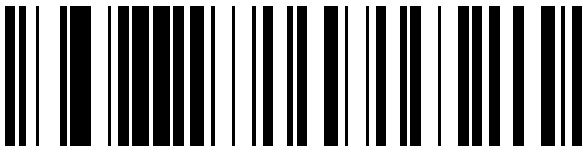
The user manual has 2 parts. This first part focuses on configuration codes for the system of the scanner and the second party on the wireless engine. The user can set the function of the barcode reader by scanning one or more setting barcodes.

Interface

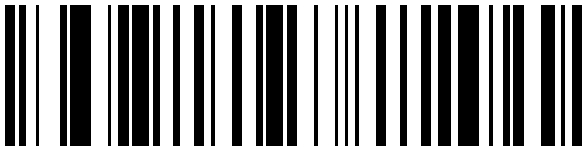
The scanning device supports USB keyboard, USB serial port (USB-COM), and serial port interface mode.

Scan the barcode below can be configured as USB keyboard.



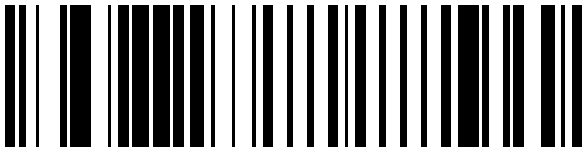
USB keyboard (Factory default)

Scan the barcode below to configure the scanner to serial mode.



Serial mode

Scan the barcode below to configure the scanner to USB serial mode. (Requires driver installation)



USB serial (USB-COM)

cCheck Pty Ltd

Virtual keyboard

Mode 1: The characters between 0x20 and 0xFF are output in the virtual keyboard mode that is not supported by the current keyboard layout. The characters between 0x00 and 0x1F are output according to the control characters (Check Appendix).

Mode 2: All characters between 0x20 and 0xFF are output using the virtual keyboard mode. Characters between 0x00 and 0x1F are output according to the control characters (Check appendix).

Mode 3: The characters used between 0x00 and 0xFF are output by the virtual keyboard mode.

Output encoding format

cCheck Pty Ltd
Level 9, 2 Claremont Street, South Yarra, 3141
E: helpdesk@ccheck.global

In order to output correctly according to the specified encoding format, you need to specify the output encoding format, such as Simplified Chinese in Notepad / excel output configuration into GBK encoding, in Word and other output configured into UNICODE encoding.

When the output encoding format is configured as English/Latin-1 encoding, the output mode of the USB keyboard is affected by the virtual keyboard function switch. When the output encoding format is configured as GBK encoding / UNICODE encoding, the output mode of the USB keyboard is forced to be the virtual keyboard output.

English/Latin-1 encoding（default）

GBK encoding（Notepad/excel）

UNICODE encoding（Word）

Invoice function

Enable and disable invoice function

Disable invoice（default）

cCheck Pty Ltd
Level 9, 2 Claremont Street, South Yarra, 3141
E: helpdesk@ccheck.global

Enable invoice

To ensure the correct output of the invoice content, when opening the invoic e code function, please configure the Chinese character output mode to GBK code (Notepad/excel), and turn off the function of changing the original cont ent of the barcode, such as Code ID, custom pre/suffix, and start character.

Scan mode

This product has auto sense mode. Scan the barcode below to configure.

Disable auto sense mode

When auto sense mode is disabled, you should trigger scanner by pressing button. This mode is factory default.

Disable auto sense (default)

Enable auto sense mode

When the auto sense mode is enabled, the scanner can automatically detect the barcode in front of the lens and scan barcode.

Enable auto sense

cCheck Pty Ltd

Character edit

The data edit function can customize the Data field of the complete barcode content into 3 fields of Start / Center / End by configuring the Start / End field length. Please configure the length and transmission configuration of the Start / End field according to actual needs.

Note: The contents of non-barcodes such as customized suffixes, start characters, end characters, CODE ID, AIM ID are not affected by the data editing function.

Transmission configuration

Transmit complete characters（default)

Only transmit first part

Only transmit Center part

Only transmit End part

cCheck Pty Ltd
Level 9, 2 Claremont Street, South Yarra, 3141
E: helpdesk@ccheck.global

Set first part length

Set End part length

Note: The field length configuration is in bytes and is configured using decimal data.

For example: Set the length of the Start segment to 10 bytes, scan the barcode for setting the length of the Start segment, and then scan the data in the appendix and edit the 1, 0 in the barcode to save.

Inversed barcode option

(Mainly for 1D barcodes /Data Matrix/Aztec)

Only normal barcode

Only inverse barcode

Some functional configuration instructions and examples

Configure barcode prefix / suffix by scanning barcode, each prefix or suffix can be up to 10 characters. (To ensure that custom suffixes can be output, please configure the scanner's custom suffix / suffix output options to be on.)

Example 1.1: Add customized prefix XYZ to all types of barcodes

Check the appendix barcode type ID table. The HEX value of all barcode systems is 99. Check the visible character ASCII table. The HEX value corresponding to XYZ is 58,59,5A.

Scan the configuration code customized prefix, the barcode scanner will issue two beeps, and then scan the appendix data and edit the 9, 9, 5, 8, 5, 9, 5, A in the barcode, Save, then complete the configuration.

If you need to modify the scanned barcode before saving, you can also scan to “cancel the previous data” or “cancel a previously read string of data”. If you need to abandon the configuration midway, scan directly cancel the current setting.

Example 1.2: Add customized prefix R to QR code

cCheck Pty Ltd
Level 9, 2 Claremont Street, South Yarra, 3141
E: helpdesk@ccheck.global

Query the appendix barcode type ID table. The HEX value of the QR code is 51. Query the visible character ASCII table. The HEX value corresponding to R is 52.

Scan the configuration code to customize the prefix, then scan the data in the appendix and edit 5,1,5,2 in the barcode, save, then complete the configuration.

Example 1.3: Cancel customized prefix of QR code

When customized suffixes are used, no additional characters are saved after the barcode type characters to save the customized suffixes for this type of barcode.

Scan the configuration code “customize the prefix”, then scan the appendix data and edit 5, 1 in the barcode, save, and complete the configuration.

Note: If there is a prefix added for all barcodes before, the QR code prefix will be restored to the prefix added for all barcodes after configuration.

If you need to clear the prefix / suffix added for various barcode types, scan “clear all customized prefixes” and “ clear all customized suffix configuration codes”.

Barcode Length Limited Setting Example

When configuring the minimum barcode length configuration, you must ensure that the configured minimum length is not bigger than the current maximum length configuration, otherwise an error will be prompted. Similarly, when configuring the maximum bar code length, you must also

cCheck Pty Ltd
Level 9, 2 Claremont Street, South Yarra, 3141
E: helpdesk@ccheck.global

ensure that the configured maximum length is not less than the current minimum length configuration.

Example 2.1: Configure Code 128 barcode length to 4-12 digits

Scan “Code 128 minimum length limit”, then scan 4 in the appendix data and edit the barcode, save,

Scan “Code 128 maximum length limit”, then scan the appendix data and edit the 1, 2 in the barcode, save, then complete the configuration.

Example 2.2: Configure the length of Interleaved 2 of 5 barcode to 14 digits

Configure Interleaved 2 of 5 barcode length 14 bits can directly scan and configure the barcode “ITF25 14-bit length” for configuration, or configure the maximum and minimum barcode length:

Scan “ Interleaved 2 of 5 minimum length limit”, then scan appendix data and edit 1, 4 in barcode, save,

Scan “ Interleaved 2 of 5 maximum length limit”, then scan the appended data and edit the 1, 4 in the barcode, save, then complete the configuration.

Example 2.3: Configure Code 39 barcode length to any supported length

Scan “ Code 39 minimum length limit”, then scan appendix data and edit 0 in barcode, save,

Scan “Code 39 maximum length limit”, then scan the appendix data and edit the 0 in the barcode, save, then complete the configuration.

USB keyboard send speed configuration example

cCheck Pty Ltd
Level 9, 2 Claremont Street, South Yarra, 3141
E: helpdesk@ccheck.global

If the client PC has weak performance and is easy to transmit error, you need to customize the USB keyboard sending speed to a slower speed, such as 50ms:

Scan the “ Customize speed”, then scan the appended data and edit the 5,0 in the barcode, save it, then complete the configuration.

Warning sound

When the data transmission is abnormal, the scanner will issue four continuous alarm sounds. If this happens, please check whether the connection line is normal.

Reading tips

1. In order to obtain a good reading effect, the aiming beam emitted by the handheld scanner should be aimed at the center of the barcode, but it can be aimed in any direction for reading.

2. Hold the scanner in front of the barcode and press the button to align the collimator beam with the center of the barcode.

3. When the handheld scanner is close to the barcode , the smaller the aiming beam ,Or the larger the aiming beam.

4. If the barcode is small, the handheld scanner should be close to the barcode. If the barcode is large, the handheld scanner should be a little far away from the barcode, so that it is easier to read the barcode correctly.

cCheck Pty Ltd
Level 9, 2 Claremont Street, South Yarra, 3141
E: helpdesk@ccheck.global

5. If the barcode is highly reflective (for example: coated surface), you may need to make the scanner at an angle to successfully scan the barcode.

Safety

When using the handheld scanner, the illumination light is strong. Do not look directly or aim at your eyes to avoid discomfort or injury.

E: helpdesk@ccheck.global

Introduction to part 2 – Wireless Functions

This second part of the manual is mainly used to introduce how to set up wireless related functions of wireless scanner products.
You can set the scanner by setting it up.

Setup code

The scanner can set the corresponding function by reading one or a group of special barcodes. In the following chapters, we will introduce the corresponding setting options and functions in detail and provide the corresponding setting codes.

cCheck Pty Ltd
Level 9, 2 Claremont Street, South Yarra, 3141
E: helpdesk@ccheck.global

Use instructions

All the functions of this barcode scanner are set by scanning the setting barcodes. First, scan "enter setup mode" barcode, and then scan the function barcode to be set, then scan the "exit setup mode" barcode after finishing setting. Some common function barcodes can scan the function barcode directly to complete the setting. This kind of barcode identification is ★, such as "★ power display".

Enter Setup Mode

Exit Setup Mode

Note: Wireless Version 1.18D later supports setting without entering or exiting settings.

cCheck Pty Ltd
Level 9, 2 Claremont Street, South Yarra, 3141
E: helpdesk@ccheck.global

Restore Wireless Parameters

If in use of the process, accidentally scan to other function settings code, which led to the scanning function cannot be used normally, through the scan initialization barcode to restore to the initialization state.

Restore Wireless Parameters

Instructions:

This bar code is most likely to be used in the following situations:

1. Error in scanner setting.
2. You forget what settings you made for scanners before, and you don't want to use the previous settings.
3. Set up the scanner to use some unusual functions, and use after completion.

cCheck Pty Ltd
Level 9, 2 Claremont Street, South Yarra, 3141
E: helpdesk@ccheck.global

Setting Custom Default Settings

By setting custom default settings, the default values of wireless parameters of wireless scanner can be set to the required functions. First scan the "Enter Settings Mode" bar code, then scan the required wireless parameter function, and then scan the "Exit Settings Mode" bar code after the completion of settings. The existing function will replace the original factory default value after the settings are completed, and the original state will not be restored even if the settings for restoring wireless parameters are set.

Wireless Matching Function Settings

This equipment can complete the wireless pairing operation in accordance with the following steps, the default factory has good pairing.

Matching with Receiver

1. Pull out the wireless Receiver from the computer.
2. Scan " Enter Setup Mode ".
3. Scanning " Matching with Dongle " enters the matching mode, at which time the scanner light is extinguished and the code cannot be read.
4. Insert the receiver into the computer USB interface.
5. When you hear "DI", the receiver pair is successful.
6. Scan "Exit Setup Mode"

cCheck Pty Ltd
Level 9, 2 Claremont Street, South Yarra, 3141
E: helpdesk@ccheck.global

Communication mode switching

a: Start the scanner and scan the "Enter Setup Mode" bar code

Enter Setup Mode

b: Scanning a Bar Code for a Communication Mode Based on Requirements

2.4G Mode

Virtual Bluetooth Mode

Bluetooth HID Mode

Bluetooth SPP Mode

cCheck Pty Ltd
Level 9, 2 Claremont Street, South Yarra, 3141
E: helpdesk@ccheck.global

Bluetooth BLE Mode

c: Scan the "Exit Setup Mode" bar code and set up the communication mode to complete.

Exit Setup Mode

Shutdown

Users can set bar codes by referring to "automatic sleep time". When users do not need the scanner to be in working state, they first scan the "Enter Setting Mode" bar code, and then scan the "Shutdown Instruction" to set bar codes. When the settings are completed, the scanner will be shut down immediately.

Shutdown

E: helpdesk@ccheck.global

Wireless transmission mode

The barcode scanner has two operating modes: Synchronous Mode and storage mode, through a different set code to operate the mode switch:

a: First scan “Enter setup mode ” barcode

b: Scan the required operating mode barcode

c: Scan “Exit Set mode” barcode to switch the desired mode of operation

Synchronous mode

Scanning "Synchronization Mode" sets bar code, setting bar scanner as synchronization mode, users scan common bar code, that is, sweep-and-pass, and discard it when disconnected.

★Synchronous mode*

cCheck Pty Ltd
Level 9, 2 Claremont Street, South Yarra, 3141
E: helpdesk@ccheck.global

Storage mode

Scanning "storage mode" sets bar code, setting bar scanner as storage mode, users scan common bar code, do not upload directly to the computer, data will be stored in the bar code.

★ Storage mode

cCheck Pty Ltd
Level 9, 2 Claremont Street, South Yarra, 3141
E: helpdesk@ccheck.global

Data Control (Data Processing for Storage Mode)

Data upload

When users need to upload data stored in barcodes to computers or mobile devices, scanning "data upload" can upload data to computers or mobile devices.

When using data upload, the barcode stored by the original scanner will not be deleted unless the data is scanned to clear the barcode.

%%SpecCode16

★data upload

Total data

When users need to count the total amount of data stored in barcodes, scanning "Total Data" can upload the total amount of data stored in scanners to computers or mobile devices.

%%SpecCode17

★Total data

Data clear

When the user needs to clear the data stored in the scanner, scanning "data clear" can clear all the data stored in the scanner.

Set Bluetooth Name

A: start scanning scanner, "enter setup mode" bar code

enter setup mode

B: Scan "Set Bluetooth Name" Barcode

Set Bluetooth Name

C: Scan Bluetooth Name Barcode

Note: The default name of Bluetooth is "Barcode Scanner". After this step is set, the bar code will be set to the name of Bluetooth.

A) Names can only be set to 16 bytes at most. If the name bar code exceeds 16 bytes, the first 16 bytes are used as Bluetooth names by the scanner.

B) The complete name of Bluetooth includes: Bluetooth name + protocol type, which only supports modification of Bluetooth name. After changing the Bluetooth name, the names of all Bluetooth protocols have changed.

For example, if the Bluetooth name is Scanner, then the Bluetooth HID name is Scanner HID, the SPP name is Scanner SPP, and the BLE name is Scanner BLE.

Sample Bluetooth Name “Scanner “

C: Scan "Exit Setup Mode" bar code, set successfully.
