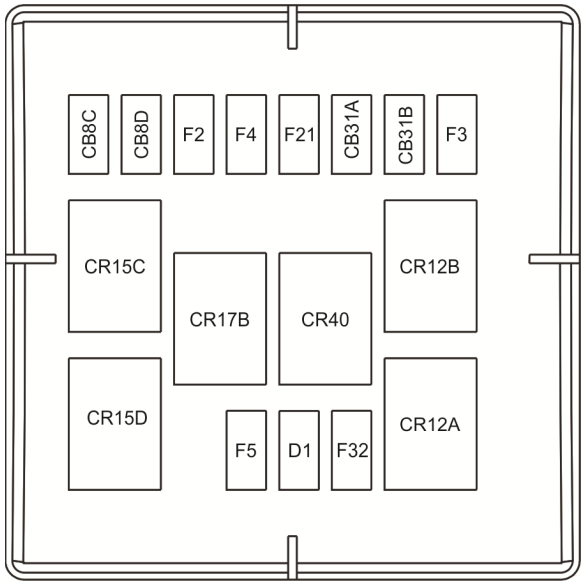


1 LSB1RS
2 String Potentiometer
3 LST3S
4 S17
5 S8O, S8S
6 LST1O
7 S24

Limit Switches and Sensors

LSB1RS	Limit switch boom fully retracted - safety
String pot	Measures boom extension
LST3S	Limit switch boom angle - safety
S17	Boom angle sensor
S8O	Universal tilt sensor - operational
S8S	Universal tilt sensor - safety
LST1O	Limit switch turntable - operational
S24	Load cell - platform overload

Engine Relay Layout - All engines except Perkins 404F



All engines

Fuses

F19	10A	Drive light
F21	5A	Telematic option
CB1	30A	Engine control power
CB2	15A	System control logic power
CB8A	30A	Glow plug 1
CB8B	30A	Glow plug 2
CB9	30A	Engine run / options/ acc
CB10	20A	System control driver power

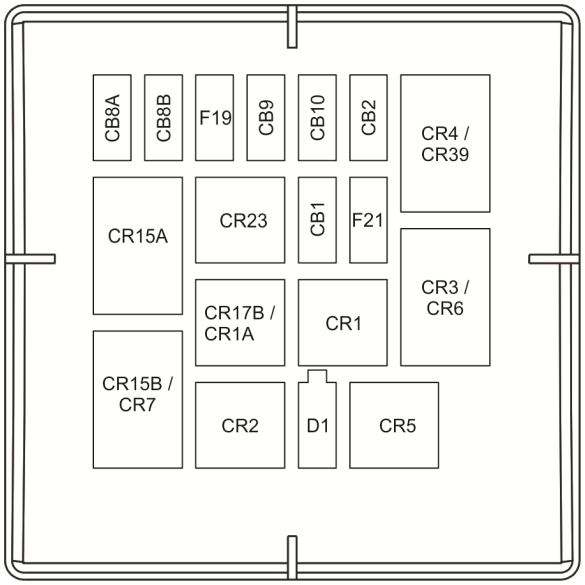
Diode

D1	6A	Alternator Ext.

Relays

CR1	Engine start
CR2	Engine run
CR3 / CR6	low RPM / Fuel pump
CR4 / CR39	High RPM / Aux shut down
CR5	Horn
C15A	Engine glow plug A
CR15B / CR7	Engine glow plug B / LPG solenoid
CR17	Hydraulic oil cooler (option)
CR23	Drive light
CR39	Aux shut down

Engine Relay Layout - Perkins 404F-22T



Perkins 404F-22T only (second relay box)

Fuses

F2	25A	Hyd / Start
F3	1A	Relay power
F4	5A	Eng ECU power
F5	1A	Spare
F21	10A	Fuel / Alt exct
F32	15A	Heater

Circuit Breakers

CB8C	30A	Glow plug 1
CB8D	30A	Glow plug 2
CB31A	20A	Eng ECU 1
CB32B	20A	Eng ECU 2

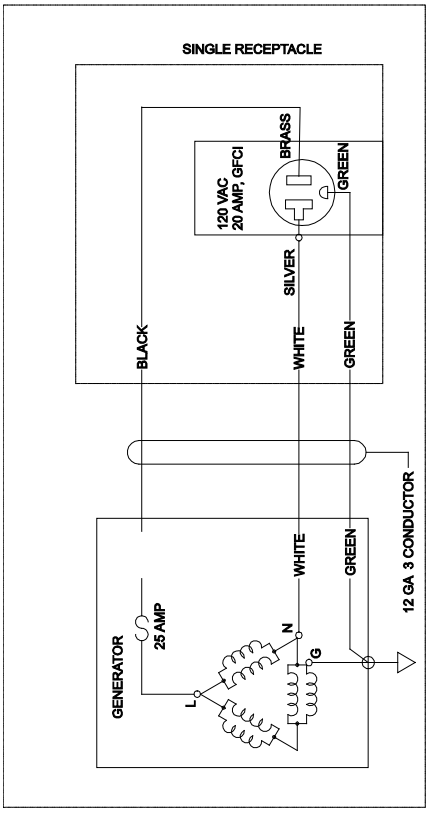
Diode

D1	6A	Alternator Ext.

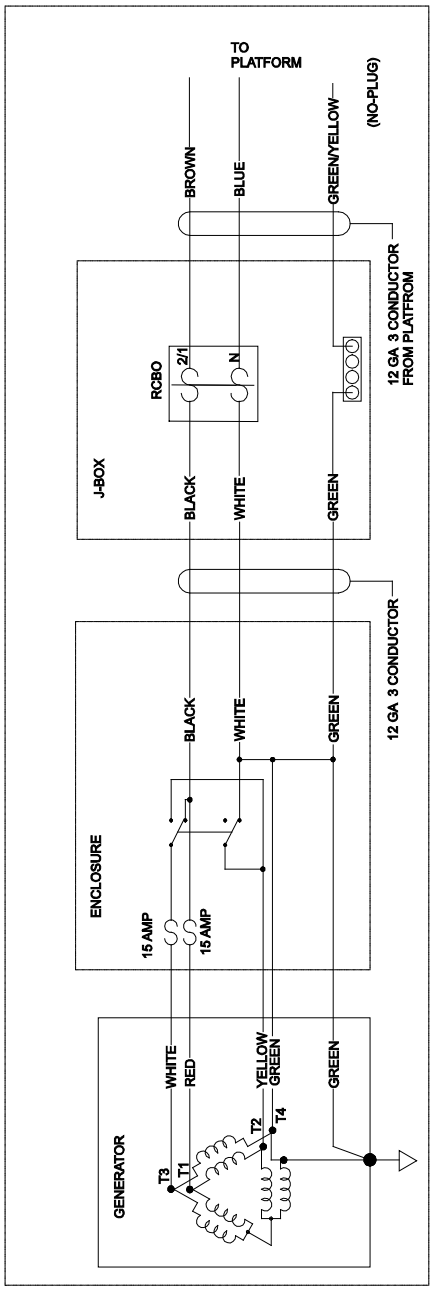
Relays

CR12A	Engine ECU 1
CR12B	Engine ECU 2
CR15C	Glow plug 1
CR15D	Glow plug 2
CR17B / CR1A	Hyd fan / Start
CR40	Fuel pump

3 kW Generator Receptacle Wiring



3kW 120V/60Hz GENERATOR AC WIRING



3kW 115V-230V/50Hz GENERATOR AC WIRING

ES0585

7 kW Generator Receptacle Wiring

Hydraulic Schematic

California Proposition 65

WARNING

Operating, servicing and maintaining this equipment can expose you to chemicals including engine exhaust, carbon monoxide, phthalates, and lead, which are known to the State of California to cause cancer and birth defects or other reproductive harm. These chemicals can be emitted from or contained in other various parts and systems, fluids and some component wear by-products. To minimize exposure, avoid breathing exhaust, do not idle the engine except as necessary, service your equipment and vehicle in a well-ventilated area and wear gloves or wash your hands frequently when servicing your equipment or vehicle and after operation. For more information go to www.P65Warnings.ca.gov/passenger-vehicle.

Breathing diesel engine exhaust exposes you to chemicals known to the State of California to cause cancer and birth defects or other reproductive harm.

- Always start and operate the engine in a well-ventilated area.
- If in an enclosed area, vent the exhaust to the outside.
- Do not modify or tamper with the exhaust system.
- Do not idle the engine except as necessary.

For more information go to www.P65warnings.ca.gov/diesel.
