

R&S®HE016 ACTIVE ANTENNA SYSTEM

9 kHz to 80 MHz (vertical)

600 kHz to 40 MHz (horizontal)

Omnidirectional reception of vertically and horizontally polarized signals

The R&S®HE016 active antenna system is a combination of the R&S®HE010E active rod antenna and two crossed HF dipole antennas. The two horizontal dipole antennas are combined via a 90° coupler to produce an omnidirectional radiation pattern.

The high sensitivity of the antenna system is comparable to that of passive systems, though the R&S®HE016 requires less than one third of the antenna surface of a passive system.

Key facts

- ▶ Omnidirectional reception of horizontally and vertically polarized signals
- ▶ High linearity
- ▶ High immunity to lightning strikes in the vicinity
- ▶ Extremely compact
- ▶ High sensitivity – comparable to that of passive antennas that are three times larger
