### HP ZBook Mobile Workstation notes

- <sup>1</sup> See mobile workstation system specifications for display output types and max displays and resolutions supported.
- <sup>2</sup> HP ZBook 15 G6 uses 65 W MaxQ RTX 3000, and all GPUs are on the system board.
- <sup>3</sup> ZBook G6 generation implemented GDDR5, whereas ZBook G7 generation implemented GDDR6
- <sup>4</sup> Different graphics architectures 'Cores' cannot be directly compared. Cores is useful for comparing graphics that are of the same architecture, usually designated by common prefix letter(s) in the model name.
- <sup>5</sup> The entry notebook design used here requires the CPU's graphics engine to drive all display signals. Hence, it is the CPU's graphics that determines what maximum display resolution is possible to support. The maximum resolutions of the notebook's CPUs are documented in the respective notebook's QuickSpecs.
