INTRODUCING THE **NEW** 3000 SERIES WIRELESS WEATHER STATIONS

Your Crops. Your Data. Better Decision\$.

The award-winning third generation of WatchDog Weather Stations offers integrated cellular modems that send essential data to the SpecConnect cloud. Use your PC or WatchDog Mobile app (free) to view current conditions on your smartphone. Station set-up is easy, and configuration is simple with the WatchDog app.

With the SpecConnect cloud, you can easily view reports for degree-days, chill hours, disease and insect pressure, monthly weather reports, soil moisture trends, and more. Frost/temp alerts are sent to your smartphone so you can respond quickly to frost events.

Now, you will have the real-time data you need to respond to changing weather conditions and make timely, smart decisions. To measure is to know.

Retriever & Pups

Our Retriever & Pups+ Network sends real time data to your laptop, tablet or smartphone - anywhere you can access the internet. Trust the data and eliminate the guesswork! Each Retriever can support up to 12 Pups. Each Pup can support four different sensors and you can receive customized threshold alerts. Our sensors measure everything from soil moisture to light, wind, rain, humidity and more.

Expand your network by adding weather stations to bring data from every corner of your property directly to you.

NEW 3000 Series Pup Stations

The 3000 Series Wireless Stations are available with wireless mesh radios to fully participate in Retriever and Pup networks. Setup is easy due to the modular design that includes the integral solar panel and rechargeable battery for reliable power. Customize your stations with additional sensors that meet your needs - see examples on the facing page.

See page 5 for sensor specifications and available ports for each model.

WatchDog® Sprayer Station

Avoid Drift Complaints

Don't let misapplication of pesticides cost you. Let our sprayer station with ultrasonic anemometer help you put pesticides where they belong and nowhere else.

Pesticide drift is increasingly important to commercial applicators. Accurate data helps pesticide applicators make important decisions regarding weather conditions that affect safety, drift and proper application. With the WatchDog® Sprayer Station you can provide evidence of suitable conditions for pesticide application by logging your data. Mount the station directly on your equipment to monitor and log weather conditions on-the-go.

All-in-One Weather Station Measures:

- Wind Speed/Direction & Chill
- Air Temperature
- Barometric Pressure
- Humidity
- Dew Point
- Computes True Wind Speed

Additional Information

- Continuously log your weather parameters at a user-selectable rate or hit the snapshot button to capture current conditions at a specific moment
- Station uses an internal compass and GPS to adjust the wind sensor values by subtracting the vehicle speed and direction to compute the true values
- Handles adverse conditions with a UV-stabilized, compact housing that is fully waterproof and resistant to chemicals

Sunlight Consistent plant quality starts with light.

Why measure light? Improve growth and quality of your turf.

Position the meters throughout your course or field to compare light levels and the effect those changes have on turf quality. You can also use multiple meters simultaneously to compare light levels and the impact on turf health, quality and aesthetics.

Quantum PAR/DLI Light Meter

Grow healthier, greener plants by measuring their precise light intake.

- Provides accurate PAR light readings from ANY light source:
 - Full sun to full shade indoors or outdoors
 - Artificial light sources (LED, High-Pressure Sodium, Metal Halide, Fluorescent, Halogen, etc.)
- Three modes of operation:
 - Instant Spot Measurement mode for PAR light readings
 - Scan mode for quickly averaging PAR over an area
 - DLI mode shows Daily Light Integral on the LCD (no computer needed)
- Integral mounting plate for: stand, stake, lanyard & hanger hole, and magnet mounts
- 1/4-20 threaded hole for mounting on camera tripods & stands

LIGHTSCOUT® DLI 100 Light Meter

Light is one of the most important factors in plant and turf quality. The best way to quantify light for growing plants is to measure photosynthetically active radiation (PAR) light between 400 and 700 - the range that promotes photosynthesis. The daily light integral (DLI) measures the total amount of PAR within a 24-hour period.

- Affordable & simple, one button operation
- Meter runs for 24 hours to calculate DLI
- Real-time intensity levels are shown in $\mu\text{mol}/\text{m}^2\cdot\text{s}^{-1}$ every 4 seconds daily
- Battery included
- Greenhouse & Turf models available

3405T3 LightScout® DLI 100 Meter - Turf (set of 3)

3405T LightScout DLI 100 Meter - Turf (1 unit)

For the best results place one meter in the sun, one in partial shade and one in full shade.
