SCUBA DRY SERIES
HYDRAULIC PERFORMANCE RANGE AT 60 Hz

Multistage electric pump SCUBA DRY series

GENERAL INTRODUCTION

- **Head made of microcasted stainless steel**
- **Plug-in power supply cable and float switch**
- **Potable water version**
- **Noiseless operation**
- **Sand abrasion resistant impellers**

MARKET SECTORS

RESIDENTIAL BUILDINGS, INDUSTRY.

APPLICATIONS

- Rain water harvesting.
- Water supply from primary water supply tanks or reservoirs.
- Pressure boosting with pump directly inserted in tank or well.
- Car washing system.
- Onboard ships pressure boosting
- Air purification/humidification systems
- Sprinkler irrigation systems.
- Specific for:
 - Narrow or poorly aerated spaces.
 - Basements subject to flooding risk.
 - Applications which require silent functioning.

CHARACTERISTIC DATA

- **Delivery:** up to 12 m³/h at 3450 rpm.
- **Head:** up to 100 m at 3450 rpm.
- **Motor power:** 0,55 to 2,2 kW.
- **Maximum operating pressure:** 10 bar.
- **Single-phase version:** 220-230 V, 60 Hz 2 poles (3450 rpm).
- With built-in automatic reset overload protection.
- Standard version with built-in capacitor, or external capacitor upon request
- **Three-phase version:** 380-400 V, 50 Hz 2 poles (3450 rpm).
- Overload protection to be provided by user and installed in the control panel (see electric panel section).

OPERATING CONDITIONS

- **Temperature of pumped liquid:**
 - Standard version: 0 to 40°C.
 - Potable water version: 0 to 40°C.
- Vertical/Horizontal installation
- **Maximum immersion depth:** 17 m
- **Maximum operating pressure:** 10 PN
- **Maximum permissible quantity of suspended sand:** 25 g/m³
- **Maximum quantity of chloride** at 20°C: 200 PPM
- **Max solid dimension** up to:
 - 1SCD(S): 1 mm
 - 3SCD(S), 5SCD(S), 8SCD(S): 2mm

CONSTRUCTION CHARACTERISTICS

- The liquid end is located underneath the electric motor, which is cooled by the pumped liquid.
- Impellers are radial centrifugal type, made of technopolymer.
- Diffusers, outer sleeve, motor casing, suction screen and shaft extension are made of stainless steel.
- Head is made of microcasted stainless steel.
- Floor base specific for rainwater harvesting tanks or surface installations.
- Ease of installation and maintenance due to plug-in power supply cable and float switch
- Potable water version available upon request.
- The electric motor is protected by a double seal system with an oil chamber.

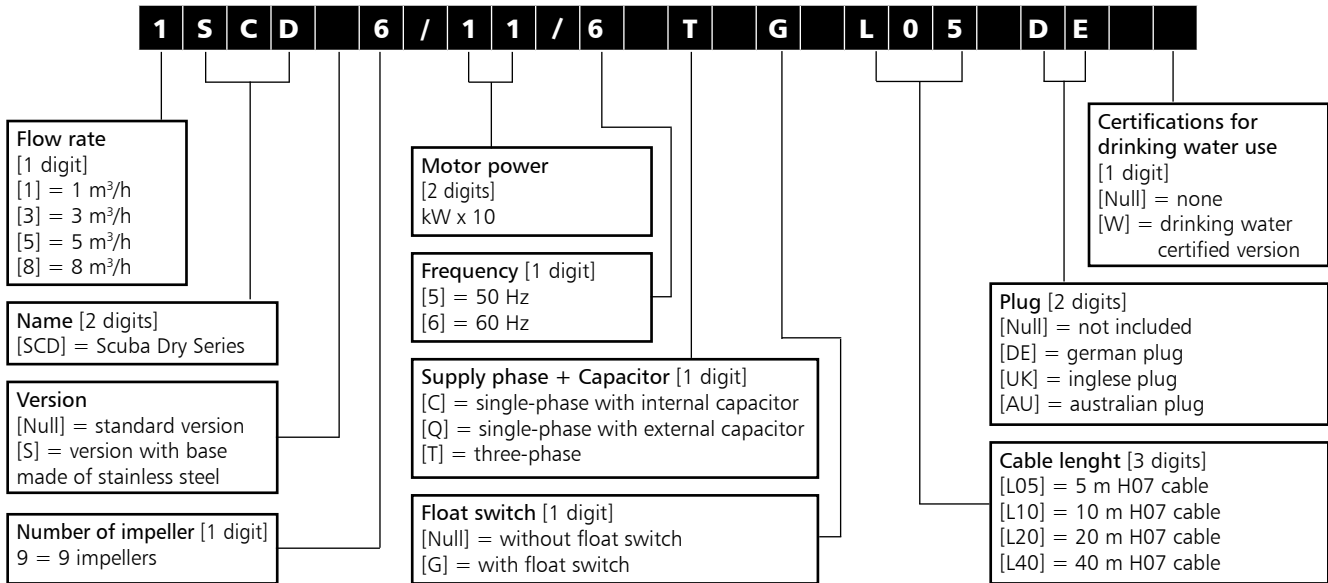

ACCESSORIES

- Kit with floating suction device
- Kit with floating switch
- Control panel with external capacitor
- Control and protection panel

Upon request:

- Installation with float
- Kit with ResiBoost inverter
- 220 - 240V, three-phase version
- Power supply cord available in multiple length
- Potable water certified version available
- Wide range of flanges

SCUBA DRY SERIES IDENTIFICATION CODE

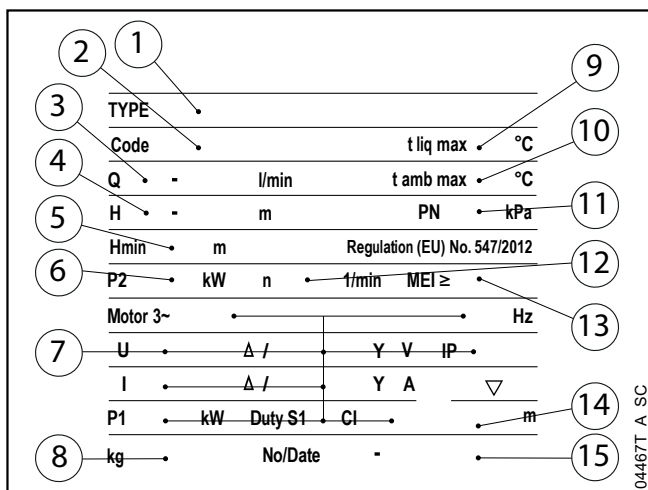

EXAMPLE: 1SCD6/11/6 T G L05 DE

Flow rate 1 m³/h, Scuba Dry series electric pump, standard version, 6 impellers, motor power 1,1 kW, frequency 60 Hz, single-phase version with internal capacitor, with float switch, 5 m of H07 cable and german plug.

RATING PLATE - SINGLE-PHASE

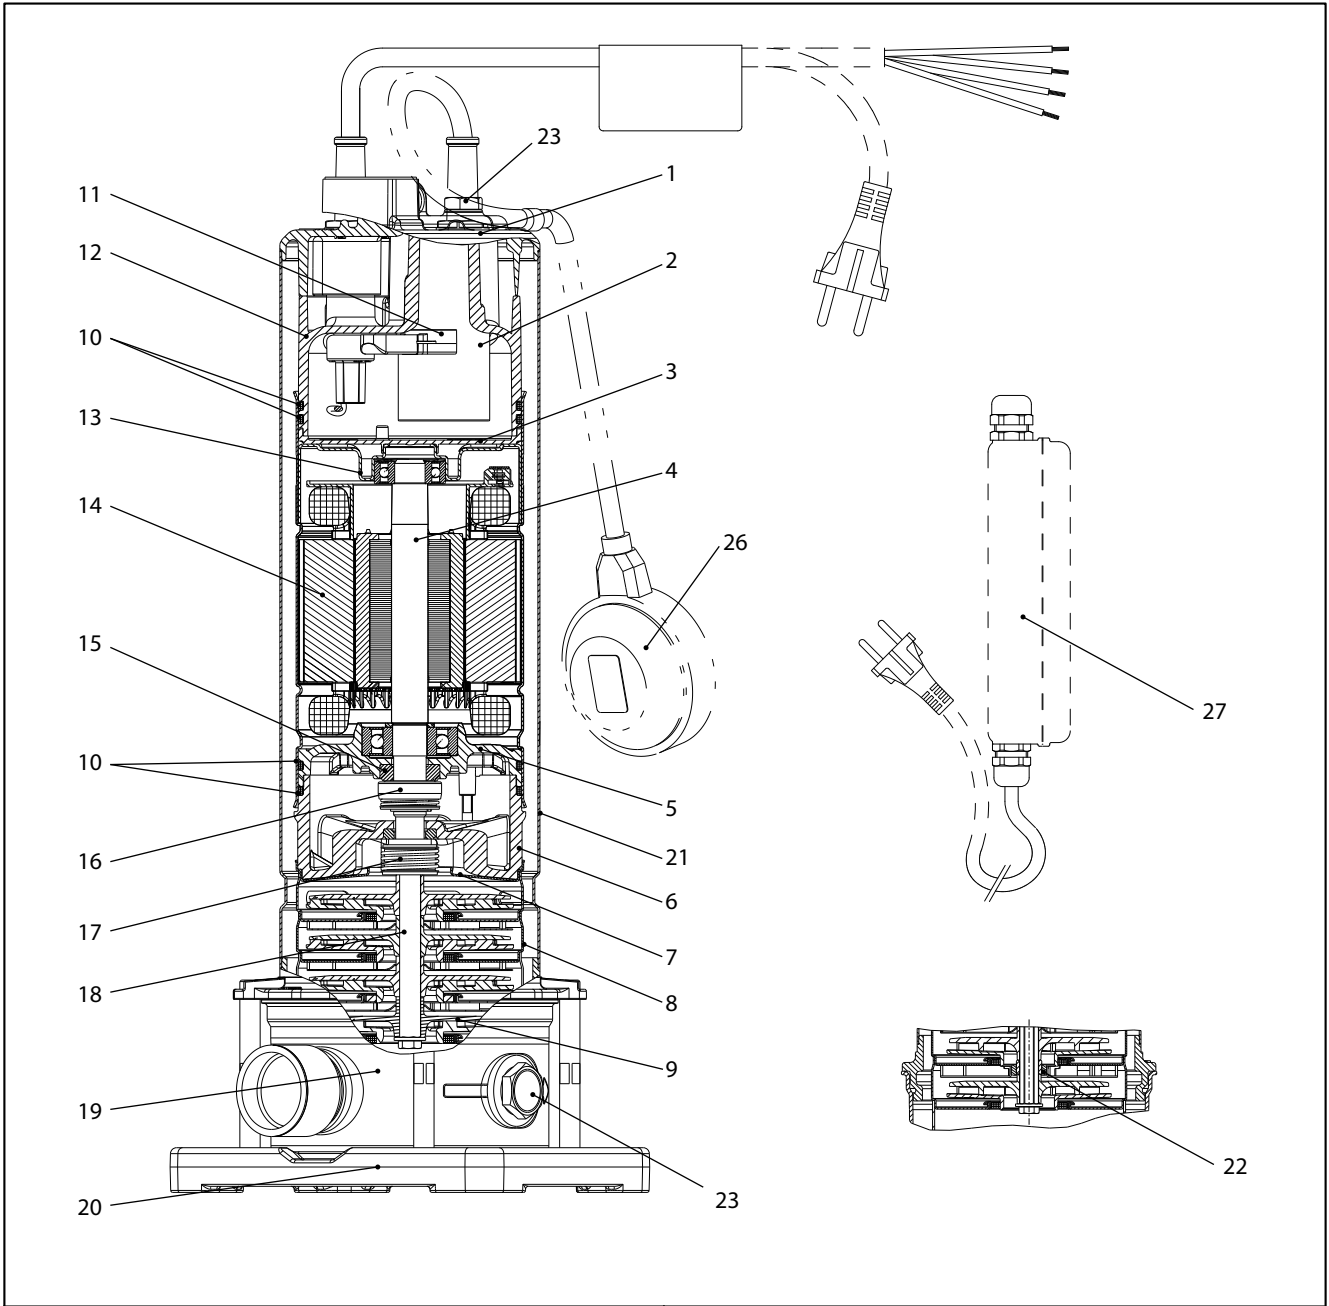

RATING PLATE - THREE-PHASE

LEGEND

- 1 - Electric pump type
- 2 - Code
- 3 - Delivery range
- 4 - Head range
- 5 - Minimum head
- 6 - Motor nominal power
- 7 - Motor characteristics:
 - Motor type
 - Frequency
 - Supply voltage
 - Absorbed current
 - Absorbed power
 - Type of service S1
 - Thermal class
 - Capacity (single-phase version)
 - Capacitor voltage (single-phase version)
 - Protection class
- 8 - Weight
- 9 - Maximum operating liquid temperature
- 10 - Maximum operating ambient temperature
- 11 - Maximum operating pressure
- 12 - Speed
- 13 - Minimum efficiency index MEI (50 Hz only)
- 14 - Maximum immersion depth
- 15 - Serial number and manufacturing data

scuba2-2p60T-en_a_te

WATER REQUIREMENTS IN CIVIL USERS

Determination of the water requirement depends on the type of users and contemporaneity factor. The calculation may be subject to regulations, standards or customs that may vary from country to country. The calculation method shown below is an example based on practical experience, designed to provide a reference value and not a substitute for detailed analytical calculation.

Water requirements in condominiums

The **consumption table** shows the maximum values for each delivery point, depending on the plumbing amenities.

MAXIMUM CONSUMPTION FOR EACH DELIVERY POINT

TYPE	CONSUMPTION (l/min)
Sink	9
Dishwasher	10
Washing machine	12
Shower	12
Bathtub	15
Washbasin	6
Bidet	6
Flush tank WC	6
Controlled flushing system WC	90

G-at-cm-en_a_th

The **sum of the water consumption values** of each delivery point determines the maximum theoretical requirement, which must be reduced according to the **contemporaneity coefficient**, because in actual fact the delivery points are never used all together.

$$f = \frac{1}{\sqrt{(0,857 \times Nr \times Na)}} \quad \text{Coefficient for apartments with one bathroom and flush tank WC}$$

$$f = \frac{1}{\sqrt{(0,857 \times Nr \times Na)}} \quad \text{Coefficient for apartments with one bathroom and controlled flushing system WC}$$

$$f = \frac{1,03}{\sqrt{(0,545 \times Nr \times Na)}} \quad \text{Coefficient for apartments with two bathrooms and flush tank WC}$$

$$f = \frac{0,8}{\sqrt{(0,727 \times Nr \times Na)}} \quad \text{Coefficient for apartments with two bathrooms and controlled flushing system WC}$$

f = coefficient; Nr = number of delivery points; Na = number of apartments

The **table of water requirements in civil users** shows the maximum contemporaneity flow-rate values based on the **number of apartments** and the type of WC for apartments with one bathroom and two bathrooms. As regards apartments with one bathroom, 7 drawing points have been taken into consideration, while 11 points have been considered for apartments with two bathrooms. If the number of drawing points or apartments is different, use the formulas to **calculate** the requirement.

TABLE OF WATER REQUIREMENTS IN CIVIL USERS

NUMBER OF APARTMENTS	WITH FLUSH TANK WC		WITH CONTROLLED FLUSHING SYSTEM WC	
	1	2	1	2
	FLOW RATE (l/min)			
1	32	40	60	79

180	425	530	811	1056
200	448	559	854	1114

For seaside resorts, a flow rate increased by at least 20% must be considered.

G-at-fi_a_th

WATER REQUIREMENTS FOR COMMUNITY BUILDINGS

The requirements of buildings intended for specific uses, such as **offices, residential units, hotels, department stores, nursing homes** and so on, are different from those of condominiums, and both their global daily water consumption and the maximum contemporaneity flow rate are usually greater. The **diagram of water requirements for community buildings** shows the maximum contemporaneity flow rate of some types of communities, for guidance.

These requirements must be determined case by case with the utmost accuracy, using analytical calculation methods, according to particular needs and local provisions.

For seaside resorts, the flow rate must be increased by at least 20%.

- 1= Offices (N. of people)
- 2= Department stores (N. of people)
- 3= Nursing homes (N. of beds)
- 4= Hotels, residences (N. of beds)

FLOW RESISTANCE

TABLE OF FLOW RESISTANCE IN BENDS, VALVES AND GATES

The flow resistance is calculated using the equivalent pipeline length method according to the table below:

ACCESSORY TYPE	DN											
	25	32	40	50	65	80	100	125	150	200	250	300
	Equivalent pipeline length (m)											
45° bend	0,2	0,2	0,4	0,4	0,6	0,6	0,9	1,1	1,5	1,9	2,4	2,8
90° bend	0,4	0,6	0,9	1,1	1,3	1,5	2,1	2,6	3,0	3,9	4,7	5,8
90° smooth bend	0,4	0,4	0,4	0,6	0,9	1,1	1,3	1,7	1,9	2,8	3,4	3,9
Union tee or cross	1,1	1,3	1,7	2,1	2,6	3,2	4,3	5,3	6,4	7,5	10,7	12,8
Gate valve	-	-	-	0,2	0,2	0,2	0,4	0,4	0,6	0,9	1,1	1,3
Foot check valve	1,1	1,5	1,9	2,4	3,0	3,4	4,7	5,9	7,4	9,6	11,8	13,9
Non return valve	1,1	1,5	1,9	2,4	3,0	3,4	4,7	5,9	7,4	9,6	11,8	13,9

G-a-pcv-en_b_th

The table is valid for the Hazen Williams coefficient $C = 100$ (cast iron pipework). For steel pipework, multiply the values by 1.41. For stainless steel, copper and coated cast iron pipework, multiply the values by 1.85.

When the **equivalent pipeline length** has been determined, the flow resistance is obtained from the table of flow resistance.

The values given are guideline values which are bound to vary slightly according to the model, especially for gate valves and non-return valves, for which it is a good idea to check the values supplied by the manufacturers.

VOLUMETRIC CAPACITY

**FURTHER PRODUCT SELECTION
AND DOCUMENTATION**
Xylect

Xylect is pump solution selection software with an extensive online database of product information across the entire Lowara range of pumps and related products, with multiple search options and helpful project management facilities. The system holds up-to-date product information on thousands of products and accessories.

The possibility to search by applications and the detailed information output given makes it easy to make the optimal selection without having detailed knowledge about the Lowara products.

The search can be made by:

- Application
- Product type
- Duty point

Xylect gives a detailed output:

- List with search results
- Performance curves (flow, head, power, efficiency, NPSH)
- Motor data
- Dimensional drawings
- Options
- Data sheet printouts
- Document downloads incl dxf files

The search by application guides users not familiar with the product range to the right choice.

FURTHER PRODUCT SELECTION AND DOCUMENTATION

Xylect

The detailed output makes it easy to select the optimal pump from the given alternatives.

The best way to work with Xylect is to create a personal account. This makes it possible to:

- Set own standard units
- Create and save projects
- Share projects with other Xylect users

Every registered user has a proper space, where all projects are saved.

For more information about Xylect please contact our sales network or visit www.xylect.com.

Dimensional drawings appear on the screen and can be downloaded in dxf format.

Xylem |'zīləm|

- 1) The tissue in plants that brings water upward from the roots;
- 2) a leading global water technology company.

We're a global team unified in a common purpose: creating advanced technology solutions to the world's water challenges. Developing new technologies that will improve the way water is used, conserved, and re-used in the future is central to our work. Our products and services move, treat, analyze, monitor and return water to the environment, in public utility, industrial, residential and commercial building services settings. Xylem also provides a leading portfolio of smart metering, network technologies and advanced analytics solutions for water, electric and gas utilities. In more than 150 countries, we have strong, long-standing relationships with customers who know us for our powerful combination of leading product brands and applications expertise with a strong focus on developing comprehensive, sustainable solutions.
