3 Overview

Both the **6410 Digital to Analog Audio Converter** and the **6420 Analog to Digital Audio Converter** use digital audio transmission standards, as section 3.1 describes.

Sections 3.2 and 3.3 describe the **6410 Digital to Analog Audio Converter** and the **6420 Analog to Digital Audio Converter**, respectively.

3.1 Digital Audio Inputs/Outputs on the 6410 and 6420

Figure 1 illustrates the transmission standards for professional and consumer formats, which can be translated via the 6410/6420.

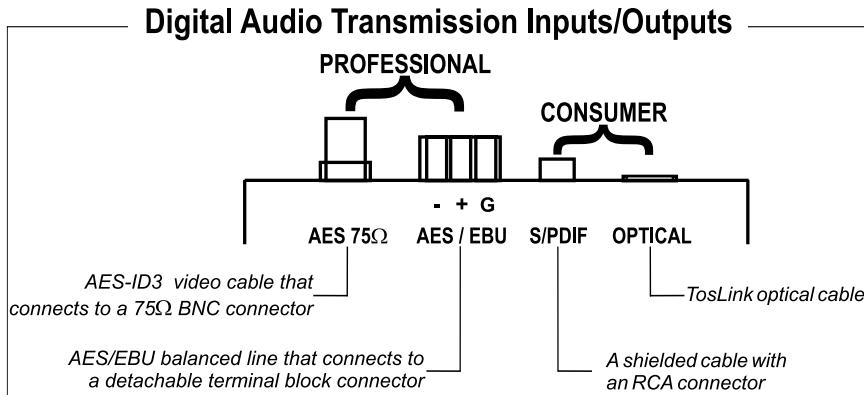

Figure 1: Digital Audio (Professional and Consumer) Inputs/Outputs on the 6410 / 6420

3.2 About the 6410 Digital to Analog Audio Converter

The multi-standard **6410** *Digital to Analog Audio Converter* accepts all serial digital audio transmission standards – AES/EBU, AES-ID3, S/PDIF and TosLink optical.

After conversion, the **6410** simultaneously¹ outputs:

- Analog balanced stereo on detachable terminal block connectors
- Unbalanced stereo on a 3.5" jack, capable of driving a $30\ \Omega$ load (headphones)

In particular, the **6410**:

- Is adjustment-free
- Provides automatic equalization (it is cable-equalized) and reclocking of the digital audio stream coming from any digital input
- Has AES/EBU and AES-ID3 transformer coupled inputs
- Supports multi-standards - AES/EBU, IEC 958, S/PDIF and EIAJ CP340/1201 professional and consumer formats with sampling frequencies up to 48 kHz
- Has a conversion ratio of 0dBFS to +12dB

¹ As Figure 4 illustrates, the sound outputs from both the amplifier and the headphones simultaneously

3.3 About the 6420 Analog to Digital Audio Converter

The multi-standard **6420 Analog to Digital Audio Converter** accepts analog balanced stereo audio on detachable terminal block connectors and converts and outputs it to the most commonly-used serial digital audio standards – AES/EBU, AES-ID3, S/PDIF and TosLink optical.

In particular, the **6420**:

- With its analog balanced stereo audio input signal, splits to 4 digital audio output signals¹, each conforming to a different standard
- Has AES/EBU and AES-ID3 transformer coupled outputs
- Supports multi-standards - AES/EBU, IEC 958, S/PDIF and EIAJ CP340/1201 professional and consumer formats with sampling frequencies up to 48 kHz
- Includes a set of 4 dipswitches for setting the system format bit (professional or consumer) and the sampling frequency (32k, 44.1k or 48k)
- Has a conversion ratio of -12dB to 0dbFS

3.4 High Signal Quality Recommendations

Achieving the best performance means:

- Connecting only good quality connection cables, thus avoiding interference, deterioration in signal quality due to poor matching, and elevated noise levels (often associated with low quality cables)
- Avoiding interference from neighboring electrical appliances that may adversely influence signal quality
- Positioning your Kramer **6410** and/or **6420** in a location free from moisture and away from excessive sunlight and dust
